18. LG[Redacted], Insurer's claim adjustor assigned to Claimant's claim, testified at hearing. LG[Redacted] testified that Insurer did not authorize Claimant to continue to see Dr. Bates after he moved his practice to Workwell because Insurer took the position that Banner was the designated "corporate provider" and that all patients would continue to receive treatment at Banner. LG[Redacted] agreed that before moving his practice, Dr. Bates was Claimant's primary ATP. She agreed that Insurer denied Claimant's transfer of care to Dr. Bates until November 2022. She testified that Dr. Bates did not request a transfer of care to him at Workwell until November 2022, and once that request was made, Respondents agreed and informed Dr. Bates' office on November 8, 2022.

19. [Redacted, hereinafter JC] was a clinic manager or center administrator for Workwell during the relevant period. JC[Redacted] testified that she requested authorization for Dr. Bates to treat Claimant at Workwell from Respondents in November 2022. She testified that the request for authorization was not expressly denied, although she had difficulty reaching Respondents or their representatives. She testified that the only direct communication she received from Insurer was the November 8, 2022 letter authorizing Dr. Bates as Claimant's ATP.

20. JC[Redacted] also testified that Workwell was previously on Employer's panel of clinics designated to treat Employer's injured workers, but was no longer on the panel as of 2019. Sometime in May or June 2022, Workwell was restored to Employer's workers' compensation panel, although only two providers at Workwell were permitted to treat Employer's injured workers. Dr. Bates was not one of the designated providers. JC[Redacted] had no direct knowledge of why Dr. Bates was not included on the panel of designated physicians.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Penalties

Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any person who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty, and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

In relevant part, section 8-43-304(1) provides: "Any employer or insurer, or any officer or agent of either, or any employee, or any other person who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any

duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, … shall also be punished by a fine of not more than one thousand dollars per day for each offense …"

Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

If it is determined that a person violated a statute or order, the question then turns to whether the insurer's conduct was objectively unreasonable. This is a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

Alleged violation of Section 8-43-404 (5)(a)(V), C.R.S.

Claimant has failed to establish that Respondents violated § 8-43-404 (5)(a)(V), and has therefore failed to establish a basis for imposition of penalties.

Penalties may be imposed under § 8-43-304 (1), where a person or party "violates any provision of articles 40 to 47 of this title, or does any act prohibited thereby." "It follows that no penalty may be imposed under § 8-43-304 (1) unless the challenged conduct is a violation of the Act." *Moseley v. U.S. Express Enterp*., W.C. No. 4-530-546 (ICAO Dec. 12, 2002). In determining whether a statutory violation has occurred, the "ALJ must look to the express duties and prohibitions imposed by the statutory language in determining whether the challenged conduct violates the Act, and should not create implied duties and responsibilities." *Id*., citing *Allison v. Indus. Claim Appeals Office,* 916 P2d 623 (Colo. App. 1995); see also *See Kraus v. Artcraft Sign Co.*, 710 P.2d 480,482 (Colo. 1985) (court should not read nonexistent provisions into the Act.").

In relevant part, § 8-43-404(5)(a)(V), provides "If the authorized treating physician moves from one facility to another, or from one corporate medical provider to another, an injured employee may continue care with the authorized treating physician …" While the statute confers upon injured workers the right to continue care with a relocating ATP, it imposes no express duties on injured workers, insurers, or employers. Claimant asserts that Respondents violated § 8-43-404(5)(a)(V) by failing to timely authorize Claimant's treatment with Dr. Bates after he relocated his practice to Workwell. Had the General Assembly intended § 8-43-404(5)(a)(V) to require injured workers to seek approval for

continuing care, or imposed obligations upon the insurer to "authorize" a relocating ATP, it could and would have included mechanisms for doing so, as it did in § 8-43-404 (a)(5)(III) and (VI). Claimant's request for penalties would require the ALJ to improperly impose implied duties and responsibilities upon Respondents that are not contained in § 8-43-404(5)(a)(V). Because Respondents have not violated any express duty or obligation imposed by § 8-43-404(5)(a)(V), Claimant's request for penalties for violation of this section is denied.

Alleged violation of Section 8-43-503 (3), C.R.S.

Claimant has failed to establish that Respondents violated section 8-43-503(3), C.R.S. Section 8-43-503(3), C.R.S. provides that "Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment. This section precludes an insurer or its representative from "issuing commands to a treating physician concerning the type or duration of treatment to be provided to the claimant." *Williams v. City of Colorado Springs,* WC 4-565-576 (ICAO, Feb. 15, 2008). Evidence that the conduct of the insurer or its representative influenced an ATP to "engage in a specific course of conduct because of the actions of the respondents," or that treatment "was delayed or that course of treatment was altered because of the actions of the respondents" may be considered in determining whether treatment was dictated. *Gianzero v. Wal-Mart Stores, Inc.,* WC 4-669-749 (ICAO, July 14, 2009).

Although Respondents did not facilitate Claimant's continuation of care with Dr. Bates until November 2022, no credible evidence was admitted indicating that Respondents dictated the type or duration of treatment provided to Claimant. No credible evidence was admitted that Respondents issued any commands to any treating physician regarding his treatment, or that Claimant's treatment was delayed or altered.

At his June 15, 2022 visit, Dr. Bates recommended Claimant return in four weeks. Claimant saw Dr. Krisburg on July 20, 2022, and continued to see him at the same frequency he saw Dr. Bates until October 13, 2022. Dr. Krisburg did not alter Dr. Bates' treatment plan. He continued to regularly refill Claimant's pain medication, imposed Dr. Bates' work restrictions, and continued to advocate for the same treatments Dr. Bates recommended, such as SI joint fusion surgery, spinal cord stimulator and a bariatric consult. When Claimant did return to Dr. Bates after November 18, 2022, he did not alter Claimant's course of treatment. He continued to prescribe the same medications, and did not make any further referrals for treatment. Dr. Bates then placed Claimant at MMI within six weeks of resuming his care.

Because Respondents did not dictate either the type or duration of treatment Claimant was prescribed or received, the evidence does not establish that Respondents violated section 8-43-503(3), C.R.S. Claimant's request for penalties for dictation of medical care is denied.

ORDER

It is therefore ordered that:

1. Claimant's request for penalties is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 29, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether the Claimant proved by a preponderance of the evidence that she sustained a compensable work injury on September 26, 2021.

IF THE CLAIMANT PROVED COMPENSABILTIY, THEN:

II. Whether Claimant proved by a preponderance of the evidence that she is entitled to medical benefits which are authorized, reasonably necessary and related to the compensable September 26, 2021 work injury.

III. Whether Claimant has proved by a preponderance of the evidence what her average weekly wage is.

IV. Whether Claimant proved by a preponderance of the evidence that she is entitled to temporary total disability benefits from September 26, 2021, until terminated by law.

STIPULATIONS OF THE PARTIES

The parties stipulated that, if Claimant's claim was deemed compensable and TTD benefits awarded, the issue of offsets, either short term or long term benefits, is reserved for future determination.

The parties further stipulated, if the claim is deemed compensable, that Dr. Mitchel Robinson is an authorized treating physician.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally

1. Claimant was a customer service agent for Employer for over fourteen years and was 53 years old at the time of the hearing. She assisted passengers and met the planes at the gate. She would bring the mobile swing gate to the plane so passengers could disembark from the plane and would then disconnect them so the aircraft could depart.

2. Claimant started with Employer as a line station worker. This position involved all the work of a customer service agent as well as having to go below the wings and bring in the planes and load and unload bags. She then moved to Denver where she worked as a customer service agent.

B. The Injury

3. On September 26, 2021, Claimant was at the gate, meeting planes, which had to be performed quickly when there were back-to-back flights. She had a plane at the gate and was using a swing gate, which had to be connected to the mobile bridge adapter (MBA) to the aircraft. She went to grab the MBA, a 150 pound piece of steel, and pulled it quickly, and the adapter "got hung up." When she pulled up on it to get it unstuck, she felt a pop in her right shoulder. She pulled back and it didn't release, and she jerked it again and it came loose. This occurred at approximately 7:30 p.m. She felt immediate pain, but since she had to get the next plane deplaned, she had to work quickly and ignored the immediate onset of pain. She stated that she was working quickly and was under time pressure which caused her to have an adrenaline rush. She believed this helped her control the pain, so it was not crippling.

4. The pain continued to increase through the evening until she arrived home at around 9 p.m. She rushed home because she knew she had to be back to work by 6:30 a.m. the following morning. The pain was sharp and caused her to not be able to move her extremity well. The pain was so severe, that she was unable to take off her sweater and required her husband to assist her to undress. As she unhooked her bra, whatever was being held by the pressure of the bra released and the sharp pain became unbearable. It was sharp and pinching, not like what she had experienced before, which was only an achy soreness. It was something that she had never felt before.

5. She described the location of the pain after the injury as "indicating the top portion of her shoulder along the edge from the neck down to the glenohumeral joint and the trapezius muscle in the back up to the neck."

6. By 3 a.m. the following morning, on September 27, 2021, she could not stand the pain. She called the call-in number for Employer, to be excused from work. She went to St. Anthony's emergency room where they took x-rays, prescribed a medication regimen and put her in a sling, referring her to orthopedics.

7. The following day, on September 28, 2021 she went to Panorama Orthopedics. They ordered x-rays and an MRI. She also saw Dr. Hugate at Panorama, who was an orthopedic oncologist. She was treated primarily with physical therapy, to the extent that, because she was gaining range of motion, Dr. Robinson no longer recommended surgery.

C. Medical Records

8. Claimant was attended at St. Anthony Hospital in Lakewood on September 27, 2021 by Gina Soriya, M.D. She documented that Claimant presented with right shoulder pain after sustaining a work-related injury, when she was moving a heavy object at work and not protecting her arm when she had the onset of pain, with pain of 10/10.[1] She ordered x-rays and medications, including Tylenol, Flexeril, and Lidoderm patches. She denied Claimant any narcotic pain medication. She provided a differential diagnosis

[1] Dr. Soriya noted a history of prior rotator cuff tear but no prior surgery but this is deemed a mistake in the record and not credible.

and acute pain in the right shoulder. Claimant was referred to her primary care physician (PCP) regarding her x-ray results of small nonspecific sclerotic lesion of the proximal humeral head, recommending a whole body scan and to an orthopedist with regard to other symptoms in her shoulder. Lastly, Dr. Soriya provided Claimant with light-duty restrictions until cleared by her primary care provider (PCP).

9. The September 27, 2021 x-rays read by Dr. William Berger showed very mild degenerative joint disease (DJD) of the acromioclavicular joint and no significant evidence of glenohumeral DJD, and noted the 7 mm sclerotic lesion of the right humeral neck.

10. On September 28, 2021 Claimant was seen at Panorama Orthopedics and Spine Center by Samuel F. McBride, PA-C, for the right shoulder. Claimant provided a history consistent with her testimony at the hearing. At that time Claimant described the pain as aching, burning, numbing, radiating, sharp, and tingling (in alphabetical order). Her pain was a 9/10. Claimant had associated symptoms of a limited range of motion, tingling and numbness in the right hand, and swelling. Her symptoms were exacerbated by lifting, pushing/pulling, twisting/turning, activities for an extended period of time, driving, standing and walking. Her symptoms were alleviated by ice, rest, elevation, stretching, massage, ibuprofen, and Tylenol. Functionally, Claimant reported difficulty with daily activities such as sleeping, opening her medication bottle, and putting on her clothes.

11. On exam, Mr. McBride found a limited range of motion but no instability. He noted positive empty can and Hawkins tests. Mr. McBride stated that they would move forward with an MRI of the right shoulder to evaluate the patient's right rotator cuff for further treatment plan. They provided Claimant prescriptions for Tramadol and Mobic since her pain was not well controlled at that time and she was having a lot of difficulty sleeping and performing her daily activities.

12. The x-rays from September 28, 2021 showed mild to moderate degenerative changes of the acromioclavicular joint and the glenohumeral joint with a type 2 acromion. Mr. McBride also identified an acute on chronic calcification superior to the greater tuberosity of the humerus.

13. The MRI performed on September 30, 2021 read by Andrew Sonin, M.D., showed calcific tendinopathy of the distal rotator cuff eroding into the humeral head with some calcification in the adjacent superolateral humeral head. Additional areas of signal void[2] in the proximal humeral shaft were surrounded by marrow edema with a thin irregular linear low signal connection between the erosion proximally and the low signal more distally, possibly representing an extension of calcification into the humeral shaft. He also noted significant delamination of the distal rotator cuff with areas of linear nondisplaced full-thickness tearing in the distal supraspinatus and infraspinatus. Dr. Sonin recommended an MRI of the entire humerus to assess the extent of abnormal marrow signal and to assess for the possibility of a more distal lesion such as a tumor or

[2] "Signal void" is interpreted by this ALJ as an area of the MRI which was unable to be clearly visualize due to accumulation of fluid.

fracture. He also recommended a CT of the proximal humerus to distinguish between this process and separate ossifications in the humerus.

14. Dr. Robinson referred Claimant to Dr. Hugate, an orthopedic oncologist with Panorama when the MRI taken on September 30, 2021, showed not only the calcific tendinitis of the shoulder joint and a tear of the rotator cuff but also a differential diagnosis of a more distal lesion such as a tumor or fracture.

15. An MRI was performed of the right humerus at Health Images at Church Ranch on October 8, 2021 was read by Eric Handley, M.D. He identified the calcific infiltrates into the bone but no cortical bone marrow edema. He also identified some moderate supraspinatus tendinopathy and some edema surrounding the bone.

16. On October 14, 2021 Claimant was seen by Ronald R. Hugate of Panorama Orthopedics, for an interoffice referral. Claimant provided a history of having had some aching pain in her shoulder off and on for a few years, but on September 26, 2021 she was pulling a heavy object while at working for Employer and she felt a pop and significant pain in the shoulder.[3] He noted that Claimant had no personal history of cancer. It was noted Claimant was there to determine if she had a tumor. On exam ,Dr. Hugate noted loss of active range of motion with significant pain, but otherwise normal. He noted the calcific tendinitis but also calcium in the proximal humerus. He observed that she had a partial rotator cuff pathology with mixed signal edema in the proximal humeral metaphysis (neck), which affects the physeal scar (growth plate at the neck) and some surrounding edema around the humerus. He did not believe that anything looked like a mass but referred her to Dr. Peter Horner, an interventional radiologist for a needle biopsy and culture to rule out infection or malignancy. He also referred Claimant back to Dr. Robinson for further care of the right shoulder pain.

17. On November 10, 2021 Dr. Robinson continued Claimant off work until further workup could be completed to assess the underlying bone lesion and treatment of the acute right shoulder injury.

18. A CT and bone biopsy of the right shoulder was completed by Dr. Peder Horner on November 12, 2021. The interpretation was not available.

19. On December 2, 2021 Claimant returned to see Dr. Robinson with unrelenting, but improving right shoulder pain. She continued having problems sleeping. He observed that the needle biopsy showed no evidence of abnormality, and was negative for cancer. He diagnosed strain of the muscles and tendons of the rotator cuff of the right shoulder and calcific tendinitis. He made the following medical decisions:

> She has a very unusual case of calcific tendinitis, which then made its way into her approximate humerus. She has some scattered degenerative changes and some wear and tear of the rotator cuff with a large calcium deposit. We talked about treatment options. We are going to move forward with physical therapy for the next 4-5 weeks. We might repeat her MRI. We are trying to decide whether or not the rotator cuff requires repair. I would like some of the inflammation to settle down, probably repeating her MRI and making her final decision.

---

[3] This history provided to Dr. Hugate is considered roughly consistent with the Claimant's testimony at hearing. The reference to a "conveyor belt" is simply a misinterpretation of Claimant's explanation of the mechanical parts involved.

…

> We discussed surgery as a possible treatment course and the patient elected to consider options before deciding. We also discussed the patient's history of thyroid disease, which may increase the level of risk associated with this surgery.
>
> The procedure risks, benefits, side effects, and alternatives of the procedure were discussed at length with the patient. We discussed the following risks of arthroscopy: Allergic reactions to anesthesia, postoperative infection, stiffness, swelling, blood clots, continued pain, and in some severe cases osteonecrosis or rapid deterioration of the surrounding cartilage.

20. Dr. Robinson referred Claimant to physical therapy for rotator cuff tear arthropathy of the right shoulder, to begin with isometric, and progress to PRE's (progressive resistance exercises) as tolerated, but to avoid impingement positions. He also ordered scapulothoracic strengthening, stretching, soft tissue manipulation and mobilization, and modalities as needed.

21. Claimant had a virtual appointment with Dr. Hugate on December 6, 2021. He reported Claimant was negative for cancer but commented that she had an unusual condition that caused the calcific tendinitis to infiltrate the marrow space of the humerus bone, which was very rare. He recommended Claimant be evaluated by Dr. Stuart Kassan, a rheumatologist. The diagnosis history was a strain of muscles and tendons of the rotator cuff of the right shoulder, calcific tendinitis of right shoulder, acute pain of the right shoulder, arm mass, and other calcification of muscle of the right shoulder.

22. Dr. Robinson wrote down on March 16, 2022 that Claimant continued to have work restrictions regarding her work-related injury, which included, not opening aircraft doors, pulling off mobile bridge adaptors; and no pushing, pulling, lifting, or overhead pressing more than 5 lbs.

23. On March 30, 2022 Dr. Robinson took a history of improving right shoulder pain with unremitting difficulty sleeping. He continued physical therapy for another 18 visits for range of motion and strengthening. He ordered an updated MRI. Claimant reported that she was having difficulty with workers' compensation and her personal insurance had been terminated.

24. On April 1, 2022 Dr. Robinson wrote that Claimant:

> … is a patient of mine at Panorama Orthopedics and Spine Center. Due to her recent injury we are ordering an MRI of her shoulder. This will be a necessary diagnostic test in order to help us decide how to move forward. She will need the MRI and to follow up with us afterwards. At that time we will discuss how it is best to move forward with the injury.

25. Claimant was also seen by Panorama Orthopedics Physical Therapy on April 1, 2022. Claimant reported she had a 3-4/10 pain all the time and sharp pain occasionally up to 8/10. Ms. Martha Myers documented Claimant was unable to work due to the injury. The history of the mechanism of injury was consistent with Claimant's testimony at the hearing. She mentioned Claimant continued to have signs and symptoms of rotator cuff tear with decreased ROM, strength, impairments in body mechanics, posture, soft tissue restrictions, edema, and pain. She recommended ongoing physical therapy.

26. The MRI performed on April 28, 2022 showed a small full-thickness perforation of the posterior supraspinatus, and that the previously noticed edema had nearly resolved. Though there was a hyperintensity[4], likely a bone infarct (osteonecrosis) as a result of the previous biopsy.

27. Dr. Robinson reexamined Claimant on May 11, 2022. He commented that Claimant had continued right shoulder pain that was sore and sharp. Associated symptoms included tightness and stiffness. Her symptoms were exacerbated by certain movements and alleviated by rest. Functionally, Claimant reported being limited by pain with certain motions. He mentioned that Claimant had been previously advised that her case was likely surgical and was a work-related concern from September 26, 2021 with continued functional limitations. He noted Claimant had loss of ROM but otherwise had a stable exam. Dr. Robinson continued to diagnose calcific tendinitis[5] and strain of the right shoulder. Dr. Robinson reviewed the MRI and noted no surgical pathology as the rotator cuff was nearly entirely intact with only a small perforation of the posterior supraspinatus. He continued physical therapy regularly and recommended Claimant avoid movements that were causing her pain for the time being.

28. Dr. Robinson completed a Physician's Report of Workers' Compensation Injury dated June 1, 2022, noting Claimant's therapy, medications and diagnostic testing. He stated Claimant continued to be unable to work. He further provided restrictions which included no lifting, repetitive lifting, carrying, pushing, pulling, gripping, reaching overhead, and reaching away from the body.

29. On June 18, 2022 Dr. Robinson ordered physical therapy for another 12 visits.

30. Claimant continued to attend physical therapy. Ms. Myers remarked, on August 2, 2022, that Claimant had pain of 6/10 if she moves "wrong" with external rotation, and wakes with pain, though with medications the pain was reduced to 2/10. She recorded Claimant had been unable to lift items out of the oven as her arm was unreliable. She highlighted that Claimant was showing signs of improvement, yet still experiencing restricted range of motion. She recommended ongoing PT. The last note by Ms. Myers was from October 18, 2022 noting that PT was suspended because of problems with insurance.

31. On August 4, 2022 Dr. Robinson noted, on exam, that Claimant was much improved but continued with painful ROM, specifically external and internal rotation. He indicated that, in addition to PT Claimant was doing pool therapy. He also gave Claimant a referral to a rheumatologist for a second opinion and to follow up with him within six weeks.

32. Claimant followed up with Dr. Robinson on November 23, 2022. He noted that Claimant continued to improve her ROM, with stable stability and negative tests otherwise. He attributed her improvement to the pool therapy though she did not feel

[4] This ALJ understands that "hyperintensity" shown in an MRI report refers to white spots that denote some problematic area on an image.

[5] Dr. Robinson commented that the calcific tendinitis was a rare form that infiltrated the bone, which caused some concern for cancer, but which was ruled out early on.

confident enough in her shoulder to perform significant movement overhead, lifting, pushing, pulling and Dr. Robinson agreed with her. He recommended continued therapy.

33. On January 30, 2023 Claimant was evaluated by Sander Orent, M.D. by virtual examination at Claimant's request. He took a history consistent with Claimant's testimony at the hearing. He reviewed the medical records and noted Claimant's motions on the video call, which were still limited. He opined that Claimant was clearly not at MMI and was unclear as to why Claimant would be discharged with ongoing symptomology and no impairment rating. He documented that Claimant continued having significant pain with simple activities such as putting her arm into flexion, sleeping at night, lifting pans from the oven, and getting dressed. He recommended a second opinion with a different orthopedic surgeon such as Scott Gottlob, M.D. to consider possible surgical repair, injections, physical therapy or a combination of treatments depending on the evaluation of the consulting orthopedist.

34. Dr. Orent opined that Claimant required substantial work restrictions of no lifting at or above the shoulder level, and lifting from floor to shoulder of no more than 5 lbs. on an occasional basis. He opined that Claimant required an impairment rating as Claimant continued with a significant amount of functional limitations. He also mentioned the possibility of a functional capacity evaluation.

35. Claimant was evaluated by Lawrence Lesnak, D.O., of Colorado Rehabilitation and Occupational Medicine on June 13, 2023, at Respondent's request. Dr. Lesnak took a history, reviewed the medical records, and examined the Claimant. The reported mechanism of injury was consistent with what Claimant testified at the time of the hearing. Dr. Lesnak ultimately opined, after reviewing the medical records and critiquing Claimant's memory regarding them, that while there may have been an incident during working hours on September 26, 2021, there was no medical evidence to support the assertion that she sustained any type of injury to her right shoulder as a result of her work activities on that day. Dr. Lesnak partially based his opinion on his interpretation of the March 2021 physical examination conducted by Dr. Ozbay, which repeated the previous diagnoses from 2019 and earlier. (It is not evident to this ALJ whether Dr. Ozbay was reporting a new or ongoing complaint.)

D. Prior medical records

36. Claimant was evaluated by Julie Sefcik, DO, at Rocky Mountain Primary Care on November 5, 2019 regarding shoulder pain. She noted that Claimant presented with right shoulder pain after having an upper respiratory infection (URI) the prior September. She was having problems moving her arm with pain when using it overhead. She reported that it was pain like a toothache but did not have any further URI symptoms. She documented some loss of range of motion due to pain, a positive Hawkins and crossover test. She diagnosed rotator cuff impingement. Ms. Sefcik injected the shoulder with Toradol and stated that Claimant should follow up for a steroid injection if she did not have relief of her symptoms. She also ordered therapy. Claimant did not return to the Clinic for over a year and did not follow up for therapy.

37. The Health Images x-ray read by Dr. Brian Cox on November 5, 2019 showed a calcific conglomeration and he interpreted it as calcific tendinosis of the rotator cuff. He also noted Claimant had mild acromioclavicular degenerative joint disease. He recommended a follow-up MRI.

38. Later that afternoon, on November 5, 2019, Dr. Sefcik reviewed the x-ray and changed her diagnosis to calcific tendinosis of the rotator cuff. She noted that the calcium deposits were causing pain with shoulder movement. She continued with the prior recommendations that if the Toradol injection did not improve her symptoms, they would recommend a steroid injection and referral to an orthopedic specialist.

39. Claimant's next appointment with her PCP, Dr. Behice Ozbay at RMPC was March 23, 2021 for a general physical. Her only "present concerns" was "easy bruising." The records were standard for review of every one of Claimant's chronic conditions as well as routine wellbeing exams. While the report mentions chronic shoulder[6] problems this is inferred as a reference to the calcific tendinosis and there were little in recommendations for treatment nor were there referrals made at that time, other than advice to continue stretching.

40. Lastly, Claimant was evaluated at Colorado Center for Arthritis and diagnosed with fibromyalgia, morphea (scleroderma), and a positive ANA in 2016. Prateek Chaudhary, DO, performed a physical exam in 2016, 2017 and 2018 that showed no abnormalities, including no tenderness, no swelling, no erythema, no nodules or cysts, no deformities, no crepitus, normal range of motion and normal alignment of all four extremities.

41. Other records from prior to 2016 were not considered relevant other than the diagnosis of calcium pyrophosphate arthropathy, as this showed Claimant was at least aware that she had calcium crystals deposits in her joints that were causing her multiple symptoms.

E. Wages

42. Claimant testified that she worked full time and was working some overtime hours or double shifts.

43. The payroll records submitted by Respondents showed earnings beginning with the pay period ending January 16, 2021.

44. There were no wages before this date and no significant explanation as to why wages prior to this date were not submitted for consideration or why Claimant was not earning wages, other than some indications of Claimant being on medical leave from October 2020.

45. Based on the total wages earned from pay period ending January 16, 2021 (beginning as of January 3, 2021) through pay period ending September 25, 2021, Claimant earned a total of $41,087.32, which divided by 38 weeks provides an average weekly wage of $1,081.25.

---

[6] This ALJ determined that any reference to an "old work injury" was incorrect and not credible.

F. Pleadings

46. Respondent's third-party administrator (TPA) filed a Notice of Contest on March 14, 2022 stating the denial was for further investigation.

47. Claimant filed a Workers' Claim for Compensation on May 31, 2022 noting that she was pulling an MBA off the aircraft and the MBA got hung up on the ledge of the swing gate. When the MBA got stuck she pulled and felt a pop in her shoulder. She noted that she had a torn rotator cuff of the right shoulder. Claimant had started the day at approximately 6:15 a.m. and was injured at approximately 7:30 p.m. on September 26, 2021. She notified her supervisor on September 27, 2021.

G. Claimant's Testimony

48. Claimant testified she had multiple preexisting conditions. One of them was calcific tendinosis, which she treated with anti-inflammatory medication, and she was unaware of a cure for this condition. She also reported she had two autoimmune system conditions. The first was Hashimoto's disease, where her immune system fights her thyroid function. The second was scleroderma. Further, she noted her body reacted to stress, food, activity, and different triggers. She had also been diagnosed with fibromyalgia, as documented in her medical records as if it were another symptom of her autoimmune system disease. Prior to her work injury, she had not seen the diagnosing provider since 2018.

49. Claimant acknowledged that she had previous inflammation in her right shoulder as a result of the calcific tendinitis, and had achiness in her right shoulder prior to September 26, 2021, but they were not the kind of symptoms that rendered her unable to work. The inflammation caused by the calcific tendinitis was only an achy sensation and much different than the stabbing sharp pain she felt following the work injury of September 26, 2021. The pain that she felt after this accident was an intense sharp pain that did not go away. She could not move her arm and there was nothing that she could do to get rid of the pain.

50. She had received a cortisone injection in approximately 2009 or 2010 for the inflammation due to the calcific tendinitis. Then in 2019 she had a Toradol injection, as she could not take ibuprofen or anti-inflammatories because she was having stomach problems. She did not see any providers between November 2019 and the March 2021 physical, in part due to the COVID-19 pandemic. Claimant denied that she had complained to her personal care provider that she was having right shoulder problems at that time of her physical in March 2021, but that it had been a complaint carried over from when she saw Julie in 2019.

51. Claimant testified that with the inflammation from the calcific tendinitis, she was able to lift her arm overhead for years while working for Employer opening aircraft doors and moving the MBA, as well as loading bags and other tasks.

52. She could not perform all of these tasks after the September 26, 2021 injury. It was the injury to her rotator cuff that was causing her the pain in conjunction with the

aggravation of the tendinitis. Initially they had told her she would be scheduled for surgery in January 2022 but that never took place as she continued to improve with therapy and time.

53. Claimant testified that she had not yet been placed at maximum medical improvement (MMI) by her treating provider, Dr. Robinson, as of the date of the hearing. Nor had Employer offered her any modified job duties.

54. As she has not recovered full range of motion, which is a necessary function to open aircraft doors and to move the MBA, she has been unable to return to work. Neither could she pick up bags as required of a customer service agent due to the pain associated with movements. She could do reservation service. In fact, she had been trying to get into reservations without any response from Employer.

55. Claimant testified that Employer never referred her to a medical provider or doctor for medical care and treatment following her report to her supervisor. Her supervisor never mentioned a different provider or she would have shown up for care to see any physician that they had identified.

56. Claimant never had any workers' compensation claims regarding her right shoulder prior the accident on September 26, 2021 while working for Employer or any other employer.

H. Conclusion of Findings

57. As found, Claimant was injured on September 26, 2021 when she attempted to release the MBA from the airplane, while she was in a hurry, and the MBA got caught. She pulled to get it dislodged and felt a pop in her right shoulder and had immediate pain. She was diagnosed with a rotator cuff strain and calcific tendinosis.

58. As found, while calcific tendinosis was a preexisting condition, Claimant's insult to an already affected body part caused edema and a small tear of the rotator cuff. As found, the original MRI showed a full-thickness tearing in the distal supraspinatus and infraspinatus. While these were small tears, this does not void the effect the injuries had on Claimant, which aggravated Claimant's intermittent symptoms of pain and discomfort experienced due to the occasional complaints of fibromyalgia or calcific tendinosis over the years.

59. The ALJ has reviewed the reports of both Dr. Lesnak and Dr. Orent and has considered those reports in light of the medical records before the ALJ from Drs. Robinson, Hugate, Ozbay, and St. Anthony's Hospital as well as the previous records from Christ Hospital, and Colorado Center for Arthritis, and finds that prior to the injury of September 26, 2021, Claimant had been diagnosed with autoimmune issues, thyroid disease, calcific tendinitis in her right shoulder, and fibromyalgia among other issues.

60. As found, although Claimant had a history of calcific tendinitis and fibromyalgia that predated the on-the-job injury of September 26, 2021, there was no persuasive or substantial evidence that such resulted in a disability to Claimant prior to the on-the-job injury of September 26, 2021.

61. As found, Claimant heard a pop in her shoulder, developed immediate pain, and the care and treatment for that condition was described in the records reviewed above. The X-Rays performed on September 28, 2021, indicated an "acute on chronic" calcification superior to the greater tuberosity of the humerus," as well as edema surrounding the humeral head. These records indicated to this ALJ that Claimant sustained an aggravation of the calcification at the time of the September 26, 2021 injury as well as an injury to her rotator cuff, both of which Dr. Robinson has been treating since the onset of his treatment of Claimant beginning September 28, 2021.

62. As found, Claimant worked full time as a customer service agent for an airline, opening aircraft doors, moving very heavy bridges and bridge adaptors in order to perform her job for the airline, without significant difficulty, despite her preexisting medical diagnosis. As found, Claimant's injury aggravated her preexisting condition in addition to cause a new injury as represented by her small rotator cuff tear. This is supported by Dr. Robinson's records above.

63. As found, the medical records reflect that Claimant sustained an injury that resulted in the need for medical treatment on September 26, 2021, and that the diagnostic testing performed shortly thereafter showed a supraspinatus rotator cuff tear and calcification going into the humerus head and a condition that Dr. Robinson described as complex. As found, the medical care and treatment was authorized, reasonably necessary and related to the injury.

64. As found, the fair approximation of Claimant's average weekly wage is $1,081.25 per week.

65. As found, Claimant was unable to return to work after the September 26, 2021 work-related injury and is entitled to temporary total disability benefits beginning as of September 27, 2021 until terminated by law.

66. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The claimant must prove her injury arose out of the course and scope of her employment by a preponderance of the evidence. Sec. 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

"Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, *supra*. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *See Triad Painting Co, supra*; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO Nov. 21, 2014). The "arising out of" element is narrower and requires Claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO Apr. 9, 2014).

Claimant has established by a preponderance of the evidence that she sustained a compensable injury arising from the course of her employment with Employer on September 26, 2021. The evidence demonstrates that, although Claimant had a preexisting calcific tendinosis in the right shoulder and fibromyalgia, Claimant was, while not free from any symptoms, able to perform her full time job with Employer, which required her to perform heavy activities on a daily basis. Those included opening aircraft doors, moving the bridge and mobile bridge adapter in order to allow flying customers to get on and off the planes, and moving or loading baggage. Claimant was in the process of detaching the MBA when it got stuck. Claimant hurried to pull it free, felt a pop and immediately intense pain. This occurred at approximately 7:30 p.m. in the evening. She was able to complete her work that evening and went home by 9:00 p.m., at which time, after the adrenaline rush she felt had subsided, she could not even undress herself. This is supported by the history given in the emergency room, to her treating providers as well as the IME physicians whom examined Claimant on her own behalf as well as on behalf of Respondents.

It is specifically persuasive to this ALJ, Dr. Robinson's multiple indications that Claimant had a right shoulder strain and small rotator cuff tear caused by the work-related events of September 26, 2021. Further, it is persuasive and supports a finding of compensability that the there was a showing on the MRI performed in April 28, 2022, of a small full thickness perforation of the posterior supraspinatus, and that the previously noticed edema had nearly resolved. The fact that there was edema that resolved is another indication that there was a traumatic aggravation of the tissue surrounding the humerus where the calcification was present. As found, from the totality of the evidence, including Dr. Robinson's opinion and Dr. Orent's opinion that Claimant sustained injuries on September 26, 2021 whose opinions were more credible and persuasive than the contrary opinions of Dr. Lesnak, Claimant has shown than her claim is compensable. Dr.

Lesnak concentrates his review of the records going back years showing that Claimant had chronic health problems but did not offer a cogent opinion that no actual injury occurred and this ALJ does not find Dr. Lesnak's opinions credible or persuasive. The reality is that those preexisting problems were not interfering with Claimant's work in September of 2021. The accident and injuries which Claimant sustained on September 21, 2021 did prevent Claimant from returning to work. As found, while Claimant had a history of chronic complaints and had occasional right shoulder problems that were prone to exacerbation, Claimant was not experiencing ongoing symptoms in the months before September 26, 2021, when the symptoms returned and were aggravated while Claimant was performing her work for Employer. Regardless of any inconsistencies in Claimant's memory of past chronic problems, the specific injury she sustained to her right rotator cuff, including the strain, the small tendon tear and the aggravation of the calcific tendonitis were proximately caused by the incident which occurred when Claimant, on September 26, 2021, pulled on the MBA to dislodge it and move it so the next aircraft to be hooked up. Claimant has shown by a preponderance of the evidence that she was injured within the course and scope of her employment with Employer and that the injuries to her right rotator cuff, including the strain, the small tendon tear and the aggravation of the calcific tendonitis were proximately caused by the September 26, 2021 accident. The ALJ finds it more likely than not that Claimant's work-related accident caused injuries and an aggravation of her preexisting conditions. As such, Claimant has established that it is more likely than not she sustained a compensable injury.

C. Authorized Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Because Claimant sustained a compensable injury, she is entitled to reasonable and necessary authorized medical treatment to cure or relieve the effects of his injury. Claimant's treatment at the emergency room at St. Anthony's, with Panorama Orthopedics and providers within the chain of referral are authorized, reasonably necessary and related to the injury.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM*

Corp., 867 P.2d 77 (Colo. App. 1993). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

This ALJ determined that the fair approximation and calculation was to average out the Claimant's wages beginning on January 3, 2021 with pay period ending January 16, 2021 through pay period ending September 25, 2021. Claimant earned a total of $41,087.32, which divided by 38 weeks provides an average weekly wage of $1,081.25. As found, the fair approximation of Claimant's average weekly wage is $1,081.25 per week.

E. Temporary Total Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbios* Logic, 952 P.2d 831 (Colo. App. 1997).

As found, the persuasive evidence shows Claimant was disabled by the September 26, 2021 injury because she could not use her right upper extremity. She was initially given temporary restrictions by the emergency physician. Later, Dr. Robinson, her authorized treating physician, kept Claimant off of work. Claimant credibly testified that with the inflammation from the calcific tendinitis she was able to lift her arm overhead for years while working for employer opening aircraft doors and moving the MBA, as well as loading bags and other tasks. She could not perform all of these tasks after the September 26, 2021 injury. It was the injury to her rotator cuff and the aggravation of her calcific tendinosis that caused her to be unable to return to work for Employer at her same job duties. Further, Claimant testified that she had not yet been placed at maximum medical improvement by Dr. Robinson, and nothing in the records and evidence submitted at the time of the hearing were persuasive otherwise. Nor had Employer offered her any modified job duties. As found, Claimant was unable to return to work beginning on September 27, 2021. Claimant credibly testified that she was unable to return to work due to her injuries of September 26, 2021 and continued to be unable to perform her job. Claimant has proven by a preponderance of the evidence that she is entitled to temporary disability benefits beginning on September 26, 2021 until terminated by law. Claimant is owed TTD benefits from September 27, 2021 until terminated by law.

Based on Claimant's AWW of $1,081.25, Claimant's TTD rate is $720.83. TTD benefits calculated through and including the date of the hearing of July 26, 2023 (628 days or 95 week and 3 days) are in the amount of $68,842.97.

Further, Claimant is owed statutory interest at the rate of eight percent (8%) on all benefits not paid when due, which is calculated through the date of hearing as follows:

[Redacted, hereianfter IRT]

ORDER

IT IS THEREFORE ORDERED:

1. Claimant has proven by a preponderance of the evidence she suffered compensable work-related injuries to her right upper extremity and shoulder on September 26, 2021 while in the course and scope of her employment with Employer.

2. Respondents shall pay all authorized, reasonably necessary and related medical benefits including but not limited to St. Anthony Hospital, and Panorama Orthopedics as well as medical providers within the chain of referral. All payments shall be made pursuant to the Colorado Fee Schedule.

3. Claimant's average weekly wage is $1,081.25 and her temporary total disability benefits rate is $720.33.

4. Respondents shall pay temporary total disability benefits beginning on September 27, 2021 and continuing until terminated by law.

5. Respondents shall pay interest at the statutory rate of 8%, pursuant to Section 8-43-401 (2)(a), C.R.S. (Cum. Supp. 2023), on all benefits that were not paid when due.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 31st day of August, 2023.

ISSUES

- Did Claimant prove that the L4-5 surgery recommended by Dr. Crowther's office is causally related to her February 6, 2022 industrial injury and if so, is it reasonable and necessary?

- Whether claimant's work restrictions on and after February 14, 2023, are causally related to claimant's injury covered by this claim, and, if not, whether Respondent is relieved of any obligation to pay Claimant ongoing TTD benefits on and after February 14, 2023?

FINDINGS OF FACT

1. Claimant worked for the Employer stocking grocery items. On February 6, 2022, she was stocking potato chip bags from boxes on a pallet on to a shelf. She testified that as she was about to put the last bag on the shelf, she was twisting around reaching for the last bag to put on the shelf when she experienced severe pain in her low back. She screamed "ouch". A co-worker asked if she was ok. She told him she was in pain. She sat down on the step stool that she was using. She tried to go back to work and picked up the bag of chips to put it on the shelf when she experienced pain again and screamed "ouch" again. She and the co-worker went to the break room and the co-worker contacted the head clerk in the front of the store to let the clerk know what had happened.

2. After reporting the injury, the Claimant went to the emergency department at St. Francis Hospital. Claimant was seen by Physician Assistant Justin Jester. He noted "This a 41 y.o. female with no significant medical problems presents here complaint of back pain. Is located in the left lower back. She was at work today stocking potato chips she states she was pushing and it made it hurt in the left lower back. It radiates into her buttocks. It does not go below that area." In the physical exam section, he notes "Positive tenderness in the left lower back. No midline tenderness. It radiates into the buttocks. Negative straight leg raise. No saddle anesthesia. Normal flexion-extension of her feet and toes. No paresthesias below the buttocks". The final diagnosis was "strain of lumbar region, initial encounter". (Exhibit I, pp. 259 -260).

3. Claimant was next seen at [Redacted, hereinafter OM] by Dr. McNulty on February 7, 2022. He took a history that "the patient is a 41-year-old female who is a Worker's Compensation injury. Apparently yesterday she experienced pain in the left side of her lumbar spine after pushing a 5 pound box of potato chips at work. She said the pain is now starting to go over onto the right side and is going into her buttocks. She denies any weakness or loss of function or sensation in the lower extremities. She went to the emergency room where she had a fairly extensive work-up but no x-rays. She was

diagnosed with a lumbar strain and given lldocaine patches, IV fluids, cyclobenzaprine and ibuprofen. She said her pain is somewhat better with these medicines. She works as an all-purpose clerk at a local grocery store where she only stocks food on shelves. Her job description however says that she needs to be able to lift and carry upwards of 75 pounds. She works 4-hour shifts with a 15-minute break and spends most of her shift standing. She has been doing this job for 15 years. Her past medical history is significant for seizures and hypertension, she only smokes medical marijuana for her seizures and she is on lisinopril and hydrochlorothiazide for her hypertension. Her social history is positive for smoking marijuana but she does not smoke tobacco and she does not use alcohol or any other recreational drugs by history." Objectively, Dr. McNulty noted near full lumbar flexion actively with some acute tissue changes in the paralumbar musculature from L3-S1 bilaterally. It was worse on the left than the right. There was no straight leg raising noticed. He ordered x-rays which did not reveal any acute osseous abnormalities. He diagnosed the Claimant with a lumbar sprain. He recommended continuing the medication she was taking, recommended physical therapy and recheck in 2 weeks. (Respondent's Exhibit C, p. 30). Dr. McNulty imposed restrictions of 2 pounds lifting, carrying, pushing and pulling. He also gave a restriction of sitting for 30 minutes for each hour of work.

4. Claimant went back to Dr. McNulty on February 21, 2022. He noted that Claimant took it upon herself not to return to work with the restrictions he provided. He also noted that Claimant had not gone to physical therapy as ordered. His impression was "lumbar sprain, no clinical improvement". He maintained the previous restrictions. In his treatment plan, he noted that she had acute left-sided low back pain without sciatica. He recommended a referral to "orthopedics". He also noted in his treatment plan that she had lumbar paraspinal muscle spasm and re-recommended physical therapy. In order to ensure that Claimant went to physical therapy, Dr. McNulty had his staff escort the Claimant to Colorado Institute of Sports Medicine. Claimant's restrictions remained the same.

5. Claimant was next seen by Virginia Quiroz, N.P. at OM[Redacted] on February 23, 2022. In addition to managing her medications, Ms. Quiroz administered a cortisone injection into Claimant' left SI joint.

6. On March 16, 2022, Claimant returned to OM[Redacted] and was seen by Dr. McNulty. In his objective evaluation, He notes that "She has full range of motion in her lumbar spine today and no real acute tissue changes. She has full active flexion extension and sidebending left and right". His impression was "Lumbar sprain and symptomatic but with full function". He also noted that Claimant stopped physical therapy due to her hospitalization for some gastrointestinal illness.

7. Ms. Quiroz, at OM[Redacted], saw the Claimant on March 23, 2022. Claimant was following up on low back pain. She reported pain level of 7 out of 10. Claimant stopped taking muscle relaxants because she thought she was having pancreatitis. She went to the hospital, and was told her pain was due to her colon. Ms. Quiroz noted that Claimant had a cortisone injection previously on February 23, 2022, which helped a little. Claimant reported that she was sore for five days after the injection

and slowly got better after that. The physical exam only revealed tenderness in the left sciatic notch and muscle spasms on the left side. The straight leg raise was negative.

8. Dr. McNulty next saw Claimant on April 13, 2022 and continued with the diagnosis of lumbar sprain. He also noted in the treatment plan that they were waiting on worker's compensation to establish causality and compensability. The pain diagram the Claimant filled out on this day showed pain localized to the lower back and was rated a 6 out of 10. He scheduled the Claimant to be seen on May 19, 2022.

9. The next treatment visit note was on June 24, 2022. Dr. McNulty indicated that her worker's compensation case had been "reactivated". However, prior to this visit the Claimant had not been treating. Objectively, Dr. McNulty noted she was in no apparent distress and was ambulating easily without a limp. She had lost 60% of active flexion and extension in her lumbar spine and there was no midline tenderness and straight leg raising was negative. He continued with the diagnosis of lumbar sprain. He referred the Claimant to outside orthopedics. He also order PT to be restarted and prescribed muscle relaxants. The pain diagram filled out by Claimant still showed lower back pain that was localized and was not radiating down either leg.

10. When Claimant was seen on July 8, 2022, the assessment was lumbar paraspinal muscle spasm and acute left-sided low back pain without sciatica. Claimant was prescribed continued physical therapy.

11. Dr. McNulty saw her again on August 1, 2022. For the first time, Claimant's pain diagram including pain emanating from her low back and down the back of her left leg. Also new was the diagnosis of lumbar radiculitis. The chief complaint was "pain from low back is now starting to shoot down to above the knee". In addition to a referral to pain management was the continued referral to orthopedics that was awaiting precertification.

12. An MRI was taken on September 11, 2022. The findings included mild facet arthropathy at L4-5 with disk herniation or stenosis. It also showed that the L5-S1 disk was narrow and desiccated with Modic type 2 changes and a broad-based right paracentral and lateral disc protrusion which narrowed the right inferior foramen and right lateral recess. There was mild facet arthopathy at that level.

13. Claimant saw Dr. Crowther, an orthopedic physician, on December 22, 2022. The history given to him was "This pleasant 42 year-old present to clinic for evaluation of her back and bilateral leg pain. Patient states that she had a work injury earlier in 2022 which has caused significant pain and discomfort in her back and down her legs." This history is different than that given to Dr. McNulty at the inception of the work injury. Initially, the Claimant reported pain in the lower back, only. The history given to Dr. Crowther now includes low back pain and bilateral leg pain. Dr. Crowther recommended ongoing conservative care. This included additional injections and physical therapy. Claimant was to follow up with Dr. Crowther after completion of the conservative care.

14. When claimant returned to Dr. Crowther on February 2, 2023, Claimant said the injections did not give her any relief or improvement. Claimant had not, despite his recommendation and referral, had physical therapy. He recommended claimant continue with conservative treatment and medications including physical therapy and chiropractic care. (Ex. F, pgs. 198-199).

15. Claimant still had not gone to or attempted physical therapy or chiropractic treatment when she saw Brianne Wagner, N.P. at Dr. Crowther's office on March 16, 2023. She still maintained no treatment she had received had given her any improvement or relief. Sensation in her lower extremities, and provocative testing, were all normal. Despite claimant not attempting physical therapy, Nurse Wagner wrote claimant had failed conservative therapies for her lumbar spine, and she recommended surgery, a right L5-S1 hemilaminotomy and discectomy with facet cyst excision (Ex. F, pgs. 200-201). Nurse Wagner did not address causation or relatedness, or document review of any of claimant's medical records from her other providers.

16. Claimant saw Dr. Michael Rauzzino for an IME on February 13, 2023 at Respondent's request. A recording of the evaluation was submitted by both parties and was reviewed in its entirety by the ALJ in addition to Dr. Rauzzino's report and testimony. Claimant complained of low back pain and pain going down her right leg. Claimant denied prior low back pain. In addition to taking a history, Dr. Rauzzino performed a physical examination which included range of motion measurements. At the conclusion of the evaluation, Claimant was crying and complained of pain of 10 out of 10.

17. In Dr. Rauzzino's report, he states "I do not have an anatomic diagnosis to account for [Redacted, hereinafter SA] severe pain complaints. Her mechanism of injury is very benign and not likely to injure the lumbar spine or musculature. I don't believe that the chronic changes seen at L5-S1 are the cause of her current symptomatology. Based on my experience as a practicing neurosurgeon, I do not believe that the chronic changes seen there would produce the progressive and severe types of symptoms she is reporting…I therefore do not believe that her current symptoms and subjective complaints are related to the mechanism of injury described: they are not consistent with the radiographic findings seen on MRI. At best, SA[Redacted] may have sustained some sort of lumbar strain, but that should have resolved in a very brief period of time." (Respondent's Exhibit A, p. 21).

18. In addition to these opinions, Dr. Rauzzino testified at hearing that the initial pain diagram did not document a disc herniation injury since the pain was localized to the low back and did not radiate to the lower extremities. (Respondent's Exhibit C, p.35). He added that if the injury did include a disc herniation, there would be an indication of pain down to the lower extremities.

19. Dr. Rauzzino also opined that the surgery proposed by Dr. Crowther is not reasonable and necessary. This opinion is based on the risks of surgery which include scarring in the area of the surgery, weakening of the structure of the spine, chronic pain and failed back syndrome. He also questioned the reasonableness of surgery based on positive Waddell's testing. Finally, Dr. Rauzzino opined that the surgery proposed by Dr.

Crowther is to treat pain, and not to correct any anatomical or structural defect that is generating the pain.

20. Dr. Rauzzino's causation opinions and opinions on reasonableness and necessity are credible and persuasive.

21. Claimant testified that none of the treatment provided has improved her condition. She is worse now than when the injury occurred.

22. Dr. Rauzzino testified at hearing and wrote in his report there are no current diagnoses, need for medical treatment, or restrictions causally related to claimant's incident covered by this claim. (Ex. A, pp. 21-23).

22. The last report in the exhibits is from Dr. McNulty and is dated April 10, 2023. He noted that surgery had been denied by the workers compensation carrier. He maintained restriction of 2 pounds lifting, carrying, pushing and pulling. He also indicated that Claimant was not at MMI since she needed surgery.

CONCLUSIONS OF LAW

A. Medical Treatment

The Respondent is liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondent admits liability, it retains the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment to the same body part was proximately caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondent disputes the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

The existence of a preexisting condition does not disqualify a claim for medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not prove an injury objectively caused any structural anatomical change to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have

required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). But the mere fact a claimant experiences symptoms after an accident at work does not necessarily mean the employment aggravated or accelerated a preexisting condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Ultimately, the ALJ must determine if the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

Claimant failed to prove the L4-5 hemilaminectomy and discectomy is reasonable necessary and causally related to her industrial injury. I am persuaded by the opinions of Dr. Rauzino that the Claimant's request for surgery is not reasonable and necessary or related to the incident on February 6, 2022.

B. Temporary Disability

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*.

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019). Since Respondent has failed to prove any of the elements required under §8-42-105(3), Respondent's request to terminate TTD is denied.

ORDER

It is therefore ordered that:

1. Claimant's request for L5-S1 hemilaminotomy and discectomy with facet cyst excision surgery is denied and dismissed.

2. Respondent's request for termination of TTD is denied since Respondent has failed to satisfy any of the requirements of §8-42-105(3).

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

The issues addressed in this order concern the calculation of Claimant's average weekly wage (AWW). The specific question answered is:

I. Whether Claimant established, by a preponderance of the evidence, that she is entitled to a post injury increase in her AWW due to the loss of her employer paid health insurance coverage and other fringe benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a former Certified Nursing Assistant (CAN) and transportation driver for Respondent-Employer. She sustained compensable injuries to her low back on August 21, 2020.

2. Respondent admitted liability for Claimant's injuries and paid lost wage benefits based upon an AWW of $825.21 pursuant to a General Admission of Liability (GAL) filed by [Redacted, hereinafter LC] on October 21, 2022. (Resp. Ex. A, p. 1; Clmt's. Ex. 1, p. 1). It is unknown what information LC[Redacted] used to compute Claimant's AWW as no calculations are included on the GAL admitted into evidence. *Id*.

3. At hearing, Respondents asserted that Claimant's earnings from August 1, 2019 through July 31, 2020 support an AWW of $811.10 rather than $825.21. Respondents rely on Claimant's earnings history contained at Exhibit B, pp. 5-6 for their contention that Claimant's AWW equals $811.10. Claimant contends that Respondents AWW calculation is incorrect and that she is entitled to an increase above any calculated AWW because of the cost associated with replacing the loss of her employer paid group health insurance.

4. Respondents' Hearing Exhibit B, pp. 5-6 consists of a compilation of Claimant's wages extending from August 1, 2019 through July 31, 2020. Careful review of this exhibit supports a conclusion that Claimant is paid a recurring amount of $2,750.00 on the last day of each month. The ALJ infers from the evidence presented that this payment probably reflects Claimant's regular monthly salary. The remaining payments reflected on Claimant's earnings history probably represent periodic payments for ancillary services Claimant provided to Respondent-Employer or mileage reimbursement for distances traveled in connection with her driving position. Regardless, Respondents seemingly agree that these additional payments also constitute wages for inclusion in Claimant's AWW calculation.

5. Careful review of the admitted earnings history report supports a finding that for the 52 week work history beginning August 1, 2019 and ending with her July 31, 2020 paycheck, Claimant earned $42,177.07. Dividing Claimant's total wages by 52 weeks supports Respondents AWW calculation of $811.10. ($42,177.07 ÷ 52 weeks = $811.10). (Resp. Ex. B, pp. 5-6). Nonetheless, Claimant's employment was terminated and she lost her employer paid health insurance effective January 31, 2022. (Resp. Ex. C, p. 7). Claimant qualified for [Redacted, hereinafter CA] coverage beginning February 1, 2022. *Id.*

6. Although she qualified for CA[Redacted] coverage beginning February 1, 2022, the evidence presented supports a conclusion that Claimant did not continue her health coverage through CA[Redacted] following the loss of her employer paid group health insurance plan. Indeed, Claimant testified that she "did nothing" to replace her health insurance for "quite a while" until she "finally went out and purchased [her] own" coverage.

7. The evidence presented supports a finding that Claimant obtained replacement health insurance through a "[Redacted, hereinafter CH]" plan through [Redacted, hereinafter KR]. (Resp. Ex. D, p. 16). Her coverage was effective December 15, 2022. *Id.* Claimant's cost of conversion to the CH[Redacted] plan is $251.31/month or $58.00/week. ($251.31 × 12 months ÷ 52 weeks = $58.00). *Id*.

8. Claimant also had dental and vision insurance coverage while working for Respondent-Employer. The cost to continue Claimant's dental and vision insurance coverage through CA[Redacted] is $37.52/month and $4.49/month respectively. (Resp. Ex. C, p. 14). Respondents indicated that for purposes of calculating Claimant's AWW after the loss of her employer paid health insurance and conversion to her private plan on December 15, 2022, they added the weekly cost ($58.00) of Claimant's private health insurance and the monthly CA[Redacted] related costs for continued dental and vision insurance to her average weekly wage of $811.10. Respondents maintain that when the cost of Claimant's conversion to a similar or lesser health insurance plan and the CA[Redacted] cost for dental and vision coverage is added to her average weekly wage of $811.10, her new AWW equals $911.11. ($811.10 + $58.00 (weekly health insurance cost) + $37.52 (monthly dental cost) + $4.49 (monthly vision cost) = $911.11).

9. Claimant requests that the value of other "incidental" benefits she was receiving at the time of her injury be included in her AWW calculation, including employer paid contributions for [Redacted, hereinafter PA], life insurance and short term disability insurance. (Claimant's Testimony; Clmt's Ex. 4).

10. Based upon the evidence presented, the ALJ generally adopts Respondents' methodology in calculating Claimant's AWW. Indeed, the wage records submitted into evidence support Respondents' asserted AWW of $811.10. Moreover, the evidence presented substantiates a finding that Claimant converted to a private health insurance plan at a weekly cost of $58.00, which the ALJ finds should be included in her AWW pursuant to C.R.S. § 8-40-201 (19)(b) and 8-42-103 (2). Where the ALJ diverges from Respondents' AWW calculation is their inclusion of the monthly

rather than the weekly CA[Redacted] cost for continuing dental and vision insurance coverage. The weekly cost of Claimant's dental coverage through CA[Redacted] continuation is $8.66. ($37.52 × 12 months ÷ 52 weeks = $8.66). The weekly cost to continue Claimant's vision coverage through CA[Redacted] is $1.04. ($4.49 × 12 months ÷ 52 weeks = $1.04). Accordingly, the ALJ finds that Claimant has proven that her AWW should be increased to $878.80 ($811.10 + $58.00 + $8.66 + $1.04 = $878.80).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Average Weekly Wage

C. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App. 1993)[1]; *National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo.App. 1997).

D. Sections 8-42-102(3) and (5)(b), C.R.S. (2013), give the ALJ discretion to calculate an AWW that will fairly reflect a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*; *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (Colo. 2008). It is well settled that if the specified method of computing a claimant's AWW will not render a fair computation of wages for "any reason," the ALJ has

[1] The claimant in Campbell suffered three periods of temporary disability and for each subsequent period was earning a higher average weekly wage. The question resolved was whether Ms. Campbell was entitled to temporary disability benefits based on the higher AWW she was earning during each successive period of temporary disability. The Court held that it would be unjust to calculate her disability benefits in 1986 and 1989 on her substantially lower earnings she was making in 1979.

discretionary authority under, § 8-42-102(3) C.R.S. 2020, to use an alternative method to determine AWW. *Campbell v. IBM Corp., supra*.

E. Pursuant to § 8-40-201 (19)(b) provides:

> The term "wages" includes the amount of the employee's cost of continuing the employer's group health insurance plan and, upon termination of the continuation, the employee's cost of conversion to a similar or lesser insurance plan, and gratuities reported to the federal internal revenue service by or for the worker for purposes of filing federal income tax returns and the reasonable value of board, rent, housing, and lodging received from the employer, the reasonable value of which shall be fixed and determined from the facts by the division in each particular case, but does not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19).

F. The workers' compensation act also provides that upon termination of a fringe benefit or advantage enumerated in § 8-40-201 (19)(b), including the loss of employer paid group health insurance requires an injured workers' employer, or if insured the employers' workers' compensation carrier or third-party administrator to recalculate the AWW and pay benefits in accordance with this recalculation with interest beginning on the date the benefit was terminated. (C.R.S. § 8-42-103 (2)).

G. The best evidence of Claimant's actual wage loss and therefore a fair approximation of her diminished earning capacity at the time of her industrial injury comes from the wage records admitted into evidence. As found here, careful review of the wage records (Resp. Ex. B) persuades the ALJ that the computation of Claimant's AWW based upon 52 weeks of earnings yields an AWW of $811.10. Moreover, the evidence presented persuades the ALJ that Claimant is entitled to a recalculation of her AWW based upon the loss of her employer paid health, dental and vision insurance following the termination of her employment. Because the value of the additional advantages, including employer paid PA[Redacted] contributions, life insurance payment and short term disability insurance contributions are not enumerated in C.R.S. § 8-40-201 (19)(b), the request that they be included in the calculation of Claimant's AWW must be denied. Accounting for the cost of the conversion to a similar of lesser health plan and the CA[Redacted] cost to continue her dental and vision coverage, Claimant has established that she is entitled to an increase in her AWW to $878.80.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence, that she is entitled to an increase in her AWW to $878.80.

2. Pursuant to § 8-42-103 (2), Respondent-Employer shall pay benefits in accordance with the above outlined recalculated AWW with interest beginning on the date Claimant's employer paid health, dental and vision insurance was terminated.

3. All matters not determined herein are reserved for future determination.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-191-762-003

ISSUES

Has Claimant demonstrated, by a preponderance of the evidence, that all medical treatment after June 8, 2022 (including all recommendations and referrals made by Dr. Kennan Vance and Dr. Benjamin Sears) constitutes reasonable medical treatment necessary to cure and relieve Claimant from the effects of the admitted September 20, 2021 work injury?

Have Respondents demonstrated, by a preponderance of the evidence, that Claimant experienced an intervening event on June 8, 2022 or June 9, 2022 that was sufficient to sever Respondents' liability?

Has Claimant demonstrated, by a preponderance of the evidence, that on August 30, 2023 she suffered further injury while in the quasi-course of employment?

FINDINGS OF FACT

1. Claimant worked for Employer as a cashier and "self check-out host". On September 20, 2021 Claimant suffered an injury to her right shoulder while lifting a case of beer while working for Employer. Respondents have admitted liability for the September 20, 2021 work injury.

2. Following the September 20, 2021 injury, Claimant was diagnosed with a torn right rotator cuff. On December 22, 2021, Dr. Keenan Vance performed a repair of Claimant's torn rotator cuff. Specifically, the procedure included "diagnostic operative arthroscopy of the right shoulder with extensive intra articular debridement", and "repair of a massive retracted rotator cuff tear and subacromial decompression including acromioplasty".

3. Unfortunately, the initial surgery failed and on May 17, 2022, Dr. Vance performed a right reverse total shoulder arthroplasty. In the operative report, Dr. Vance noted "63-year-old female with osteoporosis that failed her rotator cuff repair. Intraoperatively on the rotator cuff repair we had difficulty with her anchors holding into the bone."

4. At the completion of the May 17, 2022 surgery, x-rays were performed and showed that the hardware from the reverse total shoulder arthroplasty was "intact and well seated".

5. Thereafter in June 2022, Claimant suffered two falls at home. Claimant testified that the first fall occurred on June 8, 2022, when she was exiting her vehicle, and she slipped and fell onto her right side.

6. Claimant further testified that she fell a second time on June 9, 2022. In this instance, Claimant was on her porch and placing a water bowl for her cat. As she returned to standing, she began to feel lightheaded and fell backwards onto her buttocks.

7. In a medical record dated June 22, 2022, Claimant was seen by her primary care provider (PCP) Dr. Daniel Sullivan regarding recent shortness of breath. At that appointment, Claimant reported to Dr. Sullivan that she had fallen twice at home. Dr. Sullivan recorded that the first fall occurred when "she was getting some bags out of the trunk and she landed on her side and knees." Dr Sullivan also noted that with this first fall she thought she had broken ribs on her right side. With regard to the second fall, Dr. Sullivan noted that it was "a porch fall as she began to black out due to not having her oxygen. She landed on her bottom".

8. On July 6, 2022, Claimant returned to Dr. Vance. In the medical record of that date, Dr. Vance noted Claimant's report that she had fallen at home "a couple of weeks ago". Claimant informed Dr. Vance that she "tried everything not to fall on her shoulder but she did break [four] ribs and she fell on her knee." Based upon Claimant's report of a fall, Dr. Vance ordered x-rays.

9. On that same date, x-rays of Claimant's right shoulder revealed a heme fracture of the glenoid with dislodgement of the glenoid component. Dr. Vance listed it as an active problem of an acute periprosthetic fracture around the prosthetic joint.

10. Dr. Vance advised Claimant that due to this fracture; another revision surgery would be necessary. Dr. Vance noted that such a revision surgery would require bone grafting and a new glenoid component. As a result, Dr. Vance referred Claimant to another surgeon with experience with such complex procedures. This referral was made to Dr. Benjamin Sears in Denver, Colorado.

11. On August 3, 2022, Claimant was seen by Dr. Sears. In reciting Claimant's history, Dr. Sears noted that after the reverse total shoulder arthroplasty, Claimant "had another fall about [six] weeks later". Dr. Sears noted that the fall resulted in loosening the surgical hardware that is now "completely dislodged". Dr. Sears recommended a two stage procedure and placement of a custom glenosphere. Prior to scheduling the procedure, Or. Sears also expressed concern about a possible infection and ordered a CT scan of Claimant's right shoulder. Dr. Sears also ordered nerve conduction studies.

12. On August 30, 2022, Claimant attended an independent medical examination (IME) with Dr. John McBride. In connection with the IME, Dr. McBride reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. In his IME report, Dr. McBride opined that Claimant's need for the initial rotator cuff repair and the reverse total arthroplasty were both related to the September 20, 2021 work injury. Dr. McBride also noted that both of those procedures were reasonable and necessary medical treatment. Dr. McBride further opined that Claimant's fall at home resulted in the fracture of Claimant's scapula and caused the glenosphere to become dislodged. Specifically, Dr. McBride noted that it was that fall

that was "the etiology for [Claimant's] need for revision of her reverse total shoulder replacement." Dr. McBride agreed that it would be wise to determine if there is an underlying infection in Claimant's shoulder. However, he further noted that if such testing was negative, then the trauma of the fall would be the cause of Claimant"s periprosthetic fracture, and therefore not related to the work injury.

13. Clamant resides in Grand Junction, Colorado and the IME with Dr. McBride was conducted in Denver. Respondents provided Claimant with air travel to attend the IME. On August 30, 2022, Claimant was at Denver International Airport (DIA) to take her flight back to Grand Junction. While at DIA, Claimant suffered another fall.

14. Claimant testified regarding her fall at DIA. Specifically, she testified that the fall occurred while she was on a moving sidewalk. While on that moving sidewalk, she moved to the side and "blacked out". When she was next conscious she discovered she had fallen face first with both of her hands extended in front of her. Claimant further testified that emergency services were called and she was transported to the hospital by ambulance. With regard to the reason for the loss of consciousness on this occasion, Claimant testified that Dr. Sullivan had diagnosed her with severe anemia.

15. The August 30, 2022 paramedic record states that when emergency services personnel arrived, Claimant was "prone at the end of a walkalator'. At that time, Claimant complained of pain in her right shoulder, and the shoulder was observed to be "grossly deformed". Claimant reported to emergency personnel that while on the moving sidewalk she turned her head and "her vision started to go black." Claimant further reported that she was unable to step off the moving sidewalk and "tripped at the threshold falling forward." At that time, Claimant denied losing consciousness.

16. Claimant was transported from DIA to the emergency department (ED) at University of Colorado Hospital. Claimant testified that she remained in the hospital for two days.

17. On September 7, 2022, x-rays of Claimant's right humerus showed an acute oblique fracture of the midshaft of the right humerus "at the tip of the humeral component of the reverse total shoulder arthroplasty".

18. On September 22, 2022, Dr. Sears authored a letter to Respondents' counsel. In that letter, Dr. Sears again noted his concern that there may be an underlying infection in Claimant's right shoulder. Dr. Sears also stated his opinion that Claimant's current need for revision surgery is related to her workers' compensation injury. In support of this opinion, Dr. Sears stated that "[t]he complication of a catastrophic base plate failure requiring revision arthroplasty would only occur as a secondary condition to her placement of a reverse shoulder arthroplasty which was due to a [workers' compensation] accident." Dr. Sears also noted that the most recent fall on August 30, 2022 resulted in "a relatively nondisplaced midshaft fracture distal to the stem of the implant." Dr. Sears noted the most recent fracture was being treated nonoperatively.

19. On October 10, 2022, an x-ray of Claimant's right humerus showed a prosthetic fracture of the right humerus.

20. On November 8, 2022, Dr. Sears performed revision surgery on Claimant's right shoulder. Specifically, the procedure included resection arthroplasty right reverse shoulder arthroplasty; placement of long intramedullary (IM) nail; placement of allograft at the humeral shaft fracture and at the glenoid; and placement of a cement spacer.

21. On January 13, 2023, Dr. McBride authored an addendum to his September 2022 IME report after reviewing additional medical records. In the addendum Dr. McBride reiterated his opinion that Claimant's falls at home resulted in the periprosthetic fracture. Dr. McBride also addressed Claimant's fall on August 30, 2022 at DIA. Dr. McBride opined that Claimant's falls that occurred after the successful reverse total shoulder arthroplasty are unrelated to the work injury.

22. Claimant testified that on April 25, 2023 she underwent the second revision surgery with Dr. Sears. Claimant testified that it is her understanding that in that second procedure Dr. Sears removed the IM nail from the humerus and performed a second replacement operation. Claimant testified she has improved since surgery and is now undergoing treatment with a bone clinic. Claimant testified that she is planning to undergo additional post-surgery physical therapy, as recommended by Dr. Sears.

23. Dr. McBride's testimony was consistent with his written reports. Dr. McBride testified that the procedures performed by Dr. Vance (the initial rotator cuff repair and the reverse total shoulder arthroplasty) were both reasonable, necessary, and related to Claimant's work injury. Dr. McBride noted that immediately following the reverse total shoulder procedure imaging showed that the hardware was intact and well seated. Dr. McBride testified that this indicates that the reverse total shoulder arthroplasty was successful. Dr. McBride further testified that the fall Claimant suffered that resulted in four broken ribs was a significant fall. Dr. McBride testified that he agrees with Dr. Vance that the periprosthetic fracture occurred secondary to that fall. With regard to Dr. Sears's concern related to infection, Dr. McBride testified that was a reasonable concern. Dr. McBride further testified that ultimately infection was ruled out in this case.

24. Prior to the June 8 and June 9, 2022 falls at her home, Claimant has a history of other falls. Medical records entered into evidence show that in October 2018, Claimant underwent x-rays following a "fall into tub back in August". On June 11, 2020, Claimant underwent a number of imaging studies (including x-rays of her right wrist and cervical spine, and a CT scan of her pelvis) after suffering a fall. This June 2020 fall is further addressed by Dr. Sullivan in a July 19, 2020 medical record. At that time, Dr. Sullivan noted that Claimant had suffered a sacral and pubic rami fracture in a fall.

25. The ALJ credits the medical records and the opinions of Drs. Vance and McBride. The ALJ finds that Claimant's fall at home on June 8, 2022 resulted in four broken ribs and the fracture to the reverse total shoulder hardware. That fall was not

related to the admitted work injury. The ALJ finds that Claimant has failed to demonstrate that it is more likely than not that medical treatment she received after the June 8, 2022 fall is related to the work injury. The ALJ also finds that Respondents have successfully demonstrated that it is more likely than not that the June 8, 2022 fall at home was an intervening event sufficient to sever Respondents' liability for the September 20, 2021 work injury.

26. With regard to specific medical treatment requested in this case, the ALJ finds that although the two revision surgeries performed by Dr. Sears were reasonable and necessary in treating Claimant's condition, those procedures are not related to Claimant's work injury.

27. Although the ALJ has determined that Respondents' liability in this matter was severed as a result of the June 8, 2022 fall at home, the ALJ must now turn to the August 30, 2022 fall at DIA. Specifically, the ALJ must determine whether the quasi-course of employment doctrine is applicable to that fall. Furthermore, if that fall did occur within the quasi-course of employment, the ALJ must consider Claimant's pre-existing condition of anemia and determine if there was any special hazard present at the time of the August 30, 2022 fall.

28. The ALJ finds that it is clear that on August 30, 2022, Claimant was within the quasi-course of employment as she was traveling home after the IME with Dr. McBride. However, the ALJ finds that Respondents have successfully demonstrated that Claimant's fall was precipitated by her pre-existing conditions of anemia and syncopal episodes. Her dizziness and resulting fall upon the moving sidewalk at DIA does not rise to the level of a "special hazard". The ALJ finds that the surface upon which Claimant fell is immaterial. Due to her pre-exisitlng tendency to fall, whether Claimant had fallen upon the walkway at DIA or on any other sidewalk, floor, or ubiquitous hard surface, the end result would have been the same.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, Claimant has failed to demonstrate, by a preponderance of the evidence, that medical treatment after June 8, 2022 is related to the admitted September 20, 2021 work injury. As found, the medical records and the opinions of Drs. Vance and McBride are credible and persuasive on this issue.

6. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See* Post *Printing* & *Publishing* Co. *v. Erickson,* 94 Colo. 382, 384, 30 P.2d 327, 328 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

7. As found, Respondents have demonstrated, by a preponderance of the evidence, that on June 8, 2022, Claimant suffered an intervening event that was sufficient to sever Respondents' liability related to the admitted work injury. As found, the medical records and the opinions of Drs. Vance and McBride are credible and persuasive on this issue.

8. Under the quasi-course of employment doctrine injuries sustained while undergoing or traveling to and from authorized medical treatment are compensable, even though they occur outside the ordinary time and place limitations of normal employment. *Excel Corp. v. Industrial Claim Appeals Office,* 860 P.2d 1393 (Colo. App. 1998); *Schreiber v. Brown* & *Root, Inc.,* 888 P.2d 274 (Colo. App. 1993). The rationale for this principle is that because an employer is required to provide medical treatment, and because the claimant is required to submit to treatment in order to receive benefits, travel to receive authorized treatment is an "implied part of the employment contract." *Turner v. Industrial Claim Appeals Office,* 111 P.3d 534 (Colo. App. 2004).

9. If the precipitating cause of an injury is a preexisting health condition that is personal to the claimant, the injury does not arise out of the employment unless a "special hazard" of the employment combines with the preexisting condition to contribute to the accident or the injuries sustained. *National Health Laboratories v. Industrial Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Rice v. Dayton Hudson Corp.,* W.C. No. 4-386-678 (ICAO July 29, 1999); *Stanley Alexander v. Emergency Courier Services,* W.C. No. 4-917-156-01 (ICAO Oct. 14, 2014). This rule is based upon the rationale that, unless a special hazard of the employment increases the risk or extent of injury, an injury due to the claimant's preexisting condition lacks
sufficient causal relationship to the employment to meet the arising out of employment test. *Ramsdell v. Hom,* 781 P.2d 150 (Colo. App. 1989); *Stanley Alexander v. Emergency Courier Services, supra.* In order for a condition of employment to qualify as a "special hazard" it must not be a "ubiquitous condition" generally encountered outside the workplace. *Ramsdell v. Horn, supra; Joan Briggs v. Safeway,* Inc. W.C. No. 4-950-808-01 (I.C.A.O July 8, 2015). Conversely, if the precipitating cause of the injury involves conditions or circumstances of the employment, there is no need to prove a "special hazard" in order for the injury to arise out of the employment. *Cabe/a v. Industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008); *H&H Warehouse v. Vicory,* 805 P.2d 1167 {Colo. App. 1990).

10. As found, the August 30, 2022 fall, while within the quasi-course of employment, occurred due to Claimant's preexisting conditions and no special hazard was present. Therefore, the injuries sustained on August 30, 2022 are not compensable. As found, the medical records and Dr. McBride's opinions are credible and persuasive on this issue.

ORDER

It is therefore ordered that Claimant's request for medical treatment after June 8, 2022 is denied and dismissed.

Dated July 5, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the

ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, It is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-212-813-001

ISSUES

1. Whether Claimant sustained a compensable injury on May 4, 2022.

2. Whether Claimant is entitled to medical benefits arising from a May 4, 2022 injury.

3. Whether Claimant is entitled to temporary disability benefits arising from a May 4, 2022 injury.

FINDINGS OF FACT

1. Claimant is an employee of [Redacted, hereinafter WC] who alleges a May 4, 2022 low-back injury. Claimant was loosening an oil filter on a road grader, and, when it broke loose, Claimant jolted forward and felt a warm, tingling sensation in his mid and left low back.

2. Prior to the incident, Claimant had a significant history of low back symptoms and treatment.

3. In 1991, Claimant had low back surgery to his L5-S1 level. Then, in 1996, Claimant had a laminectomy performed at the L4-L5 level.

4. Records from as early as March 23, 2013, documented that Claimant had a history of low back pain. Every few months during 2013 and 2014, records documented low back pain, and left anterior thigh numbness.

5. Records from 2017 through the date of injury documented consistent low back pain, including a number of instances where Claimant experienced temporary flare-ups in low back pain resulting from physical exertion. For example, a record from January 16, 2017, documented that Claimant threw out his mid back while lifting bins of mail. A month later, in February 2017, Claimant reported that his back when out when he jolted in response to somebody pretending to throw something heavy toward him. In October of that year, Claimant reported his low back went out as a result of having to sleep sitting up. He reported that his symptoms were so bad that he was almost unable to walk. In March 2019, Claimant reported that his back had gone out a couple weeks earlier. He again reported throwing his back out on the morning of October 8, 2019. On August 13, 2020, Claimant reported having "jammed" his back the night before while trying to scale a fence. On August 20, 2021, Claimant reported throwing his back out while rolling over in bed that morning. On April 28, 2022, Claimant reported that his back popped and started hurting while he was pulling out a post.

6. The Court finds that each of the instances of increased pain consisted of temporary flare-ups, and that none of these prior instances aggravated or accelerated the course of Claimant's degenerative low back condition.

7. On May 4, 2022, Claimant was attempting to remove an oil filter from the road grader at work as part of his work duties. When the filter came loose, Claimant jolted and experienced a pop and immediate low back pain. Claimant attempted to report the incident to his supervisor, but the shop was noisy, and Claimant's supervisor did not hear Claimant report the incident. Claimant finished working the rest of the day.

8. On May 6, 2022, Claimant saw his chiropractor, Dr. Blach. Claimant reported his "[h]ips out again." The May 6, 2022 record does not specifically document any complaints of low back symptoms and does not specifically mention the May 4, incident. The Court finds that Claimant did not complain of low back pain at the May 6, 2022 appointment.

9. Claimant again saw his chiropractor, Dr. Blach, on May 12, 2022, and reported that he "got bucked" in his road maintainer and instantly experienced low back pain radiating to his hip. Claimant also saw his primary care physician on May 12, 2022, at UC Health, for an annual follow-up. The record documents discussions regarding his medications, blood pressure, inhaler, diet, exercise, and other bodily functions. The May 12, 2022 record does not document a discussion regarding Claimant's low back symptoms. The Court finds that Claimant did not report low back pain at the May 12, 2022 annual follow-up with UC Health.

10. On May 19, 2022, Claimant saw his chiropractor, Dr. Blach. Claimant reported that he had felt good for three days then "felt it slip out while sleeping." He reported that his entire left side hurt, including his knee and ankle.

11. On May 27, 2022, Claimant saw Dr. Blach and reported that he was still experiencing pain radiating into his left leg. He reported that it possibly happened when he was working on his road grader a month earlier when he felt something go out. He reported that it troubled him ever since.

12. On August 4, 2022, Claimant completed a written report of injury, describing the oil filter incident as having occurred on May 25, 2022. Claimant reported, "I continued to work, but the injury has progressively grown worse."

13. On August 5, 2022, Claimant underwent a lumbar spine MRI. The radiologist noted multilevel disc herniations, including:

> "This started at T10-11, was also present at T1 1-12. There was a large disc herniation at L2-3 which displaced the left L2 nerve root with mild to moderate central spinal stenosis at that level. A large herniation at L3-4

displaced and compressed multiple nerve roots of the cauda equina and produced moderate to severe central spinal stenosis and moderate to severe bilateral lateral recess stenosis. There was also mild stenosis at L4-5 with moderate to severe bilateral lateral recess stenosis at that level. There was a medium to large right paracentral disc osteophyte complex at L5-S1 which displaced the right S1 nerve roots without central stenos is. There was normal cord signal and no compression fracture on MRI."

14. Claimant reported to the radiologist that his pain was "manageable most of the time" and that he was taking over-the-counter analgesics only as needed.

15. At an August 10, 2022 visit to Yuma District Hospital, Claimant reported that his pain had increased progressively such that he was experiencing new difficulties performing work duties in a timely manner and pain extending down into his toe consistent with an L5 dermatome.

16. On January 9, 2023, Claimant reported that he was finally getting some improvement and able to stand for ten to fifteen minutes up until about two weeks ago when something was falling out of the door of his truck and he quickly reached down to grab it, causing his symptoms to worsen again.

17. The Court finds the above-referenced medical records to have accurately documented Claimant's subjective complaints at those appointments.

18. Claimant underwent an independent medical examination (IME) with Dr. Douglas Scott at Respondents' request on October 12, 2022. Dr. Scott issued a report consistent with the IME. Dr. Scott recounted Claimant's medical history, including Claimant's 1991 L5-S1 discectomy and 1996 L4-L5 laminectomy, as well as Claimant's treatment from 2013 through the date of the report. Ultimately, Dr. Scott opined that Claimant's reported history of the injury was inconsistent with the medical records, pointing out the May 12, 2022 medical report that did not document a low back injury. He opined that Claimant "has a spinal problem at multiple levels which are probably daily aggravated by his obesity, diabetes and general deconditioning." The Court finds Dr. Scott's opinions in his IME to be credible.

19. At hearing, Claimant testified on his own behalf. Claimant testified that he injured his low back on May 4, 2022, as described above. Claimant testified that he reported his alleged injury to his supervisor, [Redacted, hereinafter JL], that same day, but that he did not believe JL[Redacted] heard him over the engine noise in the shop. Claimant testified that he saw his chiropractor on May 6, 2022, and reported his symptoms. Claimant testified that he made it through the weekend, and that by Monday it was not so bad, that he "[d]idn't think about it," and he returned to work. Though, Claimant reported increased difficulty spending time standing up.

20. Claimant also testified that on May 10, 2022, he again experienced low back pain that did not go away after an incident in which he was operating his road grader and the road grader downshifted, causing Claimant to be thrown forward and then back again. Claimant testified that after August 2, 2022, Claimant has not returned to work.

21. On cross examination, Claimant testified that he would still experience pain of 6 out of 10 on a daily basis, that he would experience numbness in his leg only when standing, and that he did not know how much he could lift, but he suspected up to one hundred pounds. Claimant testified that he could do his job without weight restrictions, but would likely need an accommodation in order to avoid further injury.

22. Respondent called JL[Redacted] to testify as well. JL[Redacted] testified that he did not recall Claimant reporting an injury on May 4, 2022. The Court finds this testimony credible.

23. Respondents also called Dr. Scott to testify at hearing. Dr. Scott testified consistently with his IME report. He clarified that Claimant's low back symptoms would be expected to worsen over time given Claimant's history. He observed that Claimant's prior surgeries predisposed adjacent disc levels to degenerate and collapse, causing increased chronic low back pain. He also noted that Claimant's diabetes would cause microvascular narrowing of the blood vessels that provide blood to the lumbar discs, resulting in acceleration of his disc structure degeneration. Regarding Claimant's periodic flare-ups, Dr. Scott testified that these could occur in the absence of trauma and do not result in a worsening of Claimant's low back condition.

24. The Court finds Dr. Scott's testimony credible.

25. The Court finds Claimant's testimony credible, except insofar as he testified: that he sustained an injury on May 4, 2022; that his symptoms or level of function deteriorated as a result of the May 4, 2022 incident; that his symptoms did not improve between May 4, and May 10, 2023. To the extent that Claimant's testimony conflicts with medical records, the Court finds the medical records more credible.

26. The Court finds that the May 4, 2022 incident, just like those of January 2017, February 2017, October 2017, March 2019, October 2019, August 2020, August 2021, April 2022, May 19, 2022, and January 9, 2023, merely elicited pain symptoms without aggravating or accelerating Claimant's degenerative low back condition so as to require additional medical treatment or cause a disability.

27. Claimant likely experienced symptoms at the time of the May 4, 2022 incident, and those symptoms likely endured for several days. However, the Court finds that it

is more likely than not that Claimant did not require any medical treatment nor sustain any disability as a result of the May 4, 2022 incident.

28. Claimant did continue to see his chiropractor after the May 4, 2022 incident, but those early visits, including the May 6 and May 12 visits do not document a May 4, 2022 injury while removing an oil filter. The Court finds that Claimant did not mention the incident at those appointments because it was not apparent to him at that time that the May 4, 2022 incident was related to his ongoing low back pain. From this, the Court infers that the May 4, 2022 incident was not significant enough to aggravate or accelerate Claimant's pre-existing low back pain.

29. The Court finds it most likely that Claimant's low back condition did eventually deteriorate with time, necessitating greater medical intervention, but that the deterioration was more likely the result of a natural progression of his pre-existing condition rather than an aggravation or acceleration resulting from the May 4, 2022 incident.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals*

Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

An injury must “arise out of and occur in the course of” employment to be compensable, and it is the claimant's burden to prove these requirements by a preponderance of evidence. Section 8-41-301, C.R.S.; *see also*, *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999).

The existence of a preexisting condition will not prevent an injury from "arising out of" the employment. *Peter Kiewit Sons' Co. v. Indus. Comm'n of Colo.*, 124 Colo. 217, 220, 236 P.2d 296, 298 (1951); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990). Generally, an injury will be found compensable if the employment aggravated, activated, caused, or accelerated a medical disability or need for medical treatment. *Id*.

An incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *F. R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Barba v. RE 1J School District*, W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company*, W.C. No. 3-850-024 (December 14, 1989). Rather, a claimant must establish to a reasonable degree of probability that the need for additional medical treatment is proximately caused by the aggravation, and is not simply a direct and natural consequence of the pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo.1949); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990) *cf. Valdez v. United Parcel Service*, 728 P.2d 340 (Colo. App. 1986).

As found, the May 4, 2022 incident, just like those of January 2017, February 2017, October 2017, March 2019, October 2019, August 2020, August 2021, April 2022, and January 9, 2023, most likely elicited pain symptoms without aggravating or accelerating Claimant’s degenerative low back condition so as to require additional medical treatment or cause a disability. The Court finds it most likely that Claimant’s low back condition did eventually deteriorate with time, requiring greater medical intervention, but that the deterioration was not causally related to the May 4, 2022 incident.

Therefore, because the Court finds that Claimant’s May 4, 2022 incident neither aggravated nor accelerated his pre-existing low back condition so as to cause a need for

medical treatment or disability, the Court concludes that Claimant has not proven that it is more likely than not that he sustained a compensable injury on May 4, 2022, while working for Employer.

ORDER

It is therefore ordered that:

1. Claimant's claim for compensation for the alleged May 4, 2022 injury is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-207-183-001

ISSUES

- Did Claimant prove she suffered a compensable injury to her right shoulder?
- If Claimant proved a compensable injury, the following issues will be addressed:
- Was treatment provided by Dr. Benjamin Kam, including a right shoulder surgery on June 9, 2022 reasonably needed to cure and relieve the effects of the injury?
- Was treatment provided by and on referral from Dr. Kam authorized?
- Is Claimant entitled to TTD commencing June 9, 2022?
- The parties stipulated to an average weekly wage of $924.14.

FINDINGS OF FACT

1. Claimant works for Employer as a baker, preparing items such as bread, croissants, and pastries a large-scale commercial kitchen. The kitchen produces thousands of items daily for consumption around the resort. Claimant is one of approximately 20 bakers working at the property.

2. Claimant performs a variety of tasks during a typical shift, including lifting and carrying bags of ingredients, mixing doughs and batters, moving baking trays, and pushing wheeled racks of bread and pastries.

3. Most of the work is performed below chest height. However, a few tasks such as loading baking trays on the top shelves of the rolling racks or accessing higher shelves in the walk-in cooler require reaching at or above shoulder level. Claimant estimated she performs these tasks up to 45 times per shift.

4. In early January 2022, Claimant experienced the gradual onset of pain in her right shoulder. There was no specific injury or other inciting event. Claimant noticed symptoms at work but also while performing various tasks at home.

5. Claimant told her supervisor, [Redacted, hereinafter MH], that her shoulder was bothering her in min-January 2022. She did not state the symptoms were related to her work.

6. Claimant saw Dr. Benjamin Kam, an orthopedic surgeon, on January 19, 2022. Claimant knew Dr. Kam because he had previously worked with her husband. Claimant reported the onset of "spontaneous right shoulder pain approximately 2 weeks ago." Claimant did not mention work activities as a cause of the symptoms. Hawkins, Neer, and empty can tests were positive, suggesting rotator cuff pathology and

impingement. O'Brien's test was positive, consistent with a SLAP lesion. Dr. Kam opined, "Given her history of no trauma and her underlying ligamentous laxity, I do think her current issues relate to the mild multidirectional instability causing her pain." He prescribed NSAIDs and referred Claimant to physical therapy.

7. Claimant continued working her regular job, although she self-modified her duties by asking co-workers to perform whisking tasks.

8. Claimant's started PT on January 24, 2022. She described "acute insidious onset R shoulder pain" in early January. She said her pain was aggravated by routine activities such as sleeping, washing her hair, putting on a seatbelt, and dressing. She could not stir items at work. The therapist opined Claimants symptoms and clinical findings were consistent with a partial rotator cuff tear, labral instability, and subacromial impingement. Claimant attended PT for approximately three months.

9. Claimant followed up with Dr. Kam on May 4, 2022. He noted the PT was initially helpful, but she had recently "hit a standstill and began to digress." Dr. Kam recommended an MR arthrogram. At hearing, Claimant could identify no specific trigger or cause for the worsening of her shoulder symptoms.

10. The MR arthrogram was completed on May 12, 2022. It showed a probable SLAP tear and large paralabral cyst in the spinoglenoid notch. Dr. Kam recommended surgery.

11. Claimant returned to Dr. Kam on June 1 to discuss the etiology of her shoulder issues. Dr. Kam opined, "while she did not sustain an injury at work—she did not fall or get hit with a blow on her shoulder—her shoulder has definitely been aggravated by her regular work duties. These have included lifting, pushing, pulling heavy objects sometimes overhead, mixing batters and baking items in the kitchen, and rolling and pressing baked goods."

12. Also on June 1, 2022, Claimant reported her shoulder problems to Employer as a work-related injury. She ascribed the injury to "repetitive motion." Employer gave Claimant a designated provider list from which she chose Concentra.

13. Claimant saw Mendy Peterson, PA at Concentra on June 2, 2022. She described "spontaneous onset" of symptoms with no specific incident. She denied any recent changes to her work duties or ergonomics. Ms. Peterson opined the symptoms were neither caused nor aggravated by Claimant's work. She noted no temporal relationship between Claimant's work and the onset of symptoms, and no risk factors associated with her work. Dr. George Johnson reviewed Ms. Peterson's report and agreed with the conclusions. He put Claimant at MMI with no impairment and released her to work with no restrictions.

14. Dr. Kam performed arthroscopic right shoulder surgery on June 9, 2022. He repaired an unstable Type 2 SLAP tear, debrided a partial-thickness rotator cuff tear, and performed a biceps tenodesis.

15. Dr. Wallace Larson performed an IME for Respondents. Dr. Larson opined Claimant did not suffer a work-related occupational disease involving her shoulder. Dr. Larson explained that SLAP tears are not typically associated with repetitive activities, except for cases involving repetitive forceful overhead use such as pitching. Although Claimant's job requires heavy lifting, pushing, and pulling, she performs only occasional overhead activities. As a result, her work does not involve sufficient repetition, force, or positions to cause a SLAP tear or rotator cuff tears. The spinoglenoid cyst was probably incidental to the SLAP tear. Additionally, Dr. Larson concluded Claimant's work did not aggravate or accelerate her underlying, nonwork-related shoulder pathology. Dr. Larson emphasized the distinction between correlation and causation, and opined the mere fact Claimant felt pain while working did not establish a work-related condition absent any established risk factors or other medically plausible causal link.

16. Dr. Larson and Dr. Johnson's opinions are credible and more persuasive than any contrary opinions in the record.

17. Claimant failed to prove a compensable injury to her right shoulder.

CONCLUSIONS OF LAW

To establish a compensable claim, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the "peculiar risk" test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

A pre-existing condition does not disqualify a claim for compensation where the industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). An injury need not cause any identifiable structural change to a claimant's underlying anatomy to cause a compensable aggravation. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). A purely symptomatic aggravation is sufficient for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment they would not otherwise have required. *Id*. However, the mere fact that an employee experiences symptoms while working does not compel an inference the work caused the condition or the need for treatment. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008). The claimant must prove by a preponderance of the evidence that their work proximately caused the need for treatment.

As found, Claimant failed to prove a compensable injury to her right shoulder. Dr. Larson and Dr. Johnson's opinions are credible and more persuasive than any contrary opinions in the record. There is no persuasive evidence Claimant's work caused the SLAP tear, spinoglenoid cyst, or any other pathology shown on the MRI or during surgery. Even though Claimant's job required heavy lifting and frequent pushing and pulling, most of the tasks are performed below chest height. The occasional overhead activities did not entail sufficient force or repetition to cause the SLAP tear.

Nor did Claimant prove her work aggravated, accelerated, or combined with the nonwork-related shoulder pathology to cause disability or a need for treatment. The fact that certain work tasks elicited symptoms does not establish a causal nexus between the work and the treatment Claimant received. Claimant had an unstable Type 2 SLAP tear, which reasonably required treatment irrespective of her work. The persuasive evidence fails to establish that Claimant's job triggered or accelerated the need for treatment, or otherwise altered the course of her condition.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email

address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: July 7, 2023

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-229-971-001; 5-236-519-001

STIPULATIONS

At the commencement of the hearing, the parties agreed that at the time of his death, [Redacted, hereinafter MB] had an average weekly wage (AWW) of no less than $1,420.00, which equates to a weekly death benefit of $946.66. Questions regarding the amount of MB's[Redacted] overtime earnings and its effect on his AWW were outstanding at the time of hearing. Thus, the parties requested additional time to obtain supplementary wage records and recalculate the decedent's AWW and death benefit to reflect his overtime income if applicable. Assuming that they may be unable to obtain the aforementioned overtime records prior to the deadline for issuance of an order, the parties requested that the ALJ issue an order apportioning the minimum death benefit of $946.66 among MB's[Redacted] dependents per § 8-42-121 of the Workers' Compensation Act. However, on June 28, 2023, after review of MB's[Redacted] overtime wages, Respondents filed an unopposed motion for approval of a stipulation increasing MB's[Redacted] AWW to $1,610.47 which corresponds to a death benefit rate of $1,073.54. The parties also agreed to reserve all statutory offsets. The parties' June 28, 2023 stipulations were approved by order of the undersigned on June 29, 2023.

REMAINING ISSUE

I. Apportionment of the stipulated death benefit of $1,073.54 between MB's[Redacted] dependents per C.R.S. § 8-42-121.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. The above captioned claim numbers were consolidated for hearing pursuant to WCRP 9-6 (A) by order of Pre-hearing Administrative Law Judge (PALJ) John Sandberg on April 28, 2023. (Resp. Ex. K).

2. Decedent worked as a police officer for the [Redacted, hereinafter FD]. On February 2, 2023, while pursuing a fleeing suspect, MB[Redacted] fell from a bridge landing on the hard surface below and sustaining multiple blunt force injuries. (Resp. Ex. C, p. 29). MB[Redacted] succumbed to his injuries 9 days later, on February 11, 2023. *Id.*

3. MB[Redacted] is survived by his widow [Redacted, hereinafter KA]. He is also survived by two dependent children, [Redacted, hereinafter IB], born April 15, 2014, to [Redacted, hereinafter VB], decedent's former wife, and [Redacted, hereinafter MA], born September 19, 2021, to MA[Redacted]. (Resp. Ex. D and E). No disputes

surround the dependency of MA[Redacted], IB[Redacted] or MA[Redacted]. Indeed, the evidence presented supports a finding that each of these individuals are presumed to be wholly dependent persons pursuant to C.R.S. § 8-41-501(1) (a) & (b) and no party presented evidence sufficient to rebut this presumption.

4. As decedent and VB[Redacted] were divorced, they shared custody of their minor daughter, IB[Redacted], prior to his death. KA[Redacted] testified that prior to MB's[Redacted] passing, custody of IB[Redacted] was divided 50 percent to MB[Redacted] and 50 percent to IB[Redacted] or roughly 3½ days/week each. Since MB's[Redacted] death, KA[Redacted] testified that the 50/50 custody split has ended and she has not seen IB[Redacted] since MB's[Redacted] funeral.

5. At the time of his death, MB[Redacted] was subject to a court order requiring him to pay child support in the amount of $372.53/month to VB[Redacted] for the care and support of IB[Redacted]. (Resp. Ex. B, pp. 27-28). This child support payment ended with MB's[Redacted] untimely death.

6. KA[Redacted] testified that in addition to MB's[Redacted] child support payments, she and MB[Redacted] would also pay for IB's[Redacted] living expenses while she stayed with them to include food, clothing, school supplies and the costs of incidentals such as the fees associated with her sports activities. No evidence regarding the precise cost of these additional living expenses was presented. Based upon the evidence presented, the ALJ finds that IB[Redacted] is presently residing exclusively with her mother and the costs associated with her care and support now rest solely with VB[Redacted].

7. MB's[Redacted] untimely death has garnered significant community attention and KA[Redacted] has received considerable financial support from the public. KA[Redacted] testified that a "Go Fund Me" account has been established in her name and that between this account, community donations and public fundraisers, approximately $130,000.00 has been raised for her and the children. She testified that donations are still coming in and she plans to establish a trust fund with the assistance of her attorney for both IB[Redacted] and MA[Redacted] from some of these donations. According to KA[Redacted], she, with the assistance of her attorney, will set the terms of the trust, including the percentage of funds to be directed into the trust for IB[Redacted] and MA[Redacted]. She testified that she will place an equal amount of funds from the charitable accounts into the trust funds for IB[Redacted] and MA[Redacted]. KA[Redacted] also testified that IB[Redacted], akin to she and MA[Redacted], will also receive a share of MB's[Redacted] Fire & Police Pension Association (FPPA) survivor's benefit.

8. KA[Redacted] testified further that she was aware that specific fundraising has been carried out especially for IB's[Redacted] benefit, but no details concerning these efforts or the amounts raised were presented and KA[Redacted] acknowledged that she had no understanding of VB's[Redacted] financial situation.

9. Neither IB[Redacted] nor MA[Redacted] have other sources of income.

10. KA[Redacted] testified further that she received a "great gift" when the mortgage on the home she owned jointly with MB[Redacted] was paid off by Tunnels to Towers, an organization dedicated to lessening the financial burden/stress on families of fallen law enforcement officers.

11. Prior to MB's[Redacted] passing, KA[Redacted] worked as a registered hospice nurse. As a hospice nurse, KA[Redacted] indicated that she earned approximately $70,000.00 annually. KA[Redacted] testified credibly that she has been unable to return to work as a hospice nurse as she continues to adjust to the sudden and tragic passing of KA[Redacted]. Nonetheless, KA[Redacted] stated that she plans to return to work at some point in the future.

12. KA[Redacted] testified that with the passing of MB[Redacted] his entire income and support into their household has been lost. Moreover, she testified that with MB's[Redacted] absence in the home, the cost of day care for MA[Redacted] will increase. Accordingly, she proposed that MB's[Redacted] death benefit be allocated equally among herself and the two minor children. Given the financial benefits that KA[Redacted] has received, including the various charitable accounts and the payoff of her outstanding mortgage, Mr. Werner proposed that MB's[Redacted] death benefit be allocated 40% to IB[Redacted] and 60% to KA[Redacted] and MA[Redacted].

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. C.R.S. § 8-43-201.

B. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo.App. 2002). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact

finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Apportionment of Death Benefits

D. The Workers' Compensation Act provides that spouses and the minor children (under the age of 18) of an injured worker who succumbs to his/her injuries are presumed to be wholly dependent and entitled to death benefits. C.R.S. § 8-41-501(1) (a) and (b). Section 8-41-503(1), C.R.S., provides: "Dependents and the extent of their dependency shall be determined as of the date of the injury to the injured employee, and the right to death benefits shall become fixed as of said date irrespective of any subsequent change in conditions except as provided in section 8-41-501(1) (c). Death benefits shall be directly payable to the dependents entitled thereto or to such person legally entitled thereto as the director may designate." As noted above, there is no dispute regarding the dependency of the various claimants in this case. Moreover, the parties have stipulated to the amount of MB's[Redacted] average weekly wage (AWW) and the corresponding death benefit representing sixty-six and two-thirds percent of this AWW. Nonetheless, because there are multiple claimants in this case, including a dependent child who now resides separately from KA[Redacted] along with various financial considerations to account for, the parties have requested an apportionment of the death benefit among the interested parties.

E. Pursuant to § 8-42-121, C.R.S. 2022, "[d]eath benefits shall be paid to such one of more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable". This statutory provision does not require that all persons deemed to be wholly dependent be treated on an equal basis. (*Spoo v. Spoo*, 142 Colo. 268, 358 P.2d 870 (Colo. 1961). Rather, it is well settled that the ALJ may consider the relative incomes and the unique financial circumstances of the claimants when determining a "just and equitable" apportionment of the death benefit in any particular case. *Spoo v. Spoo supra*; See also, *Randall Ward v. Apex Heating and Air*

Conditioning, W.C. 4-129-484 (ICAO February 8, 2001). Simply stated, a "just and equitable" distribution will turn on the unique facts of each case.

F. In this case, the evidence presented supports a conclusion that MB's[Redacted] child support payment to VB's[Redacted] for IB's[Redacted] care/support terminated with his passing. Moreover, the ALJ is convinced that both MB[Redacted] and KA[Redacted] were contributing, as a family unit, to IB's[Redacted] care and support at a level above the formal child support payment while she resided with them as part of the custody arrangement between the MB and VB[Redacted] following their divorce. Because the shared custody arrangement ended with MB's[Redacted] untimely death and IB[Redacted] is now living exclusively with VB[Redacted] this additional support has also come to an end. While the ALJ applauds VB's[Redacted] sagacity and foresight to protect both MA[Redacted] and IB's[Redacted] future needs through the establishment of a trust fund, IB[Redacted] is entitled to and presently needs financial support. Without MB's[Redacted] child support payment and the extra maintenance he and KA[Redacted] were providing, IB[Redacted] will undoubtedly experience a substantially different standard of living than the one she enjoyed while MB[Redacted] was living.

G. Although the financial and emotional impact of MB's[Redacted] death to all of the claimant's in this case cannot be overstated, the ALJ is convinced that IB[Redacted] is at particular risk currently and in need of increased support. At 9 years of age, IB[Redacted] is capable of understanding that her father's absence in her life is permanent. Moreover, she is now estranged from her half-brother and stepmother, whom the ALJ is convinced played a significant role in her life. Accordingly, the ALJ is persuaded that the opportunity for IB[Redacted] to continue her sports and other activities are of particular importance to provide her with an outlet and a distraction from external issues caused by the loss of her father. Based upon the evidence presented, the ALJ is also convinced that the current costs of caring for and supporting IB[Redacted] are higher than those associated with nurturing MA[Redacted].

H. While the ALJ is convinced that KA[Redacted] and MA[Redacted] have and will face future challenges connected to the loss of MB[Redacted] and his income, KA[Redacted] is highly educated and this education, combined with her proven skills as a hospice nurse, affords her the prospect of returning to a profession where she has earned upwards of $70,000.00 in the past. Nothing in the evidence presented supports a conclusion that KA[Redacted] cannot return to her prior employment in order to support MA[Redacted] and herself. Indeed, KA[Redacted] testified that she plans to return to work at some point as the trauma caused by MB's[Redacted] premature death subsides. In this case, the ALJ finds the time that KA[Redacted] has taken away from work in order to recover from and adjust to the life altering events forced upon her reasonable. Nonetheless, she no longer bears any of the costs associated with IB's[Redacted] upbringing and IB[Redacted] needs the financial support that MB[Redacted] and by extension, she (KA[Redacted]) was providing.

I. Given IB's[Redacted] current need for additional support combined with

the fact that KA's[Redacted] financial circumstances have been aided by the generosity of her community, including the payoff of her outstanding mortgage[1], the ALJ is convinced that an even split of the death benefit between the claimant's in this case will disadvantage IB[Redacted]. After considering the individual circumstances of the claimants to this case and the foreseeable economic benefit that will inure to KA[Redacted] and MA[Redacted] when she returns to work, the ALJ is persuaded that an even split of MB's[Redacted] death benefit will leave IB[Redacted] with insufficient support. Given the totality of the evidence presented, the ALJ concludes that a "just and equitable" division of MB's[Redacted] stipulated death benefit weighs in favor of apportioning a slightly higher share to IB[Redacted] than KA[Redacted] and MA[Redacted].

ORDER

It is therefore ordered that:

1. MB's[Redacted] stipulated $1,073.54 death benefit is apportioned to the claimant's as follows: 37%, ($397.21) to IB[Redacted], 33% ($354.27) to KA[Redacted] and 30% ($322.06) to MA[Redacted]

2. Per the parties approved stipulation, all statutory offsets are reserved for future determination.

3. All other matters not determined herein are also reserved for future determination.

DATED: July 7, 2023

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or

[1] The ALJ finds KA[Redacted] genuinely thankful for the financial assistance extended to the family by Tunnels to Towers in paying off the household mortgage.

service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-215-787-002

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable work injury on August 17, 2022.
II. Whether Claimant is entitled to medical benefits.
III. Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is a twenty-five-year-old[1] manufacturing engineer who worked for Respondent-Employer on August 17, 2022. Claimant's work was generally not physical and his duties primarily included desk work. At the time of injury, Claimant was earning a yearly salary of $70,000.00, plus bonuses.

2. On Wednesday, August 17, 2022, near the end of the workday, Claimant assisted some coworkers with lifting a 400-pound machine out of a track to help prevent it from rusting overnight. While going from a low squat to a more upright position, Claimant felt a sudden flash or tingling sensation in his low back.

3. Claimant finished out the workday. He felt something was a little off in his back, but it was nothing worth complaining about. When he went home that day, he felt a tension in his low back, but no pain. The sensation continued on that Thursday and Friday, as he finished out his work week. Up through that Friday, Claimant did not have any lost time or require any medical treatment. Claimant was also able to perform his normal activities of daily living and his work duties without difficulty during this period.

4. On Saturday, August 20, 2022, Claimant was at home doing laundry. He bent over to pick up laundry detergent and felt a shooting sensation and overwhelming pain in his low back. The pain began before Claimant was even able to touch the detergent.

5. Claimant had difficulty getting out of bed the next day, Sunday. He called the Kaiser Permanente advice line to report his symptoms. The record generated by Kaiser Permanente noted: "pt was bending over yesterday and developed a sharp pain in his back… works at a machine shop and 3 days prior to injury was lifting several heaving things at work but no other issues." The Court finds the meaning of "no other issues" to mean no issues other than those low back symptoms Claimant complained of to Kaiser Permanente.

6. Claimant returned to work on Monday, August 22, 2022, and reported the injury to his supervisor, [Redacted, hereinafter MI].

[1] Claimant was 25 years old at the time of injury, not at the time of this Order.

7. Claimant treated with a chiropractor, Dr. Fox, for his low back pain. Dr. Fox recommended three sessions of chiropractic care per week with the frequency dropping off over the next twelve weeks. Dr. Fox advised Claimant that the total episode of care would cost $1,560.00 if paid in full.

8. Claimant reported the injury to his employer on Thursday, August 25, 2022. Respondents filed an Employer's First Report of Injury that same day and a Notice of Contest on September 26, 2022.

9. Claimant provided a recorded statement to Respondents on August 30, 2022. Claimant told Respondents that he did not think anything was potentially wrong with his back on the date of injury, that he did not have any pain initially, and that he was able to work August 17 through August 19.

10. Claimant received a designated provider list. However, the list was for medical providers in the Colorado Springs area, which did not correspond with where Claimant lived. Claimant obtained a list of providers in the lunchroom at his Employer and sought treatment at Concentra.

11. On September 15, 2022, Claimant's treater, William Hazell, PA-C, at Kaiser Permanente, authored a letter on behalf of Claimant which stated in relevant part:

> Based on my recollection of the clinic exam and the patient is presentation in my opinion the heavy lifting at work several days prior to the significant exacerbation of the pain while lifting laundry detergent could have been a contributing factor to muscle spasms. While expressed to him that I feel it could have been a contributing factor I also expressed to him that I could not state for certain that it actually was a contributing factor.

12. Claimant obtained treatment with Dr. Gordon Arnott at Concentra beginning on August 31, 2022. Dr. Arnott noted that "the history stated that he works at a machine shop and that three days prior he was lifting several heavy things at work but at no time was there any pain or any symptoms at that time… NONE.. noted by record." Nevertheless, Dr. Arnott opined that the objective findings were consistent with a work-related mechanism of injury.

13. Respondents obtained a record review by Dr. John Burris on December 16, 2022. Dr. Burris authored a report in which he opined in relevant part:

> The provided records do not support the reported workplace lifting event on 8/17/2022 resulted in an injury. . . . Due to the 3-day delay in onset of low back pain, the low back pain he first experienced on 8/20/2022 cannot be causally related to the reported 8/17/2022 workplace event. . . . Based on the information provided, Mr. Hanson's report of experiencing low back pain beginning on 8/20/2022 appears independent and unrelated to the reported 8/17/2022 workplace event.

14. The Court does not find Dr. Burris's opinions in his report to be credible.

15. Dr. Burris testified at hearing based on his record review. Dr. Burris testified that patients are not necessarily always correct about the mechanism of injury. Dr. Burris testified that typically a patient will experience pain within hours of a muscle strain with inflammation that would have progressed within one hour to one day. And, although picking up detergent is a relatively trivial event, Dr. Burris testified that trivial events can cause injuries, such as disc herniations from sneezing. Dr. Burris felt that the onset of symptoms was most telling. Dr. Burris conceded on cross-examination that bending over is a pretty benign action and would not be highly likely to injure somebody.

16. The Court finds Dr. Burris's testimony generally credible, except insofar as he opined that the August 17, 2022, event was not a significant causal factor in Claimant's onset of symptoms on August 20, 2022.

17. Claimant obtained an independent medical examination (IME) with Dr. John Hughes on March 23, 2023. Dr. Hughes reviewed Claimant's medical history and opined that Claimant's account of events was consistent with medical records. Dr. Hughes noted that Claimant had no prior history of low back problems. He diagnosed Claimant with lumbosacral sprain or strain with right-sided sacroiliac joint dysfunction. He felt Claimant was injured at work on August 17, 2022. The Court finds Dr. Hughes' opinions credible.

18. Claimant testified at hearing as follows. On the date of injury, Claimant was lifting a four-hundred-pound machine out of a track to help prevent it from rusting overnight. While going from a low squat to a more upright position, he felt a sudden flash or tingling sensation in his low back. He went on to work the rest of the day. Claimant went home and felt tension in his back, but no pain. The symptoms persisted, but Claimant did not experience any pain in his back until Saturday, August 20, 2022. That Saturday, Claimant was bending over to pick up laundry detergent when he experienced pain in his low back. He experienced the pain before he was even able to touch the detergent. Claimant returned to work that following Monday. By that time, the pain was tolerable, but by Monday night, the pain had worsened. Claimant was unable to return to work that Tuesday and Wednesday due to pain.

19. Claimant also testified that upon Claimant's reporting of the injury, the Employer provided Claimant with a designated provider list. However, the list was for providers in Colorado Springs, which did not correspond with where Claimant lived. Claimant obtained a list of providers in the lunchroom at his Employer and sought treatment at Concentra, one of the designed providers.

20. Claimant also testified that he earned $70,000.00 per year as of his date of injury. He also testified that he received annual bonuses that varied between $3,000.00 and $5,000.00. Claimant testified that he also received a retention bonus of $3,393.00 shortly before his injury.

21. The Court finds Claimant's testimony credible. Claimant's wage records show that Claimant typically earned a biweekly salary of $2,692.31 at the time of his injury, which corresponds roughly with an annual salary of $70,000.00. The wage records also show that Claimant received a $3,000.00 annual bonus several months after his injury, which is consistent with his testimony.

22. The Court finds Claimant has proved that it is more likely than not that he sustained a compensable injury on August 17, 2022, arising out of and in the course of his employment with Employer, and that the condition became disabling and required medical treatment on August 20, 2022. The Court finds that the injury most likely left Claimant's low back in a weakened condition, which in turn proximately contributed to Claimant's worsening on August 20, 2022, while bending over at home to pick up laundry detergent. Thus, the Court finds that the August 17, 2022 incident caused the need for medical treatment.

23. The Court finds that Claimant proved that medical treatment is reasonably necessary to cure and relieve him of the effects of his industrial injury.

24. The Court also finds that an AWW of $1,346.15 most fairly represents Claimant's wage-earning capacity as of the date of injury. The Court finds that while Claimant proved that a reasonable, present-day, cash-equivalent value could be placed upon those bonuses—as those bonuses were real and definite—Claimant failed to prove that he potentially had reasonable access on a day-to-day basis to bonuses or an immediate interest in receiving a bonus under appropriate, reasonable circumstances. Therefore, the Court finds that it was a fringe benefit not included among those enumerated under § 8-40-201(19)(b), C.R.S. (2022), and are therefore not "wages" as defined by the Workers' Compensation Act.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo.App.2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo.App.2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Commission,* 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo.App.2000).

Compensability

Section 8-41-301(1)(c), C.R.S. (2022), requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment.

The industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Office*, 131 P.3d 1224 (Colo.App.2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001). Thus, if an industrial injury leaves the body in a weakened condition and the weakened condition proximately causes a new injury, the new injury is a compensable consequence of the original industrial injury. *Price Mine Service, Inc. v. Indus. Claim Appeals Office*, 64 P.3d 936 (Colo. App. 2003); *Lanuto v. Amerigas Propane, Inc.*, W.C. No. 4-818-912, (July 20, 2011). The preceding principle constitutes the "chain of causation analysis" and provides that a subsequent injury is compensable if the "weakened condition played a causative role in the subsequent injury." *Fessler v. United Airlines*, W.C. No. 4-654-034 (Dec. 19, 2007). *See Martinez v. City of Colorado Springs*, W.C. No. 5-073-295 (Sept. 12, 2019) (an infection that resulted from claimant's weakened condition was compensable because it was a natural, although not necessarily a direct, result of the work-related injury).

As found above, Claimant has proved by a preponderance of the evidence that he sustained a compensable injury on August 17, 2022, arising out of and in the course of his employment with Employer, and that the condition worsened on August 20, 2022, so as to require medical treatment. But for the August 17, 2022 workplace injury, Claimant would not have experienced the onset of pain on August 20, 2022, and subsequently required medical treatment.

Medical Benefits

The Colorado Workers' Compensation Act ("the Act") provides that an employer must provide medical care "as may reasonably be needed . . . to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2022). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found above, medical treatment is reasonably necessary to cure and relieve Claimant of the effects of his August 17, 2022 injury. Thus, the Court finds and concludes that Claimant established by a preponderance of the evidence the need for medical treatment.

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo.App.1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82.

As found above, Claimant's annual salary was $70,000.00, which corresponds with an AWW of $1,346.15. However, the parties dispute whether Claimant's annual and retention bonuses should be included in the AWW calculation.

Section 8-40-201(19)(a), C.R.S., defines "wages" as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied." Subsection (b) clarifies that "fringe benefits" are specifically excluded from the definition of "wages" unless the fringe benefit is among those enumerated therein.

To determine if Claimant's bonuses were indeed an included wage and not an excluded fringe benefit, the Court must consider "whether a reasonable, present-day, cash equivalent value can be placed upon [the bonuses] and whether Claimant has reasonable access on a day-to-day basis, either actually or potentially, to [the bonuses], or an immediate expectation interest in receiving [the bonuses] under appropriate, reasonable circumstances." *Meeker v. Provenant Health Partners*, 929 P.2d 26, 28 (Colo.App.1996).

As found above, Claimant proved that a reasonable, present-day, cash-equivalent value could be placed upon those bonuses, as the bonuses he had received were definite. However, Claimant failed to prove that he potentially had reasonable access on a day-to-day basis to bonuses or an immediate interest in receiving a bonus under appropriate, reasonable circumstances. Therefore, the bonuses were a fringe benefit not included among those enumerated under § 8-40-201(19)(b), C.R.S. (2022), and are therefore not "wages" as defined by the Workers' Compensation Act. As such, the Court declines to include the bonuses in calculating Claimant's AWW.

Therefore, Claimant's AWW is $1,346.15.

ORDER

1. Claimant proved that it is more likely than not that he sustained a compensable injury on August 17, 2022. Respondents shall file an admission consistent with an August 17, 2022 injury.

2. Respondents shall authorize and pay for reasonable and necessary medical treatment.

3. Respondents shall admit for an AWW of $1,346.15.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 10, 2023

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-225-347-001

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course and scope of his employment with Employer?

- If Claimant has proven he sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable, necessary and related to his work injury?

- At the commencement of the hearing, the parties agreed that if Claimant has proven a compensable injury arising out of and in the course and scope of his employment with Employer that Claimant was entitled to an award to temporary total disability ("TTD") benefits beginning December 9, 2022, but the parties reserved the issues of average weekly wage ("AWW") and offsets.

FINDINGS OF FACT

1. Claimant was employed by Employer as lineman apprentice. Claimant testified he was hired on June 17, 2017 and was completing Employer's apprenticeship program which is a four year program involving two tests per year (eight tests total) in order to become a journeyman lineman. Claimant testified that he worked out of Employer's Rifle office and the area covered by the Rifle office included from Carbondale to Debeque, Colroado.

2. Claimant testified his job duties included providing construction and maintenance to power lines and help to get power lines up and running if there is a power outage. Claimant testified he would use trucks provided by Employer to travel to the job sites. Claimant testified that in order to arrive to work he would usually carpool with his boss or use his personal vehicle.

3. Claimant testified that in December 2022 he had one final break out test to complete in order to become a Journeyman Lineman. Claimant testified that the final test was performed at Employer's testing facility located near Brighton, Colorado. Claimant testified that the final test would take 40 hours to complete.

4. Claimant testified he was scheduled to begin his test on Monday December 12, 2022. Claimant testified that he had advised his supervisor that he was scheduled to take the test the week of December 12, 2022. Claimant testified that his supervisor authorized Claimant to obtain a rental car for travel to the testifying facility. Claimant testified that Employer allowed Claimant to obtain the rental car during the week of December 5, 2022. Claimant testified that he was authorized to rent the vehicle

on Wednesday of that week, but did not rent the vehicle until Thursday, December 8, 2022[1], when he obtained a ride from his co-worker to the Grand Junction airport and rented the vehicle. Claimant then drove the vehicle back to the Rifle office where he organized all of his tools needed for the breakout test and left the tools by his desk. Claimant testified he completed his work and then went home and packed for his trip to Denver.

5. According to the rental agreement entered into evidence at hearing, the rental car was leased to Claimant with a return date of December 16, 2022 on Employer's account.

6. Claimant's supervisor, [Redacted, hereinafter JD], confirmed in his testimony that Claimant was authorized to obtain a rental car on the Wednesday of the week prior to Claimant's testing taking place. JD[Redacted] testified that the reason for allowing employees to rent a vehicle several days prior to a planned trip was that Employer has experienced difficulty in having rental vehicles available if they are not picked up prior to when the vehicle is needed. JD[Redacted] testified that Claimant rented the vehicle pursuant to JD's[Redacted] instructions on Thursday, but JD[Redacted] testified that Claimant was not authorized to take the rental vehicle to Claimant's home after work. JD[Redacted] testified that Claimant should have left the rental vehicle at the service center.

7. Claimant testified that he had been in contact with two other employees who lived in the Denver area prior to his trip to Denver who had been in the Apprenticeship program with Claimant and had made plans to travel to Denver on Friday, December 9, 2022 and spend the weekend training with his two co-employees. Claimant testified that one of the co-employees, [Redacted, hereinafter SS], would be taking the breakout test with Claimant the week of December 12, 2022. Claimant testified that other co-employee, AP[Redacted], had already taken the test and was willing to help Claimant and SS[Redacted] study the weekend before the test. Claimant testified he was friends with SS[Redacted] and AP[Redacted] in addition to being co-workers.

8. AP[Redacted] and SS[Redacted] testified at hearing on behalf of Claimant. Both AP[Redacted] and SS[Redacted] confirmed that arrangements had been made for Claimant to travel to Denver early to study in preparation for the upcoming test.

9. Claimant testified he had made arrangements with his mother to have her watch his two children the weekend before the test as he was not going to be in town for the weekend. Claimant also had made arrangements for his mother to watch his dog and had left the dog at her house the weekend prior. Claimant's mother testified consistent with Claimant in this regard.

---

[1] The ALJ notes that Respondents stated in their proposed Findings of Fact, Conclusions of Law and Order that it is undisputed that the vehicle that Claimant was in at the time of the accident was rented on Wednesday, December 8, 2022." The ALJ agrees that the parties agreed that the vehicle was rented on December 8, 2022, the day before the accident, but takes judicial notice that December 8, 2022 was a Thursday.

10. Claimant testified that he had planned to stay with friends over the weekend while doing the studying and had made arrangements with his mother to take care of his children that weekend while he was out of town. Claimant testified he has joint custody of his children with their mother. Claimant's mother testified at hearing and confirmed that Claimant had requested that she watch his kids the weekend of December 10th and 11th.

11. Claimant testified that on December 9, 2022 he woke up and headed to work to turn in his evaluations that were due the next week. Claimant testified that he intended to turn in the evaluations and pick the equipment he needed from work to complete the breakout test, including his helmet, climbing boots, climbing belt, rubber gloves, high voltage tester, etc. Claimant testified his intention was to stop by the Rifle facility and then continue on to Denver. Claimant testified that he would normally be wearing fire resistant clothing if he was going to work but since he was planning on continuing on to Denver, he was wearing jeans and camouflage clothes.

12. JD[Redacted] testified that if Claimant had indicated to him prior to December 9, 2022 that he intended to travel to Denver on Friday, JD[Redacted] would not have had an issue with Claimant making the drive to Denver on Friday. Claimant and JD[Redacted] both acknowledged that Claimant had not communicated his intention to travel to Denver prior to December 9, 2022.

13. Claimant was involved in a motor vehicle accident ("MVA") while driving in the rental car between his house and the Rifle facility. Claimant testified he took the West Rifle exit from the interstate and came cross a herd of elk crossing the road, which caused Claimant to stop the vehicle. Claimant was rear ended by a vehicle traveling at a high rate of speed while stopped in his vehicle.

14. Claimant was taken by ambulance to the Grand River Medical Center Emergency Room ("ER") following the MVA. Claimant complained of headache, neck pain, and a four-centimeter scalp laceration upon being admitted to the ER. The emergency room noted no thoracic or abdominal trauma on initial or secondary survey. Claimant's neck as noted to have full range of motion, and thoracic and lumbar spine were normal. Claimant underwent a cervical spine computed tomography ("CT") scan which showed no acute findings. Claimant also underwent a CT scan of the head which showed a small posterior right parietal scalp hematoma but no acute intracranial abnormality. Claimant was diagnosed with a concussion and head laceration which was repaired with staples. Claimant's concussion symptoms were noted to be improving on discharge.

15. Claimant was evaluated by Dr. Steven Brown at Work Partners Occupational Health on December 21, 2022. Dr. Brown noted Claimant presented with complaints of head, neck, upper and lower back pain, hip and right leg pain, right shoulder pain, vision problems, and bilateral numbness of his hands and feet. Dr. Brown noted that Claimant had a prior work injury to his neck, right shoulder, and back in 2013-2014. Dr. Brown diagnosed Claimant with sprain of joints and ligaments of other parts of the neck, a concussion with loss of consciousness of 30 minutes or less,

pain the right shoulder, pain in the left hip, headache, dizziness and giddiness and an abrasion of the right lower leg. Dr. Brown noted that Claimant had a laceration to the scalp overlying the occiput which was repaired with staples that had already been removed. Claimant was instructed to discontinue the Flexeril he had been given in the ER as this could also cause dizziness. Dr. Brown noted Claimant appeared to have some global tenderness throughout the spine that Dr. Brown surmised was more myofascial and consistent with the mechanism of being rear-ended at a high speed. Dr. Brown referred Claimant for six chiropractic treatments with Dr. Chris Angello, and released Claimant to modified duty work.

16. Claimant returned to Dr. Brown on December 28, 2022. Dr. Brown noted Claimant continued to complain of pain in the head and neck which he described as sharp and achy and severe. Claimant also reported headache, light sensitivity, lightheadedness, nausea and dizziness. Claimant also reported additional issues with his left hip, right shin and right shoulder blade. Claimant was referred for additional chiropractic treatment and six vestibular therapy sessions with Karri Mullany to address vestibular hypofunction as a result of concussion.

17. On January 11, 2023, Claimant returned to Dr. Brown, who noted that Claimant reported some numbness in his frontal forehead along with headaches that cause nausea, light sensitivity and vision changes. Claimant reported he was still unable to drive and experienced dizziness when he stood up. Claimant reported left hip and low back pain were at level 0, but noted he still had some mild aching depending on the activity level. Claimant also noted that his right calf and shin pain were barely noticeable. Claimant continued to complain of right shoulder pain. Dr. Brown recommended meclizine for vertigo.

18. Claimant returned to Dr. Brown on February 1, 2023, and continued to complain of concussion symptoms that were described by Claimant as severe. Claimant continued to report horrible nausea along with continued issues with his neck and head. Claimant reported his low back and hip issues were much better after he was able to get in for chiropractic visits. With regard to his right shoulder issues, Claimant reported he continued to have tight stiff symptoms that he reported were mild. Dr. Brown noted Claimant was scheduled to start vestibular therapy later this week.

19. Claimant testified he stopped receiving medical treatment after insurance denied his claim for workers' compensation benefits. Claimant testified he additionally received glasses based on the fact that he could not see properly after the accident. Claimant testified he did not wear glasses prior to the work injury.

20. Respondents referred Claimant for an Independent Medical Examination ("IME") with Dr. Tashof Bernton, on March 14, 2023. Dr. Bernton reviewed some of Claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. According to the report, at the time of the examination, Dr. Bernton had the medical records from Work Partners through December 28, 2022 (in his cover letter, Dr. Bernton indicated that he only had records through December 21, 2022, but the report references the December 28, 2022

evaluation at Work Partners). Dr. Bernton testified that at hearing that he subsequently was able to review the additional medical records related to Claimant's MVA, including the treatment with Work Partners through February 1, 2023 and the chiropractic treatment along with the ER records and the ambulance report.

21. Dr. Bernton noted in his report that Claimant was involved in an MVA and reported a loss of consciousness. Dr. Bernton noted Claimant's examination revealed increased tone in the right rhomboid area with tender trigger points along some increased tone of the paraspinous musculature in the cervical region with associated tender trigger points. Dr. Bernton noted in his report that based on his limited information available, Claimant was three months out from an injury which involved a quite significant concussion with loss of consciousness and has persistent post- concussive deficits including some cognitive and memory deficits, visual difficulties and some balance difficulties as well as musculoskeletal symptoms which Dr. Bernton opined to be residual myofascial symptoms, and associated headache that was either myofascial or posttraumatic. Dr. Bernton opined that Claimant would likely be at maximum medical improvement ("MMI") as a result of the injury approximately six months post injury.

22. Dr. Bernton noted in his testimony at hearing that it was almost six months from the date of injury, and Claimant exhibited that he is cognitively intact and could potentially return to deskwork, potentially with restrictions. Dr. Bemton noted that while Claimant presented at the IME with the persistence of dizziness, double vision and some difficulty with tandem gait and word finding, Dr. Bernton noted Claimant did not appear to have difficulty with word finding during Claimant's testimony.

23. Dr. Bernton testified that a visual evaluation (5-6 more visits), prism glasses and transition out of them, 6 to 15 physical/vestibular therapy visits, and 5 to 10 chiropractic treatments would be reasonable and necessary medical treatment related to the MVA Dr. Bemton opined that Claimant's musculoskeletal complaints were diffuse strains that would resolve with time, and did not require additional medical care.

24. After JD[Redacted] picked up Clamant at the ER following the MVA, JD[Redacted] took Claimant to the rental vehicle that was in the salvage yard where it had been towed. JD[Redacted] testified that Claimant obtained a back pack, books, paperwork and a hat out of the rental car. JD[Redacted] testified that Claimant did not retrieve a suitcase out of the rental car. JD[Redacted] testified he did see items at Claimant's desk including his hard hat, boots, climbing gear, fire resistant clothing and additional books.

25. While JD[Redacted]testified that Claimant was not allowed to drive the rental vehicle home, Claimant presented the testimony of [Redacted, hereinafter MB], an employee for Employer who was the IBW president for six months for Employer, who testified at hearing that he would take the rental vehicles to his home when he was provided with a vehicle by Employer. MB[Redacted] testified at hearing that travel time would be considered compensated when an employee would travel to Denver. In this regard, MB[Redacted] testified that he would always charge at least five hours for his travel time for

trips to Denver, but if the trip took additional time, he would charge the additional travel time as well.[2]

26. Notably, there is insufficient evidence to establish that with regard to the car rental on December 8, 2022 that Claimant was under any instruction from Employer to not take the vehicle home. While there was some testimony from Claimant and JD[Redacted] that there was a discussion regarding a previously rented vehicle that Claimant was to leave at the Employer's premises, Claimant's testimony at hearing was that he was not instructed by Employer that he was no allowed to take the rental vehicle to his residence after it was rented on December 8, 2022. Moreover, MB[Redacted] testified that there was no company policy that would prohibit an employee from having a vehicle rented by Employer for travel at their home overnight. The AlJ finds Claimant's testimony credible in this regard.

27. The MVA in this case occurred while Claimant was traveling from his home to the Employer's premises. Claimant testified his intention was to pick up his gear from the office and continue to Denver for the planned weekend trip. JD[Redacted] testified that leaving on Friday for the planned trip to Denver would have been allowed by Employer. The AlJ finds Claimant's testimony with regard to his intentions to travel to Denver on Friday, December 9, 2022 after dropping his paperwork off at the office and picking up his work gear to be credible.

28. The parties agree that Claimant's travel to Denver was a necessary part of his employment and was authorized by Employer as evidenced by the fact that Employer arranged for Claimant's rental vehicle. The parties simply disagree as to whether Claimant was in travel status at the time of the MVA due to the fact that Claimant had not informed Employer of his intentions to leave on December 9, 2022 for the travel to Denver. However, as testified to by JD[Redacted], Employer would have allowed Claimant to leave early for Denver if he had requested this permission prior to December 9, 2022.

29. While the MVA occurred at approximately 6:39 a.m. and prior to Claimant's usual start time of 7:00 a.m., Claimant was traveling in a rental vehicle that was provided by Employer. Because Employer provided Claimant with the rental vehicle, and because the AlJ finds Claimant's testimony that his intention was to pick up his gear from the Employer's premises and continue on to Denver, the AlJ finds that Claimant has established that it is more probable than not that he was in travel status at the time of his injury. The AlJ finds, based on the testimony of Claimant at hearing, that Claimant's travel in this case was at the express or implied request of the Employer as Claimant's travel to Denver was necessary for Claimant to complete his testing to become a journeyman electrician. The mere fact that Claimant was intending to stop by the Employer's office on his way to Denver in order to study with co-workers does not

[2] The ALJ notes that MB[Redacted] was working in Employer's office in Grand Junction while Claimant was working in the office in Rifle and recognizes that the travel time "charged" by MB[Redacted] may not equally apply to Claimant's travel time. The relevance of MB's[Redacted] testimony is simply that travel time by employees for trips to Denver is compensated by Employer.

take Claimant out of travel status where the credible evidence establishes Claimant's intentions were to continue on to Denver after dropping off his paperwork.

30. The ALJ credits the testimony of Claimant at hearing along with the supporting medical records and finds that Claimant has established that the medical treatment he received from the ER and Work Partners represents reasonable medical treatment necessary to cure and relieve the Claimant from the effects of the injury.

31. The ALJ notes that the parties agreed that Claimant would be entitled to temporary disability benefits, but reserved the issue involving offsets to the disability benefits based on Claimant's receipt of disability benefits from other sources.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S.

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8- 43-201, C.R.S., 2022. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo . App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. In general, claimants injured while going to or coming from work fail to qualify for recovery because such travel is not considered performance of services arising out of and in the course of employment. *Berry's Coffee Shop, Inc. v. Palomba,* 161 Colo. 369, 423 P.2d 2 (1967); *Madden v. Mountain West Fabricators,* 977 P.2d 864 (Colo. 1999). However, a travel status exception applies when the employer requires the Claimant to travel. The essence of the travel status exception is that when the employer requires the Claimant to travel beyond a fixed location established for the performance of his or her duties, the risks of such travel become the risks of employment. *Staff Administrators, Inc. v. Industrial Appeals Claims Office,* 958 P.2d 509 (Colo. App. 1997) *citing Martin K. Eby Construction Co. v. Industrial Commission,* 151 Colo. 320, 377 P.2d 745 (1963).

5. Colorado courts recognize exceptions to this general rule where circumstances create a causal connection between the employment and an injury occurring under special circumstances while an employee is going to or coming from work, such as:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a "zone of special danger" out of which the injury arose.

Madden v. Mountain West Fabricators, id. Travel may be contemplated by the employment contract when the employee's travel is at the employer's express or implied request or when such travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work. *See Electric Mutual Liability Insurance Co. v. Industrial Commission,* 154 Colo. 491,391 P.2d 677 (1964).

6. In addressing the third variable, the *Madden* court determined the travel would be contemplated by the employment contract in the following examples (1) when a particular journey is assigned by the employer; (2) when the employee's travel is at the employer's expense or implied request or when such travel confers a benefit on the employer beyond the sole fact of the employee's arrival at work; or (3) when travel is singled out for special treatment as an inducement to employment. *Madden, supra.*

7. In this case, Claimant was required to travel to Denver to complete his testing to become a journeyman electrician. In order to accommodate Claimant's travel to Denver, Employer made arrangements to have Claimant obtain a rental vehicle on Thursday, December 8, 2022, including having a co-employee provide Claimant with a ride to the rental vehicle facility and allow the vehicle to be rented under the Employer's account.

8. The ALJ credits the testimony of the Claimant at hearing that he was intending to drop off paperwork with Employer on the morning of December 9, 2022 and then continue on to Denver for his final test at the time he was involved in the MVA. The ALJ finds that Claimant has proven by a preponderance of the evidence that he was engaged in travel that was contemplated by the employment contract when he was involved in the MVA on December 9, 2022 as he was effectively engaged in travel to Denver as contemplated by his employment with Employer.

9. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office,* 931 P.2d 570 (Colo. App. 1996).

10. As found, Claimant's medical treatment with the ER at Grand River Medical Center and his medical treatment with Work Partners was reasonable medical treatment necessary to cure and relieve the Claimant from the effects of the industrial injury.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course and scope of his employment with Employer.

2. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of his industrial injury, including the medical treatment provided by Grand River Medical Center and Work Partners.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. In **addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: July 11, 2023.

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-199-502-001

ISSUES

I. Whether [Redacted, hereinafter DM], [Redacted, hereinafter SH], and [Redacted, hereinafter EH] are dependents of the decedent and entitled to death benefits.

II. Apportionment of death benefits among the dependents.

III. Average Weekly Wage.

IV. Payment of funeral benefits.

V. Appointment of a guardian ad-litem.

STIPULATIONS

- The decedent, [Redacted, hereinafter EG], was employed by the respondent [Redacted, hereinafter IG] d/b/a [Redacted, hereinafter SG], , on the date of the accident and subsequent death. His death arose out of and occurred within the course and scope of his employment.
- SG[Redacted], was an uninsured subcontractor of [Redacted, hereinafter AR] on the date of the accident and subsequent death.
- AR[Redacted] is the statutory employer of the decedent and is insured by [Redacted, hereinafter PA].
- EH[Redacted] waived his right to claim any dependent benefits.
- DM[Redacted] and SH[Redacted], stipulated to have dependent benefits apportioned 50/50 – if each is entitled to dependent death benefits.

FINDINGS OF FACT

Based on the evidence and stipulations presented at hearing, the Judge enters the following specific findings of fact:

Accident- Statutory Employer

1. EG[Redacted], the decedent, was a 47-year-old gutter installer for IG[Redacted], d/b/a SG[Redacted].
2. On January 13, 2022, EG[Redacted] fell from a ladder while in the course and scope of his employment with SG[Redacted]. He suffered multiple injuries and died at the scene of the accident.
3. SG[Redacted] was uninsured and AR[Redacted] is the statutory employer of the decedent and is insured by PA[Redacted].

Wife and Children

4. On December 13, 1996, DM[Redacted], then age 21, and decedent, EG[Redacted], age 25, were married in Ciudad Valles, San Luis Potosi, Mexico.

5. DM[Redacted] and EG[Redacted] had two children while in Mexico:

   a. SH[Redacted], born on April 18, 2005. SH[Redacted] was 16 years old on the date of the decedent's death.

   b. EH[Redacted], born on November 10, 2000. EH[Redacted] was 21 years old on the decedent's date of death.

6. The decedent and his wife kept living together, with their children, in Mexico, until March 2014.

7. In March 2014, the decedent traveled to Colorado to work. While working in Colorado, the decedent rented a room in the house of [Redacted, hereinafter RH], his sister-in-law.

8. In 2015, the decedent returned to Mexico and stayed with his family for a few months. He then returned to Colorado where he kept working and continued renting a room in his sister-in-law's house.

9. After 2015, the decedent did not return to Mexico to stay with his family. The decedent did, however, remain married to his wife, DM[Redacted], and provided financial support to his wife and children on a consistent basis up until his death.

10. DM[Redacted] testified at the hearing and her testimony is found to be credible. Based on her testimony, the ALJ finds:

    - At the time his death, she and EG[Redacted] were married, and she resided in Mexico while EG[Redacted] was living and working in the United States to support his family.
    - She was married to EG[Redacted] on a continual basis since December 13, 1996.
    - Although they remained separated by geography, they remained married up until his death.
    - On a regular basis EG[Redacted] would contact her and send money to her for household expenses, including tuition for their children, food, utilities, and other family requirements. These payments were sent and documented by wire transfer.
    - Although he did not return back to Mexico after 2015 and stay with his family, he regularly communicated with her and his two children by phone.
    - She has not remarried since his death, and she has not been married to anyone else at any time.
    - She had two sons with the decedent. SH[Redacted] and EH[Redacted]. SH[Redacted] still lives with her at home in Mexico. He remains in preparatory school for which she continues to pay tuition and related expenses. EH[Redacted] is no longer in school and has a job.
    - Before EG[Redacted] death she remained dependent on the money that he would send to her in Mexico.

- She is unaware of any prior or subsequent marriages of EG[Redacted].
- She is unaware of any other children that EG[Redacted] may have ever had other than SH[Redacted] and EH[Redacted].

11. RH[Redacted] also testified at the hearing. Based on her testimony, which the ALJ credits, the ALJ finds:
    - She is the sister-in-law of EG[Redacted] and the sister of DM[Redacted].
    - The decedent rented a room from her in her house while he worked in Colorado.
    - Her sister, DM[Redacted], was married to EG[Redacted] at the time he died on January 13, 2022.
    - The decedent would call his wife and children almost every day.
    - The decedent would discuss with RH[Redacted] that he was sending money to his wife, DM[Redacted], in Mexico, on a regular basis.
    - DM[Redacted] would also discuss with RH[Redacted] that she was receiving money from the decedent on a regular basis.
12. Based on the testimony of DM[Redacted] and RH[Redacted], it is found that at the time of the decedent's death, DM[Redacted] and EG[Redacted] were married and were not legally separated, and DM[Redacted] and their children were being supported by the decedent.

Money Paid by IG[Redacted], d/b/a SG[Redacted].

13. Based on the testimony of IG[Redacted] and RH[Redacted], the ALJ finds that after the death of EG[Redacted], IG[Redacted], owner of SG[Redacted], paid various amounts of money to RH[Redacted], to provide to DM[Redacted] for living expenses and to pay funeral expenses-which she did. The amounts paid are as follows:
    - $1,600 for funeral benefits in Mexico.
    - $5,000 for the funeral costs in Colorado.
    - $500 per month from January 2022 through February 2023, to help support the family.
14. It is unclear from the record whether DM[Redacted] paid any funeral expenses in excess of the $6,600 dollars paid by IG[Redacted]. While DM[Redacted] testified as to the amount of funeral expenses that were incurred, she testified as to the amounts paid in pesos. Thus, the court cannot determine whether any funeral remain unpaid and whether DM[Redacted], or anyone else, paid funeral expenses in excess of the $6,600 paid by IG[Redacted].

Testimony of SH[Redacted]

15. SH[Redacted] is the son of the decedent and DM[Redacted] and he testified at the hearing. Based on his testimony, which the ALJ credits, the ALJ finds the following:
    - He is the son of the decedent.

- The decedent called him regularly.
- His parents were still married at the time of the accident and the death of the decedent.
- The decedent sent his mother money for the family on a regular basis.
- He was living with his mother at the time of the death of the decedent.
- He was depended on his father for his support at the time of his father's death.

16. SH[Redacted] also testified about the allocation of death benefits. He testified that the dependent benefits should be apportioned 50/50 between he and his mother.

Testimony of EH[Redacted]

17. EH[Redacted], who was 21 at the time of the decedent's death, also testified at the hearing. He testified that he is not claiming any dependent benefits. This testimony is consistent with the statements of his attorney, who said he was waiving any right to claim any dependent benefits.

Additional Testimony of IG[Redacted]

18. IG[Redacted] d/b/a SG[Redacted], also testified about the wages and bonuses he paid the decedent as well as the money he paid to the decedent's family after the accident. Based on his testimony, which the ALJ credits, the ALJ finds that:
    - The claimant was paid a fixed wage of $200 per day and was paid by check.
    - The decedent did not work every day. The decedent would work fewer days during the winter months since they could not work when the temperature was below 40 degrees.
    - He gave the decedent cash bonuses throughout the year and the cash bonuses averaged about $1,500 to $2,000 during 2021.

Average Weekly Wage

19. Based on the checks issued to claimant, the ALJ finds that the claimant earned $26,670 during the last six months, or 26 weeks of 2021. The ALJ finds that using the last six months of 2021 considers the variation of the claimant's working hours during the summer and winter months of 2021 and just before his accident. Dividing $26,670 by 26 weeks results in an average weekly wage of $1,025.77 and a death benefit rate of $683.85 per week.

20. Based on the testimony of IG[Redacted], it is found that the decedent was paid a bonus on a number of occasions throughout 2021 and that the total amount of the bonuses equaled approximately $1,500 to $2,000. However, it was not established that the bonuses paid to the decedent were guaranteed, that the decedent had access to a particular amount of a bonus during the year, or had an immediate interest in receiving a particular bonus at the time of his death. For example, the decedent did not get a set bonus based on the number of hours he worked each day, week, or month. Instead, each bonus was discretionary, sporadic, and provided whenever IG[Redacted] felt like giving the claimant a bonus. In other words, whether the claimant would have received similar

bonuses in 2022 was speculative. Thus, the court has not included any potential bonus in the determining the decedent's average weekly wage.

Continued to be Married and not Voluntarily Separated

21. Since being married in 1996, the decedent and DM[Redacted], remained married, and were married at the time of the accident.

22. There was no credible evidence submitted at hearing indicating the decedent and DM[Redacted] got divorced at any time.

23. Since 2015, the decedent did not travel back from Colorado to see his wife and children in Mexico. But despite the decedent not going back to Mexico to visit his wife and children since 2015, he talked to his wife and children on the telephone almost every day and supported them financially on a regular basis-by sending money via wire almost every week.

24. There was no credible evidence submitted at the hearing establishing that there was a pending divorce proceeding, or legal separation, or estrangement between the decedent and DM[Redacted] at the time of the decedent's death. Thus, the ALJ finds that there was no pending divorce proceeding, legal separation, or estrangement between the decedent and DM[Redacted] at the time of the decedent's death.

25. At the time of the decedent's death, the decedent was merely living and working in Colorado to support his wife and children who were living in Mexico.

Support of Wife

26. As found above, while the decedent was working and living in Colorado, he regularly sent money to his wife in Mexico to support her and their two children. In order to get money to his wife, he would have the money wired to his wife, DM[Redacted], in Mexico.

27. The decedent's wife, DM[Redacted], was not working in Mexico at the time of the decedent's death. She stayed at home, raised their children, and was financially supported by the decedent and therefore financially dependent on the decedent at the time of his death.

28. At the time of the decedent's death, his son, SH[Redacted], was also dependent upon the money the decedent sent to his mother for their support.

29. At the time of the decedent's death, both DM[Redacted] and SH[Redacted] were dependents of the decedent.

Guardian ad litem

30. At the time of the first two hearings regarding dependent benefits, the minor child, SH[Redacted], was 17 years old and represented by counsel.

31. At the time of the third hearing regarding this matter, SH[Redacted] was 18 years old, and still represented by counsel.

32. At no time during this matter has his mother, DM[Redacted], or the son, SH[Redacted], sought more than ½ of the dependent benefits and at no time did it appear that DM[Redacted] and SH[Redacted] were at odds regarding the apportionment of benefits and that a guardian ad litem had to be appointed to protect the interests of SH[Redacted].

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether DM[Redacted], S[Redacted], and EH[Redacted] are dependents of the decedent and entitled to death benefits.

a. DM[Redacted].

Section 8-42-114, C.R.S., provides for the payment of death benefits to dependents of a deceased worker. According to § 8-41-503, C.R.S., dependency shall be determined as of the date of the industrial injury and under § 8-41-501(1)(a), C.R.S. a widow is presumed to be wholly dependent unless it is shown that she was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support.

As found, DM[Redacted] and the decedent were legally married and remained married. They never divorced. As further found, she was wholly dependent upon the decedent for support at the time of his death. Moreover, at the time of death, she and the decedent were not estranged, legally separated, or divorced. The decedent was merely working in Colorado and sending money to his wife, who was living in Mexico at the family house, to support his family.

The respondents failed to overcome the presumption that DM[Redacted] was not wholly dependent upon the decedent. As a result, she is entitled to dependent death benefits.

b. SH[Redacted].

According to § 8-41-501(1)(b), C.R.S., minor children of the deceased under the age of eighteen years are presumed to be wholly dependent.

As found, SH[Redacted] is the minor child of the decedent and was 16 years old on the date of the decedent's death. As further found, SH[Redacted] was wholly dependent upon the decedent for his support. There was no credible evidence submitted demonstrating that he was not wholly dependent upon the decedent. As a result, he is entitled to dependent death benefits.

c. EH[Redacted].

EH[Redacted] was 21 years old on the date of the decedent's death. He has waived his right to claim any dependent benefits. As a result, he is not entitled to any dependent benefits.

II. Apportionment of death benefits among the dependents.

Section 8-42-121, C.R.S. provides that death benefits shall be paid to such one or more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable. A just and equitable distribution will depend upon the facts of each case, and the ALJ may consider the "actual dependence" of the claimants as well as the relative incomes and circumstances of the claimants. *Spoo v. Spoo*, 145 Colo. 268, 358 P. 2d 870 (1961).

The ALJ finds and concludes that apportioning the decedent's death benefits equally (50/50) between each of the decedent's dependents who are claiming dependent benefits represents a just and equitable allocation of the benefits under the facts and

circumstances of this case. As a result, the dependent death benefits will be apportioned 50% to each dependent, i.e., DM[Redacted] and SH[Redacted].

III. **Average Weekly Wage.**

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's average weekly wage on his or her earnings at the time of injury. The ALJ must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. Indus. Claim Appeals Off.*, 18 P.3d 867, 869 (Colo. App. 2001). The preceding method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777, 780 (Colo. 2010). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Id*.

Under §8-40-201(19)(a), C.R.S., the term "wage" is defined as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury…" When the Workers' Compensation Act was enacted in 1919, "wages" included "the reasonable value of board, rent, housing, lodging or any other similar advantage received from the employer." Colo. Sess. Laws 1919, ch. 210, 47 at 716. *See, Ganser v. Mountain Energy, Inc.*, WC 5-128-084-002 (ICAO, June 4, 2021). In 1989 the General Assembly narrowed the definition of "wages." It still included board, rent, housing and lodging, specifically added gratuities and certain costs of continuing or converting health insurance, but for the first time excluded "any similar advantage or fringe benefit not specifically enumerated." Colo. Sess. Laws 1989, ch. 67, 8-47-101(2) at 411*; Ganser v. Mountain Energy, Inc.*, WC 5-128-084-002 (ICAO, June 4, 2021). The preceding provision remains essentially unchanged. See §8-40-201(19)(b), C.R.S.

In *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996), the court of appeals reviewed the addition to the AWW of the claimant's accrual of paid time off. Specifically, the employer credited the claimant with 9.5 hours of paid leave for each pay period. The Court of Appeals applied the terms of §8-40-201(19)(a) and (b). Section 8-40-201(19)(a) defined 'wages' "to mean the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied." Subparagraph (b), however, limited the definition to exclude "any similar advantage or fringe benefit not specifically enumerated in this subsection (19)." To determine if the claimant's accrued time off constituted an included "wage" or an excluded "fringe benefit," the decision applied criteria inquiring "whether a reasonable, present-day, cash equivalent value can be placed upon it and whether the employee has reasonable access on a day-to-day basis, either actually or potentially, to the benefit, or an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances." *Meeker*, 929 P.2d at 28.

The *Meeker* Court determined the claimant's accrued time off qualified as "wages" to be included in the AWW. The hours credited to the claimant had an easily discernable,

immediate cash value derived by multiplying each hour accrued by the claimant's hourly rate of pay. Moreover, once earned, the time off was never forfeited and the claimant had reasonable access to the benefit. Notably, the claimant's weekly wage rate was increased by the hourly value of the number of time-off hours earned each week. *See, Burd v. Builder Services Group, Inc*., WC 5-058-572-001 (ICAO, July 9, 2019). Conversely, in *City of Lamar v. Koehn*, 968 P.2d 164 (Colo. App. 1998), the Court of Appeals affirmed the application of the *Meeker* test and concluded that vacation and sick leave earned by the claimant did not constitute "cash equivalents" for purposes of §8-40-201(19)(a) because the benefits were subject to forfeiture if the claimant accrued a specified maximum number of leave days.

In *Orrell v. Coors Porcelain*, WC 4-251-934 (ICAO, May 22, 1997) and *Yex v. ABC Supply Co*., WC 4-910-373-01 (ICAO, May 16, 2014), the Panel considered the addition of bonuses paid from employers' profit-sharing plans to a wage calculation. In both cases the prior receipt of the bonuses was excluded as fringe benefits rather than included as wages. Applying the *Meeker* test, the bonus was deemed contingent and without a present-day cash equivalent value. Importantly, the size of the bonus could be established only at the conclusion of the year or quarter. The claimant also had no access to the bonus on a day-to-day basis and had no immediate expectation of receiving the bonus.

As found, based on the checks issued to claimant, the ALJ finds that the claimant earned $26,670 during the last six months, or 26 weeks of 2021. The ALJ finds that using the last six months of the claimant's earnings of 2021 takes into consideration the variation of the claimant's working hours during the summer and winter months of 2021 and just before his accident and such calculation is a fair and reasonable manner to determine his average weekly wage under the facts and circumstances of this case. As a result, dividing $26,670 by 26 weeks results in an average weekly wage of $1,025.77 and a death benefit rate of $683.85 per week.

Based on the testimony of IG[Redacted], it is found that the decedent was paid a bonus on a number of occasions throughout 2021 and that the total amount of the bonuses equaled approximately $1,500 to $2,000. However, it was not established that the bonuses paid to the decedent were guaranteed, that the decedent had access to a particular amount of a possible bonus during the year, or had an immediate interest in receiving a particular bonus at the time of his death. For example, the decedent did not get a set bonus based on the number of hours he worked each day, week, or month. Instead, each bonus was discretionary, sporadic, and provided whenever IG[Redacted] felt like giving the claimant a bonus. In this matter, the bonuses were so speculative that even IG[Redacted] could not calculate the exact amount, or what those bonuses were based on. In other words, whether the claimant would have received similar bonuses in 2021 was speculative. Plus, it was an unenumerated, and speculative, fringe benefit. Thus, the court has not included any potential bonus in determining the decedents average weekly wage.

Therefore, the ALJ finds and concludes that the decedent's average weekly wage is $1,025.77, which equates to a death benefit rate of $683.85 per week.

IV. Payment of funeral benefits.

Based on the evidence presented at the hearing, the record was not fully developed regarding funeral benefits. For example, DM[Redacted] testified regarding the funeral expenses in pesos and not in American dollars. Moreover, IG[Redacted] paid $6,600 for funeral expenses, but it is not clear whether that covered all the funeral benefits, or whether there were additional funeral expenses that were either paid by someone else or remain outstanding. Therefore, the court specifically reserves the issue of funeral benefits.

V. **Appointment of a Guardian Ad-Litem.**

Counsel for the dependents requested that the court appoint DM[Redacted] as the guardian ad-litem of her son, SH[Redacted]. Section 8-43-207(1)(l), C.R.S. allows an ALJ to appoint guardian ad litem.

However, a guardian ad litem focuses specifically on representing the best interests of the individual during a legal proceeding, providing recommendations, and advocating for their well-being but without assuming full guardianship. *See Young v. C.A.H.* (*In re J.C.T.*), 176 P.3d 726, 734-35 (Colo. 2007). Thus, a guardian ad litem represents the legal interests of the individual during a hearing, but not after. In other words, a guardian ad litem is not appointed to manage the funds paid to or on behalf of a dependent minor child after a hearing as a conservator would.

In this case, all of the dependents were represented by the same attorney and the court did not find that their interests were adverse to one another based on the facts and circumstances of this case and their stipulations. Plus, at the time of the last hearing, SH[Redacted] was 18 years old. Therefore, the ALJ did not find that it was necessary to appoint a guardian ad litem in order for the case to proceed to an order. As a result, the request for a guardian ad litem is denied.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Both DM[Redacted] and SH[Redacted] are dependents of the decedent and entitled to death benefits.
2. The death benefits shall be apportioned 50/50 between DM[Redacted] and SH[Redacted].
3. The death benefits shall be payable to each dependent until modified or terminated by law.
4. The death benefits shall be based on an average weekly wage of $1,025.77 and payable at a death benefit rate of $683.85 per week.
5. The issue of funeral benefits is reserved for future determination.
6. The request for a guardian ad litem to be appointed is denied.
7. All other issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 13, 2023.

ISSUES

- Did Claimant prove she suffered a compensable injury on March 31, 2021?
- If Claimant proved a compensable injury, was treatment for her lumbar spine after March 31, 2021 reasonably needed and causally related to the injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a Freight Associate on the night shift. Her duties included unloading trucks and stocking product.

2. Claimant has a long history of psychogenic nonepileptic seizures. Claimant referred to them as "stress seizures" and testified they are typically triggered by emotional or physical stress.

3. Claimant previously underwent extensive workup for the seizure disorder, including EEG testing. She saw a neurologist who ultimately determined the seizures were non-epileptic and referred her to a psychiatrist for further treatment. No records from Claimant's psychiatrist were offered at hearing.

4. On March 31, 2021, Claimant was at work when a co-worker, [Redacted, hereinafter VI], flashed a barcode scanner at her eyes.[1] Shortly thereafter, Claimant developed vertigo, which is a common precursor to a seizure episode. Claimant texted her manager, [Redacted, hereinafter MS], that she was about to have a seizure. MS[Redacted] went to Claimant's location, arriving just as the seizure started. MS[Redacted] caught Claimant as she started to fall and laid her on the floor. He then called Claimant's husband, consistent with Claimant's established "seizure plan."

5. While Claimant was on the floor, another co-worker, [Redacted, hereinafter JH], approached the scene. MS[Redacted] told JH[Redacted] not to touch Claimant, per her seizure plan. However, JH[Redacted] ignored the instruction and turned Claimant onto her side. Claimant testified that she cannot control her movements during a seizure but remains aware of what is going on around her. Claimant testified JH[Redacted] moved her upper and lower halves at different times, which "twisted" her spine.

6. Claimant's husband arrived at the store after the seizure and took her home.

7. Claimant sought no immediate treatment. She testified that she typically feels lingering aftereffects for a day or two, and she assumed that would be the case after

[1] VI[Redacted] was apparently engaging in horseplay and had flashed the eyes of another co-worker before pointing the barcode scanner at Claimant. However, there is no persuasive indication Claimant invited or participated in the horseplay.

the seizure on March 31. However, she continued to experience vertigo and vomiting, so she went to the St. Francis Medical Center emergency department on April 3, 2021.

8. Claimant was evaluated by Dr. Tracy Maceachern in the emergency room. Claimant and her husband related the history of "stress-induced" non-epileptic seizures. They described the episode at work on March 31. Dr. Maceachern documented, "[Claimant's] boss reported that she did not incur any trauma and was laid on the floor." She had continued to experience worsening vertigo since that time. She was also feeling very weak and having difficulty moving around the house. Claimant reported tingling in her legs and a headache. There was no mention of a back injury or any symptoms involving her low back. Physical examination showed global weakness but no focal deficits. A head CT was normal. Claimant was given valium and Toradol in the ER, and by the end of the visit was feeling "entirely improved." Dr. Maceachern concluded, "given her reassuring exam and negative work-up for emergent abnormality, low suspicion for emergent cause of patient's symptoms, although exact etiology is unclear." Claimant was discharged with instructions to follow up with her personal physician.

9. Claimant saw her PCP, Dr. Philip Caterbone, on April 5, 2021. She reported ongoing lethargy and weakness. She also complained of acute low back pain and stated, "she was injured when lying prone during the seizure." Her pain was localized to the lumbar area with no radiating or radicular symptoms. On examination, strength was normal and SLR was negative. Claimant reported tenderness to palpation around the lumbar area, but Dr. Caterbone appreciated no spasm. Dr. Caterbone referred Claimant to neurology for the seizures and ordered x-rays of the lumbar spine.

10. Claimant followed up with Dr. Caterbone on April 12, 2021. Her fatigue and lethargy had resolved but she still complained of low back pain. Dr. Caterbone noted the lumbar x-rays were normal and referred Claimant to physical therapy.

11. A subsequent lumbar MRI showed post-surgical changes from a childhood procedure, and mild to moderate neuroforaminal narrowing, but no acute pathology.

12. PT was not helpful, so Dr. Caterbone referred Claimant to pain management. She ultimately underwent extensive treatment for her low back, including a lumbar ESI, medial branch blocks, and a spinal cord stimulator trial. She developed complications from the stimulator trial and had emergency surgery on April 5, 2022 to remove a hematoma. Claimant did not pursue a permanent stimulator implant because she became pregnant. Claimant reported no significant benefit from any treatment.

13. Dr. Allison Fall performed an IME for Respondents. Dr. Fall opined that Claimant's seizures are nonepileptic and instead are psychogenic in nature. She explained that psychogenic seizures are not associated with brain abnormalities and are therefore treated with psychotherapy rather than antiepileptic medications. Because Claimant's seizures are nonepileptic, the March 31, 2021 seizure was not physiologically caused by the flashing lights. Rather, it was the result of Claimant's personal subjective reaction to what she perceived as a stressful situation. Dr. Fall concluded Claimant's alleged injury is "like a mental stress claim."

14. Regarding the low back, Dr. Fall opined the "twisting" incident was no more impactful than simply rolling over in bed and would not reasonably cause a lumbar spine injury. Dr. Fall could identify no physiologic basis for Claimant's reported symptoms. The MRI showed no structural abnormality to account for Claimant's reported low back and leg symptoms, and physical examination showed no evidence of neurological or radicular issues. Dr. Fall also noted "nonorganic" findings such as giveway weakness and 4/5 positive Waddell's signs. Dr. Fall concluded Claimant suffered no low back injury from the March 31, 2021 incident.

15. Dr. Fall's opinions and conclusions are credible and persuasive.

16. Claimant's claim for workers' compensation benefits related to the seizure on March 31, 2021 is subject to the requirements of the "mental impairment statute."

17. Claimant failed to satisfy the statutory requirement to support her claim stress-induced seizures with evidence from a licensed psychiatrist or psychologist.

18. Claimant failed to prove she suffered a compensable back injury arising out of her employment. The alleged "assault" by JH[Redacted] was entirely personal to Claimant with no connection to the conditions and obligations of employment beyond the mere fact that it happened while she was at work. As such, any injury she may have suffered did not arise out of her employment. But even if the incident were deemed a "neutral" injurious force, Dr. Fall is persuasive that Claimant suffered no physical injury to her low back.

CONCLUSIONS OF LAW

A. Compensability of the seizure

To establish a compensable claim, a claimant must prove they suffered an injury while "performing service arising out of and in the course of his employment." Section 8-41-301(1)(b). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). There is no presumption that an injury occurring at work during work hours necessarily arises out of employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). The claimant must prove a causal nexus between the injury and their employment by a preponderance of the evidence. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

The Workers' Compensation Act imposes additional conditions for compensability of a claim for "mental impairment." Among those conditions is a requirement that the claim

be "supported by the testimony of a licensed psychiatrist or psychologist." Section 8-41-301(2)(a).[2]

The term "mental impairment" means a disability resulting from an accidental injury "when the accidental injury involves no physical injury and consists of a psychologically traumatic event." Section 8-41-301(3)(a). The General Assembly adopted the mental impairment statute because it believed claims based purely on mental causes "are less subject to direct proof and more susceptible to being frivolous." *Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918, 920 (Colo. App. 1996). To that end, the physical injury requirement "differentiate[s] between cases in which physical injury causes mental impairment ('mental-physical') and those where mental impairment follows solely an emotional stimulus ('mental-mental')." The fact that a claimant's psychological response is accompanied by physical symptoms does not remove the claim from the aegis of the mental impairment statute. *E.g.*, *Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000) (panic attack caused elevated blood pressure, arm numbness, and severe chest pains mimicking a heart attack); *Tomsha v. City of Colorado Springs*, 856 P.2d 13 (Colo. App. 1992) (job stress caused TMJ dysfunction).

Claimant's case is analogous to the situation in *Nordman v. Lockheed Martin Corporation*, W.C. No. 4-889-647-005; 4-944-807-002 (March 29, 2021). In *Nordman*, the claimant became very upset and angry after an argument with her employer, which triggered a stroke. The Panel held that the mental impairment statute applied to the claim because "the cause for the claimant's stroke is . . . an 'emotional trauma' and not [] a physical injury."

Thus, Claimant must satisfy the requirements of the mental impairment statute to the extent she seeks compensation as a natural and proximate result of the seizure. As found, Claimant failed to prove a compensable mental impairment because the claim is not supported by evidence from a licensed psychiatrist or psychologist.

B. Compensability of the low back

Because the seizure is not compensable, the alleged back injury cannot be covered as a downstream consequence of the seizure. However, the question remains whether the alleged back injury is compensable in its own right as a separate injury.

Claimant characterizes her co-worker's actions in turning her onto her side as an "assault," and references a criminal statute that references "knowingly or recklessly" causing harm to another. Section 18-3-204. Although there is insufficient evidence to show intent or recklessness on the part of Claimant's co-worker, the law governing workplace assaults provides a useful framework to evaluate compensability in this case.

[2] The Court of Appeals invalidated the requirement to present sworn "testimony" as a violation of equal protection and held that medical reports are sufficient. *Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000). Nevertheless, the claim must be supported by evidence from a psychiatrist or psychologist.

Case law has identified three categories of workplace assaults for purposes of compensability. *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001).[3] The first category covers assaults that have "an inherent connection with employment and emanate from the duties of the job." These include arguments over things such as work performance, work equipment, job tasks, delivery of a paycheck, or termination. But not all offensive or injurious interactions between co-workers are inherently related to employment merely because they happen at work. Otherwise, the causal nexus requirement "is eroded where the test is improperly framed as 'but for the bare existence of the employment' rather than 'but for the conditions and obligations of the employment." *Id*. at 476.

The second category encompasses inherently private assaults. Such conflicts originate in the private affairs of the claimant or the assailant and are unrelated to their work-related functions. These cases typically involve disputes over love interests or other purely private matters. But the category of private assaults also includes cases where the victim was specifically targeted or chosen, with the most common examples being sexual assaults or sexual harassment. *Id*. Injuries falling within this category are generally not compensable unless an exception applies, such as a "special hazard." *City of Brighton v. Rodriguez*, 318 P.2d 496 (Colo. 2014).

The third category of assaults are those related to a "neutral" source. This refers to "neutral and unexplained forces and are neither personal to either party nor distinctly associated with the employment." *Id.* at 477. Neutral forces include stray bullets, roving lunatics, drunks, lightning strikes. This type of assault is compensable if it is triggered by a neutral source not specifically targeted at the employee and "would not have occurred but for the fact that the conditions and obligations of employment placed [the] claimant in the position where he [or she] was injured." *City of Brighton, supra*, at 504.

Claimant argues the "assault" by JH[Redacted] falls in the category of neutral risks. But I agree with Respondents that the incident was inherently private, and therefore did not arise out of Claimant's employment. JH[Redacted] specifically "targeted" Claimant in an attempt to aid her because of her inherently private seizure condition. There was no connection to the conditions or obligations of Claimant's employment beyond the mere fact that she happened to be at work when the seizure occurred, and JH[Redacted] happened to be a co-worker. As such, the only nexus to Claimant's job is "the bare existence of the employment," which is insufficient per *Horodyskyj*.

Furthermore, even if the alleged assault were considered a neutral force, Claimant failed to prove the incident proximately caused an injury to her low back. Dr. Fall's opinions are credible and persuasive. The incident was not reasonably likely to cause a lumbar spine injury based on the positions, movements, and forces involved. The emergency room records contain no mention of low back pain or a back injury. Although Claimant reported back pain to Dr. Caterbone on April 5, the examination showed no spasm or other persuasive findings to substantiate an injury. Claimant thereafter received extensive treatment with no persuasively identified pain generator, and ultimately no

[3] These broad categories are consistent with the more generalized classification of employment risks outlined in *City of Brighton v. Rodriguez*, 318 P.2d 496 (Colo. 2014).

sustained benefit. As Dr. Fall explained, considering the minimal forces involved and the absence of any objective structural pathology, if Claimant had suffered an injury, she should have improved with time and treatment. The persuasive evidence fails to show Claimant's reported symptoms were proximately caused by the incident at work.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: July 13, 2023

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-209-733-003

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer on July 2, 2022.

2. Whether Claimant established by a preponderance of the evidence an entitlement to medical benefits, and specifically trigger point injections.

3. Whether Claimant established an entitlement to temporary total disability benefits for the period of July 3, 2022 to July 15, 2022.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage at the time of injury was $543.62. The parties also stipulated that if Claimant is entitled to temporary total disability benefits, such benefits would be for the period of July 3, 2022 to July 15, 2022.

FINDINGS OF FACT

1. Claimant is a 48-year-old woman who is employed in Employer's restaurant. Claimant's job duties included cleaning, helping in the kitchen, and performing various other tasks. On July 2, 2022, while working for Employer Claimant was retrieving ice from an ice machine, when a metal panel above the ice machine door became dislodged, striking the ice machine door, which struck claimant on the back of her head. (See photos, Ex. M) One of Claimant's co-workers witnessed the incident and indicated Claimant was incoherent and in a daze after being struck. (Ex. 10).

2. Claimant has a history of chronic, non-intractable migraine headaches, and seizure disorder. Since 2018, Claimant was seen at Denver health twice for treatment of migraine headaches, including complaints of fatigue, nausea, vomiting, and photophobia, phonophobia. (Ex. K). Claimant's last documented headache treatment prior to July 2, 2022 was on June 4, 2020, when she was seen at Denver Health. At that time, Claimant reported dizziness and finger numbness upon waking, in addition to the above-listed symptoms. Claimant attributed her symptoms to chronic migraine headaches. (Ex. K).

3. On October 19, 2021, Claimant was seen at Presbyterian/St. Lukes for a right shoulder injury she sustained in a fall. (Ex. J). Claimant continued to receive treatment for her right shoulder at Denver Health through January 20, 2022. (Ex. K).

4. Claimant reported her injury on July 2, 2022, and Employer sent Claimant for evaluation to AFC Urgent Care that day. Claimant reported blurry vision and photophobia, but denied additional symptoms including loss of consciousness, headaches, dizziness, nausea, vomiting, and other symptoms. Examination of Claimant's neck was normal, as

was a neurological examination. Claimant was diagnosed with a head injury, and given a total work restriction until July 4, 2022. (Ex. 1).

5. Later that evening, Claimant attended a gathering at a friend's home. Respondents' Exhibit T is a video of that gathering and shows Claimant sitting at a table with others, in no apparent distress. (Ex. T).

6. Claimant returned to AFC Urgent Care on July 4, 2022, reporting constant headaches, nausea, dizziness, and pain radiating down her neck. Claimant was referred for a head CT scan and to a neurologist. (Ex. 1). The CT scan, performed on July 6, 2022 was negative. (Ex. 3).

7. Claimant returned to AFC Urgent care on July 8, 2022, and was seen by Zeeshan Ahmed, M.D. On examination he noted mild paracervical tenderness, and diagnosed Claimant with a concussion without loss of consciousness, muscle spasm, and neck sprain. In addition, Dr. Ahmed extended Claimant's work restriction until July 16, 2022, advising that she should not return to work until then. (Ex. 1).

8. On July 21, 2022, Claimant saw Kate Kraus, NP, at Advanced Neurology, and reported experiencing daily headaches since July 2, 2022, with photophobia and nausea. Claimant also reported dizziness with changes in position, and denied neck pain. Claimant reported no prior history of migraine headaches. Ms. Kraus diagnosed Claimant with post-traumatic headache and cervicalgia. She recommended a brain MRI and VNG testing to assess dizziness. (Ex. 2).

9. On July 22, 2022, Claimant was referred from AFC Urgent Care to Dr. Yusuke Wakeshima, M.D., to assume Claimant's care. At that point, Dr. Wakeshima became Claimant's authorized treating physician (ATP). Claimant first saw Dr. Wakeshima on August 2, 2022, reporting headaches, neck pain, upper back pain, and mild cognitive issues, with pain at 10/10. Claimant denied any pre-existing conditions or similar prior symptoms, and specifically denied pre-existing migraine headaches. On examination, Claimant reported pain and tenderness with palpation in the upper trapezius and levator scapula, and pain with range of motion. Dr. Wakeshima recommended a brain MRI and cervical MRI, and noted that post-concussive symptoms typically resolve in 4-6 weeks without treatment. Dr. Wakeshima also prescribed an e-stim unit for Claimant's neck and upper back pain. (Ex. 3).

10. Claimant returned to Ms. Kraus on August 18, 2022, reporting improvement in her headaches, and neck pain, but continued dizziness. She was prescribed migraine medication. (Ex. 2).

11. On August 22, 2022, Claimant had cervical and brain MRIs. The cervical MRI showed very mild degenerative changes and a small disc bulge, without herniation or stenosis. Claimant's brain MRI was interpreted as showing calcifications in the medial left frontal lobe and left parietal lobe, which were later determined not to be related to her injury. (Ex. 4 and 6).

12. On August 24, 2022, Claimant returned to Dr. Wakeshima reporting pain down her left arm to her hand and fingers, in addition to headaches and neck pain. Dr. Wakeshima noted that Claimant's cervical MRI was not concerning and that he would consider cervical facet injections and an occipital nerve block for Claimant's reported headaches, and recommended an EMG study to evaluate Claimant's reports of left arm pain. (Ex. F).

13. Dr. Wakeshima performed the EMG testing on September 13, 2022, and indicated that the test was normal, with no evidence of neuropathy, radiculopathy, or other left-sided symptoms. On September 13, 2022, Claimant reported her pain at a level of 6/10. (Ex. F).

14. On October 18, 2022, Claimant saw Haley Burke, M.D., a neurologist on referral from Dr. Wakeshima. Dr. Burke reviewed Claimant's brain MRI and indicated that the findings were not related to her injury, and that there was no evidence of a hemorrhagic injury or diffuse axonal injury. She found Claimant's cervical range of motion minimally limited and a positive test on the left with facet joint loading. She diagnosed Claimant with cervical cranial syndrome, myofascial muscle pain, post-traumatic headache, and cervical facet joint syndrome. Claimant reported her pain level as 7/10 at best. Dr. Burke referred Claimant for physical therapy and requested authorization for cervical facet joint injections. (Ex. 6).

15. On November 9, 2022, Claimant saw Dr. Wakeshima with reports of right sided neck pain, right upper back pain, right clavicle pain and shoulder pain, and a pain level of 9/10. He ordered right shoulder and clavicle x-rays which were negative. Dr. Wakeshima offered no explanation as to how Claimant's shoulder and clavicle symptoms were related to the July 2, 2022 incident. (Ex. F).

16. On November 17, 2022, Claimant saw Dr. Burke, reporting her symptoms were unchanged, with a pain level of 9/10. Claimant reported her right shoulder pain began two weeks prior, and that she had not been able to start physical therapy. Dr. Burke indicated that Claimant appeared to have post-traumatic headaches with likely cervicocranial etiology, and that her history was consistent with an upper cervical spine sprain with mild head trauma, and was suggestive of the facet joints as the source of both her head and neck issues. She indicated that the request for facet joint injections was denied, and she again requested authorization for those injections. (Ex. D).

17. On November 26, 2022, Dr. Wakeshima authored a letter to Respondents' counsel regarding Claimant's treatment after being provided with Claimant's pre-July 2, 2022 records documenting her prior treatment for headaches and right shoulder complaints. Dr. Wakeshima reviewed Claimant's medical records and opined that as the result of the July 2, 2022 work incident, Claimant had diagnoses including neck and upper back pain, most likely myofascial with potential facetogenic components, cervicogenic headaches, and post-concussive syndrome. He indicated that while Claimant had a history of migraine headaches, the mechanism of injury could cause potential neck injury issues, and cervicogenic headaches. He indicated that any migraine headaches were not work related, but cervicogenic headaches were work-related. He also indicated Claimant was not at maximum medical improvement (MMI), and recommended 6-12 chiropractic

sessions with dry needling, and physical therapy to address myofascial pain. If those sessions did not adequately address her myofascial pain, then four sessions of trigger point injections, followed by myofascial release massage therapy would be appropriate. He indicated if Claimant's pain generator was facetogenic, he would recommend facet joint injections, as requested by Dr. Burke. Dr. Wakeshima indicated that myofascial pain nor facetogenic neck pain may not demonstrate as abnormalities on radiological tests. However, he offered no explanation as to how it would be determined that Claimant's pain complaints were facetogenic in origin. (Ex. F).

18. Dr. Wakeshima also recommended a neuropsychological evaluation to assess Claimant's post-concussive symptoms, and indicated he would refer Claimant for that evaluation with a Dr. Aylesworth. He indicated if there was no post-concussive syndrome and no associated depression issues, then no further treatment would be indicated. He further opined that Claimant would likely reach MMI upon completion of the recommended treatments, which he anticipated would take 2-3 months. (Ex. F).

19. On December 1, 2022, Claimant began chiropractic treatment with Jennifer Walker, D.C. Claimant attended 15 chiropractic visits and was discharged on February 28, 2023. Dr. Walker indicated Claimant's reported pain decreases with treatment, but the pain returned after treatment. Dr. Walker's records indicate that she found "clinical evidence" of trigger points in at least 13 different cervical muscles, the majority of which were documented to have "reproduced Claimant's hand symptoms." (No other provider documented the presence of trigger points in Claimant's cervical spine). She opined that Claimant would benefit from trigger point injections and additional chiropractic care. Over the course of her care, Dr. Walker performed dry needling of trigger points in the neck and upper shoulder/back, and massage therapy. She noted that Claimant reported less pain and more range of motion of the cervical spine with this treatment. Dr. Walker's records indicate that Claimant's initial pain levels were reported as 9/10 on December 1, 2022, and had decreased to 7/10 by February 29, 2023. (Ex. C).

20. Claimant returned to Dr. Burke on December 13, 2022 with reports of continued headaches rating 9/10 for pain. Claimant indicated that her headaches were more frequent since her last visit. Dr. Burke reiterated her recommendations for trigger point injections and an occipital nerve block. She again returned to Dr. Burke on January 10, 2023 with no reported change in symptoms. (Ex. D).

21. On January 25, 2023, Claimant had an IME with Allison Fall, M.D., at Respondent's request. At her visit with Dr. Fall, Claimant reported pain levels of 9/10. Based on her examination and review, Dr. Fall opined that Claimant sustained an uncomplicated head contusion that did not require medical treatment. She noted that imaging and electrodiagnostic studies performed were all negative and did not demonstrate objective evidence of injury. She noted that there have been no objective findings consistent with Claimant's symptoms, and that her subjective complaints are "greatly out of proportion" to her presentation. (Ex. A).

22. On February 6, 2023, Claimant returned to Dr. Burke's clinic and saw Rosalind Daninger, NP, APN. Claimant continued to report neck pain and right shoulder pain. On

examination of Claimant's cervical spine, she was noted to have decreased cervical flexion and extension with pain, and tenderness to palpation of the bilateral cervical paraspinal muscles. She also noted Claimant was able to rotate and laterally bend her neck without pain. The presence of trigger points was not documented. Claimant indicated she continued to see physical therapy twice per week, and that it was helpful. The record further notes that Insurer denied requests for cervical facet injections, trigger point injections, and occipital nerve blocks. Claimant was prescribed medication for cervical facet joint syndrome. (Ex. 6)

23. Claimant returned to Dr. Wakeshima on February 16, 2023, with right-sided neck pain, and right sided upper back pain. On examination, Dr. Wakeshima noted tenderness of the right cervical paraspinal musculature, right upper trapezius, and right levator scapula, with painful cervical flexion, extension, and side bending. Dr. Wakeshima did not document the presence of trigger points, although he noted that Claimant had benefited from dry needling during her chiropractic care with Dr. Walker. Dr. Wakeshima indicated that unless Dr. Burke had further intervention planned, he anticipated Claimant would be a maximum medical improvement within six to eight weeks. (Ex. 3).

24. On March 7, 2023, Claimant returned to Dr. Burke's office and saw Ms. Daninger. Claimant reported pain at a level of 8/10, and located at the top of her head, neck midline and right shoulder. On examination, Ms. Daninger noted decreased cervical range of motion with pain in flexion, extension, rotation, and lateral bending, with tenderness to palpation in the cervical paraspinal muscles. The presence of trigger points was not documented. (Ex. 6).

25. On April 6, 2023, Claimant saw Dr. Wakeshima. He noted that Claimant had completed chiropractic care, and continued to use an e-stim unit with some benefit. However, Claimant continued to report her pain at a level of 7/10. Dr. Wakeshima's cervical evaluation was similar to his February 16, 2023 visit, and did not document the presence of trigger points. Dr. Wakeshima indicated that because Claimant had not been able to see Dr. Burke he would request authorization to perform trigger point injections himself. He indicated that he was requesting 4 sessions of trigger point injections, followed by massage therapy through Dr. Walker's clinic. (Ex. 3).

26. Dr. Fall testified through a pre-hearing deposition and was admitted as an expert in physical medicine and rehabilitation. Dr. Fall characterized Claimant's initial examination on July 2, 2022 as normal, and testified that there had not been any diagnostic testing which would explain Claimant's reported symptoms. Dr. Fall testified, credibly, that except in unique situations, a physician cannot typically objectively measure headaches. Dr. Fall noted that Claimant's records do not document any noticeable external signs of trauma to her head after the incident, and that it was "very highly unlikely" that the incident on July 2, 2022 was continuing to cause Claimant's complaints. Dr. Fall opined that Claimant sustained a contusion on her head on July 2, 2022 that did not require medical treatment or any disability. She opined that Claimant likely did not have a concussion, although a concussion would not necessarily be visible on imaging studies. She also acknowledged that a neck injury can result from something falling on a person's

head, and that a neck strain would usually not appear on imaging studies. Although, Dr. Fall does not believe Claimant sustained an injury to her neck.

27. Dr. Fall testified that trigger point injections were not reasonable or necessary. Trigger points are nodules with "hyperintense focus with a twitch response and referred pain," and without those being present trigger point injections are not indicated. In support of this opinion, she noted that Dr. Wakeshima had not documented the presence of trigger points, and that Dr. Fall did not detect trigger points in her examination of Claimant.

28. Claimant testified that when she was struck on the back of her head, she "blacked out" momentarily. She testified that she was off work for two weeks, and returned to work on July 16, 2022. She indicated that following her injury she experienced pain in her neck and head, nausea, dizziness, and vomiting. She testified that she would like to have trigger point injections because her neck "gets inflamed" and because her physicians have recommended them.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The claimant must prove his injury arose out of the course and scope of her employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, *supra*. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co, supra*; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO Apr. 9, 2014).

Claimant has established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer on July 2, 2022. Specifically, Claimant sustained a neck strain and has experienced cervicogenic headaches. Although none of the diagnostic tests performed documented objective evidence of injury, the ALJ finds persuasive Dr. Wakeshima's opinion that Claimant likely sustained a myofascial neck injury and cervicogenic headaches. Claimant's complaints of right shoulder pain, clavicle pain, and left arm symptoms, are not causally related to her July 2, 2022 injury. Further, the ALJ finds that Claimant, more likely than not, did not sustain a concussion or closed head injury arising out of the course of her employment.

The ALJ does not find persuasive Dr. Fall's opinion that Claimant sustained only a minor head contusion that did not require medical treatment.

Medical Benefits (General & Specific)

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

As found, Claimant has established that she sustained compensable injuries consisting of a neck strain and cervicogenic headaches. Respondents shall pay for all authorized treatment that is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury. Treatment for Claimant's right shoulder, clavicle, and reported left arm radicular symptoms is not causally related to Claimant's industrial injury.

Claimant has failed to establish that trigger point injections are reasonable and necessary to cure or relieve the effects of her injuries. Neither Dr. Wakeshima, Dr. Burke, nor Ms. Daninger documented the presence of trigger points in Claimant's neck or upper back. Dr. Burke's recommendation for trigger point injections was apparently made only after authorization for facet joint injections was denied, without explanation of the medical reasonableness or necessity of trigger point injections. The ALJ finds credible Dr. Fall's opinion that in the absence of evidence of trigger points, such treatment is not reasonable or necessary. Although Dr. Walker documented "clinical evidence" or trigger points throughout Claimant's neck and upper back, the ALJ does not find this to be persuasive evidence, given that no other provider documented similar findings, which would be expected if trigger points to the extent documented by Dr. Walker were present. Moreover, Dr. Walker did perform trigger point dry needling over approximately three months, which only moderately decreased Claimant's subjective reports of pain. Claimant's request for authorization of trigger point injections is denied and dismissed.

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). TTD benefits continue until the first occurrence of any of the

following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

As found, Claimant's ATP AFC Urgent Care provided Claimant with work restrictions for the period of July 3, 2022 through July 15, 2022. Claimant returned to work on July 16, 2022, and continued to work after that date. The ALJ finds that Claimant sustained a temporary disability for the period of July 3, 2022 through July 15, 2022, resulting in an actual wage loss for that period. Respondents' shall pay Claimant TTD benefits for the period of July 3, 2022 through July 15, 2022, based on the stipulated average weekly wage of $543.62.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable neck strain and cervicogenic headaches arising out of the course of her employment with Employer on July 2, 2022.

2. Respondents shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant's compensable industrial injury.

3. Claimant's request for authorization of trigger point injections is denied and dismissed.

4. Respondents shall pay Claimant temporary total disability benefits for the period of July 3, 2022 to July 15, 2022.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-196-773-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that right wrist surgery recommended by Joseph Noce, M.D., is reasonable and necessary to cure or relieve the effects of Claimant's December 7, 2021 industrial injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a car wash manager. On December 7, 2021, while working for Employer, Claimant sustained an admitted injury when he fell into a three-foot-deep floor drain that was left uncovered. When Claimant fell, he landed on his right hip and shoulder with his arm outstretched. (Ex. 1) Claimant did not initially seek medical treatment, and returned to work the following day. Because his right shoulder pain had not resolved, he then sought medical treatment.

2. Claimant initially sought medical treatment at Banner Urgent Care on December 8, 2021, where he reported right shoulder pain and tingling in his right hand. Claimant had positive testing for shoulder impingement and decreased shoulder range of motion. Examination of Claimant's elbow and wrist was "unremarkable." Claimant was assessed with shoulder pain and advised to follow up with workers' compensation for a physical therapy referral. (Ex. 1)

3. On December 14, 2021, Claimant saw Jacqueline House, PA-C, at Banner Occ Health Clinic, and reported falling on his right shoulder and hip. Claimant reported right shoulder pain, aching, and tingling into his hand, right knee pain, and hip pain. He was diagnosed with right shoulder pain and contusions of the right hip and knee. PA. House referred Claimant to physical therapy. (Ex. 2).

4. Claimant attended physical therapy at North Colorado Medical Center from December 21, 2021 to January 10, 2022. During his initial session, Claimant reported that when he fell he felt immediate burning pain in his upper arm, forearm, hand, and fingers. He also reported paresthesia in the dorsal and palmar aspect of his right hand that occurred intermittently, but did not report these symptoms at later appointments. Claimant's physical therapy was focused on his right shoulder. (Ex. L).

5. On December 30, 2021, Ms. House noted Claimant had no new right-hand numbness or tingling, but noted Claimant was right hand dominant and primarily using his right hand. Because Claimant's right shoulder was not sufficiently improved, she ordered a right shoulder MRI. (Ex. 2). The right shoulder MRI performed on January 17, 2022 demonstrated a full-thickness tear of Claimant's rotator cuff. (Ex. 30).

6. On January 25, 2022, Claimant saw Inderjote Kathuria, M.D., at Banner Occ Health, reporting no improvement in his shoulder pain. Claimant did not report symptoms

in his right hand or wrist. After reviewing Claimant's MRI report, Dr. Kathuria referred Claimant for an orthopedic evaluation, and recommended no use of his right arm. (Ex. 4).

7. On February 1, 2022, Claimant saw orthopedist Daniel Heaston, M.D. Dr. Heaston diagnosed Claimant with a complete tear of the rotator cuff and recommended surgery. Claimant did not report issues with his right hand or wrist. (Ex. 5).

8. On March 3, 2022, Dr. Heaston performed an open rotator cuff repair surgery with biceps tenodesis. Claimant's post-surgical instructions included strict non-weightbearing of his right arm and being in a sling for six weeks. After surgery, Claimant continued to see Dr. Heaston and others in his clinic for follow-up, and did not report hand or wrist symptoms to them until July 2022. Claimant was initially placed in a sling for six weeks. (Ex. 2, 6, 5 and P).

9. Claimant started post-surgical physical therapy at Select PT on April 19, 2022. On May 10, 2022, Claimant reported swelling and issues with making a fist and bending his fingers of his right hand. Over the course of approximately five months of physical therapy, Claimant periodically reported symptoms in his right hand and forearm, and received treatment for his right hand and forearm, including massage, dry needling, and a wrist splint. At Claimant's final physical therapy visit on September 9, 2022, Claimant reported little to no progress on his hand/forearm discomfort. (Ex. 9).

10. On July 5, 2022, Claimant saw Dr. Heaston and reported that he continued to have some hand swelling and tightness, Dr. Heaston opined that Claimant's hand swelling and tightness should improve as his post-surgical motion improved. (Ex. 5).

11. On August 23, 2022, Claimant saw PA House, and reported continuing pain in his hands. (Ex. 2).

12. On September 13, 2022, Claimant saw PA House again, reporting continuing pain in his right hand and decreased grip strength. Claimant indicated he had attempted to tighten some bolts on his wife's car and the next day could barely move his hands. Claimant reported he did not have hand pain prior to surgery, and it had been present since surgery. House added a new diagnosis of pain in right hand, and referred Claimant for an evaluation with an orthopedic hand physician. (Ex. 2).

13. On September 22, 2022, Claimant saw Nicholas Noce, M.D., on referral from PA House. Claimant reported to Dr. Noce that when he initially fell, he landed on his right hand, but most of the pain was in the shoulder. Claimant reported developing pain in the dorsum of his hand after being in a sling following surgery, and that he continued to have pain and swelling in right hand and wrist, extending into the middle and ring finger. On examination, Dr. Noce noted that Claimant was tender over the scapholunate interval, although he could not determine if there was instability. He noted no obvious bony abnormality. Dr. Noce indicated that he was "not entirely certain what is causing his pain. I cannot think of anything that could have been done during surgery that would have caused him to have this amount of pain, swelling and stiffness in his hand and wrist. However, he could have had an injury during original fall onto his right upper extremity

that was initially missed due to the distracting pain in his shoulder and upper arm." He noted that Claimant's pain was centered around the scapholunate interval and his wrist, and the x-ray was "a little concerning" for possible scapholunate widening. Dr. Noce recommended an MRI of the wrist. (Ex. 8).

14. On September 29, 2022, Respondents submitted Dr. Noce's request for a wrist MRI for utilization review, and the reviewer determined that the MRI was medically necessary. (Ex. O).

15. Claimant then underwent a right wrist MRI on October 13, 2022, although no report of the MRI interpretation is contained in the record, on October 25, 2022, PA House included the following description of the MRI findings in her treatment note:

> "MRI of right wrist without contrast
>
> Impression:
>
> 1. Differential tearing of the scapholunate ligament as above with full-thickness tearing of the dorsal band and findings of dorsal intercalated segmental instability and early findings of scapholunate advanced collapse.
>
> 2. Mild tendinosis of the extensor carpal ulnar is without tearing.
>
> 3. Mild enlargement of the median nerve proximal to the flexor retinaculum. This is nonspecific but can be seen in the setting of carpal tunnel syndrome.
>
> 4. Mild triscaphe degenerative joint disease." (Ex. 2).

16. On October 25, 2022, Dr. Noce reviewed the MRI which he indicated showed a scapholunate ligament injury with small amount of widening and some extension of the lunate consistent with DISI (dorsal intercalated segment instability) deformity, and findings of wrist arthritis consistent with SLAC (scapholunate advanced collapse) wrist. Dr. Noce identified several treatment options, including a potential ligament reconstruction, which he indicated would not likely be successful. He also offered treatment with steroid injections, which could be repeated 2-3 times per year. He noted that if steroid injections stopped providing relief, he could consider salvage procedures such as a PRC (proximal row carpectomy) or scaphoidectomy and midcarpal fusion. Dr. Noce performed a steroid injection in Claimant's wrist on October 25, 2022. His records, however, do not document Claimant's response to the steroid injection. (Ex. 8).

17. On November 29, 2022, Dr. Noce's office submitted a request for authorization of surgery for Claimant's right wrist. Specifically, he requested authorization for a right scaphoidectomy and midcarpal fusion, and right carpal tunnel release, for a diagnosis of SLAC wrist. (Ex. 2). The ALJ infers that Dr. Noce saw Claimant on or about November 29, 2022, although no treatment note from that visit was offered or admitted into evidence.

18. On December 6, 2022, Respondents submitted Dr. Noce's request for authorization of surgery for utilization review. The reviewer recommended against

authorization, indicating Claimant's medical documentation did not contain objective findings to support carpal tunnel syndrome, or 6 months of conservative treatment for Claimant's right wrist. (Ex. O).

19. On January 12, 2023, Claimant saw Mark Paz, M.D., for an independent medical examination (IME) at Respondents' request. Dr. Paz issued a report dated February 7, 2023, and was admitted as an expert in internal medicine. Dr. Paz testified by deposition in lieu of live testimony. Dr. Paz opined that the treatment recommended by Dr. Noce is reasonable and necessary, but not causally related to Claimant's December 7, 2021 work injury. He testified that Claimant has pre-existing right wrist osteoarthritis that was not caused by or aggravated by Claimant's December 7, 2021 injury. Dr. Paz stated that Claimant's medical records did not contain any reports of right wrist pain until August 23, 2022. Instead, Dr. Paz testified that Claimant's right wrist issues were, more likely than not, related to the incident where Claimant tightened bolts on his wife's car. He further opined that if Claimant sustained an injury to his right wrist on December 7, 2021, it would have been addressed earlier by his physicians.

20. Claimant testified at hearing immediately following the December 7, 2021 incident at work, he felt a burning and numb sensation in his right shoulder extending to his fingertips. Claimant testified that the steroid injection Dr. Noce performed, and the dry needling performed by physical therapy did not relieve his symptoms. He testified that he had not had issues with or treatment for his right wrist, and had no physical work limitations from his wrist prior to the December 7, 2021 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MEDICAL BENEFITS (Right Wrist Surgery)

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). Whether the need for treatment is causally-related to an industrial injury is a question of fact for the ALJ. *Putnam v. Putnam and Assoc.*, W.C. No. 4-120-307 (Aug. 14, 2003), citing *Wal-Mart Stores, Inc. v. Indus. Claims Office*, 989 P.2d 251 (Colo. App. 1999). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Consistent with Dr. Paz's testimony, Respondents do not contend the surgery recommended by Dr. Noce is not reasonable and necessary. The issue before the ALJ is whether the proposed surgery is causally-related to Claimant's December 7, 2021 work injury. The ALJ concludes Claimant has established by a preponderance of the evidence that the right wrist surgery recommended by Dr. Noce is causally-related to his December 7, 2021, work injury.

No credible evidence was admitted demonstrating Claimant had complained of or sought treatment for his right hand or wrist prior to his December 8, 2021 work injury. Although Claimant indicated to some providers that he had no wrist pain prior to his March 2022 shoulder surgery, Claimant's reported symptoms in his right hand to Banner Urgent Care on December 8, 2021, to Ms. House on December 14, 2021, and while in physical therapy at North Colorado Medical Center. During this time, Claimant was primarily using his non-dominant left hand, and his treatment was focused on his right shoulder. Following surgery, Claimant was placed in a sling for six weeks and had limited use of his right arm. After beginning physical therapy and increasing the use of his right arm through therapy, Claimant began reporting additional right wrist symptoms, including swelling and

issues with making a fist beginning on May 10, 2022 in physical therapy. Claimant continued to have these issues over the following months, and received therapy from Select PT for his wrist and arm, in addition to his shoulder. Claimant also reported to Dr. Heaston hand swelling, tightness, and pain on July 5, 2022 and August 23, 2022. No medical record or other credible evidence was admitted indicating Claimant experienced right hand or wrist symptoms prior to the December 7, 2021 work injury. Given that Claimant reported symptoms over a period of months following his injury, the ALJ does not find persuasive Dr. Paz's opinion that Claimant's wrist condition is more likely related to Claimant tightening bolts on his wife's car than his work injury. Considering the evidence in its totality, including the mechanism of injury (*i.e.*, falling on his right side with his arm outstretched), the lack of prior right hand or wrist issues, and Claimant's contemporaneous reports of symptoms in his right hand and wrist, the ALJ finds it more likely than not that Claimant's right wrist condition is causally related to his December 7, 2021 industrial injury. Claimant's request for authorization of the wrist/arm surgery recommended by Dr. Noce is granted.

ORDER

It is therefore ordered that:

1. The right wrist/arm surgery recommended and requested by Dr. Noce is reasonable and necessary to cure or relieve the effects of Claimant's December 7, 2021 industrial injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 13, 2023

Steven R. Kabler
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-213-543-001

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered an arm injury while performing delivery services for Employer on July 11, 2022.

2. Whether Respondent has established by a preponderance of the evidence that Claimant was an independent contractor pursuant to §8-40-202(2) C.R.S. while performing delivery services for Employer on July 11, 2022.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 11, 2022 until terminated by statute.

FINDINGS OF FACT

1. Employer is a furniture delivery service. [Redacted, hereinafter JR] is the owner of Employer.

2. Claimant explained that on July 11, 2022 he was working at Employer's facility. While stepping between loading docks he fell and injured his arm. Claimant contacted Employer to report the injury and then visited an emergency room. On July 18, 2022 he underwent surgery to repair his separated triceps tendon.

3. Respondent did not dispute that Claimant injured his arm on July 11, 2022. However, Respondent contends that Claimant worked as an independent contractor and is thus not entitled to Workers' Compensation benefits.

4. JR[Redacted] remarked that he hired Claimant as an independent contractor to deliver furniture. He commented that Claimant operated his own business as an independent contractor for moving services. Notably, JR[Redacted] paid Claimant's business known as [Redacted, hereinafter ED] for moving services. He specifically issued a 1099-Form for Claimant to report non-employment income to the Internal Revenue Service (IRS). The record also includes a 1099-Form describing "non-employee compensation" issued by Employer to ED[Redacted] for the tax year 2022.

5. Although there was an expected schedule of work days, JR[Redacted] asked Claimant the days on which he was available. He explained that Claimant had the option of accepting or rejecting moving jobs. Specifically, Claimant could decide when and how long he worked. JR[Redacted] noted that, although Claimant used Employer's trucks, Claimant provided his own tools to perform furniture delivery jobs.

6. In contrast, Claimant testified that he does not have his own independent business and worked exclusively for Employer. He explained that he did not have discretion to choose furniture delivery jobs, but was required to accept work as dictated by Employer. Claimant remarked that Employer provided all tools and equipment necessary to complete his job duties. He summarized that the services he provided were integral to Employer's business.

7. Although Claimant contends he did not have an independent business and worked exclusively for Employer, the record belies his claim. The record includes a Form W-9 titled "Request for Taxpayer Identification Number and Certification" provided by the IRS. The purpose of IRS Form W-9 "is to report on an information return the amount paid to you, or other amount reportable on an information return." Examples of information returns include "Form 1099 Misc (various types of income, prizes, awards, or gross proceeds)."

8. Claimant listed his name on Form W-9, specified his business name ED[Redacted] and noted that the entity was an "individual/sole proprietor or single member LLC." Under Part I of the Form labelled "Taxpayer Identification Number (TIN)," Claimant provided his Employer Identification Number (EIN) of ED[Redacted]. He then certified that the information was correct by signing the Form. The date of filing was December 10, 2021 or approximately seven months prior to Claimant's July 11, 2022 arm injury.

9. Claimant has demonstrated it is more probably true than not that he suffered an arm injury while performing delivery services for Employer on July 11, 2022. He explained that on July 11, 2022, while working at Employer's facility, he stepped between loading docks, fell, and injured his arm. Claimant contacted Employer to report the injury and then visited an emergency room. On July 18, 2022 he underwent surgery to repair a separated triceps tendon. Respondent did not dispute that Claimant injured his arm on July 11, 2022.

10. Respondent has demonstrated it is more probably true than not that Claimant was an independent contractor while performing furniture delivery services on July 11, 2022. Applying the tests of §8-40-202(2) C.R.S. and *Softrock* in ascertaining whether Claimant was free from direction and control in the performance of services and was in fact customarily engaged in an independent business related to the services performed, the record reveals that Claimant was an independent contractor. Accordingly, Claimant is not entitled to receive Workers' Compensation benefits for the arm injury he sustained on July 11, 2022.

11. Initially, Claimant explained that he does not have his own independent business and worked exclusively for Employer. He commented that he lacked the discretion to choose furniture delivery jobs, but was required to accept work as dictated by Employer. Claimant remarked that Employer provided all tools and equipment necessary for him to complete his job duties. However, the evidence includes a Form W-9 in which Claimant listed his name, specified the business name ED[Redacted] and noted that the entity was an "individual/sole proprietor or single member LLC." Under Part

I of the Form Claimant provided his EIN of ED[Redacted]. He then certified that the information was correct by signing the Form. The date of filing was December 10, 2021 or approximately seven months prior to Claimant's July 11, 2022 arm injury.

12. The existence of Claimant's business entity ED[Redacted] undermines his credibility and is more consistent with the testimony of JR[Redacted]. JR[Redacted] remarked that he hired Claimant as an independent contractor. He commented that Claimant operated his own business as an independent contractor for moving services. JR[Redacted] paid ED[Redacted] under the EIN ED[Redacted]. Notably, he specifically issued a 1099-Form for Claimant to report non-employment income to the IRS. The preceding testimony is consistent with Claimant's operation of a business entity beginning about seven months prior to his arm injury. Significantly, Claimant did not simply create ED[Redacted] to work exclusively for Employer, but had an operating business when hired to perform moving services. The record thus demonstrates that it is more likely than not that Claimant was customarily engaged in an independent business related to the services performed when he was injured on July 11, 2022.

13. An employer may also establish that a worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. There is a balancing test to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The record reflects a significant conflict between Claimant and Employer regarding the nine factors and is devoid of evidence regarding some of the criteria. Nevertheless, on balance the factors suggest that Claimant was likely an independent contractor performing services for Employer.

14. Importantly, Claimant was not paid personally for his services while working for Employer. Instead, Employer paid ED[Redacted] under the EIN ED[Redacted] for delivery services. Employer also issued a 1099-Form for Claimant to report non-employment income to the IRS. In fact, the record includes a 1099-Form describing "non-employee compensation" issued by Employer to ED[Redacted] for the tax year 2022. Moreover, although there is some dispute about whether Claimant had the opportunity to decline moving jobs, the credible testimony of JR[Redacted] reflects that Claimant could choose moving jobs to accept and Claimant was not required to work exclusively for Employer. Specifically, JR[Redacted] remarked that Claimant could decide when and how long he worked. Although Employer provided Claimant with a truck for delivery services, the record is mixed about who supplied other tools to complete moving jobs. Finally, the record is devoid of evidence that Employer combined its business with ED[Redacted].

15. The balance of the totality of the circumstances and the nature of Claimant's working relationship with Employer suggests that he was not an employee. The record reveals that it is likely Claimant was engaged in an independent business and free from control and direction in the performance of his services for Employer. Accordingly, Claimant was an independent contractor when he suffered an arm injury while performing delivery services on July 11, 2022.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014). Respondents

are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004).

6. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered an arm injury while performing delivery services for Employer on July 11, 2022. He explained that on July 11, 2022, while working at Employer's facility, he stepped between loading docks, fell, and injured his arm. Claimant contacted Employer to report the injury and then visited an emergency room. On July 18, 2022 he underwent surgery to repair a separated triceps tendon. Respondent did not dispute that Claimant injured his arm on July 11, 2022.

Independent Contractor

7. Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence may be demonstrated through a written document.

8. A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAO, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAO, Jan. 25, 2011).

9. The "employer" may also establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, does not provide tools or benefits except materials and equipment, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAO, June 23, 2006). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-

202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Id.*

10. Section 8-40-202(2)(b)(IV), C.R.S. provides that if the parties use a written document specifying the existence of the nine factors referenced in §8-40-202 (2)(b)(II), C.R.S. the document can create a rebuttable presumption of an independent contractor relationship. The document must advise in larger or bold type that the individual is not entitled to Workers' Compensation benefits and must pay his own federal and state income tax on any moneys earned.

11. In *Indus. Claim Appeals Off. v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014), the Colorado Supreme Court expanded the analysis for determining whether a worker is an employee or an independent contractor beyond the factors enumerated in §8-70-115(1)(c), C.R.S. The *Softrock* decision addressed the evidence necessary to establish that a worker is customarily engaged in an independent trade or business in the context of unemployment insurance benefits. The Court reasoned that the nine factors listed both in §8-70-115(1)(c) and (2), C.R.S. (involving unemployment benefits) and §8-40-202(2)(a) and (b), C.R.S. (pertaining to Workers' Compensation), were relevant to the assessment of the maintenance of an independent business. However, the Court also determined none of the preceding criteria, by themselves, were exhaustive of the inquiry. The Court noted that the status of the claimant must include consideration of the totality of the circumstances and examination of "the nature of the working relationship." *Id*. at 565. The decision pointed to indicia that would normally accompany the performance of an ongoing separate business in the field. Considerations included whether the worker used an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance. *Id*.

12. The question whether *Softrock* applied in the Workers' Compensation context was open until the Colorado Court of Appeals decision in *Pella Windows & Doors, Inc. v. Indus. Claim Appeals Off.*, 458 P.3d 128 (Colo. App. Div. 2 2020). In *Pella Windows* the court concluded that the factors articulated in *Softrock* also apply to Workers' Compensation cases. *See Id.* at 136 ("We therefore conclude that the [p]anel did not err when it determined that [the administrative law judge] . . . should have considered the *Softrock* factors in weighing whether claimant's business was independent of Pella.").

13. As found, Respondent has demonstrated by a preponderance of the evidence that Claimant was an independent contractor while performing furniture delivery services on July 11, 2022. Applying the tests of §8-40-202(2) C.R.S. and *Softrock* in ascertaining whether Claimant was free from direction and control in the performance of services and was in fact customarily engaged in an independent business related to the services performed, the record reveals that Claimant was an independent contractor. Accordingly, Claimant is not entitled to receive Workers' Compensation benefits for the arm injury he sustained on July 11, 2022.

14. As found, initially, Claimant explained that he does not have his own independent business and worked exclusively for Employer. He commented that he lacked the discretion to choose furniture delivery jobs, but was required to accept work as dictated by Employer. Claimant remarked that Employer provided all tools and equipment necessary for him to complete his job duties. However, the evidence includes a Form W-9 in which Claimant listed his name, specified the business name ED[Redacted]and noted that the entity was an "individual/sole proprietor or single member LLC." Under Part I of the Form Claimant provided his EIN of ED[Redacted]. He then certified that the information was correct by signing the Form. The date of filing was December 10, 2021 or approximately seven months prior to Claimant's July 11, 2022 arm injury.

15. As found, the existence of Claimant's business entity ED[Redacted] undermines his credibility and is more consistent with the testimony of Mr. Reyes. Mr. Reyes remarked that he hired Claimant as an independent contractor. He commented that Claimant operated his own business as an independent contractor for moving services. Mr. Reyes paid ED[Redacted] under the EIN ED[Redacted]. Notably, he specifically issued a 1099-Form for Claimant to report non-employment income to the IRS. The preceding testimony is consistent with Claimant's operation of a business entity beginning about seven months prior to his arm injury. Significantly, Claimant did not simply create ED[Redacted] to work exclusively for Employer, but had an operating business when hired to perform moving services. The record thus demonstrates that it is more likely than not that Claimant was customarily engaged in an independent business related to the services performed when he was injured on July 11, 2022.

16. As found, an employer may also establish that a worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. There is a balancing test to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The record reflects a significant conflict between Claimant and Employer regarding the nine factors and is devoid of evidence regarding some of the criteria. Nevertheless, on balance the factors suggest that Claimant was likely an independent contractor performing services for Employer.

17. As found, importantly, Claimant was not paid personally for his services while working for Employer. Instead, Employer paid ED[Redacted] under the EIN ED[Redacted] for delivery services. Employer also issued a 1099-Form for Claimant to report non-employment income to the IRS. In fact, the record includes a 1099-Form describing "non-employee compensation" issued by Employer to ED[Redacted] for the tax year 2022. Moreover, although there is some dispute about whether Claimant had the opportunity to decline moving jobs, the credible testimony of Mr. Reyes reflects that Claimant could choose moving jobs to accept and Claimant was not required to work exclusively for Employer. Specifically, Mr. Reyes remarked that Claimant could decide when and how long he worked. Although Employer provided Claimant with a truck for delivery services, the record is mixed about who supplied other tools to complete moving jobs. Finally, the record is devoid of evidence that Employer combined its business with ED[Redacted].

18. As found, the balance of the totality of the circumstances and the nature of Claimant's working relationship with Employer suggests that he was not an employee. The record reveals that it is likely Claimant was engaged in an independent business and free from control and direction in the performance of his services for Employer. Accordingly, Claimant was an independent contractor when he suffered an arm injury while performing delivery services on July 11, 2022.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Because Claimant was an independent contractor while performing services for Employer on July 11, 2022, his request for Workers' Compensation benefits is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-182-925-002

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she is entitled to a general award of maintenance medical treatment to relieve the ongoing effects of her August 27, 2021 industrial injury and/or to prevent deterioration of the her present condition.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a long time employee of the [Redacted, hereinafter DC] having worked for DC[Redacted] for approximately 18 years. She currently works as a Correctional Trade Supervisor in the laundry department at [Redacted, hereinafter LV].

2. Claimant's position requires her to collect the penitentiary's dirty laundry from various locations spread about the prison grounds. Collection of the soiled laundry involves the use of a box truck that Claimant drives to designated sites where she must load large carts full of wash into the back of the truck for return to the prison's laundry. The truck is equipped with a tri-fold mechanical lift to aid in the process. While the lifting mechanism on the truck is automated, the operator must manually unfold two base sections on the device to use it effectively. Heavy items are then placed on this platform and lifted by the motorized system, with the push of a button, to the height of the truck bed.

3. At the collection sites, Claimant would lower the lift to the ground by use of the pushbutton system. She would then unfold the lift platform and place the large wheeled carts full of dirty laundry onto the deck so they could be raised up to the back of the truck bed. Once the carts were lifted, Claimant would push them into the truck and secure them for transport. After the carts were safely in place, Claimant would reverse the lift process by collapsing the base sections onto one another. She would then fold these two sections onto the lift frame before pushing the system button to move the lift back into its fixed storage position. Claimant would then move to the next pick up site.

4. On August 27, 2021, at around 6:30 a.m., Claimant was injured while collecting dirty laundry. She had finished loading some laundry carts and was lifting the combined weight of the two sections of the lift deck in an effort to finish the folding process when she felt pain and a sharp pulling in her abdomen.

5. Claimant returned to Respondent-Employer's laundry facilities where she reported her injury. She continued to work in pain in the hopes that her condition would improve on its own. When her pain did not resolve by that afternoon, Claimant elected to participate in a telemedicine visit with Dr. Mariam Hasan. (CHE 7, pp. 60-63).

6. During her August 27, 2021 telemedicine visit, Claimant reported moderate abdominal aching/pain that was not improving. (CHE 7, p. 61). Dr. Hasan prescribed 500 milligram tablets of acetaminophen and instructed Claimant to take 2 capsules four times per day. Sixty tablets were dispensed. *Id*. at p. 60. Dr. Hasan also ordered imaging, to include an abdominal x-ray and ultrasound. *Id*.

7. An x-ray of the abdomen obtained September 7, 2021 was unremarkable; however, a focused ultrasound of the anterior abdominal wall revealed a 1.2 cm. fascial defect and umbilical hernia. (CHE 7, pp 70-71).

8. Claimant was referred to Dr. Frank Chae for a surgical consultation by Nurse Practitioner (NP) Brendon Madrid of Concentra Medical Centers (Concentra) on September 21, 2021. (CHE 7, p. 85). Claimant was familiar with Dr. Chae as he had previously performed a laparoscopic vertical sleeve gastrectomy with repair of a large diaphragm hernia on her on April 27, 2021. *Id*. at p. 84; See also CHE 5, p. 34.

9. Before Claimant was evaluated by Dr. Chae, she experienced severe and incessant abdominal pain prompting her visit to an emergency room (ER) on September 21, 2021. (CHE 5, pp. 33-34). Upon presentation to the ER, it was discovered that Claimant's hernia had become incarcerated. (CHE 8, p. 144). Reduction required "light" sedation. *Id.*

10. Claimant presented to Dr. Chae's office on October 13, 2021 with continued complaints of pain and abdominal bulging. (CHE 8, p. 144). Dr. Chae diagnosed Claimant with an "incisional hernia with obstruction but no gangrene (following incarceration). *Id*. at p. 146. Dr. Chae recommended surgical repair with mesh. *Id.*

11. Claimant was taken to the operating room on December 6, 2021, where Dr. Chae performed an "open" repair of Claimant's incisional hernia with placement of dual layered surgical mesh. (CHE 9, pp. 158-159).

12. Claimant experienced substantial post-surgical nausea/vomiting and dehydration. She presented to the ER at Saint Mary Corwin Medical Center on December 9, 2021, where she was treated with 2 liters of IV fluids for dehydration and Phenergan to control her nausea. (CHE 10).

13. Claimant returned to Concentra on December 15, 2021 where she was evaluated by NP Madrid. (CHE 7, p. 97). During this appointment, NP Madrid documented that Claimant was taking Tylenol for continued pain because she was unable to take NSAIDS secondary to her prior bariatric surgery. *Id.*

14. Claimant returned for a follow-up appointment with NP Madrid on April 5, 2022. During this appointment, Claimant reported continued sensitivity at the umbilicus. (CHE 7, p. 126). Nonetheless, it was noted that Dr. Chae had released Claimant to full duty work with a caveat that she was at increased risk for re-injury based upon her job demands. *Id.*; See also, CHE, 8, p. 155.

15. Claimant was evaluated by Dr. Daniel Peterson at Concentra on May 25, 2022. During this encounter, Claimant reported persistent sensitivity and bulging at the location of her incision. (CHE 7, p. 137). She also reported continued pain when turning fast. *Id.* Dr. Peterson placed Claimant at MMI without impairment and no need for permanent work restrictions (PWR) or maintenance medical treatment needs. *Id.* at p. 137,140.

16. Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Brain Mathwich on November 14, 2022. During this encounter, Claimant reported minor pain and internal pulling/straining with lifting, pushing or pulling. (CHE 5, p. 36). She also reported pain when wearing jeans or leaning over the laundry carts to retrieve items as this activity caused pressure over the area surrounding her hernia. *Id.* Claimant reported that her job duties required her to push/pull laundry carts, and load and unload washers/dryers. Moreover, as described above, Claimant was required to pick up and deliver laundry to various locations around the prison. *Id*. at p. 33. Because Claimant's job duties require considerable amounts of lifting, pushing and pulling, the ALJ finds it reasonable to infer that Claimant probably experiences some level of daily pain, especially when she is engaged in her work activities.

17. Dr. Mathwich concurred with Dr. Peterson that Claimant had reached MMI on May 25, 2022, that she had no impairment and did not have maintenance treatment needs. (CHE 5, p. 37-38).

18. Respondent-Employer filed a Final Admission of Liability consistent with Dr. Mathwich's DIME opinions regarding MMI, impairment and maintenance medical treatment on December 22, 2022. (CHE 1). Claimant objected to the FAL and requested a hearing in an effort to overcome the DIME opinions of Dr. Mathwich regarding MMI and impairment. She also requested a determination regarding her entitlement to maintenance medical care. (CHE 2, 3). Claimant subsequently withdrew all hearing issues expect her request for maintenance medical benefits.

19. Claimant testified that there is a persistent bulge over the area surrounding the location of the hernia and that her surgical incision site remains sensitive. She reported that the labor intensive nature of her job, including her need to push and pull laundry carts weighing upwards of a 100 pounds, causes abdominal pain and pulling sensations. Bending into the laundry carts and lifting the facilities laundry also causes pain and an abnormal feeling in the abdomen. Claimant attributes these symptoms to the implanted surgical mesh used to remediate and strengthen the fascial defect in her abdominal wall. Claimant testified that she is apprehensive and fearful she

will suffer further injury given her condition. Accordingly, she testified that she is very cautious when performing her work duties. She takes Tylenol for pain.

20. Claimant denied that her persistent symptoms are related to her prior bariatric surgery. She also testified that Dr. Chae has not recommended additional treatment, including prescription medications to address her ongoing symptoms. Indeed, outside of over the counter Tylenol for pain, Claimant is not otherwise actively treating her hernia. Accordingly, Respondent argues that Claimant's request for maintenance treatment must be denied and dismissed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo.App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo.App. 1990). The weight and credibility to be assigned expert testimony is a

matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo.App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Claimant's Entitlement to Maintenance Medical Treatment

D. It is well settled that the need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). Indeed, in *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established the now recognized two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra.* In announcing its decision in *Grover*, the Colorado Supreme Court stated that "before an order for future medical benefits may be entered, there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease." Subsequent courts have indicated that ongoing medical treatment can be ordered if a claimant's condition can be expected to deteriorate so that greater disability results in the absence of such care. *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo.App. 1995). In *Milco,* the Court of Appeals refined the test for awarding maintenance medical benefits by noting that irrespective of its nature, maintenance treatment "must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." *Milco Construction v. Cowan, supra*; *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo.App. 1995). If the claimant reaches this threshold, the ALJ should then, as a second step, enter a "general order similar to that described in Grover." *Milco Construction v. Cowan, supra.*

E. While a claimant does not have to prove the need for a specific medical benefit, he/she must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra*. The question of whether the claimant met the burden of proof to establish his/her entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the evidence presented persuades the ALJ that the persistent abdominal pain/pulling Claimant is experiencing, especially when she is engaged in work activities, is likely causally related to some residual consequence of her August 27, 2021, hernia and subsequent surgery, perhaps the surgical mesh used to treat the fascial defect and strengthen the abdominal wall. Accordingly, the ALJ is persuaded that the Claimant has proven that there is a casual

connection between her industrial injury and her continued need for Tylenol, whether that be over the counter or not.

F. The ALJ credits Claimant's testimony that she is still taking Tylenol to relieve this ongoing pain. Claimant's use of Tylenol to alleviate the pain associated with her injury and subsequent surgery in not new. Indeed, while she is evidently using over the counter Tylenol currently, the evidence presented supports a conclusion that she was previously prescribed 500 mg Tylenol tablets for pain control. Moreover, the evidence presented supports a conclusion that Claimant's options to treat the pain connected to her work-related hernia are limited because of her previous bariatric surgery. She cannot take NSAIDS and the more potent pain killer, oxycodone makes her sick. (CHE 7, p. 97). Consequently, Claimant takes Tylenol for the persistent pain caused by her work-related hernia. Without continued access to over the counter Tylenol, the ALJ is persuaded that Claimant will likely suffer from persistent and possibly functionally altering pain that will probably result in a deterioration of her physical abilities and current condition. Contrary to Respondent's suggestion, the evidence presented supports a conclusion that Claimant needs some ongoing medical treatment to relieve the effects of her injury. Even if that "treatment" is in the form of an over the counter analgesic. Consequently, the ALJ concludes that Claimant has proven, by a preponderance of the evidence, that a general award of maintenance medical care is warranted in this case. Nonetheless, Respondents retain the right to dispute whether the need for specific future medical treatment was caused by the compensable injury or whether it is reasonable and necessary.[1] *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for reasonably necessary and related post-MMI medical treatment to relieve Claimant from the ongoing effects of her August 27, 2021 industrial injury and/or prevent deterioration of her current condition.

2. Respondents retain the right to challenge specific requests for maintenance treatment on the grounds that such care is not reasonable, necessary or related to Claimant's August 27, 2021 industrial injury. *See generally*, *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo.App. 1995); *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003).

3. All matters not determined herein are reserved for future determination.

---

[1] The question of whether Claimant's continued use of Tylenol is reasonable or necessary was not presented during the June 27, 2023 hearing. Rather, the sole question for determination at the June 27, 2023 hearing was whether Claimant established the probable need for some treatment after MMI due to her August 27, 2021 industrial injury.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant established by a preponderance of the evidence that arthroscopic rotator cuff repair surgery recommended by Michael Hewitt, M.D., is reasonable, necessary, and causally-related to Claimant's November 24, 2021 work injury.

FINDINGS OF FACT

1. On November 24, 2021, Claimant sustained an admitted injury to her right shoulder arising out of the course of her employment with Employer. The injury occurred while Claimant was taking down a display unit. In the process, Claimant testified that her right arm gave out causing immediate pain to her shoulder.

2. Claimant has a history of right shoulder pain dating to an ATV accident in June 2017. Although Claimant testified that she did not sustain a right shoulder injury at that time, Claimant was evaluated and treated for right shoulder pain on several occasions following the ATV accident. Claimant was initially seen on June 25, 2017 noting pain in her both shoulders. X-rays were negative and the shoulder examination was negative. (Ex. F & H).

3. Claimant was then seen at Salud Health Clinic on June 29, 2017, and September 12, 2017. Claimant reported she had right shoulder pain that kept her awake at night. Provocative testing of the right shoulder was negative. The treating physician opined the origin of Claimant's right shoulder pain was likely muscle spasms, and not related to her right rotator cuff. (Ex. E). Claimant was referred to physical therapy, although no records of that treatment were offered or admitted into evidence.

4. Claimant's next documented medical treatment for her right shoulder was on October 15, 2018, when she returned to Salud. Claimant reported problems with her right hand and arm, and that she felt her right arm giving out when she was carrying trays in her job in a restaurant. She was diagnosed with a trigger point of the right shoulder region. (Ex. E). Claimant testified that she had no medical care to her right arm after October 2018.

5. Following her November 24, 2021 injury, Claimant was initially evaluated at AUC Brighton on November 27, 2021. She reported pain in her right arm, shoulder and neck, and tenderness on palpation of the bicipital groove. Claimant was diagnosed with a strain of the right shoulder and advised to follow up with her primary care provider in 7 days. (Ex. D).

6. Claimant was then seen by Scott Richardson, M.D., at Concentra on December 3, 2021. Dr. Richardson is an authorized treating physician (ATP). Claimant reported a

burning sensation in her right shoulder with associated right arm numbness and tingling. Dr. Richardson diagnosed Claimant with a right shoulder, neck, and forearm strain, and referred her for physical therapy. (Ex. C).

7. Claimant attended physical therapy at Concentra Physical Therapy for seven visits between December 3, 2021 and December 30, 2021. At discharge, Claimant continued to report constant pain in the right shoulder and arm. (Ex. 6).

8. On December 7, 2021, Claimant saw Brittany Lain, NP, at Concentra. Claimant's examination was positive for tenderness in the right shoulder musculature, but not the AC joint, and rotator cuff testing was negative. Claimant reported pain with gripping, lifting above shoulder level, and laying on her right side. Ms. Lain ordered an MRI of the cervical spine. (Ex. 6).

9. On December 15, 2021, Claimant saw Ruth Vanderkooi, M.D., at Concentra, reporting continued pain and burning in the right arm, and difficulty lifting overhead. Dr. Vanderkooi noted that Claimant's cervical MRI had not been completed, and that she would consider a shoulder MRI if Claimant did not improve. (Ex. 6).

10. Claimant's cervical MRI was completed on December 27, 2021. The MRI showed mild cervical spondyloses and neuroforaminal narrowing at C5-6, but no high-grade canal stenosis. (Ex. H).

11. On December 28, 2021, Dr. Vanderkooi referred Claimant to physiatrist, Nicholas Olsen, D.O. (Ex. 6). She saw Dr. Olsen on January 4, 2022. Dr. Olsen recommended a transforaminal epidural steroid injection (TESI) for Claimant's neck symptoms. (Ex. 8).

12. Claimant saw Dr. Vanderkooi again on January 26, 2021, reporting difficulty using her right arm, including weakness, and dropping things. Dr. Vanderkooi noted that Claimant's right arm pain was likely radicular pain from C6, and that a right shoulder MRI would be appropriate to rule out pathology which could be contributing to Claimant's right arm pain. (Ex. 6).

13. On February 17, 2022, Claimant had a right shoulder MRI. The MRI was interpreted as demonstrating a focal full-thickness or near full-thickness tear of the posterior supraspinatus tendon. (Ex. 7). Claimant was then referred to orthopedic surgeon, Mark Failinger, M.D. (Ex. 6).

14. On February 22, 2022, Dr. Olsen performed a right C5-6 TESI, which provided Claimant temporary relief of Claimant's axial neck pain and radiation to Claimant's right shoulder girdle. (Ex. 8).

15. Claimant saw Dr. Failinger on March 3, 2022, for evaluation. Dr. Failinger reviewed Claimant's MRI films, and opined that the MRI showed partial tearing of the biceps tendon, irregularity in the posterior supraspinatus and anterior infraspinatus, with tendinosis, and mild AC joint arthritis. He indicated that Claimant had multiple areas of pain and discomfort, and that not all of Claimant's pain was generated from the shoulder. He recommended a diagnostic/therapeutic injection of the subacromial space to determine if

pain was generated from the rotator cuff. He performed the injection and noted that it helped with Claimant's anterior discomfort, and improved her strength on abduction, although Claimant continued to experience neck pain, which he noted should be treated by others. (Ex. 9).

16. Claimant returned to Dr. Failinger on March 17, 2022, reporting that the injection provided significant relief for a few hours, and continued to provide pain relief for a few days. Claimant's pain had, however, returned to its previous levels. Dr. Failinger recommended that Claimant return to Dr. Olsen for consultation and treatment of her cervical pain, after which Dr. Failinger would consider a decompression of the right shoulder and possible biceps tenolysis. Based on his review of the MRI, he opined it was unlikely he would perform rotator cuff repair surgery due to the size of the tear. (Ex. 9).

17. Claimant returned to Dr. Olsen on March 30, 2022. He instructed Claimant on home exercises and therapy for her neck and shoulder, and recommended an EMG study to evaluate Claimant's reports of right arm radiculopathy. (Ex. 8)

18. On April 14, 2022, Claimant saw Dr. Failinger. He noted that he was waiting on clearance from Dr. Olsen for any neurologic pathology that could interfere with surgery prior to proceeding with surgery. He disagreed with the initial radiology reading of Claimant's right shoulder MRI, and opined that the MRI did not show a full-thickness tear of the rotator cuff, but the MRI did show high-grade degeneration of the supraspinatus, that could possibly be causing some of the pain in her shoulder, but not causing pain in the neck or pain down her arm. He did not recommend further injections in Claimant's shoulder. Dr. Failinger planned to see Claimant again after completion of an EMG study. (Ex. 9).

19. On April 25, 2022, Dr. Olsen performed the EMG study of Claimant's right upper extremity which was negative. He indicated that there were no signs of cervical radiculopathy, plexopathy or peripheral nerve entrapment. Thus, he opined that Claimant was cleared for shoulder surgery. He also noted that Claimant's previous C5-6 TESI, although initially deemed non-diagnostic, actually relieved Claimant's neck pain. (Ex. 8).

20. Claimant returned to Dr. Failinger on May 12, 2022 to discuss surgery. Dr. Failinger recommended a right shoulder arthroscopy to include shoulder decompression, possible rotator cuff repair, possible biceps tenolysis, and possible clavicle resection. Dr. Failinger opined there was little else to be done for Claimant's right shoulder other than proceed with surgery. On May 23, 2022, Dr. Failinger requested authorization for the recommended shoulder surgery. (Ex. 9)

21. On May 21, 2022, William Ciccone, M.D., performed a record review at Respondents' request. Based on his review of records, Dr. Ciccone opined that Claimant did not sustain a work-related injury to her right shoulder. He opined that Claimant's report of a sudden onset of pain following her injury was not reflective of an injury, only the occurrence of pain. He opined that her physical examinations were not reflective of a shoulder injury, and he disagreed with Dr. Failinger's assessment that surgery was the

only available treatment option. He opined that the requested surgery was not reasonable, necessary, or work-related. (Ex. A).

22. Ultimately, Claimant's ATP at Concentra referred her to orthopedic surgeon, Michael Hewitt, M.D. for a second opinion regarding her shoulder. (Ex. 6). Claimant saw Dr. Hewitt on March 8, 2023. Dr. Hewitt reviewed x-rays of Claimant's shoulder (but not her MRI) and indicated they were inconsistent with a chronic rotator cuff tear, but she did have a clinical examination consistent with rotator cuff weakness. He offered several potential treatment options including observation, activity modifications, medications, therapy, and potential surgery. He did not recommend additional shoulder injections. (Ex. 10).

23. Claimant returned to Dr. Hewitt on March 16, 2023, and he was able to review Claimant's MRI films. Dr. Hewitt interpreted Claimant's MRI as demonstrating a focal full-thickness, non-retracted, central supraspinatus tear, with moderate biceps tendinopathy. He noted that Claimant had only minimal improvement over the previous 18 months, and that surgery would be medically reasonable. He recommended an arthroscopic rotator cuff repair with subacromial decompression. (Ex. 10)..

24. On April 17, 2023, Dr. Ciccone performed a second record review. Again, Dr. Ciccone opined that Claimant did not sustain any work-related injury, and his previous opinion remained unchanged. He noted the differing interpretations of Claimant's right shoulder MRI and indicated "[e]ven if there is rotator cuff pathology noted on the MRI, it is likely that the findings are related to the ATV accident on 6/25/27 and not the work event." (Ex. A). Dr. Ciccone testified by deposition and was admitted as an expert in orthopedic surgery. He opined that the surgery recommended by Dr. Hewitt was reasonable and necessary to address the Claimant's right shoulder pathology, but he opined that the need for surgery was not related to Claimant's work injury. Dr. Ciccone's opinion that Claimant did not sustain a work-related injury to her right shoulder is not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AUTHORIZATION OF SPECIFIC MEDICAL BENEFITS (Surgery)

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Hewitt is reasonable and necessary to cure or relieve the effects of her work injury of November 24, 2021. The credible evidence establishes that Claimant has pathology in her right shoulder that requires surgery. While Claimant's testimony that she did not have right shoulder issues following her ATV accident in 2017 was not supported by her medical records, no credible evidence was admitted indicating Claimant had symptoms in, or treatment for, her right shoulder for more than three years before her November 24, 2021 work injury. When evaluated in 2017, Claimant did not exhibit signs of a rotator cuff injury, and the treating physician opined that Claimant's right

shoulder symptoms were more likely the result of muscle spasms than rotator cuff pathology.

Following her November 24, 2021 injury, Claimant consistently reported right shoulder pain. Claimant's providers initially investigated her cervical spine as the cause of symptoms in her right arm. That, however, does not exclude an injury to Claimant's right shoulder. Dr. Failinger's opinion that Claimant's right shoulder pathology did not explain all of her symptoms indicates that Claimant's cervical symptoms may have a different source. In fact, it was ultimately determined that Claimant sustained a right rotator cuff tear. The ALJ credits Dr. Hewitt's interpretation of Claimant's MRI over Dr. Failinger's interpretation because Dr. Hewitt's is consistent with the reading radiologist. Moreover, although Dr. Failinger indicated that a rotator cuff repair was unlikely, he did request authorization for the procedure, which indicates that he did not definitively rule out rotator cuff pathology that may be amenable to surgery.

The ALJ does not find credible or persuasive Dr. Ciccone's opinions that Claimant sustained no injury and that her pain complaints are due to a 2017 ATV accident. Dr. Ciccone's opinion that an acute onset of sudden pain is not consistent with an injury is not credible. The ALJ finds and concludes that Claimant has established by a preponderance of the evidence that her right shoulder pathology is causally related to her November 24, 2021 work injury.

Claimant has also established that the surgery recommended by Dr. Hewitt is reasonable and necessary to treat her industrial injury. Two different orthopedic surgeons have recommended right shoulder surgery, and Dr. Ciccone agreed the surgery proposed by Dr. Hewitt is reasonable and necessary. Moreover, Claimant underwent a reasonable course of conservative treatment for her right shoulder which did not resolve her shoulder complaints. Claimant's request for authorization of the surgery recommended by Dr. Hewitt is granted.

ORDER

It is therefore ordered that:

1. The right shoulder surgery recommended by Michael Hewitt, M.D., is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury. Claimant's request for authorization of the recommended right shoulder surgery is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-148-399-004

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he was injured in the course and scope of his employment with Employer on August 27, 2020.

IF THE CLAIM IS FOUND COMPENSABLE, THEN:

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits that are authorized, reasonably necessary and related to the alleged injury of August 27, 2020.

III. Whether Claimant has proven what his average weekly wage is at the time of the incident in question.

IV. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits from August 28, 2020 and continuing until terminated by law.

V. Whether Respondents have proven by a preponderance of the evidence that Clamant was terminated for cause.

STIPULATIONS OF THE PARTIES

The parties stipulated that, if the claim was deemed compensable, Clinica Family Health was the authorized treating provider with regard to the claim and that Claimant's average weekly wage was $103.85. The stipulations of the parties are approved and incorporated into this order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 74 years old at the time of the hearing. He worked for Employer as a dishwasher, one day a week, working the 2 p.m. to 9:30 p.m. shift. He would wash pots, pans, receptacles, platters, plastic containers that would be reused and other utensils. He had started working for Employer in approximately June 2020.

2. On August 27, 2020 Claimant injured himself at work while lifting a 10 lb. pot three quarters full of water and food debris, which weighed close to 50 lbs. total with contents. He lifted it up from the floor to the counter sink, and hurt his back in the process, though he was able to lift it all the way into the sink. Claimant continued working until the end of his shift, when he advised his supervisor and shift manager, M.M., who did not respond. Claimant left the restaurant and went home.

3. The following Monday he went to Clinica Campesina or Clinica Family Health to seek treatment. Claimant was advised that they were too busy with patients due to the COVID-19 pandemic. They instructed him to leave and return at a later time.

4. Claimant was due to return to work on Thursday, September 4, 2020. However, on September 1, 2020 Claimant received a call from Employer's representative, F.M. who terminated his employment.

5. Claimant returned to Employer's premises on September 4, 2020 in order to ask Ms. F.M. to send him to a doctor because of his back pain. He parked at the restaurant right next to Ms. F.M.'s car. He got out of his car and at that moment Ms. F.M. was coming out of the restaurant and got in her car. He tried to get her attention and she rolled up her car windows and did not respond to him, driving out of the parking lot.

6. Claimant returned to Clinica Family Health again on September 4, 2020. They could not see him again. However, on this occasions they provided him an appointment for September 16, 2020. He was attended at that time and provided prescriptions for medications. They gave him steroids, muscle relaxants, anti-inflammatories, Tylenol as well as injections into the back, which helped. But the pain would come back. He was also, eventually given work restrictions of 10 lbs. lifting. He explained that the doctors were in the process scheduling more injections.

7. At one point his back pain was very intense and he went to Clinica for medical care but they sent him on to the emergency room at Avista Adventist Hospital, where they charged him $9,800, which continued to remain unpaid. He noted that approximately two months before the hearing he had received his last injection into his back and was provided with continued 10 lbs. restrictions.

8. Claimant filed a Workers' Claim for Compensation on September 10, 2020 stating that he was lifting a few pan/pots on August 27, 2020 at approximately 5 p.m. and felt a pop and sharp pain in his back. He noted that he had numbness in his legs. He reported the incident to M.M.

9. On September 16, 2020 Claimant was evaluated at Clinica Family Health related to a reported August 27, 2020 incident where Claimant was lifting a heavy pot and strained his back, causing mid back, low back pain, hip pain, and bilateral leg pain. Nurse Practitioner Jennifer Manchester noted Claimant continued with symptoms that radiated to both legs causing difficulty ambulating and had an onset of urinary hesitancy.

10. On September 18, 2020 Nurse Manchester restricted Claimant from work as of his date of injury and continuing, though stated he could return to work as of October 2, 2020 with a 20 lbs. restrictions. She recommended an MRI and referral to an orthopedic spine specialist, which Claimant declined as he did not have insurance or means to pay for them.

11. Dr. Upasana Mohapatra at Clinica also evaluated Claimant on September 23, 2020 and continued Claimant off work. He noted that Claimant's pain persisted in the middle and low back as well as the bilateral legs, specifically radiating to the left and right thighs. He diagnosed acute midline thoracic back pain. He noted that Claimant previously had reported tenderness to palpation over the lumbar spine but it was most pronounced over the thoracic spine with a positive straight leg test. He prescribed oxycodone and

cyclobenzaprine, an antidepressant. He ordered a thoracic x-ray and continued to recommend further diagnostic testing, which Claimant declined due to the cost.

12. On October 23, 2020 Dr. Mohapatra stated that Claimant continued to be unable to work. He noted that Claimant had pain in the middle back, low back and gluteal area with pain radiating down the left thigh and calf. Dr. Mohapatra continued to keep Claimant off work on November 23, 2020 noting that Claimant continued to have low back pain with radiculopathy affecting the lower extremity. His work status continued on December 13, 2021. In January 2021 his Clinica providers noted Claimant now had depressed mood related to his inability to provide for his family due to his ongoing chronic low back pain. In February 2021 Claimant was noted to have continued chronic low back pain with continued urinary hesitancy. This patterned continued with assessments of lumbar back pain with radiculopathy affecting the lower extremity, continued medications for both pain and depression related to the trauma.

13. On April 13, 2021 Claimant was evaluated by physiatrist Greg Reichhardt, M.D. for an Independent Medical Evaluation (IME) at the request of Claimant's counsel. On exam Dr. Reichhardt noted tenderness to palpation from T8 to the S1 area with most tenderness at the L1 to L3 level. Claimant had moderate lumbar paraspinal muscle spasm from L1 to L5. Straight leg raising was positive for back and leg pain. Patrick's maneuver was positive. Iliac compression test was positive. Dr. Reichhardt diagnosed thoracolumbar pain with bilateral lower extremity pain from lifting a pot at work on August 27, 2020 while-working as a dishwasher. He assessed that Claimant's exam was concerning for possible radiculopathy or myelopathy. He also noted Claimant had depression, which was multi-factorial, and only partly related to his work-related injury, and partially to the stresses of COVID, with possible adjustment disorder. Dr. Reichhardt opined that based on the history provided by Claimant, as well as the medical records available, to a reasonable degree of medical probability, Claimant current thoracolumbar pain and lower extremity symptoms were related to his August 27, 2020 work-related injury.

14. Dr. Reichhardt recommended Claimant undergo thoracic and lumbar MRIs to evaluate for potential nerve root or spinal cord compression leading to myelopathy or radiculopathy. After the MRIs, it would be appropriate for him to undergo physical therapy, progressing to an independent active exercise program. Depending on the results of the MRIs there might be consideration for selective spine injections or surgical intervention. He further stated that appropriate restrictions for Claimant were 10 pound lifting, pushing, pulling and carrying, with limited standing and walking to 30 minutes at a time with a five minute rest break, no climbing at unprotected heights, and no bending or twisting at the waist.

15. Claimant received trigger point injections on January 19, 2022 at Clinica Family Health. On January 27, 2022, Claimant returned for a follow up with Dr. Mohapatra when Claimant reported improvement with trigger point injections and muscle relaxants.

16. Claimant was seen on April 14, 2022 by Dr. Alejandro Stella at Avista Adventist Hospital for low back and right lower extremity pain. He was diagnosed with back pain and lower extremity pain. The triage nurse noted that Claimant presented with a history of low back injury of approximately one and one half years now experiencing

right buttock pain that radiated down the right leg and left foot numbness that extended up to the left knee. Dr. Stella ordered an MRI, which was conducted on April 14, 2022. The radiologist, Kevin Woolley, M.D. reported Claimant had lumbar spine degenerative changes with grade 1 anterolisthesis at L4-5 level to the basis of facet arthropathy, spinal stenosis noted at L4-L5 with bilateral foraminal impingement on the basis of degenerative change and listhesis, and bilateral foraminal impingement at L5- S1 with no disc herniation. They also performed a lower extremity ultrasound to rule out DVT.[1] Claimant was released to follow up with his primary care provider.

17. On April 25, 2022, Claimant returned to Clinica Family Health. Claimant reported previous trigger point injection helped for about two months. He received a second trigger point injection at this time. On a follow up with Clinica on May 10, 2022, Claimant reported improvement with trigger point injections, steroid burst, cyclobenzaprine, and gabapentin. On August 10, 2022, Claimant returned to Clinica for more trigger point injections. Dr. Mohapatra noted Claimant reported a reduction in pain previously. Four trigger points were injected. Claimant reported mild improvement after the procedure.

18. Claimant was seen for an IME by Dr. Lloyd Thurston on August 19, 2022, at Respondents' request. Dr. Thurston questioned Claimant on the weight of the pot at the time of the alleged injury. He informed him that 10-15 gallons weighs 80-120 pounds without a pot. Claimant stated that he believed he could not lift more than 60 pounds. Claimant stated he lifted the pot from the ground tipped it over and poured the water out, and then cleaned it with a spatula. He then put the pot away overhead. It was Dr. Thurston's opinion claimant exaggerated the mechanism of injury. He noted that if Claimant incurred an injury, it was a minor myofascial strain and resolved within 4-6 weeks of the date of injury. He opined there were no radicular symptoms. He explained that the continued subjective complaints were not consistent with a physical injury. He opined that Claimant significantly embellished and exaggerated the mechanism of injury to Dr. Reichhardt.

19. On October 10, 2022, Claimant received his last round of trigger point injections. On the last recorded visit to Clinica Family Health before the hearing, on October 20, 2022, it is noted Claimant received numerous treatments and most helpful were ibuprofen 600mg tablets taken twice a day, acetaminophen 500mg twice a day, lidocaine patches, and Cyclobenzaprine, trigger point injections and steroid bursts.

20. Since his back injury of August 27, 2020 Claimant has not returned to work due to ongoing back pain related to the work injury.

21. Ms. F.M. stated that Claimant was initially hired without a position but was doing dishwashing one day a week. The restaurant was slower around 2 p.m. when Claimant started, and then would pick up around 5 p.m. She stated that several of the pots, one for chili and one for beans were used for cooking which would be filled to about four inches below the top of the pans. The deep square pans were used to serve food and were placed on steamers by the wait staff. Claimant would wash them when they

[1] Deep vein thrombosis.

were empty. The pots full of chili or beans are taken out to the platers to put the food and then brought back with some residue and food at the bottom of the pots.

22. Mr. T.M. is also a Respondent representative. He stated the chili and bean pans weighed approximately 5 lbs. empty, that the pots are given to the dishwasher after all the food is scraped out and put into smaller containers, and that there was only residue in the pots. He stated that the diner rush lasted about one hour from 5:30 to 6:30 p.m. and that most of the cooking had been done by the time Claimant was there at 2 p.m. It was not until after the rush the steam pans from were given to the dishwasher. What was not explained by any Employer witnesses was what was Claimant doing from 2 p.m. to 6:30 p.m. when the dinner crowd was done and Claimant had to start washing the trays.

23. The photographs showed a cooking pot (chili pot) that seems to be a 40 quart stock pot which is normally 12 to 14 inches wide at the mouth and approximately 15 inches tall. This ALJ deduces that it likely could hold up to 10 gallons of water. The second pot, behind the first, is a smaller, potentially a 32 quart stock pot (beans pot). Further in photograph 3 it shows Ms. F.M. rinsing the smaller pot (beans pot) by lifting it with one hand and using a hose. The pan already appeared to have been scrubbed and washed. Lastly, Ms. F.M. stated that they would wash the chili pot by submerging it in water then rinsing it as shown in the photo. Photograph 2 showed pans on the ground that appear to be the stated dimensions that Ms. F.M. testified of 12 by 14 inches. In the sink can also be seen a plastic container, which Ms. F.M. denied they reused.

24. Ms. F.M. stated that she had a conversation with Claimant by phone on September 1, 2020 to see if she could make arrangements with Claimant to change his schedule because the staff had complained he was taking too long to finish his job. She disclosed that Claimant became very upset. She denied that she terminated Claimant. However, in the responses to discovery she indicated she would testify that “when she informed him [Claimant] of his termination, he became quite agitated and threatened to call their corporate office and speak to individuals there who did not have connection with his termination.” This is also confirmed by discovery responses by Mr. T.M. Discovery responses also stated that Claimant was terminated for cause as he had been previously counseled that he worked very slow, and needed to improve the quality and speed of his work.

25. Dr. Thurston testified at the end of hearing and his testimony was concluded via deposition. He explained that the x-ray and MRI did not show an acute injury, and that this is corroborated by Dr. Mohapatra and Dr. Stella. He disagreed with the diagnosis of radiculopathy. He explained that Dr. Reichhardt’s conclusions were based on incorrect information. He opined that while a possible myofascial injury may have occurred, that it was not probable that it was a work injury.

26. While the clocked-in time shows seven or less hours worked per day, this does not count the time that Claimant was at the job site, including his breaks, which may be what Claimant was referencing and that is consistent with his testimony that he was at work seven to eight hours a day. The argument that co-workers were complaining and that he was not finishing on time is inconsistent with the time clock which has Claimant clocking out between 9:00 p.m. and 9:30 p.m. at the latest each night. Unless the clock

was not accurate or changed, Ms. F.M.'s testimony is found to be not credible or persuasive.

27. As found, Claimant has shown he was injured in the course and scope of his employment for Employer on August 27, 2020 injuring his back and causing radicular symptoms down his legs as well as urinary hesitancy and aggravation of his depression due to the chronic back pain. The opinions of providers at Clinica Family Health and Dr. Reichhardt are more credible and persuasive than the contrary opinions of Dr. Raschbacher.

28. Claimant has shown he was unable to work after his August 27, 2020 work injury and has shown he is entitled to temporary disability benefits. The records fail to show that Claimant has been placed at maximum medical improvement through the date of the hearing of April 12, 2023.

29. Respondents have failed to show that Claimant was terminated for cause. Claimant reported the injury to his supervisor. Further, Ms. F.M.'s testimony was unpersuasive as her discovery responses indicated she terminated Claimant.

30. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

Claimant has proven that it was more likely than not he was injured in the course and scope of his employment with Employer on August 27, 2020 when lifted a pot with water and food debris off the floor and strained his thoracolumbar spine. He subsequently developed lower extremity radicular symptoms and depression related to the chronic low back and radicular pain and numbness. Claimant's claim is determined to be compensable.

Respondents argue that Claimant's version of events was illogical and there was no reason for anyone to take the empty pot, fill it with water and then place it on the ground to be cleaned as it did not make sense. However, this ALJ concludes that it makes a lot of sense. It is clear that dirty pans do get placed on the floor waiting to be washed as seen in the photos taken by Respondents. It is evident from the photos that there is limited area to place dirty items as the space was needed to take items from the sink onto the small counter in order to wash them. Claimant's testimony that the pot he lifted was full of water and food debris was credible. A pot that has been used to cook may have

had food stuck and water was placed in the pot in order to assist with cleaning the pot later. And while Claimant's assessment of weight may be imperfect, it does not change the fact that Claimant lifted items that he considered heavy, and at one of those events, injured his thoracolumbar spine. This is supported by the records from Clinica Family Health and Dr. Reichhardt as well as Claimant's testimony, which are found credible. This ALJ does not consider Claimant's being a poor historian, which was documented in various records, as being untruthful but a contribution of multiple factors, including use of interpreters instead of direct communication, his clear lack of education demonstrated by Claimant's word usage and patterns of speech at hearing, his demeanor and difficulty understanding simple questions, in addition to his age, memory, and documented depression. Claimant has shown that he was injured in the course and scope of his employment with Employer on August 27, 2020.

C. Medical benefits

Employer is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). A claimant must establish the causal connection between the compensable event and the need for medical care with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Authorization refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8–43–404(5), C.R.S.2011, gives employers or insurers the right to choose treating physicians in the first instance in order to protect their interest in overseeing the course of treatment for which they could ultimately be held liable. The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury, *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006), and if medical services are not timely tendered by the employer or insurer, the right of selection passes to the employee, *Andrade v. Indus. Claim Appeals Office*, 121 P.3d 328, 330 (Colo.App.2005). Here, the parties stipulated that Clinica Family Health were authorized treating providers for the work related conditions and the provider is accepted.

Claimant has shown he is entitled to medical benefits that are reasonably necessary and related. Following Claimant's lifting incident on August 27, 2022, Claimant immediately contacted his primary care provider at Clinica Family Health. Claimant has proven by a preponderance of the evidence that Claimant's medical care through Clinica and Avista Adventist was authorized, reasonably necessary medical treatment causally related to the August 27, 2020 accident.

23. Only those expenses related to Claimant's August 27, 2020 work related injuries for his mid and low back, bilateral radicular symptoms, urinary urgency and depression are related and not any hypertension or other unrelated medical care.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The parties stipulated to an average weekly wage of $103.85 which provides a temporary total disability rate of $69.23. This stipulation is accepted.

E. Temporary Total Disability Benefits and Interest

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Claimant's testimony and the medical records from Clinica Family Health show that Claimant was either unable to work or under restrictions from the day of his injury of August 27, 2020. Claimant continues to be under medical care and has not been placed at maximum medical improvement pursuant to the records submitted by the parties. Claimant has shown that he is entitled to temporary disability benefits from August 28, 2020 until terminated by law.

Claimant is also due interest on all benefits which were not paid when due pursuant to statute in the amount of 8% per annum. Temporary total disability benefits and interest through the date of the hearing were calculated as follows:

[Redacted, hereinafter RA's Time Sheet Calculations]

F. Termination for Cause

The termination statutes, Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. both provide that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." The respondents must prove that a claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

Here, it is clear that Claimant was terminated by Employer's representative before his next scheduled day of work, on September 1, 2020 as shown by the discovery responses and Claimant's credible testimony. Claimant persuasively testified that he was unable to work after his injury. Further, this is supported by the credible medical records from Clinica Family Health providers who stated Claimant could not work or was under restrictions. Any testimony or evidence to the contrary is specifically found not credible or persuasive. Respondents have failed to show that Claimant was terminated for cause.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's August 27, 2020 work related injury is compensable, including his mid and low back injuries, his radicular symptoms, urinary urgency and the sequelae of depression related to the ongoing chronic pain.

2. Respondents shall pay the authorized, reasonably necessary and related medical benefits including his providers from Clinica Family Health and Avista Adventist Hospital for his hospitalization of April 14, 2022. Any non-related conditions are not Respondents' responsibility. All medical bills shall be paid in accordance with the Colorado Fee Schedule.

3. The stipulation of the parties regarding average weekly wage of $103.85 is accepted and incorporated as part of this order.

4. Respondents shall pay temporary disability benefits from August 28, 2020 through the present until terminated by law. TTD benefits at the rate of $69.23 per week through the date of the hearing of April 12, 2023 is $9,475.30.

5. Respondents shall pay interest at 8% per annum on all benefits not paid when due, for a total of $10,525.63 through the date of the hearing including temporary total disability benefits. Interests shall continue to be paid until indemnity benefits are paid pursuant to this order.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-230-803-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he injured his left shoulder in the course and scope of his employment with Employer on November 17, 2022.

II. If Claimant sustained a compensable work injury on November 17, 2022, then whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonably necessary, authorized and related medical benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant had been employed by Employer for approximately 12 years and worked the night production shift, operating equipment, pulling orders, cases, and bottles, all to be loaded for distribution, which involved a fair amount of lifting. Claimant had been on vacation but returned on November 14, 2022 and was able to perform is job without problems through the November 16, 2022 shift.

2. On November 17, 2022 Claimant arrived at Employers' parking lot at approximately 6:45 to 6:50 p.m. for the 7 p.m. shift. He parked his vehicle in the designated area where he had parked for the twelve years of his tenure with Employer. He exited his vehicle, lost his balance after closing the door and walking away from his vehicle, in the ice and snow covered parking lot, slipping and falling, attempting to catch himself with an extended left upper extremity, which could not hold him and was hyperextended. Claimant injured his left shoulder.

3. Claimant advised his manager J.G. that he had fallen in the parking lot and injured his shoulder. He requested pain blockers, which he was provided. His manager did not provide Claimant with any incident report form or a designated medical provider list.

4. Claimant had experienced a prior work-related injury with this employer in 2016. At that time, when he initially reported the injury, his manager instructed Claimant to file a report and provided a referral to a medical provider. This time his manager made no comments and did not give instructions to Claimant on how to proceed.

5. Claimant, incorrectly, assumed that, since his manager did not direct him to contact anyone or send him to the Employer's medical provider, the parking lot incident was not a covered accident.

6. Claimant proceeded to file for disability benefits under Family Medical Leave (FML).

7. Claimant obtained a medical evaluation at Advanced Urgent Care on Saturday, November 19, 2022, with Kristin Kruszewski, PA-C. He was diagnosed with left shoulder pain for an unspecified injury of the left shoulder. He was provided restrictions of return to work with right-handed duty only and no use of the left arm until evaluated and cleared by orthopedics.

8. A text message was sent by Claimant on an indeterminate date that stated "What do you need me doing?" with a response by his manager stating "Go ahead do returns thanks."

9. Then, on November 20, 2022, Claimant stated "Tried to start a claim with [Redacted, hereinafter HD] for leave but was unable to complete it online. I'll have to call them tomorrow…" The response was "OK just keep us posted and get better." This ALJ infers from this conversation that Employer knew Claimant was injured when he slipped and fell in the parking lot.

10. On November 21, 2022 the conversation continued as follows:

> Q-Did you get it all taken care off (sic.) and you ok
> A-I did get everything done with HD[Redacted]. I have to see an Ortho on Monday…
> Q-Nice hope everything goes okay
> A-Yeah, me too

11. Also on the same day, the Human Resources (HR) Director, R.M., sent an email to the Night Warehouse Manager, J.G., who no longer worked for Employer, asking whether Claimant went on leave as of November 20, 2022, with a last day worked on November 17, 2022. She further asked whether the leave was for personal medical reasons. Mr. J.G. responded, "Yes that is correct." It is presumed that Mr. J.G. was answering both questions in the affirmative.

12. There is an undated letter or email stating that HD[Redacted] had created a Short-Term Disability Claim and Leave of Absence claim for Claimant on November 21, 2022.

13. On November 22, 2022 the Corporate Leave Administrator advised the HR Director that Claimant had been placed on STD/FML status effective November 20, 2022 and had entered PTO for period November 20-22, 2022.

14. On November 28, 2022 Claimant was evaluated by Dr. Michael Hewitt of Orthopedic Centers of Colorado, the orthopedist that had seen Claimant previously for his 2016 work related injury. Dr. Hewitt documented as follows:

> [Claimant] is a 47-year-old left-hand-dominant male presenting for evaluation of his left shoulder. Patient is well-known to this office after undergoing left shoulder subacromial decompression in 2016. He return (sic.) to full activities without restriction.
>
> He was injured on 11/17/2022 exiting his vehicle at work. He slipped on ice in a parking lot and fell onto an outstretched left upper extremity. His arm went overhead, he noted sudden pain but did not feel his shoulder dislocate. Patient did not strike his head or lose consciousness. Treatment has included rest, activity modification, ice, heat and anti-inflammatories. He is having difficulty sleeping.

> Pain is felt in the posterior and lateral shoulder as well as scapula. He currently has minimal neck pain and denies radicular symptoms or numbness.

15. Dr. Hewitt examined Claimant finding mild to moderate glenohumeral arthritis and a current history and exam consistent with rotator cuff tendon injury. Dr. Hewitt proceeded with injecting the left shoulder with steroids and further discussed the possibility of proceeding with imaging if the left shoulder symptoms did not resolve with ice, NSAIDs, therapy and rest.

16. Claimant filed a Workers' Claim for Compensation on February 26, 2023. Claimant stated that he injured his left shoulder on November 17, 2022 at approximately 6:45 p.m. Claimant reported to his supervisor J.G. He specifically reported that:

> After arriving to the office for work during a snow storm I slipped on the ice that was underneath the snow after exiting my vehicle and turning to close the vehicle door. While falling I attempted to catch myself with my left arm when my hand touched the ice it slid out as well, injuring my shoulder.

17. Respondents filed an Employer's First Report of Injury on March 2, 2023. The Safety and Asset Protection Specialist, G.F., completed the report specifically stating that Claimant, after just arriving to work before his shift, and exiting his personal vehicle, slipped and fell injuring his left shoulder. No medical provider was identified.

18. A Notice of Contest was filed on March 7, 2023.

19. Claimant filed an Application for Expedited Hearing on March 20, 2023 on the issues of compensability and medical benefits.

20. Respondents filed a Response to Application for Hearing on March 21, 2023.

21. Claimant testified that after the November 17, 2022 slip and fall, injuring his left shoulder, he was unable to perform his job.

22. Review of the video showed that it was speeded up, was very low resolution and pixilated, distorted and overall poor quality. However, an individual's form could be seen leaving a vehicle, slipping and falling and immediately getting up and walking away from the vehicle. The individual's face could not be seen clearly, however, Claimant believed that he was the individual in the video. This ALJ deduces and infers that the individual seen on the video is Claimant.

23. Mr. G.F., the Safety Specialist, testified that employees were instructed to go to their manager to report injuries. Mr. J.G. was Claimant's manager. Mr. G.F. stated that he heavily relied on the supervisors (managers) to make the reports of injury and complete the written forms, but if the supervisor did not encourage it, there would be no report.

24. This ALJ took administrative notice that the CDLE posters do not specifically indicated that accidents in the parking lots were potentially work related pursuant to the request of the parties.

25. Ms. R.M., the HR Director for Employer in Colorado, testified she was advised by HD[Redacted] that Claimant had filed a short term disability claim on November 21, 2022.

26. Mr. J.G., the night shift manager, testified that he did not know that work place injuries extended to the company parking lots, and further stated that many people asked him for ibuprofen each day but he did not specifically recall if Claimant did on November 17, 2022. Mr. J.G. specifically stated that he did not receive any specific training on if someone slipped and fell in the parking lot, whether or not to report that as short-term disability or as a worker's compensation claim. Any other testimony offered by this witness was neither found persuasive nor credible.

27. As found, Claimant has proven he was injured in the course and scope of his employment with Employer when he slipped and fell in the Employer's parking lot while reporting to work on November 17, 2022, injuring his left shoulder.

28. As found, Employer failed to provide any designation of medical provider either when Claimant reported the accident to his manager, or after Claimant filed a Workers' Claim for Compensation in February, 2023.

29. As found, Employer never referred Claimant to a medical provider to treat the injuries. Accordingly, the right of selection passed to Claimant.

30. As found, Claimant has established by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers.

31. As found, Claimant was entitled to select his own medical provider and he selected Dr. Michael Hewitt, who had been his prior authorized workers' compensation physician for his 2016 work injury. As found, Claimant's authorized treating physician in this matter is Dr. Hewitt.

32. As found, Claimant has established that his left shoulder injury was directly and proximately caused by the November 17, 2022 slip and fall accident at work. This is support by Claimant's credible testimony. It is further supported by Dr. Hewitt's November 28, 2022 report stating that Claimant injured his shoulder when he slipped and fell at work. Claimant has proven he is entitled to medical benefits to cure and relieve the left shoulder injury sustained on November 17, 2022.

33. Testimony and evidence inconsistent with the above findings is determined to be not relevant, not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

The claimant is required to prove by a preponderance of the evidence that, at the time of the injury, both he and the employer were subject to the provisions of the Act, he was performing a service arising out of, and in the course of, his employment and the

injury was proximately caused by the performance of such service. Sec. 8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The claimant must also prove by a preponderance of the evidence that the injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office*, 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co*., 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). Accidents on employer premises or parking lots are compensable. See *State Compensation Ins. Fund v. Walter*, 354 P.2d 591 (Colo. 19600; *Woodruff World Travel, Inc. v. Industrial Commission*, 38 Colo. App. 92, 554 P.2d 705 (1976); *Azaltovic V. Crop Production Services*, ICAO, WC No. 4-846-566 (January 31, 2012)

Based on the totality of the evidence, including hearing testimony and a full review of the exhibits presented at hearing, it is found that Claimant was injured in the course and scope of his employment with Employer on November 17 2022. As found, Claimant slipped and fell in Employer's parking lot, while reporting for his regular shift, and injured his left shoulder. He reported the accident and injury to his manager. Claimant is found credible.

As found, Claimant has established that his left shoulder injury was directly and proximately caused by the November 17, 2022 slip and fall accident at work. This is supported by Claimant's credible testimony. It is further supported by Dr. Hewitt's November 28, 2022 report stating that Claimant injured his shoulder when he slipped and fell at work. The video footage provided was grainy, significantly sped up, and not very clear. Despite this, it showed a man that had just closed his car door, turned and slipped and fell, quickly getting up and continuing to walk. Claimant has proven he was within the course and scope of his employment when he was injured and is entitled to medical benefits to cure and relieve the left shoulder injury sustained on November 17, 2022.

C. Authorized Reasonably Necessary and Related Medical Benefits

Respondents are liable for authorized medical treatment that is reasonably necessary to cure and relieve an employee from the effects of a work-related injury.

Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Indus. Claim Appeals Off.,* 914 P.2d 501 (Colo. App. 1995). Section 8-43-404(5)(a)(I)(A), C.R.S. allows the employer to choose the claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774- 720 (January 12, 2010). As found, Claimant was seen as an emergency on Saturday, November 19, 2022, by Advanced Urgent Care and they are authorized as an emergent care facility for the one time evaluation.

An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Indus. Claim Appeals Off.,* 148 P.3d 381*,* 383 (Colo. App. 2006). As found, Claimant reported to his manager/supervisor that he had a slip and fall injury in Employer's parking lot. As further found, from the text conversation between Claimant and his manager, Employer knew Claimant was injured when he slipped and fell in the parking lot on November 17, 2022, by no later than November 20, 2022. As found, Claimant's manager knew or should have known that Claimant's report of the slip and fall on company property, as well as the complaints of left shoulder pain, which triggered the request and supply of ibuprofen, was sufficient to connect the facts and to acknowledge that the accident should be classified as a potential workers' compensation injury and made the appropriate referrals.

As found, Employer failed to provide any designation of medical provider either when Claimant reported the accident to his manager, or after Claimant filed a Workers' Claim for Compensation in February, 2023. As found, Employer never referred Claimant to a medical provider to treat the injuries. Accordingly, the right of selection passed to Claimant. As found, Claimant has established by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of Sec. 8-43-404(5), C.R.S. and WCRP Rule 8-2. *Tidwell v. Spencer Technologies*, WC 4-917-514 (ICAO, Mar. 2, 2015). As found, Claimant was entitled to select his own medical provider and he selected Dr. Michael Hewitt, who had been his prior authorized workers' compensation physician for his 2016 work injury. As found, Claimant's authorized treating physician in this matter is Dr. Hewitt.

Lastly, as found, Claimant requires medical treatment for the compensable left shoulder injury as recommended by Dr. Hewitt. Claimant has shown that it was more

likely than not that Claimant requires medical benefits that are reasonably necessary to treat the work injuries sustained on November 17, 2022.

ORDER

IT IS THEREFORE ORDERED:

A. Claimant has proven by a preponderance of the evidence that he was injured in the course and scope of his employment on November 17, 2022.

B. Respondents shall pay for all authorized, reasonably necessary and related medical benefits under the care of Dr. Michael Hewitt and his referrals for the left shoulder injury. Respondents shall also pay for the emergency care Claimant received at Advanced Urgent Care. All medical care shall be paid pursuant to the Colorado Medical Fee Schedule.

C. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 19th day of July, 2023.

By: Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATIONS

At the commencement of hearing, the parties reached the following stipulations:

1. Claimant's Average Weekly Wage ("AWW") is 927.78.

2. The right of selection passed to Claimant, who selected her primary care provider, Sherri Turner-Lloyd, P.A., with Centura, to be her Authorized Treating Provider ("ATP").

3. In the event the claim is found compensable and the surgery determined to be reasonably necessary and related, Respondents have agreed to pay all wage loss benefits owed to Claimant. However, if the surgery is found to be not reasonably necessary and/or related, Respondents challenge Claimant's entitlement to wage loss benefits beginning once Claimant started missing work for her January 25, 2023 surgery. Temporary Total Disability (TTD) dates extend from November 15, 2022 to March 31, 2023.

These stipulations are approved.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she sustained a compensable injury to her right shoulder while engaged in her work duties as a medical tech/phlebotomist for Employer on November 10, 2022?

II. Whether Claimant established, by a preponderance of the evidence, that her need for right shoulder surgery was causally related to her alleged November 10, 2022 work injury?

III. If the answer to questions 1 and 2 is yes, did Claimant also prove that the right shoulder surgery performed by Dr. Sean Kelly on January 15, 2023 was reasonably necessary to cure and relieve her from the effects of her November 10, 2022 industrial injury?

IV. If the answer to question 1 is yes, did Claimant prove that she suffered a wage loss as a direct and proximate result of the November 10, 2022 industrial injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a medical tech/phlebotomist for Employer. In addition to her customary work for Employer, Claimant is frequently assigned by Employer to work as a contract employee at [Redacted, hereinafter VH] medical facilities to draw blood from patients in their care.

2. Claimant testified that she was attempting to draw a patient's blood on November 10, 2022, when she injured her right shoulder. Claimant explained that the patient's veins were difficult to see and feel making the draw particularly challenging. (Hrg. Trans., p. 19, ll. 9-11). Because no veins were "popping" up despite the use of a tourniquet on the upper arm, the patient suggested that Claimant place a hot pack on her hand and try to take the blood sample from there. *Id*. at ll. 18-19. Accordingly, the tourniquet was moved to the patient's wrist and Claimant got up from her work station to retrieve the hot pack. (Hrg. Trans., p. 19, ll. 21-22; p. 20, ll. 5-6).

3. Upon returning to her work station, Claimant placed the hot pack toward her right side on the desk directly in front of her. She then sat down and turned slightly to her left to face the patient. While taking to her patient, Claimant flexed her right elbow and raised her arm up and outward from her body in preparation of striking the hot pack to activate it. (Hrg. Trans., p. 34, ll. 13-25 – p. 37, ll.1-9). Based upon Claimant's testimony and her in-court demonstration, the ALJ finds that her right shoulder was only marginally abducted away from the body during the incident in question. Nonetheless, the shoulder was flexed sufficiently to place her right hand/fist at about the level of her chin.[1] (Hrg. Trans., p. 39, ll. 6-22).

4. With her arm raised, Claimant made a fist with her right hand and forcefully[2] brought her arm straight down, striking the hot pack with a "hammer punch" to initiate the chemical reaction between the substances inside. (Hrg. Trans., p. 21, ll. 21-25). Claimant testified that after striking the pack, she "felt a sharp pain and heard a pop". (Hrg. Trans., p. 22, ll. 1-3). She described the initial pain feeling like a "tetanus shot" on the side of the arm, which subsequently gave way to soreness "inside" the shoulder joint with tingling down the arm. *Id*. at p. 22, ll. 4-23. Claimant testified that she was initially unable to rate her pain on a scale of 1 to 10 because it "surprised" her and she was absorbed in patient care. *Id*. at p. 22, ll. 24-25; p. 23, ll. 1-3.

5. Claimant has a remote history of injury to the right shoulder as a consequence of a motor vehicle accident (MVA) occurring approximately 10-15 years

---

[1] During her demonstration Claimant was only able to raise (flex) the arm to the level of the shoulder because it was "still sore" following surgery. (Hrg. Trans., p. 39, ll. 6-12).

[2] Dr. Miguel Castrejon estimated that a moderate amount of force was involved in striking the hot pack based upon the amount of noise elicited by Claimant when she "thump[ed]" the examination table when demonstrating how hard she hit the hot pack. (Claimant's Hearing Exhibit (CHE) 13, p. 127).

ago. (Respondents' Hearing Exhibit (RHE) I, p. 35).[3] Following this MVA, Claimant developed shoulder pain necessitating physical therapy and injections. *Id.* Conservative care failed to relieve her pain. Consequently, Claimant was taken to the operating room where she reported that a "spur" was removed by Dr. Jenkins. *Id.* Claimant did well postoperatively with physical therapy. *Id.* Indeed, Claimant reportedly made a full recovery following this injury. (CHE 13, p. 129). She testified that she had no physical restrictions following her 2005 injury and was not experiencing any pain/dysfunction in her right arm/shoulder until the alleged November 10, 2022 incident. (Hrg. Trans., p. 17, ll. 3-10).

6. Claimant attempted to draw the patients' blood two times. She missed the vein each time and failed on both attempts. Pursuant to company policy, she was not allowed to make a third attempt. Consequently, the patient had to wait for different technician draw to her blood. The second tech, ([Redacted, hereinafter LE]) arrived between 1:00 and 1:30 p.m. to finish the draw. Claimant reported the incident and her injury to LE [Redacted] at that time. Despite her alleged injury, Claimant was able to complete her shift at 4:00pm that day. She returned home and notified her supervisor, "[Redacted, hereinafter HK]," via email that evening that she "hurt [her] shoulder and [she] needed to know what he wanted [her] to do". (Hrg. Trans., p. 23, ll. 4-25, p. 24, ll. 1-25).

7. Claimant testified that HK[Redacted] gave her a phone number for "Occupational Health" and instructed her to call the clinic for treatment. Claimant testified that she called the clinic "immediately" to make an appointment. Claimant's attempt to schedule an appointment failed as she was unable to reach anyone at the designated phone number. Accordingly, she left a voice mail message with the clinic and emailed HK[Redacted] advising him of the same. HK[Redacted] acknowledged the email by indicating that he hoped she heard back from the clinic soon. (Hrg. Trans., p. 25, ll. 1-7).

8. After a day off for the Veteran's Day Holiday on Friday, November 11, 2022, Claimant worked her entire shift on Saturday, November 12, 2022. (Hrg. Trans., p. 25, ll. 8-16). She testified that she was able to complete her November 12th work shift in pain at a reduced work pace. *Id*. at ll. 22-24. Claimant does not work Sundays and was thus off work on November 13, 2022. (Hrg. Trans., p. 26, ll. 5-10).

9. Because the Occupational Health Clinic had not called Claimant back as of Monday morning, November 14, 2022, she testified that she approached her supervisor at VH[Redacted], "[Redacted, hereinafter ME]" and informed her that her shoulder was getting worse. (Hrg. Trans. p. 26, ll. 11-19). Claimant also informed "ME[Redacted]" that she had still not heard back from the clinic. *Id*. at ll. 19-20. Claimant's was later able to get in touch with HK[Redacted] and after speaking with him, her work shift was cut short so she could attend a medical appointment at

[3] Both Dr. Mark Kelly and Dr. Castrejon acknowledge a history of prior injury and surgery to the right shoulder in 2005 due to an MVA wherein Claimant was rear-ended by a drunk driver. (RHE G, p. 24; CHE 13, p. 129).

VH[Redacted] in Denver. (Hrg. Trans., p. 27, ll. 4-10). Although she did not know who, Claimant testified that either HK[Redacted] or ME[Redacted] was able to set the appointment to have her shoulder evaluated at the VH[Redacted] Hospital in Denver. *Id*. at ll. 11-13.

10. Claimant proceeded to VH[Redacted] in Denver where she saw a provider identified as C.L. Reiminis, whose medical qualifications are unclear. (RHE B, p. 7; CHE 9, p. 67). The "Report of Employee's Emergency Treatment" completed during this encounter documents that Claimant was there for an "on the job injury occurring November 10, 2022. *Id.* Claimant was instructed to return to modified duty (limited mobility) with restrictions of no lifting greater than two pounds with her right arm on November 17, 2022. *Id.* Claimant has not returned to work since starting her shift on November 14, 2022.

11. Because Claimant's alleged November 10, 2022 injury occurred in one of the VH's[Redacted] medical treatment facilities[4], there was confusion surrounding her ability to treat through the VH[Redacted] system. Claimant testified that while she was in the waiting room at the VH[Redacted] Hospital in Denver on November 14, 2022, she was provided with a pamphlet containing information about the federal workers' compensation system. Claimant was instructed to call the telephone number provided in the pamphlet. (Hrg. Trans., p. 27, ll. 16-24). She did so while waiting to be seen. As part of this telephone call, Claimant confirmed that she was not a federal employee. She then advised the clinic staff at the hospital that because she was not a federal employee, treatment through the VH[Redacted] system was not valid for her. *Id*. Claimant testified that she was then advised to contact her primary care provider (PCP) for treatment.

12. Claimant made an appointment with her PCP, Sherri Turner-Lloyd for November 15, 2022 from the waiting room at the VH[Redacted] Hospital. Ms. Turner-Lloyd is a Physician Assistant (PA) working for the Centura Health System.

13. Claimant's November 15, 2022 appointment was "conducted using two-way real time video conferencing between [PA Turner-Lloyd's] location and [Claimant's] location. (RHE C, p. 8; CHE 10, p. 68). PA Turner-Lloyd obtained the following history from Claimant:

> [Claimant] presents via telemed video for shoulder pain. [Claimant] works at the lab at VH[Redacted]. She went to get a warm pack and slammed the ice (sic) pack with her R (right) hand and felt a pop and burning sensation in her shoulder. . . . She can't raise her shoulder or internally rotate without pain. She did get a call from Reiminis at VH[Redacted], the PA there. She was seen by them and had x-rays done. Her x-ray was negative. The VH[Redacted]

[4] According to the Employer's First Report of Injury, the injury occurred at the [Redacted, hereinafter PC]. (CHE 5, p. 12).

> referred her to her PCP. She was started on Ibuprofen 800 mg 3x a day and capsaicin cream TID prn.
>
> The pain is in the posterior shoulder and to lateral outer shoulder. She is having more pain in the posterior upper arm and proximal bicep. Very limited internal rotation and no pain with adduction. Pain with extension and abduction. Some tinging in her fingers, 1st 3 digits.

(RHE C, p. 9). PA Turner-Lloyd suspected internal derangement of the right shoulder. Id. at p. 8. She ordered an MRI. *Id.*

14. Claimant returned to PA Turner-Lloyd for an in-person examination on November 18, 2022. (RHE D, p. 11). The note from this encounter details that Claimant was "dismissed/released" from care through VH[Redacted] and that she "does not have [a] Workmen's Comp. provider available to her". *Id.* It was further noted that Claimant was scheduled for an MRI the following week and that paperwork was completed keeping Claimant out of work until her MRI was complete, a diagnostic impression was made and treatment completed. *Id.* (See also, RHE D, pp. 14-15). However, a note from seemingly the same date stated that Claimant could first return from leave on April 1, 2023. *Id.* at pp. 16-17. Regardless, the evidence presented supports a finding that Claimant was restricted from working in any capacity by her PCP beginning November 18, 2022, through at least April 1, 2023. *Id.* Finally, PA Turner-Lloyd's November 18, 2022 report indicates that she referred Claimant to an orthopedist for further evaluation. (RHE D, p. 11).

15. The aforementioned MRI was performed on November 26, 2022, 16 days after the alleged injury. (RHE E, pp. 18-19). MR imaging demonstrated the following findings:

- A Type II curved acromial morphology.
- Smooth acromial undersurface scalloping consistent with previous acromioplasty.
- An anterior acromial spur at the coracoacrominal ligament attachment.
- Mild hypertrophic osteoarthritic changes within the right AC joint with inferiorly directed spurring and effusion.
- A small volume of fluid within the subacromial-subdeltoid bursa.
- Age related tendinosis and delamination within the supraspinatus tendon.
- Mild bursal surface relation within the proximal supraspinatus tendon below the lateral acromion.
- No evidence of full or partial thickness tearing.
- Normal appearing infraspinatus, teres minor and subscapularis tendons.
- Normal rotator cuff muscle belly volume and signal.

- A physiologic volume of fluid within the glenohumeral joint.
- Normal appearing glenohumeral articular cartilage.
- No evidence of synovitis.
- Intact biceps anchor and superior labrum.
- Probable chronic attritional changes within a diminutive posterior labrum.
- A probable small spur along the inferior aspect of the posterior glenoid.

(RHE E, p. 18). The above referenced findings were interpreted by radiologist, Dr. John Campbell. *Id*. at p. 19. Upon review of the above referenced findings, Dr. Campbell reached the following impressions:

- Probable postoperative changes of previous acromioplasty within the right shoulder. Mild osteoarthritic changes within the right AC joint with inferiorly directed spurring.
- Trace fluid within the subacrominal bursa which can be a source of pain.
- Negative for partial or full thickness tear within the rotator cuff tendons. Normal muscle belly volume.
- The posterior labrum is diminutive likely reflecting chronic attritional changes. The findings can be seen in association with repetitive overhead abduction activities related to occupational or recreational activities. Small spur is also seen along the inferior aspect of the posterior glenoid.

Id.

16. Claimant returned for a follow-up visit with PA Turner-Lloyd on December 1, 2022. PA Turner-Lloyd commented on the results of Claimant's November 26, 2022 MRI as follows: "MRI did confirm labral degeneration but no acute tear. No partial or full thickness rotator cuff tear. Did note some mild bursitis. Follow-up with orthopedics as planned". (RHE F, p.21). PA Turner-Lloyd "suspected" that Claimant "triggered an inflammatory response at work". *Id*. PA Turner-Lloyd continued Claimant's "out of work" status until she could be seen by orthopedics and further treatment recommendations outlined. *Id*.

17. Claimant underwent evaluation with orthopedist, Dr. Sean Kelly, on December 5, 2022. (RHE. Ex. G). Dr. Kelly documented the following history of injury: "[Claimant] states that she was trying to break a heating pad with her fist and felt pain". *Id*. at p. 24. Dr. Kelly disagreed with the reading of Claimant's right shoulder MRI reporting that it showed "some partial bursal-sided tearing". *Id*. Dr. Kelly ordered a set of x-rays which did not show any "focal bony abnormalities or obvious osseous defects, but did demonstrate "[m]oderate AC Joint arthrosis . . ." Id at pp. 28-29. Following his physical examination, Dr. Kelly opined that Claimant had a right rotator cuff tear. (RHE G, p. 24). He was unsure of the extent of tearing or whether the tear was traumatic in

nature. *Id.* He also felt that Claimant was suffering from right biceps tendinitis, adhesive capsulitis and arthrosis of the right AC joint. *Id*. He recommended surgical intervention as the "next step". *Id.* In the interim, Dr. Kelly "initiated" a physician guided physical therapy (PT) program as of the date of this appointment. *Id*. He then scheduled Claimant's surgery for Wednesday, January 25, 2023. (RHE G, p. 30).

18. Claimant returned for an appointment with PA Turner-Lloyd on December 23, 2022. PA Tuner-Lloyd noted that Claimant had been seen by orthopedics and surgery was recommended for what PA Turner-Lloyd noted was a "labral tear of the right shoulder confirmed by orthopedics and MRI". (RHE H, p. 31). PA Turner-Lloyd noted that injections and PT were discussed as well. *Id.* Finally, PA Turner-Lloyd indicated that Claimant was to "remain out of work until surgery and for an additional 4 to 6 weeks after surgery for recovery" and that "paperwork" was completed for Claimant's "tentative return to work on April 1". *Id.*

19. Claimant underwent an Independent Medical Examination (IME) with Dr. Mark Failinger at the request of Respondents on January 16, 2023. (RHE I, pp. 34-42). Dr. Failing documented the following history of present illness:

> [Claimant] states that when she hit the heating pad with some force, she felt a sharp pain that went 'up my arm' and she heard a pop. She was not able to tell where the pop occurred. She states that she noted pain in her right hand that radiated all the way up her arm to her shoulder. She describes the pain as aching and discomfort, and initially rated the pain as only being mild".

(RHE I, p. 35).

20. Claimant also reported that despite a prior injury and surgery to the right shoulder, she was not having "subsequent problems (with the shoulder) until the incident of November 10, 2022". (RHE I, p. 35). Physical examination, including strength and provocative maneuver (Hawkins, O'Brien's, and Speed's) testing was limited due to pain behaviors.[5] *Id.* at p. 38. Following his physical examination and records review, Dr. Failinger answered the one question posed to him, specifically whether Claimant's described mechanism of injury (MOI) could cause labral degeneration with no acute tearing noted. *Id*. at p. 41.

21. Dr. Failinger opined that the MOI could not have caused labral degeneration and would not reasonably cause any acute labral tear. He found Claimant's report of pain in the shoulder after striking the hot pack with mild to moderate force "most unusual", opining that "[t]he development of such pain would not reasonably be due to any pathology created in the shoulder by hitting a heat pack". (RHE I, p. 41). He concluded that the "forces of activating a heat pack, unless the pack was hit by a fist with tremendous force, could not create any pathology in the shoulder of any

[5] PA Turner-Lloyd was also unable to perform provocative maneuver testing secondary to complaints of pain when evaluating Claimant on November 18, 2022. (RHE D, p. 12).

significance". *Id.* Given that Claimant's reported pain levels were "so out of proportion to any pathology that could have . . . remotely been created", Dr. Failinger raised concern for the presence of non-organic factors. *Id*.

22. Dr. Failinger opined that Claimant's MRI findings failed to support a conclusion that she sustained an acute injury to the right shoulder. (RHE I, p. 41). Moreover, he concluded that the findings on the November 26, 2022 MRI did not "reasonably explain [Claimant's] severe symptoms". *Id.* Dr. Failinger found Dr. Kelly's interpretation of the November 26, 2022 MRI and his decision to proceed with surgery in a patient whose pain complaints were so out of proportion to the MOI and MRI findings "puzzling". *Id*. Given the possible neurologic symptoms, e.g. numbness/tingling Claimant was reporting, Dr. Failinger noted that it would not be advisable to proceed with surgery without first determining whether Claimant's symptoms were emanating from her shoulder or her neck, especially in a case where the reported pain levels were "dramatically" out of proportion to the findings on MRI. *Id* at p. 42.

23. Claimant returned to Dr. Kelly the day after her IME with Dr. Failinger. (RHE J, pp. 43-48). Dr. Kelly again noted that he disagreed with the findings of the radiologist, because he could "appreciate some partial bursal sided tearing of the supraspinatus. *Id.* at 44. He also noted that Claimant had "failed conservative treatment with physical therapy and injections". *Id.* Accordingly, he asserted that Claimant wanted to proceed with surgery. *Id.*

24. Claimant testified that Dr. Kelly's indication that she failed conservative care with physical therapy and injections as written in his January 17, 2023 report was inaccurate since she did not undergo any conservative treatment prior to surgery. (Hrg. Trans., p. 42, ll. 17-25, p. 43, ll. 1-17).

25. Claimant underwent a right arthroscopic rotator cuff repair with a BioInductive Implant, a right arthroscopic biceps tenodesis, a right distal clavicle resection, and extensive debridement of the right shoulder, including the labrum with Dr. Kelly at the Audubon Surgery Center on January 26, 2023. (RHE K, pp. 49-50). Pictures of Claimant's arthroscopy were obtained during the procedure and included in the exhibits admitted into evidence. (CHE 10, pp. 103).

26. Claimant underwent an IME with Dr. Miguel Castrejon on April 26, 2023 at the request of Claimant's counsel. (CHE 13, pp. 126-136). Dr. Castrejon took a detailed history from Claimant, including a description of her pre-injury job duties. *Id.* at 126. He noted this particular job required occasional lifting of up to 50 pounds. *Id.* As referenced above, Claimant demonstrated the MOI for Dr. Castrejon, which he concluded directed moderate force to the right shoulder. *Id.* at 127.

27. Dr. Castrejon reviewed the November 26, 2022 MRI report. He concluded that the degenerative changes and pathologic findings explained in the report pre-existed Claimant's alleged November 10, 2022 injury. *Id.* at p. 131. Nonetheless, he opined that the MOI described by Claimant "aggravated" these pre-existing changes

and “led to the development of impingement and rotator cuff pathology that required treatment at the time of surgery”. *Id.* Dr. Castrejon restated his commitment to this opinion later in his IME report as evidenced by his remark that when the moderate force associated with the MOI in this case was directed to a shoulder with preexisting surgery and degenerative changes, Claimant’s underlying preexisting condition was, in all medical probability, aggravated and this MOI caused the rotator cuff tear that was found and repaired by Dr. Kelly at the time of surgery. *Id.* at p. 133. In support of his opinion, Dr. Castrejon notes that during the approximate seven year period that Claimant worked as a medical assistant prior to November 10, 2022, “there is no documentation available that would support any ongoing shoulder symptoms, need for medical treatment or limitation in work or non-work activities as a result of the 2005 shoulder surgery”. *Id.*

28. Dr. Failinger testified at hearing as a Board Certified, Level II accredited orthopedic and sports medicine surgeon. (Hrg. Trans., p. 47, ll. 16-25, p. 47, ll. 14-18). He has extensive experience in treating disorders of the shoulder having examined between 50,000 to 60,000 patients for shoulder problems over the course of his career. *Id.* at p. 47, ll. 5-7.

29. Dr. Failinger testified that when he examined Claimant, she complained of pain so diffuse that he was unable to “localize an area that was probably the source of [her] pain” nor could Claimant identify the primary location of her pain. (Hrg. Trans., p. 49, ll. 18-25). Dr. Failinger testified that the MOI Claimant described could not have caused tearing of the supraspinatus. Id. at p. 53, ll. 17-20. Dr. Failinger explained that the rotator cuff consists of a collection of four muscles and their tendons that work together, as a unit to raise, lower and rotate the arm about the shoulder joint. *Id*. at p. 54, ll. 19-25. These muscles include the supraspinatus, infraspinatus, teres minor and the subscapularis. *Id.* Dr. Failinger testified that the supraspinatus is the upper most muscle of the four on top of the shoulder and when it is firing (contracting) it helps raise the arm up and away from the body. *Id.* at p. 57, ll. 6-19. Conversely, there are muscles that assist in lowering the arm from a raised position. These “humeral depressors” and include the latissimus and the pectoralis major primarily. *Id*. at p. 55, ll. 20-25, p. 56, ll. 1-4. In order to lower the arm in a striking motion, the supraspinatus must relax as the humeral depressors fire to bring the arm downwards with force. If the supraspinatus does not relax, the arm can come down. *Id*. at p. 57, ll. 6-14. Dr. Failinger testified that it would be “impossible” for the supraspinatus tendon to be contracted during the act of striking the hot pack. *Id.* at p. 57, ll. 20-21. Because the supraspinatus muscle is not activated in the downward motion of striking the hot pack as described by Claimant, Dr. Failinger implied that no forces were transferred to the muscle tendon. Therefore, Dr. Failinger testified that the MOI is not one which would cause tearing or an aggravation of a pre-existing tear in the supraspinatus tendon. *Id.* at p. 57, ll. 20-25, pp. 58-59, ll. 1-7, p. 63, ll. 1-14. Dr. Failinger testified that Dr. Kelly’s surgical report supports a conclusion that the small tearing (fraying) in the supraspinatus was probably the result of the tendon rubbing against the bone spurring visualized during surgery as Claimant raised and lowered her arm. *Id*. at p. 68, ll. 9-22.

30. Dr. Failinger testified that there was no evidence on the MRI or in Dr. Kelly's surgical report of biceps pathology. (Hrg. Trans., p. 61, ll. 1-3). Accordingly, he testified that there was no explanation for the surgery directed to the biceps. *Id.* at ll. 3-4.

31. Dr. Failinger testified the surgery was not reasonable, necessary, and related, to the alleged incident nor did it follow the medical treatment guidelines. (Hrg. Trans., p. 76, ll. 15-25, p. 77, 1-8, p. 80, ll. 9-25, p. 81, ll. 1-15).

32. WCRP, Rule 17, Exhibit 4: Shoulder Injury Medical Treatment Guidelines provide the following regarding the surgical indications for bicipital tendon disorders and rotator cuff syndrome:

> Bicipital Tendinitis: Conservative care prior to potential surgery must address flexibility and strength imbalances. Surgery may be considered when functional deficits interfere with activities of daily living and/or job duties after 12 weeks of active patient participation in non-operative therapy. (See, WCRP Rule 17, Exhibit 4 (E) (3)).
>
> Rotator Cuff Tear:
>
> Rule 17, Exhibit 4 (E) (10) (e) (i-vi): Non-operative Treatment Procedures:
>
> > i. Medications, such as nonsteroidal anti-inflammatories and analgesics, may be indicated. Acute rotator cuff tear may indicate the need for limited opioids use.
> >
> > ii. There is some evidence that intra-articular triamcinolone provides pain relief for up to 3 months in elderly patients with full thickness rotator cuff tears, and that a single injection is likely to be as beneficial as two injections.
> >
> > iii. There is some evidence that in the setting of supraspinatus tendinosis or partial thickness tears less than 1 cm in size, either dry needling or an injection of 3 ml of platelet-rich plasma (PRP) have clinical benefits lasting up to 6 months, and that the benefits of PRP appear to be greater than those for dry needling. Dry needling has not been proven to be an efficacious therapy for supraspinatus tendinitis. There is good evidence that in the setting of rotator cuff tendinopathy, a single dose of PRP provides no additional benefit over saline injection when the patients are enrolled in a program of active physical therapy. There is strong evidence that platelet rich therapy does not show a clinically important treatment effect for shoulder pain or function when given as an adjunct to arthroscopic rotator cuff repair. However, at present, there is also a lack of standardization of platelet

preparation methods, which precludes clear conclusions about the effect of platelet-rich therapies for musculoskeletal soft tissue injuries. Therefore, PRP is not generally recommended except under specific circumstances. Refer to Section F. 4, b., Platelet-Rich Plasma.

iv. Relative rest initially and procedures outlined in Section F. Therapeutic Procedures - Non-operative. Therapeutic rehabilitation interventions may include ROM and use of a home exercise program and passive modalities for pain control. Therapy should progress to strengthening and independent home exercise programs targeted to ongoing ROM and neuromuscular re-education of shoulder girdle musculature. Maladaptive compensatory strain patterns should always be addressed. There is some evidence that in patients over 55 with nontraumatic small tears of the supraspinatus tendon, an intervention of home exercise supervised by a shoulder-trained physiotherapist, may be as beneficial at one year as the same physiotherapy program initiated after acromioplasty or acromioplasty with repair of the rotator cuff.

v. Return to work with appropriate restrictions should be considered early in the course of treatment. Refer to Section F.13. Return to Work. The injured worker should adhere to the written work restrictions not only in the workplace, but at home and for 24 hours per day.

vi. Other therapies outlined in Section F. Therapeutic Procedures - Non-operative, may be employed in individual cases.

f. Surgical Indications:

Goals of surgical intervention are to restore functional anatomy by re-establishing continuity of the rotator cuff, addressing associated pathology and reducing the potential for repeated impingement. If no increase in function for a partial tear is observed after 6 to 12 weeks, a surgical consultation is indicated. For full-thickness tears, it is thought that early surgical intervention produces better surgical outcome due to healthier tissues and often less limitation of movement prior to and after surgery. Patients may need pre-operative therapy to increase ROM.

33. Based upon the evidence presented, the ALJ finds that Dr. Kelly failed to follow the non-operative treatment guidelines before recommending and proceeding with surgical intervention on January 26, 2023.

34. During cross-examination, Dr. Failinger testified that he was unaware of what caused Claimant to develop pain because her pain was so diffuse. (Hrg. Trans., P. 90, ll. 17-19. He also testified that it was reasonable to infer that a muscle in the lower rotator cuff (infraspinatus) or the pectoralis or latissimus or even the distal triceps could have been strained resulting in symptoms. *Id*. at p. 91, ll. 10-20.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Compensability

C. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(l) (b), C.R.S.*

D. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted*

by U.S. Court of Appeals, 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). In this case, there is little question that Claimant has established that her alleged right shoulder injury occurred within the time and place limits of her employment and during an activity connected to her job-related duties as a phlebotomist for Employer. Nonetheless, the question of whether Claimant's alleged shoulder injury arose out of the alleged MOI on November 10, 2022, must also be answered affirmatively before the claimed injury can be determined to be compensable.

E. The existence of a causal relationship between Claimant's MOI and her right shoulder/arm condition is a question of fact. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985).* The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). In this case, the evidence presented fails to convince the ALJ that Claimant has established a causal relationship between her November 10, 2022 work duties and her right supraspinatus tearing, biceps tendinitis, adhesive capsulitis and/or right AC joint arthrosis. Based upon the evidence presented, the ALJ is not persuaded that Claimant's right shoulder symptoms and need for surgery are related to the November 10, 2022 incident involving the hot pack. Here, the evidence presented supports a finding that Claimant's right shoulder rotator cuff tear, AC joint arthrosis and labral tearing were pre-existing and chronic in nature. With respect to Claimant's right shoulder symptoms and need for treatment, the ALJ credits the testimony of Dr. Failinger to find that record does not describe any activity, which would likely result in an acute injury to or aggravation of a pre-existing condition involving the upper rotator cuff, specifically the supraspinatus, the biceps, or the labrum giving rise to Claimant's symptoms. While it is possible that Claimant's right shoulder symptoms could be caused by strain of the lower potions of the rotator cuff, i.e. the infraspinatus or the pectoralis or latissimus, Claimant failed to establish with a reasonable degree of medical probability that any of these anatomical structures were injured and therefore, are the probable source of her pain. Rather, the evidence presented supports a conclusion that Claimant's right shoulder symptoms probably represent the natural progression of the underlying pre-existing pathology revealed on her MRI.

F. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d

999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a pre-existing infirmity or disease to produce disability or the need for treatment for which workers' compensation is sought. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by employment related activities and not an underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

G. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, as eluded to by Respondents, the occurrence of symptoms following an incident at work may represent the natural progression of a pre-existing condition that is unrelated to Claimant's employment related duties. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found here, the ALJ credits the opinions of Dr. Failinger to conclude that Claimant's right shoulder symptoms and need for treatment, including surgery, is probably related to and emanating from the natural progression of her pre-existing right shoulder condition, i.e. supraspinatus fraying, bicipital tendonitis AC joint arthrosis and labral tearing/degeneration rather than an acute injury/or aggravation experiencing while activating a hot pack. While Claimant's belief that her right shoulder symptoms were caused by the incident involving the hot pack is sincere, there simply is insufficient forensic evidence to connect her MOI to her current right shoulder symptoms and need for surgical intervention. Consequently, the ALJ concludes that Claimant has failed to prove, to a reasonable degree of medical probability, that her alleged right shoulder injury arose out of the November 10, 2022 incident involving the activation of a hot pack. Because Claimant has failed to establish the requisite causal connection between her employment and her alleged injury, her claims for benefits, including medical treatment and lost wages, must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove, by a preponderance of the evidence, that she sustained compensable injuries to her right shoulder as a consequence of her November 10, 2022 work duties. Accordingly, Claimant's claim for medical benefits, including the January 26, 2023, right shoulder surgery performed by Dr. Kelly is denied and dismissed.

2. Claimant's request for TTD benefits is denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-199-142-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that the situs of claimant's left upper extremity's functional impairment causally related to this claim's injury is above claimant's left arm at the shoulder, and that claimant's impairment rating should be converted from the scheduled 25% impairment of the left arm at the shoulder as found by the ATP to 15% of claimant's whole-person.

2. Whether Claimant, as a result of his July 13, 2022 injury, has been seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view, so as to entitle him to a disfigurement award.

FINDINGS OF FACT

1. Claimant was a rocker framer for Respondent-Employer who injured his left shoulder on January 13, 2022, when he tripped on a raised concrete curb and landed on his left shoulder.

2. Claimant sought treatment at Midtown Occupational Health Services with Dr. Kirk Holmboe, on January 26, 2022. Dr. Holmboe referred Claimant for a left shoulder MRI.

3. On February 4, 2022, Claimant underwent an MRI of his left shoulder. The MRI showed "full-thickness partial supraspinatus and infraspinatus tendon tearing with medial retraction of the tendons," among other pathologies. Based on the results of the MRI, Claimant was referred to Dr. Douglas Foulk at Panorama Orthopedics and Spine Center.

4. Dr. Foulk recommended a left shoulder arthroscopy with rotator cuff repair, subacromial decompression, and debridement, which Claimant underwent with Dr. Foulk on March 3, 2022.

5. Claimant began physical therapy for his left shoulder on April 7, 2022, at Midtown. At that appointment, Claimant reported pain in the anterior shoulder and in the distal biceps. Claimant also complained of pain with palpitation on the anterior deltoid, pectoralis minor, and upper trapezius. On cervical side-bending and rotation, Claimant exhibited tightness. The therapist also noted that Claimant exhibited poor eccentric control of the scapula, a tight pectoralis minor, and a tight subscapularis. The therapist performed soft tissue mobilization of the upper trapezius, the levator scapulae, pectoralis minor, and biceps. Claimant also

performed stretches of the upper trapezius and levator scapulae as well as "scap squeezes."

6. Throughout Claimant's treatment, Claimant's complaints included left elbow tingling and numbness and weakness in his fingers and hand. Claimant also continued to receive treatment for his pectoralis, upper trapezius, and scapula over the course of his physical therapy.

7. On August 26, 2022, Claimant underwent electrodiagnostic testing of the left arm. The results were "[e]ssentially normal."

8. At Claimant's September 16, 2022 visit with Dr. Lon Noel at Midtown, Dr. Noel observed limited range of motion of Claimant's cervical spine. Dr. Noel also found tenderness to palpitation on the midline of Claimant's cervical spine, as well as tenderness and tightness of his left sided paracervical musculature extending into his trapezius ridge area. Dr. Noel again noted limited range of motion with tenderness to palpitation in the midline and tightness in the left trapezius area at the September 26, 2022 appointment.

9. On November 22, 2022, Dr. Noel determined Claimant had reached maximum medical improvement with a 25% upper extremity impairment rating. The impairment consisted of 21% for loss of active range of motion at the shoulder and 5% for acromial coplaning. He noted that the scheduled rating, if converted to a whole-person impairment rating, would be 15% of the whole person. Dr. Noel also recommended some maintenance medical care and provided Claimant with permanent work restrictions of no lifting or carrying more than ten pounds and no overhead work.

10. Respondents filed a Final Admission of Liability (FAL) on December 7, 2022, consistent with Dr. Noel's MMI determination, impairment rating, and maintenance recommendation. Claimant filed an AFH requesting conversion of the scheduled impairment rating to a whole-person rating.

11. Dr. John Burris performed an independent medical examination (IME) and issued a report on April 25, 2023, at Respondents' request. Claimant described his mechanism of injury and history of treatment to Dr. Burris. Claimant reported to Dr. Burris that he would primarily use his right hand for routine household chores and that he had some difficulty showering and dressing due to pain in his left shoulder with reaching. Claimant also reported to Dr. Burris that as of the date of the IME Claimant was experiencing pain diffusely from the left side of his neck, through the left posterior shoulder and shoulder blade, and along the left side of his spine to his left low back region. Claimant rated the pain at seven out of ten. The Court finds that Claimant's statements made to Dr. Burris were credible, as was Dr. Burris's account of Claimant's statements.

12. In his report, Dr. Burris opined that Claimant's functional impairment was "limited to at or below the left arm at the shoulder." Dr. Burris reasoned that "objective diagnostic testing, including a cervical spine MRI and left upper extremity EMG do not identify any work-related pathology proximal to the left shoulder." This was despite the MRI showing rotator cuff tears. Dr. Burris also felt that Claimant exhibited a nonphysiologic presentation, opining that Claimant's pain complaints were "out of proportion to the nature of his . . . condition and the documentation in the records." He felt that the examination was impeded by "extreme somatic focus, pain behaviors, and numerous inconsistencies." Based on this, Dr. Burris felt that Claimant's subjective complaints were unreliable. Having excluded subjective complaints, Dr. Burris opined that the objective testing did not reveal any functional impairment of the shoulder proximal to the arm. Based on the totality of the evidence, the Court does not find Dr. Burris's opinions credible or persuasive.

13. At hearing, Claimant credibly testified his shoulder caused pain that ran up his neck, the side of his head, and down to the scapula, and that his injury affects his ability to sleep, do grocery shopping, clothe himself, and clean himself. He also credibly testified that his inability to work overhead prevents him from working as a carpenter like he had prior to the injury. The Court finds that Claimant's functional impairment manifests in inhibiting Claimant's ability to meet some of his personal needs and to pursue the profession as a carpenter.

14. Claimant also revealed at hearing that he had been working a new job for his brother's towing business since the fall of 2022. As part of the job, Claimant would drive a flatbed tow truck that he kept parked at his home and he would tow disabled vehicles. Claimant would respond to calls at all hours and would sometimes work alone.

15. Claimant also testified at hearing that he had a shoulder slump as a result of the injury, which he showed to the Court. The Court observed a left shoulder slump of about one inch. Claimant also showed the Court four arthroscopic scars on the left shoulder. The top one was about 0.5 x 0.25 inches and somewhat discolored. Another scar was 0.5 x 0.25 inches, and another on the back of the shoulder was 0.25x 0.25 inches. On top of the shoulder was a very light scar that was 0.625 x 0.25 inches.

16. The Court finds Claimant's testimony credible.

17. Dr. Burris also testified at hearing. Dr. Burris testified that Claimant's range of motion and responses to palpation were vastly different and inconsistent when Claimant's was actively being examined and when he was not being formerly examined by Dr. Burris. He explained during his hearing testimony that Claimant would flex his neck to look down at Dr. Burris who was seated below Claimant without difficulty or limitation and he would fluidly and easily turn his head to the left and right when talking with Dr. Burris and the interpreter during the examination. However, Dr. Burris testified that during formal range of motion

testing, Claimant would not flex his cervical spine downwards, and his right and left turning motion were markedly reduced as compared to his movements when talking with the interpreter and Dr. Burris.

18. In response to Claimant's testimony about his new job operating a tow truck, Dr. Burris testified that Claimant did not disclose that job to him at the IME. Dr. Burris felt that Claimant would not be able to perform the tasks associated with that work if Claimant's limitations, symptoms, and complaints voiced at the IME were true.

19. The Court does not find Dr. Burris's testimony or opinions expressed in his IME report credible.

20. Because of his work injury, Claimant has functional impairment that is not fully enumerated on the schedule of injuries involving the loss of an arm at the shoulder. Claimant proved by a preponderance of the evidence that he suffered functional impairment to his left shoulder not listed on the schedule of disabilities.

21. Based on Claimant's testimony and the records submitted at hearing, Claimant underwent surgery to his left shoulder. That surgery caused visible disfigurement to his body consisting of four arthroscopic portal scars as described above. Claimant also has a disfigurement consisting of a one-inch left shoulder slump arising from his injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Whole-person Conversion

The ALJ is the finder of fact on the question of whether the Claimant sustained a "loss of an arm" within the meaning of schedule of disabilities in § 8-42-107(2)(a), C.R.S., or a whole person rating under § 8-42-107(8)(c), C.R.S. *Strauch v. PSL Swedish Healthcare System,* 917 P. 2d 366, 369 (Colo.App.1996). In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp*., 937 P.2d 883, 884 (Colo.App.1996)*; Strauch* at 368-369.

Injury is the manifestation in part or parts of the body which been impaired or disabled as a result of the industrial accident. *Mountain City Meat v. ICAO,* 904 P.2d 1333 (Colo. App. 1995). The part of the body that sustains the ultimate loss is not necessarily the particular part of the body where the injury occurred. *McKinley v. Bronco Billy's,* 903 P.2d 1239, 1242 (Colo.App.1995). When evaluating functional impairment the ALJ shall look at the alteration of the claimant's functional abilities by medical means and by non-medical means, as well as the claimant's capacity to meet personal, social, and occupational demands. *Askew v. Industrial Claim Appeals Office,* 927 P.2d 1333, 1337 (Colo. 1996).

In this case, Claimant's situs of impairment is proximal to the glenohumeral joint or on the body. As found above, even early in his treatment, Claimant exhibited tenderness in his cervical spine and left trapezius. Claimant received treatment for his injury directed at his pectoralis, upper trapezius, and scapula over the course of his physical therapy, all parts of the body not contained within the schedule of disabilities set forth at § 8-42-107(2)(a), C.R.S. Furthermore, part of Claimant's permanent impairment rating is 5% for acromial coplaning. That is, a portion of Claimant's rating was based upon surgery Claimant received to his acromion, a portion of the scapula, which lies proximal to the shoulder joint and is not part of the arm.

Aside from the anatomy of Claimant's symptoms, treatment, and impairment rating, Claimant's functional ability to meet his personal and occupational demands has been substantially altered. Claimant credibly testified that his injury affects his ability to sleep, do grocery shopping, clothe himself, and clean himself. This is consistent with Claimant's permanent work restrictions of no lifting or carrying more than ten pounds and no working overhead.

Although Respondents presented the testimony and opinions of Dr. Burris that Claimant's function working his new job driving a tow truck would exceed Claimant's demonstrated level of function at the IME with Dr. Burris, the Court does not find Dr. Burris's testimony credible or persuasive when considering the totality of the evidence. Even if the Court were to find that Claimant exhibited symptom magnification, the quality of Claimant's symptoms and functional impairment, as found by the Court, are such that they are not limited to Claimant's arm at the shoulder.

Claimant has therefore met his burden of proving by a preponderance of the evidence that his functional impairment is not contained within the schedule set forth at § 8-42-107(2)(a), C.R.S., and that the scheduled impairment rating Claimant received should more appropriately be a whole-person impairment rating.

Disfigurement

Section 8-42-108(1), C.R.S. permits an ALJ to award disfigurement benefits up to a maximum of $4,000 if the claimant is "seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view. . . ." The ALJ may award up to $8,000 for "extensive body scars" and other conditions expressly provided for in § 8-42-108(2), C.R.S. These awards are subject to annual adjustment by the Director of the Division of Workers' Compensation pursuant to §8-42-108(3), C.R.S.

Based on Claimant's testimony and the records submitted at hearing, the surgery Claimant underwent caused visible disfigurement to his body consisting of four arthroscopic surgical port scars on his left shoulder of varying pigmentation, as well as a shoulder slump on the left.

As a result, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation pursuant to § 8-42-108(1), C.R.S. As a result, the ALJ awards Claimant $1,157.00 in disfigurement benefits.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant permanent partial disability benefits based on a 15% whole-person impairment rating, subject to any applicable cap, credits, or offsets.

2. Respondents shall pay Claimant $1,157.00 in disfigurement benefits.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 19, 2023

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she is entitled to medical benefits that are reasonably necessary and related to the admitted May 12, 2018 injury, including physical therapy, massage therapy, chiropractic treatment and injections for the right knee and the left shoulder.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

Generally

1. Claimant sustained admitted work related injuries to her right knee, left hip, left shoulder, cervical spine, and lumbar spine in the course and scope of her employment with Employer on May 12, 2018 in a motor vehicle accident (MVA) when driving between two of Employer's locations.

Pertinent Medical Records

2. Over a thousand pages of records were submitted in this matter. This ALJ only summarizes those records that were pertinent to the decision in this matter and disregarded the multiple duplicate records submitted by both parties.

3. On June 18, 2019 Dr. Russell Swann of Advanced Orthopedic recommended a medial unicompartmental arthroplasty of the right knee (UKA) as she had exhausted all conservative care options. He opined that the MVA impact caused a loose osteochondral fragment which had progressed over the year to full thickness cartilage loss. He diagnosed osteonecrosis of the right femur, chondromalacia of the right knee, and osteoarthritis of the knee. He sent a Surgery Request Form on June 20, 2019. Peer review on June 29, 2019 stated that the surgery was reasonably necessary. Surgery took place on November 4, 2019.[1] Dr. Swann's PA, Mr. Jennings, referred Claimant to physical therapy on November 19, 2019.

4. The MRI of the right knee on July 29, 2020 showed mild edema in the soleus muscle and hemiarthroplasty hardware in the medial aspect of the knee with small knee joint effusion and a small amount of subchondral bone marrow edema in the lateral patella, as read by Dr. Brian Cox.

5. On August 26, 2020 Claimant's MRI of the lumbar spine showed L1-2, L2-3 mild disk bulge, mild bilateral L3-4 neuroforaminal narrowing without spinal canal

[1] It is not clear from the record why the significant delay.

stenosis, L4-5 diffuse disk bulge with mild facet arthropathy resulting in moderate bilateral neuroforaminal narrowing without spinal canal stenosis and L5-S1 mild-to-moderate bilateral facet arthropathy.

6. Claimant was seen by a second opinion physician regarding the right knee and possible total knee arthroplasty. On December 4, 2020 Dr. Jared Michalson opined that the UKA was stable without clinical or radiographic abnormality at the site of her prior surgery, other than swelling of the right knee and medial joint line and anserine bursal area exquisite tenderness. He did recommend an anserine bursal corticosteroid injection and recommended that Claimant be seen by one of the physiatrist on his team regarding the findings on the most recent MRI.

7. Respondents had Claimant examined by independent medical examiner (IME) Dr. John Raschbacher on January 8, 2021. He took a history from Claimant and reviewed medical records as well as examined Claimant. At that time he opined that Claimant was at MMI as of March 13, 2020 with regard to all work related injuries, including the cervical spine, thoracic spine, lumbar spine, right knee and left shoulder. He opined that all massage, chiropractic and other therapies were no longer needed and only should continue with her home exercise program (HEP), orthopedic annual exam per protocol, and maintenance medications.

8. On July 12, 2021 Dr. Brian Shea, the designated Division of Workers' Compensation Independent Medical Examination (DIME) physician, issued a report regarding Claimant noting that he opined that Claimant was not at maximum medical improvement regarding the left shoulder, as Claimant required further evaluation to determine if she was a surgical candidate. He also recommended Claimant have a follow up surgical evaluation for the right knee. Dr. Shea made a causation determination that the cervical spine, lumbar spine, the right knee, the left shoulder were injuries related to the May 12, 2018 MVA. He also opined that everything except for the left shoulder was at MMI. Dr. Shea reviewed the medical records including Dr. Raschbacher's evaluation, which stated that Claimant was at MMI as of March 13, 2020 for the right knee injury approximately six months after the knee surgery. He noted that Dr. Raschbacher declined to rate the left shoulder, cervical spine or lumbar spine problems. Dr. Shea provided preliminary impairment ratings for all four areas.

9. In a review of systems, Dr. Shea noted that Claimant walked with a mild limp favoring her right knee. Claimant reported that the knee popped and was swollen on occasion, but hurt every day as did the low back, the left shoulder and the cervical spine. Claimant reported to Dr. Shea that the nerve block performed by Dr. Sasha gave her significant relief and would be open to another set of injections. On exam he noted mild edema around the knee and distally, loss of range of motion of the knee and tenderness on the medial joint aspect. He also documented loss of range of motion (ROM) of the left shoulder, a positive Neer's and Hawkins', giveaway strength on resistance, and tenderness over the left AC joint. He noted loss of ROM of the cervical spine, hypertonicity of the trapezius, rhomboid and levator scapula muscles, left greater than right. He also documented loss of ROM of the lumbar spine.

10. On July 29, 2021 Dr. Shea issued an Addendum report in response to a letter from Division on an Incomplete Notice. He corrected his preliminary impairment rating at that time.

11. Dr. Shea provided a Second Addendum on August 8, 2021 in response to further notice from Division. He corrected his prior report pursuant to Division's definition of MMI. He noted that "[Per the letter, it is stated that a patient reaches MMI when all areas being treated as a result of a work-related injury are stable. The patient is considered not to be at MMI until all areas being treated are stable." Dr. Shea then opined that Claimant was not at MMI.

12. On August 26, 2021 Claimant followed up with Dr. Mark Failinger regarding her left shoulder. Dr. Failinger recommended a new MRI as the prior one was dated. Claimant requested consideration of further surgery. Dr. Failinger stated that following MRI results he would determine if there was any further pathology present and would consider if either further injections or surgery were appropriate. On the same day, Kelsie McManus of Concentra ordered the MRI.

13. The MRI conducted on September 14, 2021 of the left shoulder showed moderately severe tendinosis, an interstitial type tear of the distal supraspinatus tendon, mild subscapularis tendinosis, mild degeneration intraarticular segment with fluid within the biceps tendon sheath suggesting tenosynovitis, degenerated posterior and superior labrum, though no full thickness tear was identified, moderately severe degenerative changes of the acromioclavicular joint, small distal acromial and clavicular spurs and extrinsic compression of the supraspinatus complex compatible with the presence of impingement. There was also fluid in the glenohumeral joint.

14. On September 16, 2021 MA Illiana Garcia of Concentra ordered physical therapy and massage therapy as well as follow up with Dr. Failinger and Dr. Sacha. Dr. Failinger noted that proceeding with surgery had to be delayed until Claimant recovered from a left ankle surgery.

15. On December 30, 2021 Dr. Failinger attended Claimant with regard to her left shoulder. Claimant inquired about the possibility of proceeding with surgery. On examination Dr. Failinger noted mild levator scapulae and trapezial discomfort with palpation. There was significant tenderness in the greater tuberosity and some mild-to-moderate biceps tenderness. There was loss of range of motion (ROM), positive Hawkins, positive Speed and positive O' Brien tests. Dr. Failinger stated that they went over the risks, alternatives and benefits and the 4-6 month recovery time. They discussed that there were no guarantees but that she had lived with this for so long and she had focal identifiers of pain and therefore it was reasonable to proceed with the surgery. He stated he would see if the surgery was approved.

16. On January 26, 2022 Dr. Failinger sent a Surgery Authorization request form regarding a left shoulder scope, decompression, distal clavicle resection and possible biceps tenolysis.

17. On March 22, 2022 Dr. Robert L. Messenbaugh issued an opinion and responded to inquiries by Respondents. At that time, Dr. Messenbaugh opined that the treatment recommended by Dr. Failinger for authorization to treat the left shoulder with a

scope, decompression, distal clavicle resection and possible biceps tenolysis was reasonable necessary and related to the injury she sustained on May 12, 2018. He also opined that it would be reasonable to proceed with injections into the left shoulder.

18. On May 18, 2022 Respondents filed a General Admission of Liability pursuant to the Division Independent Medical Examination physician's opinion that Claimant had not reached maximum medical improvement.[2]

19. Dr. Failinger noted on May 23, 2022 that the surgery he proposed had originally been denied by Respondent and Claimant's case closed. He further stated that now the claim had been reopened and the surgery authorized.

20. On May 27, 2022 Brittany Lain, NP, of Concentra, indicated that the left shoulder surgery was approved. She documented that Claimant had ongoing chronic pain in the left shoulder that was achy and dull, described as constant and increased with movement. The pain was worsened by overhead movements, internal rotation, and symptoms were associated with decreased ROM and occasional tingling.

21. On June 14, 2022 Ms. Lain noted that the left shoulder surgery was delayed due to a heart murmur and was awaiting cardiology clearance to proceed with the rescheduled surgery.

22. Claimant was examined by Dr. Nicholas Olson, a pain management physician, on June 28, 2022, for opioid review post-surgery. Dr. Olson reviewed the chart noting that Claimant had genicular nerve blocks on two occasions, which provided good relief and a diagnostic response to the procedure.

23. On July 12, 2022 Claimant proceeded with a left shoulder examination under anesthesia, left biceps tenolysis, subacromial decompression, distal clavicle resection, and os acromiale shell resection. He diagnosed her with a left shoulder os acromiale, biceps tendinosis and left shoulder impingement. During surgery he noted that the os acromiale was unstable. Dr. Failinger prescribed physical therapy before the surgery for 18 visits on June 6, 2022 and again for an additional 12 weeks post-surgery.

24. On July 18, 2022 Bradley Schoonveld, P.T. performed an initial physical therapy evaluation noting significant pain complaints following surgery. He recommended starting with pendulum exercises and range of motion. By July 27, 2022 he noted that Claimant was progressing well but slowly due to stiffness and soreness related to the surgery. She had passive ROM (PROM) of 130° flexion and abduction, and 30-40° for external rotation (ER) and internal rotation (IR). On August 3, 2022 he stated that Claimant was progressing and doing well with PT and had started on table slides in both flexion and abduction as well as stretching behind the back. On August 10, 2022 Mr. Schoonveld indicated that, while Claimant had some additional soreness related to the PT, she had demonstrated a PROM of flexion to 160-170°, 180° abduction, and about 60° of IR/ER, which was increased from prior measurements.[3]

---

[2] Neither party offered an explanation as to why it took over nine months to file the GAL pursuant to the DIME physician's report. This ALJ infers from the evidence that the delay was caused by Claimant's left ankle fracture and that Respondents were awaiting Dr. Messenbaugh's report.

[3] This ALJ determined that a change from 130° to 180° PROM flexion is a significant functional gain.

25. Dr. Darla Draper of Concentra issued a report on August 8, 2022 documenting Claimant's medical history since 2018. She noted that an injection performed by Dr. Failinger on October 4, 2018 helped Claimant's symptoms in the right knee. She also noted that chiropractic and massage treatments had been helping. She noted that the note of January 20, 2020 documented that the steroid injection into the left shoulder also helped. She noted that on March 13, 2020 Claimant was using a cane and that it was making her left shoulder worse but that the massage treatment was helping. Dr. Draper documented that on September 18, 2020 Claimant was receiving benefit from chiropractic and massage therapy for the back and neck. She noted that the records from October 16, 2020 and December 18, 2020 showed Claimant was benefiting from physical therapy and dry needling as well as massage therapy and chiropractic care for her back, left shoulder and right leg. She documented that the right knee genicular injection performed by Dr. Sacha on January 7, 2021 also helped a lot.

26. On August 23, 2022 Claimant was seen by Dr. Nicholas Olsen who documented increased knee pain. He noted that Claimant had a previously radiofrequency neurotomy by Dr. Sacha with a report of 8 months of relief following the procedure. Claimant was interested in the possibility of repeating the procedure. To determine if Claimant was candidate for radiofrequency neurotomy, repeat genicular nerve block was required. Dr. Olsen indicated he would request for bilateral femoral genicular nerve block and a medial tibial genicular nerve block for the right knee.

27. On August 23, 2022 Dr. Olsen sent a referral prescription to insurance for bilateral femoral genicular nerve block.

28. Mr. Schoonveld specified on August 24, 2022 that Claimant's left shoulder stiffness continued to improve, that she had good ROM with full elevation and IR. By August 31, 2022 Claimant started rotator cuff (RC) strengthening, including stretches with pulleys and wall slides.

29. On August 30, 2022 Dr. Olsen sent an authorization request to the insurance for right knee genicular block at Belmar ASC.[4]

30. On September 6, 2022 Dr. Draper referred Claimant for massage therapy and chiropractic care for her low back and neck and refilled medication. She noted Claimant was awaiting authorization for the genicular injection for the right knee with Dr. Olsen and a steroid injection for the left shoulder with Dr. Failinger.

31. On September 9, 2022 Dr. Olsen sent a second request for authorization to the insurance for right knee genicular block at Belmar ASC

32. Dr. Olsen noted on October 5, 2022 that the genicular nerve injection had been denied by Respondent and that they had requested a RIME with Dr. Raschbacher.

33. Dr. Raschbacher performed a follow-up Independent Medical Evaluation on October 7, 2022. Dr. Raschbacher stated that Claimant had very good results from the knee surgery and that there was no clear objective basis or psychological reason for Claimant's continued complaints of the degree of discomfort Claimant had at the knee. Dr. Raschbacher opined that Claimant was at MMI for all body parts except for her

[4] This ALJ infers that ASC means "Ambulatory Surgery Center."

shoulder due to her surgery and that MMI for Claimant's shoulder was expected 4-6 months from the date of the surgery.

34. While Claimant continued to have pain and difficulties with the left shoulder, on October 17, 2022 Mr. Schoonveld point out that Claimant should request a steroid injection so that she could get past the shoulder pain and further progress with strengthening therapy.

35. Dr. Draper attended Claimant on October 21, 2022 noting the denial of the genicular injections for the right knee. She also noted that Dr. Failinger ordered 3-4 weeks of physical therapy for the left shoulder and that he was considering another steroid injection. She also noted that chiropractic treatment and massage therapy for the back and neck had been denied. She noted that Claimant was approximately 25% of the way towards meeting the physical requirements of her job. She continued to diagnose contusion of the left shoulder, internal impingement of the left shoulder, lumbosacral strain, contusion of the right knee and cervical strain. She recommended continued therapy and noted that Claimant was not at MMI but she anticipated MMI approximately 6-9 months post op.

36. On November 7, 2022, Dr. Failinger found on exam that Claimant had loss of ROM of the left shoulder, a positive impingement test. Dr. Failinger administered a cortisone injection into Claimant's left shoulder. Claimant had been participating in physical therapy and was recommended to continue this treatment.

37. On November 15, 2022 Dr. Olsen continued to recommend the genicular nerve block for the right knee.

38. Mr. Schoonveld documented on November 22, 2022, December 5, 2022 and December 12, 2022 that Claimant continued to progress with her strengthening.

39. On December 29, 2022 Dr. Patrick Antonio of Concentra documented that Claimant had been attending physical therapy at Colorado Rehabilitation but had not gone for two weeks and needed a new referral for continued care. He noted that the October left shoulder steroid injection by Dr. Failinger helped the left shoulder but did continue with stiffness and problems with overhead reach. He noted that he would order further physical therapy to improve strength and ROM.

40. On February 6, 2023, Dr. Failinger again found that Claimant had a positive impingement test and administered another cortisone injection into Claimant's left shoulder.

41. On February 8, 2023 Dr. Viola-Lewis noted that Claimant was still not at MMI. Dr. Viola-Lewis noted that Claimant was 75% of the way towards meeting the physical requirements of her job. She made a referral to Dr. Failinger to evaluate the right knee. She referred Claimant for physiatry evaluation of the back, left shoulder and right knee. She also made another referral for physical therapy. She continued to state that Claimant was not at MMI.

42. Dr. Viola-Lewis noted on March 17, 2023 as follows:

> She has seen Dr. Failinger who wants her to get another opinion from a joint specialist about her knee. He feels she would benefit from injection but cannot get one approved, and she has not had sufficient improvement with PT. She has also had issues getting PT

> approved through WC. There is significant psychosocial impact on her with the left shoulder dysfunction as well as the knee pain and dysfunction. She has not been back to PT despite it being ordered as it was not approved. Will order it again with the goal of returning her left shoulder to full ROM within 4 weeks, and improving strength in her knee within the same timeframe. She will be seeing Dr. Mikalson (sic.) next week. Will have her follow up a few days after that so that we can discuss the results. The delay in getting tests and treatments approved is delaying her care significantly and contributing to a backslide of physical function. She is not at MMI at this time.

43. On exam, Dr. Viola-Lewis noted Claimant had limited range of motion of the left shoulder with pain in all planes. She also noted edema in the medial aspect of the right knee consistent with lymphedema and a slight limp. Claimant continued to be only 75% towards meeting the physical requirements of her job. At that time she ordered chiropractic care for her lower and upper (thoracic) back and physical therapy for another 4 weeks, 3 times a week, for her left shoulder, lower back and left knee, which she stated were medically necessary to address objective impairment and functional loss and to expedite return to full activity. She continued to state that Claimant was not at MMI.

44. Dr. Michelle Viola-Lewis noted on April 6, 2023 as follows:

> This has been a very prolonged case and there has been efforts to continue appropriate care for this patient. She did see Dr. Mikalson (sic.) and got an injection in her knee, and sees Dr. Failinger in his private office again next week for her shoulder. She continues to have pain in her left shoulder, but the right knee is better following the injection. She has been going to the gym and doing her HEP on her own. At this point there has been no further therapies approved through WC…

45. On exam, Dr. Viola-Lewis noted that Claimant had limited ROM in all planes of the left shoulder with pain, but she could extend it to just above shoulder height. Her tone and strength were normal. She noted right knee edema distal to the medial aspect of the knee consistent with lymphedema. The surgical scar was well healed, but Claimant had a slight limp on the right. Dr. Viola-Lewis stated that Claimant was not at MMI but was anticipated to be at MMI in 6-9 months post-op. She continued to provide work restrictions, and Claimant was to return for consult in two weeks.

46. Claimant was attended by authorized treating provider, Dr. Jared Michalson on April 11, 2023. Dr. Michalson noted that it was a telemedicine visit to discuss laboratory results after evaluation of a painful previously performed partial knee arthroplasty of the medial compartment. He recommended claimant follow up for an intra-articular right knee corticosteroidal injection for both diagnostic and therapeutic purposes. He noted that, if Claimant obtained benefit from the injection, then he would proceed with a conversion from partial knee arthroplasty to a total knee arthroplasty.

47. Dr. Raschbacher issued an addendum report on April 19, 2023, opining that Claimant was at functional standstill for her left shoulder and therefore at MMI. Dr. Raschbacher made comments regarding his record review of the rehabilitation notes which stated “She had continued achiness. She is seen through December 12, 2022. On December 12, 2022, the shoulder was felt to be doing well, and she had progressed with her strengthening. However, it continued to ache all the time.” Nothing in this review is persuasive that Dr. Raschbacher pointed to specifics in the record that might indicate that Claimant was not continuing to obtaining functional benefits from the prescribed physical therapy.

48. From the records provided, none stated that Claimant had completed the recommended treatment, nor did an authorized treating provider place Claimant at MMI. Nor was there a follow up DIME report placing Claimant at MMI.

Claimant's testimony

49. Claimant stated that after she underwent the left shoulder surgery by Dr. Mark Failinger on July 12, 2022, she was prescribed physical therapy, which continued through December 23, 2022, at which time no further therapy for the left shoulder was approved. She had undergone approximately 23 sessions of therapy and she was advised that she was only approximately 50% of where she should be.

50. Claimant stated that the surgery was not initially helpful but was in physical therapy, which was helpful and provided significant benefit, including easier movement, less sharp shooting pains or numbness and performing activities of daily living such as grooming and getting dressed. Since the therapy was stopped, Dr. Failinger provided multiple injections to assist with the pain. Further, Claimant had decreased range of motion and strength since stopping the physical therapy. She stated that both her authorized providers at Concentra as well as Dr. Failinger recommended ongoing physical therapy for her left shoulder.

51. Claimant also stated that Dr. Draper of Concentra had recommended ongoing massage therapy and chiropractic treatment for her neck and low back in August of 2022, which was not approved. Claimant had recently attended a chiropractic and massage visit on her own because she was having difficulty walking, which she paid out of her own pocket. She received significant benefit for her neck and low back from the chiropractic treatment. The treatment loosened up the scar tissue and allowed for more range of motion, including for the left shoulder. The massage also helped with the pain in her left knee. Her level of function improved with better movement overall. Claimant would like to continue with the chiropractic and massage for her neck and low back, as well as the prescribed physical therapy for the left shoulder and right knee.

52. Claimant had a partial knee arthroplasty on November 4, 2019. Following which she had a genicular block and ablation procedure. She was under the care of Dr. Nicholas Olsen after that procedure. The first procedure took place approximately nine months following her knee surgery because she was unable to mobilize her knee. Within a week of the procedure, she was able to rotate the knee on a bike compared to being almost immobilized before. Dr. Olson has recommended another genicular block as a diagnostic tool to determine if another ablation would be beneficial. The procedure was also denied by Respondent. Claimant would like to continue to pursue this injection.

Dr. Failinger's testimony

53. Dr. Mark Failinger, an ATP, was called by Claimant as an expert and was accepted as an expert in orthopedics, specializing in knees and shoulders, and as a Level II accredited physician by the Division of Workers' Compensation. He stated that he performed the surgery of July 2022 and he had seen Claimant as recently as April 2023, noting that Claimant was still struggling, having problems at that point in time. He explained that Claimant had a very unique problem called oseo acromelia in the left

shoulder, which caused her to have immobility of the limb, and is a very difficult problem. He also explained that Claimant continued to have knee problems, which is load bearing joints, and take priority over non-weight bearing joints like a shoulder.

54. Dr. Failinger opined that it was inappropriate to close out Claimant's case at this time. She requires an MRI to determine the status of the shoulder joint and determine what are the next steps for Claimant. He recommended a follow up evaluation to reevaluate her home program and the repeat MRI to determine Claimant's current status. He explained that significant pain is inhibiting her progress and he needed to figure out what factors are causing that and address the pain before there can be any further functional improvement. He did state that Claimant would benefit from physical therapy for strengthening of her shoulder.

55. Dr. Failinger also stated that since the genicular block had been beneficial in the past, that it was reasonable for her to have the procedure to eliminate pain that is not amenable to other measures and were shown to be more beneficial than cortisone injections. Dr. Failinger explained that surgery, such as the arthroplasty in this case, does not resolve the problems with the patient's pain, genicular nerve blocks can provide significant relief from that pain. The genicular nerves are the nerves that surround the knee and there are superior, inferior, medial and lateral to the knee. The block acts to block the nerve signals to the brain so that the patient can increase function.

56. While Dr. Failinger explained that he had not been the primary provider to treat Claimant's knee condition for several years. However, he does know what complaints Claimant has as those are discussed when he sees her. He treated her for her knee in 2018 and after that until he made a referral to Dr. Michalson and she later had the arthroplasty with Dr. Russell Swann. He explained that the genicular block is similar to the medial branch block as it is used as a diagnostic tool to determine if an ablation would be reasonably necessary.

57. Dr. Failinger continued to recommend physical therapy for the shoulder but acknowledged that she had slow progress and limited results with therapy as she continues with significant pain.

Dr. Raschbacher's testimony

58. Dr. John Raschbacher was called by Respondent as an expert in occupational medicine and as a Level II accredited physician. He performed an independent medical evaluation in 2021 and again on October 7, 2022. He opined in both evaluations that Claimant had reached maximum medical improvement for all body parts, except with the left shoulder. He stated that it was unlikely that further application of the medical resources was going to change Claimant's subjective reports and that there was nothing objective that is new or different to treat.

59. Dr. Raschbacher noted that the Medical Treatment Guidelines' General Guidelines Principles espouse that if there is no positive response to treatment, then the patient is at MMI. He explained that by December 29, 2022 Claimant was no longer showing positive objective response to therapy and she was 5 months post-surgery, effectively noting that Claimant's left shoulder condition had plateaued. He explained that

normally, people with pathology like rotator cuff tears, usually by six months, barring some type of complication, they are at MMI and can transition to a home exercise program.

Ultimate Findings of Fact

60. As found, Claimant has shown that the chiropractic treatment for the low back and neck is reasonably necessary to treat Claimant's work related injuries of May 12, 2018. Claimant has been deemed to be not at MMI and her authorized treating providers, Drs. Viola-Lewis and other Concentra providers have continued to prescribed the treatment to cure and relieve Claimant from the effects of the injuries. The Concentra providers have stated that the treatment is medically necessary to address objective impairment and functional loss and to expedite return to full activity. To the contrary, Dr. Raschbacher has been stating that Claimant has been at MMI since March 13, 2020. However, the DIME physician on August 8, 2021 stated that Claimant was not at MMI. Respondents have failed to show that Claimant is, in fact, at MMI or overcome the DIME's opinion to that effect. This is confirmed by the opinion of Dr. Draper that noted that Claimant had improvement and benefit from the prescribed treatments. The Concentra providers are more persuasive than contrary opinions of Dr. Raschbacher. Claimant has proven by a preponderance of the evidence that she is entitled to the chiropractic and massage therapy for the work related lumbar spine and cervical spine conditions.

61. As found, Claimant has shown that the Claimant requires further physical therapy, injections and further diagnostic testing for the left shoulder. Contrary to the opinions of Dr. Raschbacher, Claimant did not have a simple rotator cuff repair that should have healed normally within the six month period that he predicted. Clearly, Claimant's left shoulder condition is more complex. Dr. Failinger clearly explained that Claimant continues to have pathology that requires further treatment for her range of motion and strengthening. Dr. Failinger's opinion in this regard are more credible and persuasive than the contrary opinions of Dr. Raschbacher. Further, Dr. Raschbacher's opinion that Claimant plateaued in physical therapy is not credible. The physical therapy notes indicated to the last documented therapy on December 12, 2022 that Claimant continued to progress with strengthening. Further, Claimant's testimony as well as Dr. Viola-Lewis' opinion that Claimant's function has slid back due to lack of continuing therapy is credible and persuasive. Dr. Failinger also persuasively stated that a new MRI was required to determine how Claimant's shoulder is progressing following the complicated July 2022 surgery. Dr. Failinger opined that the shoulder steroid injections have helped with Claimant's function as well, which is credible and persuasive. Claimant has proven by a preponderance of the evidence that Claimant requires continuing physical therapy for the left shoulder, an MRI, further orthopedic evaluation as well as injections.

62. As found, Claimant has shown that she requires further evaluation and treatment for the right knee injury caused by the May 12, 2018 work related injury. Dr. Failinger opined that the genicular nerve block given by Dr. Sacha helped significantly in the past, providing approximately 8 months of relief. He credibly opined that this would be a good course of treatment for Claimant so that she may progress with further range of motion and in her function. He also credibly opined that steroid injections and or further orthopedic evaluation was appropriate in this matter. Dr. Michalson has requested further diagnostic testing to determine if a revision of the UKA to a TKA would be appropriate.

He credibly noted that the block may assist in that determination. Claimant has proven by a preponderance of the evidence, that it is more likely than not, she requires further treatment for her right knee, including the genicular nerve block as prescribed by Dr. Olsen, physical therapy as prescribed by Dr. Viola-Lewis, and further orthopedic evaluations with Dr. Michalson.

63. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay

witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

Where the relatedness, reasonableness, or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of*

Denver v. Industrial Commission, 682 P.2d 513 (Colo.App. 1984). The question of whether the need for treatment is causally related to an industrial injury is also one of fact. *Walmart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 521 (Colo.App. 1999).

However, before applying the facts to address whether any particular medical benefit requested was reasonably necessary and related to the injury, in this case the issue of maximum medical improvement should be discussed. MMI is defined as that point in time when any medically determinable physical or medical impairment resulting from an injury has become stable and when no further treatment is reasonably expected to improve the condition. Sec. 8-40-201(11.5), C.R.S.; *MGM Supply Co. v. Indus. Claim Appeals Office,* 62 P.3d 1001, 1005 (Colo.App.2002). It represents the optimal point at which the permanency of a disability can be discerned and the extent of any resulting impairment can be measured. *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo.App.1998). It also marks the point when permanent disability benefits become available and temporary disability benefits become unavailable. *Mountain City Meat Co. v. Oqueda*, 919 P.2d 246, 254 n. 1 (Colo.1996); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637, 639 (Colo.App.1997) (once a claimant reaches MMI, any temporary wage loss ceases and the continuing wage loss becomes permanent and is to be compensated by permanent benefits under Section 8-42-107, C.R.S., not by the continued payment of temporary benefits).

In *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010) the Court of Appeal relied on the Nebraska Supreme Court opinion in *Rodriguez v. Hirschbach Motor Lines*, 270 Neb. 757, 707 N.W.2d 232, 238 (2005). They addressed the issue of whether MMI was to be determined by reference to the date of healing for each injury resulting from an accident, or by reference to the date on which all of the claimant's injuries from the accident have reached maximum recovery. The court observed that a given condition cannot be both temporary and permanent at the same time and that allowing partial MMI creates the possibility of simultaneous permanent and temporary disability awards for the same accident, a result inconsistent with the workers' compensation scheme and established precedent. *Rodriguez,* 707 N.W.2d at 238. The court concluded that, even if the medical evidence establishes that a claimant's different injuries have different dates of maximum medical recovery, the legally significant date, that is, the date of MMI for purposes of ending a claimant's temporary disability, is the date upon which the claimant has attained maximum medical recovery from all of the injuries sustained in a particular compensable accident. Rodriguez, 707 N.W.2d at 239, as cited in *Paint Connection Plus, supra.*

The Court in *Paint Connection Plus* agreed with the reasoning in *Rodriguez* and found it consistent with various Panel decisions holding that MMI is not “divisible and cannot be parceled out among the various components of a multi-faceted industrial injury.” *Parra v. Haake Farms,* W.C. No. 4-396-744 (ICAO Mar. 8, 2001*); Bernard v. Current, Inc.*, W.C. No. 4-213-664 (ICAO Oct. 6, 1997); *Carrillo v. Farmington PM Group,* W.C. No. 3-111-178 (ICAO Aug. 26, 1997); *Powell v. L & D Electric*, W.C. No. 4-150-716 (ICAO Mar. 21, 1997). The Colorado Workers' Compensation Act contains no provision for “partial maximum medical improvement” either. *Bernard v. Current, Inc., supra*; *Carrillo v. Farmington PM Group, supra*; *Powell v. L and D Electric*, *supra*. The rationale for these decisions is that calculation of permanent disability benefits is contingent on the

attainment of MMI. Thus, a gap in benefits could occur if the claimant's temporary benefits were terminated but entitlement to permanent benefits could not be determined since the claimant is not at MMI for all aspects of the injury. Thus, where a single industrial injury has multiple components, the claimant's entitlement to temporary disability benefits is not terminated by operation of Sec. 8-42-105(3)(a) until the claimant has reached MMI for all components of the injury. *Paint Connection Plus v. I.C.A.O., supra* at 433.

Respondents have a remedy. They may have been able to utilize the procedure of Sec. 8-42-107(8)(b)(II), C.R.S., which permits an employer or insurer to request an independent medical examination (IME) if no MMI determination has been made and at least twenty four months have passed since the date of the injury." *Paint Connection Plus v. Indus. Claim Appeals Office, supra.* And while in this matter, a DIME has already happened, a follow-up DIME may be requested pursuant to W.C.R.P. Rule 11-7(A).

Under Sec. 8-42-107(8)(b)(I), C.R.S., the initial determination of MMI is to be made by an authorized treating physician, and neither party may dispute the accuracy of the treating physician's MMI determination in the absence of a Division-sponsored independent medical examination (DIME). *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996); *Aren Design, Inc. v. Becerra*, 897 P.2d 902 (Colo. App. 1995). However, a physician has not determined MMI unless the physician opines that all compensable components of the injury are stable. Here, the evidence presented at hearing including exhibits and testimony, fails to show that any authorized treating physician has placed Claimant at MMI for all injuries and the DIME physician found Claimant not at MMI on August 8, 2021, following correcting his report pursuant to an inquiry from Division. Therefore, as found, Claimant has not been determined to be at MMI for her May 12, 2018 work related injury as of the date of the hearing.

As found, Claimant has established that she is entitled to further medical benefits to cure and relieve her of the work related injuries from her May 12, 2018 MVA. Those benefits are found to be, more likely than not, reasonably necessary and related to the injury, including the chiropractic, massage and physical therapy treatment recommended by Dr. Viola-Lewis, the MRI of the left shoulder and steroid injections recommended by Dr. Failinger; and the genicular nerve blocks recommended by both Dr. Olsen and Dr. Failinger. Further, Claimant has proven by a preponderance of the evidence that the treatment that is found to be reasonably necessary is also causally related to the original work related injuries. Dr. Shea' opinion that the cervical spine, lumbar spine, left shoulder and right knee injuries are causally related to the May 12, 2018 work related MVA was credible and persuasive over the contrary opinions of Dr. Raschbacher. Claimant has proven that Claimant is entitled to these benefits.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay for the reasonably necessary and related medical benefits including:

a. The physical therapy for the left shoulder and right knee as prescribed by Dr. Viola-Lewis;

b. The steroid injections for the left shoulder as prescribed by Dr. Failinger;

c. The chiropractic treatment and massage therapy treatment for the cervical spine and the lumbar spine as prescribed by Dr. Viola-Lewis;

d. The left shoulder MRI recommended by Dr. Failinger, followed by a follow up evaluation with Dr. Failinger for reevaluation of the status of the left shoulder;

e. The genicular nerve block for the right knee prescribed by Dr. Olsen and recommended Dr. Failinger;

f. The follow up orthopedic evaluation for the right knee prescribed by Dr. Failinger and Dr. Nichalson for consideration of the revision and TKA;

2. All payments of medical benefits are subject to the Colorado Fee Schedule.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 21st day of July, 2023.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-217-323-001

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $834.59.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffered a lower back injury during the course and scope of his employment with Employer on September 20, 2022.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his September 20, 2022 industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2.

4. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant chose the Concentra Medical Centers clinic at Chambers Road and I-70 as his ATP.

5. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period November 3, 2022 through December 19, 2022.

6. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his November 2, 2022 termination from employment under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

FINDINGS OF FACT

1. Employer is a warehouse distribution chain. Claimant worked for Employer as a forklift operator.

2. Claimant testified that on September 20, 2022 he sustained an injury to his lower back while at work breaking down freight. He was specifically transferring product from one pallet to another when he felt a pop in his lower back. Claimant also experienced a sharp pain when bending. He verbally reported the injury to his supervisor [Redacted, hereinafter EE] and spoke to two managers about his injury.

3. On September 21, 2022 Employer completed an "Incident Reporting System" form. Employer filed a First Report of Injury on the same date.

4. On September 21, 2022 Claimant spoke to Employer's Operations Manager [Redacted, hereinafter MM] about seeking medical attention. Claimant remarked that MM[Redacted] pulled up the Concentra Medical Centers clinic at Chambers Road and I-70 on his telephone and told Claimant to go there because the facility was close. Claimant understood that he was being directed to a specific Concentra clinic. The record reveals that Claimant did not receive a list of at least four designated medical providers.

5. On September 21, 2022 Claimant first visited the Concentra at Chambers Road and I-70 for an evaluation. Claimant reported he was lifting boxes when he injured his lower back. He noted sharp pain with movements and constant pressure/compression. Nurse Practitioner Susan Bradshaw determined her objective findings were consistent with a work-related mechanism of injury. She mentioned tenderness in the entire left paraspinal and left sacroiliac joint, left-sided muscle spasms, and limited range of motion. NP Bradshaw assessed Claimant with a lumbar strain.

6. After receiving work restrictions from Concentra, Employer offered Claimant modified duty employment. Claimant had been working eight-hour shifts prior to his injury, but Employer reduced Claimant's schedule to four-hour shifts.

7. From September 21, 2022 through April 3, 2023, Claimant regularly received treatment with Eric Chau, M.D. at the Concentra Medical Center, Denver-Aurora North facility, at Chambers Road and I-70. Claimant did not express any concerns about his treatment. He acknowledged he did not have any issues about the way Dr. Chau treated him.

8. Concentra providers continued to note that their objective findings were consistent with a work-related mechanism of injury on September 23, October 6, and October 21, 2022. Providers referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy.

9. On October 7, 2022 Dr. Chau added an addendum to Claimant's medical records. He stated "Unable to tolerate mod duties. WR updated." Dr. Chau specifically decreased Claimant's maximum lifting restriction from 20 to 15 pounds, decreased his pushing and pulling ability from 30 to 20 pounds, and limited him to sitting 50% of the time. His restrictions also included limited bending at the waist and frequently changing positions. There was no provision about only working four hours per day.

10. On October 11, 2022 MM[Redacted] authored an e-mail regarding the status of Claimant's case. He recounted that on October 6, 2022 Claimant provided him with a doctor's note regarding work restrictions. MM[Redacted] explained that Claimant could return to full duty work and his only restrictions were no lifting in excess of 20 pounds and no pushing/pulling in excess of 30 pounds. Claimant responded that his physician would send an updated note stating that he could not work more than four hours per day. Although MM[Redacted] commented that medical providers did not limit Claimant

to working four hours per day, Claimant responded that it was not about the medical note, but about how his body was feeling. MM[Redacted] concluded that he would await an updated doctor's note.

11. On October 21, 2022 Concentra Nurse Practitioner Maryna Halushka decreased Claimant's lifting maximum to 15 pounds. She also noted that Claimant could not bend at the waist.

12. On October 28, 2022 Employer had a meeting with Claimant. Employer notified Claimant they would abide by his work restrictions of no lifting in excess of 15 pounds and no bending at the waist. Effective Monday October 31, 2022, Claimant would be required to work eight hours each day. Employer noted they would work with Claimant as best as possible to enable breaks when necessary. Claimant was to continue his housekeeping duties for four hours per day but would engage in other tasks if housekeeping was not needed for the rest of his shift.

13. Claimant did not respond positively to returning to an eight-hour shift by stating he was treated like "trash." He never communicated to Employer that Dr. Chau limited him to a four-hour shift or was uncomfortable performing housekeeping tasks within a 15-pound lifting restriction with no bending at the waist.

14. Claimant testified at hearing he did not feel safe working full duty and/or eight-hour shifts. When asked directly whether Dr. Chau limited him to work only four-hour shifts, Claimant responded that he could not recall.

15. The medical records from Dr. Chau never documented a four-hour work restriction. Claimant was cleared to work an eight-hour shift throughout his medical treatment. The four-hour limitation was an added accommodation provided by Employer.

16. MM[Redacted] testified that he believed the last day of accommodating four-hour shifts for Claimant was October 28, 2022. Claimant then worked four-hour days on October 31, 2022 and November 1, 2022. He received his final occurrence point for failing to adhere to the work schedule on November 1, 2022 because he did not inform a manager he was leaving work after four hours. Claimant was thus terminated from employment on November 2, 2022.

17. MM[Redacted] explained that Employer used an occurrence point system to track Claimant's disciplinary violations. He testified the point system provided that failing to call-in or show-up for work was worth six points, a call-out with insufficient time to cover the absence cost two points, tardiness over six minutes was valued at one point, and failing to adhere to the schedule was worth one point.

18. Claimant accumulated 10 occurrence points prior to his September 20, 2022 date of injury. MM[Redacted] detailed that Claimant specifically accrued two points on July 12, 2022, August 11, 2022, August 16, 2022, August 25, of 2022 and September 19, of 2022 for a total of 10 points. He remarked that Claimant was informed of his point total on the day of his lower back injury or September 20, 2022.

19. Claimant obtained his eleventh occurrence point on October 19, 2022 for tardiness of eight minutes. His final point accrued on November 1, 2022 for failure to adhere to the eight hours per day work schedule. After accumulating 12 occurrence points, Claimant was aware that he could be terminated. Claimant was then released by Employer on November 2, 2022.

20. Claimant has been unable to return to any employment since November 2, 2022. He remarked that he continues to suffer from dull lower back pain. His mobility and functionally remain limited.

21. Claimant continued to receive treatment with Concentra through the spring of 2023. Concentra referred him for a lumbar MRI on March 24, 2023.

22. On March 4, 2023 Claimant underwent an independent medical examination with Alicia Feldman, M.D. Claimant recounted that on September 20, 2022 he was picking up a product at work, felt a pop in his lower back and had the acute onset of back pain. Dr. Feldman reviewed Claimant's medical records and conducted a physical examination. She determined "[i]t appears that [Claimant] sustained a lumbar sprain/strain injury while at work on September 20, 2022." Dr. Feldman reasoned that the natural history of his injury is that it should resolve within weeks to months. She attributed "100%" of Claimant's care between September and December 2022 to his September 20, 2022 industrial injury. However, Dr. Feldman explained that Claimant's lower back symptoms as of the date of the independent medical examination were not related to his work injury on September 20, 2022. She reasoned that Claimant had reached Maximum Medical Improvement (MMI) at his December 19, 2022 follow-up appointment with Dr. Chau.

23. On April 10, 2023 Dr. Chau reviewed Dr. Feldman's independent medical examination. Based upon the report, Dr. Chau back-dated Claimant's MMI date to December 19, 2022. Nevertheless, Claimant commented he would like additional medical care, but does not want to return to Concentra. He would like to visit a doctor in Aurora, Colorado and is requesting a change of physician to David Reinhardt, M.D.

24. Claimant has established it is more probably true than not that he suffered a lower back injury during the course and scope of his employment with Employer on September 20, 2022. Claimant's testimony and the persuasive medical records reveal that Claimant injured his lower back while at work. Initially, Claimant credibly testified that he was transferring product from one pallet to another when he felt a pop in his lower back. Claimant also experienced a sharp pain when bending. He verbally reported the injury to his supervisor EE[Redacted] and spoke to two managers about his injury. On September 21, 2022 Employer completed an "Incident Reporting System" form and filed a First Report of Injury.

25. On September 21, 2022 Claimant first visited the Concentra at Chambers Road and I-70 for an evaluation. Claimant reported he was lifting boxes when he injured his lower back. NP Bradshaw determined her objective findings were consistent with a work-related mechanism of injury. She assessed Claimant with a lumbar strain.

Concentra providers continued to note their objective findings were consistent with a work-related mechanism of injury on September 23, October 6, and October 21, 2022. Providers referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy.

26. Independent medical examination physician Dr. Feldman reviewed Claimant's medical records and conducted a physical examination. Claimant recounted that on September 20, 2022 he was picking up a product at work, felt a pop in his lower back and had the acute onset of pain. Dr. Feldman determined "[i]t appears that [Claimant] sustained a lumbar sprain/strain injury while at work on September 20, 2022.

27. Based on Claimant's credible testimony and a review of the medical records, Claimant suffered a lower back injury that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant's work activities aggravated, accelerated or combined with his pre-existing to produce a need for medical treatment. Accordingly, Claimant suffered a compensable lower back injury on September 20, 2022.

28. Claimant has demonstrated it is more probably true than not that he is entitled to reasonable, necessary and causally related medical benefits for his September 20, 2022 industrial injury. Claimant obtained authorized medical treatment for his injury through Concentra. Providers continually noted that their objective findings were consistent with a work-related mechanism of injury. They referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy. Moreover, independent medical examination physician Dr. Feldman attributed "100%" of Claimant's care between September and December 2022 to his September 20, 2022 industrial injury. Accordingly, the record reveals that Claimant's employment activities on September 20, 2022 aggravated, accelerated, or combined with his pre-existing condition to produce a need for medical treatment.

29. Claimant has proven it is more probably true than not that the right to select an ATP passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2. The record reflects that Claimant did not receive a list of at least four designated medical providers. Respondents have not met the requirements of WCRP 8-2 by tendering a written letter within seven days of the injury. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to him.

30. Because the right of selection passed to Claimant, the central issue is whether he demonstrated by his words or conduct that he chose the Chambers Road Concentra location for treatment. Respondents have demonstrated it is more probably true than not that Claimant chose the Chambers Road Concentra facility as his ATP through his conduct. Initially, Claimant remarked that on September 21, 2022 MM[Redacted] pulled up the Concentra clinic at Chambers Road and I-70 on his telephone and told Claimant to go there because the facility was close. Claimant

understood that he was being directed to a specific Concentra clinic. On September 21, 2022 Claimant first visited the Concentra at Chambers Road and I-70 for an evaluation with NP Bradshaw.

31. From September 21, 2022 through the date of MMI on December 19, 2022 and afterwards through April 3, 2023, Claimant regularly followed-up with Dr. Chau at the Concentra Medical Center, Denver-Aurora North facility, at Chambers Road and I-70. Providers referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy. Claimant acknowledged that he did not have any issues about the way Dr. Chau treated him. He scheduled his own appointments, provided transportation and voluntarily presented for care. Claimant did not express any dissatisfaction with his care, raise any concerns with the designation or request a change of physician.

32. In contradiction to Claimant's position, even after he endorsed the issue of change of physician in his Application for Hearing filed on January 5, 2023, he nevertheless continued to treat with Dr. Chau. Although Claimant testified he requested David Reinhard, M.D. as his new physician, he never provided the request to Respondents. He did not schedule an initial consultation with Dr. Reinhardt or receive treatment with him through the date of this Order.

33. In the days after the September 20, 2022 work accident Claimant signified through his conduct that he selected Concentra at Chambers Road and I-70 for treatment. Claimant obtained a variety of medical treatment through Concentra on numerous occasions between September 21, 2022 through the date of MMI on December 19, 2022, and afterwards through April 3, 2023. Accordingly, by continuing to obtain treatment for several months at the Chambers Road and I-70 Concentra facility without concerns, Claimant exercised his right of selection and chose his ATP.

34. Respondents have proven it is more probably true than not that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Initially, on November 2, 2022 Claimant was terminated from employment after accumulating 12 occurrence points. He specifically received his final occurrence point for failing to adhere to the work schedule on November 1, 2022 because he did not inform a manager he was leaving work after four hours.

35. On October 28, 2022 Employer notified Claimant they would abide by his work restrictions of not lifting more than 15 pounds and no bending at the waist. Effective Monday October 31, 2022, Claimant would be required to work eight hours a day. MM[Redacted] testified that he believed the last day of accommodating four-hour shifts for Claimant was October 28, 2022. The medical records from Dr. Chau never documented a four-hour work restriction. Claimant was cleared to work an eight-hour shift throughout his medical treatment. The four-hour limitation was an added accommodation provided by Employer. The record reveals that, although Employer offered to work with Claimant to provide necessary breaks, he had a negative reaction

about returning to an eight-hour modified shift.

36. MM[Redacted] credibly explained that Employer used an occurrence point system to track Claimant's disciplinary violations. He testified the point system provided that failing to call-in or show-up for work was worth six points, a call-out with insufficient time to cover the absence cost two points, tardiness over six minutes was valued at one point, and failing to adhere to the schedule was worth one point. Claimant accrued 10 occurrence points prior to his September 20, 2022 date of injury. MM[Redacted] detailed that Claimant specifically accrued two points on July 12, 2022, August 11, 2022, August 16, 2022, August 25, of 2022 and September 19, 2022 for a total of 10 points. He remarked that Claimant was informed of his point total on the day of his lower back injury or September 20, 2022. Claimant obtained his eleventh occurrence point on October 19, 2022 for tardiness.

37. Despite knowledge that he had accumulated 11 occurrence points, Claimant nevertheless decided to work four-hour shifts on October 31, 2022 and November 1, 2022 in defiance of Employer's request. Claimant worked four hour days on October 31, 2022 and November 1, 2022, but failed to inform a manager before departing. On November 1, 2022, due to the volitional acts of failing to work an eight-hour shift and not checking with a manager before his shift ended, Claimant accrued his twelfth occurrence point and became eligible for termination.

38. Claimant failed to complete his scheduled shifts on October 31, 2022 and November 1, 2022. The record reflects that he was aware termination could result. To the extent Claimant argues that his attendance issues were related to his work injury, his contention is not credible. The weight of the evidence establishes that Claimant simply violated known and well-communicated attendance policies. He thus precipitated his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. Because Claimant was responsible for his termination, he is not entitled to receive TTD benefits for the period November 3, 2022 through his date of MMI on December 19, 2022.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has established by a preponderance of the evidence that he suffered a lower back injury during the course and scope of his employment with

Employer on September 20, 2022. Claimant's testimony and the persuasive medical records reveal that Claimant injured his lower back while at work. Initially, Claimant credibly testified that he was transferring product from one pallet to another when he felt a pop in his lower back. Claimant also experienced a sharp pain when bending. He verbally reported the injury to his supervisor EE[Redacted] and spoke to two managers about his injury. On September 21, 2022 Employer completed an "Incident Reporting System" form and filed a First Report of Injury.

8. As found, on September 21, 2022 Claimant first visited the Concentra at Chambers Road and I-70 for an evaluation. Claimant reported he was lifting boxes when he injured his lower back. NP Bradshaw determined her objective findings were consistent with a work-related mechanism of injury. She assessed Claimant with a lumbar strain. Concentra providers continued to note their objective findings were consistent with a work-related mechanism of injury on September 23, October 6, and October 21, 2022. Providers referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy.

9. As found, independent medical examination physician Dr. Feldman reviewed Claimant's medical records and conducted a physical examination. Claimant recounted that on September 20, 2022 he was picking up a product at work, felt a pop in his lower back and had the acute onset of pain. Dr. Feldman determined "[i]t appears that [Claimant] sustained a lumbar sprain/strain injury while at work on September 20, 2022."

10. As found, based on Claimant's credible testimony and a review of the medical records, Claimant suffered a lower back injury that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant's work activities aggravated, accelerated or combined with his pre-existing to produce a need for medical treatment. Accordingly, Claimant suffered a compensable lower back injury on September 20, 2022.

Medical Benefits

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

12. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

13. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his September 20, 2022 industrial injury. Claimant obtained authorized medical treatment for his injury through Concentra. Providers continually noted that their objective findings were consistent with a work-related mechanism of injury. They referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy. Moreover, independent medical examination physician Dr. Feldman attributed "100%" of Claimant's care between September and December 2022 to his September 20, 2022 industrial injury. Accordingly, the record reveals that Claimant's employment activities on September 20, 2022 aggravated, accelerated, or combined with his pre-existing condition to produce a need for medical treatment.

Right of Selection

14. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck,* 996 P.2d at 229. However, the Colorado Workers' Compensation Act requires respondents to provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

15. The term "select," is unambiguous and should be construed to mean "the act of making a choice or picking out a preference from among several alternatives." *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant "selects" a physician when she "demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury." *Williams v. Halliburton Energy Services,* WC 4-995-888-01 (ICAO,

Oct. 28, 2016); *Loy v. Dillon Companies*, W.C. No. 4-972-625 (Feb. 19, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO, Sept. 18, 2000).

16. As found, Claimant has proven by a preponderance of the evidence that the right to select an ATP passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2. The record reflects that Claimant did not receive a list of at least four designated medical providers. Respondents have not met the requirements of WCRP 8-2 by tendering a written letter within seven days of the injury. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to him.

17. As found, because the right of selection passed to Claimant, the central issue is whether he demonstrated by his words or conduct that he chose the Chambers Road Concentra location for treatment. Respondents have demonstrated by a preponderance of the evidence that Claimant chose the Chambers Road Concentra facility as his ATP through his conduct. Initially, Claimant remarked that on September 21, 2022 MM[Redacted] pulled up the Concentra clinic at Chambers Road and I-70 on his telephone and told Claimant to go there because the facility was close. Claimant understood that he was being directed to a specific Concentra clinic. On September 21, 2022 Claimant first visited the Concentra at Chambers Road and I-70 for an evaluation with NP Bradshaw.

18. As found, from September 21, 2022 through the date of MMI on December 19, 2022 and afterwards through April 3, 2023, Claimant regularly followed-up with Dr. Chau at the Concentra Medical Center, Denver-Aurora North facility, at Chambers Road and I-70. Providers referred Claimant for conservative treatment, including massage therapy, osteopathic manipulation and physical therapy. Claimant acknowledged that he did not have any issues about the way Dr. Chau treated him. He scheduled his own appointments, provided transportation and voluntarily presented for care. Claimant did not express any dissatisfaction with his care, raise any concerns with the designation or request a change of physician.

19. As found, in contradiction to Claimant's position, even after he endorsed the issue of change of physician in his Application for Hearing filed on January 5, 2023, he nevertheless continued to treat with Dr. Chau. Although Claimant testified he requested David Reinhard, M.D. as his new physician, he never provided the request to Respondents. He did not schedule an initial consultation with Dr. Reinhardt or receive treatment with him through the date of this Order.

20. As found, in the days after the September 20, 2022 work accident Claimant signified through his conduct that he selected Concentra at Chambers Road and I-70 for treatment. Claimant obtained a variety of medical treatment through Concentra on numerous occasions between September 21, 2022 through the date of MMI on December 19, 2022, and afterwards through April 3, 2023. Accordingly, by continuing to obtain

treatment for several months at the Chambers Road and I-70 Concentra facility without concerns, Claimant exercised his right of selection and chose his ATP. *See Murphy-Tafoya v. Safeway, Inc.*, WC 5-153-600 (ICAO, Sept. 1, 2021) (where right of selection passed to the claimant, six months of treatment with personal provider following her work injury demonstrated that the claimant had exercised her right of selection); *Rivas v. Cemex Inc*, WC 4-975-918 (ICAO, Mar. 15, 2016) (through his words and conduct in obtaining treatment from Workwell for five weeks the claimant selected Workwell as his authorized provider); *Pavelko v. Southwest Heating and Cooling*, WC 4-897-489 (ICAO, Sept. 4, 2015) (the claimant exercised his right of selection when he obtained treatment for two years from provider recommended by the employer); *Tidwell v. Spencer Technologies*, WC 4-917- 514 (ICAO, Mar. 2, 2015) (where the employer failed to designate an authorized medical provider and claimant obtained treatment from personal physician Kaiser for his industrial injury, the claimant selected Kaiser as his authorized treating physician through his words or conduct).

Temporary Total Disability Benefits/Responsible for Termination

21. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must demonstrate that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Off.*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

22. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Indus. Claim Appeals Off.*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the

resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, the respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

23. As found, Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Initially, on November 2, 2022 Claimant was terminated from employment after accumulating 12 occurrence points. He specifically received his final occurrence point for failing to adhere to the work schedule on November 1, 2022 because he did not inform a manager he was leaving work after four hours.

24. As found, on October 28, 2022 Employer notified Claimant they would abide by his work restrictions of not lifting more than 15 pounds and no bending at the waist. Effective Monday October 31, 2022, Claimant would be required to work eight hours a day. MM[Redacted] testified that he believed the last day of accommodating four-hour shifts for Claimant was October 28, 2022. The medical records from Dr. Chau never documented a four-hour work restriction. Claimant was cleared to work an eight-hour shift throughout his medical treatment. The four-hour limitation was an added accommodation provided by Employer. The record reveals that, although Employer offered to work with Claimant to provide necessary breaks, he had a negative reaction about returning to an eight-hour modified shift.

25. As found, MM[Redacted] credibly explained that Employer used an occurrence point system to track Claimant's disciplinary violations. He testified the point system provided that failing to call-in or show-up for work was worth six points, a call-out with insufficient time to cover the absence cost two points, tardiness over six minutes was valued at one point, and failing to adhere to the schedule was worth one point. Claimant accrued 10 occurrence points prior to his September 20, 2022 date of injury. MM[Redacted] detailed that Claimant specifically accrued two points on July 12, 2022, August 11, 2022, August 16, 2022, August 25, of 2022 and September 19, 2022 for a total of 10 points. He remarked that Claimant was informed of his point total on the day of his lower back injury or September 20, 2022. Claimant obtained his eleventh occurrence point on October 19, 2022 for tardiness.

26. As found, despite knowledge that he had accumulated 11 occurrence points, Claimant nevertheless decided to work four-hour shifts on October 31, 2022 and

November 1, 2022 in defiance of Employer's request. Claimant worked four hour days on October 31, 2022 and November 1, 2022, but failed to inform a manager before departing. On November 1, 2022, due to the volitional acts of failing to work an eight-hour shift and not checking with a manager before his shift ended, Claimant accrued his twelfth occurrence point and became eligible for termination.

27. As found, Claimant failed to complete his scheduled shifts on October 31, 2022 and November 1, 2022. The record reflects that he was aware termination could result. To the extent Claimant argues that his attendance issues were related to his work injury, his contention is not credible. The weight of the evidence establishes that Claimant simply violated known and well-communicated attendance policies. He thus precipitated his employment termination by a volitional act that he would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. Because Claimant was responsible for his termination, he is not entitled to receive TTD benefits for the period November 3, 2022 through his date of MMI on December 19, 2022.

ORDER

1. Claimant suffered a compensable lower back injury at work on September 20, 2022.during the course and scope of his employment with Employer.

2. Respondents are financially responsible for payment of Claimant's reasonable and necessary medical expenses for the treatment of his lower back injury.

3. The right to select an ATP passed to Claimant through Respondents' failure to provide a written list of at least four designated medical providers

4. Claimant selected the Chambers Road and I-70 Concentra facility as his ATP.

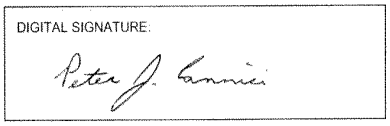
5. Claimant's request for TTD benefits for the period November 3, 2022 through his date of MMI on December 19, 2022 is denied and dismissed because he was responsible for his November 2, 2022 termination from employment.

6. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For*

further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

DATED: July 25, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-177-827-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that his scheduled eye impairment should be converted to a whole-person impairment.

2. Whether Respondents are liable for penalties for filing the final admission of liability beyond the period set forth in § 8-42-107.2(4)(c), C.R.S.

3. Whether Claimant is entitled to a disfigurement award.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to his right eye on July 8, 2021, while he was re-treading a tire. A strap broke and struck his safety goggles, causing the safety goggles to strike his right eye, causing a full-thickness laceration of his cornea.

2. Claimant was taken to the emergency department at Denver Health that same day and underwent eye surgery, consisting of a peritomy and globe exploration of the right eye.

3. On October 11, 2021, Claimant underwent a second right eye surgery with Dr. Jesse Smith. The procedure was a "[c]omplex [p]hacoemulsification and cataract extraction with intraocular lens implantation, CTR, no kenalog."

4. On October 19, 2021, Claimant saw his authorized treating physician, Dr. Jay Reinsma at Concentra. Dr. Reinsma noted that Claimant had one more follow-up scheduled with a retinal specialist, at which point he anticipated Claimant would be released from care and returned to work at full duty. Dr. Reinsma referred Claimant for an impairment evaluation in anticipation of maximum medical improvement (MMI).

5. Claimant underwent an impairment rating evaluation[1] with Dr. Chester Roe on January 25, 2022. Dr. Roe opined that Claimant had reached MMI with a 99% impairment to his right eye based on Table 2, page 163 of the *AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)*, which given the absence of impairment of the left eye, resulted in a total visual system impairment

[1] The record is ambiguous as to whether this evaluation was at the referral of Dr. Reinsma or whether it was an independent medical examination sponsored by Respondents pursuant to 8-43-404(3), C.R.S. The distinction does not affect the Court's analysis in this case, and so the Court does not make any findings in this regard.

of 25%. Dr. Roe noted that "one entirely blind eye with no visual field can only at worst be a 25% visual system impairment, if the other eye is normal, according to the Guides."

6. Dr. Roe later testified at hearing that Claimant would be legally blind if both eyes were as bad as his right eye. Regarding depth perception, Dr. Roe testified that stereo vision—or vision with two eyes—provides better depth perception than one eye alone. Regarding the impairment, Dr. Roe testified that the visual system chapter of the AMA Guides, the calculations were 99% vision impairment in the right eye, which is a 25% visual system impairment, or 24% whole-person impairment. He clarified that he chose not to assign a whole person impairment for cosmetic disfigurement because he could not perceive much of a pupil abnormality from several feet away. The Court finds Dr. Roe's testimony credible and persuasive.

7. Claimant obtained a Division independent medical examination (DIME) with Dr. James McLaughlin on August 2, 2022, a level II accredited physician under the Workers' Compensation Act.[2] Dr. McLaughlin examined Claimant and noted that Claimant was able to drive his seven-minute commute to work. However, Dr. McLaughlin noted that Claimant had difficulty getting in and out of the vehicle because he has to feel around for the handle, would have to hold onto the railing while ascending or descending stairs, and would sometimes miss his mouth while eating. The Court infers that these difficulties are related to his loss of depth perception resulting from his loss of vision in his right eye.

8. Dr. McLaughlin agreed that Claimant was at MMI, and he determined that date to be January 25, 2022. He assigned a 98% impairment to Claimant's right eye, and therefore a 25% visual impairment. Dr. McLaughlin clarified that this would convert to a whole-person impairment of 24%. Regarding permanent work restrictions, Dr. McLaughlin recommended Claimant not work at exposed heights and not operate heavy equipment, power tools, or sharp tools due to loss of depth perception and decreased stereo acuity.

9. The Court finds Dr. McLaughlin's opinion regarding permanent impairment to equate to total loss of use of the eye.

10. Claimant testified at hearing that he cannot see movement in his right eye and that he sees lots of rays of different colors. Claimant also reported left eye fatigue and headaches. In his testimony, Claimant also recounted his difficulties with depth perception, including difficulty putting paste on his dentures in the morning, difficulty preparing food, and difficulty driving.

---

[2] Rule 11-1, W.C.R.P. (2022), requires that a DIME physician be level II accredited, have sufficient recency of experience treating patients, and be board-certified in Colorado. Because Dr. McLaughlin performed the DIME, the Court infers that he met these criteria.

11. The Court finds Claimant's testimony credible. The Court also finds that Claimant's left eye fatigue and headaches are the result of overuse of his left eye to compensate for his right eye's loss of vision. Therefore, those symptoms lead the Court to find that Claimant's right eye impairment is beyond that which is set forth on the schedule of injuries at § 8-42-107(2), C.R.S.

12. The Court finds, based on Dr. McLaughlin's DIME report, Dr. Roe's testimony, and Claimant's testimony, that Claimant's loss of vision in his right eye for which he received an impairment rating from DIME Dr. McLaughlin constitutes a total loss of use of his right eye.

13. Dr. McLaughlin sent a copy of his DIME report to the Division as well as to counsel for the parties at some point in time between August 2 and September 7, 2022. Claimant and Respondents had a copy of the report for review by September 7, 2022 at the latest.

14. On September 7, 2022, The Division of Workers' Compensation issued a notice to the parties that the DIME process had concluded. The notice was sent by e-mail, and a copy was sent to Respondents' counsel. Respondents had actual notice as of September 7, 2022, that the DIME process had concluded.

15. On October 4, 2022, the Division issued a notice to Respondent-Insurer that "[t]he period for filing an application for hearing [pursuant to § 8-42-107.2(4)(c), C.R.S.] has expired and a final admission of liability is required." The Court finds that Respondent-Insurer received a copy of this letter.[3]

16. That same day, [Redacted, hereinafter RO], a representative of Claimant's counsel's office, e-mailed Respondents' counsel advising that the DIME process had concluded on September 7, 2022, and asking whether Respondents would be filing a FAL.

17. Respondents' counsel contacted Claimant's counsel via e-mail on October 10, 2022, regarding the possibility of settlement. Claimant's counsel responded on October 14, stating:

    a. *I have discussed the possibility with the client, and there is a possibility of settlement. However, I would like to receive the FA before evaluating this with the Client. If I'm not mistaken, this was due by September 27, and remains outstanding. Please advise on its status*.

18. On Wednesday, October 19, 2022, [Redacted, hereinafter BS], claims management supervisor for the Division, sent an e-mail to [Redacted, hereinafter JH] of Respondent-Insurer indicating that a "DIME conclusion notice" was sent to Respondent-Insurer on September 7, and that a FAL was due on September 27,

[3] Respondents' counsel, however, did not receive a copy of the letter until October 19, 2022, after learning about the existence of the letter and requesting a copy from the Division.

2022. BS[Redacted] also made reference to the October 4, 2022 letter sent by [Redacted, hereinafter DC]. BS[Redacted] requested that a FAL be filed by that Friday.

19. Respondents filed a FAL on November 7, 2022, admitting for a 25% scheduled impairment rating of the eye based on DIME Dr. McLaughlin's report and corresponding PPD benefits in the amount of $9,456.20. Respondents reserved the right to credit an overpayment of $715.35 toward PPD. The FAL was filed 61 days after the notice of conclusion of the DIME process, and 41 days after the FAL was due pursuant to § 8-42-107.2(4)(c), C.R.S. Based on the multiple notices Respondents received regarding the need to file an FAL, there is clear and convincing evidence that Respondents should have known that an FAL was due by no later than September 27, 2022, and that they were in continuing violation of the Workers' Compensation Act. The Court finds that Respondents' delay in filing the FAL was unreasonable and was the result of negligence. The Court also finds that with each successive notice, the delay in filing of the FAL became more unreasonable.

20. Four days prior to filing the FAL, Respondents had voluntarily issued a lump sum PPD payment to Claimant without discount in the amount of $8,740.85, the value of the admitted PPD minus an asserted overpayment of $715.35. The Court finds this to be a mitigating factor with regard to the issue of penalties. Though, the Court does also observe that Claimant would have been entitled to the same lump sum upon request pursuant to Rule 5-10, W.C.R.P., and § 8-43-203(2)(b)(II).

21. On December 7, 2022, exactly thirty days after the FAL was filed, Claimant filed an Application for Hearing (AFH) to challenge the FAL on the issues of average weekly wage, disfigurement, temporary disability benefits, permanent disability benefits, and penalties. December 7, 2022, was the latest date Claimant could file an AFH challenging the FAL pursuant to § 8-43-203(2)(b)(II), C.R.S.

22. The Court finds that Claimant's choice to wait thirty days from the date of the FAL before filing an AFH, notwithstanding having a copy of the DIME report since at least September 7, 2022, is evidence that Claimant perceived minimal ongoing harm resulting from delay of resolution of the issues endorsed in Claimant's AFH. The Court finds that the harm Claimant sustained as a result of Respondents' late filing of the FAL consisted of a delay in receipt of PPD benefits and a delay in resolution of the hearing issues. The former was somewhat mitigated by Respondents' voluntary payment of a lump sum PPD award without discount. The latter was of little harm, as evidenced by Claimant's own lack of urgency in seeking to challenge the FAL.

23. The harm resulting from the late filing of the FAL was slightly greater than *de minimus*, and the delay resulted from the negligence of Respondents. However, with each successive notice that Respondents received regarding their late FAL, the degree of culpability increased. Therefore, the Court finds that the following

daily penalties during the 41-day delay in filing of the FAL would be fairest and within Respondents' ability to pay:

a. From September 27 through October 4, 2022, daily penalties of $8 per day;
b. From October 5 through October 10, 2022, daily penalties of $10 per day;
c. From October 11 through October 19, 2022, daily penalties of $15 per day; and
d. From October 20 through November 6, 2022, daily penalties of $20 per day.

24. At the time of hearing, Claimant allowed the Court to observe his right eye for a disfigurement award. The Court observed that Claimant's right eye was slightly more dilated than the left and slightly redder. The Court finds that the disparities in pupil dilation and eye redness are related to Claimant's July 8, 2021 injury, and that Claimant has proved by a preponderance of the evidence that he has been seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view, as described, so as to entitle him to a disfigurement award. While the disfigurements are not particularly stark, their location in Claimant's right eye contributes to their prominence. The Court finds that a $700 disfigurement award is appropriate.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*,

183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Whole-Person Conversion

The ALJ is the finder of fact on the question of whether the Claimant sustained a "loss of an arm" within the meaning of schedule of disabilities in § 8-42-107(2)(a), C.R.S., or a whole person rating under § 8-42-107(8)(c), C.R.S. *Strauch v. PSL Swedish Healthcare System,* 917 P. 2d 366, 369 (Colo.App.1996). In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp*., 937 P.2d 883, 884 (Colo.App.1996)*; Strauch* at 368-369.

Injury is the manifestation in part or parts of the body which been impaired or disabled as a result of the industrial accident. *Mountain City Meat v. ICAO,* 904 P.2d 1333 (Colo. App. 1995). The part of the body that sustains the ultimate loss is not necessarily the particular part of the body where the injury occurred. *McKinley v. Bronco Billy's,* 903 P.2d 1239, 1242 (Colo.App.1995). When evaluating functional impairment the ALJ shall look at the alteration of the claimant's functional abilities by medical means and by non-medical means, as well as the claimant's capacity to meet personal, social, and occupational demands. *Askew v. Industrial Claim Appeals Office,* 927 P.2d 1333, 1337 (Colo. 1996).

Section 8-42-107(1), C.R.S., provides that a claimant is limited to a scheduled disability award if the claimant suffers an "injury or injuries" described in subsection (2) of that provision. *Strauch*, 917 P.2d 366. The schedule of impairments includes "[t]otal blindness of one eye." § 8-42-107(2)(gg), C.R.S. However, the Act also provides that "[w]hen an injury results in the total loss or total loss of use of . . . an eye . . . the benefits for such loss shall be determined pursuant to this subsection (8),[4] except as provided in subsection (7)(b)(IV)[5] of this subsection." § 8-42-107(8)(c.5), C.R.S.

The only distinction between these two provisions appears to be between total blindness and total loss of use of an eye. Although the distinction is not obvious at first glance, the Colorado Court of Appeals clarified the distinction in *McKinley v. Bronco*

[4] Whole-person.
[5] Where it provides that you must admit for the scheduled rating if it results in greater compensation.

Billy's, 903 P.2d 1239 (Colo.App.1995). The court in *McKinley v. Bronco Billy's* held that "[i]f the loss of use was partial, then . . . the amount of compensation was to be the proportionate share of the amount stated in the schedule for the total loss of a member." However, if the loss was total, then the permanent partial disability award was to be calculated based on the scheme for whole-person impairments set forth at § 8-42-107(8), C.R.S.

Claimant points to the case of *Parra v. Spectrum Retirement Communities*, W.C. No. 5-052-120-005 (May 6, 2021), as a case analogous to the present one. The panel in *Parra* upheld the ALJ's finding that the claimant's impairment of the eye was not limited to the schedule. The claimant in *Parra* suffered a full-thickness corneal laceration. As a result, he did not have a cornea or lens in his right eye and experienced headaches. Nevertheless, he was able to distinguish between lightness and darkness with his injured eye, as well as perceive motion if within several inches of his eye. The DIME physician declined to assign the claimant a whole-person impairment rating because the claimant still had some vision and still had his eyeball. The ALJ concluded that the claimant sustained a total loss of use of the eye and converted the scheduled rating to a whole-person rating.

The respondents in *Parra* appealed, arguing in part that the ALJ's finding that the claimant had "total loss of use" of his affected eye was not supported by the evidence, and that the loss of use was only partial because the claimant could still distinguish between lightness and darkness and perceive some motion. The ICAO panel, however, upheld the ALJ's finding, citing *Employers' Mut. Ins. Co. v. Indus. Comm'n*, 199 P. 482 (1921), for the proposition that an award for total blindness is correct where the vision remaining is of no value for working. The panel further upheld the finding that the impairment was not contained on the schedule in light of the facts that the claimant's "entire life has been altered by this injury" and the claimant experienced "continual headaches."

Here, just as in *Parra*, Claimant has not sustained enucleation of his right eye. Claimant retains some vision, just like the claimant in *Parra*, but the vision is of no value for Claimant's work. He cannot see movement in his right eye, but can see rays of different colors. Claimant's loss of vision has also caused Claimant continual headaches and altered Claimant's activities of daily living in substantial ways.

Parra is sufficiently analogous to the facts in this case such that the Court concludes, based on *Parra*, that it has the discretion to convert the scheduled eye impairment rating if the Court finds that Claimant sustained a total loss of use of his eye for all practical purposes. *See Mut. Ins. Co.*, 199 P. 482.

As found above, Claimant's loss of vision in his right eye for which he received an impairment rating from DIME Dr. McLaughlin constitutes a total loss of use of his right eye. Additionally, given Claimant's decreased ability to meet his personal needs in his activities of daily living, the strain placed on his contralateral eye, and his recurring

headaches, the Court concludes that Claimant's impairment is beyond that which is set forth on the schedule at § 8-42-107(2), C.R.S.

Therefore, Claimant has proved by a preponderance of the evidence that he is entitled to a conversion of his right eye impairment to a whole-person impairment of 24%.

Penalties

Section 8-43-304(1), C.R.S., provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S., is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo.App.2005).

Whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital*, 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

Section 8-42-107.2, C.R.S., provides that Respondents shall, within twenty days after the date of mailing of the Division's notice that hit has received the DIME report, either file a FAL or request a hearing to contest the DIME's findings. As found above, the Division issued its notice on September 7, 2022. Respondents had until September 27, 2022, to either file a FAL or request a hearing challenging the DIME. Respondents did neither. Respondents were therefore in violation of the Act.

The Court also considers whether Respondents' violation of § 8-42-107.2, C.R.S., was reasonable. As found above, it was not. Respondents had notice that they were to file a FAL or request a hearing by no later than September 27, 2022, yet did not.

Section 8-43-304(4), C.R.S. permits an alleged violator twenty days to cure the violation. If the violator cures the violation within the twenty-day period "and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed." The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo.App.2003). Section 8-43-304(4), C.R.S., modifies the rule and adds an extra element of proof when a cure has been effected. Specifically, the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo.App.1997); *see Tadlock v. Gold Mine Casino*, W.C. No. 4-200-716 (May 16, 2007).

Respondents came into compliance with the Act upon filing the November 7, 2022 FAL. However, in so doing, Respondents did not cure the daily violations of the Act already accrued for the period between September 27 and November 6, 2022. Even had it done so, as found above, Claimant has proved by clear and convincing evidence that Respondents should have known they were in violation of the Act. Therefore, penalties are appropriate.

An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hosp.*, W.C. No. 4-619-954 (May 5, 2006). However, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Business Products v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo.App.2005); *Espinoza v. Baker Concrete Construction*, W.C. No. 5-066-313 (Jan. 31, 2020).

When determining the penalty the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products*, 126 P.3d at 324. When an ALJ assesses a penalty, the Excessive Fines Clause of the Eighth Amendment to the U.S. Constitution requires the ALJ to consider whether the gravity of the offense is proportional to the severity of the penalty, whether the fine is harsher than fines for comparable offenses in this or other jurisdictions and the ability of the offender to pay the fines. The proportionality analysis applies to the fine for each offense rather than the total of fines for all offenses. *Conger v. Johnson Controls Inc.*, W.C. 4-981-806 (July 1, 2019).

As found above, the harm resulting from the late filing of the FAL was slightly greater than *de minimus*. Respondents took measures to mitigate the late filing of the FAL by promptly issuing a lump sum payment without discount of all PPD admitted. The mitigation is partial, as Claimant would have been entitled to the same lump sum upon request pursuant to Rule 5-10, W.C.R.P., and § 8-43-203(2)(b)(II).

As found above, the harm Claimant sustained as a result of Respondents' late filing of the FAL consisted of a delay in receipt of PPD benefits and a delay in resolution of the hearing issues. The former was somewhat mitigated by Respondents' voluntary payment of a lump sum PPD award without discount. The latter was of little harm, as evidenced by Claimant's own lack of urgency in seeking to challenge the FAL.

As for reprehensibility, as found above, Respondents' violation is the result of negligence. Nevertheless, the degree of culpability increased with each successive notice Respondents received that their FAL was untimely. Therefore, the Court concludes that daily penalties should be imposed proportional to the unreasonableness of Respondents' failure to file the FAL during each period during which Respondents had additional notice. Penalties should be imposed as follows:

- From September 27 through October 4, 2022, daily penalties of $8 per day;
- From October 5 through October 10, 2022, daily penalties of $10 per day;
- From October 11 through October 19, 2022, daily penalties of $15 per day; and
- From October 20 through November 6, 2022, daily penalties of $20 per day.

Based on the above findings, the penalties payments should be apportioned equally between Claimant and the Colorado Uninsured Employer Fund.

Disfigurement

Section 8-42-108(1), C.R.S. permits an ALJ to award disfigurement benefits up to a maximum of $4,000 if the claimant is "seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view. . . ." The ALJ may award up to $8,000 for "extensive body scars" and other conditions expressly provided for in § 8-42-108(2), C.R.S. These awards are subject to annual adjustment by the Director of the Division of Workers' Compensation pursuant to §8-42-108(3), C.R.S.

Based on Claimant's testimony and the records submitted at hearing, Claimant's injury caused a visible disfigurement to his body consisting of slight redness in the right eye and slightly more pupil dilation in the right eye than the left. Claimant has proved entitlement to a disfigurement award. As found above, and as the Court here concludes, a disfigurement award of $700.00 is most appropriate for a disfigurement that is not salient in appearance but located in the prominent location of Claimant's eye.

ORDER

It is therefore ordered that:

1. Respondents shall file an amended FAL admitting for a 24% whole-person impairment.

2. Respondents shall pay daily penalties as follow:

   a. From September 27 through October 4, 2022, daily penalties of $8 per day;
   b. From October 5 through October 10, 2022, daily penalties of $10 per day;
   c. From October 11 through October 19, 2022, daily penalties of $15 per day; and
   d. From October 20 through November 6, 2022, daily penalties of $20 per day.

   The penalties shall be paid 50% to Claimant and 50% to the Colorado Uninsured Employer Fund.

3. Respondents shall pay Claimant a disfigurement award of $700.00.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 25, 2023

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that she sustained a compensable work injury?

2. If Claimant sustained a compensable work injury, is she entitled to medical benefits?

3. If Claimant sustained a compensable work injury, is Claimant entitled to temporary disability benefits?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 34 year-old woman who worked for Employer. She began working for Employer on December 16, 2019, as a container delivery driver. In February 2021, Claimant was a promoted to roll-off driver and drove a cabover truck. In January 2022, Claimant was assigned a newer model truck, an International. (Tr. 21:12-22:2). Claimant worked full-time, anywhere from 10-12 hours a day, Monday through Friday, and five to eight hours on Saturdays. (Tr. 24:19-23).

2. Claimant credibly testified that the seat in the new truck hung low to the left, and she would compensate the tilt as best she could by using her work gloves to lift the left side up. She estimated the tilt to be at an approximately 35 degree angle. (Tr. 22:14-23:15).

3. Claimant credibly testified that the seat was always uncomfortable and she noticed pain building in her right rear hip area. On or around March 15, 2022, the pain was sharp and she felt a pinching pressure, with random spasms in her right buttocks. Claimant credibly testified she told her supervisor, "Ricky", about the seat. (Tr. 26:12-26).

4. On March 21, 2022, Claimant wrote on the Driver's Daily Vehicle Inspection Report under the section entitled Defect Description, "Driver seat leans to left – causing sciatic pain." (Ex. 5). Claimant credibly testified that Employer replaced the seat cushion, but this did not help with the pain. (Tr. 30:16-20).

5. There is no contrary evidence in the record regarding the driver's seat in Claimant's truck. Claimant's testimony was credible, and the ALJ finds that the driver's seat in Claimant's assigned work truck was tilted, and hung to the left.

6. On April 11, 2022, Claimant went to the emergency room at North Suburban Medical Center. She reported sitting on a lopsided seat for several months, and having a significant increase in right hip pain over the last three weeks. The pain had been intolerable over the previous seven days. Claimant described the pain as a deep burning sensation and a feeling like there was a bubble inside her right hip that radiated down the side of her leg. The pain was substantially worse when sitting. The CT scan and MRI revealed Claimant had a disc extrusion at the L4-L5 level, among other findings. (Ex. 12).

7. On Thursday, April 14, 2022, Claimant emailed [Redacted, hereinafter MA], a regional HR business partner with Employer. Claimant reported that she started experiencing low back pain on March 15, 2022, and she wrote up her truck on March 21, 2022. Claimant explained that her seat was uneven, and she used her work gloves to elevate the left side of the seat, but the pain was becoming increasingly worse. Claimant told MA[Redacted] that she had a bulging disc in her L4-L5 vertebrae, and it was causing severe pain in her sciatic nerve, down to her foot. Claimant explained that she went to the Hospital on April 11, 2022, and they advised her to rest three days. Claimant noted this was her third day of rest, but she was still in "pretty bad shape." Claimant inquired if there was any light work for her to do while the doctors determined how to proceed with her spine. (Ex. 4).

8. MA[Redacted[testified that Claimant filled out paper work on April 14, 2022 regarding her alleged injury. According to MA[Redacted], Claimant wanted to see how she did at home over the weekend, and then she would let Employer know if she wanted to see an Authorized Treating Provider (ATP). On the following Tuesday, Claimant decided to see an ATP. (Tr. 85:15-86:6).

9. On April 19, 2022, Claimant saw, ATP, Nazia Javed M.D. Claimant reported experiencing low back pain that began on or about March 15, 2022. Claimant told Dr. Javed that her truck seat was uneven, and it started affecting her back. She reported the pain was worse with prolonged sitting or bending. Claimant had pain radiating down her right leg. She told Dr. Javed that about two years prior she went to a chiropractor who took x-rays of her spine, and told her she had lumbar degenerative discs. Dr. Javed diagnosed Claimant with lumbar discogenic pain, lumbar disc bulge and RLE radiculitis. (Ex. 9).

10. Dr. Javed referred Claimant to Joseph Fuller, M.D., at Mountain Spine and Pain Physicians. Dr. Fuller examined Claimant on April 21, 2023. Dr. Fuller performed epidural steroid injections on Claimant. (Ex. 8). On or about May 25, 2022, ATP, Dr. Javed, referred Claimant to Yusuke Wakeshima, M.D., for oral pain management since the trial of steroid injections was not successful. (Ex. 9).

11. On June 13, 2022, Claimant was evaluated by Dr. Wakeshima. He diagnosed Claimant with right-sided low back pain with right-sided sciatica, lumbar radiculopathy - right, lumbar degenerative disc disease, sacroiliac joint dysfunction of right side, piriformis syndrome of right side, and pain in right lower extremity. With respect to Claimant's lumbar radiculopathy, Dr. Wakeshima opined "[t]he patient's clinical presentation is also

consistent with sacroiliac joint dysfunction today, which would also be more consistent with her mechanism of injury of being [sic] an unbalanced seat." (Ex. 7).

12. Dr. Javed also referred Claimant to Andrew Castro, M.D., a spine surgeon, who evaluated Claimant on June 29, 2022. Dr. Castro's assessment was lumbar radiculopathy secondary to a disc herniation L4-5 right-sided. He opined that Claimant was reasonably indicated for a right-sided, L4-5 microdiscectomy, as Claimant failed conservative therapy. Surgery was scheduled for July 28, 2022. (Ex. 11)

13. Claimant had a pre-operative appointment with Dr. Castro's office on July 22, 2022. At the appointment, Claimant reported that she was "still having work comp issues and has a court date set for October 5. She did not want to wait until the court date and is planning surgery under her commercial insurance." (Ex. 11).

14. On July 28, 2022, Dr. Castro operated on Claimant and performed a partial laminectomy L4-5, and a lumbar decompression at L4-5. (Ex. 11). At her August 10, 2022, follow-up appointment, Claimant reported she was doing well and the record notes she "is much improved from surgery." Similarly, at her August 24, 2022 appointment, Claimant reported being "a lot better than she was preop." (Ex. C)

15. Claimant testified that the surgery temporarily alleviated her pain, but once the medication and epidural wore off, the pain came back about a month later. (Tr. 36:24-37:8 and 38:3-9).

16. On August 5, 2022, Claimant was evaluated by Dr. Wakeshima. Claimant reported that the surgery went extremely well, and she was not having any significant pain issues. (Ex. 7). She continued to follow-up with Dr. Wakeshima every few weeks. At her September 14, 2022 appointment, Claimant reported experiencing bilateral low back pain with intermittent severe muscle spasms bilaterally. Dr. Wakeshima saw Claimant again on September 23, 2022. He noted that she had "tenderness over the sacroiliac joint region and positive provocative maneuvers sacroiliac joint dysfunction including positive Patrick's, Yeoman's and Gaenslen's maneuvers." Dr. Wakeshima recommended fluoroscopically guided sacroiliac joint injections. (Ex. 7).

17. On October 26, 2022, Claimant was evaluated by Michael Shen, M.D., who took over her care due to the retirement of Dr. Castro. Claimant reported she still had some surgical lower back pain when rolling over in bed or getting out of chairs that did not last long. She was not having any radicular symptoms. (Ex. C).

18. Claimant saw Dr. Wakeshima later that day, on October 26, 2022. She reported that the surgery helped with her leg pain, but she still had pain in her low back region. Claimant's pain was 5 out of 10. Dr. Wakeshima specifically noted that driving a truck with a crooked seat may cause a pelvic obliquity situation and may potentially cause a strain to the sacroiliac joint. He opined that if her pain generator remained consistent with a SI joint dysfunction, he would submit a request for SI joint injections. (Ex. 7). There is no objective evidence in the record that Dr. Wakeshima submitted such a request.

19. Claimant testified that she is still experiencing pain in her right buttocks, but it is different that the pain she experienced previously. Claimant testified that it hurts when she lays down and it hurts to get up. (Tr. 54:19-55:4).

20. The ALJ finds, based on the totality of the evidence, that Claimant's July 28, 2022 surgery for her herniated discs, resolved her leg symptoms, but did not completely alleviate the pain in her back.

21. At the request of Respondents, John Burris, M.D., performed an Independent Medical Examination (IME) on Claimant on August 16, 2022. Dr. Burris reviewed Claimant's medical records and he examined Claimant. Claimant reported that her recent surgery was beneficial and decreased her low back pain, and resolved her leg symptoms. Dr. Burris opined that Claimant developed an atraumatic lumbar L4-5 disc herniation on or about March 15, 2022. He further opined that the vast majority of lumbar disc herniations are due to the natural degenerative process. He concluded that Claimant's "lumbar condition cannot, within a reasonable degree of medical probability, be causally related to the activity of riding in a crooked seat." He also concluded Claimant's herniated disc and July 28, 2022 surgery were not work-related conditions. Dr. Burris prepared a report outlining his opinions (Ex. A).

22. Dr. Wakeshima reviewed Dr. Burris's IME report. He agreed with Dr. Burris's opinion that sitting on a crooked seat would not cause the disc pathology appreciated on the MRI. He also agreed that Claimant's herniated disc and related surgery were not work-related. Dr. Wakeshima noted, however, that Dr. Burris did not specifically comment on whether the sacroiliac dysfunction was work related. He disagreed with Dr. Burris's opinion that that the disc pathology was the cause of Claimant's symptoms. Instead, Dr. Wakeshima opined that Claimant's symptoms were related to her SI joint dysfunction. He reiterated that he had previously suspected Claimant's problem was a SI joint dysfunction, but the patient had "opted to go forth with lumbar microdiscectomy at the L4-5 disc by Dr. Castro." (Exs. 6 and B).

23. Dr. Burris testified via a pre-hearing deposition on November 23, 2022. He credibly testified that Claimant's disc herniation was not causally related to mechanism of injury of riding in a crooked seat. (Dep. Tr. 7:11-24). Dr. Burris further testified that SI joint dysfunction is a soft tissue imbalance across the pelvis involving the sacroiliac joint, which is the joint between the sacrum and the iliac bone in the back of the pelvis. (Dep. Tr. 9:7-18). Dr. Burris disagreed with Dr. Wakeshima's opinion that Claimant's SI joint dysfunction was Claimant's pain generator. He felt that Claimant's disc herniation was the major pathology. (Dep. Tr. 11:1-19). Dr. Burris opined that there are many things that can cause a soft tissue imbalance, including a disc herniation, and in his opinion, Claimant had a "classic presentation of an evolving disc herniation." (Dep. Tr. 10:3-25). Dr. Burris credibly testified that Claimant's SI joint dysfunction could be related to the crooked seat, but it could also be related to the herniated disc. He testified that it was equally probable that Claimant's SI joint dysfunction was related to the crooked seat as it was to her herniated disc. Dr. Burris ultimately opined that he thought the herniated disc was more likely. (Dep. Tr. 15:4-13). He maintained his opinion that Claimant's overall

presentation was most consistent with an evolving disc herniation, which was not work-related. (Dep. Tr. at 11:1-19).

24. The ALJ finds the opinions of Drs. Wakeshima and Burris to be credible and persuasive. Both doctors agree that Claimant's herniated disc and related surgery are not work-related. The ALJ finds that Claimant's herniated disc and her related surgery are not work-related, and not compensable.

25. Dr. Wakeshima diagnosed Claimant with an SI joint dysfunction on June 13, 2022, and she continues to have this diagnosis. Dr. Wakeshima opined that Claimant's SI joint dysfunction is causally related to her alleged mechanism of injury – sitting in a crooked seat for multiple hours. Dr. Burris credibly testified while he thought Claimant's disc herniation caused the SI joint dysfunction, he credibly testified that it was equally probable that the crooked seat caused that SI joint dysfunction. While both physicians are credible and persuasive, the ALJ assigns more weight to Dr. Wakeshima's opinion, particularly since he treated Claimant for several months. Based on the totality of the evidence, the ALJ finds that Claimant's SI joint dysfunction is causally related to sitting on a crooked seat.

26. In October 2022, Dr. Wakeshima recommended that Claimant receive SI joint injections. The ALJ finds that in October 2022 this recommended treatment was reasonable, necessary and related, but there is no objective evidence in the record that SI joint injections are currently reasonable and necessary to treat Claimant's SI joint dysfunction.

Claimant's Work Restrictions

27. At Claimant's first appointment with her ATP on April 19, 2022, Dr. Javed gave Claimant restrictions with respect to lifting, pushing/pulling and specifically noted she was to avoid repetitive bending, and needed to alternate sitting and standing every 20 minutes to stretch her back. (Ex. E). Based on this restriction, Employer provided Claimant a "Return to Work" offer (RWO) that accommodated Claimant's work restrictions, which she accepted. (Ex. G). Dr. Javed continued to provide these same general restrictions from April 19, 2022 through May 26, 2022. Claimant accepted another RWO on May 2, 2022 that accommodated the work restrictions set forth by Dr. Javed. (Ex. G).

28. On June 1, 2022, Dr. Javed updated Claimant's work restrictions to include "no driving." At that appointment, Claimant told Dr. Javed that driving was difficult because her right leg felt weak and was in constant pain. (Ex. 9). Employer provided Claimant a new RWO on June 2, 2022 that specifically noted Claimant would be unable to drive herself to work and suggested that Claimant use [Redacted, hereinafter UR] or ask others for a ride. (Ex. G).

29. Claimant credibly testified that she informed Employer she lived 25 minutes away from work and did not have the funds for UR[Redacted], nor did she have anyone she could ask for a ride. (Tr. 62:1-25). On June 2, 2022, Claimant emailed MA[Redacted] and explained her inability to pay for UR[Redacted] or get a ride to work. Claimant also

stated she "tried to request that Dr. Javed allow me to remain out of work until I can get relief as the pain has only grown increasingly more severe as time passes. . . I have tried to express this to Dr. Javed but she wouldn't help me on that front but picked that I couldn't drive stating your employer won't pay for UR[Redacted] so you will have to go on leave." She also noted that Dr. Javed requested that Claimant file for FMLA. (Ex. G).

30. Claimant's June 1, 2022 medical records do not reflect a conversation between Claimant and Dr. Javed regarding FMLA. At hearing, Claimant testified she went on FMLA ***prior*** to June 2022, and went on leave to take care of her son who dislocated his knee. Claimant testified "I took FMLA specifically to care for him, after his surgery, and yes, this is when I was – in the same time that I was having my own physical pain." (Tr. 45:24-46:14). The record is unclear as to what specific dates Claimant was out on FMLA.

31. On June 16, 2022, Dr. Javed removed the "no driving" restriction from Claimant's work restrictions. Claimant continued to follow up with Dr. Javed through October 18, 2022. At each visit from June 16, 2022 through October 22, 2022, Dr. Javed noted that Claimant's work restrictions generally included avoiding bending, and alternating sitting and standing to stretch her back muscles. They also included varying restrictions with respect to lifting, pushing, and pulling. Other than the two week period between June 1, 2022 and June 16, 2022, Claimant was not restricted from driving.

32. MA[Redacted] testified that Claimant emailed her on August 8, 2022, and inquired about her eligibility for light duty.[1] MA[Redacted] replied "GFL has no modified duty available, based on your restrictions." (Tr. 105:15-22).

33. From April 19, 2022 through July 15, 2022 the work-related medical diagnoses on the WC 164 forms, supporting work restrictions, included lumbar discogenic pain, lumbar disc bulge, and RLE radiculitis.[2] From August 5, 2022 through October 18, 2022, the work-related medical diagnoses on the WC164 forms, supporting work instructions, included, lumbar disc bulge s/p microdisectomy, lumbar discogenic pain, and lower back pain. (Ex. E).

34. Based on the totality of the evidence, the ALJ finds that Claimant's work restrictions were related to her disc herniation, which is not work-related, and not her SI joint dysfunction.

35. The ALJ finds that Claimant failed to prove by a preponderance of the evidence, that she is entitled to temporary disability benefits.

CONCLUSIONS OF LAW

Generally

[1] The email was not offered into evidence, but was read into the record by MA[Redacted]. (Tr. 104:3-105:7).

[2] The diagnosis of RLE pain is added on June 1, 2022, but it does not carry over in subsequent WC 164 forms.

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S.; *see Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related

injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics,* WC 4-960-513-01, (ICAO, Oct. 2, 2015).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The “rights and liabilities for occupational diseases are governed by the law in effect at the onset of disability.” *Henderson v. RSI, Inc.*, 824 P.2d 91, 96 (Colo. App. 1991). The standard for determining the onset of disability is when “the occupational disease impairs the claimant’s ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity.” *Colo. Springs v. Indus. Claim Appeals Office*, 89 P.3d 504,506 (Colo. App. 2004). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner,* 12 P.3d at 846. The mere occurrence of symptoms in the workplace does not mandate that the conditions of the employment caused the symptoms or the symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla,* WC 4-606-563 (ICAO Aug. 18, 2005).

As found, Claimant worked full-time as a driver anywhere from 50-60 hours during the week, and another five to eight hours on Saturday. (Findings of fact ¶ 1). Claimant credibly testified that the crooked seat in her truck was always uncomfortable, and she noticed pain building in her right hip area, but it was on or around March 15, 2022 that the pain was sharp with random spasms in her buttocks, so she notified her supervisor. (*Id.* at ¶ 3). While Claimant was diagnosed with a herniated disc, Dr. Wakeshima also diagnosed Claimant with SI joint dysfunction on June 28, 2022. Claimant's July 28, 2022 surgery helped alleviate the symptoms in Claimant's right leg, but her lower back pain continued. Dr. Wakeshima credibly and persuasively opined that Claimant's pain generator is her SI joint dysfunction, and this is causally related to her mechanism of injury. Dr. Burris credibly testified that he believed it was more likely that Claimant's SI joint dysfunction was caused by her disc herniation, but it was equally probable that it was caused by sitting in a crooked seat. Based on the totality of the evidence, the ALJ found Dr. Wakeshima's opinion to be more persuasive. As found, Claimant suffered an SI joint dysfunction from sitting on a crooked seat between January and April of 2022. Claimant proved by a preponderance of the evidence that she suffered a compensable injury.

Medical Benefits

For an insurer to be liable for the payment of medical bills, the employee must have suffered a compensable injury arising out of and in the course of employment. § 8-42-101, C.R.S. If the injury is compensable and the medical services are reasonable and necessary, then the insurer is responsible for the expenses incurred by the employee for the treatment of the injury. *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Claimant proved by a preponderance of the evidence that a compensable injury occurred between January 2022 and April 2022. As found, there is no objective evidence in the record that the SI joint injections recommended by Dr. Wakeshima in October 2022 are still reasonable, necessary, and related. (Findings of fact ¶ 26). Claimant needs to be evaluated by an ATP, so recommendations can be made as to what medical benefits are reasonable and necessary to treat Claimant's SI joint dysfunction.

Temporary Disability Benefits

From April 20, 2022 thought October 18, 2022, Claimant's ATP placed her on modified duty with various work restrictions. As found, Claimant's work restrictions were related to her herniated disc, which is not a work-related injury. As found, Claimant's work restrictions were not related to her SI joint dysfunction. (Findings of fact ¶ 34). Claimant failed to prove by a preponderance of the evidence that she is entitled to temporary disability benefits.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury, while in the course and scope of her employment.

2. Claimant shall be evaluated by an ATP to determine what treatment is reasonable and necessary to treat Claimant's SI joint dysfunction.

3. Claimant is not entitled to TPD or TTD benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 27, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she was injured in the course and scope of her employment with Employer on September 14, 2021.

IF CLAIMANT HAS PROVEN COMPENSABILITY, THEN:

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to medical benefits that are authorized, reasonably necessary and related to the injury of September 14, 2021.

III. Whether Claimant has proven what her average weekly wage is at the time of the incident in question.

IV. Whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability benefits from September 15, 2021 to October 22, 2021 and July 28, 2022 until September 13, 2022.

V. Whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary partial disability benefits from October 23, 2021 to July 27, 2022.

VI. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for her termination of employment with Employer.

STIPULATION

The parties stipulated to strike the testimony of Ms. N.A. as the testimony began during hearing but was not completed at hearing or by deposition.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally:

1. Claimant was hired by Employer on August 14, 2021 as a housekeeper for the hotel, to clean guest rooms. The rooms she was assigned were large suite type rooms.

2. On September 14, 2021 she was cleaning a room, making a bed when she felt a twinge in her low back. She paid no attention to it and completed the cleaning of that room. She then pushed her cart, which was very heavy, to the elevator. The cart contained sheets, bedding, towels, cleaning materials and supplies. The elevator was a

small one, and she had to lift the cart into the elevator. She then proceeded to the second floor room. She was in the process of making the bed, and while lifting the mattress to make the bed, she felt a very strong pain in her low back. She tried to move but it hurt too much. She attempted to continue cleaning but was unable to. She went to her cart to retrieve her telephone.

3. Claimant called J.G., a co-worker that worked in the laundry room. Earlier that morning, he had told Claimant that the supervisor, N.A., had advised that she would be cleaning rooms until 11:00 a.m. and requested not to be bothered or interrupted. J.G. reported to the room and saw Claimant. He attempted to call the supervisor, N.A., but she did not respond to the phone call. Mr. J.G. went to look for the supervisor and then assisted Claimant going downstairs, holding her up. They went to the laundry room. At that point she was in a lot of pain and crying from the symptoms. As they were getting out to the elevator, another co-worker, daughter of Respondents' Representative, L.P., a non-testifying advisory witness, asked what was going on. The daughter then advised Respondents' Representative what had happened.

4. Claimant then proceeded to the laundry room, where J.G. attempted to assist Claimant to sit but she was unable to do so due to the pain. Her supervisor, N.A., found her in the laundry room and asked what had happened. Claimant reported her injury to her supervisor, explaining that she had injured herself while making a bed, when she had to lift the mattress to tuck the sheet in. She explained everything in her native language as her supervisor spoke it as well.

5. Claimant did not fill out any paperwork on that day. Mr. J.G. offered her three pain pills to take while in the laundry room, but her supervisor, N.A., failed to offer to send her for medical care. Her husband went to pick her up to take her for medical care. Her supervisor was aware that she was going to seek medical attention at Rockies emergency in Loveland. She explained to the medical staff that she had been lifting a mattress to tuck in the sheet when she felt the severe low back pain.

6. On September 15, 2021 Employer's Representative completed an Employer's First Report of Injury noting that Claimant had an injury on September 14, 2021 while making a bed, injuring her lower back. The form specifically noted that Employer was notified on September 14, 2021 and that Claimant was earning $13.00 per hour at the time of her injury. It specified Claimant was not paid for the day of the injury. A second typed FROI was completed on September 17, 2021 which was substantially similar to the first.

B. Medical Records:

7. The M-164 form completed by UCHealth Medical Center of the Rockies - Loveland noted that Claimant injured her low back lifting a mattress on September 14, 2021. Dr. Danielle Mianzo prescribed lidocaine patches and Flexeril and referred her to her primary care provider.

8. Claimant followed up at Concentra on September 20, 2021. PA-C Douglas Drake noted that Claimant's chief complaint was that she was making a bed when she felt back pain. She had been lifting a mattress to make the bed and felt a very sharp pain.

She reported pain in the low back, radiating into the left buttocks, which was relieved by OTC medication and rest. She denied prior injuries to the low back just prior to the incident. On exam, PA Drake noted left sided muscle spasm upon palpation in the paraspinal muscles, with limited range of motion (ROM) and a positive straight leg test (SLT). PA Drake made a referral to a chiropractor and physical therapy, stating that it was medically necessary to address objective impairment and functional loss and to expedite return to work. He provided work restrictions of 5 lbs. maximum lifting, carrying, pushing and pulling, no crawling, kneeling, squatting, or climbing. He stated that objective findings were consistent with the history and work-related mechanism of injury.

9. Physical therapy with Concentra started on September 20, 2021. Claimant reported that she was making a bed, lifting a mattress to tuck in the sheet when she experienced immediate pain in her low back and then symptoms started referring down her lateral left thigh. Mr. Brian Busey, P.T. noted that Claimant had tenderness to palpation of the lower thoracic and lumbar spine. He documented loss of range of motion of both the thoracic and lumbar spine. In addition to instructing Claimant with regard to exercises, the therapist performed dry needling to the myofascial trigger points, as well as muscular and connective tissues massage on September 22, 2021. She was directed to continue with the McKenzie roll for sitting and driving throughout the day.

10. Claimant returned to consult on September 22, 2021 with reports of burning pain in the left calf while driving, with pain in the low back, left greater than right side, with pain radiating from the left buttocks and left thigh. The pain was a burning sensation with the intensity of the pain waxing and waning. Dr. Jeffrey Baker, on exam noted left sided muscle spasms and limited range of motion though no longer a positive SLT. He continued to recommend the same restrictions, and instructed Claimant to use Naproxen and provided Claimant with cold packs.

11. On September 30, 2021 Claimant reported to Dr. Baker that her lower back pain was still continuing, ran down her left leg, was constant and burning and was irritated with sitting. He noted on exam that she continued to have tenderness and left-sided spasms, limited range of motion with pain. He noted that Claimant did appear to be healing slowly, but unfortunately her employer would not allow her to work light duty. He continued the same restrictions.

12. On October 11, 2021 Mr. Busey noted that Claimant was not making progress in physical therapy and returned Claimant for consult with her treater.

13. Claimant reported a worsened condition by October 14, 2021. Dr. Baker noted Claimant had tenderness at the L4-5 level and in the bilateral sacroiliac joints, with left-sided muscle spasms of the paraspinal muscles, limited ROM, but otherwise, a normal exam. Claimant continued to complain of radiating pain down her left leg. Claimant was approximately 50% of the way toward meeting the physical requirements of her job related to her low back strain. He stated that objective findings were consistent with history and work-related mechanism of injury, continued the work restrictions and ordered an MRI of the lumbar spine.

14. Dr. John Raschbacher conducted an independent medical examination on March 29, 2022 at Respondents' request. Dr. Raschbacher noted that Claimant first had

symptoms when she started working at the hotel but then on September 14, 2021 the pain worsened. He noted that before this she had no symptoms. He noted Claimant was given larger rooms to clean than she had previously done when she worked for Employer in 2018.

15. Claimant reported that her symptoms were worsening, with complains of left low back pain, left buttock pain, and pain that goes to the left knee. She sometimes had pain on the right side, although that was rare. He opined that since there was no clear injury, he did not recommend accepting liability for the lumbar spine pain, strain or symptomology related to the September 14, 2021 work injury. He stated that even if a lumbar strain had occurred, at this point, about six months later and after treatment, one would not anticipate this degree of symptomatology or diminished range of motion.

C. Employment and other records:

16. Claimant's pay check stub from Employer dated September 3, 2021 showed she earned $14.00 per hour and earned $847.00 for the 60.5 hours worked for the period of beginning on August 16, 2021 and ending on August 31, 2021. The check dated September 20, 2021 showed a payment of $671.72, for pay period of September 1 through September 15, 2021. However, Claimant began work on September 14, 2021 at 8:54 a.m. and her injury occurred at approximately 10:00 a.m. She left immediately after the injury, and was not paid for her date of injury according to the FROI. Therefore, Claimant earned a total of $1,518.72 for the period of August 16, 2021 through September 13, 2021, which is a four week period. This provides an average weekly wage of $379.68.

17. Respondent Insurer conducted an investigation and produced a summary of the recorded statement of Claimant's interview on October 5, 2021, which noted that it was not a quote of the person interviewed. The summary indicated that Claimant was making a bed when she felt pain in her low back. Prior to this, she indicated that she was feeling well. She then pushed a heavy cart down the hall and into the small elevator, which was difficult. When she started making the bed in the next room, she could not continue due to the severe pain.

18. Respondents filed a Notice of Contest on October 6, 2021 noting that an investigation was ongoing.

D. Claimant's testimony:

19. On September 21, 2021 Claimant took the paperwork from the medical facility, which showed that Claimant had restrictions, to Employer. However, N.A., Claimant's supervisor, did not wish her to go back to work with those restrictions. Ms. N.A. took her statement and completed the paperwork on Claimant's behalf as she did not read or write in English. Ms. N.A. then asked Claimant to sign a document. She could not explain why Employer's Representative had completed the paperwork as Claimant had never spoken with her directly.

20. Claimant earned $14.00 per hour and worked approximately 35 hours per week while working for Employer. She did not return to work for Employer because her supervisor, N.A., did not give a job to go back to. She simply stopped sending her a schedule, which was the custom prior to her injury. When she saw her supervisor in

person she asked why that was and N.A. told her that she would no longer be working for Employer. She specifically asked if she could work in the laundry room and was advised that was not available but did not receive an explanation why.

21. While working for Employer she had a discussion with a co-worker, Ms. J.A., about the job and feeling back soreness. Ms. J.A. recommended she use a girdle belt the same way she did, to protect her back. She was not wearing the girdle the day she was injured.

22. Claimant stated that this was not the only time she had worked for Employer. She had worked for them previously in 2018 for approximately four months and had no problems with her back. It was a different job before, because she was not responsible for cleaning the suites or using the small elevator that caused her to lift the cart to force it into the elevator.

23. Claimant obtained another job at [Redacted, hereinafter SC], a restaurant, where she was working within her restrictions. She started on October 23, 2021 and worked there through December 3, 2021. She earned $13.50 per hour and worked 35 hours a week. She worked preparing beverages. She left this employer in order to look for a job that paid better.

24. She then went to work for another restaurant called [Redacted, hereinafter BH] on December 27, 2022. She worked there through July 27, 2022. She left BH[Redacted] because of her back injury as the work hurt her too much. She was earning $18.00 per hour working twenty five hours a week. She was working as a food prep in the kitchen. She would prepare salsas and sauces as well as preparing portions of food.

25. Before working for Employer, she worked for another restaurant called [Redacted, hereinafter PO]. She worked there from 2018 to 2021. She earned $16.00 per hour through March 20, 2021 and then started earning $16.50 per hour from March 21, 2021. She did not have any accidents or injuries while working for PO[Redacted].

26. The last time she was seen by a medical provider was September 14, 2022 because she was pregnant and was released from care due to her pregnancy.

27. Claimant explained that she had not had any injuries to her back prior to September 14, 2021 while working for Employer or any prior employers.

E. Co-Worker's testimony:

28. Ms. J.A. a co-worker also worked for Employer during the month of September 2021 but September 14, 2021 was her regularly scheduled day off. She stated that Claimant called Ms. J.A. at some point and told her that she had fallen and had told Mr. J.G. about the fall. Ms. J.A. stated that claimant had been taking pain pills and was using a girdle because of back pain. She was under the impression that Claimant had slipped and fallen while working at the PO[Redacted] restaurant, while carrying something. She believed Claimant was working as a dishwasher there. She was never asked to become involved with any claim against PO[Redacted].

29. Ms. J.A. stated that she was no longer friends with Claimant.

30. Ms. J.A. did not recall being interviewed by an investigator or that the conversation was recorded.

31. A copy of a recording was introduced and admitted as Claimant's Exhibit 6 and this ALJ recognized Ms. J.A.'s voice. The interviewer advised her that the interview was not going to be disclosed. She stated that she worked for Employer as a housekeeper. She stated that she had worked there for two years and her supervisor was N.A. She confirmed that she worked with Claimant for about a month. She knew Claimant before that time, for approximately seven years. She stated that she was not aware Claimant was hurt because she was not at work on the day she was hurt. She found out because Claimant called her the same day in the afternoon. Claimant told her that she hurt herself while making a bed and that she could not move. Claimant had already gone to the hospital by the time she spoke with J.A. and that she had been given medication for the pain.

32. Ms. J.A. had worked at PO[Redacted] and [Redacted, hereinafter CI] together with Claimant previously. She did not know why Claimant had left PO[Redacted] and did not know if Claimant had ever been hurt there. Ms. J.A stated that Claimant had told her she fell while working for Employer, she saw her wearing a brace and Claimant told her she had been taking pain pills. She was not aware of any other injuries that Claimant may have sustained in the seven years she had known her. As found, Ms. J.A. is not found credible as she contradicted her own testimony at multiple times, including that she worked for PO[Redacted] and then stated she did not, as well as stating first that Claimant had fallen and then that she was hurt lifting a mattress. She is also not found credible because of unsubstantiated reports that Claimant may have been injured at PO[Redacted].

F. Dr. Raschbacher's testimony:

33. Dr. John Raschbacher testified on behalf of Respondents. He stated he had performed an independent medical examination (IME) of Claimant on March 29, 2022. He took a history, including employment history, and reviewed the records. He stated that Claimant had reported a specific injury while working for Employer. Dr. Raschbacher opined that, even if there was an acute episode, it would be a strain and would have resolved. He stated that none of his opinions had changed since producing his IME report. In fact, he opined that there was no evidence that Claimant had sustained any injuries while working for Employer. However, he was not aware that Claimant had visited the emergency room (ER) on the date of the claimed injury and his opinion might have changed if he had reviewed the ER records.

34. He stated that it was possible that a worker could have injured their back if with bending, lifting and twisting. He agreed that a patient could have an acute on chronic injury. He based his opinion that Claimant had not incurred an acute episode on two different factors. The first being that Claimant had continued to worsen, though had not made a claim against her new employer. The second that Claimant was a younger individual and there was no indication that she had anything other than a sprain. Lastly, he stated that her range of motion and pain behavior were notable six and a half months after the incident.

G. Ultimate Findings:

35. As found, Claimant has shown that she was injured in the course and scope of her employment with Employer on September 14, 2021 when she was bent over to lift a mattress while making a bed and felt a severe pain in her back. While Claimant may have had some symptoms when she first started her employment with Employer, the traumatic event of September 14, 2021 caused Claimant injury. The injury caused immediate severe pain, triggering her need to go to the emergency. Claimant was found to be credible. Both the ER record and the Concentra records document the mechanism of injury. PA Drake and Dr. Baker specifically noted that objective findings were consistent with the history and work-related mechanism of injury and support the causation analysis and finding of compensability. While Claimant had some limited treatment between September 20, 2021 and October 11, 2021, the ultimate determination was that she was not getting better and required an MRI pursuant to Dr. Baker's opinion. Claimant consistently reported how she was injured to all of her providers. Respondents' IME failed to flesh out what the mechanism of injury was simply relying on the account that she had had some diffuse discomfort at the beginning of her employment with Employer. Claimant also reported the mechanism of injury to her employer, which was also consistent with her hearing testimony as well as her recorded statement. Even Dr. Raschbacher admitted that she could have suffered a minor back strain from making the bed. Over the contrary opinion of Dr. Raschbacher and the contradictory testimony by Ms. J.A., who is specifically found not credible, Claimant has proven that it was more likely than not that she had a specific incident causing injury to her low back as supported by Dr. Baker's opinion,

36. As found, Dr. Raschbacher's opinion and testimony are neither credible nor persuasive. It is clear from both his report and his testimony that he did not have all the information necessary to make a full and credible determination regarding Claimant's injury, including the Emergency Room report of September 14, 2021. Further, Dr. Raschbacher failed to obtain the facts of the incident that happened on September 14, 2021 when taking a history. Despite this, he did explain that a person could suffer an acute injury to the low back from lifting a mattress to make a bed.

37. As found, Claimant's treatment as provided by the emergency room and Concentra was reasonably necessary and related to the injury. Claimant was placed at MMI on September 14, 2022 due to her pregnancy based on the Claimant's testimony. As such, any further medical treatment may not be awarded until Claimant proceeds with the DIME process, unless her ATP provided recommendations for maintenance care.[1]

38. As found, Claimant credibly testified that she was advised by her supervisor that no work was available for her when she turned in her work restrictions. Further, Claimant asking whether she could work in the laundry room and her supervisor decline to provide her a job. Claimant has proven that she is entitled to temporary disability benefits.

[1] Medical records with a finding of MMI and maintenance medical care were not in evidence.

39. As found, Claimant started a light duty job on October 23, 2021 at SC[Redacted], and then moved to work with BH[Redacted] through July 27, 2022. Both jobs were light duty and within her work restrictions. Claimant was unable to continue her job at BH[Redacted] because of continuing low back pain despite the work restrictions. Claimant is owed temporary partial disability benefits from October 23, 2021 through July 27, 2022 and temporary total disability benefits from September 15, 2021 through October 22, 2021 and from July 28, 2022 until terminated by law. No payroll records were provided and exact payments cannot be calculated at this time.

40. Respondents failed to show that Claimant was terminated for cause. Claimant was credible in that she requested modified work and was advised by her supervisor that no work was available. No offer of employment was made by Employer and it was not Claimant's volitional act that caused loss of employment but Employer's acts in failing to offer a position within her work restrictions.

41. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See

Bodensieck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S. (2022); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury is "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

The claimant must also prove by a preponderance of the evidence that the injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co*., 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

A pre-existing condition does not preclude a claim for compensation and an injury is compensable if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

A claimant's testimony, if credited, may alone constitute substantial evidence to support a determination concerning the cause of the claimant's condition. *See Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986) (claimant's testimony was substantial evidence that his employment caused his heart attack); *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); see also *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997) (lay testimony sufficient to establish disability). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Further, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Claimant has proven that it was more likely than not she was injured in the course and scope of her employment with Employer on September 14, 2021 when she lifted a mattress while making a bed and strained her lumbar spine. Claimant was carrying out her duties as a housekeeper for Employer when she was injured. She subsequently developed lower extremity radicular symptoms, in the left lower extremity, as a consequence of the lumbar strain. Claimant was credible in her account that she did not have any symptoms prior to working for Employer and that she had no prior injuries, contrary to the testimony of Ms. J.A., who was specifically not found credible or persuasive. Claimant's mechanism of injury was documented in both the emergency room record immediately following the injury, as well as the Concentra records shortly after the injury. These medical records were persuasive that Claimant's account of the mechanism of injury was more likely than not the cause of Claimant's lumbar spine injury. Claimant has proven that the incident of September 14, 2021 was the proximate cause of her work related injury to her low back and radicular symptoms. While Claimant may have had some low back symptoms caused by working as a housekeeper for Employer, those symptoms were not of the caliber to require medical attention and no medical records were in evidence to establish that Claimant had a medical condition which required medical attention prior to her injury. The September 14, 2021 incident was the

proximate cause of Claimant's injury and need for medical treatment. Claimant has proven by a preponderance of the evidence that she was injured on September 14, 2021 while in Employer's employment as a housekeeper. Claimant's claim is determined to be compensable.

C. Authorized Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

As found, Claimant has shown she was injured while working for Employer and required medical care as a consequence of that work related injury. Claimant persuasively explained that the pain was so intense that she required immediate attention at the emergency room, following which she was attended by the providers at Concentra Medical Center for her lumbar spine and radicular lower extremity injuries. Claimant was persuasive in her description of the symptoms. As found the medical care was reasonably necessary and related to the specific mechanism of injury caused by lifting the mattress at work. Claimant has proven by a preponderance of the evidence that she required medical care caused by the September 14, 2021 work related injury. As Claimant met her burden of establishing she sustained a compensable work related injury to her lumbar spine and lower extremity, Claimant is entitled to reasonably necessary treatment to cure and relieve her of the effects of her injury.

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Indus. Claim Appeals Off.,* 148 P.3d 381, at 383 (Colo. App. 2006); *One Hour Cleaners v. Indus. Claim Appeals Off.,* 914 P.2d 501 (Colo. App. 1995). Section 8-43-404(5)(a)(I)(A), C.R.S. allows the employer to choose the claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987); *see also* W.C.R.P. Rule 8-2. An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch, supra,* at 383. As found, Claimant reported to her supervisor that she had been injured while lifting a mattress in the course of making a bed. As further found, Employer conceded to having notice by completing the September 15, 2021 Employer's First Report of Injury, noting that they had notice of the injury on the day that it occurred. Further, Claimant advised her supervisor that she would have her husband take her for medical attention. The record is devoid of any designation of provider in this matter. As found, Claimant's supervisor knew or should have known that Claimant's report of the injury triggered a deadline to designate a provider. There was no designation, therefore, Claimant's choice of provider, Concentra, is authorized.

Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v.*

Industrial Claim Appeals Office, *supra*. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774- 720 (January 12, 2010). As found, Claimant was seen as an emergency on September 14, 2021 at UCHealth Medical Center of the Rockies-Loveland and they are authorized as an emergent care facility for the one time evaluation.

Based on the Claimant's testimony that she was released from care, medical benefits terminate as of the date of MMI, unless an authorized medical provider has recommended maintenance care after MMI. Any determination for future medical care is reserved for later determination as this ALJ has insufficient information with regard to what kind of release Claimant was provided.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007); *Campbell v. IBM Corp*., *supra*.

Claimant was hired by Employer on August 14, 2021. Claimant's pay check stub from Employer dated September 3, 2021 showed she earned $14.00 per hour and earned $847.00 for the period of beginning on August 16, 2021 and ending on August 31, 2021. The year to date was the same as the wages so it is presumed that she started working on August 16 and not on August 14, 2021. The check dated September 20, 2021 showed a payment of $671.72, for pay period of September 1 through September 15, 2021. However, Claimant began work at 8:54 a.m. on September 14, 2021 and her injury occurred at approximately 10:00 a.m. She left immediately after the injury, and was not paid for her date of injury according to the FROI. Therefore, Claimant earned a total of $1,518.72 for the period of August 16, 2021 through September 13, 2021, which is 4 week period. While Claimant asserted that she earned $14.00 working approximately 35 hours per week, the payroll records are more reliable than Claimant's memory in this regard. Her earnings provide an average weekly wage of $379.68 and a temporary total disability rate of $253.12.

E. Temporary Disability Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic, supra*, at 833.

As found, Claimant has shown by a preponderance of the evidence that she was entitled to temporary disability benefits. Claimant was initially provided with work restrictions and she provided the paperwork to her supervisor the day following her back injury. Claimant was persuasive in the account that her supervisor, after being given the work restrictions, stated that Employer had no work for her. No offer of employment was provided to Claimant. Claimant has shown by a preponderance of the evidence that she was unable to return to her employment on September 15, 2021. As found, Claimant started a light duty job on October 23, 2021 at SC[Redacted], and then moved to work with BH[Redacted] through July 27, 2022. Both jobs were light duty and within her work restrictions. Claimant was unable to continue her job at BH[Redacted] because of continuing and persistent low back pain despite the work restrictions. Was persuasive that her disability caused her to have to leave her employment at BH[Redacted]. Claimant has shown she is owed temporary partial disability benefits from October 23, 2021 through July 27, 2022 and temporary total disability benefits from September 15, 2021 through October 22, 2021 and from July 28, 2022 until terminated by law.

F. Termination for cause

The termination statutes, Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. both provide that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." The respondents must prove that a claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the

termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

Here, it is clear that Claimant was informed by her supervisor on September 15, 2021 that Employer had no employment for her within her work restrictions. The records submitted for hearing showed that Claimant continued with work restrictions after that date. Claimant credibly testified that she was unable continue working at BH[Redacted] due to her low back pain and disability. Respondents have failed to show that Claimant was terminated for cause or that her wage loss involved any volitional but was a caused by her inability to work due to her September 14, 2021 work related injury and subsequent disability.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a work-related injury to her low back with consequent radicular symptoms on September 14, 2021 in the course and scope of her employment.

2. Respondents shall pay for all authorized, reasonably necessary, and related medical benefits including but not limited to treatment at UCHealth Medical Center of the Rockies-Loveland and Concentra Medical Center as well as any other provider within the chain of referral to treat the lumbar spine injury and radicular lower extremity pain, and in accordance with the Colorado Medical Fee Schedule.

3. Claimant's average weekly wage is $379.68 and her temporary disability rate is $253.12.

4. Respondents shall pay temporary total disability benefits beginning September 15, 2021 through October 22, 2021 and from July 28, 2022 until terminated by law.

5. Respondents shall pay temporary partial disability benefits from October 23, 2021 through July 27, 2022.

6. Respondents failed to prove that Claimant's loss of employment was from any volitional act of Claimant but was caused by the Claimant's impairment and disabilities resulting from the September 14, 2021 work related injuries.

7. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 28th day of July, 2023.

By: Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

I. Whether the blood pressure medications are reasonable, necessary, and causally related to the claimant's industrial injury.

II. Whether the ketamine infusions are reasonable, necessary, and causally related to the claimant's industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This is an admitted claim and involves a November 17, 2020, injury to multiple body parts, including Claimant's neck and lower back. *See Claimant's Exhibit 1, page 1; Respondents' Exhibit 1, page 1*. That same day, Claimant treated at Concentra with Lori Long-Miller, M.D., and reported the nature of her injury. Dr. Long-Miller placed Claimant on work restrictions and recommended medications and physical therapy. *Claimant's Exhibit 4, pages 7-11*.

2. On February 17, 2021, Claimant started treating with Melinda Gehrs, M.D., who noted the nature of Claimant's injury and persistent pain/symptoms. Dr. Gehrs noted Claimant was not taking any medications other than those prescribed through her workers' compensation claim. *Claimant's Exhibit 5, pages 189-197*.

3. On July 14, 2021, Dr. Gehrs diagnosed Claimant with complex regional pain syndrome (CRPS). *Claimant's Exhibit 5, pages 209-213*.

4. On July 26, 2021, Dr. Long-Miller referred Claimant to Giancarlo Barolat, M.D., for her CRPS diagnosis. *Claimant's Exhibit 4, pages 105-113.*

5. On or about August 17, 2021, Dr. Gehrs prescribed Claimant a compound cream, which contained ketamine. *Claimant's Exhibit 5, pages 223-231.*

6. On August 25, 2021, Claimant treated with Dr. Barolat and reported the nature of her injury and persistent CRPS pain and other symptoms. Dr. Barolot concluded that Claimant should be treated with a spinal cord stimulator to treat her CRPS.

7. In order to determine whether Claimant was a good candidate for the spinal cord stimulator, Dr. Barolot referred Claimant to John Mark Disorbio, Ed. D, for a psychological evaluation. *Claimant's Exhibit 6, pages 239-243*.

8. On September 9, 2021, Claimant underwent a psychological evaluation with Dr. Disorbio. Dr. Disorbio concluded that the spinal cord stimulator was not contraindicated. Thus, he cleared Claimant, psychologically, for the spinal cord stimulator. *Claimant's Exhibit 8, pages 283-290*.

9. On September 13, 2021, Claimant was evaluated by Dr. Masri for treatment of her CRPS. At this appointment, Dr. Masri noted Claimant has bilateral CRPS of her upper extremities that is more intense on the on the left side than her right side. He also noted the progression of the CRPS from her left side to her right side during the last month. He was concerned about the rapid progression of her CRPS. As part of his evaluation, he also reviewed the medications Claimant was taking as well as medications she had not tried. Dr. Masri concluded that Claimant should have the spinal cord stimulator sooner rather than later. In addition to recommending the spinal cord stimulator, he also discussed with Claimant the use of ketamine infusions to help mitigate her CRPS symptoms. *Claimant's Exhibit 7, pages 262-267*.

10. On October 4, 2021, William Barreto, M.D., performed a utilization review for the request to refill Claimant's ketamine prescription. Dr. Barreto concluded that the request for the ketamine should be denied. He based his denial primarily on his contention that there was no documentation regarding the dosage and route of administration. In addition, he also concluded that there was no clear indication that the ketamine was improving Claimant's function. *Respondents' Exhibit G, pages 161-165*.

11. On October 7, 2021, Dr. Barolat requested authorization to perform a spinal cord stimulator trial. *Claimant's Exhibit 6, page 244*.

12. On October 27, 2021, Claimant followed up with Dr. Gehrs. At this appointment, it was noted that both of her hands were often turning blue and white, with the left side being worse than the right side. It was also noted that she had pain, which she described as pins and needles, throughout her entire left arm. Just about any activity bothered her left arm and aggravated it, so she tried not to use it for day-to-day activities and did not lift more than five pounds. It was further noted that Claimant had swelling in her left arm and also had left and right sided neck pain. Lastly, her left arm was hypersensitive to temperature and touch and cold aggravated everything. *Claimant's Exhibit 5, pages 231-234*.

13. At the October 27th visit, Claimant also went over her medications. At this time, she was using gabapentin three times a day, tramadol twice a day, cyclobenzaprine at night, baclofen three times a day and Percocet as needed. She also noted what did not work or appeared to cause her problems. She stated that she could not tolerate Topamax so she stopped using it and she also stopped using the Cymbalta since it made her tired. She also discussed a recent trial of a topical medicine that had ketamine in it, and that it caused her to wake up with a feeling of imminent doom. *Claimant's Exhibit 5, pages 231-234*.

14. On November 29, 2021, Claimant saw Dr. Gehrs, who noted that she was starting Claimant on a new topical compound cream that did not contain ketamine. *Claimant's Exhibit 5, pages 235-238*.

15. Although Claimant stopped using the ketamine cream due perceived side effects, she resumed using the cream after discussing the matter with Dr. Gehrs. And after she restarted using the ketamine cream, she did not have any recurrent side effects and the cream provided pain and symptom relief.

16. On January 4, 2022, Claimant underwent the spinal cord stimulator implantation with Drs. Basri and Barolat. During the procedure, she was administered ketamine. *Claimant's Exhibit 6, pages 245-247 and Exhibit 7, pages 270-274*.

17. On January 10, 2022, Claimant returned to Dr. Masri to determine the amount of pain relief she was obtaining from the spinal cord stimulator and the ketamine. Claimant had good relief from the placement of the spinal cord stimulator as well as the ketamine. Dr. Masri noted that:

> Patient has significant response for bilateral upper extremity complex regional pain syndrome and chronic neuropathic pain. She was pain free for approximately 2 days after her initial stimulator placement and this has subsided somewhat, but is still significantly better. She did receive intra-operative ketamine during stimulator closure. This indicates the ketamine most likely did provide additional relief. We have discussed ketamine infusions in an attempt to help manage her ongoing symptoms. She would like to consider these after stage 2 of her trial has been completed.

Claimant's Exhibit 7, page 273.

18. On January 11, 2022, and based on Claimant's positive response to the ketamine administered during the placement of her stimulator, Dr. Masri requested authorization to perform six ketamine infusions. He concluded that in his opinion, the ketamine infusions were medically necessary to treat Claimant's CRPS and chronic neuropathic pain. Lastly, he stated that the injections would be billed under the Colorado WC Fee Schedule at a cost of $1,050 per infusion. *Claimant's Exhibit 7, page 275*.

19. On January 18, 2022, the Claimant underwent the permanent spinal cord stimulator implementation. It is unclear whether Claimant was administered ketamine during this procedure – as was done during the trial placement of the stimulator. *Claimant's Exhibit 6, pages 258-259*.

20. Despite not knowing if ketamine was used during both procedures, Claimant credibly testified that when she did have the ketamine infusion, she did not have any CRPS pain/symptoms and that it was the first time she felt no CRPS symptoms since her diagnosis and that the ketamine infusion provided more pain/symptom relief than any other treatment.

21. On February 3, 2022, Claimant underwent an independent medical examination with Respondents' retained expert N. Neil Brown, M.D. Dr. Brown concluded that Claimant has CRPS, that the spinal cord stimulator was reasonable and necessary, that Claimant was not at MMI, that Claimant was unable to work, and that Claimant had a 72% whole person impairment rating. But, despite these findings, he concluded that the ketamine infusions are not reasonably necessary to treat Claimant from the effects of her work injury. Dr. Brown stated that the ketamine infusions were not reasonably necessary because even though Claimant said she got good relief from the ketamine used during the surgical procedure to install the spinal cord stimulator, there are merely anecdotal reports of significant success with the use of ketamine in chronic

pain patients and that there are no good quality scientific peer reviewed studies that demonstrate the efficacy of ketamine infusions. Thus, he considered the use of ketamine to be "investigational" and not acceptable treatment for CRPS. *Respondents' Exhibit C, pages 8-27*.

22. On March 9, 2022, Claimant was again evaluated by Dr. Barolat. Claimant was six weeks post the spinal cord stimulator implantation and she was doing extremely well. It was noted that a few days earlier, Claimant's pain came back to very high levels, but she realized that the stimulator had been turned off. Thus, this was further proof that the stimulator was working. But despite the stimulator working for her upper extremities, the CRPS had started spreading to Claimant's lower extremities in August of last year, but her symptoms in her lower extremities were definitely getting worse. As a result of the CRPS spreading to her lower extremities, Dr. Barolat concluded that either lumbar sympathetic blocks and/or ketamine infusions might be able to reverse the spread of the CRPS to her lower extremities. *Claimant's Exhibit 6, page 261*.

23. On March 15, 2022, Claimant was seen by Dr. Masri. At this appointment, it is noted that the stimulator was still providing Claimant good relief for her upper extremities. But it was also noted that she was developing signs and symptoms of CRPS in both of her lower extremities, predominately at the feet. Dr. Masri again recommended Claimant undergo ketamine infusions to aid with her overall neuropathic pain. He also noted that he went over with Claimant the potential risks, side effects, adverse reactions, and possible complications-and despite the possible risks-Claimant wanted to proceed with the ketamine infusions. *Claimant's Exhibit 7, pages 276-280*.

24. On March 20, 2022, Dr. Masri again requested authorization to perform six ketamine infusions. At this time, the infusions were noted to cost $1,200 for each infusion under the Colorado Workers' Compensation Fee Schedule. *Claimant's Exhibit 7, pages 281-282*.

25. On March 22, 2022, Dr. Brown issued a supplemental report. Dr. Brown maintained his opinion that the ketamine treatment is not reasonable, necessary, or related to Claimant's injury. Again, he stated that there are anecdotal reports of significant success using ketamine to treat chronic pain patients, but yet there were no good quality scientific peer reviewed studies that demonstrate the efficacy of ketamine infusions. *Respondents' Exhibit C, pages 28-29*.

26. On April 8, 2022, Claimant returned to see Dr. Long-Miller. During this visit, Claimant told the doctor that at the onset of her CRPS she developed HTN (hypertension). Dr. Long-Miller stated that Dr. Barolot stated that there is strong evidence that CRPS can cause hypertension. Dr. Long-Miller ultimately concluded that Claimant's hypertension was more than likely caused by her CRPS. Thus, Dr. Long-Miller prescribed Claimant Losartan Potassium and Hydrochlorothiazide for her hypertension. *Claimant's Exhibit 4, pages 170-182.*

27. On July 18, 2022, Dr. Brown issued a second supplemental report. *Respondents' Exhibit 6, pages 30-31*. Regarding Claimant's hypertension, Dr. Brown concluded that:

> CRPS may cause intermittent vasoconstriction due to sympathetic discharge not unlike the "fight or flight" response to stress which can cause systolic hypertension. It is not uncommon for people suffering from CRPS to have problems like orthostatic hypotension (low blood pressure on standing) or Postural Orthostatic Tachycardia Syndrome (POTS) (tachycardia on standing) can be caused by CRPS. The claimant has no evidence of any postural change of her blood pressure or her pulse rate with standing which would support CRPS as a contributor to her hypertension so this is most likely a pre-existing untreated condition related to her obesity and possibly genetic predisposition or essential hypertension.
>
> *Respondents' Exhibit 6, pages 30-31*.

28. On June 9, 2023, Dr. Brown testified by deposition. Dr. Brown testified as an expert in neurosurgery. *Dr. Brown's June 9, 2023, Deposition Transcript, page 7, lines 10-12; page 10, lines 16-18 (hereinafter Depo. Tr. 7:10-12; 10:16-18)*. Dr. Brown testified he does not treat patients for hypertension other than in the operating room. *Depo. Tr. 5:18-25; 6:1-12*. Dr. Brown also testified he is familiar with ketamine anecdotally in pain management. *Depo. Tr. 6:17-25; 7:1-9*. Dr. Brown testified ketamine may be helpful in pain management, but yet there are a lot of potential side effects. *Depo. Tr. 13:18-25; 14:1-7*. Dr. Brown testified that the Colorado Medical Treatment Guidelines do not recommend ketamine as treatment for CRPS. Dr. Brown testified CRPS is a rare disorder and something he has not treated or see in "some years." *Depo. Tr. 18:10-16*. Dr. Brown testified he recommended denying the ketamine treatment based on the [medical treatment] guidelines. *Depo. Tr. 18:19-23*. Dr. Brown testified that if Claimant was having functional improvement with the ketamine treatment, then he "could see why one would proceed forward." *Depo. Tr. 26: 4-10*. As for the blood pressure medications, Dr. Brown testified "it's certainly understandable…if people have severe pain that you're going to have episodic increase in your blood pressure." *Depo. Tr. 27: 13-16*. But, despite indicating that he does not treat patients for hypertension, other than during surgery, Dr. Brown relates Claimant's hypertension to her obesity or essential hypertension that is common in the population. *Depo. Tr. 28:5-8*.

29. On cross-examination, Dr. Brown testified Claimant was not taking blood pressure medications before her work injury. *Depo. Tr. 35:19-24*. Dr. Brown testified Claimant's workers' compensation treating providers prescribed the blood pressure medications in conjunction with her CRPS diagnosis. *Depo. Tr. 36:6-15*. Dr. Brown testified there's no indication Claimant had high blood pressure before her work injury or that the other potential causes for hypertension (obesity, essential hypertensions, etc.) caused Claimant's need for blood pressure medications. *Depo. Tr. 36:19-25*. Dr. Brown testified that if Claimant has no history of hypertension before her work injury and that the onset of her hypertension coincides with her CRPS diagnosis, then he would relate her hypertension to her CRPS diagnosis. *Depo. Tr. 37:15-22*.

30. As for the ketamine, Dr. Brown testified the Medial Treatment Guidelines are simply guidelines and a medical provider is not obligated or required to follow them. *Depo.*

Tr. 41:11-16; 42:2-9. Dr. Brown testified all patients are different and that medical providers are trying to tailor a treatment plan to decrease the patient's pain and increase the patient's function. *Depo. Tr. 42: 10-20*. Dr. Brown testified Drs. Barolat and Masri are following this same plan. *Depo. Tr. 42:21-25*.

31. Before her CRPS diagnosis (and her work injury), Claimant had never been diagnosed with hypertension and had never been prescribed or taken blood pressure medications.

32. Claimant credibly testified she has no history of hypertension and has never been prescribed blood pressure medications (nor have they been recommended). Claimant credibly testified she was not diagnosed with high blood pressure until after her work injury and CRPS diagnosis. Thus, the ALJ finds that Claimant had no history of hypertension and has never been prescribed blood pressure medications (nor have they been recommended) before her work injury. The ALJ further finds that Claimant was not diagnosed with hypertension until after her work injury and development of CRPS.

33. While Dr. Brown first recommended denying the blood pressure medications on the ground they are unrelated to her work injury, Dr. Brown concluded that if Claimant has no history of high blood pressure, then he would relate the onset of her high blood pressure (hypertension) to her work injury.

34. Based on the totality of the evidence, the ALJ finds that Claimant's high blood pressure was caused by her work injury and the development of her CRPS. Thus, the ALJ finds that the blood pressure medications Losartan Potassium and hydrochlorothiazide are reasonable, necessary, and related to her industrial injury.

35. Drs. Masri and Barolot have recommended ketamine infusions along with Claimant's permanent spinal cord stimulator. Previously, Claimant used a ketamine-based pain cream. After using the pain cream for the first time, Claimant awoke with a sense of doom, a known side-effect to ketamine. Claimant then stopped the ketamine cream. This is detailed in Dr. Gehr's October 2021 report. After discussing the ketamine cream again in detail with Dr. Gehrs, Claimant resumed using the cream and it and did not subsequently have any side effects. Dr. Gehrs refilled the ketamine cream prescription, but Respondents denied it. During the implementation of her spinal cord stimulator, Claimant received ketamine intravenously. This was the first time she had been pain/symptoms free since her injury. Based on the pain relief Claimant received from the ketamine, Drs. Masri and Barolot recommended ketamine infusions, which Respondents denied. Respondents denied the ketamine infusions on the ground the Colorado Medical Treatment Guidelines do not recommend ketamine.

36. The purpose of medical treatment is to decrease pain and increase function. Dr. Brown agrees. Additionally, Dr. Brown testified that this is what Claimant's treating providers, including Drs. Masri and Barolot, are trying to accomplish. The ketamine infusions further this objective.

37. Regardless of what the treatment guidelines contemplate, Claimant received pain/symptom relief and increased function following the intravenous ketamine infusion at the time of her spinal cord stimulator implementation.

38. Claimant's medical records document that she has discussed with her treating providers regarding the risks, side effects, etc. of ketamine treatment. Knowing these risks/side effects, Claimant wants to proceed with the recommended treatment to achieve decreased pain and increased function.

39. The ketamine infusions are reasonable and necessary to treat Claimant's CRPS, and associated symptoms, and are causally related to her industrial injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the blood pressure medications are reasonable, necessary, and causally related to the claimant's industrial injury.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

When determining whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted under an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather, the ALJ may give evidence regarding compliance with the Guidelines such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). See also: Section 8-43-201(3), C.R.S.

A. Blood Pressure Medication

Claimant credibly testified she has no history of hypertension and has never been prescribed blood pressure medications (nor have they been recommended). Claimant credibly testified she was not diagnosed with high blood pressure until after her work injury and CRPS diagnosis. While Dr. Brown first recommended denying the blood pressure medications on the ground they are unrelated to her work injury, Dr. Brown concluded during his deposition that if Claimant has no history of high blood pressure, then he would relate the onset of her high blood pressure (hypertension) to her work injury. Moreover, Drs. Barolot and Long-Miller concluded that Claimant's hypertension was most likely caused by her CRPS-and the ALJ credits their opinions.

Thus, based on the totality of the evidence, the ALJ finds and concludes that Claimant proved by a preponderance of the evidence that her high blood pressure was caused by her CRPS - work injury - and that the blood pressure medications Losartan Potassium and hydrochlorothiazide are reasonable and necessary to treat her high blood pressure.

B. Ketamine Infusions

Claimant's treating providers, Drs. Masri and Barolot, have recommended ketamine infusions along with Claimant's permanent spinal cord stimulator. Claimant did use a ketamine-based pain cream and after using the pain cream for the first time, Claimant awoke with a sense of doom, a known side-effect to ketamine, and stopped the ketamine cream. However, after discussing using the ketamine cream again with Dr. Gehrs, Claimant resumed using the ketamine cream and did not subsequently have any side effects.

During the implementation of her spinal cord stimulator, Claimant received ketamine intravenously. Claimant credibly testified this was the first time she had been pain/symptoms free since her injury. Then Drs. Masri and Barolot recommended ketamine infusions. Respondents denied the ketamine infusions on the ground the Colorado Medical Treatment Guidelines do not recommend ketamine.

As found, the purpose of medical treatment is to decrease pain and increase function. Dr. Brown agrees. Additionally, Dr. Brown testified that this is what Claimant's treating providers, including Drs. Masri and Barolot, are trying to accomplish. The ketamine infusions further this objective.

Regardless of what the Medical Treatment Guidelines contemplate, Claimant received pain/symptom relief and increased function following the intravenous ketamine infusion at the time of her spinal cord stimulator implementation. Claimant discussed with her treating providers about the risks, side effects, etc. of ketamine treatment. Knowing these risks/side effects, Claimant wants to proceed with the recommended treatment to achieve decreased pain and increased function.

Thus, the ALJ finds and concludes that the Claimant proved by a preponderance of the evidence that the ketamine infusions are reasonable, necessary to treat her from the effects of her work injury. As a result, the infusions are also causally related to her industrial injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The Respondents shall pay for the medication to treat Claimant's high blood pressure that was caused by her industrial injury.

2. The Respondents shall pay for the Claimant's ketamine infusions prescribed by her treating physician.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 28, 2023

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Stanley Ginsburg, M.D. that Claimant is entitled to receive a 15% whole person permanent impairment rating for an episodic neurological disorder as a result of his April 22, 2020 admitted industrial injuries.

2. If Respondents failed to present clear and convincing evidence to overcome the DIME opinion, whether Dr. Ginsburg erred by failing to apportion Claimant's pre-existing seizure condition because it was independently disabling.

3. Whether Claimant has presented substantial evidence to support a determination that medical maintenance treatment will be reasonably necessary to relieve the effects of his April 22, 2020 admitted industrial injuries or prevent further deterioration of his condition.

FINDINGS OF FACT

1. On April 22, 2020 Claimant suffered admitted industrial injuries during the course and scope of his employment with Employer. Claimant's resulting medical treatment involved the cervical spine, right wrist, right knee and pre-existing epilepsy condition.

2. The record reveals that Claimant has suffered from epilepsy for a number of years prior to his April 22, 2020 industrial injuries. Specifically, Claimant had an extensive history of seizures related to epilepsy that began when he was an infant. As a result of his epilepsy and seizures, Claimant has experienced numerous falls, head injuries, headaches and neck pain throughout his life.

3. In November 2015, after it was determined that Claimant's response to several medications had failed, Claimant underwent a surgical procedure to Implant a vagal nerve stimulator (VNS) to control his seizures. Following the placement of the VNS, Claimant initially responded very positively. However, by June 30, 2016, Claimant reported having "nearly daily seizures" for a period of two weeks. He testified that the VNS helped control his seizures approximately fifty percent of the time and gave him the ability to anticipate oncoming seizures.

4. Claimant continued to receive treatment for his epilepsy from 2015 through 2019. He detailed the symptoms of his nocturnal and daytime seizures. Claimant stated his nocturnal seizures caused him to suffer dreams of seeing things, loss of awareness, falling out of bed, and tongue and cheek biting. He also described two types of typical daytime seizures. The first type would begin with an aura of dizziness followed by speech

arrest and loss of awareness. The second type would cause him to fall and suffer shaking of the extremities.

5. Medical records for the period 2015 through 2019 reflect discussion of a deep brain stimulator (DBS) as surgical treatment for Claimant's seizure disorder. At a neurology evaluation with Monica Petluru, M.D. on January 14, 2019 Claimant there was a tentative plan to complete the DBS surgery in February or March 2019 after surgical protocols had been addressed. However, Claimant ultimately pursued less aggressive treatments prior to his work injuries including the VNS device and medication management.

6. On January 3, 2020 Claimant was admitted to Kit Carson County Memorial Hospital for a cluster of seizures over the past three days. Specifically, he reported a total of 30 seizures over a 3-day period.

7. Claimant testified that in February 2020 he was placed on Epidiolex to control his seizures. Epidiolex is a pharmaceutical-grade CBD that is effective for patients who are refractory to treatments. In the four months leading up to the injury, Claimant stated treatment with Epidiolex had "completely stopped all my seizures . . . which no other medication had." Additionally, Claimant's treatment was effective to the point his "ability to work was actually really good" preceding his April 22, 2020 work accident because his seizure disorder was under control.

8. On March 19, 2020 Claimant applied to work with Employer. He began working for Employer on April 16, 2020.

9. On April 22, 2020 Claimant sustained admitted work injuries. A large pig slammed Claimant into a steel beam. He struck his head, lost consciousness and landed on his right knee and wrist.

10. Following his injuries, Claimant immediately presented to the Kit Carson Memorial Hospital Room on April 22, 2020. He reported a low-grade headache with low-grade neck muscle pain and tightness. Claimant denied any seizure activity. He was admitted overnight as a seizure precaution and was discharged home after an unremarkable night.

11. On April 28, 2020 Claimant visited Authorized Treating Physician (ATP) Sacramento Pimentel, M.D. for an evaluation. He reported no additional seizure activity. Claimant's concussion symptoms had resolved and he was released to work full duty.

12. Claimant explained that upon returning to work, he began having abnormal seizures that were more frequent and severe than the seizures he had experienced prior to the injury. Employer eventually asked Claimant to resign due to his worsening condition and inability to work.

13. On January 6, 2021 Claimant had a telephone encounter with neurological specialist Sarah Sparr, RN. Claimant reported he was suffering anywhere from three to twenty convulsive events per day. He was concerned his VNS was not working correctly following his industrial injury because he was no longer receiving transmissions from the device to detect oncoming auras preceding convulsions. Claimant was also suffering falls and additional injuries due to the increased frequency of seizures and lack of warning. He requested a helmet to protect his head during seizure activity and prevent further injuries.

14. On February 15, 2021 Claimant had a follow-up appointment with Dr. Pimental. Claimant was experiencing more daytime seizures despite previously suffering primarily nighttime seizures. He also had good seizure control since beginning Epidiolex prior to his work injury. The increased frequency in seizures rendered Claimant unable to work and affected his overall functioning. Dr. Pimental again documented Claimant's pre-existing seizure disorder, but noted the seizures had worsened since his April 22, 2020 work injury. He referred Claimant to neurosurgery.

15. On March 29, 2021 Claimant returned to Dr. Pimental for an evaluation. Claimant now had a helmet for protection from seizure injuries. Dr. Pimental commented that Claimant had been suffering almost daily seizures.

16. On May 3, 2021 Claimant had a follow-up appointment with Dr. Pimental. Dr. Pimental again noted Claimant's history of a severe seizure disorder. He remarked Claimant was no longer at his previous job but was actively looking for work. Dr. Pimental also commented that Claimant was unable to have the ideal follow-up plan during the preceding year due to the COVID pandemic.

17. On June 9, 2021 Claimant again visited Dr. Pimental for an examination. He believed Claimant had reached Maximum Medical Improvement (MMI) due to his plateau in progress. Dr. Pimental referred Claimant to a level two physician for an impairment rating.

18. On July 21, 2021 David L. Reinhard, M.D. determined that Claimant had reached MMI. He reviewed Claimant's medical records after the April 22, 2020 industrial injuries and conducted a physical examination. Although Dr. Reinhard discussed Claimant's lifelong seizure disorder under the "history" section in his report and was aware of Claimant's VNS, he did not specifically assign any permanent impairment for an aggravation of Claimant's epileptic condition. He instead found that Claimant's primary complaints were related to a concussion and cervical spine injury. Dr. Reinhard thus assigned an 18% whole person impairment for Claimant's cervical spine condition. He also assigned a 10% rating for Claimant's episodic neurologic disorder based on posttraumatic migraine headaches under Table 53 of the *Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). Combining the ratings yields a 26% whole person impairment.

19. In December 2021 Claimant had a DBS placed. Adjustments were made on December 17, 2021, but Claimant continued to suffer seizures. By December 2022 Claimant had his DBS removed due to a central nervous system infection.

20. Respondents challenged Dr. Reinhard's impairment rating and sought a Division Independent Medical Examination (DIME). On February 17, 2022 Claimant underwent a DIME with neurologist Stanley H. Ginsburg, M.D. He reviewed Claimant's medical records subsequent to his April 22, 2020 industrial injuries and conducted a physical examination. He agreed that Claimant had reached MMI on July 21, 2021. Dr. Ginsburg assigned a 14% whole person rating for Claimant's cervical spine and a 15% whole person rating for an episodic neurological disorder pursuant to the *AMA Guides*. The ratings combined for a 29% whole person impairment. Regarding Claimant's pre-existing seizure disorder, Dr. Ginsburg stated, "there is some evidence that the injury aggravated this and played a role in the necessity of brain stimulation but this is not certain, although it is an important concept to consider." He remarked that although Claimant had "a convulsive disorder prior to the injury, there was evidence strongly suggestive of more problems with a convulsive disorder." Dr. Ginsburg noted that a 15% rating for an episodic neurological disorder was appropriate because this "was the most serious problem interfering with his life." He determined that apportionment was not appropriate. Dr. Ginsburg recommended medical maintenance care in the form of medications for seizures, under the care of an epileptologist, as well as physical therapy for the following year.

21. On July 25, 2022 Kathy F. McCranie, M.D. conducted a medical records review of Claimant's claim. Dr. McCranie explained that both Drs. Reinhard and Ginsburg erred in finding that Claimant's work injury caused permanent impairment for an episodic neurologic disorder because neither physician reviewed Claimant's medical records preceding his April 22, 2020 industrial injury. She emphasized that "[w]ithout a full review of the prior medical records, it is not possible to make a reasonable assessment of impairment."

22. Ultimately, based on her review of Claimant's medical records, Dr. McCranie determined there was no acceleration or permanent aggravation of Claimant's seizure activity or headaches. Therefore, a permanent impairment for an episodic neurologic disorder was not warranted. She explained that Drs. Reinhard and Ginsburg should have at least apportioned the rating based on Claimant's documented pre-existing independently disabling condition with work restrictions. Finally, regarding the cervical impairment rating, Dr. McCranie observed that a 4% impairment was more appropriate.

23. At the hearing on January 5, 2023 Dr. McCranie maintained that Claimant did not warrant an impairment rating for an episodic neurologic disorder. She reasoned that Dr. Ginsburg erred when he assigned an impairment rating for Claimant's seizure disorder because "[t]hey were not accelerated by the accident because there [are] substantial records after the accident to show that his seizures returned to baseline." Dr. McCranie believed Claimant reached baseline by November 2020 but at the latest prior to reaching MMI on July 21, 2021. By relying on just a few post-injury medical records and Claimant's subjective reports, Dr. Ginsburg committed error and could not fully appreciate the extent of Claimant's pre-existing seizure disorder. Dr. McCranie emphasized that Dr. Ginsburg would not have known the full severity of Claimant's condition. She determined that Claimant did not require any maintenance medical care

for an episodic neurologic disorder because the condition was not related to the work accident.

24. Finally, Dr. McCranie also determined that Dr. Ginsburg should have apportioned Claimant's pre-existing, independently disabling seizure condition. In particular, she noted that Claimant had a prior impairment as documented by his substantial pre-existing medical records and work restrictions related to his epilepsy. Essentially, due to Claimant's significant impairment before the accident, there should have been a 15% apportionment for Claimant's pre-existing seizure disorder. Claimant's impairment rating for an episodic neurologic disorder would thus be reduced to 0%.

25. Edward Maa, M.D., a board-certified neurologist specializing in epilepsy, testified at the hearing in this matter. He explained that he had been treating Claimant's epilepsy since at least 2007. Dr. Maa remarked that Claimant had a history of medically refractory epilepsy likely originating from a post-birth stroke in his left hemisphere. He explained that, although the VNS placed in 2015 did not stop all of Claimant's seizures, it dramatically improved daytime convulsions and benefitted Claimant continuing into 2020. Dr. Maa remarked that, from February 2020 until the April 22, 2020 work accident, Claimant's seizures stopped and he was able to work again following treatment with Epidiolex. He commented that, because Claimant was doing well with Epidiolex, he did not want to pursue more aggressive treatment prior to the industrial injury. Notably, Epidiolex was an effective treatment for patients who were refractory to existing epilepsy treatments. Dr. Maa emphasized that Epidiolex "was definitely controlling [Claimant's] seizure activity." However, Dr. Maa explained that a stretch injury to Claimant's vagus nerve from the trauma of the April 22, 2020 work accident likely impacted the functioning of the VNS within his body. He summarized that the traumatic work injury more likely than not caused, aggravated, or accelerated Claimant's seizure disorder and the medical necessity of DBS surgery.

26. Claimant testified at the hearing in this matter. He recounted that, prior to his work injury, 90% of his seizures were nocturnal and only 10% occurred during the daytime. He described how the VNS gave him the ability to swipe a magnet over the device upon feeling an aura. The device stimulated his brain to stop the seizure. Claimant commented the VNS allowed him "have more control of my seizures" and "helped me about fifty percent of the time." However, Claimant "was no longer feeling any stimulation into my brain" from the VNS following his industrial injury.

27. On June 3, 2023 Dr. McCranie testified through an evidentiary deposition in this matter. Dr. McCranie explained that reviewing the testimony of Claimant and Dr. Maa did not change her opinion. She maintained that Claimant did not warrant an impairment rating for an episodic neurologic disorder. Dr. McCranie specified that Dr. Maa only addressed a temporary increase in Claimant's condition and offered no opinion on permanent acceleration or aggravation. Further, she noted that the timing of the return of the seizures was not linked to Claimant's work injury because, between May 15, 2020 and July 24, 2020, there were no medical notes reflecting any seizures.

28. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Ginsburg that Claimant was entitled to receive a 15% whole person impairment rating for an episodic neurological disorder as a result of his April 22, 2020 admitted industrial injuries. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Ginsburg's 15% impairment determination for an episodic neurological disorder was incorrect. Initially, the record reveals that Claimant suffered from epilepsy for a number of years prior to his April 22, 2020 industrial injuries. Claimant had an extensive history of seizures related to epilepsy that began when he was an infant. In November 2015, after it was determined that Claimant's response to several medications had failed, he underwent a surgical procedure to Implant a VNS to control his seizures. Following the placement of the VNS, Claimant initially responded very positively. However, in the years between 2015 and 2019 Claimant continued to suffer repeated seizures. Medical records for the period 2015 through 2019 reflect discussion of a DBS as surgical treatment for Claimant's continuing disorder. However, Claimant ultimately pursued less aggressive treatments prior to his work injury and began taking Epidiolex to treat his symptoms. In the four months leading up to his work injury, Claimant stated treatment with Epidiolex had "completely stopped all my seizures . . . which no other medication had." Claimant explained that his treatment with Epidiolex was effective to the point his "ability to work was actually really good" preceding his April 22, 2020 industrial injury.

29. On April 22, 2022 Claimant suffered admitted industrial injuries. Claimant's resulting medical treatment involved the cervical spine, right wrist, right knee and pre-existing epilepsy condition. He received care from ATP Dr. Pimental for his work injuries. Claimant explained that, upon returning to work, he began having abnormal seizures that were more frequent and severe than the seizures he had previously experienced. When Claimant reached MMI on July 21, 2021 Dr. Reinhard assigned an 18% whole person impairment for Claimant's cervical spine condition. He also assigned a 10% rating for Claimant's episodic neurologic disorder based on posttraumatic migraine headaches. Combining the ratings yields a 26% whole person impairment.

30. On February 17, 2022 Claimant underwent a DIME with neurologist Dr. Ginsburg. He reviewed Claimant's medical records subsequent to his April 22, 2020 industrial injuries and conducted a physical examination. He agreed that Claimant had reached MMI on July 21, 2021. Dr. Ginsburg assigned a 14% whole person rating for Claimant's cervical spine and a 15% whole person rating for an episodic neurological disorder based on Claimant's seizures pursuant to the *AMA Guides*. The ratings combined for a 29% whole person impairment. Regarding Claimant's pre-existing seizure disorder, Dr. Ginsburg stated, "there is some evidence that the injury aggravated this and played a role in the necessity of brain stimulation but this is not certain, although it is an important concept to consider." He remarked that, although Claimant had "a convulsive disorder prior to the injury, there was evidence "strongly suggestive of more problems with a convulsive disorder." Dr. Ginsburg noted that a 15% rating for an episodic neurological disorder was appropriate because this "was the most serious problem interfering with his life."

31. Dr. McCranie performed a records review and testified at the hearing in this matter. She explained that both Drs. Reinhard and Ginsburg erred in finding that Claimant's work injury caused a permanent impairment for an episodic neurologic disorder. Initially, she noted that neither physician reviewed Claimant's medical records preceding his April 22, 2020 industrial injury. Dr. McCranie reasoned that Dr. Ginsburg erred when he assigned an impairment rating for Claimant's seizure disorder because "[t]hey were not accelerated by the accident because there [are] substantial records after the accident to show that his seizures returned to baseline." She explained that, by relying on just a few post-injury medical records and Claimant's subjective reports, Dr. Ginsburg committed error. Dr. McCranie emphasized that Dr. Ginsburg could not fully appreciate the extent of Claimant's pre-existing seizure disorder.

32. Despite Dr. McCranie's opinion, the record reflects that Dr. Ginsberg did not erroneously assign Claimant a 15% impairment rating for an episodic neurologic disorder. Dr. Ginsburg had knowledge from Claimant's history, a physical examination, review of medical reports subsequent to Claimant's work injury, and neurological expertise regarding the nature and severity of Claimant's seizure disorder. Specifically, Dr. Ginsburg emphasized that, although Claimant had a seizure disorder prior to his April 22, 2020 work injury, there was evidence "strongly suggestive" of an aggravation of the condition. Moreover, the persuasive opinion of Dr. Maa supports Dr. Ginsburg's DIME opinion. Dr. Maa has been treating Claimant's epilepsy since at least 2007. He explained that, although the VNS placed in 2015 did not stop all of Claimant's seizures, it dramatically improved daytime convulsions and was beneficial into 2020. Dr. Maa remarked that, from February 2020 until the April 22, 2020 work accident, Claimant's seizures stopped and he was able to work again following treatment with Epidiolex. He commented that, because Claimant was doing well with Epidiolex, he did not want to pursue more aggressive treatment prior to the industrial injury. Dr. Maa emphasized that Epidiolex "was definitely controlling [Claimant's] seizure activity." However, Dr. Maa explained that a stretch injury to Claimant's vagus nerve from the trauma of the April 22, 2020 work accident likely impacted the functioning of the VNS within his body. He summarized that the traumatic work injury more likely than not caused, aggravated, or accelerated Claimant's seizure disorder and the medical necessity of DBS surgery.

33. Dr. McCranie testified through an evidentiary deposition that her opinion had not changed after reviewing the testimony of Claimant and Dr. Maa. She maintained that Claimant did not warrant an impairment rating for an episodic neurologic disorder. Dr. McCranie specified that Dr. Maa only addressed a temporary increase in Claimant's symptoms and offered no opinion on a permanent acceleration or aggravation of Claimant's condition. Further, she noted that the timing of the return of the seizures was not linked to Claimant's work accident because, between May 15, 2020 and July 24, 2020, there were no medical notes indicating any seizures. However, Dr. McCranie's deposition testimony largely focused on Dr. Maa's opinion. Importantly, Dr. Maa has treated Claimant for his seizure disorder since 2007 as has significant experience with Claimant's condition. Dr. McCranie also did not detail the clearly erroneous nature of Dr. Ginsburg's opinion assigning Claimant a 15% whole person rating for an episodic neurological disorder.

34. Based on the medical records and persuasive opinion of Dr. Maa, Dr. Ginsburg correctly assigned an impairment rating for Claimant's episodic neurological disorder. The contrary determination of Dr. McCranie is a mere differences of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Ginsburg's DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's determination assigning Claimant a 15% whole person impairment for an episodic neurological disorder was incorrect.

35. Respondents have failed to present clear and convincing evidence to overcome Dr. Ginsburg's DIME opinion not to apportion Claimant's pre-existing seizure condition. Relying on Dr. McCranie's opinion, Respondents assert that apportionment is appropriate because Claimant's seizure condition was independently disabling prior to his April 22, 2020 industrial injuries. Essentially, due to Claimant's significant impairment before the accident, there should have been a 15% apportionment for Claimant's pre-existing seizure disorder. Claimant's impairment rating for an episodic neurologic disorder would thus be reduced to 0%.

36. Despite Dr. McCranie's contrary opinion, the record reveals that Dr. Ginsburg's apportionment determination was not clearly erroneous. Claimant credibly testified that his seizure condition was under control at the time of his industrial injury. He was able to perform his full job duties without missing time from work due to his seizure for about 3-4 months prior to his work injury. Dr. Maa also explained that, from February 2020 until the April 22, 2020 work accident, Claimant's seizures stopped and he was able to work following treatment with Epidiolex. While Claimant had a pre-existing seizure disorder, the medical records reflect that his condition was under control with Epidiolex in the months preceding April 22, 2020. Respondents have not demonstrated that Claimant's seizure disorder was symptomatic and independently disabling at the time of his work injury. Respondents have thus failed to establish it is highly probable Dr. Ginsberg erred in not apportioning Claimant's permanent impairment rating as a result of his pre-existing seizure activity.

37. Claimant has presented substantial evidence to support a determination that medical maintenance treatment will be reasonably necessary to relieve the effects of his April 22, 2020 admitted industrial injuries or prevent further deterioration of his condition. Initially, Dr. Ginsburg recommended medical maintenance care in the form of medications for seizures under the care of an epileptologist, as well as physical therapy, for the following year. In contrast, Dr. McCranie determined that Claimant did not require any maintenance medical care for an episodic neurologic disorder because the condition was not related to the work accident. Despite Dr. McCranie's determination, the medical records and persuasive opinion of Dr. Ginsburg reflect that additional medical benefits are reasonable, necessary and causally related to Claimant's April 20, 2022 work accident. Accordingly, Claimant is entitled to receive medical maintenance benefits in the form of medications for seizures under the care of an epileptologist, as well as physical therapy, for the following year.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Indus. Claim Appeals Off.,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Indus. Claim Appeals Off.,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Indus. Claim Appeals Off.,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S. *See Yeutter v. Indus. Claim Appeals Off.*, 487

P.3d 1007, 1012 (Colo. App. 2019). The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *See Eller v. Indus. Claim Appeals Off.*, 224 P.3d 397 (Colo. App. 2009); *Qual-Med, Inc. v. Indus. Claim Appeals Off.*, 961 P.2d 590 (Colo. App. 1998). Consequently, when a party challenges a DIME physician's determination of MMI or impairment rating, the finding on causation is also entitled to presumptive weight. *Egan v. Indus. Claim Appeals Off.*, 971 P.2d 664 (Colo. App. 1998).

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc.,* 961 P.2d at 592. In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Ginsburg that Claimant was entitled to receive a 15% whole person impairment rating for an episodic neurological disorder as a result of his April 22, 2020 admitted industrial injuries. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Ginsburg's 15% impairment determination for an episodic neurological disorder was incorrect. Initially, the record reveals that Claimant suffered from epilepsy for a number of years prior to his April 22, 2020 industrial injuries. Claimant had an extensive history of seizures related to epilepsy that began when he was an infant. In November 2015, after it was determined that Claimant's response to several medications had failed, he underwent a surgical procedure to Implant a VNS to control his seizures. Following the placement of the VNS, Claimant initially responded very positively. However, in the years between 2015 and 2019 Claimant continued to suffer repeated seizures. Medical records for the period 2015 through 2019 reflect discussion of a DBS as surgical treatment for Claimant's continuing disorder. However, Claimant ultimately pursued less aggressive treatments prior to his work injury and began taking Epidiolex to treat his symptoms. In the four months leading up to his work injury, Claimant stated treatment with Epidiolex had "completely stopped all my seizures . . . which no other medication had." Claimant explained that his treatment with Epidiolex was effective to the point his "ability to work was actually really good" preceding his April 22, 2020 industrial injury.

9. As found, on April 22, 2022 Claimant suffered admitted industrial injuries. Claimant's resulting medical treatment involved the cervical spine, right wrist, right knee and pre-existing epilepsy condition. He received care from ATP Dr. Pimental for his work injuries. Claimant explained that, upon returning to work, he began having abnormal

seizures that were more frequent and severe than the seizures he had previously experienced. When Claimant reached MMI on July 21, 2021 Dr. Reinhard assigned an 18% whole person impairment for Claimant's cervical spine condition. He also assigned a 10% rating for Claimant's episodic neurologic disorder based on posttraumatic migraine headaches. Combining the ratings yields a 26% whole person impairment.

10. As found, on February 17, 2022 Claimant underwent a DIME with neurologist Dr. Ginsburg. He reviewed Claimant's medical records subsequent to his April 22, 2020 industrial injuries and conducted a physical examination. He agreed that Claimant had reached MMI on July 21, 2021. Dr. Ginsburg assigned a 14% whole person rating for Claimant's cervical spine and a 15% whole person rating for an episodic neurological disorder based on Claimant's seizures pursuant to the *AMA Guides*. The ratings combined for a 29% whole person impairment. Regarding Claimant's pre-existing seizure disorder, Dr. Ginsburg stated, "there is some evidence that the injury aggravated this and played a role in the necessity of brain stimulation but this is not certain, although it is an important concept to consider." He remarked that, although Claimant had "a convulsive disorder prior to the injury, there was evidence "strongly suggestive of more problems with a convulsive disorder." Dr. Ginsburg noted that a 15% rating for an episodic neurological disorder was appropriate because this "was the most serious problem interfering with his life."

11. As found, Dr. McCranie performed a records review and testified at the hearing in this matter. She explained that both Drs. Reinhard and Ginsburg erred in finding that Claimant's work injury caused a permanent impairment for an episodic neurologic disorder. Initially, she noted that neither physician reviewed Claimant's medical records preceding his April 22, 2020 industrial injury. Dr. McCranie reasoned that Dr. Ginsburg erred when he assigned an impairment rating for Claimant's seizure disorder because "[t]hey were not accelerated by the accident because there [are] substantial records after the accident to show that his seizures returned to baseline." She explained that, by relying on just a few post-injury medical records and Claimant's subjective reports, Dr. Ginsburg committed error. Dr. McCranie emphasized that Dr. Ginsburg could not fully appreciate the extent of Claimant's pre-existing seizure disorder.

12. As found, despite Dr. McCranie's opinion, the record reflects that Dr. Ginsberg did not erroneously assign Claimant a 15% impairment rating for an episodic neurologic disorder. Dr. Ginsburg had knowledge from Claimant's history, a physical examination, review of medical reports subsequent to Claimant's work injury, and neurological expertise regarding the nature and severity of Claimant's seizure disorder. Specifically, Dr. Ginsburg emphasized that, although Claimant had a seizure disorder prior to his April 22, 2020 work injury, there was evidence "strongly suggestive" of an aggravation of the condition. Moreover, the persuasive opinion of Dr. Maa supports Dr. Ginsburg's DIME opinion. Dr. Maa has been treating Claimant's epilepsy since at least 2007. He explained that, although the VNS placed in 2015 did not stop all of Claimant's seizures, it dramatically improved daytime convulsions and was beneficial into 2020. Dr. Maa remarked that, from February 2020 until the April 22, 2020 work accident, Claimant's seizures stopped and he was able to work again following treatment with Epidiolex. He

commented that, because Claimant was doing well with Epidiolex, he did not want to pursue more aggressive treatment prior to the industrial injury. Dr. Maa emphasized that Epidiolex "was definitely controlling [Claimant's] seizure activity." However, Dr. Maa explained that a stretch injury to Claimant's vagus nerve from the trauma of the April 22, 2020 work accident likely impacted the functioning of the VNS within his body. He summarized that the traumatic work injury more likely than not caused, aggravated, or accelerated Claimant's seizure disorder and the medical necessity of DBS surgery.

13. As found, Dr. McCranie testified through an evidentiary deposition that her opinion had not changed after reviewing the testimony of Claimant and Dr. Maa. She maintained that Claimant did not warrant an impairment rating for an episodic neurologic disorder. Dr. McCranie specified that Dr. Maa only addressed a temporary increase in Claimant's symptoms and offered no opinion on a permanent acceleration or aggravation of Claimant's condition. Further, she noted that the timing of the return of the seizures was not linked to Claimant's work accident because, between May 15, 2020 and July 24, 2020, there were no medical notes indicating any seizures. However, Dr. McCranie's deposition testimony largely focused on Dr. Maa's opinion. Importantly, Dr. Maa has treated Claimant for his seizure disorder since 2007 as has significant experience with Claimant's condition. Dr. McCranie also did not detail the clearly erroneous nature of Dr. Ginsburg's opinion assigning Claimant a 15% whole person rating for an episodic neurological disorder.

14. As found, based on the medical records and persuasive opinion of Dr. Maa, Dr. Ginsburg correctly assigned an impairment rating for Claimant's episodic neurological disorder. The contrary determination of Dr. McCranie is a mere differences of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Ginsburg's DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's determination assigning Claimant a 15% whole person impairment for an episodic neurological disorder was incorrect.

Apportionment

15. Respondents contend that Dr. Ginsburg erred by failing to apportion Claimant's pre-existing seizure condition because it was independently disabling. Section 8-42-104(5)(b), C.R.S. governs apportionment of medical impairment for a prior nonwork-related condition. The statute specifies that in cases of permanent medical impairment an employee's award shall not be reduced except:

> When an employee has a nonwork-related previous permanent medical impairment to the same body part that has been identified, treated, and, at the time of the subsequent compensable injury, is independently disabling. The percentage of the nonwork-related permanent medical impairment existing at the time of the subsequent injury to the same body part shall be deducted from the permanent medical impairment rating for the subsequent compensable injury.

Moreover, the Division of Workers' Compensation has adopted WCRP 12 to implement the statutory provisions for impairment rating determinations. WCRP 12-3(B) provides, in pertinent part:

> the Physician may provide an opinion on apportionment for any preexisting work related or nonwork-related permanent impairment to the same body part using the [*AMA Guides*] where medical records or other objective evidence substantiate a preexisting impairment. Any such apportionment shall be made by subtracting from the injured worker's impairment the preexisting impairment as it existed at the time of the subsequent injury or occupational disease. The Physician shall explain in their written report the basis of any apportionment. If there is insufficient information to measure the change accurately, the Physician shall not apportion. If the Physician apportions based on a prior nonwork-related impairment, the Physician must provide an opinion as to whether the previous medical impairment was identified, treated and independently disabling at the time of the work-related injury that is being rated.

16. Apportionment allows an injured worker's award or settlement to be reduced if the worker "has a non-work related previous permanent medical impairment to the same body part that has been identified, treated, and, at the time of the subsequent compensable injury, is independently disabling." §8-42-104(5)(b), C.R.S. Apportionment is not appropriate when the previous condition is asymptomatic and not disabling at the time of the subsequent injury. *Lambert & Sons, Inc. v. Indus. Claim Appeals Off.*, 984 P.2d 656, 659 (Colo. App. 1998); *see also Askew v. Indus. Claim Appeals Off.*, 927 P.2d 1333, 1338 (Colo. 1996). The goal of apportionment is to ensure both that employers are only liable for impairment resulting from the specific work injury and injured workers are not barred from recovery due to pre-existing injuries. *See Browne v. Indus. Claim Appeals Off.*, 495 P.3d 974, 980 (Colo. App. 2021).

17. As found, Respondents have failed to present clear and convincing evidence to overcome Dr. Ginsburg's DIME opinion not to apportion Claimant's pre-existing seizure condition. Relying on Dr. McCranie's opinion, Respondents assert that apportionment is appropriate because Claimant's seizure condition was independently disabling prior to his April 22, 2020 industrial injuries. Essentially, due to Claimant's significant impairment before the accident, there should have been a 15% apportionment for Claimant's pre-existing seizure disorder. Claimant's impairment rating for an episodic neurologic disorder would thus be reduced to 0%.

18. As found, despite Dr. McCranie's contrary opinion, the record reveals that Dr. Ginsburg's apportionment determination was not clearly erroneous. Claimant credibly testified that his seizure condition was under control at the time of his industrial injury. He was able to perform his full job duties without missing time from work due to his seizure for about 3-4 months prior to his work injury. Dr. Maa also explained that, from February 2020 until the April 22, 2020 work accident, Claimant's seizures stopped and he was able

to work following treatment with Epidiolex. While Claimant had a pre-existing seizure disorder, the medical records reflect that his condition was under control with Epidiolex in the months preceding April 22, 2020. Respondents have not demonstrated that Claimant's seizure disorder was symptomatic and independently disabling at the time of his work injury. Respondents have thus failed to establish it is highly probable Dr. Ginsberg erred in not apportioning Claimant's permanent impairment rating as a result of his pre-existing seizure activity.

Medical Maintenance Benefits

19. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of her condition. *Grover v. Indus. Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988).

20. As found, Claimant has presented substantial evidence to support a determination that medical maintenance treatment will be reasonably necessary to relieve the effects of his April 22, 2020 admitted industrial injuries or prevent further deterioration of his condition. Initially, Dr. Ginsburg recommended medical maintenance care in the form of medications for seizures under the care of an epileptologist, as well as physical therapy, for the following year. In contrast, Dr. McCranie determined that Claimant did not require any maintenance medical care for an episodic neurologic disorder because the condition was not related to the work accident. Despite Dr. McCranie's determination, the medical records and persuasive opinion of Dr. Ginsburg reflect that additional medical benefits are reasonable, necessary and causally related to Claimant's April 20, 2022 work accident. Accordingly, Claimant is entitled to receive medical maintenance benefits in the form of medications for seizures under the care of an epileptologist, as well as physical therapy, for the following year.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Ginsburg's DIME determination assigning Claimant a 15% whole person impairment for an episodic neurological disorder was incorrect.

2. Respondents have failed to present clear and convincing evidence to overcome Dr. Ginsburg's DIME opinion not to apportion Claimant's pre-existing seizure condition.

3. Claimant shall receive medical maintenance benefits in the form of medications for seizures under the care of an epileptologist, as well as physical therapy, for the following year.

4. Any other issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

1. Whether Respondents established by a preponderance of the evidence grounds to reopen Claimant's claim to permit Respondents to file an amended Final Admission of Liability to correct errors in the original Final Admission of Liability.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to her left shoulder on November 16, 2021.

2. On June 10, 2022, Claimant's authorized treating physician (ATP) James McLaughlin, M.D., placed Claimant at maximum medical improvement (MMI) and assigned Claimant a 6% upper extremity permanent impairment rating, which corresponds to a 4% whole person impairment. (Ex. A).

3. Claimant's 6% upper extremity rating entitled Claimant to $4,538.98 in permanent partial disability (PPD) benefits.

4. On July 8, 2022, Respondents filed a Final Admission of Liability (FAL), in which Respondents mistakenly admitted for a 6% *whole* person permanent impairment rating in the "permanent partial disability" section of the FAL instead of a 6% left upper extremity impairment. Respondents also admitted to $4,538.98 in PPD benefits. (Ex. D).

5. Respondents paid Claimant $4,538.98 in PPD benefits.

6. At hearing, Insurer's adjuster, [Redacted, hereinafter AD], credibly testified that Insurer's intent was to admit for a 6% upper extremity impairment rating, and not a 6% whole person impairment rating. AD[Redacted] testified that, due to an internal error on the part of Insurer, the FAL was not correctly completed, resulting in Respondents mistakenly admitting for a 6% whole person impairment.

7. Claimant testified at hearing that she received $4,538.98 in PPD benefits from Respondents, is not seeking additional PPD benefits, and agrees that it is appropriate to permit Respondents to correct the errors in the July 8, 2022 FAL.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits

by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *Univ. Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REOPENING TO CORRECT ERRORS IN THE FAL

Once a case has been closed by a final admission, section 8-43-303(1) C.R.S., allows an ALJ to reopen an award within six years of the date of injury on a several grounds, including error or mistake. *Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). Reopening of a closed claim may be granted based on any mistake of fact that calls into question the propriety of a prior award. Section 8-43-303(1), C.R.S.; *Richards v. Indus. Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

When a party seeks to reopen based on mistake the ALJ must determine "whether a mistake was made, and if so, whether it was the type of mistake which justifies reopening." *Travelers Ins. Co. v. Indus. Comm'n*, 646 P.2d 399, 400 (Colo. App. 1981). The power to reopen is permissive, and is therefore committed to the ALJ's discretion.

Respondents have established grounds for reopening for the sole purpose of filing an Amended FAL to correct the clerical errors contained on the July 8, 2022 FAL. It is

undisputed that Claimant was assigned a scheduled upper extremity impairment of 6%. It is also undisputed that Claimant is entitled to, and has received, PPD benefits in the amount of $4,538.98 for her scheduled impairment rating. The FAL contains errors that do not reflect the appropriate impairment rating, and should be corrected to do so. Respondents shall file an Amended Final Admission of Liability which properly reflects Claimant's impairment rating and PPD benefits. Respondents have not established grounds for otherwise amending or altering the July 8, 2022 FAL.

ORDER

It is therefore ordered that:

1. Claimant's claim is reopened for the sole purpose of permitting Respondents to file an Amended FAL which properly reflects Claimant's admitted and agreed upon impairment rating and PPD benefits based upon a 6% schedule upper extremity permanent impairment rating. Respondents shall file an Amended FAL within thirty days of the date of this Order.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 31, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a 36% scheduled impairment to his left knee?

FINDINGS OF FACT

1. Claimant worked 14 years for Employer, initially as a volunteer firefighter and eventually ascending to the position of Fire Chief. He sustained admitted injuries on December 14, 2017 when a ladder on which he was working collapsed unexpectedly.

2. Claimant's most impactful injuries involved multiple displaced fractures of the right foot. He underwent several surgeries on the right foot and developed serious complications related to infections. Eventually, he had a below-the-knee amputation (BKA) in August 2020. Claimant was assigned a 90% lower extremity rating for the right BKA, which was admitted and not disputed by Respondents.

3. Claimant also injured his left knee in the work accident. He saw Dr. Michael Feign, an orthopedic surgeon, on January 3, 2018, and reported 8/10 "constant" left knee pain since the injury. He was having difficulty weightbearing and was using a wheelchair. Examination of the left knee showed pain mostly along the proximal fibula and lateral tibial plateau. Dr. Feign reviewed left knee x-rays taken at the emergency department immediately after the accident, which showed no fracture. However, because "[the] patient did have a fall from 10 feet," he ordered an MRI to rule out a nondisplaced tibial plateau or fibular fracture.

4. The left knee MRI was completed on January 5, 2018. In terms of acute pathology, the MRI showed a nondisplaced intra-articular fibular head fracture, a bone marrow contusion of the lateral tibial plateau with surrounding microtrabecular fracture, and a medial gastrocnemius strain. It also showed pre-existing tricompartmental osteoarthritis.

5. Claimant followed up with Dr. Feign to review the MRI on January 11, 2018. Dr. Feign opined Claimant sustained an acute gastrocnemius strain "as well as direct trauma to the lateral side of his knee causing a nondisplaced fracture of the proximal fibula and irritation of an arthritic proximal tibia-fibula joint." He did not believe surgery was necessary and recommended conservative treatment.

6. Thereafter, Claimant's treatment was primarily focused on his right foot. However, he continued to see Dr. Feign periodically for left knee pain. On February 28, 2018, Dr. Feign documented Claimant's knee had not improved because he was "completely non-weightbearing on his right foot and even tho[ugh he has] been using crutches and a walker he has been putting much more strain on his left knee." Dr. Feign

opined, “is understandable with his arthritic change and his acute trauma to have more pain since he is putting all of his weight on his left knee.” Dr. Feign encouraged Claimant to use his wheeled scooter or iWalk “which can help decrease some of the stress on his left knee.”

7. Dr. Nicholas Olsen performed an IME for Respondents on January 28, 2019. Claimant reported continued left knee pain with ambulation “despite adequate time to heal a stress fracture of the fibula.” Examination of the left knee showed significant tenderness around the fibular head and the peroneal nerve. There was a positive Tinel’s sign and some findings in the L4 distribution, which suggested injury to the peroneal nerve at the knee. Dr. Olsen opined “[Claimant’s] left knee complaints are work-related.” Dr. Olsen thought a peroneal nerve neuropraxia or contusion probably explained his symptoms of numbness and tingling.

8. Claimant was referred to Dr. Thomas Centi in January 2020 for an evaluation of MMI and impairment. Dr. Centi determined Claimant was not at MMI, in part because of issues related to the left knee. Dr. Centi recommended an updated left knee MRI and possible orthopedic referral depending on the results.

9. Dr. David Hahn performed a right BKA on August 4, 2020. After the BKA, Claimant’s physicians turned their attention more specifically to the persistent left knee symptoms.

10. Claimant started seeing Dr. Kareem Sobky for the left knee on September 2, 2020. He described chronic lateral left knee pain “since the injury.” He reported lateral sided locking and catching, swelling, and giving way. He was also having more pain in the patellofemoral articulation and episodic “large effusions.” Dr. Sobky noted Claimant’s left knee injury had been largely untreated because of the predominant focus on the right leg. Dr. Sobky opined, “[Claimant] has definitely [been] stressing the left knee as he has been putting all of his weight on that side. It is also likely that he has worsened problems in the left knee as the patellofemoral chondromalacia as he has really been unable to bear weight on the right lower extremity for years now.” Dr. Sobky ordered an MRI and administered a steroid injection to the left knee.

11. At a follow-up appointment on December 4, 2020, Dr. Sobky noted Claimant had received his right left prosthesis “but is bearing significant weight on his left side so his left knee is very irritated. He is working diligently with the prosthesis and fitting but unfortunately the left knee is just taking the brunt of the weight and is really aggravated.” The previous injection had only lasted two weeks, so Dr. Sobky injected the left knee with different medication “to see if we can give him longer-lasting symptomatic relief.” Dr. Sobky opined Claimant would probably need a total knee replacement for his “post-traumatic osteoarthritis,” although the high risk of infection was a major concern.

12. Dr. Sobky has continued to treat Claimant’s left knee symptomatically, primarily with periodic injections and bracing.

13. Dr. Olsen performed another IME for Respondents on October 18, 2021. Dr. Olsen acknowledged Claimant suffered a nondisplaced intraarticular fracture of the left fibular head and a bone marrow contusion of the lateral tibial plateau from the work accident. But he opined the fibular head fracture had fully healed and Claimant's ongoing left knee symptoms were solely related to "end-stage" osteoarthritis. Dr. Olsen stated the accident did not aggravate Claimant's underlying arthritis and his ongoing symptoms reflected the natural progression of his pre-existing condition. Dr. Olsen determined Claimant was at MMI with no impairment related to the left knee. He assigned a 90% lower extremity rating for the right BKA.

14. On December 9, 2021, Dr. Hahn agreed that Claimant reached MMI as of October 18, 2021. Dr. Hahn did not address impairment, as he is not Level II accredited.

15. Respondents referred Claimant to Dr. Douglas Scott for an impairment rating on May 21, 2022. Dr. Scott opined the left fibular head fracture and bone bruise had "healed and resolved." He agreed with Dr. Olsen that Claimant's ongoing left knee complaints were related to osteoarthritis and were not injury-related. As a result, he assigned no impairment for the left knee. Like Dr. Olsen, he provided a 90% lower extremity rating for the right BKA.

16. Respondents filed a Final Admission of Liability (FAL) admitting for the 90% right lower extremity rating. Claimant timely objected and requested a DIME.

17. Claimant saw Dr. John Bissell for the DIME on December 6, 2022. Dr. Bissell agreed Claimant's condition had stabilized and he was at MMI as of October 28, 2021. He also agreed with Dr. Olsen and Dr. Scott that Claimant has a 90% lower extremity impairment for the right BKA. However, he opined Claimant has injury-related permanent impairment to his left knee. Dr. Bissell noted Claimant suffered a left knee fibular head fracture and lateral tibial plateau microfracture. Although those conditions eventually healed, he believed the injury permanently aggravated Claimant's pre-existing osteoarthritis. He pointed to consistent treatment for left knee symptoms since the accident. He emphasized that the accident subjected Claimant's knee to sufficient trauma "to fracture the knee in two places (and strain his gastrocnemius muscle)." Dr. Bissell further noted Claimant was working full duty with no knee-related limitations immediately before the accident despite the pre-existing arthritis. Applying a "but for" analysis, Dr. Bissell determined Claimant would probably still be working full duty, as he had done up until December 2017, had the accident not occurred. Dr. Bissell believed a left total knee arthroplasty would be causally related to the injury, but "it is not clear surgery will ever be possible for him as it poses such a high risk of infection." Therefore, Claimant was at MMI with permanent impairment. Dr. Bissell assigned a 36% lower extremity rating for the left knee. The rating was based on "aggravated osteoarthritis" under Table 40 combined with range of motion deficits.

18. Dr. Olsen testified at hearing consistent with his reports. He emphasized that the fibular head fracture was "outside the knee joint proper," and therefore had no structural impact on the pre-existing osteoarthritis. He noted Claimant had left knee surgery 37 years ago, including repairs to the ACL, MCL, and probably the meniscus. The

prior surgery set the stage for future development of osteoarthritis. Given the pre-existing degenerative changes shown on the initial MRI, Dr. Olsen opined it was inevitable Claimant would eventually develop increasing pain and range of motion deficits, unrelated to the accident. He did not believe the work accident aggravated or accelerated the underlying osteoarthritis. Dr. Olsen offered no critique of Dr. Bissell's rating methodology; he simply disagrees that the ongoing knee symptoms are injury-related.

19. Claimant performed physically demanding work for Employer for 14 years, initially as a volunteer firefighter and then as a Fire Chief. He completed quarterly physical performance tests to evaluate his ability to perform tasks including carrying, crawling, operating the Jaws of Life, climbing ladders, and lifting up to 150 pounds. There is no persuasive evidence Claimant's ability to perform his job was limited in any way by left knee symptoms before the work accident. Although Claimant injured his left knee and had surgery in the 1980s, he recovered well and had no problems for more than 30 years before the 2017 injury. Claimant had not previously been diagnosed with osteoarthritis, chondromalacia, or knee instability, and the persuasive evidence shows Claimant's left knee was probably asymptomatic before the work accident.

20. Claimant's testimony regarding his pre-injury functional capacity and lack of left knee symptoms is credible and persuasive.

21. Dr. Bissell's conclusions are consistent with and supported by the opinions of Dr. Sobky and Claimant's credible testimony. Dr. Bissell's opinions regarding Claimant's left knee impairment are credible and more persuasive than the contrary opinions offered by Dr. Olsen and Dr. Scott.

22. Claimant proved by a preponderance of the evidence he suffered a 36% lower extremity impairment to his left knee.

CONCLUSIONS OF LAW

If an injury results in permanent medical impairment, the claimant is entitled to PPD benefits pursuant to §§ 8-42-107(2) and/or 8-42-107(8). The Workers' Compensation Act applies different formulas for calculating PPD depending on whether the body part in question is listed on the "schedule of disabilities." In this case, the parties agree that Claimant suffered purely "scheduled" impairments, which are addressed under § 8-42-107(2). Although the DIME process applies to MMI determinations in all cases, the DIME procedure does not apply to scheduled impairment ratings. *See* § 8-42-107(8)(a); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000). The claimant has the burden to establish scheduled impairment by a preponderance of the evidence. *E.g., Burciaga v. AMB Janitorial Services, Inc.*, W.C. No. 4-777-882 (November 5, 2010). A DIME's determination regarding scheduled impairment is not entitled to special weight but is simply another opinion to consider when evaluating the preponderance of persuasive evidence. *Sanchez de Bailon v. Final Order Pinnacle Foods Corp.*, W.C. No. 5-080-057 (November 10, 2020).

A pre-existing condition does not disqualify a claim for compensation where the industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

As found, Claimant proved he has a 36% scheduled lower extremity rating to the left knee, as determined by Dr. Bissell. Claimant developed significant left knee pain immediately after the accident, which continued unabated to the time of MMI. As Dr. Bissell pointed out, Claimant's experienced direct trauma to his left knee sufficient to fracture the fibular head and cause a microfracture of the tibial plateau. Although the fibular head is not part of the "knee joint proper," the same cannot be said of the tibial plateau. Moreover, Claimant's left knee has endured several years of unusual stress because of overcompensating for the right foot injury. Dr. Sobky is persuasive that the lengthy period of altered gait mechanics probably aggravated Claimant's underlying osteoarthritis. Although Claimant had advanced osteoarthritis in his left knee immediately before the industrial accident, it was asymptomatic and nondisabling despite engaging in physically demanding work. The opinions of Dr. Bissell and Dr. Sobky are credible and more persuasive than the contrary opinions offered by Dr. Olsen and Dr. Scott. No physician has pointed to any flaw in Dr. Bissell's rating methodology, aside from the causation determination. Dr. Bissell's rating is consistent with the AMA Guides and appropriately quantifies the permanent left knee impairment caused by the work accident.

ORDER

It is therefore ordered that:

1. Insurer shall play Claimant PPD benefits based on a 36% left knee scheduled rating.

2. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 2, 2023

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-201-695-005

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he is permitted to recover penalties against Respondent for wrongfully withholding benefits pursuant to §8-43-304(1), C.R.S. or §8-43-401(2)(a), C.R.S.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties pursuant to §8-43-207(1)(p), C.R.S. for Respondent's failure to obey ALJ Lovato's December 6, 2022 Order requiring reimbursement of medical expenses.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of disfigurement benefits.

FINDINGS OF FACT

1. Claimant is a 32-year-old male who began working for Employer as an installation technician in October 2019. [Redacted, hereinafter RS] is the sole owner of Employer. Claimant and RS[Redacted] were Employer's only employees in March 2022.

2. On March 3, 2022 Claimant was repairing a surveillance camera on the side of a house at a residential property in Franktown, Colorado. Claimant fell from a ladder, landed on his heels and shattered both heel bones.

3. Claimant underwent an open reduction internal fixation of the bilateral calcaneus fractures on March 5, 2022. Jeremy Christensen, DPM, of Rock Canyon Foot & Ankle, performed the surgery.

4. On December 6, 2022 ALJ Lovato issued Findings of Fact, Conclusions of Law and Order (Order) in this matter. She determined that Claimant's March 3, 2022 injuries were compensable and he was entitled to receive reasonable, necessary and related medical treatment. The Order specifically required Respondent to "reimburse Claimant for any medical expenses related to his March 3, 2022, injury." However, ALJ Lovato noted that, although multiple invoices and bills were admitted into evidence, it was unclear "what amounts have been paid, and what amounts are outstanding." The Order explained that, because ALJ Lovato was unable to determine Claimant's outstanding medical expenses, "[c]ounsel for Claimant and Respondent shall confer regarding the medical expenses. If the parties are unable to reach an agreement, either Claimant or Respondent may file an Application for Hearing on this issue."

5. RS[Redacted] testified at the hearing in this matter. He admitted to the contents of several email communications with Claimant's counsel regarding satisfaction of ALJ Lovato's December 6, 2022 Order. RS[Redacted] also acknowledged receiving all the medical bills and the itemized ledger of medical expenses from Claimant's counsel. He did not dispute

the amount of medical benefits. Finally, RS[Redacted] recognized that, despite the attempts of Claimant's counsel to confer, he has not paid any of the outstanding medical bills.

6. The record reveals the following itemized list of Claimant's medical expenses as a result of his March 3, 2022 injury:

Dane Raggio - Medical Bills		
DOS	Provider	Amount
3/7/22	TraumaOne, PC	$221.00
4/29/22	Marrington Medical Consultants, LLC	$964.04
3/4/22-3/8/22	Colorado Surgical & Critical Care Assoc.	$2,598.00
3/4/22-3/8/22	Physican Pain Consultants	$1,586.00
3/8/22-3/11/22	Westminster Rehab	$4,350.00
3/3/22-3/8/22	Castle Rock Adventist Hospital	$49,597.02
3/14/22/4/21/22	Rock Canyon Foot & Ankle Clinic, LLC	$3,282.00
11/15/22	John S. Hughes, MD	$2,750.00
	Total:	**$65,348.06**

As reflected in the preceding chart, Claimant's uncontroverted medical expenses total $65,348.06.

7. In her December 6, 2022 Order, ALJ Lovato also found that "Employer does not currently maintain a workers' compensation insurance policy, nor did Employer have workers' compensation insurance on March 3, 2022." ALJ Lovato thus determined that Respondent "shall pay $1,048.80 in penalties for failure to admit or deny liability." She noted that 50% of the penalties were to be paid to Claimant and 50% to the Subsequent Injury Fund. Respondent admitted that he has not paid any penalties either to Claimant or to the Subsequent Injury Fund.

8. Claimant testified at the hearing in this matter. He explained that, as a result of his March 5, 2022 surgery, he has approximately five-inch-long scars on the outside of both feet. Claimant remarked that the scars are painful, discolored, thick, and raised from the surface of the skin.

9. Claimant has demonstrated it is more probably true than not that he is permitted to recover penalties against Respondent for wrongfully withholding benefits pursuant to §8-43-401(2)(a), C.R.S. On January 4-5, 2023 Claimant's counsel conferred with RS[Redacted] regarding the outstanding amounts owed and provided a detailed list of outstanding medical expenses. RS[Redacted] testified that he received all of Claimant's medical records, bills and an itemized ledger of medical expenses. He did not dispute the amount or authenticity of Claimant's outstanding medical bills, and otherwise made no attempt to confer about the amount of reimbursement. RS[Redacted] also testified that he understood ALJ Lovato's Order required him to pay Claimant's outstanding medical expenses. Finally, RS[Redacted]acknowledged he has not paid any of Claimant's outstanding medical bills.

10. Because over six months have elapsed since ALJ Lovato's order, Respondent's failure to reimburse Claimant has surpassed the 30-day time limit by over five months. A

reasonable Respondent would neither fail to pay penalties and benefits lawfully imposed by an ALJ nor ignore Claimant's attempts to confer regarding compliance with a court order.

11. Respondent admittedly failed to pay Claimant's medical expenses. RS[Redacted] detailed that he has not paid Claimant's medical expenses because he was waiting until he received additional funding from a bank or other source. However, the convenience or ability of a respondent to pay benefits is not dispositive. Notably, if Respondent required additional time to seek funding, RS[Redacted] could have sought assistance from the court by filing an application for hearing on the issue of Claimant's medical expenses or simply conferred with undersigned counsel. However, Respondent, chose to ignore counsel and failed to take any action to comply with ALJ Lovato's order.

12. Based on a review of the record, penalties pursuant to §8-43-401(2)(a), C.R.S. are appropriate. The preceding statute provides for penalties of eight percent of the amount of wrongfully withheld benefits. Employer failed to act as a reasonable respondent in neglecting to comply with ALJ Lovato's December 6, 2022 Order. Specifically, the record reveals that RS[Redacted] knowingly did not confer or make any attempt to reimburse Claimant for his medical expenses. Claimant's outstanding medical expenses total $65,348.06. Eight percent of $65,348.06 yields a statutory penalty of $5,227.84.

13. The court is further empowered to order any "sanctions provided in the Colorado rules of civil procedure, except for civil contempt pursuant to rule 107 thereof, for willful failure to comply with any order of an administrative law judge." §8-43-207(1)(p), C.R.S. Furthermore, under C.R.C.P. 37(b)(2), if a party "fails to obey an order" the court may order that party "to pay the reasonable expenses, including attorney's fees, caused by the failure," unless "the failure was substantially justified." Although there is little dispute that Respondent failed to obey ALJ Lovato's December 6, 2022 order, additional penalties are not warranted at this time. The penalty of $5,227.84 is sufficient to penalize Employer's violation of the law and encourage future compliance without being excessively punitive. Fifty percent of the penalty shall be paid to Claimant and fifty percent to the Subsequent Injury Fund.

14. Claimant has proven it is more probably true than not that he is entitled to an award of disfigurement benefits. As a result of his work injury, Claimant sustained serious, permanent scarring on parts of his body normally exposed to public view. He exhibited approximately five-inch-long scars on the lateral aspects of both feet because of the surgery performed by Dr. Christensen as necessitated by his work injuries. Claimant credibly testified that the scars are painful, discolored, thick, and raised off the surface of the skin. Because Claimant has sustained serious permanent disfigurement to areas of the body normally exposed to public view, he is entitled to additional compensation. Insurer shall pay Claimant $2,500.00 for the disfigurement.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is

that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Penalties

4. In cases where penalties are premised on an order requiring payment of medical benefits, the ALJ may impose penalties based on either §8-43-401(2)(a), C.R.S. or §8-43-304(1), C.R.S.; *Giddings v. Indus. Claim Appeals Off.*, 39 P.3d 1211, 1213 (Colo. App. 2001). In the present matter, ALJ Lovato ordered Respondent to pay Claimant's medical benefits pursuant to §8-42-101(6)(a)-(b), C.R.S. The preceding statute provides that if a respondent fails to furnish medical benefits for a claim that is admitted or found to be compensable, "the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided." Because ALJ Lovato's Order was premised on the payment of Claimant's outstanding medical expenses for a compensable claim, penalties may be imposed under either §8-43-401(2)(a) or §8-43-304(1), C.R.S.

5. Section 8-43-304(1), C.R.S. authorizes the imposition of penalties not to exceed $1000 per day if an employee or person "fails, neglects, or refuses to obey any lawful order made by the director or panel." A person fails or neglects to obey an order if she leaves undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under §8-43-304(1), C.R.S. even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001).

6. Pursuant to §8-43-401(2)(a), C.R.S. all insurers and self-insured employers "shall pay benefits within thirty days after any benefits are due." If a respondent "knowingly delays payment of medical benefits for more than thirty days or knowingly stops payments, such insurer or self-insured employer shall pay a penalty of eight percent of the amount of wrongfully withheld benefits." *Id*. The imposition of penalties is governed by an objective standard of negligence. As such, it is measured by the reasonableness of the respondent's actions "and does not require knowledge that conduct was unreasonable or in bad faith."

Pueblo School Dist. No. 70 v. Toth, 924 P.2d 1094 (Colo. App. 1996). Penalties may thus be assessed against a respondent for neglecting to take action that a reasonable respondent would take to comply with a lawful order. *Id*.

7. An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital,* W.C. No. 4-619-954 (ICAO. May 5, 2006). However, any penalty assessed should not be excessive or grossly disproportionate to the conduct in question. When determining the penalty, the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the other party and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products v. Indus. Claim Appeals Off.,* 126 P.3d 323 (Colo. App. 2005).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he is permitted to recover penalties against Respondent for wrongfully withholding benefits pursuant to §8-43-401(2)(a), C.R.S. On January 4-5, 2023 Claimant's counsel conferred with RS[Redacted] regarding the outstanding amounts owed and provided a detailed list of outstanding medical expenses. RS[Redacted] testified that he received all of Claimant's medical records, bills and an itemized ledger of medical expenses. He did not dispute the amount or authenticity of Claimant's outstanding medical bills, and otherwise made no attempt to confer about the amount of reimbursement. RS[Redacted] also testified that he understood ALJ Lovato's Order required him to pay Claimant's outstanding medical expenses. Finally, RS[Redacted] acknowledged he has not paid any of Claimant's outstanding medical bills.

9. As found, because over six months have elapsed since ALJ Lovato's order, Respondent's failure to reimburse Claimant has surpassed the 30-day time limit by over five months. A reasonable Respondent would neither fail to pay penalties and benefits lawfully imposed by an ALJ nor ignore Claimant's attempts to confer regarding compliance with a court order.

10. As found, Respondent admittedly failed to pay Claimant's medical expenses. RS[Redacted] detailed that he has not paid Claimant's medical expenses because he was waiting until he received additional funding from a bank or other source. However, the convenience or ability of a respondent to pay benefits is not dispositive. Notably, if Respondent required additional time to seek funding, RS[Redacted] could have sought assistance from the court by filing an application for hearing on the issue of Claimant's medical expenses or simply conferred with undersigned counsel. However, Respondent, chose to ignore counsel and failed to take any action to comply with ALJ Lovato's order.

11. As found, based on a review of the record, penalties pursuant to §8-43-401(2)(a), C.R.S. are appropriate. The preceding statute provides for penalties of eight percent of the amount of wrongfully withheld benefits. Employer failed to act as a reasonable respondent in neglecting to comply with ALJ Lovato's December 6, 2022 Order. Specifically, the record reveals that RS[Redacted] knowingly did not confer or make any attempt to reimburse Claimant for his medical expenses. Claimant's outstanding medical expenses total $65,348.06. Eight percent of $65,348.06 yields a statutory penalty of $5,227.84.

12. As found, the court is further empowered to order any "sanctions provided in the Colorado rules of civil procedure, except for civil contempt pursuant to rule 107 thereof, for willful failure to comply with any order of an administrative law judge." §8-43-207(1)(p), C.R.S. Furthermore, under C.R.C.P. 37(b)(2), if a party "fails to obey an order" the court may order that party "to pay the reasonable expenses, including attorney's fees, caused by the failure," unless "the failure was substantially justified." Although there is little dispute that Respondent failed to obey ALJ Lovato's December 6, 2022 order, additional penalties are not warranted at this time. The penalty of $5,227.84 is sufficient to penalize Employer's violation of the law and encourage future compliance without being excessively punitive. Fifty percent of the penalty shall be paid to Claimant and fifty percent to the Subsequent Injury Fund.

Disfigurement

13. Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." A disfigurement, for Workers' Compensation purposes, is "an observable impairment of the natural appearance of a person." *Arkin v. Indus. Com'n of Colo.*, 358 P.2d 879, 884 (Colo. 1961). If scars are apparent in swimming attire a disfigurement award is appropriate. *See Twilight Jones Lounge v. Showers,* 732 P.2d 1230, at1232 (Colo. App. 1986).

14. As found, Claimant has proven by a preponderance of the evidence that he is entitled to an award of disfigurement benefits. As a result of his work injury, Claimant sustained serious, permanent scarring on parts of his body normally exposed to public view. He exhibited approximately five-inch-long scars on the lateral aspects of both feet because of the surgery performed by Dr. Christensen as necessitated by his work injuries. Claimant credibly testified that the scars are painful, discolored, thick, and raised off the surface of the skin. Because Claimant has sustained serious permanent disfigurement to areas of the body normally exposed to public view, he is entitled to additional compensation. Insurer shall pay Claimant $2,500.00 for the disfigurement.

Payment to Trustee or Posting of Bond

15. Under §8-43-408(2), C.R.S. an employer must pay to the trustee of the Division of Workers' Compensation (Division) an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. Alternatively, "employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado."

16. This Order awards no ongoing benefits, so the present value equals the total benefits awarded. The Order awards medical benefits of $65,348.06, penalties of $5,227.84 and disfigurement benefits of $2,500.00 for total compensation of $73,075.90. Respondent is thus required to pay the trustee of the Division a total amount of $73,075.90. In the alternative, Respondent may file a bond with the Division signed by two or more responsible sureties approved by the Director or by a surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The

Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to mariya.cassin@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent shall reimburse Claimant for reasonable and necessary medical benefits totaling $65,348.06.

2. Respondent shall pay $5,227.84 in penalties. Fifty percent of the penalty shall be paid to Claimant and fifty percent to the Subsequent Injury Fund.

3. Respondent shall pay Claimant $2,500.00 in disfigurement benefits.

4. In lieu of payment of the above compensation and benefits to Claimant, Employer shall:

a. Deposit the sum of $73,075.90, adding 4% per annum, with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, c/o Mariya Cassin, 633 17th St. Suite 400, Denver, CO 80202; or

b. File a bond in the sum of $73,075.90 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation, or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

c. Respondent shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Respondent of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

5. Respondent shall pay statutory interest at the rate of 8% per annum on benefits not paid when due.

6. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or order authorizing distribution provides otherwise.

7. Pursuant to §8-42-101(4), C.R.S. any medical provider or collection agency shall immediately cease any further collection efforts from Claimant because Respondent is solely liable and responsible for the payment of all medical costs related to Claimant's work injuries.

8. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-197-307-004

ISSUES

I. Whether the claimant has proven by a preponderance of the evidence she is entitled to temporary disability benefits.

II. Whether the claimant is responsible for her termination and not entitled to temporary disability benefits.

III. The claimant's average weekly wage.

STIPULATIONS

- The parties stipulated that if the claimant is awarded temporary disability benefits, they will work together to determine the amount of TTD and TPD that is payable.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. The claimant worked for the employer as an overnight supervisor for a women's shelter.
2. Despite her supervisory role, the claimant also performed physical tasks as a shelter aid, including lifting up to 50 pounds. Examples of her lifting tasks include assisting with food deliveries, such as carrying 6-gallon boxes of milk weighing about 50 pounds, cleaning the facility (including mopping and sweeping), packing residents' belongings into totes (some weighing over 25 pounds), and setting up and taking down cots. These tasks required the use of both upper extremities.
3. On February 4, 2022, while working at the women's shelter, the claimant began implementing the shelter's new policy that required all shelter residents, and potential residents, to have their belongings searched for the safety of everyone in the shelter. At about 8:30 a.m., a potential resident named [Redacted, hereinafter NM] arrived. NM[Redacted] is a man, that identifies as a woman. NM[Redacted] was informed by the claimant that her belongings needed to be searched before being admitted to the shelter. NM[Redacted] refused. Therefore, the claimant told NM[Redacted] that she could not stay at the shelter.
4. After telling her that she could not stay at the shelter, NM[Redacted] launched an unprovoked assault against the claimant. Without warning NM[Redacted] threw a right-hand punch at the claimant. The first punch narrowly missed the claimant's head.

Subsequently, NM[Redacted] forcefully grabbed hold of the claimant's long braided hair with her left hand to gain control of the claimant's head, and then threw another right hand punch that struck the left side of the claimant's head. In response to this vicious assault, the claimant moved backwards through a doorway that was behind her, while NM[Redacted] kept advancing, and maintained her grasp of the claimant's hair. While being assaulted, the claimant started fighting back. The claimant tried to hit NM[Redacted], but NM[Redacted] lost her balance and started falling towards the ground. While NM[Redacted] was still falling towards the ground, the claimant tried to hit her one more time, and then tried once again the instant NM[Redacted] landed on the ground. The time the claimant spent trying stop the attack by hitting NM[Redacted] was about 2 seconds. Throughout the assault, the claimant reasonably believed her safety was at risk and had no reason to believe that NM[Redacted] intended to cease the attack – even while NM[Redacted] was falling to the ground and was on the ground for a moment.

5. As NM[Redacted] fell to the floor, a female coworker intervened, placing herself between NM[Redacted] and the claimant. Right after falling, NM[Redacted] swiftly rose and lunged towards both the coworker and the claimant, attempting to resume the assault.
6. After lunging towards the co-worker and the claimant, the co-worker attempted to take control of the situation by yelling at the assailant and motioning her to leave. About a second later, both the co-worker and the claimant attempted to pull NM[Redacted] out of the room and through the doorway so she would leave the shelter. This attempt lasted about a second. While NM[Redacted] started walking away, it appears the claimant tried to take control of the situation by yelling at NM[Redacted] to get out of the shelter. Based on the claimant's actions, NM[Redacted] stopped assaulting her and began to leave the shelter.
7. Throughout the violent assault, the claimant's actions focused on self-defense and thwarting the assailant's intentions. The assailant's actions, including forcefully grabbing the claimant's hair and striking her head with a closed fist showed an intent to cause severe bodily harm. Had the claimant not defended herself and effectively persuaded the assailant to cease the attack through her fighting back, vocalizations, and body language, the extent of the claimant's injuries could have been far more severe.
8. Moreover, the fact that the claimant defended herself and attempted to stop the assault by trying to hit NM[Redacted], even when NM[Redacted] landed on the floor, during an approximate 2-second period, was reasonable and appropriate as demonstrated by NM[Redacted] standing up and then lunging at the claimant - in an attempt to continue the assault.
9. At no time did the claimant become the aggressor. All actions taken by the claimant were reasonable and necessary to defend herself from the vicious assault.
10. [Redacted, hereinafter NL], representing the employer's HR department, provided testimony on behalf of the employer. She stated that comprehensive new hire training was provided to employees, encompassing de-escalation techniques, establishing

boundaries, personal safety measures, and thorough review of the employee handbook.

11. The employer's Codes of Conduct, as outlined in section 3.11, explicitly prohibits threats or acts of violence from employees towards fellow employees, clients, volunteers, vendors, and others acting on behalf of the agency. Workplace violence encompasses verbal or physical threats, intimidation, and aggressive physical contact that may result in injury or harm to an individual's life, well-being, family, or property. NL[Redacted] testified that violations of the code of conduct could lead to termination and emphasized the gravity of such decisions, which are only reached after a comprehensive investigation. She also stated that she personally reviewed video footage of the altercation and conducted interviews with staff before the claimant's termination. NL[Redacted] did not, however, discuss the matter with the claimant.

12. NL[Redacted] also stated during her testimony that she believed that at some point the claimant became the aggressor in the altercation. She cited the claimant's continued striking of NM[Redacted], even when NM[Redacted] was on the ground. Additionally, NL[Redacted] pointed out various factors, such as the claimant's failure to retreat to a larger room after the participant started walking away, her persistent verbal confrontation, her pursuit of the participant despite physical restraint by another employee, and her body language suggesting aggressiveness. She also stated that no evidence suggested that the claimant sought to protect other employees from the assailant through her body language.

13. Upon determining that the claimant had violated the Codes of Conduct, the employer immediately terminated the claimant’s employment on the day the claimant was assaulted and injured.

14. In essence, the employer contends that once NM[Redacted] fell to the ground, she no longer posed a threat, thereby rendering the claimant's continued defensive actions, including attempts to hit her to defend herself within a brief two-second timeframe, unjustifiable. The employer also contends that the claimant transitioned from a victim to an aggressor by orally confronting the assailant and persuading the assailant to stop the attack and leave the shelter.

15. The court’s view of the assault against the claimant, and her actions of defending herself, differs significantly from the employer's. The ALJ does not perceive the assault in the same context as the employer. Instead, the ALJ finds that the claimant responded reasonably by fighting back, attempting to strike the assailant, and vocalizing commands to halt the assault. It was precisely the claimant's active resistance, body language, and vocal intervention that effectively stopped the assault and prevented the assailant from inflicting further harm upon the claimant and possibly others.

16. The employer argues that they consistently instruct employees in de-escalation techniques. That said, these techniques address verbal confrontations rather than physical violent assaults against employees.

17. NL[Redacted] conceded during cross-examination, that they do not provide their employees any training on how an employee is to defend themselves during a physical

assault. Nor do they have a specific policy outlining exactly what to do when assaulted by someone – let alone what to do when the assailant intends to cause great bodily harm.

18. In addition, during her cross-examination, NL[Redacted] was asked whether she agreed that NM[Redacted], who is a man that identifies as a woman, appeared much taller and bigger than the claimant. Despite the video evidence, which shows NM[Redacted] is much taller than the claimant, NL[Redacted] would not admit that the assailant was taller than the claimant. Instead, she said the camera angle made it hard to tell. Her evasiveness and refusal to agree that the video clearly shows that NM[Redacted] is much taller than the claimant greatly diminishes NL's[Redacted] credibility as it relates to the employer's policies, enforcement of their policies, her interpretation of the video, and the basis for terminating the claimant.

19. The claimant testified that following the punch to the head, she experienced disorientation and received no immediate assistance. Recognizing the need to safeguard herself, she engaged in self-defense. While falling and being separated from the assailant, she threw some punches to defend herself. The perception of the claimant was that the assailant exhibited no signs of surrender and did not express any intention to cease the assault-even when he fell to the ground. The ALJ finds the claimant's perceptions and actions to be reasonable and appropriate under the circumstances. The ALJ also finds the claimant's testimony to be credible.

20. The claimant had never received instructions or protocols from the employer to refrain from protecting oneself if being physically assaulted. Nor was any guidance or training provided for self-defense techniques.

21. The first person the claimant spoke to after the assault was [Redacted, hereinafter SK], the director. The first thing SK[Redacted] said was "please tell me you did not hit him back."

22. The ALJ finds that the claimant's actions actually de-escalated the situation. In other words, given the circumstances, the claimant's defensive actions, body language, and vocalizations neutralized the threat posed by the assailant. And although the claimant sustained substantial injuries, the claimant's resistance, body language, and vocalizations likely minimized the extent of her injuries.

23. At no point did the claimant assume the role of an aggressor. She reacted to an assault and attempted to protect herself the best way she knew how, and such actions were completely reasonable under the circumstances.

24. Claimant testified about her job duties. As found above, the claimant worked for the employer as an overnight supervisor for a women's shelter. But, despite her supervisory role, the claimant also performed physical tasks as a shelter aid, including lifting up to 50 pounds. Examples of such tasks included assisting with food deliveries, such as carrying 6-gallon boxes of milk weighing about 50 pounds, cleaning the facility (including mopping and sweeping), packing residents' belongings into totes (some weighing over 25 pounds), and setting up and taking down cots.

25. On February 4, 2022, the day of the assault, the claimant presented to Denver Health with primary complaints of pain involving her right forearm, wrist, and hand. The

Claimant was evaluated and underwent x-rays, which were normal. Claimant was given a splint to wear and provided restrictions. The claimant was restricted from lifting anything with her right arm until February 7, 2022. Claimant was also advised to return to the ER or urgent care if her symptoms worsened.

26. The day after the assault, the claimant's condition worsened so she returned to Denver Health. At this visit, the claimant complained of headaches, blurred vision, nausea, and right sided pain in her shoulder, arm, and hand.

27. On February 7, 2022, the claimant presented to Concentra. At this visit, the claimant complained of a headache, dizziness, blurred vision, neck pain, and right arm pain. After being evaluated, the assessment included a right shoulder strain, right forearm strain, right wrist strain, cervical strain, head contusion, face contusion, migraine, and right scapula pain. The claimant was prescribed various medications, physical therapy, and referred to a psychologist due to the assault. The claimant was restricted to performing modified duty from February 5, 2022, to her next follow up appointment. Her restrictions included no lifting.

28. On February 11, 2022, the claimant returned to Concentra with similar complaints that included severe pain in her neck, upper back, and right arm. She was also suffering from a lot of anxiety due to the assault. It was also noted that the Claimant had not been working since the assault. After assessing the claimant, her work restrictions were continued. The claimant was limited to modified duty and no lifting greater than 2 pounds with her right upper extremity.

29. On February 18, 2022, the claimant returned to Concentra. At this visit, it was noted that the claimant was adhering to the work restrictions as prescribed. At this visit, the claimant still complained of headaches, neck pain, right shoulder and scapula pain, right wrist, as well as stress and adjustment reaction resulting in not sleeping due to stress. The report also indicates that the claimant had also been working as a hairstylist, braiding hair, but that she had to cancel appointments because she cannot use her right wrist. Her work restrictions of no lifting or carrying anything greater than 2 pounds and no reaching overhead were continued.

30. On March 11, 2022, another referral was made for the claimant to see a psychologist.

31. As of March 18, 2022, the claimant had been working for the [Redacted, hereinafter SA] for the past weeks and had also been working at a Covid testing center, and both jobs, at that time, allowed her to work within her restrictions. Her restrictions were increased, and she could lift up to 5 pounds with her right upper extremity.

32. As a result of her injuries, and after the assault, the claimant could not perform her regular job duties at the shelter that required lifting up to 50 pounds and her inability to perform her regular job duties exceeded three days.

33. On the day of the assault, and shortly after the claimant's discharge from the hospital, the employer terminated claimant. The employer terminated the claimant for being in a "physically violent altercation with a participant" because the employer thought that the claimant's actions were "inappropriate, unprofessional, and do not condone how we treat participants at [Redacted, hereinafter CC]." According to the employer, the

Claimant's actions of defending herself violated their code of conduct and workplace policies.

34. The employer submitted portions of their code of conduct and workplace policies. The portions they provided set forth the expectations for each employee as well as a section about preventing violence in the workplace. The conduct policy provides the following:

> *Conduct Expectations*:
>
> Certain standards are necessary for efficient operation of the Agency, for the benefit and protection of the rights and safety of Agency employees, and to reflect respect for those individuals and families coming to the Agency for services. Conduct that interferes with operations or brings discredit to the Agency will not be tolerated whether it occurs on or off Agency time or Agency property. CC[Redacted] expects from its employees the highest standards of competence, loyalty and service. In all dealings with clients, the general public and with each other, employees must respect the dignity of each individual. All employees are expected to engage in mutual and cooperative actions in relation to one another. It is vital that clients, visitors, and fellow employees are treated with unfailing courtesy and understanding at all times, regardless of the situation. Employees are expected to conduct themselves professionally and behave in a manner that is respectful of the Vision, Mission and Core Values of CC[Redacted].

35. The policy about violence provides:

> Preventing Violence in the Workplace.
>
> The Agency is committed to providing employees with a safe work environment. Threatened or actual violence by or toward our employees is strictly prohibited on our premises or on a work site. Threats or actual violence by employees is prohibited towards other employees, clients, volunteers, vendors and other people acting on behalf of the Agency. Violence in the workplace may be described as verbal or physical threats, intimidation, and/or aggressive physical contact. Prohibited conduct includes, but is not limited, to the following:
>
> - Inflicting or threatening injury or damage to another person's life, health, wellbeing, family or property;
> - Possessing a firearm, explosive or other dangerous weapon on Agency premises or using an object as a weapon;
> - Throwing objects;
> - Slamming items such as doors, drawers, desks, etc.;
> - Abusing or damaging Agency or employee property;
> - Using obscene or abusive language or gestures in a threatening manner; or,

- Raising voices in a threatening manner.

36. As found above, the claimant was terminated for how she defended herself. Moreover, the act of defending herself from a violent assault, in the manner she did, would not reasonably be expected to cause the loss of employment. In other words, defending yourself against a violent assault by fighting back and yelling at the assailant would not be expected to cost you your job.

37. The ALJ finds that the policies submitted by the employer do not apply to the circumstances of this case, defending oneself during an assault, and how the claimant defended herself.

38. The ALJ is mindful that in some cases, an assault victim can cross the line and become the aggressor. But in this case, the ALJ finds that the claimant did not come close to that line and did not cross that line.

39. Thus, the ALJ finds that the termination was neither reasonable nor warranted under the circumstances. Thus, the claimant is not at-fault for her termination and subsequent wage loss.

40. At the time of her injury, the claimant was working four jobs. The claimant was working for the employer, [Redacted, hereinafter ES], and the SA[Redacted]. The claimant also worked at home braiding hair. The claimant did not, however, seek to have her income from braiding hair included in her average weekly wage.

41. The employer's wage records, that were submitted at the hearing, are from June 19, 2021 through January 28, 2022-which is 223 days. The records show that the Claimant started at an hourly rate of $16.87 per hour, but then got a raise around July 17, 2021, to $19.00 per hour. Therefore, in calculating the claimant's average weekly wage, the ALJ has taken the hours worked from June 19, 2021 through January 28, 2022, and determined the claimant's average weekly wage, based on the higher wage of $19.00 per hour. Between June 19, 2021, and January 28, 2022, the Claimant earned $33,694.51. But based on an hourly rate of $19.00, she would have earned $34,038.50. Therefore, the ALJ has used the higher figure and finds that the claimant's average weekly wage at the employer is $1,068.48.[1]

42. The claimant had concurrent employment at ES[Redacted] at the time of her work injury. In order to determine her average weekly wage from her concurrent employment at the time of the jury, the ALJ will use her gross earnings from 2021. During 2021, the claimant earned $22,374.60 at ES[Redacted]. Dividing her gross earnings by 52 weeks results in an average weekly wage from ES[Redacted] of $430.28.

43. The claimant also worked at the SA[Redacted]. There are wage records that show the claimant earned $855.00, for 42.75 hours of work, at $20.00 per hour, from

[1] $34,038.50/223 days = $152.64 per day. $152.64 x 7 days = $1,068.48 per week. The ALJ also did not include the $350 bonus the claimant received in 2021 since there was no indication that the bonus, and the amount of the bonus, was regularly expected.

January 16, 2022, through January 29, 2022.[2] Therefore, this results in an average weekly wage from the SA[Redacted] of $427.50.

44. While the claimant did not submit wage records from ES[Redacted] that shows the amount she earned from January 1, 2022, through February 4, 2022, the ALJ still finds that the 2021 wages from ES[Redacted] represent a portion of the claimant's earning capacity at the time of the accident. Therefore, based on the three jobs the claimant was working at the time of her injury, the claimant's average weekly wage is found to be $1,926.26.[3]

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim must be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197

---

[2] The ALJ did not include bereavement or public health payments from the SA[Redacted] since those do not appear to be based on hours worked and do not assist in determining loss of earning capacity under the facts and circumstances of this case.

[3] Archdiocese of Denver of $1,068.48, plus ES[Redacted] of $430.28, plus the SA[Redacted] of $427.50, equals $1,926.26.

P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence she is entitled to temporary disability benefits.

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

The claimant's testimony and statements to her medical providers is found to be credible. As found, the claimant worked for the employer as an overnight supervisor for a women's shelter. But despite her supervisory role, the claimant also performed physical tasks as a shelter aid, including lifting weights up to 50 pounds. Examples of such tasks included assisting with food deliveries, such as carrying 6-gallon boxes of milk weighing about 50 pounds, cleaning the facility (including mopping and sweeping), packing residents' belongings into totes (some weighing over 25 pounds), and setting up and taking down cots.

As further found, the claimant was injured on February 4, 2022. Due to her work injury, the claimant was restricted from performing her regular job duties.

- For example, on February 4, 2022, the day of the assault, the claimant presented to Denver Health with primary complaints pain involving her right forearm, wrist, and hand. Based on her injuries, the claimant was restricted from lifting anything with her right arm.
- On February 7, 2022, the claimant presented for additional medical treatment. At this visit, the claimant complained of a headache, dizziness, blurred vision, neck pain, and right arm pain. After being evaluated, the assessment included a right

shoulder strain, right forearm strain, right wrist strain, cervical strain, head contusion, face contusion, migraine, and right scapula pain. The claimant was prescribed various medications, physical therapy, and referred to a psychologist due to the assault. Lastly, the claimant was restricted to performing modified duty from February 5, 2022, to her next follow up appointment and her restrictions included no lifting.

- On February 11, 2022, the claimant returned to Concentra with similar complaints that included severe pain in her neck, upper back, and right arm. She was also suffering from a lot of anxiety due to the assault. It was also noted that the claimant had not been working since the assault. After assessing the claimant, her work restrictions were continued. The claimant was limited to modified duty and no lifting greater than 2 pounds with her right upper extremity.
- Then, on February 18, 2022, the claimant returned to Concentra. At this visit, it was noted that the claimant was adhering to the work restrictions as prescribed. At this visit, the claimant still complained of headaches, neck pain, right shoulder and scapula strain, right wrist, as well as stress and adjustment reaction resulting in not sleeping due to stress. The report also indicates that the claimant had also been working as a hairstylist, braiding hair, but that she had to cancel appointments because she cannot use her right wrist. Her work restrictions of no lifting or carrying anything greater than 2 pounds and no reaching overhead were continued.

Based on the claimant's testimony and the medical records, the ALJ finds and concludes that the claimant has established by a preponderance of the evidence that she is entitled to temporary disability benefits as of February 5, 2022.

II. Whether Claimant was responsible for her termination and not entitled to any temporary disability benefits.

Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if he is aware of what the employer requires and deliberately fails to perform. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

As found, the claimant was violently assaulted by a patron of the shelter. In order to defend herself, the claimant fought back and hit the assailant and yelled at the assailant.

The employer contends that the claimant violated company policies by volitionally hitting and attempting to hit the assailant in self-defense and by yelling at the assailant in an attempt to get the assailant to stop assaulting her and to leave the facility.

The ALJ has watched the surveillance video several times and found that the claimant acted reasonably under the circumstances. The ALJ further found that the claimant's actions would not reasonably be expected to result in someone being terminated – for defending themselves from a violent assault.

The ALJ further found that the policies implemented by the employer to de-escalate situations only pertains to verbal situations and not physical assaults. Moreover, the ALJ further found that the employer did not provide any training for what an employee should do if they are physically and violently assaulted. In fact, the ALJ finds and concludes that it was the claimant's actions of fighting back and yelling at the assailant that de-escalated the situation and caused the assailant to stop assaulting the claimant and begin to leave the facility.

Based on the totality of the evidence, the ALJ finds and concludes that the respondents failed to establish by a preponderance of the evidence that claimant's volitional actions of defending herself make her at-fault for her termination and subsequent wage loss. As a result, the claimant is entitled to temporary disability benefits.

III. The claimant's average weekly wage.

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*,

867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As found, at the time of her injury, the claimant had four jobs. The claimant worked for the employer, the SA[Redacted], ES[Redacted], and braided hair at home. The claimant did not, however, request that her earnings from braiding hair be considered in determining her average weekly wage.

As found, the wage records from the employer that were submitted at the hearing, are from June 19, 2021 through January 28, 2022-which is 223 days. The records show that the claimant started at an hourly rate of $16.87 per hour, but then got a raise around July 17, 2021, to $19.00 per hour. Therefore, in calculating the claimant's average weekly wage, the ALJ took the hours worked from June 19, 2021 through January 28, 2022, and determined the claimant's average weekly wage, based on the higher wage of $19.00 per hour. Thus, between June 19, 2021, and January 28, 2022, the claimant earned $33,694.51. But based on an hourly rate of $19.00, she would have earned $34,038.50. Therefore, the ALJ used $34,038.50 to determine her average weekly wage and finds and concludes that the claimant's average weekly wage at the employer is $1,068.48.

As also found, the claimant had concurrent employment at ES[Redacted]. As set forth in the W-2 submitted by the claimant for 2021, the claimant earned $22,374.60. Dividing her yearly earnings by 52 weeks results in an average weekly wage from ES[Redacted] of $430.28. While the documents from ES[Redacted] cover only 2021, the ALJ still finds and concludes that the claimant was working for ES[Redacted] in 2022 and that earnings from such employer should be included in calculating her average weekly wage.

Lastly, as also found, the claimant concurrently worked at the SA[Redacted]. The wage records from the SA[Redacted] show the claimant earned $855.00, for 42.75 hours of work, at $20.00 per hour, from January 16, 2021 through January 29, 2022. Therefore, this results in an average weekly wage from the SA[Redacted] of $427.50.

The ALJ finds and concludes that the fairest and most equitable way to determine the claimant's average weekly wage based on the evidence submitted at the hearing is to add the average weekly wage from each of the three employers together. As a result, the ALJ finds and concludes that the claimant established by a preponderance of the evidence that she was working three jobs at the time of her accident and that her average weekly wage is $1,926.26.[4]

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

---

[4] Claimant, in her proposed order, contends that the maximum AWW for this claim is $1,738.38. It is, however, up to the parties to determine how the maximum AWW cap applies in calculating the claimant's TTD and TPD benefits since that issue is not before the ALJ.

1. The claimant is entitled to temporary disability benefits from February 5, 2022, until terminated by law.
2. The claimant is not responsible for her termination and is not at fault for her wage loss.
3. The claimant's average weekly wage is $1,926.26.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 5, 2023

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-203-709-002

ISSUES

I. Whether the respondents established by a preponderance of the evidence that the claimant violated a safety rule and are entitled to reduce his indemnity benefits by 50%.

II. Whether the claimant established that the need for treatment of his left knee is reasonably necessary and related to his work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Date of Compensable Accident

1. The claimant sustained a compensable injury on April 20, 2022.

Hiring and Training of Claimant.

2. The Claimant was hired by the employer on January 31, 2022, to work as a forklift driver. Claimant's job duties as a forklift driver included transporting freight, pulling merchandise, replacing freight, filing orders, and controlling freight flow in an indoor warehouse. **RHE J, 171; Hearing Tr. 29, ll. 20-25, Tr. 30, ll. 1-6.**

3. On January 31, 2022, the claimant completed the employer's "Daily Onboarding Quiz- Day One". On February 1, 2022, the claimant completed the employer's "Daily Onboarding Quiz- Day 2". On February 3, 2022, the claimant completed the employer's "Daily Onboarding Quiz- Day 3". **RHE J, 165-170.** Daily Quiz 1 and 3 both outline the importance of a clear workplace and keeping the workplace and floors clean of debris. However, the claimant's job did not involve cleaning debris off the floors. The claimant also acknowledged receipt and understanding of the essential functions of, and an ability to perform, the employer's forklift operator position. **RHE J, 174.**

4. [Redacted, hereinafter KR], the employer's Operations' Manager Over Environmental Health, and Safety testified at the hearing. As the Environment Health and Safety Manager, KR[Redacted] is familiar with the safety training provided to the employer's associates, including the employer's lift operators. **Tr. 68, ll. 23-25, Tr. 69, ll.1-6.** KR[Redacted] credibly testified the employer has a forklift training program complied of Crown[1] videos, subsequent testing, followed by four hours of training on use of the forklift, and additional training for the associate's first 90 days of employment. **Tr. 71, ll. 6-16.** According to KR[Redacted], together with when the employee completes the

[1] Crown is the manufacturer of the forklift involved in the Claimant's accident.

first portion of their forklift training, they are also required to read through the training with the trainer and sign off on it. **Tr. 73, ll. 20-23.** The employer also requires their forklift operators to be certified, which involves watching a manufacturer-specific video, passing a test, completing four additional hours of training with a trainer, with a checklist and training guide, and finally completing a practical exam. **Tr. 74, ll. 1-25, Tr. 75, ll. 1-15.**

Safety Rules

5. The employer did submit into evidence a document titled "General Safe Work Practices." The document contains a few rules that govern the operation of forklifts. But there is not a written rule that says driving a forklift above a certain speed is unsafe and not allowed. It does not appear that the claimant was told such either. In addition, although the document has a place for the claimant's signature, the copy submitted by the employer is not signed by anyone. Therefore, it is not clear that this document was provided to the claimant.
6. The employer failed to submit sufficient and credible evidence to establish that they have any safety rules, whether verbal or in writing, that govern the proper speed the forklift drivers should drive while working in the warehouse.
7. But the claimant did admit during his testimony that going full speed on his forklift down an aisle would violate a safety rule. **Tr. 48, ll. 8-10**.
8. [Redacted, hereinafter AL] testified at the hearing and on behalf of the employer. He testified that about two hours before the accident, he noticed that some pallets looked like they had been "bulldozed." Bulldozing is when a forklift driver pushes empty pallets out of the way with the forks of the forklift. He credibly testified that about two hours before the accident he advised the claimant to not bulldoze any pallets. Thus, the claimant was advised to not bulldoze pallets.

Write-ups - Coaching Events - Enforcement

9. Based on KR'S[Redacted] testimony, on February 10, 2022, the claimant received a coaching for "Failure to follow power equipment operating rules not otherwise covered specifically within this guideline". **RHE J, 201.** The specific incident in which the Claimant was involved was striking a fixed object, in this case, a bollard. **Tr. 67, ll. 21-25.** Following the February 10, 2022, incident, the claimant received additional training relating to the operation of a forklift, going over the employer's safety rules, completing a "safety observation," and spending additional time with a trainer. **Hearing Tr. 82, ll. 11-22.**
10. On March 31, 2022, the claimant again received a coaching for "Failure to follow power equipment operating rules not otherwise covered specifically within this guideline". **RHE J, 200.** According to KR's[Redacted] testimony the March 31, 2022, coaching involved the claimant's improper placement of pallets on the rack. **Tr. 83, ll14-25.** After the claimant received this coaching, his manager asked a driver from a different shift to give the claimant additional safety training on the operation of the forklift. **Tr. 84, ll. 20-25, Tr. 85, ll. 1-4.**
11. On April 13, 2022, the claimant received a Safety Accountability, Step One Safety

Rule Violation, a more severe safety violation than the two occurrences previously received, for careless operation of equipment. **Tr. 85, ll. 2-24, RHE J, 199.** This safety rule violation occurred due to the claimant hitting a sprinkler head while placing a pallet on a shelf. **Tr. 76**. KR[Redacted] testified that accountability is given to the employee, and the training is given after. In this case, after the claimant received the Step One Safety Rule Violation, he "open doored" it with his manager, [Redacted, hereinafter MR]. The open-door process took place the morning of his April 20, 2022, accident. **Tr. 86, ll. 12-22.** The claimant was unhappy or disgruntled about receiving the Safety Rule Violation. **Tr. 109, ll. 10-14.** During their open-door discussion the morning of April 20, 2022, MR[Redacted] emphasized to the claimant the expectation for any lift driver who works for the Employer to hold themselves accountable to a safety-first mindset. **Tr. 111, ll. 4-10.**

12. KR[Redacted] also stated that the claimant has also been coached on his need to meet production requirements or his quota. **Tr. 77, ll. 20-25**. In other words, the employer told the claimant that he had to work faster. Since the claimant's job required him to drive a forklift, the only way for him to improve his production would be to work faster by lifting and placing products on the shelves faster and driving faster.

13. None of the prior write-ups, or coaching, involve the claimant driving too fast. On the contrary, the claimant was coached for not meeting production—working too slow.

14. The employer has surveillance cameras in the warehouse. There was no credible evidence submitted demonstrating the employer attempted to enforce any type of speed limit in the warehouse by reviewing the surveillance tape regularly and advising employees to keep their speed down.

15. Based on KR's[Redacted] testimony, each forklift has a governor that limits its speed to 9 miles per hour. **Tr. 67, ll. 2-3**. Thus, if the employer wanted to make sure that each forklift was always driven slower, no matter how it impacted each driver's production, they could have set the governor at a lower speed. In other words, if 9 miles per hour is too fast, then it would appear the employer had the means to limit the speed - but chose not to. In essence, the employer allowed forklifts to drive up to 9 miles per hour – apparently to assist each driver meet their production quota.

16. None of the claimant's prior write-ups or coaching are found to be willful violations of any of the employer's safety rules. Instead, they merely represent the claimant's lack of experience and skill as an indoor forklift driver and the requirement that he work faster to meet his production or quota.

Accident

17. On April 20, 2022, the claimant, after completing his break, was working in "Module 9" operating a forklift, replenishing freight. After slotting a rack of freight, the claimant brought the forks of his lift down, facing away from him, while making his way to grab the next freight, he came across some type of floor debris, which resulted in a loss of control of the forklift, preventing his forklift from stopping, and causing him to impale his left thigh on a pallet. **Hearing Tr. 34, ll. 13-25, Tr. 35, ll. 1-25, Tr. 36, ll. 1-7.**

18. At the time of the accident, the claimant was driving approximately 4 miles per hour. **Hearing Tr. 55, ll. 19-21.**

19. KR[Redacted] testified that following the claimant's accident, she inspected the accident scene. She also reviewed CCTV footage of the accident, which is included in the record as Exhibits K and L. Based on her observations, KR[Redacted] noted markings on the rack of the module indicating it had been struck by a pallet, she also noticed that paint was removed and there were scratches. Plus, the top pallet was missing a board, which KR[Redacted] believed was the board that impaled the claimant's leg. All the nails and boards on the pallet were shifted as if it occurred on impact. The entire side of the pallet was bent, and every board on the pallet was bent, and the nails pulled as if from a hard direct blow. **Tr. 79, ll. 12-25, Tr. 80, ll. 1-2.** Based on her review of the CCTV video, KR[Redacted] offered her lay opinion that the accident occurred when the claimant pulled replenishment product from the other side of the rack, had a full load of product on his forks, went through the breezeway, traveled 90 feet in five seconds, going full speed, and made contact with a stack of pallets on the ground, and then drove the pallets into the rack of the module. Because the module rack is immobile, the pallet was driven into the claimant's left leg. **Tr. 95, ll. 12-25.** Following the claimant's accident, KR[Redacted] inspected the accident scene. Based on her inspection, she stated that there was some debris covering the floor - which is consistent with the claimant's testimony that the accident might have resulted from debris on the floor. **Tr. 87, ll. 3-8.**

20. The surveillance or CCTV video admitted into evidence and relied on KR[Redacted] to conclude the claimant was driving carelessly and at an excessive speed is of very poor quality. The video appears to be a video taken of the video being played on a monitor. When viewing the video, you can see the timestamp on the video as well as the playback speed. For example, on one video, at about 6:45.37, the video shows a forklift, which is allegedly being driven by the claimant, driving quickly past the end of an aisle. But upon closer inspection of the video, the video is being played back at 4 times the normal speed. Thus, this misrepresents the speed of the forklift seen on the video. The court has also reviewed the video to try to determine the portion of the video that allegedly shows the claimant traveling 90 feet in 5 seconds. However, the ALJ cannot find that portion of the video that arguably shows the claimant traveling very fast and allegedly covering 90 feet in five seconds. For example, there is a section of the video that shows a forklift going down an aisle – and it appears to be going quickly. This is at around 7:03.30 through 7:04.03. But again, a review of the playback speed of this portion of the video shows that it is being played back at 8 times its normal speed. There is also another video which is of better quality, but does not appear to show the claimant speeding or going too fast. As a result, the ALJ does not find the video to be reliable evidence of the speed the claimant was driving at the time of the accident or just before the accident. Thus, because KR[Redacted] relied on the video, which the ALJ does not find persuasive, the ALJ also does not find KR's[Redacted] testimony regarding her contention that the accident was caused by the claimant driving too fast to be reliable or persuasive.

21. There was some testimony about the possibility that the claimant might have been injured while "bulldozing" pallets. Bulldozing is when a forklift driver uses his forklift to push or "bulldoze" empty pallets out of the way. There was, however, a lack of credible evidence that the claimant was injured due to bulldozing pallets.

22. Moreover, there was also testimony from [Redacted, hereinafter CN]. He testified that he visited the claimant in the hospital after the accident. He further testified that the claimant told him that the accident occurred while trying to retrieve a replenishment pallet, he tried to back out and in doing so, struck a stack of empty pallets. **Hearing Tr. 110, ll. 1-8.**

23. The ALJ credits the claimant's testimony that he lost control of the forklift due to debris on the floor and not due to excessive speed or bulldozing pallets. This is supported by the testimony of [Redacted, hereinafter ML] who also testified that there was some debris on the floor after the accident. As a result, the ALJ finds it was an accident - and was not caused by the claimant's willful violation of a safety rule such as speeding or bulldozing.

Medical Treatment after Accident and Knee Complaints

24. After the accident, the claimant was transported by Emergency Medical Services to Kaiser Permanente Hospital where he was diagnosed with a penetrating injury just above the left knee by a wood pallet, with damage to the popliteal artery and vein. **RHE B.** The claimant subsequently underwent removal of the impaled wood from the left popliteal fossa, repair of the popliteal artery and popliteal vein transections with interposition reversed autogenous saphenous vein grafts, irrigation and debridement of wound, closure of muscle fascia, application of negative pressure wound VAC, and lateral closure. **RHE C, 9.**

25. On the day of the accident, and while in the hospital, the claimant also complained of left knee pain. As a result, they took x-rays of his left knee. The x-rays demonstrated small joint effusion, surgical clips, skin staples, and gas within the soft tissues. **RHE C, 28.**

26. While in the hospital, the claimant also noticed knee pain when he started to become mobile. **Tr. 34, ll. 3-6.**

27. The claimant subsequently underwent an extensive course of treatment, including multiple surgeries with skin grafting, and physical therapy, including physical therapy to the left knee, massage therapy, and psychological counseling.

28. On June 7, 2022, the claimant was evaluated by Christopher Amaral, PA-C. At this time, the claimant still had left knee pain and a feeling of instability. As a result of ongoing knee pain and instability, the claimant was referred for physical therapy.

29. On June 20, 2022, the claimant was seen by Oscar Sanders, M.D. for his thigh injury, the wound from the impaling injury, and his symptoms that included knee pain and a feeling of instability in his knee. As for his knee, Dr. Sanders discussed with the claimant the possibility of intra-articular pathology and an MRI to help determine the cause of his knee pain and instability. Dr. Sanders, however, decided to hold off on getting an MRI until after the claimant underwent reconstructive wound care treatments with the plastic surgeon for the thigh wound, but yet directed the claimant to continue with physical therapy for his knee symptoms. **CHE 145-147**.

30. On July 13, 2022, the claimant was again seen by Dr. Sanders. At the appointment, the claimant still had ongoing knee symptoms. After the appointment, Dr. Sanders

completed WC164 form and stated that the work-related diagnosis included a left knee sprain. **CHE 162**.

31. On August 22, 2022, the claimant was seen by Dr. Sanders and his primary complaints involved his left knee. At this appointment, he described an incident where his knee gave out and also indicated that although he has tried to increase his walking, he has to stop about every 10 minutes due to knee pain and that he is using a cane to help him walk. Thus, Dr. Sanders ordered an MRI. **CHE 165-166**.

32. In September 2022, the claimant underwent the left knee MRI ordered by Dr. Sanders. The MRI showed the following:

    a. Chronic grade 2 sprain of the proximal MCL.

    b. A focal full-thickness defect between the proximal MCL and an adjacent medial retinaculum.

    c. Areas of high-grade cartilage loss within the patellofemoral compartment.

    d. Strains of the vastus medialis, vastus lateralis, and biceps femoris.

    e. Small joint effusion.

33. Based on the findings on the MRI, and the claimant's concerns about having a full recovery, he was referred to Dr. Javernick, an orthopedic surgeon, for an evaluation. **CHE 174-175**.

34. Orthopedic surgeon, Dr. Matthew Javernick, evaluated the Claimant on September 21, 2022. In connection with his evaluation, Dr. Javernick reviewed the Claimant's left knee MRI. According to Dr. Javernick, the left knee MRI showed only a small amount of chondromalacia patella, with a focal defect in the MCL, but this was focal did not involve the entirety of the MCL, and clinically was completely stable. Dr. Javernick diagnosed the Claimant with chondromalacia patella with a stable medial collateral ligament, opining the majority of the claimant's complaints are unrelated to the knee, but related to the significant trauma that occurred upstream of the knee. From an orthopedic standpoint regarding the knee, Dr. Javernick's only recommendations were low impact activity and strengthening activities. **RHE F, 111.** It is not clear whether the strengthening activities were to be provided via physical therapy since it does not appear that he wrote the claimant a prescription for physical therapy.

35. On October 4, 2022, the claimant was again seen by Dr. Sanders. At this appointment, Dr. Sander's revised the claimant's diagnosis regarding his knee by including a tear of the medial collateral ligament and chondromalacia of the left patellofemoral joint. He also noted that the claimant was seen by Dr. Javernick and Dr. Javernick did not think the claimant was a surgical candidate. Dr. Javernick thought that the claimant's knee was stable and that the majority, but not all, of the claimant's knee complaints related to the significant trauma that is affecting both the vascular and lymphatic return from the lower leg. Therefore, Dr. Sanders referred the claimant to Dr. Reichhardt for a physiatry consultation to assess the claimant's symptoms, which included his left knee. **CHE 180-181.**

36. On November 16, 2022, Dr. Bernton issued a report setting forth his opinion about the cause of the claimant's knee pain. In his report, Dr. Bernton discussed the findings on examination and on the MRI. Dr. Bernton concluded that the claimant has some chondromalacia in his left knee, but that it is unrelated to the work accident. Thus, he concluded that the claimant's left knee problems are unrelated to his work injury and therefore any need for treatment is not work related. In his report, however, Dr. Berton failed to adequately address any aggravation of the claimant's chondromalacia and also failed to address the possible cause of the claimant's knee pain as Dr. Reichhardt explained in his December 20, 2022, report. Moreover, Dr. Bernton failed to explain the cause of the claimant's knee pain, when his knee pain did not exist before the work accident, and then developed right after the accident. As found, the immediate development of the claimant's knee pain after the accident is documented in the medical records that show the claimant complained of left knee pain on the day of the accident and had x-rays taken of his knee that same day. Dr. Bernton also failed to address whether the effusion in the claimant's knee joint is or is not evidence of an injury. As a result, the ALJ does not find Dr. Berton's opinions and conclusions to be persuasive.

37. On December 20, 2022, the claimant was seen by Dr. Reichhardt. At this appointment Dr. Reichhardt addressed the cause of the claimant's knee pain and the need for medical treatment. Dr. Reichhardt concluded that the claimant's knee pain and need for treatment relates to the work accident. Dr. Reichhardt stated that:

> It is, however, medically probable that his left knee was injured as a result of the accident. Certainly, the force of the blunt penetrating injury could have put sufficient force on his knee to tear the MCL. In addition, his reaction to the trauma potentially could have caused additional injury to the patellofemoral compartment and/or aggravated underlying patellofemoral degenerative changes. In addition, the damage to the quadriceps could have caused worsening of patellofemoral tracking, aggravating any underlying patellofemoral degenerative changes. It is medically probable that his knee pain relates to his work-related injury.

38. The ALJ finds Dr. Reichhardt's opinions and conclusions to be persuasive. His conclusions about the cause of the claimant's knee pain and need for medical treatment considered the force of the accident and the torn MCL demonstrated on the MRI. He also provided additional opinions as to the possible cause of the claimant's knee pain such as the possible aggravation of the patellofemoral compartment or tracking changes caused by the damage to the claimant's quadriceps. Although Dr. Reichhardt cannot provide a definitive cause of the claimant's knee pain, or the pain generator, his thought process is logical and consistent with the underlying medical records and the information available to him at the time of his assessment. Thus, the ALJ finds Dr. Reichhardt's opinion that the work accident caused the claimant's left knee pain and caused the need for medical treatment to be credible and highly persuasive.

39. As a result, the work accident injured the claimant's left knee and caused his knee pain and feeling of instability. Thus, the accident caused the need for medical

treatment to cure and relieve the claimant from the effects of his work-related left knee injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the respondents established that the claimant violated a safety rule and are entitled to reduce his indemnity benefits by 50%.

Section 8-42-112(1)(b), C.R.S. provides for a fifty percent reduction in compensation "where injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." The burden of proof is on the respondents to establish that the claimant willfully violated the safety rule, and resolution of this issue is generally one of fact for determination by the ALJ. *Lori's Family Dining, Inc., v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). An employee's violation of a safety rule need not be considered willful if the employee had some "plausible purpose to explain his violation a rule." *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1995).

A violation which is the product of mere negligence, forgetfulness or inadvertence is not willful. *Johnson v. Denver Tramway Corp.*, 171 P.2d 410 (Colo. 1946). Conduct which might otherwise constitute a safety rule violation may not be willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). Thus, a violation of a safety rule may not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Moreover, in order to establish a safety rule violation, the employer must establish that the adopted safety rule was enforced. *See Lori's Family Dining, Inc., v. Industrial Claim Appeals Office*, 907 P.2d 715, 718 (Colo. App. 1995):

The employer contends that the claimant was driving the forklift at an excessive rate of speed, which violated a safety rule, and that driving too fast resulted in a loss of control and collision with a wooden pallet. To support this contention, the employer has provided various employment records, testimony, and surveillance footage. The ultimate determination of whether the claimant's actions violated a safety rule and whether this violation was the cause of the accident and injuries rests on the weight and credibility attributed to the evidence presented.

After a comprehensive review and analysis of the evidence presented, the ALJ finds and concludes that the employer did not meet their burden of proof by establishing, by a preponderance of the evidence, that there was a safety rule about driving too fast, that the rule was enforced, that the claimant willfully violated the rule, that the claimant was driving too fast, and that the violation caused the accident and the claimant’s injuries.

The ALJ’s opinion is based on several factors. First, there is a lack of credible and persuasive evidence to support a finding that there is a specific rule against driving too fast. Although the claimant agreed that driving full speed down an aisle would violate a safety rule, there is a lack of credible evidence establishing that the employer had such a rule, adopted such a rule, and enforced such a rule. As a result, all that is left is some evidence that driving full speed down an aisle would violate a safety rule.

Second, there is a lack of credible evidence that any rule about driving too fast was enforced. To the contrary, the claimant was coached on his production. In other words, he was coached to increase the speed at which he performed his job. Thus, even if the claimant were driving too fast and the speed of the forklift contributed to the accident, the claimant was coached, encouraged, and directed to work faster – which must have meant he had to drive faster to move more product in a given period of time. As a result, demanding more production would eviscerate or nullify any safety rule about driving speed that could have existed. Thus, the employer's desire for the claimant to work faster not only reveals a lack of any type of rule against driving too fast, but also demonstrates a lack of enforcement of any rule about the speed at which the drivers drive.

Third, each forklift was governed so that it could not be driven over 9 miles per hour. If driving up to 9 miles per hour was too fast to drive in the warehouse, then the employer probably had the ability to govern the speed of each forklift to a speed they determined was safe. Thus, their decision to not limit or govern the speed of each forklift to a lower speed also tends to show the lack of a rule, as well as a lack of enforcement, of any rule that precluded driving 9 miles per hour.

Fourth, the employer relies heavily on the surveillance video and KR's[Redacted] contention that the video shows the claimant driving too fast – or full speed – while performing his job. As found by the ALJ, the surveillance video was not found to be persuasive evidence regarding the speed the claimant was driving at the time of the accident. As found above, the video provided to the court is being played at different speeds at various times. For example, some portions of the video are being played back at 4 times the normal speed and sometimes it is being played back at 8 times the normal speed. The video is also very grainy and of poor quality. Thus, the ALJ did not find the video and KR's[Redacted] interpretation of the video to be persuasive. As a result, the ALJ did not find that the accident was caused by the claimant driving too fast.

Fifth, the ALJ found that the accident was not caused by the claimant driving full speed or driving too fast. The ALJ found that the accident was caused by debris on the floor, which was not left by the claimant.

There was also a contention that the claimant might have been injured while bulldozing pallets, which the employer advised the claimant not to do shortly before the accident. The ALJ, however, has also considered this argument and found that there is a lack of credible evidence to support a finding that the claimant's accident and injuries were caused by him bulldozing pallets.

The ALJ does acknowledge that the employer tries to have a safe working environment and attempts to correct the behavior of its employees in a manner that prevents accidents from happening, and from happening again.

That said, based on the facts and circumstance here, the court finds and concludes that the employer failed to establish by a preponderance of the evidence that the accident was caused by the claimant willfully violating a safety rule.

II. Whether the claimant established that the need for treatment of his left knee is reasonably necessary and related to the work injury.

The claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In this case, the claimant suffered a severe injury to his leg. As found, the claimant was driving a forklift and crashed into a wooden pallet. Crashing into the pallet resulted in a large piece of wood impaling and going through the claimant's left leg - just above his left knee.

Dr. Reichhardt credibly and persuasively concluded that the accident injured the claimant's left knee and necessitated the need for medical treatment. As found, Dr. Reichhardt concluded that:

> It is, however, medically probable that his left knee was injured as a result of the accident. Certainly, the force of the blunt penetrating injury could have put sufficient force on his knee to tear the MCL. In addition, his reaction to the trauma potentially could have caused additional injury to the patellofemoral compartment and/or aggravated underlying patellofemoral degenerative changes. In addition, the damage to the quadriceps could have caused worsening of patellofemoral tracking, aggravating any underlying patellofemoral degenerative changes. It is medically probable that his knee pain relates to his work-related injury.

On the other hand, Dr. Bernton gave the opinion that the claimant's knee complaints are unrelated to the industrial injury. The ALJ, however, did not find Dr. Bernton's opinions on causation to be persuasive for several reasons. First, Dr. Bernton failed to take into consideration and explain how the contemporaneous onset of the claimant's knee pain following the severe accident and injury is inconsistent with a finding that the accident injured the claimant's knee. As found above, the claimant complained of knee pain immediately after the accident and while in the hospital. Moreover, his complaints resulted in x-rays being taken of his knee. Second, Dr. Bernton also failed to consider that the claimant complained of left knee pain when he started putting more weight on his left leg after his numerous surgeries. Third, Dr. Bernton failed to address the fact that the claimant did not have any knee pain or symptoms before the accident and then did have knee pain immediately after the accident.

As a result, the ALJ finds and concludes that the claimant established by a preponderance of the evidence that the accident caused an injury to the claimant's left knee and caused the need for medical treatment involving his left knee. Thus, the ALJ finds and concludes that the claimant is entitled to reasonably necessary medical treatment to cure and relieve him from the effects of the work accident involving his left knee.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The employer failed to establish by a preponderance of the evidence that the claimant violated a safety rule and that his indemnity benefits should be reduced by 50%.
2. The employer shall provide reasonable and necessary medical treatment to cure and relieve the claimant from the effects of the work accident which resulted in an injury to his left knee.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 9, 2023.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-182-400-003

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment on September 10, 2021.

2. Whether Claimant established an entitlement to reasonable and necessary medical benefits to cure or relieve the effects of an industrial injury.

3. Whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability benefits.

4. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is an 85 -year-old woman who worked part-time for Employer distributing food samples to customers at [Redacted, hereinafter SC]. Claimant had performed this type of work for various companies for approximately eight years.

2. Claimant's job duties required her to prepare food, push a wheeled cart weighing approximately 100 pounds from the back of the store into the shopping area, and stand on her feet for approximately six hours per shift.

3. On September 10, 2021, Claimant was working for Employer. During her lunch break, Claimant went to the cafeteria, gave herself an insulin shot, then ate her lunch. After she ate, she went into the restroom. While in a stall in the bathroom Claimant started to sit on a toilet when she fell to the floor onto her left side. Claimant testified at hearing that she did not know what caused her to fall on September 10, 2021.

4. On September 10, 2021, Claimant was taken by ambulance to North Colorado Medical Center (NCMC) where she was examined in the emergency department. Claimant reported she "was at the store in the restroom and her left leg gave out on her." (Ex. 8) Imaging studies demonstrated that Claimant sustained a comminuted intertrochanteric fracture of the left hip requiring surgery. Claimant remained hospitalized until September 25, 2021. (Ex. 8).

5. During her hospitalization, on September 11, 2021, Claimant was examined by Costa Alimonos, D.O., and also reported her leg gave out suddenly when she was injured on September 10, 2021. (Ex. 8).

6. On September 12, 2021, while hospitalized at NCMC, Claimant underwent an occupational therapy evaluation with Mary Swain, OT. Under the heading "Function Prior

to Admission," the occupational therapy report states: "Pt. lives in a Ranch Level house. Pt. reporting independence w/ADL's and IADL's. Pt. ambulates w/SPC [single point cane]." (Ex. 8).

7. Claimant has a history of issues with pain and weakness in her left leg dating to 2019. In October 2019, Claimant was seen at North Colorado Medical Center for left hip pain radiating to her mid-thigh, not associated with any known injury. (Ex. E). Imaging studies demonstrated mild to moderate degenerative changes in the left hip and knee, and lower back. (Ex. E). On October 29, 2019, The nurse practitioner Claimant saw, Maribeth Taylor, NP, indicated these findings could explain Claimant's left leg weakness symptoms, and recommended Claimant consider a cane or walker "if it gets worse." (Ex. F). From this, the ALJ infers Claimant had previously reported left leg weakness.

8. On November 21, 2019, Claimant saw Kelly Sanderford, M.D., at Banner, reporting intermittent stabbing pain in the left thigh, mild pain radiating from her back to her lower leg and thigh. Dr. Sanderford also documented that Claimant had a history of syncope and collapse, without further detail. (Ex. G & J). She reported feeling as if her leg was "going to give out," and pain in her thigh at random times. Dr. Sanderford reviewed Claimant's imaging studies and noted Claimant had minimal arthritis in her hips, but severe degenerative lumbar disease. She suspected Claimant's reported left thigh pain was radicular pain from her back, and recommended an MRI and physical therapy. Dr. Sanderford's diagnosis was lumbago with sciatica on the left side, and pain in the left thigh. (Ex. G & I).

9. An MRI of Claimant's lumbar spine was performed on December 2, 2019, for a diagnosis of left leg pain. The MRI demonstrated "[m]oderate to severe spinal canal stenosis and associated subarticular zone narrowing asymmetric to the left side at L3-4 which could cause irritation/impingement of adjacent descending nerve roots asymmetric to the left side;" and "[m]oderate left L4-5 subarticular zone narrowing which could potentially cause adjacent descending nerve irritation." (Ex. H).

10. At Claimant's physical therapy appointment on December 4, 2019, she reported having pain in the left thigh and buttocks, which began in August 2019. The physical therapist noted Claimant "ambulates into therapy using a SPC [single point cane]. The cane is not adjustable and is too tall for her." The physical therapist recommended Claimant find "a cane that is more appropriate for her height." (Ex. K). Claimant reported pain in her left thigh and buttocks which she indicated began in August 2019, and was not associated with any known event. (Ex. J).

11. On December 20, 2019, Claimant reported to physical therapy that "she doesn't have much pain, just the left leg gives out sometimes." Claimant's stated physical therapy goal was to be able to walk without pain. Claimant also reported she was scheduled to see a back specialist -- Dr. Blatt -- at the end of January 2020. (Ex. L). On January 10, 2020, Claimant reported increasing pain and that she did not feel therapy was helping beyond providing temporary relief that did not last. (Ex. P).

12. On or about January 23, 2020, Claimant saw David Blatt, M.D., a neurologist at the Banner Health Clinic. Dr. Blatt diagnosed Claimant with left lateral thigh pain, IT band/trochanteric bursitis. Dr. Blatt referred Claimant for additional physical therapy. (Ex. O). On January 31, 2020, Claimant reported to physical therapy that she had seen a neurologist who thought her pain was due to bursitis and her IT band, and indicated that the neurologist wanted Claimant to continue physical therapy. (Other than the referral from Dr. Blatt - Ex. O - no records of his evaluation or treatment were offered or admitted into evidence).

13. At hearing, Claimant testified that she did not know the reason she fell on September 10, 2021. Claimant testified she did not report to the NCMC ER physician that her leg “gave out,” when she fell on September 10, 2021, and that she never reported that her leg was “giving out” in 2019. Claimant further testified that prior to her September 9, 2021 injury, she had not owned, borrowed, or used a cane. Claimant’s testimony on these issues is inconsistent with her medical records and is not reliable or credible.

14. Claimant’s medical records indicate Claimant reported her left leg giving out to the ER physician on September 10, 2021. On September 11, 2021, Claimant also reported that her leg "gave out" the following day to a different physician. (Ex. B). Claimant’s testimony that she had never reported her leg giving out in 2019 is also contrary to her medical records. Claimant reported to Dr. Sanderford in November 2019 that she felt that her leg was going to give out; and reported to physical therapy on December 10, 2019 that her “left leg gives out sometimes.” (Ex. G & K). The ALJ finds the contemporaneous medical records from multiple providers more credible and persuasive than Claimant's testimony to the contrary.

15. Claimant’s testimony that she had not used a cane prior to her fall is also inconsistent with her medical records. Specifically, physical therapy records from December 4, 2019 indicate Claimant was using a non-adjustable single point cane that was too tall for her, and the therapist recommended Claimant find an appropriately-sized cane. (Ex. K). After her September 10, 2021 injury, Claimant reported to occupational therapy that she was using a single point cane prior to her injury. (Ex. 8). Given that Claimant’s use of a cane prior to her accident is documented by two different providers, and the level of detail in the physical therapy records related to Claimant’s usage of a cane, the ALJ finds the records more reliable and credible than Claimant’s testimony that she had not previously used a cane.

16. Claimant has not worked since her injury due to continuing issues related to her left hip fracture.

17. Allison Fall, M.D., was admitted as an expert in physical medicine and rehabilitation. Dr. Fall performed an independent medical examination of Claimant at Respondents’ request, and testified by deposition in lieu of live testimony. Dr. Fall opined that the cause of Claimant’s injury was likely due to weakness in supporting her body. Dr. Fall also testified that Claimant’s MRI findings were consistent with an L3-4 nerve irritation that could cause weakness in Claimant’s thigh muscles.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his

employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The evidence establishes that Claimant's injury occurred "in the course" of his employment. That is, it occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014). The issue before the ALJ is whether Claimant's injury "arose out of" his employment.

The "arising out of" element requires a claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

As the Colorado Supreme Court explained in *City of Brighton*, "All risks that cause injury to employees can be placed within three well-established, overarching categories: (1) employment risks, which are directly tied to the work itself; (2) personal risks, which are inherently personal or private to the employee him- or herself; and (3) neutral risks, which are neither employment related nor personal." *City of Brighton*, 318 P.3d at 502.

Employment risks are "risks inherent to the work environment itself." *City of Brighton*, 318 P.3d at 502. Typically, the causal connection between employment risks and employment are obvious. *Id*. The evidence in this case does not establish that Claimant's injury was the result of an "employment risk." No evidence was admitted credibly establishing that the physical condition of the bathroom where Claimant was injured contributed to her injury, or that some action associated with her employment caused her to fall. Claimant's injury does not constitute an "employment risk" because neither the physical condition of the location Claimant was injured, nor a specific work-related activity caused her injury.

Consequently, the compensability of Claimant's September 10, 2021 injury rests on whether it was the result of a personal risk, or a neutral risk. Personal risks are entirely personal or private to the employee herself, such as an employee's preexisting idiopathic medical conditions unrelated to employment. *City of Brighton*, 318 P.3d at 503. Personal risks are generally not compensable unless an exception applies, such as when a "special hazard" of employment contributes to an injury that is primarily caused by a preexisting condition. *Id*.

Neutral risks are those risks that are neither employment nor personal risks, and includes "unexplained falls" (*i.e.*, falls with a truly unknown cause or mechanism). City of Brighton, *supra*. Neutral risks are analyzed under a "but-for" test. That is, an "unexplained fall 'arises out' the employment if the fall would not have occurred but for the fact that the

conditions and obligations of employment placed the employee in the position where he or she was injured." *Id*.

Claimant has failed to establish by a preponderance of the evidence that the fall she sustained on September 10, 2021 was "unexplained," or the result of a "neutral risk." Claimant asserts that the cause of her fall is "unexplained" primarily based on Claimant's testimony that she did not know why she fell. However, the evidence demonstrates it is more likely than not that Claimant fell on September 10, 2021 because of weakness in her left leg, consistent with Claimant's two separate reports to physicians at NCMC that her left leg gave out. As found, Claimant's testimony that she did not report her leg giving out was not credible and was inconsistent with her medical records. Given Claimant's history of left leg weakness, and reports of her leg previously "giving out," the cause of Claimant's fall is more likely than not due to her preexisting idiopathic conditions, that is, a condition personal to Claimant. Thus, the ALJ concludes that Claimant's injury was the result of a personal risk, unrelated to her employment. Claimant has failed to establish that she sustained an injury arising out of the course of her employment with Employer.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish a compensable injury, Claimant's claim for medical benefits is denied and dismissed.

TEMPORARY TOTAL DISABILITY

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove her industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

Because Claimant has failed to establish a compensable injury, Clamant has not established an entitlement to temporary disability benefits. Claimant's request for determination of her average weekly wage is denied as moot.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that she sustained a compensable injury arising out of the course of her employment with Employer on September 10, 2021. Claimant's claim is denied and dismissed.

2. Claimant's request for medical benefits is denied and dismissed.

3. Claimant's request for temporary disability benefits is denied and dismissed.

4. All issues are dismissed as moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 6, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-210-972-001

ISSUES

1. Did Claimant prove by a preponderance of the evidence that Respondents violated § 8-43-203, C.R.S. by failing to file a position statement within 20 days of receiving notice of Claimant's Worker's Claim for Compensation, and if so, is Claimant entitled to a penalty?

2. Did Claimant prove by a preponderance of the evidence that Respondents violated the October 18, 2022, Director's Order by failing to file a position statement within 15 days of the date of the Order, and if so, is Claimant entitled to a penalty?

3. Did Claimant prove by a preponderance of the evidence that Respondents failed to timely provide Claimant with a designated provider list pursuant to WCRP 8-2, and if so, is Claimant entitled to a penalty?

4. If Claimant successfully demonstrated that Respondents were in violation of the Rules, Statues or an Order, have Respondents shown by a preponderance of the evidence that Claimant failed to set forth the alleged penalties with specificity by not including the dates the alleged violations began and ended on the Application for Hearing (AFH)?

5. If Respondents successfully demonstrated that any violations have been cured, did Claimant prove by clear and convincing evidence that Respondents knew or should have known that they were in violation of the Rules, Statutes or Orders?

6. If Claimant proved she is entitled to penalties, what are the applicable penalty periods and amounts?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant suffered a work-related injury on June 24, 2022. Claimant credibly testified that on June 24, 2022, she was in her [Redacted, hereinafter PL] returning from a site when a deer came out of nowhere and hit her car.

2. Claimant credibly testified that she injured her neck and lower back in the accident. She further testified that she was diagnosed with multiple sclerosis (MS) in 2010, and that the 2022 motor vehicle accident caused her MS to flare up.

3. A few days after the accident, on June 29, 2022, Claimant went to the Emergency Room (ER) at UC Health in Broomfield. The following day, June 30, 2022, Claimant

returned to the ER at UC Health. Claimant testified she subsequently went to her PCP at Broomfield Family Practice.

4. Prior to the accident, Claimant had been involved in two other motor vehicle accidents within the two prior years. Claimant credibly testified that the pain she experienced from the June 24, 2022 accident, was similar to her pain and injuries from the previous motor vehicle accidents. At the time of the June 24, 2022 accident, Claimant was treating for her injuries from the other two accidents. Claimant testified that unlike the previous accidents, the 2022 accident escalated her MS, and she experienced vertigo.

5. On July 17, 2022, Claimant filed a Worker's Claim for Compensation. Claimant noted on the form that she injured her neck, upper back and lower back on June 24, 2022 when a deer jumped in front of her moving vehicle. She left the section "[d]ate employer notified" blank. (Ex. A). The ALJ infers that as of July 17, 2022, Claimant had not reported her injury to Employer.

6. On July 21, 2022, the Division of Workers' Compensation (Division) wrote to Insurer at [Redacted, hereinafter AS]. The Division sent Insurer a copy of Claimant's Workers' Claim for Compensation, and informed Insurer that pursuant to § 8-43-203, C.R.S. and WCRP 5-2, it had 20 days, or until August 10, 2022, to either admit or deny liability. (Ex. 1).

7. On September 6, 2022, the Division sent Insurer another letter, again addressed to AS[Redacted]. This letter was fashioned as an "**URGENT NOTICE REQUIRING IMMEDIATE RESPONSE."** The Division notified Insurer that it had failed to admit or deny liability within 20 days and that **"[t]he period for filing a position statement has expired and you are now in a potential penalty situation."** Failure to respond immediately "could result in issuance of a Director's order and imposition of penalties." (Ex. 9). Insurer did not respond to the Division by September 26, 2022.

8. On September 6, 2022, Insurer's third-party administrator (TPA), [Redacted, hereinafter ES], wrote to Claimant. The communication is from [Redacted, hereinafter CS], Sr. Claims Representative at ES[Redacted]. According to the "cover page," the enclosures included a self-addressed envelope, authorization to disclose health information, and a medical treatment provider list. (Ex. 9).[1] The ALJ infers that the stated enclosures, including but not limited to, a medical treatment provider list, were sent to Claimant.

9. The ALJ finds that Insurer was aware of Claimant's Worker's Compensation Claim, as of September 6, 2022.

---

[1] Claimant's Exhibit 9, which was admitted into evidence over Respondents' counsel's objection, contains the September 6, 2022 "Cover Page for Mailing" from ES[Redacted] to Claimant, a one page communication from ES[Redacted] to Claimant regarding opting out of medical document exchange, and the September 6, 2022, **"URGENT NOTICE"** to Insurer from the Division. The cover page, is page 1 of 12, but the exhibit does not contain 12 pages. While the September 6, 2022, "**URGENT NOTICE"** to Insurer was attached as part of Exhibit 9, there is no objective evidence in the record that this Notice was sent to Claimant, or that it was a part of the materials CS[Redacted] sent to Claimant.

10. On October 18, 2022, the Director issued an Order, whereby Insurer was ordered to submit an admission of liability or notice of contest within 15 days, or by November 2, 2022. The Order specifically read "**[f]ailure to respond as ordered will result in imposition of penalties of up to $1,000 per day as permitted by § 8-43-304 for failure to comply with an order of the director."** (Ex. 2). Insurer had until November 2, 2022 to respond to the Director's Order. The Order was sent to Insurer at AS[Redacted]. The Order also informed Insurer that it had the responsibility of informing the TPA of the claim and informing the Division if the claim had been assigned to a TPA.

11. There is no objective evidence in the record that Insurer notified the Division that the claim had been assigned to Insurer's TPA, ES[Redacted].

12. On November 17, 2022, Respondents filed a General Admission of Liability (GAL), admitting liability, specifically for medical benefits. (Ex. B).

13. The ALJ finds that Respondents filed the GAL more than 20 days after the Division sent Insurer a copy of Claimant's Worker's Claim for Compensation. The ALJ finds that the GAL was filed more than 15 days after the deadline to respond to the Director's Order. Respondents offered no evidence as to why they failed to respond to the letters from the Division, or to the Director's Order prior to November 17, 2022. The ALJ finds that Respondents violated the Act and failed to timely respond to a Director's Order, but cured such violations on November 17, 2022.

14. Respondents presented no objective evidence to address their failure to timely respond to the Division and the Director's Order. The ALJ finds that Respondents' conduct was not objectively reasonable.

15. On November 23, 2022, CS[Redacted] sent a facsimile to [Redacted, hereinafter NR] that included a list of four physicians for Claimant "as requested." (Ex. 4). This number is Claimant's counsel's fax number. He subsequently wrote to CS[Redacted] and told her Claimant selected Injury Care Associates & Occupational Medicine as her authorized treatment provider. (Ex. 5).

16. On December 5, 2022, Claimant filed an AFH, endorsing multiple penalty allegations.[2] The penalty allegations relevant to this matter include:

a. "Respondent's failure to file a position statement either admitting or contesting liability within 20 days after a workers' compensation claim is filed – C.R.S. § 8-43-203."

b. "Respondents failure to comply with a Director's Order dated October 18, 2022 requiring an admission of liability or a notice of contest within 15 days."

[2] At hearing, Claimant withdrew the penalty alleged pursuant to § 8-43-203(4), C.R.S. for failure to produce a copy of the claim file.

c. “Respondents failure to designate an ATP or provide Claimant with a four-doctor panel – WCRP 8-2.”

(Ex. C).

17. The “penalties” section of the OAC’s AFH states “[d]escribe with specificity the grounds on which a penalty is asserted, including the order, rule or section of the statute allegedly violated, and the dates on which you claim the violation began and ended.”

18. The ALJ finds that even though Claimant did not specify the dates the violations allegedly began and ended, Claimant described her penalty claims with specificity as required by § 8-43-304(4), C.R.S.

19. Claimant testified that Insurer’s delay in filing a GAL and providing her with a list of designated providers, caused her stress, uncertainty and hardship. Claimant also testified that she sought, and received medical care from her primary care physicians following her June 24, 2022 accident.

20. The ALJ finds that Insurer’s delay in responding to the Division and the Director, by not taking a position with respect to Claimant’s Worker’s Claim for compensation did not delay Claimant receiving medical treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

General Penalties

Section 8-43-304(4) of the Colorado Revised Statutes provides that an application for hearing on penalties shall "state with specificity the grounds on which the penalty is being asserted." The specificity requirement serves two functions. First, it provides notice of the basis of the claim so that the putative violator may exercise its right to cure the violation. Second, it ensures the alleged violator receives notice of the legal and factual bases for the penalty claim so that their rights to present evidence, confront adverse evidence, and present argument in support of their position are protected. *Matthys v. Colo. Springs*, W.C. 4-662-890 (2007) (citing *Major Medical Insur. Fund v. Indus. Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003)). Failure to state with specificity the grounds on which a penalty is being asserted subjects the claim to dismissal. *See Young v. Bobby Brown Bail Bonds, Inc*., W.C. No. 4-632-376 (Apr. 7, 2010); *Marcelli v. Echostar Dish Network*, W.C. No. 4-776-535 (March 2, 2010); *Gonzales v. Denver Public School*, W. C. Nos. 4-437-328, 4-441-546 (Dec. 27, 2001); *Brown v. Durango Transportation Inc.,* W. C. No. 4-255-485 (Oct. 2, 1996).

Respondents argue that Claimant failed to assert her penalty claims with specificity because she did not set forth the dates on which the alleged violations began and ended. While this language is listed on the OAC's AFH form, this language is not required by the statute. *See* § 8-43-304(4), C.R.S. Respondents cured the violations by filing a GAL on November 17, 2022. Further, Claimant's penalty claims gave Respondents notice of the legal and factual basis of the claims. As found Claimant's penalty claims were plead with specificity. (Findings of fact ¶ 18).

The general penalty provision sets forth four categories of conduct and authorizes the imposition of the described penalties when an employer or insurer: (1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, *for which no penalty has been specifically provided,* or (4) fails, neglects or refuses to obey any lawful order of the director or the panel. § 8-43-304(1) C.R.S.; *see Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001). The purpose of the penalty provision in Section 8-43-304(1) of the Colorado Revised Statutes is to deter misconduct. *McManus v. Indus. Claim Appeals Office,* 81 P.3d 1074 (Colo. App. 2003).

The imposition of penalties under the general penalty provision is a two-step process. The ALJ must first determine whether the disputed conduct constituted a violation of the Act, of a duty lawfully enjoined, or of an order. If the ALJ finds such a

violation, she may impose penalties if she also finds that the actions were not objectively reasonable. *Pioneers Hosp. of Rio Blanco v. Indus. Claims Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (court required to determine whether insurer's conduct was reasonable).

As found, Respondents violated § 8-43-304(1), C.R.S., by failing to file a position statement within 20 days after receiving Notice from the Division that Claimant filed a Worker's Compensation Claim. (Findings of fact ¶ 13). Respondents also violated this statute by failing to comply with a Director's Order requiring an admission of liability or a notice of contest within 15 days of October 18, 2022. (*Id.*). Respondents did not offer any evidence as to why they did not file a position statement with the Division or comply with the Director's Order. As found, Insurer knew by September 6, 2022 that Claimant had filed a Worker's Claim for Compensation. (Findings of fact ¶ 9). Respondents failed to establish that not timely filing a position statement with the Division when Respondents received notice that Claimant filed a Worker's Claim for Compensation is reasonable. Similarly, Respondents failed to establish that the failure to timely respond to the Director's Order was reasonable. As found, Respondents' violations were not objectively reasonable. (Findings of fact ¶ 14).

Section 8-43-304(4) of the Colorado Revised Statutes provides that even if the facts warrant the imposition of a penalty, the violator has a grace period to "cure" the violation. If, within 20 days of the filing of the AFH, the violator or noncomplying person, cures the violation, no penalty can be assessed unless the aggrieved party shows by clear and convincing evidence that the violator knew or should have known of the violation. There is no presumption that curing the problem within the 20-day period establishes that the violator knew or should have known of the violation. A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo.App. 1995).

Respondents cured their violations on November 17, 2022, when they filed a GAL. (Findings of fact ¶ 13). This was before Claimant filed her AFH on December 5, 2022, so arguably within the 20-day cure period. As found, Insurer's TPA corresponded with Claimant regarding the claim on September 6, 2022. (Findings of fact ¶ 8). A reasonable Insurer knows that it is required to timely respond to a Worker's Claim for Compensation. A reasonable Insurer also know it must reply to all communications from the Division, including, but not limited to, a Director's Order. It is highly probable and free from substantial doubt that Respondents knew, or should have known, at least by September 6, 2022, that Claimant filed a Worker's Claim for Compensation, and Respondents were required to comply with the requirements of the Act. Thus, Claimant has proven by clear and convincing evidence that by September 6, 2022, Insurer knew Claimant filed a Worker's Claim for Compensation, and Respondents knew, or reasonably should have known that they were in violation of the Act and the Director's Order. Claimant demonstrated by a preponderance of the evidence that penalties should be assessed against the Respondents.

The amount of the penalty may be based on several factors including the extent of

harm to the claimant, the duration and type of violation, the insurer's motivation for the violation, the insurer's mitigation, and whether or not the misconduct is representative of a pattern of misconduct. *Anderton v. Hewlett Packard*, W.C. No. 4-344-781 (Nov. 23, 2004): *Grant v. Prof'l Contract Servs*, W.C. No. 4-531-613 (Sept. 16, 2005). Claimant testified her harm from the Insurer's violations was uncertainty and stress. Claimant did not testify as to the medical treatments she was allegedly forced to forego or how the delay specifically stalled her healing process. There is no objective evidence in the record that Insurer's actions constituted part of a pattern of misconduct, or that there was any malicious motivation by the Respondents. There was minimal harm to Claimant. Further, Respondents' actions were negligent because they did not involve a pattern of misconduct, and there is no evidence of any malicious motivation.

The ALJ finds that from September 6, 2022 to November 17, 2022, Respondents did not file a position statement in relation to Claimant's Worker's Claim for Compensation. The ALJ finds that Respondents did not timely respond to the Director's Order by November 2, 2022. Respondents filed a GAL on November 17, 2022. Respondents committed two separate violations, albeit for similar conduct. The ALJ fines Respondents $10.00/day for failing to respond to the Division regarding Claimant's Worker's Claim for Compensation, from September 6, 2022 to November 17, 2022. This is a total penalty of $730.00. The ALJ finds that the appropriate penalty for violating the Director's Order is $50.00/day, and this occurred from November 2, 2022 until November 17, 2022, for a penalty of $750.00. The total penalty of $1,480.00 is sufficient to penalize Respondents' violation of the law and encourage future compliance without being excessively punitive. Fifty percent (50%) of this penalty shall be paid to Claimant and fifty percent (50%) to the Colorado Uninsured Employers Fund.

Penalties Pursuant to W.C.R.P. 8-2

Section 8-43-404 of the Colorado Revised Statutes provides the employer or insurer the statutory right, in the first instance, to select a physician to treat the industrial injury. If Respondents fail to comply with WCRP 8, the right of selection passes to the claimant, with the result being that the physician selected by the claimant is authorized to treat the injury. *See Ruybal v. Univ. Health Sciences Ctr.*, 768 P.2d 1259 (Colo. App. 1988)*.; Tellez v. Teledyne Waterpik*, W.C. No. 3-990-062 (March 24, 1992); *Buhrmann v. Univ. of Colo. Health Sciences Ctr.*, W.C. No. 4- 253-689 (Nov. 4, 1996); *In the Matter of the Claim of Matthew Bolerjack, Claimant*, W.C. No. 4-905-434-02, 2014 WL 3886660, at *3 (July 29, 2014). The ALJ finds and concludes that the penalty for Respondents' failure to provide an injured employee a designated provider list, is set forth in the Rule itself, *i.e.* the right of selection passes from the Respondents to Claimant. Pursuant to WCRP 8(E), the right to select the authorized treating physician passed to the Claimant seven business days after Respondents had notice of the injury and allegedly failed to provide a designated provider list.

Claimant failed to prove by a preponderance of the evidence that Claimant is entitled to penalties for failing to designate an ATP or provide Claimant with a designated provider list within seven business day of receiving notice of the injury.

ORDER

It is therefore ordered that:

1. Penalties are assessed against Respondents for a violation of § 8-43-203(1), C.R.S. for failing to file a position statement as requested by the Division on July 21, 2022. Penalties are awarded from September 6, 2022 to November 17, 2022 in the amount of $730.00. Fifty percent of the penalty shall by paid to Claimant, and fifty percent of the penalty shall be paid to the Colorado Uninsured Employer's Fund. The check for the Colorado Uninsured Employer's Fund shall be payable to and sent to the Division of Workers' Compensation Revenue Assessment Unit, 633 17th Street, Suite 400, Denver, Colorado 80202.

2. Penalties are assessed against Respondents for a violation of § 8-43-203(1), C.R.S. for failing to respond to the October 18, 2022, Director's Order. Penalties are awarded from November 2, 2022 to November 17, 2022 in the amount of $750.00. Fifty percent of the penalty shall by paid to Claimant, and fifty percent of the penalty shall be paid to the Colorado Uninsured Employer's Fund. The check for the Colorado Uninsured Employer's Fund shall be payable to and sent to the Division of Workers' Compensation Revenue Assessment Unit, 633 17th Street, Suite 400, Denver, Colorado 80202.

3. Claimant's request for penalties pursuant to W.C.R.P 8-2 is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-218-288-001

ISSUES

- Did Claimant prove he suffered a compensable injury to his right shoulder on July 21, 2022?

- If Claimant proved a compensable injury, did he prove a January 31, 2023 MRI was reasonably needed and causally related to the injury?

- The parties stipulated to an average weekly wage of $1,110.29.

FINDINGS OF FACT

1. Claimant has an extensive history of nonwork-related right shoulder problems. He saw Dr. Andrew Parker in July 2020 for approximately two months of right shoulder pain. Dr. Parker diagnosed a non-traumatic right rotator cuff tear and performed an arthroscopy on September 24, 2020. Claimant reinjured the shoulder in December 2020 and underwent a revision rotator cuff repair. Claimant's right shoulder remained symptomatic, and he had a third rotator cuff surgery on March 10, 2021. He reinjured the shoulder and had a fourth surgery on May 12, 2021.

2. Claimant continued to have problems with his right shoulder and ultimately had a reverse total shoulder arthroplasty on September 23, 2021. The arthroplasty was successful. At a post-surgery evaluation on December 20, 2021 the surgeon noted Claimant was "doing very well" with minimal pain and good range of motion. He was participating in PT and wanted to return to work. No additional pre-claim records were submitted at the hearing.

3. Claimant works for Employer as a technician, monitoring robotic sandwich-processing machines.

4. On July 21, 2022, Claimant developed pain in his right shoulder while shoveling "[Redacted, hereinafter UE]" sandwiches that were spilling out of a packaging machine. Claimant was using a lightweight plastic shovel to scoop the sandwiches into a tote for disposal. The combined weight of the shovel and sandwiches was approximately 5 pounds. Claimant scooped a batch of sandwiches, twisted to the right, and tossed them into the tote. While doing so, he felt pain and a "tearing" sensation in his right shoulder. Claimant reported the symptoms to his supervisor but was able to finish his shift by limiting use of his right arm. Claimant was scheduled off the next three days for the weekend, and he and his supervisor decided the best course of action was to rest and ice the shoulder and see if it improved with time. Claimant requested no treatment.

5. Claimant's shoulder continued to bother him the rest of that day and the next day. Two days later, on July 23, 2022, Claimant dislocated his right shoulder while

reaching overhead to don a shirt. His arm became "stuck," and he pulled it down forcefully with the left arm, causing a loud "pop."

6. Claimant went to work on Monday, July 25 and completed an accident report. The report states Claimant was shoveling sandwiches into a tote when he "felt a tear and or a pop in his right shoulder." Claimant was evaluated by Employer's on-site nurse, but no corresponding records from the evaluation were submitted at the hearing.

7. Claimant saw PA-C John Hundley at the UCHealth Occupational Medicine Clinic on July 29, 2022. Claimant stated he developed severe pain in his right shoulder while shoveling sandwiches into a tote. Claimant had since rested his shoulder but his symptoms continued to worsen, to the point that "now he has extremely limited range of motion and sometimes has a feeling that his shoulder is spontaneously dislocating."[1] Claimant's shoulder range of motion was severely limited in all planes. Because of Claimant's high level of reported symptoms and complex surgical history, Mr. Hundley referred Claimant for an orthopedic evaluation. He also assigned work restrictions of "no forceful lifting, pushing or pulling with the right arm. No reaching overhead with the right arm. Must wear arm sling when active." Mr. Hundley opined Claimant's symptoms and clinical presentation were consistent with a work-related injury.

8. Claimant saw PA-C Mark Cuthbertson at Panorama Orthopedics on August 9, 2022. Claimant described the sandwich-shoveling incident and said his shoulder pain had been worse with pushing and pulling "since that time." Mr. Cuthbertson also documented that "[Claimant] dislocated the shoulder with forward flexion and overhead activity two days after the shoveling injury. It had gotten stuck in an overhead position, so he forced the joint back into reduction and experienced a significant pop when trying to bring his arm down." Claimant's right shoulder flexion was significantly reduced. X-rays showed intact arthroplasty hardware with no sign of loosening, although Mr. Cuthbertson thought Claimant may need a metal suppression MRI to fully evaluate the condition of the shoulder. Mr. Cuthbertson ordered PT and recommended Claimant follow up with Dr. John Caldwell.

9. Dr. Caldwell evaluated Claimant on August 19, 2022. Claimant described his history of shoulder problems culminating in the reverse total shoulder arthroplasty. He said his shoulder "was performing well until recently . . . he was shoveling some objects off the floor and then felt a tearing sensation in his shoulder." Claimant also reported, "he was taking his shirt off overhead with his arm extended over his head, it got stuck in that position. He had to manually relocate the shoulder using his other arm . . . he felt a large clunk followed by an immediate onset of pain." Claimant was tender to palpation over the anterior shoulder and right biceps. Dr. Caldwell reviewed imaging and saw no clear evidence of hardware complications. He opined Claimant's symptoms were probably related to "a muscular-type injury that he sustained while he had the subluxation." Dr. Caldwell recommended additional PT.

---

[1] Claimant credibly testified he told Mr. Hundley about the July 23 dislocation event, but had no control over the specific way Mr. Hundley chose to write his report.

10. Claimant followed up with Dr. Caldwell on September 28, 2022. He had made minor progress in PT, but "his shoulder is still nowhere near where it was before this event in July." Dr. Caldwell was concerned Claimant may have dislodged his prosthesis and recommended a metal suppression MRI.

11. Respondents filed a Notice of Contest denying the claim on October 12, 2022.

12. Claimant returned to Dr. Caldwell on January 20, 2023. His symptoms were unchanged. The MRI had not been completed because of insurance authorization issues. Dr. Caldwell noted the x-rays showed no apparent problems with the prosthesis, "however, his physical exam today . . . does bring up suspicion of a possible acromial stress fracture versus a muscular tear or sprain." Dr. Caldwell reiterated his request for an MRI.

13. Claimant had the MRI on January 31, 2023. It showed an area of increased signal and lucency along the humeral stem "suspicious for loosening" of the prosthesis. There was muscle atrophy and fatty infiltration and a possible low-grade teres minor strain, but no tears. Claimant paid $350 out-of-pocket for the MRI.

14. Dr. Mark Failinger performed an IME for Respondents on February 25, 2023. Claimant reported ongoing shoulder pain, largely unchanged since the incidents in July 2022. Claimant was working his regular job with self-modifications to reduce the strain on his right shoulder. Dr. Failinger opined it was not medically probable that the act of shoveling sandwiches described by Claimant caused new pathology in the shoulder. Instead, he opined the dislocation on July 23 was the cause of Claimant's ongoing symptoms. Dr. Failinger concluded, "the only diagnosis possibly related to the work accident would be a mild shoulder strain, with the dislocation event not reasonably related to the patient's work activities."

15. Dr. Failinger testified at the hearing to elaborate on the opinions expressed in his report. Although Claimant reported feeling a tear while shoveling the sandwiches, Dr. Failinger testified patients frequently perceive a tearing sensation even though no actual tear has occurred. The MRI shows no tear of any structure in the shoulder, and Dr. Failinger explained that the nature of a reverse total shoulder arthroplasty means "there is really no rotator cuff to tear." He opined the potential hardware loosening shown on the MRI was unrelated to the shoveling incident but could have been caused by the dislocation. However, he agreed with Mr. Hundley that Claimant probably suffered a minor "strain" on July 21. Dr. Failinger conceded, "the patient noticed something that was new or different, and I don't think you can just say nothing happened." He further testified the teres minor strain shown on the MRI was probably caused by the shoveling incident. He agreed it was reasonable for Mr. Hundley to diagnose a minor shoulder strain and give Claimant temporary work restrictions at the initial evaluation. He also agreed it was reasonable to order an MRI to investigate the possible strain vs. loosening of the hardware. However, he reiterated the minor strain could not have contributed to the subsequent dislocation, and concluded Claimant's ongoing shoulder symptoms are related to the dislocation and not the shoveling incident.

16. Claimant proved he suffered a compensable injury to his right shoulder on July 21, 2022. Claimant's descriptions of the work accident and the subsequent development and progression of symptoms are generally credible. The persuasive evidence shows he probably suffered a minor soft-tissue strain, which reasonably required evaluation, conservative treatment, and temporary work restrictions. Claimant's shoulder strain had not resolved and remained symptomatic when he suffered the dislocation on July 23, 2022. Claimant's symptoms immediately thereafter reflected a combination of the work injury and the nonwork-related dislocation. Even though the work injury was not the sole cause of Claimant's symptoms, it was a "significant factor" in his need for evaluations and treatment in late July and early August 2022.

17. Claimant proved the evaluations and treatment received from Mr. Hundley and Panorama Orthopedics were reasonably needed to cure and relieve the effects of his compensable injury. The MRI was a reasonable diagnostic test to investigate the nature of the underlying injury and determine a course of treatment. Claimant is entitled to reimbursement of the $350 he paid out-of-pocket for the MRI.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). An industrial injury need not be the "sole cause" of a need for medical treatment to be deemed a "proximate cause." Rather, it is sufficient if the injury is a "significant factor" in the sense that there is a "direct causal relationship" between the injuy and the need for treatment. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001).

Even a minor "strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused them to seek medical treatment. *E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only available if an accident results in a compensable "injury." The mere fact that an incident occurred at work that elicited symptoms does not establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant proved he suffered a compensable injury at work on July 21, 2022. He probably suffered a minor soft-tissue strain, which reasonably required evaluation, treatment, and temporary work restrictions. Claimant's shoulder strain had not resolved and remained symptomatic when he suffered the dislocation on July 23, 2022. His symptoms immediately thereafter reflected a combination of the work injury and the nonwork-related shoulder dislocation. Even though the work injury was not the sole cause of Claimant's symptoms, it was a "significant factor" in his need for evaluations and treatment in late July and early August 2022. Dr. Failinger may be correct that Claimant's mild shoulder strain resolved, and his current symptoms are solely related to the subsequent dislocation. However, the ALJ has no authority to make such a finding at this juncture, which would be tantamount to a determination of MMI.

B. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved the evaluations and treatment received from Mr. Hundley and Panorama Orthopedics were reasonably needed to cure and relieve the effects of his compensable injury. The MRI was a reasonable diagnostic test to investigate the nature of the underlying injury and determine a course of treatment. Claimant is entitled to reimbursement of the $350 he paid out-of-pocket for the MRI. Section 8-42-101(6)(a); WCRP 16-10(H).

ORDER

It is therefore ordered that:

1. Claimant's claim for a July 21, 2022 right shoulder injury is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including the July 29, 2022 evaluation with Mr. Hudley, and the appointments at Panorama Orthopedics on August 9, August 19, and September 28, 2022, and January 20, 2023.

3. Insurer shall reimburse Claimant $350 he paid out-of-pocket for the January 31, 2023 right shoulder MRI.

4. Claimant's average weekly wage is $1,110.29.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-214-450-001

ISSUES

1. Whether the respondent has demonstrated, by a preponderance of the evidence, that on July 12, 2022, the claimant was not an employee of the employer, but rather an independent contractor.

2. If the claimant is deemed an employee of the employer, whether the claimant has demonstrated, by a preponderance of the evidence, that she sustained an injury arising out of and in the course and scope of her employment.

3. If the claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that the medical treatment she received was authorized.

4. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she received was reasonable and necessary to cure and relieve her from the effects of the injury.

5. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits.

6. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that penalties shall be assessed pursuant to Section 8-43-408, C.R.S. for the respondent's alleged failure to obtain and maintain worker's compensation insurance.

FINDINGS OF FACT

The parties provided conflicting versions of events in this matter. The ALJ has considered the evidence and testimony presented at hearing and makes the following findings of fact:

1. The respondent operates a funeral and cremation business. The claimant previously worked for the employer and returned in May 2022. [Redacted, hereinafter MG] asserts that the claimant was an independent contractor when she returned to work for the respondent in May 2022.

2. Upon her return the claimant worked as the general manager and funeral director. The claimant's business cards identified these as the claimant's titles. The claimant's job duties included all facets of operating the respondent's business. The

claimant was paid $20.00 per hour. The claimant was paid via check. These checks were issued to the claimant in her own name.

3. On July 7, 2022, MG[Redacted] authored a letter stating that the claimant was paid $2,500.00 per month. The purpose of this letter was to assist the claimant with obtaining a mortgage. The ALJ calculates that this would be equal to $576.92 per week ($2,500.00 times 12 months in a year is $30,000.00; divided by 52 weeks is $576.92.)

4. On July 12, 2022[1], the respondent's workforce met at a local cemetery to engage in upkeep of the cemetery. This included painting a sign and cutting grass around headstones. On that date, the claimant operated a riding lawnmower at the cemetery. This specific piece of equipment has a mechanism that allows the driver to raise and lower the blade while in operation. This is done by pressing down a foot pedal with one's right foot.

5. Typically as the respondent's general manager and funeral director the claimant would not have been engaged in mowing activities. However, on July 12, 2022 it was necessary for the claimant to mow, because the respondent was short-handed and the claimant had absorbed a number of job duties, including mowing.

6. On July 12, 2022, the claimant used the pedal mechanism on the mower to raise and lower the blade while mowing around headstones and sprinklers. While operating the mower in this manner and pushing down on the foot lever, the claimant felt a pop in her right knee and experienced pain symptoms.

7. Other workers were present when the claimant felt this pop and pain in her knee, including MG[Redacted]. The claimant was allowed to stop working and sat in a vehicle while the others continued working.

8. After July 12, 2022, the claimant continued to perform all of her normal job duties, despite ongoing pain and swelling in her right knee. The claimant utilized a knee brace and crutches. The claimant asked MG[Redacted] to provide her with information for filing a workers' compensation claim. MG[Redacted] repeatedly assured the claimant that the company did have workers' compensation insurance and promised to provide her with the relevant information. MG[Redacted] did not provide the claimant with the requested workers' compensation information.

9. Initially, the claimant believed that her knee was simply sprained and she attempted to self-treat her symptoms. However, the claimant's right knee symptoms did not improve and she sought medical treatment.

---

[1] The date of July 13, 2022 appears in the medical records and on the claimant's Application for Hearing. The ALJ is persuaded by the claimant's testimony that this was a typographical error, and the incident at Issue occurred on July 12, 2022. Click to Open Sidebar

10. On August 11, 2022, the claimant again requested the insurance information from MG[Redacted] via text message. MG[Redacted] responded "Progressive Insurance and some other company. I can get numbers etc tomorrow."

11. On August 12, 2022, the claimant was seen by her primary care provider {PCP) Dr. Tarek Arja with Grand Valley Family Medicine. The claimant did not see Dr. Arja prior to that date for three primary reasons: 1) she hoped her knee would improve without medical treatment; 2) she was busy working for the respondent; and 3) MG[Redacted] was not providing workers' compensation insurance information to her.

12. On August 12, 2022, the claimant's appointment with Dr. Arja was via "telehealth" and no examination was performed. On that date, the claimant reported to Dr. Arja that she had injured her right knee one month prior while operating a riding lawn mower for her employer. The claimant reported that her right knee symptoms included pain, swelling, decreased range of motion, and instability. Dr. Arja recommended the claimant rest and elevate her right knee. He also recommended the use of a knee brace, ice, and heat. Finally, Dr. Arja ordered x-rays[2] of the claimant's right knee.

13. On August 12, 2022, MG[Redacted] texted the claimant and stated that the parties "should go other routes ... I don't like the lack of respect for each other. Not good. I appreciate all you have done I really do". When the claimant asked if she was being terminated, MG[Redacted] responded "Yes I'm sorry". Thereafter, the claimant was provided a letter dated August 12, 2022 in which the respondent notified the claimant that her employment was terminated as of that date. The letter did not provide a reason for the termination. MG[Redacted] testified that the claimant was terminated due to poor performance.

14. On August 18, 2022, the claimant was examined by Dr. Arja. On that date, Dr. Arja listed the claimant's right knee symptoms as pain, swelling, locking, instability, decreased range of motion, and decreased weight bearing. In addition, Dr. Arja noted that the claimant experienced a popping sound in her right knee at the time of the injury. On examination, Dr. Arja noted that the claimant had moderate right knee tenderness on palpation "about the anterior aspect, over the lateral joint line, over the medial joint line and over the patella". Dr. Arja recommended the continued use of the knee brace and over-the-counter pain medications. Dr. Arja also referred the claimant to physical therapy. The claimant was restricted from all work on August 18, 2022.

15. The claimant began physical therapy on August 23, 2022. The claimant continued to be restricted from all work.

16. The claimant had a telehealth visit with Dr. Arja on August 27, 2022. Dr. Arja continued to recommend physical therapy and use of a knee brace.

[2] It is unclear from the records entered into evidence whether the x-rays recommended by Dr. Arja were ever taken.

17. A letter dated September 2, 2022[3] was admitted into evidence at the hearing. The respondent stated that the claimant's employment was terminated "due to the lack of not following the vision we have set forth as a company." The letter further stated that the claimant's "business and leadership practices were not to our standards, expectations and processes that weren't being followed. You had total supervision and management over the staff and some things weren't handled properly." In that letter the respondent also stated that the company does have workers' compensation insurance.

18. On January 5, 2023, Dr. Arja authored a letter in which he stated that the claimant was released to full work duty as of December 20, 2022.

19. While working for the respondent, the claimant worked a varied schedule depending upon the company workload. At times the claimant would report to work as early as 7:00 a.m. At other times, the claimant would arrive by 9:00 a.m. The claimant's workday typically ended between 3:00 p.m. and 3:30 p.m. A time sheet for a two week period in May 2022 demonstrates that the claimant worked 61 hours during that time.

20. Based upon the time sheet entered into evidence, the ALJ calculates that the claimant typically worked 6 hours per day, five days per week for a total of 30 hours per week. At $20.00 per hour this is equal to $600.00 per week. The ALJ determines that $600.00 per week was the claimant's average weekly wage {AWW) with the respondent as of the date of her work injury.

21. While working for the respondent, the claimant had two other part time jobs as a home health worker. The claimant worked for [Redacted, hereinafter CK] and was paid $15.25 per hour. In the 12-week period leading up to July 12, 2023 the claimant had earnings with CK[Redacted] of $3,685.92. The claimant also worked for [Redacted, hereinafter KU] providing care for her mother. That employer paid the claimant $15.00 per hour. Based upon the claimant's testimony, the ALJ infers that the claimant worked approximately 15 hours per week while working for KU[Redacted].

22. As a result of the work restrictions placed by Dr. Arja on August 18, 2022, the claimant was unable to perform her job duties for CK[Redacted] and KU[Redacted]. The claimant retired to work with CK[Redacted] on January 17, 2023. She returned to work for KU[Redacted] on January 22, 2023.

23. With regard to her concurrent employment with CK[Redacted] and KU[Redacted], the ALJ makes the following calculations. The claimant's AWW with CK[Redacted] was $307.16; {$3,685.92 divided by 12 weeks is equal to $307.16 per week). The claimant's AWW with KU[Redacted] was $225.00; ($15.00 per hour at 15 hours per week equals $225.00).

24. The claimant asserts that the employer does not have workers' compensation insurance, as evidenced by the employer's failure to provide her with that

[3] The claimant testified that she did not receive the September 2, 2022 letter until she was provided with the exhibits of this hearing.

information. MG[Redacted] testified that the respondent does carry workers' compensation insurance for their employees. However, no evidence was provided of the respondent's workers' compensation policy and/or related coverage. In addition, no insurance company has been identified in this matter.

25. With regard to whether the claimant was an independent contractor, the ALJ credits the claimant's testimony and the various documents entered into evidence. The ALJ finds that the respondent has failed to demonstrate that it is more likely than not that the claimant was an independent contractor. In reaching this finding, the ALJ notes that the claimant was paid an hourly rate and was paid in her own name. The claimant's business cards identified her as a general manager and funeral director. The respondent stated that the claimant "had total supervision and management over the staff'. The ALJ finds that such oversight and management would not be delegated to a contractor. In addition, the respondent provided the claimant with instruction, training, and tools. These facts indicate that the respondent exercised direction and control over the claimant in the performance of the work. The ALJ finds that the claimant did not engage in an independent trade or business providing similar services to others, nor did she intend to do so at the time of the injury. For all of the foregoing reasons, the ALJ concludes that the claimant was an employee of the respondent and was not an independent contractor.

26. The ALJ further credits the claimant's testimony and the medical reports entered into evidence. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that on July 12, 2022, the claimant suffered a right knee injury while working for the employer.

27. The ALJ credits the claimant's testimony and the medical reports entered into evidence and finds that the claimant has demonstrated that it is more likely than not that the treatment she received for her right knee from Dr. Arja and the recommended physical therapy was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the July 12, 2023 work injury.

28. The ALJ credits the claimant's testimony, the medical records, and wage records entered into evidence and finds that the claimant has demonstrated that it is more likely than not that for the period of August 18, 2022 through January 5, 2023 the claimant suffered a wage loss due to her work restrictions.

29. The ALJ calculates that as of July 12, 2022, the claimant's AWW from all employers was $1,132.16; (the total of $600.00, $307.16, and $225.00). The claimant's rate for temporary total disability (TTD) benefits is $754.77; (two-thirds of the AWW of $1,132.16).

30. The ALJ is not persuaded that the claimant was at fault for the termination of her employment with the respondent.

31. The ALJ finds that the claimant has demonstrated that it is more likely than not that as of July 12, 2022, the respondent did not obtain and/or maintain workers' compensation insurance.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, *C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation... under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

5. Under Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

6. As found, the claimant provided services to the respondent and was paid for her services. Therefore, the claimant is presumed to be an employee of the respondent.

7. The respondent has the burden of proving that the claimant was an independent contractor rather than an employee. Section 8-40-202{2){b){II), C.R.S., sets forth nine factors to balance in determining if claimant is an employee or an independent contractor. *See Carpet Exchange of Denver; Inc. v. Industrial Claim Appeals Office,* 859 P.2d 278 (Colo. App. 1993). Those nine factors are whether the person for whom services are provided:

- required the individual to work exclusively for the person for whom services are performed; (except that the individual may choose to work exclusively for that person for a finite period of time specified in the document);

- established a quality standard for the individual; (except that such person can provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed);

- paid a salary or hourly rate but rather a fixed or contract rate;

- may terminate the work during the contract period unless the individual violates the terms of the contract or fails to produce results that meet the specifications of the contract;

- provided more than minimal training for the individual;

- provided tools or benefits to the individual; (except that materials and equipment may be supplied);

- dictated the time of performance; (except the completion schedule and range of mutually agreeable work hours may be established);

- paid the individual personally, instead of making checks payable to the trade or business name of the individual; and,

- combined their business operations in any way with the individual's business, or maintained such operations as separate and distinct.

8. A document may satisfy the requirement to prove independence, but a document is not required. Section 8-40-202(2)(b)(III), C.R.S, provides that the existence of any one of those factors is not conclusive evidence that the individual is an employee. Consequently, the statute does not require satisfaction of all nine criteria in Section 8-40-202(2)(b)(11) in order to prove by a preponderance of the evidence that the individual is not an employee. See *Nelson v. Industrial Claim Appeals Office,* 981 P.2d 210 (Colo. App. 1999).

9. In *Industrial Claim Appeals Office v. Softrock Geological Services,* 325 P.3d 560 (Colo. 2014) the Supreme Court revised the standard previously used to analyze whether or not an employee is customarily engaged in an independent trade or business. The previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court stated "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565. Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in Section 8-202(2)(b)(II), but also any other relevant factors. *Pierce v. Pella Windows & Doors,* W.C. No. 4-950-181, May 4, 2015.

10. The *Softrock* Court pointed to *Long View Systems Corp. v. Industrial Claim Appeals Office,* 197 P.3d 295 (Colo. App. 2008) in which the Panel was asked to consider whether the employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the emptoyer. See *Pierce v. Pella Windows & Doors,* W.C. No. 4-950-181, May 4, 2015.

11. Section 8-40-202(b)(IV), C.R.S., provides that a written document may create a rebuttable presumption of an independent contractor relationship if it meets the nine criteria listed in Section 8-40-202(b)(II), C.R.S. and includes language in boldface font or underlined typed that the worker is not entitled to workers' compensation benefits and is obligated to pay all necessary taxes. Additionally, the document must be signed by both parties. Here there was no written contract.

12. The ALJ has considered the nine factors listed in Section 8-40-202(2)(b)(11), C.R.S. and the totality of the circumstances of the relationship of the parties and concludes that the claimant was an employee of the respondent. The respondent has failed, by a preponderance of the evidence, to overcome the presumption of an employee-employer relationship. In reaching this conclusion the ALJ notes that the claimant was paid an hourly rate and was paid in her own name. The claimant's business cards identified her as a general manager and funeral director. The respondent stated that the claimant "had total supervision and management over the staff'. As found, such oversight and management would not be delegated to an independent contractor. In addition, the respondent provided the claimant with

instruction, training, and tools. These facts indicate that the respondent exercised direction and control over the claimant in the performance of the work. The ALJ finds that the claimant did not engage in an independent trade or business providing similar services to others, nor did she intend to do so at the time of the injury.

13. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

14. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered an injury that arose out of and in the course and scope of her employment with the respondent on July 12, 2022. As found, the claimant's testimony and the medical records are credible and persuasive.

15. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.,* W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion...." *Greager v. Industrial Commission,* 701P.2d 168 (Colo. App. 1985), *citing,* 2 A. Larson, *Workers' Compensation Law* Section 61.12(9)(1983).

16. There is no persuasive evidence in the record to indicate that the respondent provided the claimant with a list of designated medical providers, upon learning of the claimant's work injury. In the absence of a selection of physician by the respondent, the claimant has demonstrated by a preponderance of the evidence that choice of medical provider passed to the claimant. Therefore, the medical treatment the claimant received as a result of the July 12, 2022 work injury is authorized medical treatment.

17. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

18. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment she received following the July 12, 2022 injury was reasonable and necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the testimony of the claimant are credible and persuasive.

19. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra,* requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra.* The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and
(2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymbum v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy* & Co., 964 P.2d 595 (Colo. App. 1998).

20. As found, the claimant has demonstrated, by a preponderance of the evidence, that the July 12, 2022 work injury caused disability that resulted in a wage loss from August 18, 2022 through January 5, 2023. Therefore, the claimant is entitled to TTD benefits during that period of time. As found, the medical records and the testimony of the claimant are credible and persuasive.

21. The ALJ must determine a claimant's AWW by calculating the monetary rate at which services are paid to the claimant under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon her AWW on a date other than the date of the injury. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid* & *Waldron v. Vigil,* 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food* & *Commercial Workers Local No.* 7, W.C. No. 4-240-475 (ICAO, May 7, 2007).

22. As found, the claimant's AWW is $1,132.16 and her TTD rate is $754.77. The ALJ calculates that the claimant is owed unpaid TTD benefits totalling $15,203.22.

23. Sections 8-43-408(1) and (2) C.R.S., provide that in cases in which a claimant suffers a compensable injury and the employer failed to comply with the insurance provisions of the Colorado Workers' Compensation Act, the employer shall pay the Colorado uninsured employer fund an amount equal to the present value of all unpaid compensation or benefits.

24. Section 8-43-408(1)(5), C.R.S., provides that in cases in which a claimant suffers a compensable injury and the employer failed to comply with the insurance provisions of the Colorado Workers' Compensation Act, the employer shall also pay the Colorado uninsured employer fund an amount equal to twenty five percent (25%) of the compensation or benefits due to the claimant. Based upon the calculations above, 25 percent of the TTD owed is $4,332.93.

ORDER

It is therefore ordered:

1. On July 12, 2023, the claimant was an employee of the respondent.

2. The claimant suffered a compensable injury on July 12, 2022.

3. The respondent is responsible for the medical treatment the claimant received for her right knee including treatment with Dr. Arja beginning August 12, 2022 and physical therapy.

4. The claimant's average weekly wage (AWW) is $1,132.16.

5. The claimant is entitled to temporary total disability (TTD) benefits for the period of August 18, 2022 through January 5, 2023, totaling $15,203.22.

6. The respondent shall pay interest to claimant at the statutory rate of 8% per annum on all amounts of compensation not paid when due.

7. For failing to maintain workers' compensation insurance, the respondent shall pay the Colorado uninsured employer fund $15,203.22. The respondent shall also pay to the Colorado uninsured employer fund an amount equal to 25% of the TTD benefits due to the claimant for the period of August 18, 2022 through January 5, 2023, which is $3,823.31. The employer shall send such payment to the Colorado Uninsured Employer Fund to the Division of Workers' Compensation, 633 17th St., Suite 400, Denver, CO 80202.

8. The respondent shall pay Interest to the Colorado uninsured employer fund at the statutory rate of 4% per annum on all amounts of compensation not paid when due.

9. In lieu of payment of the above compensation and benefits to the claimant, the respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $19,026.31 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation Division Trustee, c/o Mariya Cassin. The check shall be mailed to the Division of Workers' Compensation Revenue Assessment Unit, 633 17th St., Suite 400, Denver, CO 80202. OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $19,026.31 with the Division of Workers' Compensation within ten (10) days of the date of this order:

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

ii. Issued by a surety company authorized to do business in Colorado.

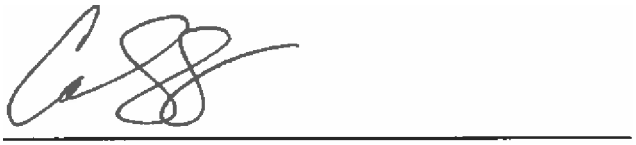
iii. The bond shall guarantee payment of the compensation and benefits awarded.

10. The respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

11. The filing of any appeal, including a petition to review, shall not relieve the respondent of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

12. All matters not determined here are reserved for future determination.

Dated June 13, 2023.



Cassandra M. Sidanycz
Administrative Law Judge

Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A} and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-201-119-001

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that the December 23, 2022 facsimile from the office of Authorized Treating Provider (ATP) Paul Stanton, D.O. to Respondents requesting authorization for a C4-7 anterior cervical discectomy constituted a completed request pursuant to W.C.R.P. Rule 16-7.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to the penalty of automatic authorization for the surgery requested by Dr. Stanton because Respondents failed to respond to the request within 10 days pursuant to W.C.R.P. Rule 16-7(B)(2).

3. Whether Claimant has demonstrated by a preponderance of the evidence that the C4-7 anterior cervical discectomy performed by Dr. Stanton on March 10, 2023 was reasonable, necessary and causally related to his March 4, 2022 industrial injury.

FINDINGS OF FACT

1. Claimant is a 63-year-old male who has worked for Employer for 26½ years as a Delivery Driver.

2. On March 14, 2022 Claimant was delivering [Redacted, hereinafter OT] bread with 12 loaves per tray and 15 trays in a cart. The 12 loaves on 15 trays weighed approximately 250 to 300 pounds. While pushing the cart, a wheel became caught in a crack on the floor and the cart started to fall. Claimant grabbed the cart with his left arm and stopped it from falling, but twisted his left shoulder.

3. On March 16, 2022 Claimant completed a Statement of Injury or Illness. In the report, he noted that he injured his left shoulder while catching a falling stack of product.

4. Claimant initially attempted to treat his left shoulder pain with ice. However, when his symptoms did not resolve he visited Authorized Treating Provider (ATP) Concentra Medical Centers (Concentra) in Pueblo, Colorado on March 18, 2022 for treatment. Brendon Madrid, N.P. recorded that, while Claimant was moving a stack of product he hit a crack in the floor and the stack started to tip over. Claimant caught the stack and felt a pull in his left shoulder. Claimant reported persistent left shoulder pain that radiated into the neck, back, and left arm. NP Madrid diagnosed Claimant with a left shoulder strain and referred him for physical therapy.

5. Claimant was eventually diagnosed with a left shoulder rotator cuff tear. On February 25, 2022 he underwent surgical repair with ATP David Walden, M.D.

6. On March 25, 2022 Claimant visited St. Thomas More Hospital Outpatient Rehabilitation Department for physical therapy. He completed an intake form with a pain diagram and noted symptoms in the left shoulder. Claimant's description of functional issues was also limited to the left shoulder. The physical therapist assessed Claimant with a strain of unspecified muscles, fascia and tendon at the shoulder and upper left arm. Notably, Claimant's symptoms were consistent with a rotator cuff injury.

7. On April 1, 2022 Claimant returned to Concentra in Pueblo and was evaluated by Debra Anshutz, N.P. Claimant reported persistent pain in the shoulder that radiated into his back, neck, and left arm. He also exhibited numbness in the fingers. NP Anshutz noted that Claimant had completed two physical therapy visits and undergone a CT of the left shoulder on March 29, 2022. NP Anshutz assigned work restrictions.

8. Claimant transferred medical care from the Concentra in Pueblo to the Concentra in Cañon City. On April 5, 2022 he had his first visit with ATP Steven Walter Quakenbush, PA-C. PA-C Quakenbush examined Claimant and recorded there were no pain complaints in the head, neck, left elbow, wrist or hand. There was also no numbness of the extremity. PA-C Quakenbush diagnosed Claimant with a "left shoulder sprain with suspected right RTC tears."

9. On April 7, 2022 Claimant visited Dr. Walden for an examination. Dr. Walden remarked that all of Claimant's pain was located in the rotator cuff distribution.

10. On April 26, 2022 Claimant returned to PA-C Quakenbush and had no neck pain with full range of motion. Review of systems was also negative for neck pain and stiffness.

11. Claimant's first mention of neck pain to PA-C Quakenbush did not occur until September 20, 2022 or four months after the shoulder surgery and six months after the work incident. PA-C Quakenbush noted radiating pain from the left lateral neck into Claimant's shoulder. Claimant also had progressive weakness involving his left upper extremity. PA-C Quakenbush noted Dr. Walden had requested an EMG to assess whether Claimant's left shoulder symptoms involved scapulothoracic pain or radicular pain from the cervical spine.

12. The record reveals that Claimant suffered from significant underlying cervical spine degeneration. A December 20, 2022 cervical spine MRI showed cervical disc disease at C4-5 and C5-6 with "severe" collapse of the disc space, facet spondylosis, and "severe" foraminal stenosis. The imaging also showed spondylolisthesis at C4-5 that was "reduced when lying supine indicating instability."

13. On December 22, 2022 Claimant visited ATP Paul Stanton, D.O. for an evaluation. Dr. Stanton commented that Claimant still had left-sided shoulder pain and some weakness with overhead activities. He diagnosed Claimant with cervical disc disorders at C4-7 with radiculopathy. Dr. Stanton concluded that "[a]t this point, I think [Claimant] will require a reconstruction of his C4-7 levels to stabilize his spondylolisthesis."

14. On December 23, 2022 Dr. Stanton's office faxed to the correct number for Respondents a 22-page document requesting a C4-7 anterior cervical discectomy/fusion. The transmission was admitted as Exhibit 10 at the hearing. The request had the wrong claim number but the correct date of birth and date of injury,

15. Claims representative [Redacted, hereinafter MF] testified at hearing in this matter. He commented that he never received a request for cervical surgery via fax on December 23, 2022 or at any subsequent time. MF[Redacted] showed his fax in-box and explained how this confirmed he never received the transmission. On December 23, 2022 the only fax he received was another medical record from Dr. Walden. MF[Redacted] revealed his fax cue and explained that documents are organized by claim number. Exhibit 10 is a fax cover sheet with the letterhead of Colorado Springs Orthopaedic Group, dated December 23, 2022 that has no information identifying Claimant. The second page of Exhibit 10, with the letterhead of The Spine Center, is the Request for Pre-Authorization for Surgery Procedure. The document has an incorrect claim number of 1E01E01189371.

16. When the December 23, 2022 surgical request from Dr. Stanton's office was not timely addressed, the office contacted MF[Redacted]. He requested resubmission of the documents. Dr. Stanton's office then sent the surgical request on January 9, 2023. MF[Redacted] explained that that he received the prior authorization documents by email on January 9, 2023. He immediately took action and scheduled an appointment with Dr. Rauzzino for an independent medical examination. He also sent a denial of the prior authorization request to Dr. Stanton and Claimant on January 11, 2023.

17. MF[Redacted]acknowledged that there were other medical records in the file that reflected the incorrect claim number. He specifically could not explain why the MRI submission of Dr. Stanton on December 3, 2022 found at Exhibit 9, which had the wrong claim number, made it into his electronic file.

18. On January 24, 2023 Claimant returned to PA-C Quakenbush for an evaluation. PA-C Quakenbush recounted that Claimant continued to experience pain down the left lateral neck into the shoulder and upper arm. He also had some transient numbness into his left fourth and fifth fingers. PA-C Quakenbush noted that on December 20, 2022 Dr. Stanton had diagnosed Claimant with multilevel degenerative changes of cervical spine and severe right neuroforaminal stenosis at C5-6 and C6-7. Claimant had been recommended for surgical intervention of his cervical condition.

19. On March 6, 2023 Claimant underwent an independent medical examination with Michael J. Rauzzino, M.D. Dr. Rauzzino reviewed Claimant's medical records and performed a physical examination. On April 24, 2023 the parties conducted the pre-hearing evidentiary deposition of Dr. Rauzzino. He maintained that, although Claimant injured his left shoulder while attempting to prevent a rack of bread from falling at work on March 14, 2022, the medical records do not reflect that he injured his neck or cervical spine during the incident. Dr. Rauzzino specified that the mechanism of injury was consistent with the medical records and Claimant suffered immediate left shoulder pain. However, Claimant did not suffer neck pain during the incident.

20. Notably, Dr. Rauzzino explained that the temporal proximity of an event must be in closely associated with the development of symptoms. He remarked that the records revealed “there was no neck pain, there was no injury to the cervical spine for many, many months after the injury.” If Claimant had suffered an injury to his cervical spine while attempting to prevent a rack of bread from falling, his symptoms would have presented immediately. However, the record reflects that Claimant’s first mention of neck symptoms to PA-C Quakenbush did not occur until September 20, 2022 or four months after the shoulder surgery and six months after the work incident.

21. Dr. Rauzzino explained that Claimant suffers from degenerative changes to his cervical spine that are unrelated to the March 14, 2022 accident. He noted that he had reviewed the plain films of the cervical spine from November 10, 2022 and an MRI of the cervical spine dated December 20, 2022. The plain films did not demonstrate any traumatic instability at C4-5, but only physiologic motion from degeneration. The cervical spine MRI revealed the absence of any acute injury such as a left-sided disc extrusion. Dr. Rauzzino summarized that the “findings are all chronic, degenerative, and pre-existing.” He testified in his deposition that there were several levels where the space for the nerves had been narrowed. However, the key finding “was that there was no acute structural injury to the neck.” The MRI reflected chronic, degenerative changes that developed over a number of years and were not caused by trauma. Importantly, Dr. Rauzzino reasoned that the pathology reflected on the December 20, 2022 MRI was not caused or accelerated by the workplace event of March 14, 2022. There was also no aggravation of Claimant’s pre-existing, degenerative condition leading to a permanent change in his condition as a result of attempting to prevent a rack of bread from falling at work. Dr. Rauzzino remarked that the natural history of Claimant’s degenerative arthritis and foraminal stenosis is that it will progress over time.

22. Based on the EMG results, Dr. Rauzzino reasoned that Claimant likely experienced an injury to the suprascapular nerve at the time he caught the bread rack. An injury to the suprascapular nerve is the reason Claimant continued to have symptoms after the shoulder surgery was completed. Dr. Rauzzino summarized that the records were very clear that Claimant did not suffer an injury to the cervical spine based on the mechanism of injury and reporting of symptoms. He emphasized that the pathology in Claimant’s cervical spine was “100 percent not caused by the injury at work.” There was simply no acute disk herniation that could be attributed to the March 14, 2022 work incident.

23. On March 10, 2022 Claimant underwent the C4-7 anterior cervical discectomy fusion surgery proposed by Dr. Stanton under private insurance. Claimant continues to remain off work following the surgery, has not been released from care, and has not been returned to modified duty. He testified the surgery has provided pain relief and significantly improved his range of motion. Claimant summarized that the rotator cuff surgery performed by Dr. Walden did not relieve his symptoms, but the cervical surgery with Dr. Stanton has had a good outcome with expected continued progress.

24. Claimant has failed to prove it is more probably true than not that the December 23, 2022 facsimile from the office of ATP Dr. Stanton to Respondents

requesting authorization for a C4-7 anterior cervical discectomy constituted a completed request pursuant to W.C.R.P. Rule 16-7. Initially, on December 23, 2022 Dr. Stanton's office faxed to the correct number for Respondents a 22-page document requesting a C4-7 anterior cervical discectomy/fusion. The request had the wrong claim number but the correct date of birth and date of injury, Respondents assert that, because of an incorrect claim number, Claimant failed to submit a completed request to trigger Rule 16.

25. MF[Redacted] showed his fax in-box and explained how this confirmed he never received the transmission. Exhibit 10 reveals a fax cover sheet with the letterhead of Colorado Springs Orthopaedic Group, dated December 23, 2022 that has no claim or information identifying Claimant. The second page of Exhibit 10, with the letterhead of The Spine Center, is the Request for Pre-Authorization for Surgery Procedure with an incorrect claim number. Because of the incorrect claim number, it is likely the fax was never routed to the correct location. Although Dr. Stanton's office submitted a 22-page document seeking surgical authorization, information including procedure codes and date of birth are not helpful when not connected to the correct claim. The consequences of a failure to timely respond to a prior authorization request are significant. Because of the time-sensitive nature of acting on a request for prior authorization, it is imperative for the request to be delivered to the individual responsible for adjusting the claim. Respondents were not culpable for an incorrect claim number and do not carry the burden of researching and identifying the claim under which a request is being made. Accordingly, the December 23, 2022 fax from Dr. Stanton's office presented in Exhibit 10 did not constitute a completed request for prior authorization. The 10-day requirement to respond in Rule 16-7(B)(2) thus was not triggered on December 23, 2022.

26. Claimant has failed to establish it is more probably true than not that he is entitled to the penalty of automatic authorization for the surgery requested by Dr. Stanton because Respondents failed to respond to the request within 10 days pursuant to W.C.R.P. Rule 16-7(B)(2). Specifically, even if the December 23, 2022 fax from Dr. Stanton's office presented in Exhibit 10 constituted a completed request and the 10-day requirement to respond in Rule 16-7(B)(2) was triggered, the penalty of automatic authorization was not warranted. Initially, because Respondents did not timely respond to the surgical request, they violated Rule 16-7(B)(2). However, the record reflects that Respondents' conduct was not objectively unreasonable because it was predicated on a rational argument based in law or fact.

27. MF[Redacted] showed his fax in-box at the hearing and explained how this confirmed that he never received the transmission from Dr. Stanton's office. On December 23, 2022 the only fax he received was another medical record from Dr. Walden. MF[Redacted] also explained his fax cue in which documents are organized by claim number. Respondents' procedure for distributing incoming fax documents was a reasonable approach. When the December 23, 2022 surgical request from Dr. Stanton's office was not timely addressed, the office contacted MF[Redacted]. He requested resubmission of the surgical request. Dr. Stanton's office then resubmitted the documentation on January 9, 2023. MF[Redacted] verified that he received the prior authorization request by email on January 9, 2023. He immediately took action and scheduled an appointment with Dr. Rauzzino for an independent medical examination.

He also sent a denial of the prior authorization to Dr. Stanton and to Claimant on January 11, 2023. MF's[Redacted] actions constituted a genuine effort to comply with the 10-day requirement to respond in Rule 16-7(B)(2). Because Respondents efforts in addressing the December 23, 2022 request for surgical authorization were predicated on a rational argument based in law or fact, their actions were not objectively unreasonable. Accordingly, Claimant's request for automatic authorization of the surgery requested by Dr. Stanton on December 23, 2022 is denied and dismissed.

28. Claimant has failed to demonstrate it is more probably true than not that the C4-7 anterior cervical discectomy fusion surgery performed by Dr. Stanton on March 10, 2023 was reasonable, necessary and causally related to his March 4, 2022 industrial injury. Initially, on March 14, 2022 Claimant injured his left shoulder at work while attempting to prevent a rack of bread from falling. Claimant was eventually diagnosed with a left shoulder rotator cuff tear. On February 25, 2022 he underwent surgical repair with Dr. Walden.

29. Following Claimant's left shoulder surgery he had reduced pain complaints in his armpit and chest area. Although Claimant attended several physical therapy visits, his left shoulder and trapezius area remained painful. Claimant's first mention of neck pain to PA-C Quakenbush did not occur until September 20, 2022 or four months after the shoulder surgery and six months after the work accident. PA-C Quakenbush noted radiating pain from the left lateral neck into Claimant's shoulder. On December 22, 2022 Dr. Stanton commented that Claimant still had left-sided shoulder pain and some weakness with overhead activities. He diagnosed Claimant with cervical disc disorders at C4-7 with radiculopathy. Dr. Stanton concluded that "[a]t this point, I think [Claimant] will require a reconstruction of his C4-7 levels to stabilize his spondylolisthesis." Respondents subsequently denied the proposed surgery. Nevertheless, Claimant underwent the procedure through his personal insurance on March 10, 2023.

30. Despite the surgical request from Dr. Stanton, the persuasive opinion and testimony of Dr. Rauzzino reflects that the proposed surgery was not reasonable, necessary and causally related to Claimant's March 4, 2022 industrial injury. Dr. Rauzzino explained that the medical records reflect that "there was no neck pain, there was no injury to the cervical spine for many, many months after the injury." If Claimant had suffered an injury to his cervical spine while attempting to prevent a rack of bread from falling, his symptoms would have presented immediately. However, the record reflects that Claimant's first mention of neck symptoms to PA-C Quakenbush did not occur until September 20, 2022 or four months after the shoulder surgery and six months after the work incident. Furthermore, Dr. Rauzzino explained that Claimant's cervical MRI reflected chronic, degenerative changes that developed over a number of years and were not caused by trauma. Importantly, Dr. Rauzzino reasoned that the pathology reflected on the December 20, 2022 MRI was not caused or accelerated by the March 14, 2022 work incident. There was also no aggravation of Claimant's pre-existing, degenerative condition leading to a permanent change in his condition after attempting to prevent a rack of bread from falling at work. Dr. Rauzzino remarked that the natural history of Claimant's degenerative arthritis and foraminal stenosis is that it will progress over time. He summarized that the records were very clear in demonstrating that Claimant did not

sustain a cervical spine injury based on the mechanism of injury or reporting of symptoms. Dr. Rauzzino emphasized that the pathology in Claimant's cervical spine was "100 percent not caused by the injury at work."

31. Based on the extensive medical records and persuasive opinion of Dr. Rauzzino, the surgery performed by Dr. Stanton on March 10, 2023 was not reasonable, necessary and causally related to Claimant's March 14, 2022 work activities. The record reveals that Claimant injured his left shoulder while attempting to prevent a rack of bread from falling at work on March 14, 2022. However, the medical records do not reflect that he injured his neck or cervical spine during the incident. He instead suffered from a pre-existing, degenerative spinal condition unrelated to his work activities. Claimant's employment thus did not aggravate, accelerate or combine with his pre-existing condition to produce the need for surgical intervention. Accordingly, Claimant's C4-7 anterior cervical discectomy fusion surgery performed on March 10, 2023 was not reasonable, necessary and causally related to his March 14, 2022 work accident.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Completed Request for Prior Authorization

4. Claimant seeks a determination with regard to authorization of the C4-7 anterior cervical discectomy fusion surgery recommended by Dr. Stanton. He asserts that

the proposed surgery was automatically authorized under Rule 16-7 in effect at the time of the request for prior authorization on December 23, 2022. Notably, Respondents failure to deny or authorize the proposed surgery within 10 days under Rule 16-7-I(B)(I) deemed the surgery authorized pursuant to Rule 16-7-2(E). Claimant plead "[p]enalty period begins 12/23/22 and continues until carrier authorizes treatment."

5. Rule 16-7-2(E) specifies:

> Failure of the payer to timely comply in full with all Prior Authorization requirements outlined in this rule shall be deemed authorization for payment of the requested treatment unless the payer has scheduled an independent medical examination (IME) and notified the requesting provider of the IME within the time prescribed for responding.

6. Rule 16-7(B)(2) specifically pertains to denials for medical reasons. The Rule provides that "the payer shall respond to all Prior Authorization requests in writing within 10 days from receipt of a completed request as defined per this Rule." Therefore, for Rule 16-7(B)(2) to apply, the medical provider must submit a completed prior authorization request.

7. To complete a prior authorization request under Rule 16-7(C), the provider "shall concurrently explain the reasonableness and medical necessity of the treatment requested and shall provide relevant supporting documentation (documentation used in the provider's decision-making process to substantiate need for the requested treatment)." A completed request under Rule 16-7(C) includes "[a]n adequate definition or description of the nature, extent and necessity for the treatment;" an identification of the applicable MTG; and a final diagnosis. The issue of whether a provider has submitted a completed request is a question of fact to be determined by the ALJ. *See Aguirre v. Nortrack*, W.C. No. 4-742-953 (ICAO, Oct. 5, 2011). It is Claimant's burden to prove that a completed request was sent to respondents in order for Rule 16's penalty of automatic approval to apply. *Murray v. Tristate Generation and Transmission Ass'n,* W.C. No. 4-997-086-02 (ICAO, Dec. 22, 2017). A respondent is not required to plead insufficiency of a request for authorization as an affirmative defense. *McDaniel v. Vail Associates, Inc.*, W.C. No. 3-111-363 (ICAO, July 18, 2011).

8. As found, Claimant has failed to prove by a preponderance of the evidence that the December 23, 2022 facsimile from the office of ATP Dr. Stanton to Respondents requesting authorization for a C4-7 anterior cervical discectomy constituted a completed request pursuant to W.C.R.P. Rule 16-7. Initially, on December 23, 2022 Dr. Stanton's office faxed to the correct number for Respondents a 22-page document requesting a C4-7 anterior cervical discectomy/fusion. The request had the wrong claim number but the correct date of birth and date of injury, Respondents assert that, because of an incorrect claim number, Claimant failed to submit a completed request to trigger Rule 16.

9. As found, MF[Redacted] showed his fax in-box and explained how this confirmed he never received the transmission. Exhibit 10 reveals a fax cover sheet with the letterhead of Colorado Springs Orthopaedic Group, dated December 23, 2022 that

has no claim or information identifying Claimant. The second page of Exhibit 10, with the letterhead of The Spine Center, is the Request for Pre-Authorization for Surgery Procedure with an incorrect claim number. Because of the incorrect claim number, it is likely the fax was never routed to the correct location. Although Dr. Stanton's office submitted a 22-page document seeking surgical authorization, information including procedure codes and date of birth are not helpful when not connected to the correct claim. The consequences of a failure to timely respond to a prior authorization request are significant. Because of the time-sensitive nature of acting on a request for prior authorization, it is imperative for the request to be delivered to the individual responsible for adjusting the claim. Respondents were not culpable for an incorrect claim number and do not carry the burden of researching and identifying the claim under which a request is being made. Accordingly, the December 23, 2022 fax from Dr. Stanton's office presented in Exhibit 10 did not constitute a completed request for prior authorization. The 10-day requirement to respond in Rule 16-7(B)(2) thus was not triggered on December 23, 2022.

Penalty of Automatic Authorization pursuant to Rule 16-7

10. Section 8-43-304(1), C.R.S. authorizes the imposition of penalties not to exceed $1000 per day if an employee or person "fails, neglects, or refuses to obey any lawful order made by the director or panel." A person fails or neglects to obey an order if she leaves undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under §8-43-304(1), C.R.S. even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001). The failure to comply with a procedural rule has been determined to be a failure to obey an "order" and failure to perform a "duty lawfully enjoined" within the meaning of §8-43-304(1), C.R.S.; *Pioneers Hospital v. Indus. Claim Appeals Off.*, 114 P.3d 97, 98 (Colo. App. 2005).

11. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must ascertain whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of an action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Indus. Claim Appeals Off.,* 107 P.3d 965 (Colo. App. 2003) ("reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact.") *In Re Claim of Murray*, W.C. No. 4-997-086-02 (ICAO, Aug. 16, 2017). The question of whether a party's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Indus. Claim Appeals Off.,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Indus. Claim Appeals Off.*, 240 P.3d 429 (Colo. App. 2010). Where the violator fails to offer a reasonable factual or legal explanation for its actions, the ALJ may infer the opposing party sustained its burden to prove the violation was objectively unreasonable. *Human Resource Co. v. Indus. Claim Appeals Off.*, 984 P.2d 1194, 1197 (Colo. App. 1999).

12. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to the penalty of automatic authorization for the surgery requested by Dr. Stanton because Respondents failed to respond to the request within 10 days pursuant to W.C.R.P. Rule 16-7(B)(2). Specifically, even if the December 23, 2022 fax from Dr. Stanton's office presented in Exhibit 10 constituted a completed request and the 10-day requirement to respond in Rule 16-7(B)(2) was triggered, the penalty of automatic authorization was not warranted. Initially, because Respondents did not timely respond to the surgical request, they violated Rule 16-7(B)(2). However, the record reflects that Respondents' conduct was not objectively unreasonable because it was predicated on a rational argument based in law or fact.

13. As found, MF[Redacted] showed his fax in-box at the hearing and explained how this confirmed that he never received the transmission from Dr. Stanton's office. On December 23, 2022 the only fax he received was another medical record from Dr. Walden. MF[Redacted] also explained his fax cue in which documents are organized by claim number. Respondents' procedure for distributing incoming fax documents was a reasonable approach. When the December 23, 2022 surgical request from Dr. Stanton's office was not timely addressed, the office contacted MF[Redacted]. He requested resubmission of the surgical request. Dr. Stanton's office then resubmitted the documentation on January 9, 2023. MF[Redacted] verified that he received the prior authorization request by email on January 9, 2023. He immediately took action and scheduled an appointment with Dr. Rauzzino for an independent medical examination. He also sent a denial of the prior authorization to Dr. Stanton and to Claimant on January 11, 2023. MF's[Redacted] actions constituted a genuine effort to comply with the 10-day requirement to respond in Rule 16-7(B)(2). Because Respondents efforts in addressing the December 23, 2022 request for surgical authorization were predicated on a rational argument based in law or fact, their actions were not objectively unreasonable. Accordingly, Claimant's request for automatic authorization of the surgery requested by Dr. Stanton on December 23, 2022 is denied and dismissed.

Reasonable, Necessary and Causally Related

14. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*,

W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

15. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

16. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the C4-7 anterior cervical discectomy fusion surgery performed by Dr. Stanton on March 10, 2023 was reasonable, necessary and causally related to his March 4, 2022 industrial injury. Initially, on March 14, 2022 Claimant injured his left shoulder at work while attempting to prevent a rack of bread from falling. Claimant was eventually diagnosed with a left shoulder rotator cuff tear. On February 25, 2022 he underwent surgical repair with Dr. Walden.

17. As found, following Claimant's left shoulder surgery he had reduced pain complaints in his armpit and chest area. Although Claimant attended several physical therapy visits, his left shoulder and trapezius area remained painful. Claimant's first mention of neck pain to PA-C Quakenbush did not occur until September 20, 2022 or four months after the shoulder surgery and six months after the work accident. PA-C Quakenbush noted radiating pain from the left lateral neck into Claimant's shoulder. On December 22, 2022 Dr. Stanton commented that Claimant still had left-sided shoulder pain and some weakness with overhead activities. He diagnosed Claimant with cervical disc disorders at C4-7 with radiculopathy. Dr. Stanton concluded that "[a]t this point, I think [Claimant] will require a reconstruction of his C4-7 levels to stabilize his spondylolisthesis." Respondents subsequently denied the proposed surgery. Nevertheless, Claimant underwent the procedure through his personal insurance on March 10, 2023.

18. As found, despite the surgical request from Dr. Stanton, the persuasive opinion and testimony of Dr. Rauzzino reflects that the proposed surgery was not reasonable, necessary and causally related to Claimant's March 4, 2022 industrial injury. Dr. Rauzzino explained that the medical records reflect that "there was no neck pain, there was no injury to the cervical spine for many, many months after the injury." If Claimant had suffered an injury to his cervical spine while attempting to prevent a rack of bread from falling, his symptoms would have presented immediately. However, the record reflects that Claimant's first mention of neck symptoms to PA-C Quakenbush did not occur until September 20, 2022 or four months after the shoulder surgery and six months after the work incident. Furthermore, Dr. Rauzzino explained that Claimant's cervical MRI reflected chronic, degenerative changes that developed over a number of years and were not caused by trauma. Importantly, Dr. Rauzzino reasoned that the pathology reflected on the December 20, 2022 MRI was not caused or accelerated by the March 14, 2022

work incident. There was also no aggravation of Claimant's pre-existing, degenerative condition leading to a permanent change in his condition after attempting to prevent a rack of bread from falling at work. Dr. Rauzzino remarked that the natural history of Claimant's degenerative arthritis and foraminal stenosis is that it will progress over time. He summarized that the records were very clear in demonstrating that Claimant did not sustain a cervical spine injury based on the mechanism of injury or reporting of symptoms. Dr. Rauzzino emphasized that the pathology in Claimant's cervical spine was "100 percent not caused by the injury at work."

19. As found, based on the extensive medical records and persuasive opinion of Dr. Rauzzino, the surgery performed by Dr. Stanton on March 10, 2023 was not reasonable, necessary and causally related to Claimant's March 14, 2022 work activities. The record reveals that Claimant injured his left shoulder while attempting to prevent a rack of bread from falling at work on March 14, 2022. However, the medical records do not reflect that he injured his neck or cervical spine during the incident. He instead suffered from a pre-existing, degenerative spinal condition unrelated to his work activities. Claimant's employment thus did not aggravate, accelerate or combine with his pre-existing condition to produce the need for surgical intervention. Accordingly, Claimant's C4-7 anterior cervical discectomy fusion surgery performed on March 10, 2023 was not reasonable, necessary and causally related to his March 14, 2022 work accident.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. The December 23, 2022 fax from Dr. Stanton's office presented in Exhibit 10 did not constitute a completed request for prior authorization.

2. Claimant's request for the penalty of automatic authorization of the surgery requested by Dr. Stanton on December 23, 2022 is denied and dismissed.

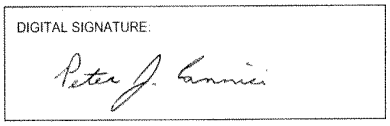
3. Claimant's C4-7 anterior cervical discectomy fusion surgery performed on March 10, 2023 was not reasonable, necessary and causally related to his March 14, 2022 work accident.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For*

further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 13, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that her claim should be reopened based on a worsening of condition since she was placed at maximum medical improvement (MMI) on June 22, 2021.

II. If the claim is reopened, whether Claimant has proven by a preponderance of the evidence that the ulnar nerve transposition surgery recommended by Dr. Larsen is reasonable, necessary, and related to the work injury?

III. If the claim is reopened, whether Claimant established by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits?

IV. Does the evidence presented support Respondents' contention that Claimant is attempting to circumvent the DIME to obtain a surgery that was previously recommended and not performed?

V. Does the evidence presented support Claimant's contention that Respondents are estopped from challenging the recommendation for ulnar nerve transposition surgery?

Because this ALJ finds Claimant's claim for TTD benefits premature, this order does not address her entitlement to TTD.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Larsen, the ALJ enters the following findings of fact:

Claimant's January 20, 2020 Injury and Subsequent Treatment

1. This matter previously was before this ALJ on April 6, 2022, on Claimant's Application for Hearing to convert her scheduled impairment to impairment of the whole person. By Summary Order of May 5, 2022, this ALJ found that while Claimant had sustained injuries to both her wrist and ulnar nerve at the elbow, the impairment caused by these injuries would remain on the schedule of injuries. Accordingly, the claim for conversion to whole person impairment was denied and dismissed. (Clmt's Hrg. Ex. 3).

2. Claimant works as a police officer for Employer. She injured her left wrist/forearm/elbow while trying to effectuate the arrest of an intoxicated and combative suspect on January 20, 2020. (Resp. Hrg. Ex. A, p. 1).

3. Following her injury, Claimant underwent significant medical care,

including physical therapy and subsequent referral to Dr. Karl Larsen at the Colorado Center for Orthopedic Excellence. Early diagnostic testing to include MRI of the left wrist demonstrated no occult fractures or triangular fibrocartilage complex (TFCC) disruption. (Resp. Hrg. Ex. A, p. 2).

4. During an appointment with Physician Assistant (PA) Stephanie Noble at the Colorado Center for Orthopedic Excellence on February 14, 2020, Claimant's physical examination was suggestive of and consistent with a TFCC tear which was not "clearly delineated" on the previously obtained MRI. (Clmt's Hrg. Ex. 6, p. 33). PA Noble recommended a cortisone injection to the extensor carpi ulnaris (ECU) tendon sheath followed by long arm casting to "fully immobilize" the wrist and forearm to prevent "pronosupination" as she felt that this may help the soft tissue and TFCC tear heal. *Id*. at p. 34. Regarding the condition of Claimant's left elbow, PA Noble noted: "If [Claimant] *continues* to have elbow pain, she may benefit from obtaining an MRI of the elbow as well, but at this point the majority of her symptoms appear to be at the wrist". *Id.* at p. 34 (emphasis added). Dr. Larsen agreed with PA Noble's treatment plan. *Id.* Accordingly, Claimant was administered a corticosteroid injection and placed in a long arm cast.

5. Based upon the content of PA Noble's 2/14/2020 record, including the statement that should Claimant "continue" to have elbow pain, the ALJ finds it reasonable to infer that Claimant was probably experiencing elbow symptoms shortly after her January 20, 2020 injury and before she was placed in a long arm cast.

6. Claimant returned to the Colorado Center for Orthopedic Excellence on March 23, 2020 where she was evaluated by Dr. Larsen. (Clmt's Hrg. Ex. 6, p. 35). Claimant reported little improvement from the previously administered injection. *Id.* Her cast was removed and an examination attempted. *Id*. Noting that the examination was of limited value due to Claimant's stiffness from immobilization, Dr. Larsen placed Claimant's wrist in a brace and referred her to Occupational Therapy to work on "gentle range of motion and desensitization". *Id*. A return appointment was set for approximately one month. *Id.* If Claimant was not doing well at this appointment, Dr. Larsen noted that decisions would need to be made about proceeding to surgery. *Id*.

7. During a follow-up visit on April 22, 2020, Claimant reported continued "snapping" on the ulnar side of the wrist and pain with rotation and ulnar deviation. (Clmt's Hrg. Ex. 6, pp. 36-39). Physical examination revealed continued instability of the distal ulna and "mild" synovitis about the ECU tendon. *Id*. Claimant expressed a desire to proceed with a repair surgery but it was noted that she was 8 weeks pregnant which complicated surgical scheduling. *Id.*

8. After consulting with Claimant's obstetrician, Dr. Larsen took her to the operating room on June 11, 2020 for completion of a left wrist arthroscopy with debridement of triangular fibrocartilage tear, a left distal radioulnar joint (DRUJ) stabilization and left ECU tendon sheath reconstruction procedure. (Clmt's Hrg. Ex. 6, p. 44).

9. Claimant experienced persistent post-surgical pain around the DRUJ with range of motion. (Clmt's Hrg. Ex. 6, p. 57). On September 4, 2020, a steroid injection was administered to help her "cope" with the rigors of therapy and provide pain relief. *Id*. It was also noted during this follow-up appointment, that Claimant had been unable to wean herself from her brace. *Id*.

10. During an October 20, 2020 appointment with PA Noble, Claimant reported that the previously administered steroid injection gave her approximately two weeks of relief but her pain had returned and she had a recurrence of the clicking in her left wrist. (Clmt's Hrg. Ex. 6, p. 59). She also complained of a new burning sensation into the ring and small finger as well as the underneath (volar) aspect of the left wrist. *Id.* Physical examination, including provocative testing, i.e. a thumb grind and Tinel's over the ulnar nerve were positive for pain, laxity and burning in the ring and small finger. *Id.* In addition to having left ulnar-sided wrist pain, Claimant was diagnosed with thumb CMC laxity and cubital tunnel syndrome. *Id*.

11. At a December 7, 2020, follow-up appointment, Claimant reported persistent left wrist pain and recurrent clicking. (Clmt's Hrg. Ex. 6, p. 60). Physical examination revealed that the ECU tendon was tender and "somewhat mobile" indicating that Claimant had possibly stretched out her June 11, 2020 surgical reconstruction. *Id*. Dr. Larsen was able to produce wrist clicking with a "midcarpal load and shift maneuver" suggesting the presence of midcarpal instability. *Id.* Claimant was noted to be nearly 9 months pregnant by this appointment, which Dr. Larsen felt was contributing to her ligamentous laxity. *Id*. Outside of an injection into the ECU tendon sheath, Dr. Larsen recommended "taking a long period of time to let [Claimant's] body recover from the hormonal effects of her pregnancy before [considering] anything else". *Id*.

12. Claimant underwent electrodiagnostic testing on March 31, 2021 with Dr. Katharine Leppard. Testing demonstrated objective evidence of "left ulnar mononeuropathy at the elbow, mild in severity." (Resp. Hrg. Ex. J, p. 50). Motor nerve conduction across the Guyon's canal was reportedly "normal" and there was no evidence of median nerve mononeuropathy at the wrist or electrodiagnostic evidence a radiculopathy, brachial plexopathy, neurogenic thoracic outlet or radial mononeuropathy in the left upper extremity. *Id*.

13. By April 16, 2021, Claimant's wrist was noted to be doing "relatively well with just some aching discomfort". (Clmt's Hrg. Ex. 6, p. 64). Claimant had returned to "regular duty work by this date; however, Claimant experienced a worsening of the radiating pain from her medial left elbow into the hand with numbness and tingling into the ring and small fingers after a session of target practice at the firing range. *Id*. It was noted that Claimant had felt similar symptoms, albeit with less numbness and tingling since coming out of her long arm cast on March 23, 2020. (See ¶ 5 above). Dr. Larsen noted the possibility that Claimant's prior long arm casting had somehow aggravated the condition of Claimant's elbow but he added that her elbow had "not been particularly symptomatic until we tried to return her to normal duty". *Id*. at p. 65. Because

Claimant's elbow symptoms were worsening and because she had a "somewhat" subluxable ulnar nerve at the elbow with a positive Tinel's sign and elbow flexion compression test along with prior electrodiagnostic evidence of ulnar neuropathy, Dr. Larsen recommended a return to therapy to "work on specific nerve gliding exercises". *Id*. Barring symptomatic improvement with these exercises, Dr. Larsen noted that Claimant may require an ulnar nerve transposition surgery. *Id*.

14. Respondents sent Claimant for a second opinion with Dr. Jeffrey Watson. (Clmt's Hrg. Ex. 5). Dr. Watson, by report of June 9, 2021, noted Claimant's previous history of surgery by Dr. Larsen, her persistent left wrist and elbow pain, including *both lateral* and *medial* elbow pain along with occasional numbness over the ulnar border of the right hand. (Clmt's Hrg. Ex. 5, p. 26). Physical examination revealed "slight hypermobility of the right ulnar nerve with flexion and extension, but it does not firmly subluxate over the medial upper condyle".[1] *Id*. at p. 27. Percussion testing revealed a "mildly positive Tinel's sign along the ulnar nerve at the cubital tunnel", left slightly greater than right. *Id*. Moreover, Claimant demonstrated marked tenderness with palpation of the ulnar fovea as well as the ECU tendon. She also had ECU subluxation with provocative maneuvers, which was caused additional pain. *Id.* Dr. Watson concluded that Claimant's presentation was a "difficult" one as she had pain at her elbow, forearm and wrist following a "complex" wrist reconstruction effort. *Id*. He was not confident that Claimant's pain was emanating from her ulnar nerve because she had "more focal pain around the ulnar part of the wrist as opposed to the ulnar nerve distribution" and "minimal changes on her electrodiagnostic evaluation. *Id*. at p. 28. Instead, Dr. Watson felt that Claimant's problems were more likely coming from persistent instability of the extensor carpi ulnaris tendon. *Id.* While he had no confidence in a revision stabilization procedure of the TFCC or DRUJ, Dr. Watson noted that a revision stabilization of the ECU tendon "may be worthwhile", although he described this surgery as a "big commitment". *Id.*

15. The ALJ credits the October 20, 2020 and April 16, 2021 of PA Noble and Dr. Larsen respectively to find that Claimant probably has cubital tunnel syndrome related to her January 20, 2020 work injury.

16. Claimant was seen by Dr. Nicholas Kurz on June 22, 2021. (Clmt's Hrg. Ex. 4, p. 21). Dr. Kurz had previously released Claimant to full duty on her last visit to the City of Colorado Springs Occupational Medicine Clinic in March of 2021. Claimant had not returned to full duty but instead had taken vacation and then went on light duty pending the opinions by Dr. Larsen and the second opinion by Dr. Watson. According to Dr. Kurz' examination at that time, Claimant had a normal exam with full range of motion, strength and sensation. *Id*. at pp. 21-22. Dr. Kurz also noted that Dr. Larsen

[1] The ALJ finds Dr. Watson's reference to occasional numbness over the ulnar border of the right hand and slight hypermobility of the right ulnar nerve perplexing as Claimant has never reported any symptoms associated with the right elbow. Accordingly, the ALJ has given consideration to the possibility that Dr. Watson's reference to right hand pain and hypermobility or the ulnar nerve may be a typographical error. Nonetheless, Dr. Watson's examination revealed a positive ulnar nerve Tinel's sign over the left elbow, which is consistent with Dr. Larsen's finding on examination.

was of the opinion that some of Claimant's ligamentous wrist laxity was due to her pregnancy and he would expect that to improve with the passage of time and "to recover from the hormonal effects of her pregnancy." *Id*. at p. 22. Accordingly, Dr. Kurz placed Claimant at MMI without impairment and while his report indicated that maintenance treatment may be warranted, the Final Admission of Liability (FAL) filed by Respondents on July 16, 2021, stated that no medical maintenance was required. (Clmt's Hrg. Ex. 4, p. 22; see also Resp. Hrg. Ex. W, p. 112).

17. Claimant requested a Division Independent Medical Examination (DIME) to assess her left wrist and elbow following the filing of Respondents' July 16, 2021 FAL. Dr. John Bissell was selected as the physician to complete the requested DIME. Shortly before she saw Dr. Bissell on November 4, 2021, Claimant returned to full duty work.

Dr. Bissell's DIME

18. Dr. Bissell completed his DIME on November 4, 2021. (Clmt's Hrg. Ex. 8). During the DIME, Claimant reported "chronic aching, stabbing and burning in her left elbow and *medial* forearm with numbness and pins and needles in her left medial hand particularly in the fourth and fifth digits".[2] *Id*. at p. 105. Concerning the condition of Claimant's left elbow, Dr. Bissell documented the following:

> Dr. Larsen recommended ulnar nerve transposition but Dr. Kurz referred her for [a] second opinion [with] Dr. Watson. Dr. Watson told her the nerve injury was not significant enough but he found that she had persistent instability and recommended another stabilization surgery. Surgery was not approved and Dr. Kurz released her to full duty, which she started this week.

(Clmt's Hrg. Ex. 8, p. 103).

19. Although the physical examination section of Dr. Bissell's DIME report is devoid of any suggestion that he tested the left ulnar nerve for hypermobility, Dr. Bissell did perform a Tinel's test of the left ulnar nerve at the elbow. (Clmt's Hrg. Ex. 8, p. 106). Dr. Bissell documented a positive Tinel's test at the elbow, which caused "paresthesia extending into [Claimant's] fingers". *Id.* In reaching his clinical diagnosis of "left ulnar neuropathy, probably at the elbow, mild-claim related", Dr. Bissell cited the results of Claimant's nerve conduction study completed by Dr. Leppard on March 31, 2021. *Id*. at pp. 106-107. Indeed, Dr. Bissell noted: "Left upper limb EMG/NCV testing was complex and in summary showed *probable* left ulnar neuropathy at the elbow and mild sensory only left median neuropathy at the wrist. She saw hand surgeon Dr. Larsen who opined she might benefit from ulnar nerve transposition surgery and she had a second opinion

[2] The ALJ finds Dr. Bissell's reference to symptoms emanating from the left "medial" portion of the hand a likely error as the fourth and fifth digits are located on the lateral, i.e. outside aspect of the hand rather than on the medial (inside) aspect of the hand.

with hand surgeon Dr. Watson who opined she might benefit from revision extensor carpi ulnaris tendon stabilization". *Id*. at p. 107 (emphasis added).

20. Dr. Bissell concluded that Claimant was at MMI and assigned a total of 14% upper extremity impairment rating, 2% of which was given for Claimant's claim related left ulnar neuropathy above mid forearm. (Clmt's Hrg. Ex. 8, p. 107). Dr. Bissell recommended that Claimant follow-up with Dr. Kurz over the next year to assess her progress, noting that her symptoms should abate with ergonomic adjustment, bracing, resolution of the hormonal effects of pregnancy (ligamentous laxity) and time. *Id*. at p. 108. He did not recommend additional surgery, noting that multiple surgeries were unlikely to result in an improvement in pain or function. *Id*.

21. The ALJ finds that when Claimant was placed at MMI in June of 2021, differing opinions were given by examining experts as to what type of surgery may be of benefit to her at that time. Given the ongoing possibility that the laxity in her wrist could improve following the delivery of her child combined with the disparate opinions regarding the location of her pain generator, and the fact that she had been placed at MMI without impairment, the ALJ finds it reasonable that Claimant would be content to try to live with the state of her elbow condition as of June 22, 2021.

22. On December 1, 2021, Respondents filed an FAL consistent with the MMI and impairment rating opinions expressed by Dr. Bissell in his November 4, 2021 DIME report. (Clmt's Hrg. Ex. 9, p. 116). While Respondents admitted to the MMI and impairment rating determinations of Dr. Bissell, they denied maintenance care benefits pursuant to Dr. Kurz' June 22, 2021 report. *Id.*

23. Claimant subsequently filed an Application for Hearing seeking to convert her 14% scheduled rating to impairment of the whole person. As noted above, a hearing concerning conversion of Claimant's scheduled impairment commenced April 6, 2022. (Clmt's Hrg. Ex. 3). At this hearing, neither Claimant nor Respondents sought to overcome Dr. Bissell's DIME opinions as to MMI, or impairment nor did Claimant seek future maintenance medical care. *Id*. After Claimant's conversion request was denied and dismissed, she filed the current Application for Hearing seeking to reopen her claim for additional medical benefits, specifically surgery directed to the left elbow along with temporary total disability (TTD) benefits commencing October 10, 2022 and ongoing. (Clmt's Hrg. Ex. 1).

24. In support of their position that Claimant's request for conversion of her scheduled impairment should be denied and dismissed, Respondent presented a records review report authored by Dr. Thomas Mordick at the April 6, 2022 hearing. This same January 22, 2022 report is included in Respondents current Exhibit packet. (See Resp. Hrg. Ex. B). The ALJ has carefully reviewed this report a second time. In his January 22, 2022 report, Dr. Mordick notes:

> On 11-04-21 a Division IME was performed by Dr. Bissell. He stated his opinion that the claimant was at MMI. In (sic) awarded a

> 14% upper extremity rating. Of note 2% was for the ulnar nerve. [Redacted, hereinafter MC] did not complain of ulnar nerve issues for 10 months after her injury and 4 months after her surgery. In medical probability, immobilization in a cast does not result in cubital tunnel syndrome, and if somehow a cast should irritate the ulnar nerve it would happen while the cast was on and not months later. Therefore, in medical probability, the ulnar nerve complaints are not related to the injury of 01-20-2020."

(Resp. Hrg. Ex. B, p.14).

25. While it is clear that Dr. Mordick disagreed with Dr. Bissell's conclusion that Claimant's left elbow symptoms/complaints were causally related to her January 20, 2020 work injury as of January 22, 2022, Respondents did not raise any objection to Dr. Bissell's DIME determination regarding the cause of Claimant's left ulnar nerve/cubital tunnel symptoms at the time of the April 6, 2022 hearing.

26. Claimant returned for a follow-up appointment with Dr. Larsen on October 10, 2022. (Resp. Hrg. Ex. T). During this encounter, Dr. Larsen noted that he had not seen Claimant since May 2021, at which time it had been determined that Claimant had "ulnar neuritis of the left elbow with ulnar nerve subluxation as well as some persistent pain about her ulnar wrist". *Id*. at p. 83. Dr. Larsen also indicated that his recommendation to proceed with an ulnar nerve transposition surgery had been denied with Respondents' request for a second opinion with Dr. Watson. *Id.* Since the denial of the request for elbow surgery, Dr. Larsen noted that Claimant was experiencing "*significant worsening* pain localized to [Claimant's] elbow radiating out to her hand". *Id*. (emphasis added). Examination directed to the left *medial* elbow revealed tenderness over the ulnar nerve which was "palpably subluxable". *Id*. at p. 84. Claimant was careful to note that subluxation of the ulnar nerve reproduces the symptoms that she is having in her elbow and radiating into her hand. *Id*. Claimant also had a "painfully positive" Tinel's sign at the elbow, a palpably unstable ECU tendon and pain with an ulnocarpal grinding test at the wrist. *Id*. Dr. Larsen opined that Claimant had both an elbow problem and ongoing issues with her wrist. (See generally, Resp. Hrg. Ex. T, p. 85). He concluded that her "most symptomatic problem was ulnar neuritis at the medial elbow with ulnar nerve subluxation, noting that this was "electrodiagnostically associated with ulnar neuropathy at the elbow that was mild but her symptoms are more of pain and radiating symptoms when the nerve subluxate" (sic). *Id*. Dr. Larsen felt that Claimant remained a good candidate for an ulnar nerve transposition surgery and Claimant expressed a desire to proceed. *Id.*

27. Claimant was evaluated by Dr. Mordick for a WCRP, Rule 16 opinion on December 6, 2022. During this appointment, Claimant purportedly reported "constant pain in the *lateral* aspect of the left elbow. (Resp. Hrg. Ex. C, p. 16)(emphasis added). According to Dr. Mordick's independent medical examination (IME) report, Claimant described her pain as extending from the lateral aspect of the elbow to the ulnar side of the wrist. *Id.* at p. 17. Dr. Mordick did not appreciate any ulnar nerve subluxation on

examination and according to his report, Claimant did not complain of tenderness over the medial epicondyle. *Id*. Dr. Mordick found Claimant's examination to be atypical for cubital tunnel syndrome and because her elbow pain was lateral rather than medial, he recommended against ulnar nerve transposition surgery. *Id*. at p. 18.

28. Claimant returned to Dr. Larsen following Dr. Mordick's IME. She was reevaluated by Dr. Larsen on January 16, 2023, because Dr. Mordick's examination was in complete opposition to what he (Dr. Larsen) found on exam during Claimant's October 10, 2022 appointment. (Resp. Hrg. Ex. U, p. 87; see also, Clmt's Hrg. Ex. 6, p. 90).

29. During a January 16, 2023 appointment, Claimant reported to Dr. Larsen that Dr. Mordick spent approximately 5 minutes on his examination and that she was still having ongoing symptoms, that her ulnar nerve was subluxing at the elbow and that with pressure on the area of the ulnar nerve, she experiences "numbness in the ulnar digits of the hand". (Resp. Hrg. Ex. U, p. 87). Claimant localized her pain over the posterior and posteromedial aspect of the elbow. *Id.* at p. 88. She specifically denied any "*lateral* elbow pain". *Id*. (emphasis added). Physical examination noted a complete absence of tenderness over the lateral epicondyle; however, Claimant complained of tenderness over the ulnar nerve and demonstrated a positive elbow flexion compression test. *Id*. According to Dr. Larsen, he and Claimant could both appreciate the ulnar nerve subluxing over the medial epicondyle during his physical examination. *Id*.

30. Dr. Larsen concluded that Claimant had "very clear evidence of ulnar nerve subluxation and ulnar neuritis with a low degree of ulnar neuropathy on electrodiagnostic test. (Resp. Hrg. Ex. U, p. 88). He was unable to reconcile the differences between his examinations and the examination of Dr. Mordick. *Id.*

31. Dr. Mordick recorded the December 6, 2022, IME appointment with Claimant and the audio recording has been moved into evidence. (Clmt's Hrg. Ex. 10). The ALJ has carefully listened to the entire audio recording of this appointment. The recording is 15 minutes and 38 seconds in length. The first minute and 13 seconds of the recording consists of introductory statements made by "[Redacted, hereinafter NA]", an employee of Dr. Mordick's office followed by Claimant's consent to audio record the examination. Dr. Mordick introduces himself at 1:14 into the audio and proceeds to gather a history from Claimant for the next 4 minutes and 16 seconds, i.e. approximately to the 5 minute and 30 second mark of the audio when he asks Claimant to show him where she is having pain. Claimant confirms that the pain is difficult locate but concedes she has worsening pain on the outside of the left forearm/elbow. Dr. Mordick obtains additional history up to the 7 minute and 57 second mark of the recording when the actual physical examination begins. During the physical examination, Claimant reports having numbness in the ring and pinkie finger along with ½ of the middle finger. Following a basic sensory assessment, Dr. Mordick completes a palpatory examination of the left extremity. Dr. Mordick provides no verbal description of the areas palpated which reportedly cause/reproduce Claimant's pain. The palpatory examination proceeds to the 15 minute and 35 second mark of the audio recording,

making the complete examination approximately 7 minutes and 38 seconds in length. During the examination, Claimant reported that palpation to the area of the elbow caused soreness/pain in essentially the entire left forearm and a shooting sensation into the pinkie.

32. In a letter directed to Respondents' attorney dated January 20, 2023, Dr. Mordick reiterated his recommendation against proceeding with left ulnar nerve decompression with transposition surgery. (Resp. Hrg. Ex. D, p. 22). Dr. Mordick repeated his concerns that the cause of Claimant's elbow problems did not appear related to Claimant's January 20, 2020 injury. *Id*. Moreover, he cited Claimant's atypical and inconsistent examination findings, lateral rather than medial elbow pain, and weak EMG findings as additional evidence that the requested cubital tunnel surgery was not reasonable or necessary. *Id.*

33. Following Dr. Mordick's IME, Respondents requested a medical records review opinion from Dr. Lawrence Lesnak. Dr. Lesnak issued a report on February 6, 2023, outlining his opinions regarding Claimant's candidacy for left ulnar nerve transposition surgery at the elbow. (Resp. Hrg. Ex. E, pp. 26-29). In addition to the reasons cited by Dr. Mordick as support for denying Dr. Larsen's request for elbow surgery, Dr. Lesnak opined that the nerve conduction velocity study performed by Dr. Leppard did not meet the criteria for a diagnosis of mild ulnar motor neuropathy across the elbow. *Id.* at pp. 28-29. According to Dr. Lesnak, the 13 m/sec decrease in Claimant's ulnar nerve conduction was below the 15 m/sec or greater decrease "*required*" for the aforementioned diagnosis. Id. at p. 28 (emphasis in original). Dr. Lesnak did not recommend repeat EMG/NCV testing to determine whether there had been any interim change in Claimant's nerve conduction velocities between the time of Dr. Leppard's testing and his records review.

The Deposition Testimony of Dr. Larsen

34. Dr. Larsen is a Board-certified, fellowship trained orthopedic hand and upper extremity surgeon. He graduated from the Uniformed Services University of the Health Sciences Medical School and did a year of general surgical training in the Air Force where he served as a flight surgeon. He thereafter did an orthopedic residency and then a subspecialty fellowship in hand and microvascular surgery and then served as an upper extremity surgeon at the Air Force Academy before going into private practice in 2008. He is Level II certified with the Division of Workers' Compensation (DOWC) and serves on the DIME panel of the DOWC. (Depo. Tr. Dr. Larsen, pp. 4-6, ll. 1-23).

35. Dr. Larsen testified that he recommended ulnar nerve transposition surgery because Claimant's clinical presentation included positive provocative testing (tenderness and instability of the ulnar nerve) supporting his conclusion that she had ulnar neuritis in combination with a low degree of ulnar neuropathy. (Depo. Tr. Dr. Larsen, pp. 11-12, ll. 1-8). So, he testified that he "offered [Claimant] a surgery that

would manage both, but the driving force was the ulnar neuritis" causing worsening pain around the ulnar nerve. *Id*. at ll. 8-10.

36. Dr. Larsen testified that after he received Dr. Mordick's December 6, 2022 report, he had Claimant brought back on January 16, 2023 to reexamine her yet again to "verify" what he was seeing because Dr. Mordick's examination results were in complete opposition to what he was seeing. (Depo. Tr. Dr. Larsen, p. 17-18, l. 1). According to Dr. Larsen, his examination findings from January 16, 2023, were consistent to what he had seen in October 2020 and May 24, 2021 and it appeared that Claimant's symptoms associated with left wrist/elbow were becoming more painful to her. *Id*. at p. 18-19, ll.1-4.

37. Dr. Larsen disagreed with the conclusions of Dr. Mordick as set out in his January 20, 2023 report (Resp. Ex. D, p. 22-23) when he suggested that the proposed ulnar nerve transposition surgery be denied on the basis that Claimant reported lateral not medial elbow pain and did not demonstrate ulnar nerve instability. (Depo. Tr. Dr. Larsen, p. 21, ll. 3-17). According to Dr. Larsen, Claimant's lateral elbow pain has not been a prominent part of her complaints or treatment over the years and he conspicuously felt the nerve sublux on examination. *Id.* When questioned as to whether the recommendation presently for the surgery on the elbow was based simply on Claimant's complaints of pain, Dr. Larsen testified that it is based not only on the Claimant's complaints of pain but also the provocative examination and the subluxation of the ulnar nerve eliciting pain behavior. *Id*. at p. 25, ll. 14-24.

38. Dr. Larsen opined that as of Claimant's October 10, 2022 examination, her left upper extremity symptoms appeared to render her unable to perform the full range of duties associated with her position as a police officer. (Depo. Tr. Dr. Larsen, p. 15, ll. 5-10).

Claimant's Hearing Testimony

39. Claimant testified that at the time of her initial injury she injured her wrist, had a burning sensation in her forearm and had pain and discomfort in her elbow. Claimant testified that with the passage of time, her elbow pain has gotten worse. She acknowledged that as of May 24, 2021, Dr. Larsen thought that surgery should be done on the elbow, but that Dr. Kurz had her get a second opinion with Dr. Watson who recommended that she proceed with additional wrist surgery. With two different opinions from two well-known doctors, as to the suspected pain generator, Claimant testified that she did not know what to do.

40. The evidence presented supports a finding that Claimant did not have any treatment between the time Dr. Kurz placed her at MMI on June 22, 2021 and October 10, 2022, when she returned to Dr. Larsen with complaints of worsening pain localized to the elbow and radiating out to the hand. By this time, Claimant's case would have been closed to additional medical benefits for approximately 10 month, i.e. since

December 31, 2021 by virtue of the fact that she did not object to Respondents 12/1/2021 FAL denying maintenance medical benefits.

41. Claimant testified that by October 10, 2022 this date her elbow pain had become constant and that she had shooting pains inside the left elbow and constant pain and numbness and tingling in her hand. Claimant described the pain as being on the inside or medial side of her elbow and thought that the difference in opinions/documentation of the physicians regarding the location of her pain may be related to the different way that the doctors performed their examinations and whether she had her elbow flexed or extended. Regardless, Claimant testified that the elbow pain she is enduring currently is in the same location as it was in May of 2021. According to Claimant, this pain and the other associated symptoms, including numbness and tingling in the pinky, ring, and one half of the middle figure are now constant in nature and more intense than she felt previously. Indeed, Claimant testified that when she went back to patrol duty in September of 2022 she noticed a significant worsening of her elbow pain/symptoms which progressively became more and more bothersome until it was constant. Claimant also testified that she could feel the ulnar nerve slipping out during her examinations with Dr. Larsen.

42. During cross-examination, Claimant admitted that she was off work for 12 weeks with whiplash following a motor vehicle accident on September 20, 2022. She also admitted that she is off work presently due to high risk pregnancy and symptoms consistent with supraventricular tachycardia.

The Testimony of Dr. Thomas Mordick

43. Dr. Thomas Mordick testified as a Board-certified, fellowship trained hand surgeon. Regarding Claimant's reported symptoms, Dr. Mordick testified that when he evaluated Claimant, she unmistakably indicated that she had lateral, not medial elbow pain and numbness in the left middle finger, ring and small fingers. The other notes indicate the left ring and small finger, which ·Dr. Mordick agreed would be more consistent with cubital tunnel syndrome, but Dr. Mordick testified that Claimant very specifically reported that she had numbness in her middle finger when he evaluated her. According to Dr. Mordick, such middle finger numbness would be an atypical distribution for an ulnar nerve problem. Dr. Mordick did not appreciate any ulnar nerve subluxation on examination and he testified that Dr. Lesnak reported that the EMG/NCV testing did not support a diagnosis of cubital tunnel syndrome. For these reasons, Dr. Mordick testified that the recommended ulnar nerve transposition surgery is not indicated.

44. Concerning Claimant's reported worsening of condition, Dr. Mordick testified that Claimant told him that her pain and numbness were unchanged for a long period of time. Accordingly, Dr. Mordick testified: "So, there does not appear to be any worsening of numbness, which would be indicative of cubital tunnel syndrome. As noted, this ALJ has listened carefully to the entire audio recording of Dr. Mordick's IME examination. That review would indicate that during the palpatory examination of Claimant's left wrist/elbow, Dr. Mordick never asked Claimant whether the pain he was

eliciting was worse than she had experienced previously. Moreover, on at least three occasions, Claimant told Dr. Mordick that her symptoms were worsening with time. Indeed, in reference to the shooting pain that Claimant reported travels from her elbow down her forearm, Claimant stated it has gotten "worse" as time has gone on. (Clmt's Hrg. Ex. 10, audio recording 4:14). She also reported that her symptoms were "getting worse and worse" and she now has "constant" pain at the elbow to the wrist. *Id*. at 5:19. Finally when asked pointedly whether her pain was different or the same as before, Claimant responded, "I would say it is getting worse at this point. *Id*. at 6:24.

45. The ALJ finds Claimant's testimony that her elbow pain and other associated symptoms, including paresthesia (numbness) have worsened since being placed at MMI on June 22, 2021, credible and more persuasive than the contrary statements of Dr. Mordick that she reported her pain and numbness were unchanged.

46. Based upon the evidence presented, the ALJ finds the medical situation surrounding the condition of Claimant's left elbow and wrist to be complicated. The ALJ is persuaded that Claimant likely suffered two separate injuries to her left upper extremity during the January 20, 2020 incident, one related to the TFCC and ECU tendon, i.e. the lateral aspect of the wrist and the other involving the elbow. Based upon the evidence presented, the ALJ is convinced that these injuries/conditions are probably causing pain and other associated symptoms in the entire left forearm, including the wrist and both the lateral and medial side of the elbow. Indeed, the ALJ is convinced that Claimant does have lateral forearm and elbow pain that is probably emanating from the injury to her ECU tendon and perhaps her TFCC injury. Moreover, there is electrodiagnostic evidence of ulnar nerve irritation/neuropathy at the elbow which is probably causing the reported medial elbow pain and associated symptoms (numbness/tingling) that are reproducible with provocative testing (Tinel's/grind test/ulnar nerve subluxation). Although mild in nature, Claimant's abnormal EMG/NCV testing results constitute some "objective" evidence that her ulnar nerve is not completely healthy. Based upon the evidence presented, the ALJ finds that Claimant's ulnar nerve irritation/neuropathy represents the probable source of her persistent and worsening elbow pain.

47. Dr. Lesnak's suggestion that Claimant's reported worsening ulnar nerve pain and associated cubital tunnel syndrome symptoms are not explained by the results of her EMG testing is not persuasive. Indeed, Dr. Leppard concluded that Claimant's testing yielded an abnormal result and that Claimant had mild ulnar neuropathy at the elbow. Moreover, Dr. Bissell seemingly adopted Dr. Leppard's EMG testing results when he concluded that Claimant had "left ulnar neuropathy, probably at the elbow, mild-claim related". (Clmt's Hrg. Ex. 8, pp. 106-107). As noted, Respondent's did not challenge Dr. Bissell's DIME finding concerning the cause of Claimant's ulnar neuropathy. Consequently, the ALJ finds any suggestion that Claimant does not have an ulnar neuropathy in direct contradiction to Dr. Bissell's diagnostic opinion concerning Claimant's elbow and his determination that Claimant's ulnar neuropathy is "claim related". Nevertheless, the evidence presented persuades the ALJ that Claimant's ulnar nerve irritation and cubital tunnel symptoms are probably related to the January

20, 2020, incident and that the condition of Claimant's elbow is deteriorating. As presented, the evidence also supports a finding that the proposed ulnar nerve transposition surgery is reasonable and necessary to treat the advancing symptoms associated with Claimant's ulnar nerve/elbow injury. Accordingly, the ALJ finds that Claimant has proven that she is entitled to a reopening of her case to seek this otherwise reasonable, necessary and claim related medical care.

48. As to the Claimant's request for temporary disability benefits, Dr. Larsen has indicated that he does not believe that she can perform the full range of duties required of a police officer. Claimant testified she is presently on extended leave due to special circumstances surrounding a high risk pregnancy that precludes her from doing any work. The disability associated with Claimant's pregnancy will cease upon the delivery of her child in early July. Nonetheless, Claimant is unsure as to whether she has been cleared to proceed with the recommended ulnar nerve transposition surgery by her ob-gyn doctor. Accordingly, Claimant may have to wait until the delivery of her child before she can proceed with surgery. Based upon the evidence presented, the ALJ is convinced that Claimant is entitled to temporary disability benefits commencing when her disability from the pregnancy ceases and until such time as she is placed at MMI following the ulnar nerve transposition surgery. Regardless, the ALJ finds an Order concerning the payment of TTD to be premature until the special circumstances surrounding Claimant's high risk pregnancy are no longer precluding her employment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado (Act) §§8-40-101, *et seq*. C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section* 8-40-102(1), C.R.S. The claimant bears the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-43-301(1), C.R.S.; *Faulker v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo.App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of a claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. A workers' compensation claim is decided on its merits. Section 8-43-201, *supra*.

B. In accordance with §8-43-215, C.R.S., this decision contains specific findings of fact, conclusions of law and an order. In rendering this decision, the ALJ

has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice, or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found here, Claimant's testimony regarding the alleged worsening of her condition is credible and persuasive. Based upon the evidence presented, the ALJ is convinced that Claimant has a serious medical condition in the left elbow/forearm caused by an injury to the ulnar nerve during the January 20, 2020 work incident. As noted above, the ALJ is also persuaded that the condition of Claimant's left elbow is worsening with the passage of time and that the proposed ulnar nerve transposition surgery is a reasonable, necessary treatment option to cure and relieve her of the ongoing symptoms/dysfunction caused by this claim related condition.

D. The weight and credibility to be assigned expert testimony is also matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). As found, the testimony/opinions of PA Noble and Dr. Larsen regarding the cause of Claimant's left wrist/elbow condition and her need for surgery are more convincing than the contrary opinions of Drs. Mordick and Lesnak. Here, the evidence presented substantially supports a conclusion that Claimant's left elbow symptoms came on shortly after an inciting event related to Claimant's work activity, specifically tussling with a drunken combative suspect. As found, this condition has been deemed to be related to this January 20, 2020 incident by PA Noble and Drs. Larsen and Bissell. Moreover, the evidence presented, including the audio recording of Claimant's IME with Dr. Mordick supports a conclusion that the overall condition of Claimant's the left forearm is worsening.

Claimant's Request to Reopen Based on a Change of Condition

E. A request for continuing medical treatment must be presented at the time of MMI, *Hanna v. Print Expediters Inc.*, 77 P. 3d 863 (Colo.App., 2003). Furthermore, the issue of medical benefits is closed if the respondents file an uncontested final admission that denies liability for future medical benefits. *Burke v. Industrial Claim*

Appeals Office, 905 P. 2d 1 (Colo. App. 1994). Indeed, C.R.S. § 8-43-203(2)(b)(II) provides that a case will be "automatically closed as to the issues admitted in the [FAL] if the claimant does not, within thirty days after the date of the [FAL], contest the [FAL] in writing and request a hearing on *any disputed issues that are ripe for hearing*." . . . (emphasis added). *Olivas-Soto v. Indust. Claim Appeals Office*, 143 P.3d 1178 (Colo.App. 2006). "Once issues are closed, they may only be reopened on the grounds stated in C.R.S. § 8-43-303. C.R.S. § 8-43-203(2) (d). Among those grounds is a change in the claimant's condition. C.R.S. Section 8-43-303(1); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261 (Colo.App. 2004); *See also, Milco Construction v. Cowan*, 860 P. 2d 539 (Colo.App. 1992) (a claim may reopened for further medical treatment when the claimant experiences an "unexpected and unforeseeable" change in condition); *Brown and Root, Inc. v. Industrial Claim Appeals Office*, 833 P. 2d 780 (Colo.App. 1991).

F. Based upon the evidence presented, the ALJ is persuaded that Claimant objected to and filed an Application for Hearing contesting Respondents' December 1, 2021 FAL. Nonetheless, Claimant did not include an objection to Respondents denial of liability for future medical care, i.e. maintenance treatment benefits in her Application for Hearing. Indeed, the only issue for determination at hearing following Claimant's DIME was whether she was entitled to have her scheduled impairment of the left upper extremity converted to whole person impairment. Accordingly, the ALJ is convinced that the issue of medical benefits, including post-MMI treatment closed because it was not endorsed within thirty days of the FAL as required by § 8-43-203(2)(b)(II).

G. Nevertheless, § 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based upon a change in condition which occurs after maximum medical improvement. *El Paso County Department of Social Services v. Donn*, 865 P.2d 877 (Colo.App. 1993). In seeking to reopen a claim, the claimant shoulders the burden of proving his/her condition has changed and he/she is entitled to additional benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo.App. 2005).

H. A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo.App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo.App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (Oct. 25, 2006). The question of whether a claimant established a change in the condition of a physical or mental condition causally connected to the original compensable injury, is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office*, 12, P.3d 844 (Colo.App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo.App. 1999); *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004). Where the claimant alleges a change in condition, as here, the ALJ may credit the claimant's testimony as to the worsening of symptoms/problems as sufficient to order a reopening of the case. *See, Savio House v. Dennis,* 665 P.2d 141 (Colo.App. 1983).

Nonetheless, reopening is only appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo.App. 2000); *Jefferson County School District v. Goldsmith,* 878 P. 2d 116 (Colo. App.1994); *Dorman v. B & W. Construction Co.,* 765 P.2d 1033 (Colo.App. 1988); and *Brickell v. Business Machines, Inc.,* 817 P.2d 536 (Colo.App. 1990).

I. Here, the evidence presented supports a conclusion that Claimant has proven that her left elbow condition was caused by an injury traceable to the January 20, 2020 work incident and that the condition of her elbow has worsened with the passage of time as evidenced by the manifestation of constant symptoms, including paresthesia since being placed at MMI by Dr. Kurz on June 22, 2021. Indeed, the record evidence persuades the ALJ to find and conclude that Claimant's persistent and worsening elbow pain and associated symptoms warrants additional treatment, including surgery which the ALJ is convinced is reasonably necessary and designed to cure and relieve her ongoing symptoms and functional decline. While not unanticipated, the recommendation for ulnar nerve transposition surgery nevertheless resulted from a fundamental change in Claimant's condition over time as evidenced by her now "constant symptoms" and her inability to perform the full range of duties associated with her work as a police officer. Accordingly, Claimant's request to reopen her claim is granted.

Respondents' Assertions Regarding Circumventing the DIME

J. Citing the decision announced by the Court of Appeals in *Justiniano v. Industrial Claim Appeals Office*, 410 P.3d 659 (Colo.App. 2016), Respondents contend that Claimant's request to reopen her claim for additional medical treatment amounts to an impermissible attempt to circumvent the higher standard of clear and convincing evidence required to challenge Dr. Bissell's DIME. Based upon the evidence presented, the ALJ is not convinced. In *Justiniano,* Claimant proceeded through a DIME and the DIME doctor determined that she had reached MMI. Thereafter, Ms. Justiniano's employer and its workers' compensation insurance carrier filed a FAL advising her that she had 30 days to file an objection. Claimant did not file an objection. Instead, she filed a petition to reopen her claim within two weeks after the filing of the FAL, while the claim was still open. As part of her petition to reopen, Ms. Justiniano used medical information that post-dated the DIME. The ALJ denied and dismissed the petition to reopen concluding that Ms. Justiniano was "actually attempting to challenge the DIME regarding the MMI determination by suggesting that [she] required additional medical care, specifically the wrist surgery performed [in September 2013] in order to reach MMI". In concluding that Claimant's petition to reopen was a constructive challenge to MMI, the ALJ determined that Ms. Justiniano's petition to reopen constituted an attempt to avoid the higher clear and convincing burden of proof required to challenge the determination that she had reached MMI. Claimant appealed the ALJ's decision and the Panel affirmed.

K. In affirming the Panel, the Court noted that the statutory authority to reopen a claim is "permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ". *Justiniano, supra* (quoting *Cordova v. Indust. Claim Appeals Office*, 197 P.3d 220, 222 (Colo.App 2008). Although the Court did not reach the question as to the validity of the petition to reopen in the face of an open FAL, the Court did note that claimant's petition to reopen was premature because the claim had not yet closed. Moreover, the Court cited claimant's counsel's admission that the decision to file a petition to reopen rather than contest the DIME opinion regarding MMI was in part "strategic" because he did not believe that claimant could overcome the DIME. In light of these factors, the Court concluded that the ALJ did not abuse her discretion in dismissing claimant's petition to reopen nor did the panel err in upholding the ALJ. *Justiniano, supra* at p. 662.

L. In the instant case, the ALJ notes that Claimant made no attempt to challenge the DIME and that her case had been closed for many months before she petitioned to reopen for additional medical treatment on the basis that she experienced a change in her condition during that time period. As found here, there is ample evidence to support a conclusion that Claimant suffered a change in condition caused by her industrial injury. Undeniably, Claimant has reported a post-MMI increase in her symptoms and per Dr. Larsen, there is evidence of greater functional loss, including Claimant's inability to carry out the full range of essential duties associated with her job due to the industrial injury. Accordingly, the ALJ is not convinced that Claimant is attempting an end run around the DIME in order to take advantage of a lower burden of proof to obtain additional medical benefits, including surgery for a condition that she tried to live with post MMI. Notably, the DIME process does not control whether the claimant's condition has worsened following the date of MMI or whether the worsening is causally related to the industrial injury. In fact, MMI represents a point in time where a claimant's condition becomes stable and where any permanent impairment associated with the injury is determinable. *Cordova, supra* at p. 190.

M. In concluding that Claimant is entitled to a reopening of her claim, the ALJ finds the claim for *Debra Hague v. Duckwall-Alco Stores Inc*. W.C. 4-522-932 (April 19, 2005) instructive. Similar to the situation here, the ALJ found that Ms. Hague had proven that she suffered a worsened condition caused by her industrial injury. Accordingly, he reopened the claim for additional medical treatment, including a "transposition/decompression of the ulnar nerve". *Id*. Akin to the situation presented in Hague, this ALJ finds that Dr. Kurz' and Dr. Bissell's MMI determination merely fixed a single point in time when Claimant's condition had become stable and this point in time did not "legally or factually rule out the possibility that the Claimant's condition could not subsequently worsen as evidenced by [her] additional symptoms and diagnoses and the need for additional treatment". Just as in *Hague*, the instant case involves a worsening of condition many months after MMI rather than a challenge to MMI. Thus, the ALJ is convinced, as was the ALJ in Hague, that Claimant is not attempting to circumvent the DIME process but rather exercise her "statutory right to reopen based on worsened condition". *Id.* (See also, Gomez *v. University of Colorado*, WC's 4-945-122-04, 4-929-679 & 4-936-273 (ICAO, Apr. 17, 2020).

Claimant's Contentions Concerning Estopple

N. Although developed in the context of judicial proceedings, the doctrines of *res judicata* (claim preclusion) and collateral estopple (issue preclusion) may be applied to administrative proceedings in Workers Compensation Claims to bind the parties to an administrative agency's findings of fact or conclusions of law." *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44, 47 (Colo. 2001); see *Holnam v. Industrial Claim Appeals Office,* 159 P.3d 795 (Colo.App. 2006*)*. Claim and issue preclusion are affirmative defenses that must be pled and proven by the party seeking to apply the doctrines. *Bristol Bay Prods., LLC v. Lampack*, 312 P.3d 1155, 1164 (Colo. 2013).

O. *Res Judicata* or claim preclusion bars relitigation of previously decided matters and matters that could have been raised in a prior proceeding but were not. *Foster v. Plock,* 411 P.3d 1008, 1014 (Colo.App.2016). The elements of claim preclusion are: "(1) finality of the first judgment, (2) identity of subject matter, (3) identity of claims for relief, (4) identity or privity of parties to the actions." *Camus v. State Farm Insurance*, 151 P.3d 678, 680 (Colo.App. 2006). Claim preclusion blocks litigation of claims that were or might have been decided only if the claims are tied by the same injury. *Layton Construction Co. v. Shaw Contract Flooring Servs., Inc.*, 409 P.3d 602 (Colo.App. 2016); *Loveland Essential Grp. v. Grommon Farms, Inc*., 318 P.3d 6 (Colo.App.2012). As noted, claim preclusion is an affirmative defense which must be plead and proven by the party seeking to apply the doctrines, i.e. the Claimant in this particular case. Although cited in her position statement, Claimant did not specifically plead claim preclusion as an affirmative defense to be applied in the instant matter. Moreover, application of the principle of *res judicata* has been rejected in cases involving reopening, based upon the broad discretion afforded in the area, which favors a just result over the interest of the litigants in a final resolution of the claim. See, *Hernandez v. Cattle King Beef Company*, 3-714-045 (February 26, 1988) (noting that the ALJ had the discretion to reopen *sua sponte* in the absence of a petition to reopen.); *Padilla v. Industrial Commission*, 696 P.2d 273 (Colo. 1985).

P. Issue preclusion is broader than claim preclusion in that it applies to a cause of action different from that involved in the original proceeding. However, issue preclusion is narrower than claim preclusion because it does not apply to matters that could have been litigated in the prior proceeding but were not. *Pomeroy v. Waitkus*, 183 Colo. 244, 517 P.2d 396 (1974). Issue preclusion bars relitigation of an issue if:

> (1) the issue sought to be precluded is identical to an issue actually determined in the prior proceeding; (2) the party against whom [issue preclusion] is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding.

Youngs v. Indus. Claim Appeals Office, 297 P.3d 964, 974 (Colo.App. 2012); *Feeley v. Indus. Claim Appeals Office*, 195 P.3d 1154, 1156 (Colo.App. 2008). An issue can be identical for issue preclusion purposes if either the facts or the legal matter raised is the same. *Carpenter v. Young*, 773 P.2d 561, 565 n. 5 (Colo.1989).

Q. In this case, Claimant argues that Respondents should be estopped from asserting that Claimant does not suffer from claim related ulnar neuropathy based upon Respondent's failure to raise any objection to Dr. Bissell's DIME determination regarding the cause of Claimant's left ulnar nerve/cubital tunnel symptoms at the time of the April 6, 2022 hearing. Respondents counter Claimant's contention by asserting that prongs 1 and 4 of the above referenced legal test have not been met. Based upon the evidence presented, the ALJ agrees. Nonetheless, even assuming that issue preclusion does not prohibit the re-litigation of the compensability of the ulnar nerve injury, the evidence presented supports a conclusion that Claimant sustained an injury to her ulnar nerve in the compensable January 20, 2020 on the job injury and based upon the testimony of Dr. Larsen and the Claimant this injury has worsened since the date of MMI and that the proposed surgery by Dr. Larsen is reasonably necessary to cure and relieve Claimant of her injuries.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen is granted.

2. The proposed ulnar nerve transposition surgery is reasonably necessary and causally related to the claimant's compensable injury of January 20, 2020.

3. Claimant's claim for temporary disability benefits is reserved and held in abeyance as her current inability to work is related to a non-industrial related cause, i.e. her high risk pregnancy. Once this non-work related disability ceases, Claimant will be entitled to temporary disability benefits as provided for in C.R.S. §§ 8-42-105 and 106, until terminated as provided therein.

4. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in

Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the L3-L4, L4-L5 laminectomy recommended by Dr. Rauzzino is reasonably necessary to cure and relieve him of the effects of his January 28, 2022 injury.

II. Whether Claimant proved by a preponderance of the evidence that Respondent failed to timely deny a complete prior authorization request and consequently deemed the requested surgery authorized.

FINDINGS OF FACT

1. This is an admitted claim involving a January 28, 2022 injury. Claimant was a truck driver. He injured his low back during a home delivery while unloading 800 pounds of furniture.

2. On April 4, 2022, Claimant reported "right anterior thigh cramping pain with prolonged sitting." Nathan Adams, PA noted Claimant's weight as 230 pounds in December 2022. He also noted that Claimant was a smoker and discussed with him the importance of cessation to improve recovery and reduce associated risks. PA Adams added that Dr. Castro had "said he wouldn't do surgery unless [Claimant] quit smoking."

3. On April 27, 2022, Claimant saw Dr. Mechelle Viola-Lewis. Claimant reported that he noticed "no change" resulting from taking Medrol Dosepak.

4. On August 31, 2022, Claimant saw Dr. Vanderkool and told him that he could walk only one to two minutes before getting severe nerve pain in his right hip, radiating down his whole right leg.

5. Dr. Michael Rauzzino saw Claimant on November 22, 2022. Dr. Rauzzino noted in that report: "I reviewed the MRI of his lumbar spine done on April 7, 2022 at SimonMed, which shows severe spinal stenosis at L4-L5 and L3-L4, L4-L5 is the worst level. There is also little bit of stenosis at L2-L3 and L5-S1. He has degenerative disc disease at L5-S1. He has had injections with Dr. Olsen, which has not been curative for him. He says they help temporarily then his symptoms get back." Dr. Rauzzino noted that Claimant had severe spinal stenosis at L4-L5 and to a lesser extent at L3-L4. He noted that Claimant had signs and symptoms classic of neurogenic claudication. Dr. Rauzzino made no mention of referring Claimant for any other tests and did not comment upon Claimant's smoking or obesity. Nevertheless, he recommended a two-level decompression without

fusion. The report was faxed to Respondent on November 30, 2022, with a Rule 16-7, WCRP, request for prior authorization included on the fax cover sheet for an L3-L4 laminectomy. Dr. Rauzzino did not include the L4-L5 level in his request.

6. On January 4, 2023, Respondent issued a denial of prior authorization of the L3-L4 laminectomy requested by Dr. Rauzzino. Attached to the denial was an undated[1] record review report by Dr. Aaron Morgenstein, an orthopaedic surgeon board certified in Colorado. Dr. Morgenstein opined that the requested bilateral L3-L4 laminectomy was not medically necessary. He reasoned that Claimant's most severe level of spinal stenosis was at L4-L5, not L3-L4. Dr. Morgenstein appeared to imply that the L4-L5 level should be prioritized.

7. On January 17, 2023, Dr. Rauzzino submitted a request for prior authorization for L3-L5 laminectomy. Attached was a copy of Dr. Rauzzino's November 22, 2022 report and an April 7, 2022 MRI of the lumbar spine without contrast showing "[m]ultilevel chronic degenerative disc disease and degenerative central canal and neural foraminal narrowing . . . [and] central canal stenosis involving L4-L5 level." Respondent neither authorized nor denied the request.

8. On January 26, 2023, Claimant saw PA Adams and reported experiencing radicular symptoms.

9. On April 19, 2023, Dr. Rauzzino submitted another request for prior authorization for an L3-4, L4-L5 laminectomy. Dr. Rauzzino attached his November 22, 2022 report and a copy of the April 7, 2022 MRI.

10. Claimant was examined by Dr. Viola-Lewis on April 20, 2023. The history portion of the corresponding report noted some improvement after Dr. Olson's injections.

11. On May 3, 2023, Respondent issued a denial of prior authorization of the L3-L4 and L4-L5 levels. Attached to the denial was an undated[2] record review report by Dr. Morgenstein. Dr. Morgenstein opined that the requested procedure was "not medically necessary," reasoning that "there are vague and conflicting symptoms of neurogenic claudication, the lumbar MRI is greater than one year old, the surgeon's last office visit is greater than 5 months old, and there is lack of documentation of the claimant having failure of a trial of 6 weeks of active therapy."

12. At hearing, Claimant testified that he received physical therapy of about 12 weeks. The physical therapy was not beneficial. He also testified that he received three injections. He testified that the injections did not help at all, nor did chiropractic care, of which he had about three or four visits. Claimant testified that he refused prescriptions for pain medications.

---

[1] Though, the referral date was noted as December 30, 2022.

[2] Though, the referral date was noted as May 2, 2023.

13. During cross examination, Claimant admitted that he is a smoker. He smokes less than a pack a day but has been a smoker for thirty years. Claimant also testified that he is six feet tall, weighs about 215 to 220 pounds. Claimant acknowledged that no provider sent him for psychological testing.

14. The Court finds Claimant's testimony credible, except insofar as he testified that he declined pain medications, as the medical records document him taking a trial of Medrol Dosepak.

15. The Court also credits the opinions of Dr. Rauzzino over those of Dr. Morgenstein insofar as Dr. Rauzzino recommends a an L3-4, L4-L5 laminectomy. Dr. Morgenstein's rationale in his original peer review was that the most severe level of spinal stenosis was at L4-L5, not L3-L4, yet Dr. Rauzzino requested prior authorization for a laminectomy only at the L3-L4 level. Dr. Rauzzino resubmitted his request two more times, revising his request to include the L4-L5 level. By the time Dr. Morgenstein completed a follow-up peer review five months later, Dr. Morgenstein recommended against the procedure on four bases: "there are vague and conflicting symptoms of neurogenic claudication, the lumbar MRI is greater than one year old, the surgeon's last office visit is greater than 5 months old, and there is lack of documentation of the claimant having failure of a trial of 6 weeks of active therapy." Notably the second and third rationales would not have applied to Dr. Rauzzino's original November 22, 2022 recommendation and arose only because of the delay in treatment. Regarding the first rationale, the Court notes that there is sufficient medical documentation of Claimant experiencing radicular symptoms arising from his low back condition. Regarding the last rationale, the Court credits Claimant's testimony that he underwent physical therapy and injections without relief.

16. The Court finds that the L3-L4, L4L-5 laminectomy recommended by Dr. Rauzzino to be reasonably necessary to cure and relieve Claimant of the effects of his January 28, 2022 injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be

interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo.App.2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo.App.2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Commission,* 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo.App.2000).

Medical Benefits

The Colorado Workers' Compensation Act ("the Act") provides that an employer must provide medical care "as may reasonably be needed . . . to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S.

Although respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo.App.2002)(upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures).

As found above, the L3-L4, L4-L5 laminectomy recommended by Dr. Rauzzino is reasonably necessary to cure and relieve Claimant of the symptoms of his injury.

Aside from Dr. Morgenstein's rationale for recommending against the procedure, Respondent argues that the recommendations of the Medical Treatment Guidelines (MTGs) weigh against authorization of the procedure.

The Colorado Division of Workers' Compensation has issued medical treatment guidelines under Rule 17, WCRP, as evidence of professional standards for treatment of high-cost or high-frequency medical procedures. *See* Rule 17-1(A), W.C.R.P. An ALJ is not bound to the treatment guidelines in his or her determination of whether a particular treatment is reasonable and necessary. *See Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006)(it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive). However, it is appropriate for an ALJ to consider the treatment guidelines in determining the reasonableness and medical necessity of a particular treatment. *Stamey v. C2 Utility Contractors, Inc.*, W.C. Nos. 4-503-974 and 4-669-250 at *2 (August 21, 2008).

Respondent specifically argues that Dr. Rauzzino failed to consider Claimant's smoking and obesity and the absence of psychological screening in this case prior to surgery.

Regarding smoking, the MTGs note only that there is strong evidence that smoking is a non-occupational risk factor for lumbar radicular pain. Rule 17, WCRP, Exhibit 1, p. 13. Although the MTGs also note that there is some evidence that "[p]atients who smoke respond less favorably to non-operative spine care than nonsmokers," Rule 17, WCRP, Exhibit 1, p. 111, that portion of the MTGs does not address the impact of smoking on surgical outcomes. The Court acknowledges that, intuitively, it seems logical that smoking *could* have a negative impact on a surgical outcome. However, the Court finds insufficient evidence in the case to lead it to find that smoking is *likely* to result in a negative surgical outcome.

Respondent also pointed to Claimant's obesity as a risk factor for low back pain. However, the MTGs associate obesity with negative surgical outcomes only when the obesity is morbid:

> Functional improvement and relief of back pain from most back surgery is similar between patients with a body mass index (BMI) under 25 and overweight or mildly obese patients with a BMI between 25 and 35. Mild obesity does not appear to have an adverse effect on the responsiveness to surgery for these clinical outcomes.

Rule 17, WCRP, Exhibit 1, p. 68.

Respondent points out that Claimant's weight has fluctuated, insinuating that it is possible that his BMI may now be above 35 kg/m^2. Claimant testified that he is six feet tall and 220 pounds. The Court found this testimony credible and takes judicial notice that this corresponds with a BMI of 30 kg/m^2. Based on the MTGs, there is good evidence that Claimant's mild obesity is unlikely to have a negative impact on the

outcome of the two-level laminectomy recommended by Dr. Rauzzino. Therefore, the Court finds Claimant's obesity to be unlikely to affect a surgical outcome.

Respondent also points to the absence of psychological screening in this case, despite the MTGs' recommendation for psychological screening prior to surgery. Specifically, the MTGs note undiagnosed depression to be contraindications to decompressive surgery. The MTGs state, "A psychological screen with a follow-up psychological evaluation, if indicated, is required prior to proceeding with decompressive surgery." Rule 17, Exhibit 1, p. 72. Respondent directs the Court's attention to various other provisions of the MTGs that observe the importance of a psychological screening prior to proceeding with surgery so as to ensure psychological factors will not interfere with the outcome of surgery.

The Court recognizes the absence of a psychological screen in this case as concerning. However, the evidence of the record does not lead the Court to suspect that Claimant in fact suffers from depression or any other mental condition that would impede his recovery. In light of the totality of the facts of this case, the Court finds the absence of a psychological screen to be relevant, but not dispositive, on the question of whether the two-level laminectomy recommended by Dr. Rauzzino is reasonable and necessary to cure and relieve Claimant of the effects of his injury.

Claimant also presented arguments that Respondent failed to provide a timely authorization or denial of Dr. Rauzzino's first two requests for prior authorization, and that the procedure is deemed authorized pursuant to Rule 16-7-2, WCRP. Respondent presented arguments that the requests were not complete requests for prior authorization pursuant to Rule 16-7(C), WCRP, and therefore Respondent was not required to comply with the requirements of Rule 16-7-1, WCRP, regarding prior authorization denials. Because the Court finds the L3-L4, L4-L5 laminectomy to be reasonably necessary to cure and relieve Claimant of the effects of his work injury, the Court need not address the question of whether Respondent inadvertently authorized the surgery by virtue of a failure to provide a timely denial of a complete prior authorization request.

ORDER

1. Claimant has proved by a preponderance of the evidence that the L3-L4, L4-L5 laminectomy recommended by Dr. Rauzzino is reasonably necessary to cure and relieve him of the effects of his January 28, 2022 injury.

2. Respondent shall pay for an L3-L4, L4-L5 laminectomy with Dr. Rauzzino.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 13, 2023.

WORKERS' COMPENSATION NO. WC 5-118-442-002

ISSUES[1]

1. Whether Claimant established by a preponderance of the evidence grounds for reopening her claim based on a change of her condition.

2. If Claimant establishes grounds for reopening, whether Claimant established by a preponderance of the evidence that surgery recommended by Lily Daniali, M.D. is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

3. Whether Claimant established by a preponderance of the evidence that medications recommended by Dr. Sanders for maintenance care and admitted by Respondents should be authorized.

4. If Claimant's claim is reopened, whether she established by a preponderance of the evidence an entitlement to temporary total disability benefits.

FINDINGS OF FACT

1. On September 6, 2019, Claimant sustained an admitted injury to her right forearm when she sustained a dry ice burn arising out of the course of her employment with Employer.

2. Claimant was initially seen at North Colorado Medical Center and treated in the burn unit for a 2% total body skin area (TBSA) partial thickness burn/frostbite injury of the volar aspect of her right forearm. She was admitted for wound care on September 13, 2019 and discharged on September 16, 2019. (Ex. H).

3. Over the next several years, Claimant's care was directed by authorized treating physician (ATP) Oscar Sanders, at the UC Health Occupational Medicine Clinic. During this time, Claimant was referred to various providers for evaluation and treatment of her wound, and associated pain. Throughout, Claimant reported hypersensitivity and pain in the area of her burn scar that did not extend beyond the scarred area to other areas of her arm or body. Claimant's scar covers an area of approximately 1 ½ inches by 2 ½ inches on the right forearm. (Ex. D). The area of hypersensitivity was described by providers as approximately 2 ½ inches by 1 ½ inches or approximately 3 cm in diameter. (Ex. N & D).

[1] In her position statement, Claimant endorsed as an issue "Should Claimant be entitled to have a nurse case manager appointed to her case as recommended by her authorized treating physician?" This issue was not endorsed in Claimant's Application for Hearing, nor was it identified at hearing as an issue for consideration. As such, the ALJ lacks authority to determine this issue.

4. Claimant treated with the NCMC Burn Unit from September 2019 until January 12, 2021 when she was discharged from their care with a well-healed wound and mature scar. (Ex. H).

5. Over the course of her care, Dr. Sanders referred Claimant to additional providers for evaluation of her ongoing pain.

6. On February 4, 2020, Dr. Sanders referred Claimant for a plastic surgery consult for potential scar revision treatments, and continued care. Claimant reported persistent hypersensitivity that was improving. He also referred Claimant for psychotherapy counseling due to her injury-related adjustment disorder. (Ex. I).

7. On February 17, 2020, Claimant saw Lily Daniali, M.D., a plastic surgeon at Swedish Medical Center. Claimant reported hypersensitivity and increasing pain in her right forearm. Dr. Daniali noted Claimant's burn injury was well-healed, but extremely sensitive to touch. She was diagnosed with a second-degree burn injury to her right forearm with allodynia. Claimant was recommended to see a hand therapist to begin work on desensitization of her injury, and started on gabapentin for nerve pain. (Ex. K).

8. Claimant returned to Dr. Daniali on June 15, 2020. Dr. Daniali found a positive Tinel's sign over the medial and antebrachial sensory area, and noted significant hypersensitivity in that area. Claimant's reported pain level was 8/10, and she reported Dr. Daniali discussed possible surgical options, and recommended a diagnostic lidocaine injection to determine if Claimant had nerve scarring and pain. (Ex. K).

9. On July 13, 2020, Dr. Daniali performed the "a diagnostic block of the area of maximal hypersensitivity within [Claimant's] burn scare where she had the maximally positive Tinel's sign (*i.e.*, the centralized portion of her scar and her antebrachial sensory area). Claimant received no relief from the injection, and Dr. Daniali determined Claimant was "a poor candidate for surgical exploration to locate a specific neuroma for surgical intervention." She recommended continued non-surgical symptom management and that Claimant see a pain specialist. She also noted that due to the significant allodynia, Claimant was not a good candidate for laser scar treatment. (Ex. K).

10. On July 13, 2020, Dr. Sanders opined that Claimant was not a candidate for scar revision or reconstruction, and recommended Claimant complete pain management. (Ex. I).

11. On July 14, 2020, Claimant underwent an independent medical examination (IME) with Marc Steinmetz, M.D., at Respondents' request. Dr. Steinmetz opined that Claimant was physically at maximum medical improvement (MMI). As part of his examination, Dr. Steinmetz noted Claimant had a negative Tinel's "at the wrist" and diagnosed Claimant with residual forearm scar from a frost-bite type burn with secondary residual pain. Dr. Steinmetz agreed that Claimant should see a pain specialist if Dr. Sanders concurred. (Ex. D).

12. On September 30, 2020, Dr. Sanders responded to a letter from Respondents' counsel indicating Claimant was not at MMI, and recommended Claimant have an initial

evaluation with pain management to formulate a treatment plan for maintenance care. He further noted "I anticipate she will be at MMI shortly after this appointment." (Ex. J).

13. On October 8, 2020, Claimant began treatment at Colorado Pain Care, for pain management. Over the following two years, she was under the care of various providers at Colorado Pain Care for medication management of her pain, including opioid medications, and gabapentin. Claimant consistently reported her pain levels as between 7/10 and 10/10. At her initial visit, the treating provider, Hortense Ngoe, N.P., suspected Claimant may have had complex regional pain syndrome (CRPS) of her right arm, noting her pain was out of proportion to the inciting incident. (Ex. M).

14. Claimant returned to Dr. Sanders and discussed potential diagnostic and therapeutic options for her potential CPRS, including stellate ganglion blocks. Dr. Sanders noted that if Claimant elected not to pursue invasive procedures, she would be approaching MMI. (Ex. I).

15. Claimant returned to Colorado Pain Care on January 7, 2021. Ms. Ngoe recommended Claimant undergo two ulnar nerve blocks to determine if a potential radiofrequency nerve ablation (RFA) procedure would be beneficial. (Ex. M).

16. On February 15, 2021 and March 8, 2021, Robert Moghim, M.D., at Colorado Pain Care, performed right ulnar nerve blocks. After the February 15, 2021 injection, Claimant reported an initial 80% reduction in pain intensity, and a 60% reduction that remained until March 8, 2021. She reported the second block, performed on March 8, 2021, provided almost complete resolution of pain. However, this reduction in pain was temporary. Dr. Moghim opined that Claimant could have a potential entrapment of the medial antebrachial cutaneous (MABC) nerve and the ulnar nerve, related to Claimant's scarring. Dr. Moghim recommended that Claimant consult with Dr. Daniali to consider possible surgical options. (Ex. M).

17. At Claimant's March 22, 2021 visit with Dr. Sanders, he noted Claimant did not have a diagnostic response to the March 8, 2021 ulnar nerve block, opined that Claimant did not demonstrate evidence of an ulnar neuropathy at the elbow, and agreed it was reasonable to be evaluated by Dr. Daniali for potential surgical treatment of any nerve entrapment caused by her burn scarring. He also recommended that Claimant continue pain management. Dr. Sanders opined that if Dr. Daniali did not recommend surgical intervention, Claimant would be at MMI. (Ex. I).

18. On April 20, 2021, Claimant saw Ryan Endress, M.D., a physician in Dr. Daniali's practice at Swedish. Dr. Endress recommended a diagnostic nerve block of the more proximal MABC to simulate the effects of a neurectomy. (Ex. K).

19. On June 7, 2021, Claimant then underwent an ultrasound of the right arm, which was interpreted as unremarkable. (Ex. U). Dr. Sanders reviewed the ultrasound on June 9, 2021, and indicated it was normal without evidence of nerve entrapment. He also indicated that if Dr. Daniali did not recommend surgery, it would be reasonable to proceed with a CRPS evaluation. (Ex. I).

20. On June 29, 2021, Dr. Endress reviewed Claimant's ultrasound and indicated there were no signs of a neuroma, and performed the MABC block. Claimant indicated she had an anesthesia effect in the appropriate nerve distribution (*i.e.*, MABC), but did not have significant relief of the pain. Dr. Endress opined that the lack of pain relief indicated it was unlikely that MABC surgery would improve her symptoms. (Ex. K).

21. Dr. Sanders then referred Claimant to Gregory Reichhardt, M.D., to evaluate Claimant for CRPS. Claimant saw Dr. Reichhardt on July 21, 2021. Dr. Reichhardt noted that Claimant's pain was limited to the area of her scarring and that she did not have sensory changes in a specific peripheral nerve or dermatome distribution. He diagnosed Claimant with allodynia, etiology unclear, and referred Claimant to George Schakaraschwili, M.D., to conduct further testing for CRPS. (Ex. N).

22. On August 21, 2021, Claimant saw Kathie McCranie, M.D., for an independent medical examination at Respondents' request. Dr. McCranie opined that Claimant had reached MMI. She found that Claimant likely did not have CRPS because Claimant did not meet the Budapest criteria and did not have signs and symptoms consistent with CRPS. She further opined that Claimant would be a poor surgical candidate

23. On October 7, 2021, Dr. Schakaraschwili performed QSART, thermogram and autonomic testing to evaluate Claimant for potential CRPS. Based on the results of the testing, he opined that Claimant did not likely have CRPS, and that she likely had neuropathic pain potentially due to damage to the cutaneous nerve in the forearm. He noted that Claimant may have entrapment of a nerve, but no EMG testing had been performed. (Ex. O).

24. In December 2021, Dr. Reichhardt and Dr. Sanders referred Claimant to Timo Quickert, M.D., to perform a stellate ganglion block of her right arm. (Ex. N).

25. In January 2021, Dr. Sanders indicated Claimant would not be at MMI until after the stellate ganglion block was performed. (Ex. I). Similarly, on March 1, 2022, Dr. Reichhardt indicated that if Claimant did not have improvement with the stellate ganglion blocks, she would likely be approaching MMI. (Ex. N).

26. On March 28, 2022, Dr. Quickert performed the stellate ganglion block. (Ex. P). At a follow up with Dr. Reichhardt on March 31, 2022, Claimant reported that her pain initially increased following the injection, then decreased to her baseline pain. Dr. Reichhardt characterized Claimant's response to the injection as non-diagnostic and non-therapeutic. He recommended Claimant focus on an independent exercise program, desensitization and medical management, and discharged Claimant from his care. (Ex. N)

27. On April 7, 2022, Claimant attended a 24-month Division-sponsored independent medical examination (DIME) with Stanley Ginsburg, M.D., at Respondent's request. He noted that Claimant was hypersensitive in the right arm to her shoulder, but had no evidence of weakness. He also indicated that Claimant was tender to touch over the ulnar area at the elbow but not he could not elicit a Tinel's sign. Dr. Ginsburg placed Claimant

at MMI effective April 7, 2022, and assigned Claimant a 15% right upper extremity impairment rating and 6% psychological impairment rating. The ratings combine to a whole person rating of 20%. (Ex. C).

28. On May 24, 2022, Claimant saw Dr. Sanders who opened that Claimant was stable and additional treatment was unlikely to improve her condition. He placed Claimant at MMI, and noted that Claimant was not taking pain medications at that time. Dr. Sanders recommended maintenance care to include periodic follow up with occupational health and pain management for two years, and coverage of medications and labs for two years. (Ex. I).

29. On June 14, 2022, Respondents filed a final admission of liability (FAL) consistent with Dr. Ginsburg's DIME report. Respondents also admitted for maintenance care recommended by Dr. Sanders on May 24, 2022, temporary total disability benefits in the amount of $88,994.92 and permanent partial disability in the amount of $5,335.27. The FAL further noted that Claimant had reached the statutory benefits cap for ratings under 25%. (Ex. 12).

30. Approximately one month later, on July 19, 2022, Claimant returned to Dr. Sanders reporting increased pain in the central area of her scar (*i.e.*, the same location where her pain and hypersensitivity had been previously reported). Claimant denied neck pain or numbness in the right arm, and had no additional allodynia to the right arm. He noted that her motion was limited by pain, as opposed to true weakness. Dr. Sanders opined that Claimant had likely experienced an exacerbation of her pain after discontinuation of her medications. He recommended she continue taking her pain medications, and start a short course of physical therapy. He opined that she was no longer at MMI. Dr. Sanders did not document any change in Claimant's physical condition, other than her subjective reports of increased pain. (Ex. J).

31. Over the next few months, Claimant attended physical therapy, and followed up with Colorado Pain Care and Dr. Sanders. During this time, Claimant reported no substantial improvement in her symptoms. Ultimately, on September 6, 2022, Dr. Sanders referred Claimant back to Dr. Daniali for evaluation.

32. Claimant saw Dr. Daniali on October 10, 2022. Dr. Daniali noted that Claimant was reporting increased pain, indicating her pain was exacerbated by any movement or even the slightest touch (consistent with Claimant's reports to health care providers since her date of injury). On examination, Dr. Daniali found a positive Tinel's throughout the right upper extremity and opined that Claimant had a "sensitive nerve that appears encased in scar." Based on her examination, Dr. Daniali recommended Claimant undergo surgical "exploration of the right upper extremity with neurolysis vs TMR vs nerve burial." Dr. Daniali did not order any further diagnostic studies, or document any change in Claimant's physical condition. Dr. Daniali offered no cogent explanation for the rational for her opinion that Claimant has a nerve encased in scar, the significance of Claimant's positive Tinel's sign, or why her previously-expressed opinion that Claimant was not a surgical candidate was no longer valid.

33. Dr. McCranie was admitted as an expert in occupational medicine and testified at hearing. She opined that Dr. Sanders' evaluations of the Claimant after MMI did not document examinations which showed an objective change in Claimant's physical condition, or function. Dr. McCranie further testified that the medial antebrachial cutaneous (MABC) nerve is the nerve that provides sensation to the forearm, and that the injection performed by Dr. Endress demonstrated that surgery for that nerve would not be helpful. She also credibly opined that no other diagnostic tests have been performed to indicate that surgery would be helpful. Thus, she opined that there is no indication for exploratory surgery. Dr. McCranie's testimony was credible.

34. Claimant testified at hearing that over the past nine to ten months, she has been having a lot of pain in her right arm which has prevented her from performing activities of daily living. She also testified that her sleep is affected by her right arm pain. While Claimant's testimony is credible, her contemporaneous medical records document the same pain and limitations she described in her testimony. Claimant testified that the surgery recommended by Dr. Daniali is to address a problem with a vein in her arm, which is inconsistent with the recommended surgery. Claimant testified that she wishes to have the surgery recommended by Dr. Daniali because she believes it will help her. Claimant also testified that she has had difficulty obtaining medications prescribed for her injury when she attempts to obtain them from the pharmacy, although it was not clear that Respondents have denied authorization for Claimant's medications. Claimant has not worked or earned income since her date of injury.

35. Claimant's brother, [Redacted, hereinafter SI] testified at hearing. SI[Redacted] testified that he sees Claimant every day, and that she does not sleep much, and often wakes up crying and in pain. He testified that he assists Claimant with activities of daily living and when possible, attends her medical appointments with her. SI[Redacted] testified that he has attempted to help obtain Claimant's medications prescribed by Colorado Pain Care, and at times has had to pay co-pays for medications, or been informed that medications are not authorized.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REOPENING FOR CHANGE IN CONDITION

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving her condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Indus. Comm'n*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Constr. Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO July 19, 2004).

Claimant has failed to establish by a preponderance of the evidence that she sustained a post-MMI change in condition causally connected to her original work injury. Claimant's claim was closed pursuant to the FAL filed on June 14, 2022. Approximately five weeks after the FAL was filed, Claimant returned to Dr. Sanders reporting increased pain in the location of her burn scar. Although Claimant reported increased pain, no

physician credibly opined that Claimant's physical condition had changed, or credibly identified any objective basis for the increase in pain. The fact that Claimant has experienced an increase or exacerbation of symptoms is not credible evidence that Claimant's physical condition changed after being placed at MMI on April 7, 2022.

Claimant has also failed to establish that her claim should be opened to obtain the surgery recommended by Dr. Daniali. The record contains no credible evidence to explain the reasonableness and necessity of Dr. Daniali's surgical recommendation. Dr. Daniali examined Claimant in July 2020. At that examination, Claimant had a positive Tinel's sign in her right upper extremity, and reported significant hypersensitivity in the area of her scar. Dr. Daniali evaluated Claimant for potential surgery at that time by performing a lidocaine block which proved non-diagnostic. Based on that, Dr. Daniali opined that Claimant was a poor candidate for surgery. Subsequently, Claimant received additional diagnostic injections from Dr. Endress, Dr. Moghim, and Dr. Quickert, each of which were non-diagnostic. None of Claimant's ATPs recommended surgery.

Dr. Daniali's October 10, 2022 examination of Claimant was substantively identical to her examination in July 2020. At both visits, Claimant had a positive Tinel's sign in her right upper extremity, and reported significant hypersensitivity in the area of her scar. In October 2022, Dr. Daniali commented that Claimant had a "sensitive nerve that appears encased in scar," but offered no further explanation for this opinion. Unlike July 2020, Dr. Daniali did not order or perform any diagnostic tests in October 2022 to evaluate Claimant for an encased nerve or to determine the potential efficacy of surgery. Despite the lack of diagnostic testing or new objective findings, Dr. Daniali recommended exploratory surgery. Dr. Daniali's records contain no cogent, credible explanation for the new surgical recommendation and do not credibly explain how Claimant's physical condition changed since MMI, such that surgery is now warranted. The ALJ finds more persuasive Dr. McCranie's opinion that Claimant has not had a change in her physical condition, and that no diagnostic tests have indicated that the requested surgery would be helpful to Claimant.

AUTHORIZATION OF SPECIFIC MEDICAL BENEFITS

Surgery

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish

entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

As discussed above, Claimant has failed to establish that the surgery recommended by Dr. Daniali is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury. Claimant's request for authorization of the exploratory surgery recommended by Dr. Daniali is denied and dismissed.

Medications

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Fin. Serv.,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In the June 14, 2022 FAL, Respondents admitted for maintenance medical care including the recommendations set forth in Dr. Sanders' May 24, 2022 report. Dr. Sanders' recommendations included coverage of medications for two years. Respondents do not contend and have not offered credible evidence indicating that Claimant's maintenance medications are no longer reasonable, necessary or related to her admitted work injury. Claimant and SI[Redacted] credibly testified that Claimant has had difficulty obtaining her medications due to co-pays and delayed authorizations, although the evidence is unclear that Claimant's medications prescribed by any of her ATPs have been denied by Respondents. Because Respondents have admitted for maintenance medical care, including medications, and have not challenged the request for authorization of medications recommended by Dr. Sanders, Respondents are liable for such medications.

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage

loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). TTD benefits continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant was placed at MMI effective April 7, 2022, and remains at MMI. Because Claimant has failed to establish grounds to reopen her claim, and remains at MMI, Claimant has failed to establish an entitlement to temporary total disability benefits. Claimant's request for reinstatement of TTD benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her claim for change in condition is denied and dismissed.

2. Claimant's request for authorization of the surgery recommended by Dr. Daniali is denied and dismissed.

3. Claimant's request for reinstatement of temporary total disability benefits is denied and dismissed.

4. Respondents shall pay for all authorized, reasonable and necessary medications related to Claimant's industrial injury.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 13, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-161-225-002

ISSUES

I. Whether the claimant established by a preponderance of the evidence that he is permanently and totally disabled.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On December 30, 2020, the claimant was working for the employer and suffered a compensable back injury.
2. The claimant testified that he was working on an older Mercury Mountaineer to change the inner seals on the rear drive shaft. To do so, the outside "knuckles" need to be removed which are affixed with big bolts. The bolts proved difficult to remove, leading the claimant to heat the bolt with a torch and then pull on the bolt to loosen it. In doing so, the bolt suddenly released while the claimant had his full weight pulling down on the bolt. The claimant also testified that he immediately felt pain and dropped to his knees in agony and screamed. Transcript. p.18, ll. 3-p.19, l.9.
3. The claimant also testified that after the injury, he crawled to the bay next to where he was working and rolled around in pain. Transcript p.20, ll.2-9.
4. The claimant added that his supervisor, [Redacted, hereinafter TD], responded to the claimant's screams. Transcript p.19 l. 22-p. 20, l.1.
5. The claimant's testimony in this regard is corroborated by the video clips played by the claimant in his rebuttal presentation (Exhibit 15) and the audio recording of the employer's manager, TD[Redacted] (Exhibit 16). The claimant's testimony describing the work-related injury is considered to be credible and accurate.
6. The claimant went to Good Samaritan Hospital on the day of the incident, December 30, 2020. He complained of back pain which began suddenly while working with a breaker bar at work. His pain was described as localized to right low lumbar back, non-radiating and severe. Exhibit R, p.327.
7. The Good Samaritan emergency room physician noted: "Suspect bulging disc causing pain". Exhibit R, p.328.
8. The Good Samaritan emergency room physician recommended the claimant follow up with his PCP/pain specialist as soon as possible for advanced imaging and further pain relief. Exhibit R, p.329.
9. The claimant saw Dr. Tracey following his December 30, 2020, work-related injury on January 5, 2021. The claimant was concerned about the nature of his low back symptoms which Dr. Tracey recorded as:

> The patient rates his pain at a 7 out of 10 located to his low back and bending to radiation down both his legs but primarily his right also with episodes of weakness, stating that his pain and radicular symptoms worsen significantly after his visit to Good Samaritan Hospital on 12/30. He states his pain as aching and squeezing in nature stating that is improved with medication, muscle relaxers, and reset while worsened with any activity. The patient is very concerned about his pain stating he has not experienced pain and weakness like this before and is very concerned. Exhibit 4, p.40.

10. On October 6, 2020 (about 7 weeks before the work-related injury) the claimant established medical care with Dr. Tracey at Integrated Sport and Spine. Dr. Tracey noted that the claimant had been on a narcotic pain treatment program for failed neck syndrome associated with an injury that occurred 13 years before. He was seeking a transfer of care to Dr. Tracey's office since he had recently moved to Colorado from North Carolina. Exhibit 4, p.23.

11. The claimant saw Dr. Tracey on January 5, 2021, complaining of work-related low back pain. Dr. Tracey ordered an MRI of the claimant's lumbar spine, noting the suggestion in the Good Samaritan records of possible bulging disc. He also prescribed the claimant additional oxycodone. Exhibit 4, p.39.

12. The claimant underwent an MRI on January 11, 2021, which revealed: 1) a right paracentral disc protrusion and annular fissure at L5-S1, 2) facet arthropathy producing mild-to-moderate neural foraminal narrowing and 3) multilevel disc degeneration. Exhibit 1, p.27-28.

13. On January 14, 2021, the claimant returned to Dr. Tracey to go over the MRI results. At this appointment the claimant rated his back pain at 7/10 and with occasional radiation down his right leg. Based on the claimant's symptoms and the MRI findings, Dr. Tracey referred the claimant to Dr. Feldman for bilateral L5-S1 TF epidural steroid injections. Exhibit 4, p. 43.

14. On March 3, 2021, the claimant returned to Dr. Tracey. At this appointment, the claimant indicated that his low back pain was 6/10. But he also indicated that his pain medication regimen allowed him to be 90% functional. Exhibit 4, p. 50.

15. On October 9, 2021, the claimant underwent right sided L4-5 and L5-S1 facet joint injections. Exhibit 4, p. 79. The injections reduced the claimant's pain by about 50% for about three days, but then his back pain returned. Exhibit 4, p. 82. Based on the return of his back pain, Dr. Tracey recommended the claimant undergo right sided L4-5 and L5-S1 medial branch blocks to help diagnose the claimant's pain generator. Exhibit 4, p. 82. The claimant underwent the medial branch blocks on December 10, 2021. Ex. 4, p. 88.

16. On December 21, 2021, the claimant returned to Dr. Tracey and indicated that the medial branch blocks did not provide any pain relief to the posterior elements of his spine. Exhibit 4, p. 90. Thus, Dr. Tracey thought the pain was coming from the musculature of the claimant's back. Other than prescribing additional medication, he

did not have any more treatment recommendations. But, based on his assessment, he did not think the claimant could return to full duty and work in the heavy-duty category. Instead, he thought the claimant might be able to work in the moderate work category. But to help determine the claimant's work capacity and final restrictions, he ordered a functional capacity evaluation (FCE). Exhibit 4, p. 90.

17. The FCE was performed by Sherry Young. Ms. Young testified at the hearing and was accepted as an expert in occupational therapy and functional capacity evaluations.

18. Ms. Young testified that Dr. Tracey referred the claimant to her for an FCE. Transcript p. 69, ll.13-16. Exhibit 5 is a prescription from Dr. Tracey for an FCE. That said, Ms. Young's report indicates that the referral came from the claimant's attorney. In any event, Ms. Young conducted an FCE of the claimant on May 18, 2022, and set forth her findings and conclusions in a detailed report dated June 20, 2022. Exhibit 7.

19. The FCE included testing to determine the claimant's level of effort. As set forth in her report, the claimant scored 20 out of 20, which is indicative of full effort. Exhibit 7, p.109 and Exhibit 7, pp.117-118.

20. The FCE also included testing to determine whether the claimant was engaging in symptom exaggeration. According to Ms. Young, the claimant did not demonstrate any behaviors suggestive of symptom magnification. Exhibit 7, p.109 and Exhibit 7, pp.119-122.

21. Following a 3.5-hour evaluation, Ms. Young concluded, in part:

> [Redacted, hereinafter MP] demonstrated the ability to safely lift 20 pounds from floor to waist, 20 pounds from waist to shoulder, and 20 pounds overhead on an "occasional" basis. MP[Redacted] should avoid frequent or repetitive lifting as much as possible due to the quick and severe elevation in pain with all lifting activities, especially lifting from floor level and to overhead. These abilities best suit the light work category as defined by the U.S. Department of Labor with restrictions of no frequent lifting. While MP[Redacted] may be able to lift more weight in isolated instances, it would be at the cost of elevated symptoms that would impact functional abilities during subsequent activities. Please refer to Appendix D for more information. Positional tolerances were poor throughout the FCE. As with most people with chronic spinal pain, tolerances fluctuate from day to day and hour to hour. MP[Redacted] is most comfortable when he can switch between sitting and standing/walking frequently. Sitting can be performed on a frequent basis in 20-30-minute increments (on average). Standing can be performed on an occasional basis in 10-20-minute increments (on average). Walking can be performed on an occasional basis in 10-20-minute increments (on average). Low-level positional tolerances such as squatting, kneeling, bending, and crouching are very

> limited. MP[Redacted] could sustain low- level work for 4-minute intervals and is limited to the low end of the "occasional" definition…. His lifting abilities meet the light work category, but future employment will require limitations including the ability to change positions every 10-30 minutes which could prove very challenging given his lack of skilled work experience…. He required frequent rest breaks during this 3.5-hour FCE for an average of 6 minutes totaling 21% of testing time. Exhibit 7, p.109.

22. Ms. Young also concluded that:

> MP[Redacted] demonstrated the ability to safely lift 20 pounds from floor to waist, 20 pounds from waist to shoulder, and 20 pounds overhead on an "occasional" basis. MP[Redacted] should avoid frequent or repetitive lifting as much as possible due to the quick and severe elevation in pain with all lifting activities, especially lifting from floor level and to overhead. 7, 109. This lifting is limited to an "occasional" basis which is defined as being from 1-33% of the day and involving reps of 1-12 times per hour. Exhibit 7, p.125.

23. Ms. Young clarified in her testimony that this does not mean that the claimant can always lift 12 times per hour but that it can vary. Transcript, p.56, ll.8-10. She concluded that the claimant would most likely be able to engage in such lifting a maximum of two-five reps per hour. Transcript, p.56, ll.17-20.
24. Ms. Young also stated that her restriction of no frequent or repetitive lifting was for weights above five pounds, not all weights. Transcript, p.56, l.21- p. 57, l.6.
25. Ms. Young's report does indicate that the claimant may be able to lift more weight in isolated instances, but it would be at the cost of elevated symptoms that would impact functional abilities during other activities. Exhibit 7, p.109.
26. Her report also concluded that the claimant is most comfortable when he can switch between sitting and standing/walking frequently. Sitting can be performed on a frequent basis in 20–30-minute increments (on average). Standing can be performed on an occasional basis in 10-20-minute increments (on average). Walking can be performed on an occasional basis in 10-20-minute increments (on average). Low-level positional tolerances such as squatting, kneeling, bending, and crouching are very limited. Moreover, the claimant could sustain low-level work for four-minute intervals and is limited to the low end of the "occasional" definition. Exhibit 7, pp.109-110.
27. Ms. Young explained that there is a difference between sitting while engaged in work activities and sitting when one is simply relaxing, such as when one is watching a movie at home. Her sitting limitations are based on observations of the claimant sitting and engaged in work-like activity such writing or using his arms or hands. Transcript, p.59, l.18- p.60, l.13.

28. Future employment will require limitations including the ability to change positions every 10-30 minutes. Exhibit 7, p.110.

29. Ms. Young testified that she always gives a range for limitations because people's pain tends to increase as the course of the day proceeds. Transcript, p.58, ll.9-12.

30. She also stated that the claimant required frequent rest breaks during the 3.5-hour FCE for an average of six minutes totaling 21% of testing time. Exhibit 7, p.110.

31. She also performed "Inclinometry and Balance" testing. She stated that the results of that testing led her to conclude that "This client's abilities indicate a moderate balance deficit when standing on each leg individually." Exhibit 7, p.123. Ms. Young explained that the claimant's "Inclinometry and Balance" testing indicates that when he must balance on one leg, he becomes a moderate risk for falls. As a result, he should not be on ladders. Another example of one leg balancing occurs when one is in an environment with obstacles where you must walk around such quickly or stop over objects. Transcript, p.63, l.16- p.64, l.3.

32. Ms. Young noted that the hazard of navigating objects would be present in an automotive repair shop or different types of production jobs. Transcript, p.64, ll.17-21.

33. Ms. Young also noted that he should avoid uneven walking surfaces such as lawns that are not even. Transcript, p.64, ll.12-16.

34. Ms. Young testified that the claimant was slow and cautious when he was observed climbing stairs, relying on the handrail, making sure each foot was fully on the step. Transcript, p.65, ll.2-11.

35. Ms. Young testified that it is her recommendation that the claimant is restricted to using a handrail when climbing stairs and should only carry items on stairs with one hand, not bilaterally. Weight bearing on stairs should be limited to 1-10 lbs. Transcript, p.65, ll.18-25.

36. Ms. Young's report set forth more detailed opinions about lifting restrictions to which the claimant should adhere. These are documented in "Appendix D: Functional Lift Test", Exhibit 7, p.125. Such section expands on Ms. Young's opinions on "Frequent Lifting" stating in relevant part:

> Due to the quick and severe onset of back pain during lifting activities, MP[Redacted] should avoid frequent or repetitive lifting (bilaterally or unilaterally) entirely. It will greatly increase symptoms and decrease his ability to perform any type of subsequent activity, even sedentary activities. Exhibit 7, p.125.

37. Ms. Young's report set forth more detailed opinions about postural and positional tolerance to which the claimant should adhere. These are documented in "Appendix E: Postural and Positional Tolerances". Exhibit 7, p.126-128. Such section provided more detailed information of the claimant's postural and positional restrictions.

38. With regard to sitting (20-30 minutes), standing (10-20 minutes) and walking (10-20 minutes) restrictions, Ms. Young also noted: “Tolerance may be unpredictable and fluctuate”. Exhibit 7, p.126.

39. Ms. Young also noted that the claimant is “most comfortable when he can change positions frequently: sitting and then standing and/or walking combined. He reports that he lies down once a day for an hour or more to control pain.” Exhibit 7, p.126.

40. Ms. Young recommended that the claimant limit bending (full as in reaching downward toward one knee), crouching, squatting, kneeling, crawling, climbing stairs, twisting of trunk, reaching above shoulders to “minimal” which the report defines as “limited to 1–3-minute increments, less than 10% of a workday.” Exhibit 7, pp.126-127.

41. Ms. Young limited slight bending (slight as in when reaching forward) and reaching to chest level to occasionally which his defined as 1-33% of the day. Exhibit 7, pp.126-127.

42. Ms. Young testified that the claimant required aggregate resting of 44 minutes during 3.5 hours of testing which was 21% of the time. Transcript, p.67, ll.11-24. This is also documented in Ms. Young’s report, Exhibit 7, pp.113-116.

43. Ms. Young’s report set forth climbing ladders, poles and scaffolding was described as activities to “Avoid, Safety Issues”. Exhibit 7, p.127.

44. Ms. Young testified that her recommended and observed limitations of the claimant’s activities should be considered the maximum that he would be capable of performing. Transcript, p.76, l.23 – p.77, l.2.

45. Overall, the ALJ finds Ms. Young’s report and testimony to be credible and persuasive. Her report is supported by both the claimant’s testimony and his medical records. Plus, her findings and conclusions were adopted by the claimant’s treating physician, Dr. Tracey, and the Division Examiner, Dr. Green.

46. On June 28, 2022, Dr. Tracey noted that he had reviewed the FCE results, specifically reciting the limitations set forth therein as being:

> The patient demonstrated the ability to safely lift 20 pounds from floor to waist, 20 pounds from waist to shoulder and 20 pounds overhead on an occasional basis. Frequent lifting and repetitive lifting should be avoided as much as possible due to the quick and severe elevation in pain with all lifting activities…. Sitting can be performed on a frequent basis in 20–30-minute increments. Standing can be performed on an occasional basis in 10–20-minute increments. Walking can be performed on an occasional basis in 10–20-minute increments. Low level positional tolerances such as squatting kneeling bending and crouching are very limited. The patient could sustain a level work for 4-minute intervals and is limited to the low end of the occasional definition. Exhibit 4, p.94.

47. On June 28, 2022, Dr. Tracy adopted the limitations and restrictions identified by Ms. Young. Most importantly, Dr. Tracy specifically noted that he reviewed the entire 27-page Functional Capacity Evaluation performed by Ms. Sherry Young. Thus, he did not blindly adopt the restrictions and limitations found by Ms. Young. Dr. Tracy stated that MP[Redacted] was putting forth full effort and that the FCE should be considered a valid representation of [the claimant's] functional limits and abilities. Dr. Tracy stated that it was his interpretation that [the claimant] could do light duty and potentially part-time employment based on his position changes. Exhibit 4, p. 94-95.

48. Dr. Tracey ultimately provided an impairment rating based, in part, upon his finding that the claimant qualified for a rating under Table 53, II B of the Impairment Guidelines which assigns impairment for an unoperated disc with 6 months or more of pain and rigidity. Exhibit 6, p.103. He rendered a specific diagnosis of "protrusion of lumbar intervertebral disc". Exhibit 6, p.104.

49. While treating the claimant, Dr. Tracey did not suggest there were signs and symptoms of symptom magnification or that the claimant's underlying back condition did not support his pain complaints and the restrictions set forth by Ms. Young and adopted by him.

50. On November 8, 2022, the claimant underwent a Division Independent Medical Examination with Dr. Justin Green. Dr. Green reviewed the claimant's medical records and conducted a physical exam. Dr. Green's clinical diagnosis was "Status post, reported 12/30/2020 acute L5-S1 discogenic pain syndrome/protrusion, more likely than not work-related." Exhibit 3, pp.14-19.

51. Dr. Green noted that "… there is a notation of lumbar diagnoses and symptomatology documented prior to the 12/30/2020 reported work-related date of injury. Nonetheless, based upon the Division Guidelines, regarding apportionment, I do not have enough information to establish or believe, at this time, that I can determine that the presence of prior low back pain complaints and/or impairment was independently disabling at the time of the 12/30/20 date of injury." Exhibit 3, p.18.

52. Dr. Green concurred with Dr. Tracey's restrictions and the FCE's assignment of restrictions. Exhibit 3, p.19.

53. Dr. Green assigned the claimant an impairment rating of 10% whole person, assigning 5% for a specific disorder of the lumbar spine and 5% for loss of range of motion. Exhibit 3, p.22.

54. Thus, the restrictions set forth in the FCE have been reviewed and adopted by the claimant's treating physician as well as the DIME physician.

55. Respondents filed a Final Admission of Liability and accepted the impairment rating provided by Dr. Green. Exhibit C, pp.5-15.

56. The claimant testified that he is only able to sit for about 20-30 minutes at a time before he starts experiencing a "jammed" feeling, a sensation of pressure, in his low back which is painful which he feels he cannot escape. The pain requires him to get up and "move around and stretch." Transcript, p.23, ll.6-15.

57. The claimant stated that he likes to stretch by laying on his back and drawing his knees up to his chest, but that is not always practical. He will typically do this for three to five

minutes. Transcript, p.24, l.22 – p.25, l.15. If possible, like when he is at home, he will do this three to four times per day. Transcript, p.32, ll.17-22.

58. In addition to laying down to stretch, the claimant indicated that he would lay down every day, usually around noon for 20-30 minutes. Transcript, p.33, ll.5-16.

59. The claimant indicated that he now is prescribed more pain medication than before the December 30, 2020, injury at work and his contention is consistent with the medical record. Transcript, p.24, ll.1-7; Exhibit 4.

60. The claimant testified that he is limited when walking to 10-15 minutes of walking, after which he experiences increased sensation of weakness in his left leg. Transcript, p.25, ll.16-20. The claimant stated that the sensation of weakness affects his walking and makes him walk very systematically. Transcript, p.26, l.20- p.26, l.5. He also indicated that he has difficulty with stairs and uses a handrail if one is present. Transcript, p.27, ll.8-13. He also stated that he experiences increased pain in his lower back and exhaustion after 10-15 minutes of walking. Transcript, p.27, ll.20-24.

61. The claimant also stated that he has issues bending. He can bend forward but has trouble getting back up. He alleges that he has trouble bending backwards and trouble bending side to side. He described his level of discomfort as “huge”. Transcript, p.28, ll.11-17.

62. The claimant also testified that he has exacerbated his back engaging in simple activities. For example, he stated that on one occasion he was attempting to get a pizza out of the oven and that resulted in his back “going out” and incapacitating him for two weeks. Transcript, p.29, ll.8-15. He also contends that he has had similar experiences with vacuuming for as little as five minutes. Transcript, p.29, l.16- p 30, l. 12

63. The claimant also testified that twisting is extremely painful and that he tries to avoid it whenever possible. Transcript, p.31- p.32, l.6.

64. The claimant also indicated that he can only stand for 15-20 minutes at a time before he needs to sit down because he gets a weak feeling and pain. Transcript, p.32, ll.9-12.

65. The ALJ finds that the claimant’s testimony about his physical restrictions and his ongoing symptomology to be consistent with the findings of the functional capacity evaluator, Ms. Young, as well as the findings and conclusions of Drs. Tracey and Green. Thus, the ALJ finds the claimant’s testimony about his limitations at this time to be credible.

66. Based on his testimony, the ALJ finds that the claimant has these restrictions:

    a. He can stand for 15-20 minutes before he needs to sit down due to pain and develops a weak feeling.

    b. He can walk for 10-15 minutes before he becomes weak and exhausted, which then makes him walk very systematically.

    c. He can sit for 20-30 minutes at a time until the pain requires him to get up and move around and stretch.

    d. He struggles with stairs and will use a handrail if one is present.

67. The claimant has a chronic neck condition that dates back to 2006. Transcript, p.21. ll.5-12. The claimant treats his chronic neck pain with pain medication. Transcript, p.21, ll.11-

19. The claimant had no limitation to his activities from his neck condition while taking his pain medications. He managed to work in various positions, including driving a truck and auto mechanics. Transcript, p.21, l.23- p.22, l.11.

68. The claimant did have intermittent low back issues in the years before the December 30, 2020, work injury, but did not remember specifically when it started. That said, his prior low back issues did not keep him from working and he was not told to restrict his activities by any medical professional for his prior back issues. Transcript, p.22, ll.12-24.

69. The claimant described his prior work duties as a Catastrophic Insurance Adjustor requiring him to carry a ladder and to climb a ladder to inspect siding and roofs. Transcript, p.44, l.23-p.45, l.4.

70. Surveillance video of the claimant was obtained. The video shows the claimant sweeping up some debris in front of his house and placing it in a large trash bin. The video also shows the claimant walking, moving the trash bin, and driving. The claimant does not appear to have any physical limitations during the surveillance video. That said, the video is only about 11 minutes long, and he does not appear to be working in excess of his restrictions.

71. Ms. Young reviewed the surveillance video taken of the claimant. She testified that the video revealed no activity that was inconsistent with her observations during the FCE. Transcript, p.68, ll.7-15.

72. The claimant was also evaluated by Ms. Cynthia Bartmann, a vocational expert. After interviewing the claimant, reviewing his medical records, and the FCE, Ms. Bartmann concluded that the claimant is limited to work in the sedentary work category. She also concluded that positions in the sedentary work category such as customer service, telemarketer, front desk, receptionist, and other types of office work would require the ability to sit for long periods of time. She also concluded that the claimant's need to constantly change positions could not be accommodated in the workplace. Ex. 8, p. 144. This portion of her report is supported by the evidence contained in the record, which includes the claimant's testimony, the FCE and Drs. Tracey and Green adoption of such FCE and is therefore found to be persuasive.

73. In her report, Ms. Bartmann also concluded that the claimant would also be precluded from performing the sedentary jobs outlined above because the claimant lacked computer experience and could not use a keyboard. Ex. 8, p. 145. However, as noted by the claimant, and Ms. Montoya, he did have prior computer and keyboard experience and the ALJ finds it hard to believe that the claimant cannot use a keyboard. Therefore, this portion of her report is not found to be supported by the evidence and is not found to be persuasive.

74. Ms. Bartmann also testified at the hearing. She was accepted as an expert in vocational evaluations. Following her initial report, Ms. Bartmann reviewed additional material consisting of the report of the respondents' vocation evaluator, Katie Montoya (Exhibit H), surveillance video (Exhibit J) and Dr. Green's DIME report (Exhibit 3). Ms. Bartmann's review of the additional material did not change her opinions set forth in her report. Transcript, p.81, ll.4-12.

75. Ms. Bartmann recounted the job history provided to her by the claimant. She began by acknowledging that the claimant had trouble recalling his remote job history. In the remote past, the claimant engaged in work that Mr. Bartmann generally described as "production worker", construction and utility-line labor positions. She also stated that the claimant's more recent work history consisted of truck driving and auto mechanics. Transcript, p.81, l. 22- p.82, l.7.

76. Ms. Bartmann indicated that the claimant had not told her of his brief work as a Catastrophic Insurance Adjustor but learned of such from Ms. Montoya's report and from the claimant's hearing testimony. Transcript, p.82, ll.8-11. Based on such, Ms. Bartmann said that such work was about 18 years earlier, that the claimant apparently struggled learning the computer program required by the job and that the claimant worked at such position for only a short time. Thus, she concluded that the claimant did not appear to have gained the skills necessary to succeed in this field of employment. Transcript, p.82 ll. 11-16.

77. Having considered the restrictions outlined in Ms. Young's report and reiterated in her testimony, Ms. Bartmann said that the claimant could not perform any of his past work. Transcript, p.83, ll.l3-14, Exhibit 8, p.144. Ms. Bartmann also indicated that the claimant did not acquire any skills in his past employment that are transferable to work in the light or sedentary categories. Exhibit 8, p.144, Transcript, p.84, ll.4-6.

78. In light of his physical restrictions and his lack of transferable skills, she concluded that the claimant is only vocationally qualified to work in jobs that are unskilled. Transcript, p.84, ll.10-13.

79. Ms. Bartmann stated that due to the claimant's restrictions - as set forth by the FCE and adopted by Drs. Tracy and Green - there are no unskilled jobs that the claimant can perform. Transcript, p.84, l.23- p.85, l.4.

80. Ms. Bartmann did indicate that the claimant's 20 lb. lifting restriction would allow access to the "light work" category of jobs, but that this category also requires the ability to stand or walk six out of eight hours each day or work at an assembly pace. Transcript, p.85, ll.14-19. However, she also noted that the inability to lift more than five pounds frequently or repetitively would relegate the claimant to the "sedentary" work category. Transcript, p.102, l.23- p.103, l.8.

81. Ms. Bartmann also explained that the claimant's need to change positions, as outlined by Ms. Young, would prohibit work in the "light" category. She noted that some "production work" allows for occasionally changing positions, but that a worker is still required to maintain production pace. It is the standard in the industry to have to maintain a position for 30-45 minutes to keep working at production pace. Ms. Bartmann does not believe that there are any production-type jobs that exist which would allow the claimant to change positions as frequently as outlined by the FCE. Transcript, p.86, ll.5-19.

82. Ms. Bartmann also noted that jobs not requiring the stand/walk requirement of light duty would fall under the "sedentary work" category, but that such category required the claimant to sit six out of eight hours per day. Because of his need to change positions, Ms. Bartmann stated that it would be impossible for the claimant to work in this category. Transcript, p.85, l.20- p.86, l.1.

83. Ms. Bartmann explained that the lifting restrictions and the need to change positions frequently, when combined with the lack of transferrable job skills, render the claimant unable to do any work. Transcript, p.86, ll.20-25.

84. Ms. Bartmann testified that in 30 years of doing vocational market research, she has never found a manufacturing plant that will allow someone to change positions as often as needed by the claimant. Transcript, p.98, ll.15-20.

85. Ms. Bartmann also noted that the FCE revealed that the claimant required rest 21% of the time. Ms. Bartmann said that no employer could accommodate such. Transcript, p.87, ll.11-16.

86. Ms. Bartmann also testified that the claimant's need to lay down and stretch would not be tolerated by most employers. Transcript, p.88, l.24.

87. Ms. Bartmann said that the claimant's need to lay down for 30 minutes during the workday would be tolerated only if such could be done during the regularly scheduled 30-minute lunch break, and if the employer had a break room. The need to lay down for 30 minutes would not be tolerated if it occurred outside the scheduled lunch break. Transcript, p.88, ll.13-20.

88. Ms. Bartmann addressed Ms. Montoya's suggestion that the claimant may be able to work in the food delivery industry. She noted that the need to climb stairs and carry with only one extremity would not be possible. Transcript, p.89, ll.20-25. Ms. Bartmann also noted that Dr. Raschbacher did not believe the claimant should drive given the claimant's use of prescription narcotics, which would also independently prevent access to any delivery job. Transcript, p.89, ll.15-18. Finally, Ms. Bartmann expressed doubt that a food delivery position would allow for the required frequency to change positions needed by the claimant. Nor did she believe that claimant's restrictions would allow him to work at an acceptable production pace in this industry. Transcript, p.90, ll.1-9.

89. Ms. Bartmann stated that employers generally will only tolerate absences of one day per month or 12 days per year. If a worker misses more than that on average, they will be unable to maintain employment. She added that an "absence" does not mean missing an entire workday. Missing two hours in a day will be considered an absence. Transcript, p.90, l.18- p.93, l.17.

90. Ms. Bartmann's testimony is found to be credible and her opinions, as stated in her report and testimony, are considered to be persuasive, since they are supported the underlying medical records and the claimant's testimony.

91. The respondents called Dr. John Raschbacher as an expert witness. It was stipulated that he is an expert in occupational medicine.

92. On March 23, 2021, the claimant attended an IME with Dr. Raschbacher. Exhibit 9, p.147. During the IME with Dr. Raschbacher, the claimant provided a description of the event of the injury which Dr. Raschbacher recorded as follows:

> Specifically, the mechanism of injury or purported injury, was reviewed. It was in the morning at about 8:15 a.m. or 8:30 a.m., and he was under a truck changing the differential seals. To do this, he had to break loose the knuckle and was using

> a torch to heat the bolts and then he used a 22 mm piece that was on a breaker bar. He was straining at this, and he felt that he had discomfort at the lower back. He states that he was "screaming in agony." He crawled for a while. He states there were others in the shop, but nobody attended him. He states everything is on video. The shop is covered with CC TV. The vehicle he was working on was on a lift, overhead. It was a Mercury Mountaineer. The breaker bar was about 36 inches long. He was standing with the piece at his neck or head level and pulling towards him with the bar when the injury occurred. He states that he never felt anything like that. He states that his legs went out and he collapsed. Exhibit 9, p.149.

93. As part of the March 23, 2021, IME, Dr. Raschbacher reviewed video of the workplace. Dr. Raschbacher described two video clips of the interior workplace that he viewed as follows:

> There is a second video clip, in which the workplace is shown. MP[Redacted] appears to be working at the left side of the video, walking around the Bay with a vehicle on a lift. Shop noises can be heard. He puts the lift down a little bit and then works on the vehicle using what appears to be an impact wrench or some similar tool. It appears that about five minutes into the video that there is an exclamation, which very short, which sounds like "oh." MP[Redacted] continues to work on the vehicle. One is able to hear voices of other workers in the shop. In one short clip, MP[Redacted] is seen to be working under a vehicle, which is on a lift. There is a short verbal outburst and then he walks off screen and then after a few seconds reappears. Other workers, next to the bay in which he was working, do not seem to notice this occurrence. Exhibit 9, p.155.

94. Dr. Raschbacher noted that the video clips he reviewed were inconsistent with the claimant's description of events. Dr. Raschbacher's report stated:

> At the time of the IME, with this Examiner, MP[Redacted] described a mechanism of injury as per the body of the report. He stated that his legs went out and that he collapsed. He stated that he was "**screaming in agony**," and that he crawled for a while. This does not appear to be an accurate description of the events recorded on the video tape or CC TV. There is no evidence of him screaming in agony or crawling or having his legs go out or collapsing. It, therefore, appears that he has not provided an accurate medical history and, therefore, there is no reason to assume that further history that he provides will be any more accurate. If he did have an episode in which he had discomfort temporarily from pulling on cheater bar or the wrench, it appears that resolved

> quite quickly and was not nearly as severe as the fairly dramatic presentation he described as having in his history. His coworkers did not even notice that anything had happened, and they were in reasonably close proximity. MP[Redacted] returned to work almost immediately. (Emphasis in original) Exhibit 9, p.157.

95. A portion of Exhibit 15, a video clip entitled "Clip of possible injury" was played during the hearing and viewed by Dr. Raschbacher.

96. Dr. Raschbacher could not state that this was the video of the incident he had previously viewed but acknowledged that the video clip was consistent with his description of the video clip set forth in his report of March 23, 2021. Transcript, p.147, l.8- p.151, l.13, Exhibit 9, p.155.

97. Based on Dr. Raschbacher's perception that the claimant had grossly exaggerated the events of the work incident, Dr. Raschbacher stated that "It is not clear that he (Claimant) actually suffered an injury on December 30, 2020…. There is no objective support for such and his subjective reports do not appear to be reliable…." Exhibit 9, p.156.

98. Dr. Raschbacher stopped believing the claimant because the video of the alleged incident he reviewed did not comport with the claimant's description of the incident. Transcript, p.147, ll.1 -6.

99. Dr. Raschbacher did not receive from the respondents any audio tape to consider. Transcript, p.151, ll.18-20.

100. Dr. Raschbacher is unaware of any preexisting issues to the lumber spine specifically. Transcript, p.121, ll.5-7.

101. Dr. Raschbacher does not believe that there is any basis for limiting the claimant's physical activity based on his lumber spine. Transcript, p.129, ll.14-16.

102. Dr. Raschbacher testified that it is his opinion that a disc protrusion not impinging on a nerve root is unlikely to cause pain but cannot absolutely be discounted as a source of pain. Transcript, p.136, ll.11-17.

103. On the other hand, Dr. Raschbacher acknowledged that annular tears can be symptomatic. Transcript, p.143, ll.23-25. The symptoms generally include difficulty with forward flexion bending and low back pain. Transcript, p.144, ll.13-19.

104. Dr. Raschbacher disagrees with Dr. Tracey, the claimant's treating physician, that there was a ratable impairment and does not believe any of the medical treatment provided by Dr. Tracey was supported by a good basis. Transcript, p.151, l.21- p.153, ll.17.

105. Dr. Raschbacher disagrees with DIME physician, Dr. Green, that there was a ratable impairment or that the claimant needs restrictions. Transcript, p.153, ll.21-23.

106. Dr. Raschbacher does not believe that the FCE performed by Ms. Young has much merit. Transcript, p.154, ll.7-10. He did not, however, sufficiently explain why the FCE did not have much merit – in his opinion.

107. Based on Dr. Raschbacher's perception that the claimant had grossly exaggerated the events of the work incident, Dr. Raschbacher stated that: "It is not clear that he (Claimant) actually suffered an injury on December 30, 2020…. There is no objective support for such and his subjective reports do not appear to be reliable…." Exhibit 9, p.156.

108. As part of the March 23, 2021, IME, Dr. Raschbacher also concluded that the claimant was taking significant doses of narcotics and that it is inappropriate for him to drive. Exhibit 9, pp.157-158.

109. On February 28, 2023, the claimant was once again required to attend a IME with Dr. Raschbacher.

110. Dr. Raschbacher summarized his prior IME by stating:

> April 5, 2021: This is an IME done for [Redacted, hereinafter MK] by this examiner. Inconsistencies in MP's[Redacted] history were described, particularly one in which MP[Redacted] did not apparently show any evidence of his report that he was **screaming in agony.** There was no evidence on the video of him crawling." (Emphasis in original) Exhibit U, p.358.

111. In the report of the February 28, 2023, IME, Dr. Raschbacher once again reiterated his opinion that it is unclear that there ever was an injury:

> I am in agreement that he has reached MMI, as per Dr. Tracy and as per Dr. Green. More likely than not, he reached MMI quite some time before that, if one makes the assumption that there has actually been an injury, and it is not clear that there ever was an injury, particularly given the reports he gave during the IME done in 2021 with this examiner in which he did not appear to give a truthful or likely truthful history. Exhibit U, p.359, ¶#3.

112. Similarly, Dr. Raschbacher stated that he would not assign the claimant any impairment rating stating:

> There are difficulties, however, with using the diagnosis of annular ligament tear as a pain generator, particularly after this much time has passed and with the consideration of the history he gave to this examiner in 2021, it is not clear that there is any ratable impairment. In any event, Dr. Green's opinion was that there was impairment, was based on annular ligament tear, and he pursued the correct methodology. This examiner would not assign any impairment, no. Table 53 diagnosis, to MP[Redacted]. Exhibit U, p.359, ¶#4.

113. Dr. Raschbacher further concluded that the claimant had no work restrictions that he did not have before the December 30, 2020, event. Exhibit U, p.360, ¶#6.

114. The claimant testified in rebuttal. The claimant testified that the video clip of the alleged injury played during the hearing testimony of Dr. Raschbacher was not a video recording of the moment of injury but that there was instead different video footage of the actual moment of injury. Portions of Exhibit 15 video clips were then displayed. The first was a video clip labeled December 30, 2020 6:55 am from 28 minute, 38 second mark until 31 minute, 10-second mark. The claimant identified himself in the video and stated this clip was the moment of injury. Transcript, p.182, l.23- p.183, l.5. Similarly, a second video clip was played labeled December 30, 2020 6:53 am from 31 minute, 38-second mark until 37 minute, 46-second mark. This video showed the same scene from a different camera angle. Generally, these videos show the claimant pulling down with a bar on the wheel of a car. The bar drops suddenly, the claimant appears to shout out in pain, and ultimately drops to the floor. The claimant moves to the bay next to where he was working and lays on the ground for several minutes. The claimant is ultimately approached by another person, who the claimant identified as his supervisor TD[Redacted]. Transcript, p.183, ll.8-10.

115. The ALJ finds that these two video clips are fairly consistent with the description of events that the claimant provided to Dr. Raschbacher and with the claimant's testimony at hearing. Thus, the ALJ finds that this video corroborates the claimant's version of events surrounding his injury and demonstrates that he did suffer an injury.

116. The ALJ finds that Dr. Raschbacher did not have (or did not acknowledge having viewed) either of these clips. It appears he relied on an irrelevant video clip which he incorrectly represented to be of the moment of injury. The ALJ further finds that Dr. Raschbacher based the majority of his opinions and conclusions regarding whether the claimant sustained an injury and whether he has any restrictions that flow from his work injury on the wrong video. Moreover, the ALJ finds that such a critical error formed the foundation of his opinions and conclusions and that his reliance on such video calls into question all of his opinions and conclusions. As a result, the ALJ does not find his opinions and conclusions regarding the extent of the claimant's injuries and his restrictions, or lack thereof, to be reliable or persuasive. That being said, the only opinion of Dr. Raschbacher that the ALJ does credit, is that the claimant should not be driving while using narcotics.

117. The claimant testified on rebuttal that he has listened to an audio tape, Exhibit 16. The claimant identified the male voice as belong to his supervisor TD[Redacted]. Counsel for the respondents objected to the admissibility of Exhibit 16 as being hearsay. The ALJ could not hear the recording when played remotely so deferred ruling on the admissibility of the exhibit until the ALJ had the opportunity to play the recording directly on a local device.

118. Having listened to Exhibit 16, the ALJ finds that such is admissible. The claimant identified the voice of his supervisor, TD[Redacted]. The ALJ notes that TD[Redacted] is a representative of the employer and his statement about the events would not constitute hearsay as such are the admission of a party opponent. Having listened to the tape, the ALJ concludes that the recording is relevant and admissible.

119. TD[Redacted] recites the events of the day of the injury. The interview was acknowledged as having occurred on January 11, 2021, 12 days after the injury.

TD[Redacted] acknowledges that he is a service manager of the Employer's business. He states that he was aware of the claimant's injury on December 30, 2020. He heard the claimant yelp. TD[Redacted] looked over and saw the claimant squat and then lay down on the ground. TD[Redacted] relayed that he approached the claimant and asked him if he was hurt. The claimant told him he experienced pain like an electrical bolt going down his back. The claimant told him that he would attempt to keep working but eventually came back to TD[Redacted] and told him he would need to go to the doctor. Exhibit 16.

120. The ALJ finds that TD's[Redacted] statements in Exhibit 16 are substantially similar to the description the claimant provided at the hearing as well as the history the claimant provided to Dr. Raschbacher.

121. Katie Montoya testified on behalf of the respondents. She was accepted by the ALJ as a vocational expert. She generated a report dated March 13, 2023. (Exhibit H).

122. Ms. Montoya stated that the claimant can use a computer, but he is not a skilled computer user and is not capable of working as an administrative assistant or other work requiring a skilled computer user. Transcript, p.161, ll.4-12.

123. Ms. Montoya acknowledged that the claimant would not have access to a full range of light duty jobs because he cannot tolerate prolonged standing or walking. Transcript, p.163, ll.10-14.

124. Ms. Montoya testified that when she did her report, she pulled postings of employers that might have sedentary jobs that would allow sitting and standing options. She believes that she reviewed postings of Advantage Security and Park 'N Fly but did not testify in detail as to any other details. Transcript, p.167, l.25- p168, l.6. Ms. Montoya did not relate the specific nature of the jobs offered by these two employers, the physical requirements of each job, and how such positions could accommodate the claimant's restrictions.

125. Ms. Montoya suggested in her testimony that being off task for three to five minutes every 30 minutes could affect the ability to maintain employment but stated that "it would depend on the work if that became a hindrance". Transcript, p.171, l.19- p.172, l.2. Ms. Montoya did not identify any jobs that would allow an employee to be off task for the described amount of time as shown by the FCE.

126. Ms. Montoya reported that the claimant has limited transferable skills, though her report does not state with specificity the claimant's transferable skills. Exhibit H, p.32.

127. Ms. Montoya set forth in her report that the claimant is relegated to unskilled work and "possibly" semi-skilled work. Exhibit H, p.32. Ms. Montoya did not, however, explain in detail what constitutes "semi-skilled work" or if the claimant possessed such skills.

128. Ms. Montoya concluded in her report that the claimant would "continue to have the opportunity to perform some driving positions (most food delivery where he has the chance to vary positions more often). Exhibit H, p. 32. On the other hand, she also acknowledged that his medications may impact his ability to hold such positions. Exhibit H, p.32.

129. Ms. Montoya concluded in her report that the claimant can perform customer service type work and cashier type alternatives, though she noted that he cannot stand and walk to the degree needed for all light work. She also stated that he could perform some production-type work. Exhibit H, pp.32-33.

130. Ms. Montoya's report does not set forth any specific employers or detailed contact with potential employers. Ms. Montoya's report does not address having considered the claimant's balance issues as stated in the FCE. Ms. Montoya's report does not refer to having considered the effects of the claimant resting or being off-task up to 21% of the day as outlined in the FCE. Exhibit H, generally.

131. In her report, Ms. Montoya did consider the claimant's potential absenteeism and its effect on his employability. She noted that his absentee rate (as described by the claimant) would be "an issue with maintaining employment". Exhibit H, p.33. She did not make or provide any standards of the amount of absenteeism that would generally tolerated by employers and did not dispute Ms. Bartmann's testimony that: employers generally will only tolerate absences of one day per month or 12 days per year; that an "absence" does not mean missing an entire workday but that missing two hours in a day will be considered an absence; and that if a worker misses more than on average, they will be unable to maintain employment.

132. The claimant has established that it is more true than not that his restrictions regarding weight, balance, and positional tolerances, which includes severe limitations on sitting and standing, render him unable to find and maintain employment.

133. The claimant has established that it is more true than not that his being off task to a degree of up to 21% of the day or more also renders him unable to find and maintain employment.

134. The claimant has established that it is more true than not that his anticipated level of absenteeism also renders him unable to find and maintain employment.

135. The claimant did have a preexisting neck condition and was on medication for his neck pain. However, his prior neck condition did not preclude the claimant from working – as demonstrated by his work history after his neck injury.

136. The claimant has established that his work related back injury – which caused his physical restrictions and limitations - is a significant causative factor of his inability to obtain and maintain employment and earn any wages. Therefore, based on his current restrictions, his work injury is the direct cause of his permanent and total disability.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The

claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the claimant established by a preponderance of the evidence that he is permanently and totally disabled.

To prove permanent total disability, the claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. §§8-40-201(16.5)(a) and 8-43-201, C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53 ¶ 26. The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995).

The claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Grant v. WalMart Associates, Inc.,* WC 4-905-009 (ICAO, Mar. 18, 2019). In weighing whether a claimant is able to earn any wages, the ALJ may consider various human factors, including the claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998); *Yeutter* 2019 COA 53 ¶ 26. The ALJ can also

consider whether the claimant is physically able to sustain or maintain employment. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001).

The critical test is whether employment exists that is reasonably available to claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998); *Blocker v. Express Personnel* WC 4-622-069-04 (ICAO, July 1, 2013.).

The question of whether the claimant proved the inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995); *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53 (reasoning that DIME opinion held no special weight in a subsequent hearing where claimant sought permanent total disability benefits).

The ALJ has evaluated the entire record. In this case, after the claimant was placed at MMI, and due to the claimant's ongoing pain complaints, his ATP, Dr. Tracey, requested an FCE to help determine the claimant's work restrictions. Thereafter, Ms. Young performed an FCE and set forth her opinion on the claimant's work restrictions. After the FCE was completed Dr. Tracey reviewed the FCE and adopted the restrictions set forth by Ms. Young. At no time did Dr. Tracey state that the claimant's pain complaints and work restrictions were inconsistent with the claimant's underlying work injury.

After Dr. Tracey adopted the findings of the FCE and set forth the claimant's work restrictions, the claimant underwent a Division IME with Dr. Green. Dr. Green evaluated the claimant, provided an impairment rating, and agreed with the restrictions set forth by Ms. Young and Dr. Tracey.

The claimant then underwent two vocational evaluations. Each vocational expert based their opinions on the restrictions set forth in the FCE which were adopted by Dr. Tracey. Ms. Bartmann issued a report on behalf of the claimant. She concluded that based on the claimant's restrictions, he would be unable to obtain and maintain any employment. The ALJ credited her opinion since it was consistent with the claimant's testimony as well as the restrictions set forth by Ms. Young and adopted by Dr. Tracey.

The second evaluation was performed by Ms. Montoya. While Ms. Montoya did not think the claimant was unable to earn any wages, she admitted that the claimant may have problems obtaining and maintaining employment when considering all of the claimant's restrictions and limitations, including those described by the claimant. She also indicated that his ability to obtain and maintain employment delivering food would also be difficult due to his narcotic use, as indicated by Dr. Raschbacher, which may prohibit him from obtaining such jobs.

The respondents provided the opinion of Dr. Raschbacher regarding the extent of the claimant's work injury and the restrictions which flow from the injury. In essence, Dr. Raschbacher did not credit the claimant's contention as to how he got injured based on his review of some of the employer's surveillance video of the workplace that allegedly covered the time the claimant was injured at work. The video he watched did not show the claimant getting injured. Since he did not credit the claimant's contention as to how he got hurt, he

did not believe the claimant's ongoing pain complaints and the extent of his claimed disability and restrictions.

However, during the hearing, the claimant presented additional surveillance video from the employer that covered the time the claimant was injured. This video showed the claimant getting injured and reacting in a similar way to the manner in which the claimant described to the doctors involved here as well as his testimony.

Therefore, since Dr. Raschbacher's opinions were based on the wrong surveillance video, the ALJ did not find his opinions to be persuasive regarding the extent of the claimant's injury and the restrictions that flow from the injury.

The ALJ has considered the reliability of the FCE and while Ms. Young provided opinions about the claimant's effort, and lack of symptom magnification, the ALJ believes that evaluating the claimant's effort, and possible symptom magnification, with a high degree of confidence is not possible. But, on the other hand, there was a lack of credible and persuasive evidence presented that negated her findings and conclusions, as well as those of Dr. Tracey.

While there was some surveillance of the claimant, it did not appear that the claimant was exceeding the restrictions set forth by Ms. Young and Dr. Tracey. In the end, the ALJ has credited the claimant's testimony regarding the effects of his work injury and his resulting disability. As a result, the ALJ finds and concludes that the claimant has proven by a preponderance of the evidence that he is unable to obtain and maintain employment and earn any wages because of his low back injury and his physical restrictions that flow from such injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The claimant is permanently and totally disabled. The respondents shall pay claimant permanent total disability benefits-less any offsets and/or credits.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to

Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 16, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-186-177-002

ISSUES

- Did Respondents overcome the DIME's determination that Claimant is not at MMI?
- If Respondents overcame the DIME, the following issues will be addressed:
- What is Claimant's scheduled impairment rating?
- Did Respondents prove apportionment is applicable?
- Overpayment.
- If Respondents failed to overcome the DIME, did Claimant prove entitlement to reinstatement of TTD benefits commencing March 31, 2022?
- The parties stipulated to an increased average weekly wage (AWW) of $957.21, effective February 1, 2022.

FINDINGS OF FACT

1. Claimant worked for Employer as an HVAC sheet metal fabricator and installer. The job was physically demanding and required lifting and carrying heavy materials, frequent crawling, ascending and descending ladders and stairs, and walking on pitched roofs. Claimant had no limitations or difficulty performing any work tasks before his admitted injury on October 25, 2021.

2. Claimant injured his left knee on October 25, 2021 when he fell in an uncovered sump pump hole. Claimant's right leg went into the hole and his left leg bent awkwardly behind him. Claimant felt immediate, severe pain in his left knee and leg. He remained stuck in that position for approximately 15-20 minutes, until a plumber working on the project pulled him out of the hole. Claimant had difficulty bearing weight on the left knee, so the plumber helped him to his vehicle. Claimant returned to Employer's office and reported the injury to his supervisor.

3. Claimant has a lengthy pre-injury medical history regarding his left knee. He suffered a work-related injury in 1996 when he was kicked in the left knee while breaking up a fight among patrons at the [Redacted, hereinafter CF]. He had surgery on October 5, 1996 to repair the ACL, MCL, and meniscus. Claimant continued to have problems with the left knee and underwent two additional surgeries, first to revise the initial procedure and later to remove scar tissue. Claimant was eventually put at MMI on January 6, 1998, with a 22% lower extremity impairment rating. He was released to full duty with no permanent restrictions.

4. Claimant continued to have left knee symptoms and periodic flares thereafter. X-rays of the left knee were taken in 2009, although no corresponding report is in evidence. A treatment record in April 2015 for a back strain after lifting a 100-pound piece of concrete contains an incidental reference to "chronic left knee issues and limited range of motion from 0-90 degrees after multiple surgeries." No treatment for the left knee was recommended and Claimant was cleared for full duty at work. A left knee x-ray on August 3, 2015 showed severe tricompartmental osteoarthritis.

5. Claimant saw PA-C Franklin Sloan on March 3, 2016 for left knee pain. Claimant recounted his surgical history and described gradually increasing pain over the years with weightbearing and range of motion. He had previously received cortisone injections and seen a couple of orthopedists. Claimant was observed to walk with a "mild" limp. ACL testing was positive, and the knee was "slightly" unstable. Mr. Sloan diagnosed advanced posttraumatic arthritis and opined Claimant was a candidate for a knee replacement. He advised Claimant to follow up with Dr. Danylchuk to further discuss his surgical options. There is no persuasive evidence Claimant ever saw Dr. Danylchuk or sought any additional treatment for his left knee around that time.

6. Claimant credibly testified to periods of "working excessively" on construction projects, during which time he worked several months with no days off. Those activities aggravated his knee pain, but he "never missed a day of work." His knee pain subsequently improved when his workload reduced. Although Claimant could not recall exact dates of projects he worked on, he believes the March 3, 2016 evaluation with Mr. Sloan probably coincided with a period when he "overworked" his knee. No persuasive evidence was presented to contradict Claimant's testimony in this regard.

7. There is no persuasive evidence Claimant received any additional evaluations for treatment for his left knee for five years, between March 2016 and March 2021. The only record in that interval is a June 23, 2019 general health checkup, which makes no mention of any knee issues.

8. Claimant saw his PCP, Dr. Aaron Fields, on March 14, 2021 for a general primary care evaluation. Among other things, he reported "continuous" bilateral knee and foot pain. The report states Claimant reported "12/10" pain in the left knee and 6/10 in the right knee.[1] Dr. Fields administered steroid injections to both of Claimant's knees and referred Claimant for an orthopedic evaluation. The injections helped for only "about two weeks." Claimant continued working and did not pursue the orthopedic evaluation. Claimant knew he would probably need a knee replacement at some point but planned to delay the procedure as long as possible.

[1] The notation of "12/10" pain is puzzling, because there are no other instances of exaggerated "off the chart" pain reports, including immediately after Claimant's October 2021 work accident when he reported 7/10 pain despite being "unable to bear weight" on the knee. Claimant credibly testified he did not recall reporting his pain was 12 out of 10.

9. Claimant followed up with Dr. Fields two additional times before the October 25, 2021 accident regarding general health issues. Neither report contains any mention of left knee issues.

10. Claimant worked two periods for Employer, from approximately September 2018 through December 2020, and from July 2021 until the work accident on October 25, 2021. Claimant also performed more than 20 years of physically demanding work in the construction trades. There is no persuasive evidence Claimant's left knee limited his ability to work before October 2021.

11. Employer referred Claimant to Dr. Thomas Centi for the October 25, 2021 work accident. At the initial evaluation, Dr. Centi documented moderate edema, moderate effusion, tenderness to palpation, and severely reduced range of motion. Claimant reported 7/10 left knee pain. Dr. Centi ordered a hinged knee brace and an MRI. He gave Claimant work restrictions of no lifting more than five pounds and only seated work 95% of each shift.

12. The MRI was completed on October 30, 2021. It showed a large joint effusion, consistent with Dr. Centi's post-injury clinical exam findings. It also showed chronic severe degenerative osteoarthritis, a tear of the previously repaired ACL, and a large loose body.

13. Claimant saw Dr. David Walden for an orthopedic evaluation on November 9, 2021. He was still non-weightbearing and using crutches. Claimant described the work accident and his pre-injury history of left knee problems. Dr. Walden reviewed the MRI and obtained x-rays in the office, which showed "end-stage tricompartmental osteoarthritis." Dr. Walden noted it was "difficult to know exactly" what, if any, pathology shown on the imaging was caused by the work accident. He opined an ACL repair was not indicated given the severe degenerative changes, and the only reasonable surgical option would be a total knee arthroplasty. His assessment included "left knee acute irritation of underlying end-stage osteoarthritis." Dr. Walden injected Claimant's knee, referred him to physical therapy, and recommended he start weaning off the crutches.

14. Claimant followed up with Dr. Walden on December 7, 2021. He still could not bear weight on the left leg. Dr. Walden documented, "I explained to the patient that a good deal of his pathology is not due to a work-related injury, however, it does seem as though the function of his knee has changed significantly. He was able to do a vigorous job doing HVAC for his company and now is on crutches and barely able to bear weight." Dr. Walden opined the injury may have caused the pre-existing loose body to become symptomatic, either by changing its position or setting off a reaction in the joint. He acknowledged the procedure would not fix all of Claimant's problems with the knee but thought it could provide some relief.

15. Dr. Walden performed arthroscopic surgery on December 20, 2021. He removed multiple large loose bodies, debrided the remaining medial meniscus, and performed a synovectomy.

16. Claimant's pain improved somewhat with post-surgical therapy, but the knee remained symptomatic and disabling.

17. Dr. Centi put Claimant at MMI on March 31, 2022. He noted Claimant had completed his post-surgical therapy and the only remaining option was a knee replacement. Because Dr. Centi did not believe a knee replacement was related to the work injury, he concluded Claimant was at MMI. Dr. Centi assigned a 23% lower extremity scheduled rating, including 5% under Table 40 for degenerative arthritis, combined with range of motion. He gave Claimant permanent work restrictions of no lifting more than 10 pounds, no ladders, minimal stairs, no kneeling or squatting, and must be sitting 50% of a shift. The permanent restrictions are incompatible with Claimant's pre-injury job for Employer, or his past work in the construction trades.

18. Insurer filed a Final Admission of Liability based on Dr. Centi's rating. Claimant objected and requested a DIME.

19. Dr. Mark Failinger performed an IME for Respondents on June 17, 2022. Dr. Failinger noted Claimant's left knee was severely arthritic before the October 25, 2021 accident. He saw no objective evidence in imaging studies or other medical data that the work injury caused any new pathology in Claimant's left knee. Despite acknowledging that Claimant suffered a significant sprain when he fell in the sump pump hole, Dr. Failinger opined the accident did not aggravate or accelerate the pre-existing condition. He agreed a knee replacement is reasonable given Claimant's severe, end-stage degenerative osteoarthritis. However, he believes a knee replacement is solely related to the pre-existing condition, and not to treat address any pathology created by the injury. Therefore, he agreed with Dr. Centi's determination of MMI.

20. Dr. John Bissell performed the DIME on November 7, 2022. Dr. Bissell was provided a voluminous packet of records. Although he reviewed the records, he considered it unnecessary to discuss each record individually in his report. He also reviewed Dr. Failinger's IME report, including the "comprehensive history . . . and record review" documented therein. Dr. Bissell noted Claimant's 1996 knee injury required three surgeries and resulted in a 22% lower extremity impairment rating. He experienced episodic knee pain thereafter. Dr. Bissell acknowledged that Claimant "was not asymptomatic" before the October 25, 2021 work accident and had received steroid injections in both knees in March 2021. He noted imaging studies after the October 25, 2021 injury confirmed severe degenerative changes. Nevertheless, Dr. Bissell emphasized that Claimant "was working full duty . . . had no permanent restrictions and was not independently disabled at the time of his October 25, 2021 work injury." Dr. Bissell concluded Claimant would probably still be working full duty "but for" the work accident. Dr. Bissell concluded the October 25, 2021 accident "resulted in permanent aggravation of his known pre-existing severe left knee osteoarthritis, and the only remaining remedy for this condition is total knee replacement. Therefore, the work injury is the proximate cause of his need for a total knee replacement." Accordingly, Dr. Bissell determined Claimant is not at MMI.

21. Dr. Failinger testified at hearing to elaborate on the opinions expressed in his report. He thoroughly explained the basis for his conclusion that the October 2021 injury caused no "new pathology" or identifiable structural change in Claimant's underlying anatomy. He reiterated that a knee replacement is reasonable to address Claimant's end-stage osteoarthritis but is not causally related to the work accident. He disagreed with Dr. Bissell's determination regarding MMI, because "everything that was claim-related has been treated."

22. Respondents failed to overcome Dr. Bissell's determination of MMI by clear and convincing evidence. Everyone agrees Claimant had severe, pre-existing degenerative arthritis and a knee replacement is reasonable. The fundamental disagreement involves causation. Dr. Failinger's opinions, while well-reasoned and eloquently presented, do not prove that Dr. Bissell's causation determination was highly probably incorrect.

23. Insurer was paying Claimant admitted TTD benefits immediately before Dr. Centi placed him at MMI. Insurer terminated Claimant's TTD benefits effective March 31, based on the determination of MMI. The record establishes no other basis for termination of TTD benefits, such as a full-duty release or return to work. Because Claimant has been determined not at MMI, he is entitled to reinstatement of TTD benefits as of March 31, 2022.

24. The endorsed issues of PPD, apportionment, and overpayment are premature and rendered moot by the failure to overcome the DIME.

CONCLUSIONS OF LAW

A. Respondents failed to overcome the DIME regarding MMI

A DIME's determination of MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The party challenging the DIME's conclusions must show it is "highly probable" the determination of MMI is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

The existence of a pre-existing condition does not disqualify a claim for compensation or medical benefits if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The assessment of MMI "inherently" includes a determination what conditions, if any, are causally related to the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Therefore, in this context, Respondents must overcome Dr. Bissell's conclusion that the injury aggravated Claimant's condition by clear and convincing evidence.

As found, Respondents failed to overcome the DIME's MMI determination by clear and convincing evidence. Dr. Bissell's conclusion that the work accident aggravated Claimant's pre-existing condition and proximately caused the current need for a knee replacement is a reasonable interpretation of the available evidence. The argument that Dr. Bissell performed an inadequate review of medical records and failed to appreciate the extent of Claimant's underlying pre-existing condition is not persuasive. Dr. Bissell knew Claimant had advanced osteoarthritis affecting his knee before the work accident. He knew Claimant's knee was "not asymptomatic" and required episodic treatment, including injections seven months before the injury. However, Dr. Bissell concluded the symptoms became worse and Claimant's functional status declined significantly after the work accident. Those were the critical factors informing Dr. Bissell's determination that the injury aggravated and combined with Claimant's pre-existing condition to accelerate his need for a knee replacement. There is no clear and convincing evidence that these determinations were incorrect.

Dr. Failinger and Dr. Bissell are looking at this case from fundamentally different perspectives. Dr. Failinger considered "aggravation" from a pathologic and anatomical perspective, whereas Dr. Bissell focused on the alteration of Claimant's symptomology and functional status. These competing approaches produce very different conclusions, because even if the injury caused no objective structural change to Claimant's knee, it dramatically altered his level of symptoms and, more important, his functional capacity. Claimant had a severely degenerated left knee immediately before October 25, 2021, but performed physically demanding work without difficulty and required only infrequent treatment. Dr. Bissell's characterization of Claimant's pre-injury flares as "episodic" is consistent with the sporadic nature of treatment before the work accident. Although reasonable physicians may disagree about the meaning of the term "aggravation" from a medical standpoint, Dr. Bissell's analysis is consistent with applicable legal standards. An injury need not cause any identifiable structural change to a claimant's underlying anatomy to cause a compensable aggravation. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). A purely symptomatic aggravation is sufficient for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment they would not otherwise have required. *Id*. Dr. Bissell was reasonably persuaded those criteria were met, and the evidence to the contrary does not rise to the level of clear and convincing.

B. Reinstatement of TTD effective March 31, 2022

Once commenced, TTD benefits "shall continue" until the occurrence of a terminating event enumerated in § 8-42-105(3)(a)-(d). Insurer was paying admitted TTD benefits when Dr. Centi placed Claimant at MMI on March 31, 2021. Although Insurer was entitled to terminate TTD at that time under Rule 6-1(A)(1), the determination that Claimant is not at MMI entitles him to reinstatement of TTD benefits.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME regarding MMI is denied and dismissed.

2. As stipulated by the parties, Claimant's average weekly wage is $957.21, with a corresponding TTD rate of $638.14, effective February 1, 2022.

3. Insurer shall pay Claimant TTD benefits, at the rate of $638.14 per week, commencing March 31, 2022 and continuing until terminated by law.

4. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 16, 2023

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-228-965-001

ISSUES

Has Claimant demonstrated, by a preponderance of the evidence, that she suffered an occupational disease arising out of and in the course and scope of her employment with Respondent?

FINDINGS OF FACT

1. Claimant is a registered nurse (RN). She has most recently been employed with Respondent since 2017. At the time she returned to employment with Respondent in 2017, Claimant was hired as Valve Clinic Coordinator. In that position, Claimant oversaw the creation and development of the valve clinic portion of the Cardiovascular Department.

2. Claimant's job duties included all aspects of starting the clinic, including undergoing training and marketing the clinic. Once the clinic began seeing patients, Claimant's job duties included reviewing charts, determining if a patient meets specific criteria, reviewing imaging such as echocardiograms, meeting with patients, educating patients, preparing and giving presentations to the clinical staff, doing rounds, and performing research.

3. Claimant testified that she began to notice pain in her hands in August 2022. At that time, she believed she was experiencing general body aches or pain caused by a ganglion cyst on her wrist. Claimant further testified that her pain symptoms worsened and began to include numbness and tingling. These symptoms occurred both at work and at home. However, at work the symptoms became more severe. Claimant began using a brace on her right wrist while at work.

4. Claimant testified that overtime her pain continued to worsen and ultimately she sought treatment at an urgent care practice. Claimant testified that the provider she saw at that facility believed Claimant was suffering a stroke and did not provide treatment modalities for Claimant's hands and wrists.

5. Thereafter, Claimant elected to seek treatment with an orthopedic specialist. On December 5, 2022, Claimant was seen by orthopedic surgeon, Dr. James Treadwell. At that time, Clamant reported symptoms that included numbness in her bilateral hands, with radiation into her forearm and elbow, and occasional tingling into her shoulder. Claimant also reported wrist pain and swelling. On December 5, 2022, x-rays of Claimant's bilateral wrists showed mild degenerative changes at the basilar joints of both thumbs, and mild degenerative changes between the scapholunate

interval. Based on his examination and the x-ray findings, Dr. Treadwell ordered electromyography nerve conduction studies {EMG/NCS).

6. On January 23, 2023, Dr. Robert Frahzo performed bilateral EMG/NCS. Dr. Frahzo's report of that date notes that the studies showed evidence of bilateral carpal tunnel syndrome. He noted that it is moderate to severe on the right, and moderate on the left.

7. On February 6, 2023, Claimant returned to Dr. Treadwell. At that time, Dr Treadwell discussed treatment options, including surgical intervention. In the medical record of that date Dr. Treadwell noted "[p]atient having difficulty with quality of life this is work related." Claimant elected to proceed with bilateral endoscopic carpal tunnel release surgery.

8. On January 26, 2023, Claimant notified her supervisor of Dr. Treadwell's recommendations. Claimant's supervisor referred Claimant to human resources. On January 26, 2023, Claimant was instructed to complete an Injury or Illness Recap Report. In that report, Claimant was quoted as stating "I started having pain to both wrists about 6 months ago. I have already been to Urgent Care and the [emergency department], a [doctor] at Rocky Mountain Ortho on 12/5/22, and a nerve [doctor] on 1/23/23. I got diagnosed with carpal tunnel to bilat[eral] wrists but continue to have pain to both wrists while I work (Repetitive movements causing pain)." At that same time, a Workers' Compensation - First Report of Injury or Illness was prepared by Respondent.

9. On January 26, 2023, Claimant was seen by Dr. Spencer Olsen as her authorized treating physician (ATP) for this claim. At that time, Claimant reported a date of injury of August 1, 2022. Dr. Olsen noted that Claimant had several months of bilateral hand pain and numbness, with numbness and tingling into the whole arm. Dr. Olsen opined that Claimant's condition is not work related. Specifically, Dr. Olsen noted "[e]vidence is weak for relatively light, repetitive tasks as a cause of carpal tunnel syndrome. Whereas there is strong evidence for age, gender and diabetes." Dr. Olsen recommended that Claimant pursue treatment through her private insurance. Claimant has not returned to Dr. Olsen.

10. On March 10, 2023, Torrey Beil, Vocational Consultant, authored a Job Demands Analysis and Risk Factors Analysis. Although Ms. Beil was unable to observe Claimant in the performance of her job duties, she was able to gather information regarding Claimant's position. In her report, Ms. Beil noted that Claimants work activity was sedentary, with computer based activity of approximately one half of any shift. In addition, Claimant was estimated to attend meetings approximately four times per week. Ms. Beil opined that Claimant's job functions do not include any risk factors for carpal tunnel.

11. Dr. Olsen testified via deposition and was accepted as an expert in occupational medicine. Dr. Olsen testified that Claimant presented to him with severe bilateral hand pain and numbness. Dr. Olsen further testified that Claimant attributed the cause of her symptoms to repetitive work activities. Dr. Olsen reiterated his opinion that

Claimant's diagnosis of carpal tunnel is not work related. In support of this opinion, Dr. Olsen noted that Claimant does not have workplace risk factors for carpal tunnel syndrome. In addition, Claimant has other risk factors that are stronger; including her age, gender, and Type 2 diabetes.

12. Claimant testified that her diabetes is well controlled and her A1C level is under 6. Claimant testified that Dr. Treadwell performed the right carpal tunnel release in early March 2023, and the left carpal tunnel release in late March 2023.

13. Claimant also testified that she disagrees with Ms. Beil's report, as it does not accurately reflect her job duties. Claimant testified that she spends approximately 80 percent of any shift performing computer work. This includes research, reviewing patient charts, and writing letters summarizing her conversations with patients. In addition, Claimant would use her computer to ensure necessary testing was being completed. Claimant further testified that her job duties included interviewing patients via telephone, entering data, and and at times she wrote things down. Claimant testified that she varied her activities between typing and mousing and she took breaks throughout the day.

14. The ALJ takes administrative notice of the Colorado Medical Treatment Guidelines (MTG), specifically WCRP 17 Exhibit 5 which addresses the guidelines for cumulative trauma. WCRP 17 Exhibit 5(0)(3) sets forth the General Principles of Medical Causation assessment. That rule states that legal causation is based on the totality of medical and non-medical evidence, which may include, age, gender, pregnancy, BMI, diabetes, wrist depth/ratios, and other factors based on epidemiologic literature. Regarding keyboarding, the MTG notes that most of the studies rely on self-report, which appears to approximately double the actual time spent using the keyboard. The MTG also notes that group studies provide good evidence that keyboarding in a reasonable ergonomic posture[1], up to 7 hours per day under usual conditions is very unlikely to cause carpal tunnel syndrome. The MTG lists risk factors for carpal tunnel syndrome as: combination of repetition and force for six hours; combination repetition and forceful tool use with awkward posture for six hours; combination of two pound pinch or ten pound hand force three times or more per minute for three hours.

15. The ALJ credits the Claimant's testimony regarding her work duties. The ALJ finds that although Claimant did perform computer work throughout her work day, those activities were varied and not continuous data entry for seven straight hours without a break. The ALJ also credits the medical records, the MTG regarding cumulative trauma, the opinions of Ms. Beil, and the testimony and opinions of Dr. Olsen. The ALJ finds that Claimant has failed to demonstrate that it is more likely than not that she suffered an occupational disease while employed with Respondent.

[1] Wrist with 30 degrees or less of extension, and 15 degrees or less of radial deviation.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. **App.** 2000).

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove, by a preponderance of the evidence, that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with thevocation must

be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff,* 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Gotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008).

7. The Colorado Workers' Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: "In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost." WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG "set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

8. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. *See Jones v. T.T.C. Illinois,* Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); see *also Burchard v. Preferred Machining,* W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTO); see a/so Stamey *v. C2 Utility Contractors* et *al,* W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease while working for Respondent. As found, Claimant's testimony regarding her job duties, the medical records, the MTG, and the opinions of Dr. Olsen and Ms. Beil are credible and persuasive.

ORDER

It is therefore ordered that Claimant's workers' compensation claim is denied and dismissed.

Dated June 20, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301{2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she is entitled to attendant care companion services and/or a long term care facility or an independent living facility.

STIPULATIONS OF THE PARTIES

Claimant stipulated that the attendant/companion care services they are requesting do not include essential services such as cleaning, cooking, or personal care as Claimant is able to take care of her activities of daily living.

The parties also stipulated that Exhibits 10 and 11 no longer required a foundation and could be admitted into evidence.

This ALJ approves the stipulations of the parties, and the stipulations are incorporated into this Order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. This matter involves an adjudicated permanently and totally disabled worker who was injured in the course and scope of her employment. She was held up at gunpoint two different times. Claimant was able to recover and return to work after the April 18, 2007 robbery where she was held up by four men while working alone at a gas station on the 10 p.m. to 7 a.m. shift at a gas station, though she experienced some anxiety, and became more vigilant. On March 8, 2008 Claimant was held up at gunpoint to the head by two men that accosted her. Claimant became more angry and frightened by this event. Claimant was unable to recover from the diagnosed post-traumatic stress disorder (PTSD), due to the resultant anxiety, panic attacks, chronic fear, and depression.

2. Claimant was evaluated by Dr. Gutterman at Respondent's request and he issued a report dated February 20, 2009.[1] He took a history and noted that Claimant suffered from post-traumatic stress disorder (PTSD) as a result of the March 8, 2008 robbery. Dr. Gutterman believe Claimant was at Maximum Medical Improvement from a psychiatric perspective, had persisting PTSD symptoms that "may gradually lessen both with continuing supportive treatment by Dr. Kenneally, as well as the tincture of time." He noted that Claimant had clearly .improved from a psychiatric/psychological perspective;

[1] Claimant had been previously evaluated by Dr. Gutterman, who recommended an impairment rating related to the April, 2007 claim.

however, many of her symptoms persisted. He provided an impairment rating and recommended Claimant return to work but not as a cashier. He stated that she should continue on medication for another 12 months and with Dr. Kenneally in outpatient therapy for another six months to a year.

3. Claimant was seen for a psychological evaluation by Dr. Walter J. Torres at Claimant's request on August 15, 2009. He disagreed with Dr. Gutterman's recommendations finding as follows:

> The degree of posttraumatic symptomatology that [Redacted, hereinafter MM] manifests, especially as registered by the nonnegotiable concreteness of her belief in the reality of the dangers that afflict her, strongly signals that with reasonable probability, her Posttraumatic Stress Disorder can be expected to be of a chronic nature. Accordingly, it is psychologically reasonable to expect that her condition will linger beyond a year and that she will be in need of psychopharmacological treatment significantly beyond one year. Given the kind of particularly malignant forms of trauma that she underwent, i.e. repealed traumas of a malicious nature, it would not be at all surprising that her need for treatment will be of indeterminate duration.

4. Dr. Torres recommended increasing her Lexapro, and providing her with medication to assist with her sleep disruptions related to nightmares. He stated that since her medication regimen had not stabilized that she was not at MMI. He also provided an impairment rating.

5. On December 23, 2010 Dr. Ann Sartori, Psy.D., recommended desensitization involving the workplace, having her children drive her by the workplace with her and going in with her if possible. Her providers were recommending accompaniment all the way back then, while Claimant had not yet reached MMI and was still under active psychological treatment. Dr. Sartori noted that Claimant had avoidance behaviors and was limiting her social interactions.

6. Authorized treating physician, Dr. Howard J. Entin, M.D. a Medical Director for Colorado PsychCare, attended Claimant on March 6, 2012, noting residual PTSD, agoraphobia, nightmares, avoidance of triggers, decreased interest, hyperarousal, insomnia, and hypervigilance. He noted that despite the years of treatment and time, claimant had no change of symptoms and stated that it was unlikely further treatment will have any effect.

7. Dr. Entin placed Claimant at MMI from psychiatric standpoint on October 15, 2012**,** stating that psychosocial status did not appear to have changed. He reported she was spending all her days with various friends, never alone, she never drives because she was too anxious, though she could go to public places, but was still fearful. She was still obsessed and ruminated at times.

8. Dr. Gutterman issued a follow up IME on December 11, 2012. He documented that Claimant's "problems have become her children's problem." He documented that her three children got frustrated with her and noted that Claimant called her son frequently and he would tell her, "Momma, you call all of the time." Dr. Gutterman also documented that she felt like the nightmares would not leave her alone.

9. On January 23, 2013 Dr. Sartori noted that her children were concerned that Claimant would become easily agitated and angry. She was too dependent upon them. The children reported that they had lost their mother as they knew her. On February 23, 2013 Dr. Sartori noted that Claimant continued to suffer from severe PTSD though had parts of her days where she was less afraid. She did not stay in the house alone, day or night, she was not driving, she saw shadows of people that terrified her, she continued to experience nightmares of the trauma with the gun at her head, was easily startled, experienced helplessness and anxious states with severe depression, anxiety and mood instability.

10. Dr. Robert Kleinman performed a Division of Workers' Compensation IME on February 5, 2013. He documented review of Dr. Sartori's treatment records which included struggles with family, health and continued insomnia, exaggerated startle, hypervigilance, depression, and hopelessness, continued PTSD and major depression, and noted that Claimant would have anxiety attacks that would prevent her from working. Dr. Kleinman provided an apportioned impairment of 9% whole person.[2]

11. On April 29, 2014 ALJ Margot W. Jones issued a Summary Order granting permanent total disability benefits.

12. Respondents filed a Final Admission of Liability on June 19, 2014 noting that they were authorizing continuing maintenance care that was reasonably necessary and related to the injury by an authorized treating physician. The also admitted to Claimant's permanent total disability beginning as of her MMI date of October 15, 2012. This was based on ALJ Jones' Summary Order

13. Dr. Entin issued a report on June 20, 2022. He noted that he had first seen Claimant on April 14, 2009, about a year after her injury for purposes of determining maximum medical improvement (MMI) and assigning a permanent impairment rating. Dr. Entin noted that he had been treating Claimant for the last 13+ years to provide maintenance care. He noted that Claimant still had PTSD symptoms, was avoidant and vigilant in public, and relied on the presence of others to make her feel safe. He opined that, within a reasonable degree of medical probability that part of her need to be with others was as a result of these two robberies. He also opined that Claimant would continue to require her current medications for an indefinite period of time and would need visits with him every 4-6 months for refills. He stated she no longer required further counselling.

14. Dr. Torres issued a report on August 22, 2022. Dr. Torres took a history that Claimant was Ethiopian, divorced, had three children in their 30s and that her youngest daughter stayed with her and could not move out because Claimant could not stay by herself, and that when the last robbery happened all three children lived with her. He noted that medication usage was as follows:

> She reported using Lunesta 3 mg on a nightly basis and Lexapro 20 mg on a daily basis. When she gets more acutely depressed or anxious she takes two Lexapro. She believes that she does that about twice per month. (She acknowledges that Dr. Entin has advised against this practice.) She takes Klonopin, as needed for

[2] Dr. Kleinman noted that 5% whole person impairment was provided for PTSD resulting from the first assault of April 18, 2007.

> panic symptoms. She almost always, if not always, lakes half the Klonopin tablet when she goes out. If she goes to the mall and she sees someone wearing a hoodie "that is the worst ... or scary things, a lot of things scare me"--she takes a whole tablet.

15. Dr. Torres noted that she felt restricted with respect to independent action and intolerance of aloneness was understood as a primary concern. He noted that Claimant could not tolerate being home alone greater than two hours. If her children were unavailable, then she would rely on friends to pick her up as aloneness was plainly intolerable. She also relies on other family members, like her nephew to keep her company. She has physical limitations due to an unrelated cancer, a hip replacement that caused limited motion and she has family come clean the bathroom, twice per week, and to other activities for which they are paid as home health care aids.

16. Dr. Torres explained he administered the gold standard testing pursuant to the DSM-5 for PTSD, which required Claimant meet specific criteria in five domains, which include A) experience of an event that meets criteria as a traumatic stressor; B) intrusive ideation (e.g. intrusive thoughts, memories, and nightmares), C) avoidance of reminders of traumatic incidents (whether emotional, physical, or interpersonal), D) marked alterations in cognitions or mood (loss of memory of aspects of the traumatic event, negative beliefs or expectations about oneself and the world, diminished interest or pleasure), and E) physiological hyper-arousal (e.g. poor sleep, hypervigilance, and overly reactive startle response).

17. Dr. Torres noted that the incidents in Claimant's case clearly meet criteria as traumatic event. She has intrusive thoughts about the woman that requested to use of the bathroom as well as the man that pointed the gun at her head and the gun clicking. She frequently remembers these events either triggered by events or in her dreams, specifically the clicking of the gun and visions of the man in the hoodie that are triggered by the sight of any man in a hoodie. She reacts with increasing stress and attempts to ameliorate the symptoms by taking additional medications. The intrusive memories also generate a feeling of panic. These intrusive and unwanted recollections occur four to five times per week. Claimant has disturbing dreams associated with the trauma about three times per week and sometimes stays up for long periods and others she sleep the remainder of the night with her daughter. Dr. Torres documented that Claimant has acute reaction to reminders of the trauma which occur once or twice per week. He also noted that Claimant has a physiological response, panic attacks, when she sees someone in a hoodie, scarf or if she is startled by someone.

18. Dr. Torres documented that Claimant consciously avoids being quiet or alone for too long because she is prone to become immersed in thoughts or feelings associated with the traumatic event and she begins to cry. She also avoids going out. She engages in avoidance efforts on a daily basis.

19. She has developed a distrust of the world, with the exception of family and close friends. She frequently has bad feelings about the world and frequently ruminates about them. She engages in self-recrimination, she has persistent negative emotions like discouragement, demoralization, irritability, anger, with loss of quality of life and marked diminished interest in engaging in socializing independently or being independent. Dr. Torres opined that this loss of ability is extreme and disabling.

20. Dr. Torres noted that Claimant is frequently irritable, has an exaggerated startle reaction that occurs on a regular basis, even to an unexpected knock on the door. This occurs approximately twice a week. She has problems with concentration, hypervigilance, and sleep disturbance including nightmares, which cause her to frequently cry at night or disrupt her daughters slumber, though she had none of these problems prior to the traumatic event. Claimant has been suffering from these problems for over 13 years and she continues to suffer from them. She is no longer able to drive as it causes un-elicited panic, she does not socialize or go to movies and is unable to tolerate aloneness.

21. Finally, Dr. Torres opined that Claimant has a diagnosis of chronic PTSD and adjustment disorder with depressed mood. The findings of the interviews convincingly depicted Claimant as presently suffering from severe and disabling Posttraumatic Stress Disorder. The rigors that her family must engage in to manage her impairments, especially her intolerance of aloneness and her periods of overwhelming distress, attest to this. Further, and important to note in this context, is that by pre-injury history, Claimant was far from dependent or needy in temperament. She never had been a dependent personality. She very much enjoyed a highly independent, social, and assertive disposition. Accordingly, she presently hates and laments that she cannot engage in the routinely rewarding actions and way of life of her former (pre-injury) self. Dr. Torres opined that Claimant requires a companion for at least seven to nine hours a day and ongoing maintenance medications that may be need indefinitely.

22. Claimant's daughter, R.N., provided a statement describing her relationship with her mother on August 27, 2022. She stated that she had to accommodate her mother's increasing need caused by her fears and limitations, including in providing her assistance with shopping by driving her, providing company and verbal support by calls and video chats. She frequently would accompany her mother after work due to her fear of being alone. When she and her siblings were not available, she would take her mother to a friend's house for company throughout the day, which occurred most days. She stated that her mother was fearful of being alone. She stated Claimant was uncomfortable handling money following her trauma and must assist with her finances. She assists with handling bank matters and transactions at the stores. She stated she received a large amount of calls during the day, which were difficult to always answer because she was at work but would because her mother was always fearful and anxious. She stated that she spent approximately 20 or more hours during any week providing care to her mother with different tasks and companionship as she has a consistent need for people around her at all times due to the trauma of being robbed at gunpoint.

23. On August 28, 2022, her other daughter, I.N., noted that she had helped her mother due to her PTSD. She has had to take her to appointments, dropping her off at a friend's house, getting her out of the house, for walks at the mall of the park, taking her to doctor appointments and spending time with her when she feels anxious and nervous. She stated "[S]ince my mother battles with PTSD, I have seen it take a toll on her everyday life. She can't be alone for too long because she gets scared and is worried that something might happen." She stated that when she works, her mother is with friends or other family. I.N. stated that she spends approximately 40 to 50 hours with her mother a week. She stated that "Overall my mother's trauma is still present and affects her

everyday life. We as a family and friends try to help her with her depression and try to understand her emotions to the best of our ability."

24. F.N., Claimant's son wrote a statement on August 31, 2022. He said that he is always with his mother when his sisters, family or friends were not available. He stated that his mother asks him to stay until someone else is there. He stated that he is there to assist her and so she does not feel alone, going on walks with her, run errands and accompanies her to get out of the house. He stated that he spent between 40 to 60 hours making sure her needs are met. He stated that his mother never travelled alone and that she does not drive due to the possibility that she might experience a panic attack while driving. He stated that, as a family, they coordinated their schedules and made arrangements so that Claimant was never alone. He stated that Monday through Wednesdays are his days to take care of his mother at night from 6 p.m. to 6 a.m., when he goes to work.

25. On September 14, 2022 Dr. Torres wrote an addendum report after reviewing Claimant's children's affidavits. He noted that their descriptions of Claimant's inability to tolerate aloneness, to drive, to be out alone on her own, to be quiet and disengaged for too long or to engage in financial transactions were fully consistent with Dr. Torres' findings in the psychological evaluation as well as his belief that the Claimant's deficits are entirely caused by the work injury related PTSD. Dr. Torres opined that Claimant required unskilled essential services as her children had been devoting extraordinary time allotments that "grossly strain their work and independent lives." He specifically stated:

> Tending to [Claimant]'s needs seriously restricts her youngest daughter's ability to tend to essential developmental needs of her own life. Further, even when available to be with her and able to accommodate her need for accompaniment, [Claimant] needs specific assistance with engagement and conversation, transportation for errands, socialization, financial transactions, and company to simply be able to be outdoors.

26. Dr. Torres revised the amount of time Claimant currently requires a companion or unskilled essential services to ten to twelve hours a day for an indefinite amount of time. Dr. Torres further stated that while age is not a factor as Claimant is unlikely to change, he stated that without the needed essential services Claimant's daughter is "on route to deeply sacrificing her own personal development" as well as her two other children to a lesser degree. He stated that as they continue to tend to their personal lives, relationships, vocations and families, Claimant will require the provision of more essential services.

27. On October 26, 2022 Dr. Entin authored a report stating his agreement that Claimant needs essential services in order to unburden her children but that they would still be responsible for the other 12 hours, which is not sustainable or reasonable in the long term. He stated that given Claimant's ongoing needs he opined that "she would be much better served moving into an Independent Living Facility where she could have daily meals prepared and people available and around her 24 hours a day." Dr. Entin also opined that "were it not for these robberies, and the development of her current emotional state and behaviors, it is unlikely she would have needed this level of care and intervention that she currently claims she needs."

28. Claimant was evaluated by Dr. Timothy Shea, a clinical psychologist and neuropsychologist on January 17, 2023 and produced an independent medical evaluation (IME) at Respondents' request dated January 30, 2023. He reviewed the medical records listed in his report, summarizing what he thought pertinent to his evaluation. He summarized Claimant's background, educational history, work history, family history, current home life, activities of daily living (ADLs), acculturation, social environment, substance use as well as medical history, sleep, treatments, psychiatric functioning, and stated that Claimant's appropriate diagnosis was post-traumatic stress disorder (PTSD). He noted that the two incidents of robbery that occurred in 2007 and 2008 negatively impacted Claimant. However, he did not recommend attendant care services in the form of a companion as Claimant needed to become less dependent. He recommended Claimant be more active, less isolationist and dependent on her children. That companionship was a preference and not a necessity, and not clinically indicated.

29. On February 10, 2023 Dr. Torres issued a letter noting that Claimant's current condition cannot be apportioned and are solely the result cause by the robbery events though other factors have been identified, they are still as a consequence of these events on Claimant. He also noted that Claimant and her family should seriously consider the Independent Living Facility option.

30. Claimant credibly testified she never had problems going out on her own, going to medical appointments, going to work, shopping or doing other activities of daily living prior to the assaults. Neither was she afraid of people, nor did she require having someone with her at all times.

31. Since the March 8, 2008 traumatic event she has problems being alone. Her daughter, who is about 31 years of age, lives with her. Claimant frequently gets panic attacks when she is alone, as well as anxiety. She cannot live by herself. When she is left by herself, she has anxiety at the highest level, especially if someone knocks on the door, or if someone refers to guns, when she hears sirens, or if she simply hears any violent words or noises.

32. Claimant also suffers from depression especially if she is alone in the house, and sometimes just being alone in her bedroom. She suffers from panic attacks when she is alone in the house, when she sees somebody with a hoodies, from violent things that she hears on the television, like the news, or if she hears someone was robbed, which are the worst things. People with hoodies or scarves remind her of the robbers when she was attacked.

33. When Claimant is alone she gets panic attacks, becomes depressed, will cry, be very sad and she will frequently stay in bed. However, she does her best to never be alone. When she is alone, maybe for two or three hours, but only during the day, she will become depressed, cry and get panic attacks. She will constantly call her kids or friends during the time when she is alone because of the panic attacks or her kids will call her to make sure she is okay. She never feels safe when she is alone. She is never alone during the night. When there is no one to be with her, she will go to a friend's house so that she is not alone at night.

34. Even when she goes out in public she is never alone. Since her traumatic event she has tried going out alone but is unable to do it because she becomes very

scared and panicky. She needs someone to stay with her every day during the day. If her daughter cannot be there during the night, then she simply goes to a friend's house. When another person is with her, her anxiety, fear, panic attacks and depression seem to be less controlled. Every Friday night, she will normally go to a friend's house because her children want to go out, and afterwards they pick her up.

35. A long time ago Claimant attempted to travel to California alone, and she became panicky, scared and uncomfortable. She has also travelled back home to Africa. She travelled once with two of her daughters for one of her daughter's wedding. She stayed for about a month or a little longer. She flew from Denver, to Chicago and then to Djibouti, West Africa. She did not go out after the wedding. The wedding was mostly family, though there were some people on the groom's side that she did not know. Otherwise, she stayed at her mother-in-law's house. The other time she travelled to Africa she travelled to Ethiopia for her uncle's funeral. She travelled with her friend and stayed there for about two and one half to three months. She stayed there so long because she was sick, she needed family, and she was very depressed. She stated that she would have been unable to attend the events if she had not travelled with someone she trusted. When she was there, a family member or a friend she trusted was with her at all times. She only recalled going out when she was accompanied by her cousins.

36. Claimant stated that Dr. Howard Entin was her provider to treat her for her ongoing conditions and he is the one who prescribes her all of the medication. She takes her medications regularly, every day as he prescribes them. She is willing to follow the recommendations that Dr. Entin made, for the short term for someone to stay with her, and in the long run to go into an assisted living situation.

37. Claimant admitted that she walked with a cane due to cancer of her leg, which caused her to have a hip replacement and surgery on part of her thigh.

38. Her children do help her with some chores around the house, such as cleaning, cooking and laundry. They do not help her with feeding, dressing or with her self-care like bathroom, bathing/showering. For the most part, her children are there to keep her company and to go out with her when needed.

39. Claimant's daughter, R.N., also testified at hearing. She is a case manager for a health care center. She identified Exhibit 9 as a true and correct statement she made in August 2022. She testified that she supported her mother with companionship either in person or by phone. While she does not live with her mother, she only lives 5 minutes away. She generally has to devote at least 20 hours or more a week typically, especially if her siblings are not available. If it were not for Claimant's current status, she would not be likely to spend as much time with her. She does it because her mother gets scared of being alone and she does not wish her mother to have so many panic attacks. When she and her siblings are not available, she relies on her friends to stay with her or they will pick her up. She stated that her mother has a good community of friends. She stated that otherwise, there are a lot of phone calls and they support her mother that way. She often drives her to her friends, especially if she and her siblings have things to do, they will drop her mom off at friends and pick her up when they are done. She stated that her mother no longer drives.

40. Ms. R.N. stated that her mother is scared all the time. Chores that seem mundane to her and her siblings, her mother can just not do, for example, going to collect the mail. She cannot do it by herself because she gets too scared. She stated Claimant does not go anywhere by herself, not even the grocery store. She is always accompanied by someone. She stated that at night she gets very, very scared and that it was not possible to leave her on her own. She noticed that, so long as her mother is with someone, she is less fearful, less depressed, less anxious and overall calmer. Ms. R.N. stated that she prefers that her mother never be alone because her mother is better when accompanied. However, when they have no choice but to leave her alone, she is constantly calling one of them, Claimant's children, or finding a friend.

41. Claimant's daughter, R.N., stated that she and her siblings do their best to always have a schedule that prevents her mother from being alone, always covering for each other. She and her siblings have been managing this kind of schedule for approximately thirteen years.

42. Claimant's other daughter, Y.N., also testified at hearing. She is a banker. She is 31 years old. She lives with her mother and has done so her whole life but it became crucial since her traumatic event happened. She helps her mother cope with her PTSD symptoms by talking to her when she gets anxious or nervous, takes her on outings to distract her, or keeps her company while watching TV or a movie. Sometimes Claimant gets so stuck in her head that the distractions are needed. She works varied days, though mostly weekdays, but when she is not working, she keeps her mother company. She makes arrangements for her cousins or friends to stay with her mother when she is working and her siblings are not available. Ms. Y.N. stated that her mother needed the help most during the nighttime, after the sun starts setting, as her anxiety starts going up then, and she sees a shift in her mother's mood. It doesn't happen daily but it is the majority of the time.

43. Ms. Y.N. stated that, if it had not been for the fact that Claimant has PTSD, she would likely not live with her mother at this stage in her life, since she really needs her own space. She only lives with her because her mother needs her help. She is with her mother over 40 hours a week, not counting when she is sleeping. Sometimes they are getting ready to go somewhere, then her mother will all of a sudden become more depressed, she will not go out and will go to bed and lie down all day long. When she is in a better mood, she will joke around, laughing, especially if Y.N. is with her, Claimant is able to relax and express herself, be more herself. On the other hand, sometimes when Y.N. is with Claimant and Claimant hears some noise outside, she becomes very fearful and "freaks out." But most of the time Y.N. is with Claimant, she seems to keep calm, less anxious, panicky and fearful. She specifically stated as follows:

> Q. I know this is just for the record: Why does she live with you? Or why do you live with her?
>
> A. Because my mom needs someone. She is dependent on us. Like she can't do things for herself. Like she is the not the same. Like she used to be able to drive before all of this happened. She used to like (sic.) take care of herself. But she can't do any of that anymore. She gets too freaked out. ...

44. Claimant's son, Mr. F.N., also testified. He was 34 years old at the time of the hearing and was working in construction. He also provides help and support for his mother as it relates to her PTSD, taking her places she needs to go, any chores she needs help with, and overall to keep her company when no one else is available. The times are variable but some weeks it is 40 to 60 hours a week, sometimes less. He will typically take over on the weekends because he works during the week. The siblings make a schedule to make sure that Claimant has someone available, including friends and cousins. They are continuously in communication about who is available and can keep her company. This has been the case for over ten years. If they have to drop her off at someone's house, then they schedule who is to pick her up, including himself. Sometimes he does grocery shopping with Claimant and sometimes Claimant will give him a list for him to pick up groceries for her. It is pretty typical that Mr. F.N. is with his mother most weekends, taking his mother to run errands.

45. Mr. F.N. stated that the PTSD has taken a toll on his mother's life, because she easily gets stressed, especially when she is not directly with someone else. It prevents her from having an independent life, as she is constantly needing somebody around that she can trust. Mr. F.N. believed that being present with his mother helped her with her symptoms, to calm down and be happy and less focused on her depression. She has less panic attacks, less stress, less depression. In fact, if she has people she trusts around and keeping her busy, she rarely has a full blown panic attack.

46. Dr. Walter J. Torres testified at hearing as Claimant's witness. Dr. Torres has a Ph.D. in clinical psychology and in forensic psychology, and has been treating patients since 1980. He was treating post-traumatic stress disorder (PTSD) since before the condition was recognized as such in the later 1980s, which was around the time it was written into the DSM III. Claimant was first referred to Dr. Torres in August 2009 and he diagnosed Claimant with PTSD. He also issued a report in August 2022 after having evaluated her, and after having reviewed Dr. Entin's notes as well as the statements of Claimant's children. Dr. Torres' current diagnosis is posttraumatic stress disorder, chronic, and adjustment disorder with depressed mood. He diagnosed PTSD after administering a clinician administered PTSD scale for DSM-V which is the gold standard for the assessment of PTSD. This was based on her re-experiencing that was severe, avoidance, negative changes in feelings and in cognition, beliefs regarding the world, high arousal in various forms, increase startle, increase re-activity to stimuli associated with the trauma, and nightmares.

47. Dr. Torres stated that he generally agreed with Dr. Entin's letter dated June 20, 2022, wherein he stated that Claimant continued to be anxious, especially when in public, that she did not like to be alone and was usually accompanied by family or friends. Dr. Torres stated that the word "like" suggested a preference. In Claimant's case, it is a "need" to not be alone, a profound intolerance of being alone. One of the key factors of PTSD is re-experiencing, and Claimant's re-experiencing comes with terror. And when she is with someone she trusts, she does not re-experience the terror, which is consistent with the testimony of Claimant and her family, that Claimant is experiencing less fear, has less anxiety and depression when not alone. One of the triggers of Claimant's re-experience is that she was alone when the trauma occurred. So removing that trigger

takes away the terror to a certain degree. The presence of the other trusted person, takes her out of the sphere of the trauma and away from the terror of the re-experience.

48. When questioned about the source of the need for the recommendation for companion care services, Dr. Torres stated that the driver for the referral and need for companion care services was the work-related PTSD, which was the only source because the work-related injury was the source of her intolerance of aloneness. Dr. Torres recommended that Claimant be provided company, because companionship relieved her of her aloneness, as being alone triggers her increased symptoms of PTSD, specifically terror in the re-experiencing. Further, Claimant's children's statements supported his initial assessment that Claimant was experiencing an intolerance of aloneness and the recommendation that Claimant requires companion care. He specifically noted that she required companion care for 10-12 hours as he did not think it was feasible to have another person during the night. But during the night she experiences nightmares and she frequently migrates to her daughter's bed to the extent that they had been discussing getting another bed for the daughter's bedroom. In the alternative, he would recommend 24 hour companion care. Dr. Torres concurred with Dr. Entin that Claimant continued to require maintenance care visit and medication refills.

49. Dr. Torres also reviewed Dr. Entin's recommendation for a 24 hour facility, where there would be staff attending to Claimant either during the day or during the night. As Dr. Torres explained, Claimant's current schedule of companion care being provided by her children is not sustainable. He stated that Claimant's children will develop lives of their own and it is unlikely that Claimant will be able to continue to sleep with her daughter if her daughter moves on with her life. Dr. Torres agreed that the 24 hour care was the answer to Claimant's long term needs, which he stated was reasonably necessary care that is solely related to the occupational trauma.

50. Dr. Torres opined that the companionship provided by her children has continued to prevent her deterioration and maintained her at MMI, as would the recommended 24 hour facility that both he and Dr. Entin are recommending for the long term, which would keep claimant from worsening. Dr. Torres explained that if Claimant is not provided with the reasonably necessary attendant care or company, she will continue to experience terror, decompensate, become disorganized and overwhelmed, all of which are stressful emotionally and physically.

51. Claimant is also not able to drive herself, because she will develop panic when driving, which was evident in the record since at least 2012 or 2013 when she was under Dr. Sartori's care. Dr. Sartori gave a very good description of her condition, her needs, and the attempt that Dr. Sartori made to activate her and to get her desensitized to some circumstances. At that time, they had Claimant attempt to drive but the resulting circumstances were untenable because Claimant would develop panic and then swerve in reaction to something that she would perceive as overwhelmingly dangerous, so she was not a safe driver after the second trauma. She needs someone driving her to where she needs to go as she cannot drive herself.

52. Dr. Torres also reviewed Dr. Timothy Shea's report, which endorses the diagnosis of PTSD but stated that essential services were not necessary by way of criticizing Dr. Torres' recommendations. But Dr. Torres never made a recommendation

for someone to clean, cook and bathe Claimant, but to provide companionship and take her to perform her chores and attend medical appointments because those are all things that the traumatic effect of the attach caused her to need, in order to fight the aloneness and panic attacks, and only due to the effects of the psychological work related condition and not for her physical needs caused by any physical disability.

53. While Claimant is behaviorally limiting herself, she has no other options. The core symptom of PTSD is avoidance and when a person chooses to avoid something they are making a choice not to participate in a domain. Dr. Torres explained though, that Claimant's choices were taken away from her by the PTSD causing trauma, which caused her unavoidable dread and fear therefore causing the unavoidable limiting behavior. Dr. Torres stated that he disagreed with Dr. Shea's opinion and rationale that Claimant does not need companion attendant care services.

54. Dr. Torres explained that it was just not feasible to provide Claimant with care that would make her less avoidant as no one has identified that kind of care or that the condition would not be responsive to any such care. He explained that the intolerance of aloneness and avoidance behavior has existed since Claimant's traumatic event. These symptoms were not generated by an overly solicitous family but by the trauma itself. Dr. Torres explained that Dr. Sartori and the prior psychologist tried to establish some limits. But at the time, the family was very young and the adolescent children could not manage their mother. Dr. Sartori tried but it just did not work as the anxiety became too high, her terror was too high and her avoidance was very strong. He further stated that the children are not professional therapists and have done their best for their mother. And none of her providers prescribed a therapist to work with them to try to deal with the situation and extend the hours she could tolerate alone.

55. Considering that Claimant has suffered with these symptoms for over 13 years, Dr. Torres opined that it was very likely that she would continue to suffer with the symptoms for the rest of her life. He stated that as far back as 2009 the profile suggested that her condition would likely be chronic. This is also supported by Dr. Entin's opinion that Claimant would continue to need care indefinitely. Dr. Torres opined that the kind of attendant care services that he was recommending need not be provided by skilled professionals as the record demonstrated that none of Claimant's children were skilled in nursing but that they have been providing the services, nonetheless.

56. Dr. Torres noted that he only initially recommended up to 12 hours of companion care because Claimant does have family. However, had she not had family, she would require 24 hour attendant care because she is not safe on her own. It is but for the significant sacrifice of her family that she has been able to handle her PTSD.

57. Dr. Torres explained that prior to the traumatic event, Claimant was a highly functioning independent, vital and assertive woman, who took care of her family and frequently took on two jobs. The proof being that Claimant was working a night job at a gas station when she was attacked and threatened with a gun. That kind of job demonstrated that she was independent and tolerant of aloneness prior to her injury.

58. He also discussed what may or may not be available in the market in terms of 24 hour companion care, discussing that he was not aware of 24 hour at home attendant care but was aware that there was independent care living facility available for

her. Despite what may or not be available or feasible, what he did absolutely know is that she requires access to company, whether at home or an independent living facility.

59. Dr. Timothy P. Shea testified at the second hearing on May 5, 2023. He is an expert in clinical psychology and a practicing neuropsychologist for the last 10 years. Dr. Shea issued a report on January 30, 2023. Dr. Shea agreed with the diagnosis of chronic PTSD as diagnosed by Claimant's medical team. He disagreed that Claimant required an assisted living facility because Claimant does not require any help with her activities of daily living (ADLs) as a result of the work related claim, and if she did need ADLs assistance, it is not due to the PTSD. The company Claimant requires does not need special training or medical experience. He explained that Claimant has required company since the initial trauma but definitely the second trauma and well over 15 years.

60. He explained that the

> …core belief of someone who has PTSD is that the world is an unsafe place. And so because of that it is very common for them to then isolate at home and not go out. And so the challenge is kind of the longer this goes on it becomes more reinforcing because they don't have stimuli to then challenge that held belief. So if they only stay inside they are going to reinforce the believe that the world is an unsafe place which can then increase symptom response and cause greater distress because there isn't any other information to challenge to say, oh, maybe the world isn't so unsafe. And that is a core part of the treatment in counseling and therapy for PTSD is that in vivo exposure. Is that going out into the community and having experiences and challenging kind of the disordered thought that occur because of the trauma.

61. The symptoms of chronic PTSD include panicking when reminded of the trauma, panic attacks, anxiety, being easily upset or angered, being short with emotion, disturbed sleep or lack of sleep, irritability or aggressive behavior, jumpy or easily startled, vivid flashbacks, nightmares, self-isolation, depression, emotional avoidance or scary situations, and insomnia. Dr. Shea agreed that Claimant has had and continues to have each one of these conditions either as evaluated by Dr. Shea or reported to him. Further, he stated that being alone does or can exacerbate her PTSD symptoms. He also stated that the majority of these problems are either relieved or helped with not being alone but cause increased symptoms by being alone.

62. Dr. Shea noted that Claimant has practiced and reinforced behavior avoidance for the last 15 years since the last trauma of March 8, 2008. He stated that talk therapy was recommended and that more aggressive types of treatment were recommended. Part of her avoidance is actually avoiding being alone or going outside without someone present, which is an aspect of her PTSD. Part of that is also Claimant's thoughts and beliefs that the world is a dangerous place, which is one of the main reasons being alone is so hard for her.

63. Dr. Shea opined that due to unresolved symptoms of anxiety that continue to be present in her day-to-day life, it makes sense that her preference is to be around her family. He stated that she currently needed assistance to drive places, including to shops, medical appointments, grocery stores and to friend's houses.

64. Dr. Shea recommended another try at therapy to treat Claimant's PTSD and differed from Dr. Entin's opinion that Claimant had chronic untreatable PTSD. He further continued to opine that having a companion for Claimant was not clinically indicated despite Claimant's symptoms. He felt that Claimant having a companion would reinforce her belief that the world is not safe and therapy would give Claimant an opportunity for improvement. By not treating the PTSD there was risk of things getting worse with untreated stressors and also reinforcing believes because she would not be able to challenge them sufficiently.

65. Dr. Shea also agreed that Claimant continued to have all the symptoms of PTSD and that a companion would relieve her symptoms of PTSD including panic attacks, anxiety, being jumpy and easily startled, nightmares, depression and emotional avoidance, and possibly her disturbed sleep, vivid flashbacks, and insomnia.

66. This ALJ reviewed the video surveillance submitted as part of the Exhibit packet for Claimant. They revealed a person that was busy going places, but considering that there were less than an hour and a half of video and over one hundred sixteen hours of surveillance, this is not particularly indicative of a busy person. However, nothing on the video indicates violation of her work restrictions or contrary to testimony or other statements. They also reveal that Claimant has almost constant company from someone. It was clear that individuals visiting Claimant's home called by phone before knocking on the door, which was also consistent with testimony at hearing. Lastly, medical records indicated that surveillance taken prior to MMI where one person which was originally identified as Claimant turned out not to be Claimant. This also indicated that there was more than the surveillance documented at this hearing.

67. As found, Claimant clearly continues with significant symptoms of PTSD, anxiety, startle response, panic attacks, disturbed sleep and nightmares, self-isolation, which providers tried to treat without success for many years, emotional and situational avoidance and depression. Dr. Torres was persuasive in his testimony that Claimant is unable to be left alone for long periods of time and requires a companion in order for her PTSD not to be exacerbated or aggravated, including increasing the symptoms as mentioned above. Dr. Torres and Entin's opinions are more credible over the contrary opinion of Dr. Shea. Claimant's children served in this role while they were younger an able to do so but are now adults and can no longer act in that role without significant sacrifices. Claimant's children's testimony were credible in this matter as well as in the fact that Claimant cannot be left alone for significant periods of time without significant exacerbation of her symptoms.

68. Claimant has proven by a preponderance of the evidence that she is entitled to attendant care services as recommended by Dr. Torres for companion care in order for Claimant's PTSD symptoms to be controlled and kept at MMI. Claimant is entitled to up to 12 hours of companion services to be provided by Respondents either through medical providers, the community or through Claimant's family and friends, if available.

69. While both Dr. Torres and Dr. Entin indicated that the long term goal may be a 24 hour care facility, it is premature to address this at this time, while Claimant continues to live with a family member who would be able to attend to Claimant during nighttime hours.

70. Testimony and evidence inconsistent with the above findings is not relevant, credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Authorized Medical Benefits

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Therefore, in a dispute over medical benefits that arises after the filing of an admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the work injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A panel of the ICAO also addressed these issues in *Maestas v. O'Reilly Auto Parts*, ICAO, W.C. No. 4-856-563-01 (August. 31, 2012). The panel stated:

> [The *Snyder*] principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury.

As found, Claimant has proven that it is more probable than not the attendant care services of a companion as recommended by Dr. Torres is reasonably necessary and causally related medical treatment to prevent further exacerbations and flare up from Claimant's continuing chronic severe PTSD. This care is clearly part of her maintenance treatment in order to maintain maximum medical improvement and prevent flare-ups or aggravation of her PTSD.

Respondents' rely on medical opinions from a decade ago and Dr. Shea to support a denial of attendant care companion services. These opinions are not persuasive in this matter. The medical records show a significant effort to desensitize Claimant to the traumatic events for approximately five years without success, and Claimant continues to have significant symptoms of anxiety, distress and re-trauma when hearing noises, hearing news of violence and being in public, seeing shadows, individuals with hoodies and the like. Claimant continues to have nightmares that continue to affect and disrupt both Claimant and the daughter that lives with her. Claimant's children and friends have continued to have to provide Claimant with companion care to prevent panic attacks and increased anxiety.

Respondents cite to *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995), for the proposition that the Court of Appeals put weight on the severity of the Claimant's injuries and the extent the injuries limited the scope of the Claimant's ability to undertake ADLs. However, Claimant is not requesting attendant care to address non-work related ADLs. In this case, Claimant has significant PTSD which has caused her to be permanently and totally disabled. The treatment recommended by Dr. Torres is to treat her symptoms causally related to the trauma and her subsequent PTSD. Based on the totality of the evidence, Claimant has met her burden to prove that companion care services up to 12 hours a day as recommended by Dr. Torres is reasonable, necessary and causally related to the medical treatment needed to continue maintaining Claimant's ongoing and present PTSD, fifteen years after the work related injury in this permanently and totally disabled Claimant.

Claimant has failed to show that a 24 hour in patient facility is reasonably necessary at this time as Claimant continues to live with her daughter, though may become necessary when that living arrangement terminates.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall authorize and pay for attendant care services up to 12 hours a day as recommended by Dr. Torres and Dr. Entin to provide Claimant appropriate reasonably necessary maintenance treatment in the form of companionship for her work related PTSD.

2. Claimant's request for 24 hour care is denied and dismissed at this time as premature.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 20th day of June, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-214-953-001

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on July 18, 2022.

2. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for her termination from employment on October 27, 2022 under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving Temporary Total Disability (TTD) benefits.

FINDINGS OF FACT

1. Claimant worked for Employer as a Cashier. She testified that on July 18, 2022 she was carrying heavy boxes of water and juice while performing stocking duties for Employer. Claimant remarked that, while carrying a box, she felt a crack/pop in her back and could not move. She then called her husband and he finished carrying the boxes. Claimant subsequently completed her work shift.

2. Because of her back pain, Claimant visited Denver Health Urgent Care on July 18, 2022. Claimant reported right lower back pain and urinary symptoms. The medical note states that "yesterday tweaked her back lifting juice boxes at work and now has pain in her right low back." The medical record also reflects that Claimant had dysuria with mild suprapubic pain. Claimant was able to walk with pain, but there was no radiation down her legs. After a physical examination and a urinalysis, Claimant was diagnosed with a back strain as well as acute cystitis without hematuria.

3. Claimant did not report her July 18, 2022 injury to Respondents until July 29, 2022. On July 29, 2022 Claimant visited Kathy Okamatsu, FNP at Authorized Treating Provider (ATP) Concentra Medical Centers. The report noted Claimant had a Worker's Compensation injury on July 18, 2022 with "right lower back pain radiating to right posterior thigh after lifting at work." NP Okamatsu recounted that Claimant's job duties involved stocking cases of water, juice, and soda. Each case weighed approximately 50 pounds. The report specified that "[u]pon completion, [Claimant] started having vaginal pain, pain with urination, and muscular pain in the right lower back with radiation to the mid posterior aspect of the right thigh." NP Okamatsu assessed Claimant with a lumbar strain, provided medications, referred Claimant to physical therapy and assigned temporary work restrictions. She concluded that her objective findings were consistent with a work-related mechanism of injury. However, NP Okamatsu noted that "treatment of vaginal pain and urinary tract infection" was not work related.

4. On August 2, 2022 Claimant underwent an MRI of her lumbar spine at Denver Health. The MRI revealed L4-5 "moderate right and severe left foraminal

narrowing with flattening of the exiting left L4 nerve at L4-5 due to central disc bulge, facet arthropathy, and thickening of the ligamentum flavum." At L5-S1 Claimant had a paracentral disc extrusion with "7 mm inferior migration compressing the left S1 nerve root."

5. On August 12, 2022 Claimant visited Cynthia Rubio, M.D. at Concentra. Claimant reported continued lower back pain as a result of lifting heavy cases of water, juice and soda on July 18, 2022. Dr. Rubio diagnosed Claimant with a lumbar strain and probable herniated disc. She continued Claimant's work restrictions. Dr. Rubio concluded that her objective findings were consistent with a work-related mechanism of injury.

6. On September 8, 2022 Claimant visited Robert Kawasaki, M.D. at Concentra. Claimant reported that, while lifting heavy boxes at work, she felt something ripping in her back. Claimant developed a sharp, burning sensation in her lower back and down her right leg. She initially visited Denver Health and was diagnosed with a urinary tract infection and a lumbar strain. Dr. Kawasaki reviewed the August 2, 2022 lumbar MRI and noted it revealed an L5-S1 disc extrusion with compression of the left S1 nerve root. However, he commented that Claimant's symptoms were on the right side. Nevertheless, Dr. Kawasaki summarized that Claimant had an extrusion that had broken off from the disc. He remarked that there could have been migration of the disc that was compressing the right S1 nerve root and thus would account for Claimant's symptoms. After conducting a physical examination, Dr. Kawasaki diagnosed Claimant with the following: (1) severe lower back complaints with right leg radicular symptoms in an S1 distribution; (2) adjustment disorder with significant pain responses; and (3) "poor coping ability for her pain with very dramatic presentation."

7. Later on September 8, 2022 Claimant returned to Concentra for a follow-up visit with Rebecca Blatt, M.D. After conducting a physical examination and reviewing Claimant's medical records, Dr. Blatt determined the Claimant was able to return to modified duty with temporary restrictions of no lifting, repetitive lifting and carrying not to exceed 10 pounds, and remaining seated for 75% of the time or 45 minutes each hour. She also remarked that Claimant was prohibited from bending, twisting, squatting and climbing and might "need to be off work from 9/8/22 to 9/10/22 to get used to new medications." Dr. Blatt concluded that her objective findings were consistent with a work-related mechanism of injury.

8. On October 13, 2022 Claimant returned to Concentra and visited Stephen Danahey, M.D. Claimant reported that her lower back pain worsened and she wanted to be taken off work. She specified that she was experiencing symptoms in the left lower back that radiated down the left leg. There was also pain in the right gluteal area. Dr. Danahey noted that Claimant had undergone a second MRI on October 6, 2022 that revealed a left paracentral disc herniation with caudal extrusion at L5-S1, impingement of the S1 nerve and moderate spinal stenosis. The MRI also reflected exaggerated left foraminal impingement at L4-5 and multilevel degenerative changes. Dr. Danahey concluded that his objective findings were consistent with a work-related mechanism of injury. He also continued Claimant's work restrictions and remarked "no work with assistant manager."

9. On October 19, 2022 Claimant visited Jesus Sanchez, PhD for a psychological assessment. Claimant reported that medication was ineffective in dealing with the pain, and she did not identify any effective coping strategies to manage her symptoms. She commented that she continued to work 32 hours per week, in 8-hour shifts, four days per week. Claimant remarked that her work restrictions were not respected and being off work was necessary for improvement. Dr. Sanchez determined Claimant's presentation was "remarkable for expressive distress related to pain, fear of re-injury while at work and feeling unfairly treated there, limited coping skills to manage pain, catastrophic thoughts of the future, and feelings of loss of value and diminished self-concept…." He diagnosed Claimant with adjustment disorder including anxiety and depressed mood.

10. On October 25, 2022 Claimant underwent an examination with Michael J. Rauzzino, M.D. based on a referral from Dr. Danahey. After reviewing Claimant's medical records, Dr. Rauzzino remarked that Claimant initially reported right lower back and right leg pain after lifting heavy boxes at work. However, after an MRI revealed a large, left-sided disc herniation, her symptoms changed more toward her left leg. Nevertheless, Dr. Rauzzino determined Claimant's symptoms were consistent with her mechanism of injury. He remarked that there was a strong emotional overlay in Claimant's presentation and she exhibited significant pain behaviors. Noting Claimant's large left-sided disc herniation, Dr. Rauzzino explained she could benefit from a minimally invasive L5-S1 discectomy. However, he was concerned about Claimant's prognosis and recovery based on psychological factors. Dr. Rauzzino stated that he first wanted to consult with Dr. Sanchez to determine if Claimant would be a good surgical candidate. In an addendum he noted that he discussed the matter with Dr. Sanchez who noted concerns about her surgical candidacy.

11. On October 27, 2022 Employer terminated Claimant's employment. Specifically, Human Resources Generalist [Redacted, hereinafter LF] sent a letter to Claimant appraising her that she had been absent from work from October 23-25, 2022. He explained that, based on Employer's attendance policy, "missing two consecutive shifts on 10/23/2022, 10/24/2022 without notifying your manager is considered job abandonment. Due to your absence not being approved and not receiving any communication from you, we have determined that you have abandoned your position." LF[Redacted] noted that Claimant's termination was effective immediately.

12. The record reveals that Claimant has received escalating disciplinary violations during her employment. In step two of the process, Claimant obtained a written warning for dishonesty. Specifically, on October 18, 2022 Employer became aware of Claimant's allegations that Assistant Manager [Redacted, hereinafter DB] had struck her on the buttocks during her work shift on September 29, 2022. Employer commenced an investigation on the same day after Human Resources Generalist [Redacted, hereinafter AJ] received a doctor's note from Claimant stating that her injury had worsened due to unwanted physical touch. Claimant specified that, on September 29, 2022 between 2-3 pm MST, she was assisting a customer near the cash register when DB[Redacted] struck her on the buttocks. As part of the investigation, Employer obtained statements from other employees who were working during the shift including [Redacted, hereinafter LF],

[Redacted, hereinafter RM], [Redacted, hereinafter RG] and DB[Redacted]. Employer also reviewed store surveillance video from September 29, 2022. Although Claimant was visible in the video, the reported incident did not occur. The other employees stated that Claimant did not appear to be in any pain and left as she normally would at the end of the shift. The investigation concluded that there was no evidence of any unwanted physical touching. Employer thus determined Claimant was dishonest regarding the allegations. Based on the Employee Handbook that Claimant signed on April 19, 2022, Employer explained "this is a 'serious' offense 2. Dishonesty, intentional cash irregularities, and intentional miss-marking of merchandise may result in immediate dismissal."

13. In an e-mail dated October 19, 2022 LF[Redacted] and AJ[Redacted] contacted Claimant regarding the results of the investigation. LF[Redacted] and AJ[Redacted] explained to Claimant that they had reviewed video surveillance footage and verified that she was being dishonest in her report. The correspondence noted that AJ[Redacted] would be immediately returning to work. They emphasized that the dishonesty displayed by Claimant would not be tolerated by Employer and further infractions would lead to additional disciplinary action up to termination. LF[Redacted] explained that Claimant would physically receive the final written counseling from her District Manager on her return to work. Claimant responded that she would refuse to sign the document and "it is all a lie."

14. Employer also provided specific documentation in the form of a step four violation that recounted the reasons for Claimant's termination. The report detailed that on October 14, 2022 Claimant was contacted regarding her availability for the following week. Claimant reported additional back pain but failed to provide a medical report excusing her from work. On October 19, 2022 Employer contacted Claimant regarding an investigation for violating her medical restriction that she could not stand for over 20 minutes. Employer instructed Claimant to follow her medical recommendations and noted that a chair would be added to her workstation regardless of her shift. Finally, effective immediately Claimant would be added to the store schedule along with DB[Redacted]. On October 22, 2022 Claimant was informed through a group chat by her store manager about the upcoming weekly schedule. However, she failed to acknowledge the message and did not report to work on October 23-25, 2022. Claimant's absences constituted no call/no shows in violation of Employer's attendance policy that Claimant had acknowledged receiving on April 19, 2022. Notably, the attendance policy provided that upon receiving two no-call absences in a 12-month rolling period, the employee would be terminated.

15. AJ[Redacted] testified Employer's attendance policy provides that, if an employee is unable to work a scheduled shift, she must notify a manager as soon as possible. If an employee fails to show up for a scheduled shift and does not call, the employee will receive an automatic one-day suspension. If an employee fails to show up to work for a scheduled shift twice in a rolling 12-month period, the employee will be terminated. The record reflects that Claimant was aware of Employer's attendance policy as specified in the handbook. She acknowledged receipt of the handbook and attendance policy on April 19, 2022 and electronically signed off on the policies. Finally, Claimant

admitted at the hearing that she knew she could be fired if she did not show up for a scheduled work shift.

16. The record reveals that the work schedule for the week of October 23, 2022 was sent to employees and posted at Claimant's store on the Friday before October 21, 2022. The schedule was also sent by group chat on October 22, 2022. The preceding were the two customary methods for transmitting the work schedule to employees. Claimant was on the schedule and expected to work on October 23, 24 and 25, 2022. However, Claimant did not show up for her scheduled shifts or contact her manager. As evidenced by a series of angry text messages in the record, Claimant was aware that her employment had been terminated for failing to show up for scheduled work shifts.

17. On December 12, 2022 Claimant underwent an independent medical examination with J. Taschof Bernton, M.D. Dr. Bernton administered a Battery for Health Improvement 2 psychological test. After performing an extensive record review and physical examination, Dr. Bernton determined that the symptoms Claimant reported to medical providers on July 18, 2022 did not correlate with the MRI findings of Claimant's lumbar spine. However, he concluded that, based on all of the available information, it was probable that Claimant suffered a lumbar strain while carrying boxes on July 18, 2022. Dr. Bernton specified that "I would regard [Claimant's] condition as work related based on her acute presentation to the emergency room." Nevertheless, Claimant's urinary tract infection was not related to any work activities. Dr. Bernton concluded that Claimant was not a surgical candidate but a psychological evaluation to determine surgical candidacy was appropriate.

18. On April 22, 2023 Claimant visited Timothy Shea, PsyD for a psychological evaluation. Dr. Shea remarked that Claimant made it very clear her employment was a primary source of stress and she had problems with numerous people at work. She reported "the lies" from Employer were very frustrating. Dr. Shea reasoned that Claimant's hyper-focus on her job and associated stressors were clearly impacting her perception of actual events. After administering numerous psychological tests during the evaluation, Dr. Shea determined there was a clear disconnect between Claimant's behaviors, reports of pain and emotions. He explained that Claimant's much higher than expected pain reports were likely caused by expressing stressors, depression, and anxiety through increased pain experiences. Dr. Shea noted some concern for exaggeration of pain and likely misattribution of symptoms. He concluded "[t]here is bountiful evidence that there are multiple non-organic factors that may be further exacerbating her reported pain experience over what would be expected based upon the reviewed documentation." Dr. Shea agreed with Dr. Sanchez that a diagnosis of adjustment disorder with anxiety and depressed mood was appropriate.

19. Dr. Bernton testified at the hearing in this matter. He considered the information he had available at the time of his examination as well as the subsequent psychological evaluations of Drs. Sanchez and Shea. Dr. Bernton emphasized his opinion had solidified regarding Claimant's condition at her July 18, 2022 medical visit to Denver Health Urgent Care. He concluded that Claimant had presented with only a non-work-related urinary tract infection.

20. Claimant has demonstrated that it is more probably true than not that she suffered compensable injuries during the course and scope of her employment with Employer. Initially, Claimant has maintained that she experienced lower back pain after carrying heavy boxes of juice and water at work on July 18, 2022. She visited Denver Health Urgent Care after her work shift, reported right lower back pain and was diagnosed with a back strain as well as acute cystitis without hematuria. On July 29, 2022 NP Okamatsu at ATP Concentra assessed Claimant with a lumbar strain, provided medications, referred her to physical therapy and assigned temporary work restrictions. NP Okamatsu concluded that her objective findings were consistent with a work-related mechanism of injury. A subsequent MRI of Claimant's lumbar spine revealed a paracentral disc extrusion at L5-S1 that was compressing the left S1 nerve root. Dr. Rubio then diagnosed Claimant with a lumbar strain and probable herniated disc. She also concluded that her objective findings were consistent with a work-related mechanism of injury.

21. On September 8, 2022 Dr. Kawasaki reviewed the August 2, 2022 lumbar MRI and noted it revealed an L5-S1 disc extrusion with compression of the left L1 nerve root. However, he commented that Claimant's reported symptoms were on the right side in an S1 distribution. Nevertheless, Dr. Kawasaki remarked that there could have been migration of the disc that was compressing the right S1 nerve root to account for Claimant's right-sided symptoms. On the same date, Dr. Blatt determined that Claimant's objective findings were consistent with a work-related mechanism of injury. Dr. Danahey subsequently noted that Claimant had undergone a second lumbar MRI on October 6, 2022 that revealed a left paracentral disc herniation with caudal extrusion at L5-S1 with impingement of the S1 nerve and moderate spinal stenosis. He also concluded that his objective findings were consistent with a work-related mechanism of injury. After noting concerns about the migration of Claimant's pain, Dr. Rauzzino also determined her symptoms were consistent with the reported mechanism of injury. Noting Claimant's large left-sided disc herniation, Dr. Rauzzino explained she could benefit from a minimally invasive L5-S1 discectomy. However, based on psychological factors, Dr. Rauzzino expressed trepidation about Claimant's surgical candidacy.

22. In contrast to the opinions of the Concentra physicians, Dr. Bernton determined that the symptoms Claimant reported to medical providers on July 18, 2022 did not correlate with her lumbar MRI findings. However, he concluded that it was probable Claimant suffered a lumbar strain while carrying boxes on July 18, 2022. Nevertheless, Claimant's urinary tract infection was not related to any work activities. In addition to Dr. Bernton's opinion, the migration of Claimant's symptoms from the right to left side of her lower back casts doubt on the veracity of her complaints. Importantly, psychological assessments reflected a disconnect between Claimant's behaviors, reports of pain and emotions. Notably, Dr. Shea expressed concern for exaggeration of pain and likely misattribution of symptoms. He concluded "[t]here is bountiful evidence that there are multiple non-organic factors that may be further exacerbating her reported pain experience, over what would be expected based upon the reviewed documentation." Dr.

Shea agreed with Dr. Sanchez that a diagnosis of adjustment disorder with anxiety and depressed mood was appropriate.

23. Despite Dr. Bernton's opinion and concerns about Claimant's reported symptoms based on psychological factors, the record reveals that Claimant likely suffered an industrial injury at work on July 18, 2022. Lumbar MRIs revealed a L5-S1 disc extrusion that is compressing the left S1 nerve root. Furthermore, the record is replete with opinions from Concentra physicians that Claimant's objective findings were consistent with a work-related mechanism of injury. Claimant's work activities thus aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant suffered an industrial injury while working for Employer on July 18, 2022.

24. Respondents have proven it is more probably true than not that Claimant was responsible for her termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Initially, on October 27, 2022 Claimant was terminated from employment based on the violation of Employer's attendance policy for missing two consecutive work shifts on October 23-24, 2022 without notifying her manager. Employer considered Claimant's actions to constitute job abandonment.

25. The record reveals that Claimant has received escalating disciplinary violations during her employment. Employer also provided specific documentation in the form of a step four violation that recounted the reasons for Claimant's termination. AJ[Redacted] credibly explained that Employer's attendance policy specifies that, if an employee is unable to work a scheduled shift, she must notify a manager as soon as possible. If an employee fails to show up for a scheduled shift and has not called, the employee receives an automatic one-day suspension. If an employee fails to show up to work for a scheduled shift twice in a rolling 12-month period, the employee is terminated. Claimant was aware of Employer's policies as reflected by her acknowledgment of receiving the handbook and attendance policy on April 19, 2022 and electronically signing off on the policies. Claimant also admitted at hearing that she knew if she did not show up to work she could be fired.

26. The record reveals that the work schedule for the week of October 23, 2022 was sent to employees and posted at Claimant's store on the Friday before October 21, 2022. The schedule was also sent by group chat on October 22, 2022. The preceding were the two customary ways the work schedule was communicated to employees. Claimant was on the schedule and able to work October 23, 24 and 25, 2022. However, Claimant did not show up for her scheduled shifts or contact her manager. As evidenced by a series of angry text messages in the record, Claimant was aware that her employment had been terminated for failing to show up for scheduled work shifts.

27. The record reflects that Claimant failed to report for her scheduled work shifts on October 23, 24 and 25, 2022 and was aware that termination could result. To the extent Claimant argues that her attendance issues were related to her work injury, her contention is not credible. The weight of the evidence establishes that Claimant simply

violated known and well-communicated attendance policies. She thus precipitated her employment termination by a volitional act that she would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over her termination from employment. She is thus precluded from receiving TTD benefits after October 27, 2022.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to

produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967).; *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician may provide diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms, there is no mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer. Initially, Claimant has maintained that she experienced lower back pain after carrying heavy boxes of juice and water at work on July 18, 2022. She visited Denver Health Urgent Care after her work shift, reported right lower back pain and was diagnosed with a back strain as well as acute cystitis without hematuria. On July 29, 2022 NP Okamatsu at ATP Concentra assessed Claimant with a lumbar strain, provided medications, referred her to physical therapy and assigned temporary work restrictions. NP Okamatsu concluded that her objective findings were consistent with a work-related mechanism of injury. A subsequent MRI of Claimant's lumbar spine revealed a

paracentral disc extrusion at L5-S1 that was compressing the left S1 nerve root. Dr. Rubio then diagnosed Claimant with a lumbar strain and probable herniated disc. She also concluded that her objective findings were consistent with a work-related mechanism of injury.

9. As found, on September 8, 2022 Dr. Kawasaki reviewed the August 2, 2022 lumbar MRI and noted it revealed an L5-S1 disc extrusion with compression of the left L1 nerve root. However, he commented that Claimant's reported symptoms were on the right side in an S1 distribution. Nevertheless, Dr. Kawasaki remarked that there could have been migration of the disc that was compressing the right S1 nerve root to account for Claimant's right-sided symptoms. On the same date, Dr. Blatt determined that Claimant's objective findings were consistent with a work-related mechanism of injury. Dr. Danahey subsequently noted that Claimant had undergone a second lumbar MRI on October 6, 2022 that revealed a left paracentral disc herniation with caudal extrusion at L5-S1 with impingement of the S1 nerve and moderate spinal stenosis. He also concluded that his objective findings were consistent with a work-related mechanism of injury. After noting concerns about the migration of Claimant's pain, Dr. Rauzzino also determined her symptoms were consistent with the reported mechanism of injury. Noting Claimant's large left-sided disc herniation, Dr. Rauzzino explained she could benefit from a minimally invasive L5-S1 discectomy. However, based on psychological factors, Dr. Rauzzino expressed trepidation about Claimant's surgical candidacy.

10. As found, in contrast to the opinions of the Concentra physicians, Dr. Bernton determined that the symptoms Claimant reported to medical providers on July 18, 2022 did not correlate with her lumbar MRI findings. However, he concluded that it was probable Claimant suffered a lumbar strain while carrying boxes on July 18, 2022. Nevertheless, Claimant's urinary tract infection was not related to any work activities. In addition to Dr. Bernton's opinion, the migration of Claimant's symptoms from the right to left side of her lower back casts doubt on the veracity of her complaints. Importantly, psychological assessments reflected a disconnect between Claimant's behaviors, reports of pain and emotions. Notably, Dr. Shea expressed concern for exaggeration of pain and likely misattribution of symptoms. He concluded "[t]here is bountiful evidence that there are multiple non-organic factors that may be further exacerbating her reported pain experience, over what would be expected based upon the reviewed documentation." Dr. Shea agreed with Dr. Sanchez that a diagnosis of adjustment disorder with anxiety and depressed mood was appropriate.

11. As found, despite Dr. Bernton's opinion and concerns about Claimant's reported symptoms based on psychological factors, the record reveals that Claimant likely suffered an industrial injury at work on July 18, 2022. Lumbar MRIs revealed a L5-S1 disc extrusion that is compressing the left S1 nerve root. Furthermore, the record is replete with opinions from Concentra physicians that Claimant's objective findings were consistent with a work-related mechanism of injury. Claimant's work activities thus aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant suffered an industrial injury while working for Employer on July 18, 2022.

Responsible for Termination

12. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Indus. Claim Appeals Off.*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that the claimant was responsible for her termination, the respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAO, Sept. 27, 2001).

13. As found, Respondents have proven by a preponderance of the evidence that Claimant was responsible for her termination from employment under the termination statutes and is thus precluded from receiving TTD benefits. Initially, on October 27, 2022 Claimant was terminated from employment based on the violation of Employer's attendance policy for missing two consecutive work shifts on October 23-24, 2022 without notifying her manager. Employer considered Claimant's actions to constitute job abandonment.

14. As found, the record reveals that Claimant has received escalating disciplinary violations during her employment. Employer also provided specific documentation in the form of a step four violation that recounted the reasons for Claimant's termination. AJ[Redacted] credibly explained that Employer's attendance policy specifies that, if an employee is unable to work a scheduled shift, she must notify a manager as soon as possible. If an employee fails to show up for a scheduled shift and has not called, the employee receives an automatic one-day suspension. If an employee fails to show up to work for a scheduled shift twice in a rolling 12-month period, the employee is terminated. Claimant was aware of Employer's policies as reflected by her acknowledgment of receiving the handbook and attendance policy on April 19, 2022 and electronically signing off on the policies. Claimant also admitted at hearing that she knew if she did not show up to work she could be fired.

15. As found, the record reveals that the work schedule for the week of October 23, 2022 was sent to employees and posted at Claimant's store on the Friday before October 21, 2022. The schedule was also sent by group chat on October 22, 2022. The

preceding were the two customary ways the work schedule was communicated to employees. Claimant was on the schedule and able to work October 23, 24 and 25, 2022. However, Claimant did not show up for her scheduled shifts or contact her manager. As evidenced by a series of angry text messages in the record, Claimant was aware that her employment had been terminated for failing to show up for scheduled work shifts.

16. As found, the record reflects that Claimant failed to report for her scheduled work shifts on October 23, 24 and 25, 2022 and was aware that termination could result. To the extent Claimant argues that her attendance issues were related to her work injury, her contention is not credible. The weight of the evidence establishes that Claimant simply violated known and well-communicated attendance policies. She thus precipitated her employment termination by a volitional act that she would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over her termination from employment. She is thus precluded from receiving TTD benefits after October 27, 2022.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable injuries during the course and scope of her employment with Employer on July 18, 2022.

2. Claimant was responsible for her termination from employment on October 27, 2022 and is thus precluded from receiving TTD benefits.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. The amount that most fairly constitutes Claimant's average weekly wage (AWW).

II. Whether temporary disability benefits should be modified based on a changed AWW.

FINDINGS OF FACT

1. This is an admitted claim involving a November 19, 2021 low back injury.

2. Claimant earned a gross salary of $2,578.00 per month in June 2021. That figure corresponds with an AWW of $594.92.

3. Claimant earned $2,655.00 per month from July 2021 through June 2022, the period of time that corresponded with Claimant's date of injury. That figure corresponds with an AWW of $612.69.

4. Claimant also received a one-time $1,000.00 yearly stipend in July 2021, as well as a $1,274.00 cost-of-living adjustment payment in June 2022. The Court finds that neither of these payments were of the type that would have been affected by disability.

5. In July 2022, Claimant's monthly salary increased to $2,734.67, an AWW of $631.08, and remained at that level until January 2023, when his monthly salary again increased to $3,133.00, an AWW of $723.00, coinciding with a job reallocation to "Structural Trades I."

6. In February, 2023, Claimant earned $3,424.73, corresponding with an AWW of $790.32.

7. On May 4, 2023, the [Employer] issued a letter to all [Redacted] employees announcing that all employees would receive a 5% pay increase effective July 1, 2023.

8. Respondent filed a General Admission of Liability (GAL) on August 18, 2022. The GAL admitted to an AWW of $808.04.

9. Respondent filed two more GALs on November 16, 2022, and March 14, 2023, admitting for intermittent temporary partial disability (TPD) benefits. The TPD benefits were calculated based upon the admitted AWW of $808.04.

10. The GALs documented lost time (in hours) on the following dates:

DATE	LOST TIME	DATE	LOST TIME	DATE	LOST TIME	DATE	LOST TIME	DATE	LOST TIME	DATE	LOST TIME	DATE	LOST TIME	DATE	LOST TIME
11/22/2021	2.5	1/17/2022	2	3/7/2022	1	4/20/2022	1.5	6/13/2022	2	7/20/2022	3	8/31/2022	2	12/14/2022	3.75
11/23/2021	8	1/18/2022	2	3/9/2022	2	4/21/2022	2	6/16/2022	2.5	7/22/2022	3	9/12/2022	6	1/18/2023	0.25
11/29/2021	3	1/19/2022	2	3/14/2022	1	4/25/2022	2	6/23/2022	3	7/27/2022	3	9/13/2022	0.5	1/23/2023	2.5
12/1/2021	2.75	1/21/2022	1.25	3/16/2022	1.5	4/27/2022	2	6/24/2022	3	7/28/2022	2	9/15/2022	2	1/26/2023	1
12/6/2021	1.5	1/26/2022	2	3/21/2022	3	5/2/2022	2	6/27/2022	3	7/29/2022	3	9/16/2022	8	2/1/2023	1
12/9/2021	2	1/27/2022	4.25	3/23/2022	1.5	5/3/2022	4	6/28/2022	2	8/1/2022	3	9/26/2022	8	2/6/2023	2
12/14/2021	2	1/28/2022	2.75	3/28/2022	1	5/4/2022	1.5	6/30/2022	3	8/2/2022	2	9/30/2022	8	2/9/2023	1
12/17/2021	1.5	2/3/2022	2.25	3/29/2022	2	5/6/2022	2	7/3/2022	3	8/4/2022	3	10/17/2022	2	2/13/2023	1
12/22/2021	3.25	2/7/2022	6.5	3/30/2022	1.5	5/13/2022	1.5	7/5/2022	3	8/15/2022	3	10/21/2022	8	2/23/2023	3
1/3/2022	1.75	2/9/2022	2	3/31/2022	8	5/18/2022	2	7/7/2022	4	8/16/2022	2	10/26/2022	5.5	2/28/2023	2.5
1/4/2022	2	2/10/2022	2	4/4/2022	2	5/20/2022	1.5	7/8/2022	3	8/17/2022	5	10/28/2022	1		
1/5/2022	2	2/11/2022	2.5	4/6/2022	1.5	5/26/2022	2	7/11/2022	5	8/18/2022	8	10/31/2022	2		
1/7/2022	4.5	2/17/2022	4	4/7/2022	2.5	5/27/2022	1.5	7/13/2022	3	8/22/2022	3	11/1/2022	2.5		
1/12/2022	1.25	2/24/2022	1.5	4/12/2022	2	6/3/2022	2	7/14/2022	3	8/23/2022	8	11/7/2022	2		
1/13/2022	2	3/2/2022	3.5	4/13/2022	1.5	6/7/2022	4	7/18/2022	3	8/24/2022	2	11/28/2022	1		
1/14/2022	1.5	3/3/2022	2.5	4/18/2022	4	6/8/2022	2	7/19/2022	2	8/26/2022	4	12/7/2022	8		

11. The parties stipulated at a post-hearing conference on June 12, 2023 to the following facts:

    a. Claimant's authorized treating physician placed him at maximum medical improvement (MMI) on April 14, 2023.

    b. Respondent has requested a Division independent medical examination (DIME), which is currently pending.

12. At hearing, Respondent presented the testimony of Z.M.[Redacted], an HR specialist for Respondent.

13. Ms. Z.M.[Redacted] testified about Claimant's earnings and explained the line items on Claimant's pay records. Regarding the $1,000.00 stipend payment in July 2021, Ms. Z.M.[Redacted] testified that it was an across-the-board payment for all [Redacted] classified employees. Although it was labeled as "extra duty" on the pay record, she testified that the categorization was simply due to the categories available on the software used for pay records.

14. Ms. Z.M.[Redacted] also explained that the June 2022 payment of $1,274.00 was a one-time lump sum "across-the-board" payment to compensate employees for the absence of a cost-of-living adjustment that year.

15. Regarding Claimant's raise in January 2023, which corresponded with Claimant's position reallocation from "Labor I" to "Structural Trades I," Ms. Z.M.[Redacted] testified that the reallocation resulted in an increased salary, but that the raise was not merit-based. Ms. Z.M.[Redacted] also testified on cross examination that there had been discussions of [Redacted] raises for July 2023, but that that information had not yet been released.

16. The Court finds Ms. Z.M.[Redacted]'s testimony credible, except insofar as she testified that the July 2023 raise had not yet been announced.

17. Claimant testified on his own behalf at hearing. Claimant testified consistently with the pay records regarding his raises. Additionally, Claimant testified that he was supposed to receive a 3.5% raise in 2022, but instead received the [Redacted] standard raise.

18. Regarding his reallocation to "Structural Trades I," Claimant testified that the reallocation was based on his skill set, including building walls, building ramps, and running machines. Claimant also testified that he developed a key system to track keys as part of his new position, worked with a COVID task force for testing students, performed some camera work of different structures, and built a ramp for motorcycles. Claimant denied that any doctor ever took him off work.

19. The Court finds Claimant's testimony credible.

20. Respondent presented rebuttal testimony of Ms. Z.M.[Redacted] regarding Claimant's new duties. Specifically, she testified that the new duties simply constituted modified duty to accommodate Claimant's work restrictions. To the extent this testimony conflicts with Claimant's, the Court credits Claimant's testimony.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo.App.2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or

unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo.App.2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Commission,* 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo.App.2000).

AWW

The entire objective of wage calculation is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM*, 867 P.2d 77, 82 (Colo. App. 1993. In general, an ALJ is to compute a claimant's AWW based on the claimant's earnings at the time of injury. *See* § 8-42-102(2), C.R.S. (2021).

Where the prescribed methods will not result in a fair calculation of a claimant's AWW in the particular circumstances, section C.R.S. § 8-42-102(3) grants an ALJ discretion to determine AWW "in such other manner and by such other method as will, in the opinion of the director *based upon the facts presented*, fairly determine such employee's average weekly wage." Section 8-42-102(3), C.R.S. (emphasis added).

Here, the parties have agreed that the AWW of $808.04 is incorrect. Each party has argued as to what they believe the correct AWW to be.

Respondent argues that Claimant's AWW should be calculated as $612.69 based on Claimant's earnings at the time of Claimant's injury. Respondent argues that the "default method" of calculating AWW as of the date of injury would fairly compute the AWW in this case and that it would be inappropriate for the Court to apply the discretionary provisions of § 8-42-102(3), C.R.S. Respondent distinguished the cases of *Campbell v. IBM* and *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo.App.2007), on the basis that those cases involved claimants who sustained injuries at a lower paying job only to later lose wages at a different, higher-paying job. Respondent further distinguished *Pizza Hut v. ICAO*, 18 P.3d 867 (Colo.App.2001), as that case involved a claimant who began a new, much higher-paying employment only two weeks after his date of injury, whereas Claimant continued to earn his date-of-injury wages for seven months following his date of injury. Last, Respondent argues that none of Claimant's wage increases were merit-based.

Claimant argues that it would be "manifestly unjust" for the Court to base Claimant's AWW on the earnings in effect at the time of injury given that Claimant experienced subsequent increases in wages during the course of his entitlement to temporary disability benefits. He cited *Campbell* for that proposition.

Respondent argued persuasively at hearing that application of the discretionary provision to all cases where claimants receive wage increases during periods of disability would be an exception that swallows the rule. Although ALJs have found similar such arguments persuasive in the past in cases analogous to this one, *Campbell* remains good law and binds this Court.

For example, in *Romero v. Liberty Mutual Ins. Co.*, W.C. No. 4-218-823 (2000), an ALJ declined to apply the discretionary standard and calculated the AWW based on the date of injury, despite the claimant receiving pay increases during the months after his injury, which included periods of disability. The ALJ cited policy reasons for why the discretionary provision should not be applied. The ICAO set aside the ALJ's order and remanded the matter, noting:

> "We do not disagree with the ALJ's observation that the redetermination of AWW to include a post-injury wage increase is inconsistent with determining AWW based on the "remuneration which the injured or deceased employee was receiving at the time of the injury," as provided by § 8-42-102(2) . . . . As noted by the ALJ, it arguably also undermines the 'predictability and certainty' of the respondents' liability. . . . However, these consequences are expressly contemplated by *Campbell*, and *Campbell* represents the current state of the law on the issue."

Id.

Therefore, because the facts in this case are sufficiently analogous to those in *Romero* and *Campbell*, the Court must apply the discretionary provision of § 8-42-102(3), C.R.S.

Were the Court to use Claimant's AWW effective as of the date of injury, Claimant would be undercompensated during later periods when his earning capacity increased. Conversely, were the Court to base the AWW on the highest, most recent earnings, Claimant would receive a windfall at Respondent's expense during earlier periods of disability. The Court could adopt a variable AWW which would adjust for different periods of temporary disability. Although this practice achieves fair AWW calculations for periods of temporary disability, it raises an obvious issue as to which of the various AWWs to use once permanent disability benefits come due. One party might plausibly argue that the AWW as of the date of injury would result in the most appropriate calculation permanent disability benefits. The opposing party might make an equally plausible argument that permanent partial disability should be based on the AWW at the time of MMI. *See, e.g.*, *Waalkes v. The Salvation Army*, W.C. No. 4-533-879 (September 30, 2003); *Porter v. Wal-Mart Stores*, W.C. No. 4-392-507 (August 12, 2002).

Therefore, the Court in this case determines a single AWW based on the weighted averages of Claimant's earnings during periods of temporary disability. The AWW is weighted based on the number of hours of lost time during each period. Admittedly, this will result in Claimant being both overcompensated for early temporary disability and overcompensated for later periods of disability. But, in the aggregate, it will ensure that Claimant is neither overcompensated nor undercompensated, and will achieve the fairest outcome for the parties.

During the course of this claim, Claimant has lost wages corresponding to 343 lost hours. Those periods of disability can be broken down as follows:

- From Claimant's date of injury through June 2022, while earning an average weekly wage of $612.69,[1] Claimant had 172.5 hours of lost time, representing 50% of the total lost time.
- From July 2022 through December 2022, while earning an average weekly wage of $631.08,[2] Claimant had a total of 156.25 hours of lost time, representing 46% of the total lost time.
- In January 2023, while earning an average weekly wage of $722.89,[3] Claimant had a total of 3.75 hours of lost time, representing 1% of the total lost time.
- From February 2023 until the March 14, 2023 GAL, while earning $790.32 per month,[4] Claimant had 10.5 hours of lost time, representing 3% of the total lost time in this matter.

Claimant has since been placed at MMI effective April 14, 2023, and Respondent has requested a DIME.

Claimant cites to *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (May 7, 1997), for the proposition that Claimant's July 1, 2023 pending raise should be factored in to calculate Claimant's AWW. However, the facts here do not support inclusion of Claimant's prospective July 1 raise in the calculation of AWW.

In *Ebersbach*, the ICAO held that the claimant was entitled as a matter of law to have her AWW adjusted to account for post-injury pay raises she was eligible to receive under a union contract. The Panel stated:

> [T]he facts in this case cannot be meaningfully distinguished from those in *Campbell*. Here, at the time of the injury, the claimant had a contractual right to an increase in her hourly earnings as of May 7, 1995. This right was not contingent on performance evaluations or other subjective factors. Thus, the undisputed evidence establishes that the claimant would have been earning an additional twenty-five cents per hour subsequent to that date but for the intervention of the

[1] This is based on $2,655.00 per month.
[2] This is based on $2,734.67 per month.
[3] This is based on $3,132.53 per month.
[4] This is based on $3,424.73 per month.

industrial injury. The claimant's right to receive the increase was sufficiently definite that it would be manifestly unjust to deprive her of the benefit of the increase when calculating her average weekly wage.

Id.

Here, unlike in *Ebersbach*, the Court does not find that Claimant is more likely than not to have sustained lost wages due to temporary disability after the July 1, 2023 raise.

While it is possible that Claimant will be entitled to temporary disability benefits beyond those which were admitted on the March 14, 2023 GAL, entitlement to such benefits at this time is speculative. Although imperfect, using the existing dates of disability currently admitted on the March 14, 2023 GAL is the Court's best approximation of Claimant's total lost time in this matter. Therefore, the Court does not include the July 1, 2023 raise in its calculation, and instead weighs wages based on the amount of lost time during each period during which Claimant earned those wages.

Period	November 19, 2021, through June 2022	July 22 through December 22	January 2023	February 2023 to March 14, 2023	TOTAL
Hours	172.5	156.25	3.75	10.5	343
Monthly Gross Pay	$2,655	$2,734.67	$3,132.53	$3,424.73	
AWW	$612.69	$631.08	$722.89	$790.32	
Weight	50%	46%	1%	3%	1
AWW x Weight	$308.13	$287.48	$7.90	$24.19	**$627.71**

Based on the above, and weighing the AWWs for each period of lost time based on that period's share of the total lost time, the Court calculates an AWW of $627.71.

ORDER

1. Respondent proved by a preponderance of the evidence that the admitted AWW was incorrect. Respondent shall file an amended general admission of liability or a Final Admission of Liability within twenty-one days of this Order admitting for benefits consistent with an AWW of $627.71.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-153-666-006

ISSUES

1. Whether Claimant established by a preponderance of the evidence grounds for reopening his claim.

2. If Claimant's claim is reopened, whether Claimant established entitlement to temporary disability benefits.

3. If Claimant's claim is reopened, whether Claimant established an entitlement to additional reasonable and necessary medical benefits.

FINDINGS OF FACT

1. On November 12, 2020, Claimant sustained an admitted injury to his left knee arising out of the course of his employment with Employer. On that date, Claimant sustained a fracture of the left tibia while delivering a package for Employer.

2. Claimant was initially seen at St. Joseph Hospital and was hospitalized for approximately two weeks and then transferred to Vibra Rehab Hospital of Denver where he remained for until December 4, 2020. (Ex. E).

3. On January 27, 2021, Claimant saw authorized treating physician (ATP) Matthew Lugliani, M.D., at COMP. Dr. Lugliani ordered a CT scan of Claimant's left knee and referred Claimant to Rajesh Bazaz, M.D., an orthopedic surgeon. (Ex. F).

4. The CT scan was performed on February 4, 2021, and showed a partially-healed non-displaced fracture of the anterior and medial tibial plateau, without soft tissue pathology. (Ex. 15 & H).

5. On February 12, 2021, Claimant saw Dr. Bazaz at Western Orthopaedics for evaluation of his left knee. Dr. Bazaz indicated Claimant did not require surgery, and ordered an MRI of Claimant's left knee. (Ex. G & 13).

6. On February 16, 2021, Claimant saw Dr. Lugliani and reported 10% improvement of his left knee. Claimant also reported new complaints of low back and neck pain. On examination, Dr. Lugliani noted decreased range of motion and tenderness to palpation of Claimant's back, but an otherwise normal examination. Dr. Lugliani referred Claimant for chiropractic care and massage therapy. (Ex. 19).

7. On March 2, 2021, Claimant had MRIs performed of his left knee ordered by Dr. Bazaz. The left knee MRI showed moderate bone marrow edema of the left tibia, consistent with subacute healing of the fracture, and intact menisci and anterior cruciate ligament. (Ex. H).

8. Also on March 2, 2021, Claimant had cervical, thoracic, and lumbar spine MRIs on that date. Although the imaging reports indicate Claimant was referred by Dr. Lugliani, Dr. Lugliani's medical records do not reflect that he referred Claimant for the MRI. The cervical MRI showed multilevel disc bulges and protrusions with mild thecal sac narrowing at C4-5 and C5-6, and a C5-6 posterior annular fissure. (Ex. 16). The lumbar MRI showed disc bulges at L4-5, L5-S1 and L5-S1 with mild neuroforaminal narrowing at L4-5 and L5-S1. (Ex. 18). Claimant's thoracic MRI showed only mild to moderate disc desiccation. (Ex. 17). No credible evidence was admitted indicating any provider has opined that the pathology shown on the cervical, thoracic, or lumbar MRIs was causally-related to Claimant's November 12, 2020 work injury.

9. Dr. Bazaz reviewed Claimant's left knee MRI on March 5, 2021. He opined that Claimant's fractur had healed appropriately, and that Claimant needed to start physical therapy. Claimant requested that Dr. Bazaz treat his back complaints, but Dr. Bazaz indicated he did not order Claimant's cervical, thoracic, or lumbar MRI and would not be the appropriate physician to treat his back complaints. (Ex. 14 & G).

10. Claimant returned to Dr. Bazaz on April 16, 2021. Claimant had not begun physical therapy, and had not returned to Dr. Lugliani. Dr. Bazaz again indicated that Claimant should be in physical therapy for his knee, but was unclear why this had not occurred. (Ex. G).

11. Claimant's next documented medical visit was with Lawrence Lesnak, D.O., on July 7, 2021. (Dr. Lesnak indicated that he had now been designated as Claimant's ATP). Claimant reported left knee pain, and lumbar pain. He also reported to Dr. Lesnak that he had a different work-related low back injury in October 2020 while working for a different employer, and was treated at Concentra for approximately one month. (No records of this injury were admitted into evidence). Dr. Lesnak examined Claimant and recommended a trial of physical therapy. (Ex. E). Dr. Lesnak also ordered a CT of Claimant's left knee, which was performed on August 6, 20212, and showed a healed proximal tibial stress fracture. Dr. Lesnak further opined that Claimant did not sustain spinal injuries as a result of his November 12, 2020 work injury. (Ex. H).

12. Claimant began physical therapy for his left knee on August 31, 2021, at Select Physical Therapy. Claimant attended four sessions before he was discharged for non-compliance on September 17, 2021. (Ex. I).

13. On November 4, 2021, Claimant saw Dr. Lesnak again. Dr. Lesnak noted that the only recommended treatment for Claimant was aggressive physical therapy, and although Claimant had previously been discharged from physical therapy, he was willing to provide a new physical therapy prescription. If Claimant elected not to pursue further physical therapy, Dr. Lesnak indicated he would place Claimant at maximum medical improvement (MMI). (Ex. E). No credible evidence was admitted indicating Claimant followed through with additional physical therapy.

14. On March 10, 2022, Dr. Lesnak placed Claimant at maximum medical improvement (MMI) effective January 10, 2022 for his November 12, 2020 injury. Dr.

Lesnak assigned Claimant a 2% left lower extremity impairment rating, and opined that Claimant did not require work restrictions or maintenance care, unless he continued to have symptoms. Dr. Lesnak opined that Claimant' reported neck and back symptoms were unrelated to his November 12, 2020 injury. (Ex. E).

15. On March 29, 2022, Respondents filed a final admission of liability (FAL) for Claimant's November 12, 2020 injury, admitting for a 2% left lower extremity impairment rating. (Ex. B).

16. Claimant did not request a Division-sponsored independent medical examination (DIME), file an objection to the FAL, or file an Application for Hearing within thirty days of the March 29, 2022 FAL. Consequently, Claimant's claim closed on April 29, 2022 pursuant to § 8-42-107.2, C.R.S.

17. After being placed at MMI, Claimant apparently sought treatment for his left knee from providers in [Redacted hereinafter PT]. On May 16, 2022, Claimant had a left knee x-ray ordered by Parham Pezeshk, M.D. The x-ray showed no joint effusion or degenerative changes. On July 27, 2022, Claimant had another left knee x-ray at the same facility, which was interpreted as showing no significant changes from the May 16, 2022 x-ray. (Ex. H). No additional records from these providers were offered into evidence.

18. In addition to Claimant's November 12, 2020 knee injury, Claimant sustained two additional work-related injuries. On August 25, 2020, Claimant sustained a lower back injury while unloading a container working for a different employer. Claimant was released to full duty from his August 25, 2020 injury on September 22, 2020.[1] On April 1, 2021, Claimant was evaluated by Kathy McCranie, M.D., for an independent medical examination related to the August 25, 2020 injury. Dr. McCranie opined that Claimant was at maximum medical improvement by early October 2020, and had no permanent impairment from that injury. (Ex. D).

19. On February 23, 2022, Claimant reported he sustained an injury to his low back, including the lumbar and lumbosacral spine while working for Employer. A First Report of Injury was filed on March 2, 2022. Respondents filed a Notice of Contest on March 18, 2022. (Ex. C).

20. Claimant's submitted exhibits demonstrate Claimant has been evaluated for issues involving his lower back since reaching MMI for the November 12, 2020 knee injury. This includes undergoing a lumbar MRI on September 15, 2022 which demonstrated mild lateral foraminal narrowing due to a disc bulge at the L5-S1 level. No credible evidence was admitted indicating that the lower back treatment Claimant has received is causally related to his November 12, 2020 knee injury. The ALJ makes no findings as to whether Claimant's lower back condition is causally related to any other industrial injury.

[1] The ALJ infers that the August 2020 injury is the same injury Claimant reported to Dr. Lesnak as occurring in October 2020.

21. At hearing, Claimant testified that both Dr. Lesnak and Dr. Bazaz verbally told him that he had a spinal injury as a result of the November 12, 2020 work injury. Dr. Lesnak indicated he was unable to treat Claimant's spine because the treatment was not authorized by Insurer. Claimant testified that he was in a wheelchair for two years following the November 12, 2020 injury, and that he was provided a brace for his knee. He indicated that except for a brief period where he attempted to return to Employer, he has not been able to obtain work.

22. Claimant testified that Dr. Lesnak was the last physician he saw in Colorado for his November 12, 2020 injury, and he was not able to complete treatment with him. Claimant indicated Dr. Lesnak told him he would not be able to work as a driver due to the injury to his back, and that he could not perform a job where he was constantly standing because of his knee. He also indicated Dr. Lesnak informed him he could work with restrictions, including sitting for 30 minutes every two to three hours. Claimant testified that at his last visit with Dr. Lesnak, he indicated Claimant's leg had been affected by 15%, and that he was surprised to see a 2% impairment rating.

23. Sometime between March 10, 2022 and May 16, 2022, Claimant moved to PT[Redacted] where he sought treatment from new providers, including Dr. Tse Wong, and Dr. Ahmoud, both of whom were orthopedists. (Ex. 24). Claimant had another lumbar spine MRI which Claimant testified the same as his previous lumbar MRI. (The ALJ infers that the MRI Claimant referenced was the undated lumbar MRI taken in PT[Redacted], and submitted as Exhibit 21). Claimant testified he also saw a family doctor, who recommended spinal injections. Claimant testified that the physician in PT[Redacted] informed him that if he did not improve, he would require spinal surgery, but that he was advised that an operation could paralyze him. Claimant was then referred to "Workforce" in PT[Redacted], for training that would help him get a job working on a computer, but he was not able to complete the training because he left PT[Redacted].

24. Claimant then moved to [Redacted, hereinafter PM], where he saw another physician, who recommended a spine specialist and a pain management clinic. Claimant then moved to [Redacted, hereinafter LK], where he now resides. Claimant indicated that he was unable to receive pain management treatment because he has no insurance.

25. Claimant testified that he continues to have swelling and pain in his knee and leg, and issues with his spine, which Claimant believes could cause him to be paralyzed.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find

that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REOPENING CLAIM

Claimant seeks to reopen his claim for the purpose of obtaining additional medical benefits and temporary disability benefits, but has not articulated a statutory basis for reopening. The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. The party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012). An otherwise final award of benefits may be reopened under § 8-43-303, C.R.S., which provides, in relevant part:

> At any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition ….

Claimant's testimony demonstrates that he disagrees with Dr. Lesnak's impairment rating, lack of work restrictions, his opinion that Claimant does not require additional care for his knee, and his opinion that Claimant did not sustain a back injury on

November 12, 2020. Claimant's testimony that Dr. Lesnak informed him he had a spinal injury, and required additional care is not reflected in Dr. Lesnak's medical records. While Claimant's testimony that he continues to experience pain in his knee and lower back are credible, no credible evidence was presented to indicate that Claimant's lower back condition is causally related to his November 12, 2020 injury. Moreover, Claimant has not established that the physical condition of his left knee has changed since being placed at MMI. Claimant has not established that his claim should be reopened for any of the bases set forth in § 8-43-303, and no credible evidence was admitted upon which a finding that these factors exist could be reasonably based.

In substance, Claimant's claim seeks to challenge Dr. Lesnak's determination that he was at MMI on January 10, 2022, for his November 12, 2020 work-related left knee injury. However, the ALJ lacks authority to resolve that issue because Claimant did not seek a DIME and did not timely contest his MMI and impairment determinations. Under § 8-42-107 (8)(b)(I), an ATP makes the initial determination as to whether a Claimant has reached MMI. If a party disputes the ATP's MMI determination, the party may request an division independent medical examination ("DIME") in accordance with § 8-42-107.2, C.R.S., to resolve that dispute. Section 8-42-107.2 (2)(a)(I)(A), provides that when a claimant initiates an MMI dispute, the time for selection of a DIME commences with the date of mailing of an FAL that includes an impairment rating. Section 8-42-107.2 (2)(b) provides that the party seeking an IME to dispute an ATP's determination must provide written notice and propose candidates to perform the IME within thirty days after the date of mailing of the FAL. If no notice is submitted within 30 days, the "authorized treating physician's findings and determinations shall be binding on all parties and on the division." *Id*. "A DIME is a prerequisite to any hearing concerning the validity of an authorized treating physician's finding of MMI, and, absent such a DIME, an ALJ lacks jurisdiction to resolve a dispute concerning that determination." *Town of Ignacio v. Indus. Claim Appeals Office*, 70 P.3d 513, 515 (Colo. App. 2002), *citing Story v. Indus. Claim Appeals Office*, 910 P.2d 80, 82 (Colo. App. 1995).

Respondent mailed its FAL on March 29, 2022. To challenge the FAL and the finding of MMI, Claimant was obligated to request a DIME on or before April 29, 2020. No evidence was admitted indicating that Claimant requested a DIME within 30 days of the mailing of the FAL or thereafter. Consequently, pursuant to § 8-42-107.2 (2)(b), C.R.S., Dr. Lesnak's MMI determination is binding on the parties, and the ALJ lacks authority to resolve any dispute concerning that determination. The ALJ finds that Claimant has failed to establish by a preponderance of the evidence grounds for reopening his claim.

TEMPORARY DISABILITY BENEFITS AND MEDICAL BENEFITS

Because Claimant has failed to establish grounds for reopening his claim, Claimant's claim for temporary disability benefits and medical benefits is denied and dismissed. The ALJ makes no conclusions as to whether Claimant requires additional treatment for alleged spinal injuries or whether any such treatment is causally related to any other alleged industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his November 12, 2020 worker's compensation claim is denied and dismissed.

2. Claimant's request for temporary disability benefits and additional medical benefits related to his November 12, 2020 worker's compensation claim is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 21, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-147-151-004

PROCEDURAL HISTORY

On July 19, 2022 Respondent filed an Application for Hearing on issues which included overcoming the DIME physician's opinions by clear and convincing evidence, causation, failure to comply with modified job offer and unauthorized medical care, as well as offsets, overpayment and credits.

Claimant filed a Response to Application for Hearing on August 18, 2022 listing the issues of medical benefits that were authorized, reasonable and necessary, temporary total and temporary partial disability benefits, and defense of the DIME physician's opinion and defense to failure to comply with modified job offer.

The parties submitted the Stipulation of Facts on March 29, 2023. The Stipulation of Facts are accepted and approved. The Stipulation of Facts are the official transcript for the November 15, 2022 hearing.

On April 6, 2023 this ALJ issued Findings of Fact, Conclusions of Law and Order, which specified that Respondents were ordered to pay temporary disability benefits from March 29, 2021 through July 8, 2021. This ALJ stated as follows: Respondents shall provide Claimant an accounting of the wages paid to Claimant and the exact dates paid. Should the parties be unable to calculate the amount, the parties may provide the information within 10 days of this order and this ALJ may issue a Supplemental Order.

Respondents' filed an Uncontested Motion for Extension of Time to Complete Exchange of Additional Wage Records and/or to Request Supplemental Order Re Retro TTD/TPD. This motion was granted on April 21, 2023.

Respondents filed a Request for Supplemental Order and Submission of the Additional Wage Information on May 8, 2023. The motion was accompanied by wage records previously admitted as Exhibit P and not the records requested by this ALJ in order to issue a supplemental order. An order was issued by ALJ Peter J. Cannici on May 24, 2023 granting the motion. However, Judge Cannici's order was not brought to the attention of this ALJ.

Claimant's Petition to Review filed on April 26, 2023 and a Briefing Scheduled was issued by the OAC on April 28, 2023. As no transcript was available, the official transcript of the hearing is the Stipulation file by the parties. Claimant failed to file a Brief in Support of the Petition to Review. Respondents filed a Brief in Opposition of the Petition to Review on

This Supplemental Order is issued pursuant to the above order and the petition to review.

ISSUES

I. Whether Respondent proved by clear and convincing evidence that the Division of Workers' Compensation Independent Medical Examination (DIME) physician, Dr. Ranee Shenoi, was incorrect in her findings of causation, maximum medical improvement (MMI), and permanent partial impairment.

II. What were Claimant's permanent partial impairments related to the work injury, if any.

III. Whether Claimant has shown by a preponderance of the evidence that she sustained a loss of wages from March 29, 2021 through MMI.

IV. Whether Respondent has shown by a preponderance of the evidence that Claimant was responsible for her wage loss and Respondent entitled to recoup an overpayment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally:

1. Claimant worked for Employer as a bus driver since approximately 2018. As part of her job, she conducted a pre-trip inspections of the bus. She had to open the hood of the bus, check oil and everything under the hood to make sure it was in working order. She had to do a break test, check windows and seats, check the First Aid kits, the tires, bolts, lights, dings or damage to the bus. The pre-trip inspection allotted time was 12 minutes but sometimes it took more time to complete it. Then she would be ready to proceed with her route. She would pick up elementary, middle school and high school children on her route. The preschoolers had paraprofessionals sometimes ride with them during the noon time. She never really had any problems with the kids, and she did not normally have do much lifting other than the heavy bus hood. The job required her to lift 50 lbs. minimum to qualify for the job. Claimant did not have any problems doing her day to day activities related to the job before her accident. She stated that she liked the summers off because it gave her time to recoup and recharge.

2. On a snowy day, on November 11, 2019, she slipped on ice when stepping up onto a curb. She had a bag in her left hand and a purse in her other hand. She slipped in a split with each leg going opposite ways. Another coworker went to grab her on her way down. She fell onto her big bag and her left leg, hitting the ground, but not all of her body fell to the ground. She did not specifically hit her head or her shoulder. One of her hands did hit the ground. She jarred her body but she did finish her bus route. She reported it to her supervisor and was seen by Dr. Matus on the date of her accident.

3. Claimant stated that she had no prior problems or injuries prior to the November 11, 2019 event. This ALJ does not find this particularly credible since Claimant injured her left lower extremity, specifically had a bone spur in her left heel in 2000,

including a surgery to her left heel,[1] and had a neck whiplash injury in the 1980s, as documented in the medical records.

B. <u>Medical records</u>:

4. Claimant was evaluated by Dr. Brenden Matus at WorkWell on March 10, 2020.[2] Dr. Matus noted the patient was feeling a bit better. She had a flare with a particular stretch. Claimant had pain present in the mid-to-low back and left foot. Her pain rating was 7/10. She had "upper back neck tension and paresthesias in the right ulnar nerve distribution since her last massage." Dr. Matus stated he would monitor this problem. He further stated that if she continued to have left foot pain, he would order an MRI of the left foot and ankle as well as refer her to Dr. Myers.

5. On May 15, 2020 Claimant was evaluated by Dr. Bruce Cazden at WorkWell. He noted the mechanism of injury of November 11, 2019 when Claimant slipped on ice while stepping up on a curb with her left leg. She reported right mid to low back pain from slipping and left foot and ankle pain. He specifically noted that "[S]he has new symptoms of neck pain with numbness and tingling in both upper extremities. It does not appear that this is related to her work comp claim." He did not diagnose the neck condition as work related.

6. An MRI[3] of the cervical spine from July 14, 2020 showed degenerative disc and joint changes with mild dural sac indentation and multilevel bilateral foraminal narrowing.

7. Samuel Chan, M.D. evaluated Claimant on July 24, 2020. He took a history consistent with that described by Claimant and other providers. He specifically noted that claimant had landed on her left foot and continued to have problems with the left foot, low back, interscapular area and cervical spine. Claimant reported that her treatment plan was somewhat interrupted because of the COVID pandemic. He documented that Dr. Myers was treating her for the left foot pain and recommended she obtain HOKA shoes. He reviewed all of Dr. Matus' records. He reviewed both the x-rays of the foot and the MRI of the ankle and foot. They showed moderate anterior talofibular and mild deltoid ligament sprains as well as suspected hammertoe deformities but were otherwise normal. Dr. Chan documented that Dr. Matus continued to cite to Claimant's ongoing cervical spine complaints. On exam he noted that Claimant was tender to palpation of right greater and lesser occipital nerve insertion areas. There was also tenderness to palpation of right trapezius, levator scapulae, and splenius capitis muscles, with active trigger points noted. Tenderness to the bilateral AC joints but otherwise a normal cervical spine exam. He noted negative lumbar spine exam but tenderness to palpation of the calcaneus, sinus tarsi and downgoing toes bilaterally. He diagnosed bilateral occipital neuralgia, migraine

---

[1] See Dr. McCranie's, Dr. Chan's and Dr. Shenoi's past medical history and surgery sections on Exhibit F, bate 031; Exh. M, bate 90, and Exh. N. bate 99.

[2] Records between November 11, 2019 and March 10, 2020, where not in evidence, only other providers' summaries of the visits, including physical therapy and massage therapy visits. This ALJ chose to rely on the descriptions from those records.

[3] Description taken from multiple medical records, including Dr. Ogin's March 11, 2021 report, as the original report was not in evidence.

syndrome and myalgia. He recommended trigger point injections for the occipital neuralgia, which he proceeded to perform.

8. The initial visit with Dr. Barry Ogin was on November 9, 2020 when Dr. Ogin took a fairly long history. Claimant was referred to Dr. Ogin by Dr. Matus with ongoing complaints of neck and cervicogenic headaches. He noted that Claimant had a comprehensive course of conservative care including physical therapy, massage therapy, dry needling and trigger point injections, and medications. Claimant reported that her low back pain only gave her occasional problems. He noted that Claimant's chief complaint was her neck, including aching and stiffness centrally but worse on the left hand than on the right side. She reported daily headaches and radiation into her shoulders and upper back centrally. Claimant had full shoulder range of motion without pain, scapular retraction and protraction was symmetric, she had full active range of motion of the cervical spine including with flexion, extension, right and left rotation, right and left lateral flexion. She was not reporting any numbness and tingling at that time. Dr. Ogin recommended medial branch block to the cervical spine given the MRI indications and, per the guidelines p. 28, physical examination findings consistent with facet origin pain, at least 3 months of pain, unresponsive to conservative care, including manual therapy, and has a positive psychosocial screen without aberrant concerns.

9. Dr. Ogin also documented that on December 10, 2020 she had a 100% relief following a cervical facet injection at the C2-5 bilateral MBB.

10. Dr. Ogin's report noted responses for December 18, 2020 that Claimant was three days post medial branch block (MMB) and her neck and headaches were feeling better with a good diagnostic response though the pain was gradually returning. She also complained of tingling and numbness down her left arm and into her left fourth and fifth fingers of the left hand.

11. On March 11, 2021 Dr. Ogin took a history that Claimant had increasing pain along her parascapular region, with severe pain in her right upper shoulder, down her medial arm to her hand, along the ulnar distribution. She also complained of pain in her sternum. She denied any new injuries other that the fact that she had returned to driving and had to hold out her arms to hold the steering wheel. His diagnosis and assessment was sprain of the ligaments of the cervical spine, including cervical facet joint syndrome, cervical pain, myalgia, cervical stenosis and cervical disc disorder with radiculopathy of mid-cervical region. He noted that the upper neck and headaches had responded to treatment but that, following performing an EMG which revealed a right C8-T1 radiculopathy. After a re-review of the MRI, the multi-level degenerative disc with spinal stenosis was more prevalent in the C5-C7. With that in mind, he recommended a C7-T1 epidural steroid injection.

12. On April 11, 2021, Dr. Paul Ogden responded to a request to approve a modified job offer, which included assembling and bagging hoagie sandwiches, assisting administrative personnel, and watching videos. Dr. Ogden added that "[B]ased on the restrictions of March 29, 2021 of avoiding reaching out or overhead" as well as allowing "position changes sit/stand/walk every 20-30 minutes" that Claimant was able to perform the tasks listed.

13. Respondent scheduled Claimant for an Independent Medical Evaluation (IME) with Dr. Kathy McCranie which took place on June 15, 2021. She took a history, which included the event of November 11, 2019 as well as an incident where she was cleaning out a closet and had an immediate onset of symptoms into her upper extremities and neck. She noted Claimant's recall of her medical treatment including that she did not have any benefit from the trigger point injections but had 100% immediate relief from the epidural steroid injections, though they lasted for a fairly short time before symptoms started to return. She also reviewed the medical records. Dr. McCranie opined that Claimant sustained both a lumbar strain and a strain of the foot and ankle, both of which resolved. She opined that Claimant's continuing complaints involving the cervical spine and the right greater than left upper extremity paresthesias, which were not documented until March 10, 2020, were not work related conditions. Lastly, Dr. McCranie opined that the right shoulder labral tear was not related to the November 11, 2019, injury, as an acute labral tear would cause immediate, severe pain in the shoulder and Claimant did not report shoulder pain for approximately seven months post-accident. Dr. McCranie further stated that, while the treatment for the cervical spine and shoulder were reasonably necessary, they were not causally related to the November 11, 2019 work injury.

14. Dr. McCranie stated as follows:

> It is my impression that the cervical spine is not accident related, making an impairment rating non-applicable. If, however, this condition is deemed to be accident related for administrative purposes, an impairment rating was performed as it is my opinion that she is at MMI for the cervical spine regardless of causality. For degenerative changes in the cervical spine, she would receive a 6% impairment with a 4% impairment for range of motion as her sensory examination was normal. Motor examination revealed some weakness in the ulnar distribution, more likely related to findings of peripheral neuropathy. If the cervical spine is deemed to be accident related, impairment would be 10% whole person. As noted previously, it is my opinion, however, that this impairment is not accident related. Regarding the right shoulder, it is my opinion that this impairment is not accident related. She is currently involved in ongoing workup of the right shoulder and if this is deemed accident related, this is not yet at MMI. However, it is my opinion, this should be treated outside of the worker's compensation arena for the reasons outlined above.

15. On June 21, 2021 Dr. Matus issued a report which included a description of Claimant's treatment to date. He noted his diagnosis as a work related fall injury with a strain of the low back and other muscle spasms, and strain of the muscles and tendons of the ankle and foot and the objective findings of those injuries were consistent with the history and mechanism of injury.[4] His physical exam revealed full range of motion of the cervical spine though Claimant reported tenderness on palpation of the right paraspinous muscles and trapezius muscles on the right, but no midline cervical spine tenderness. Back pain was causing minimal to some difficulty in daily life and left ankle had very minimal pain. Dr. Matus provided restrictions of limited use of the right upper extremity,

[4] As found, the section in Dr. Matus' June 21, 2021 and July 9, 2021 reports under "Case Summary" (Exh. H, bates 054-055; Exh. I, bate 065-066) are summaries of other providers' diagnosis, opinions and recommendations for treatment and were not necessarily adopted by Dr. Matus.

avoid repetitive reaching out or overhead; limited lift, push and pull of 5 pounds maximum, and should be allowed to change positions regularly between sit/stand/walk at least every 20-30 minutes; and referred her to Dr. Primack for a final evaluation and impairment rating.[5]

16. Claimant was placed at maximum medical improvement on July 9, 2021 by Dr. Matus without restrictions or impairment. Dr. Matus agreed with the IME examiner, Dr. McCranie that the cervical spine, headaches and shoulder conditions were not work related injuries and should be treated by Claimant's PCP, if Claimant continued to have ongoing complaints regarding those problems. He did not provide a diagnosis for the neck, nor did he show in his report that he performed an impairment rating for the related low back or left lower extremity. Yet he continued to document that back pain was causing minimal to some difficulty in daily life and left ankle had very minimal pain. Dr. Matus stated "[W]e have agreed to target Maximum medical improvement status, Injury related symptoms resolved, ongoing non related symptoms." As found, Dr. Matus placed Claimant at MMI as of July 9, 2021 noting that only the low back and left lower extremity injuries were related to the November 11, 2019 work injury. As further found, he did not perform an impairment rating with regard to either condition but considered them resolved.

17. On July 22, 2021 Respondent filed a Final Admission of Liability. Claimant objected and requested a Division Independent Medical Evaluation (DIME). The FAL admitted to an average weekly wage of $622.50.

18. Dr. Ranee Shenoi was selected as the DIME physician. She evaluated Claimant on October 12, 2021 and issued her report on October 12, 2022. She opined that Claimant reached MMI on July 9, 2021 and had a 7% whole person impairment related to the cervical spine, including 4% for specific disorder of the spine (Table 53 IIB), a 2% for loss of range of motion, and 1% for neurologic system (loss of strength). Dr. Shenoi stated that she was asked to evaluate the cervical, thoracic and lumbar spine as well as the left foot. She stated "[A]s the DIME Examiner, I will address MMI and impairment. I will not address causation."

19. Dr. Shenoi stated that the DIME application did not request she address the bilateral shoulder problems and she believed that the thoracic spine issues were coming directly from the shoulder pathology. Based on the *AMA Guides* she opined that the left foot injury provided a 1.25% impairment of the lower extremity which converted to 0% whole person impairment of the foot based on the peroneal nerve injury for altered sensation.

20. Dr. Shenoi asked Claimant what complaints were related to the work injury and she related sleep problems, pain in her right shoulder, arm, elbow and hand, including burning in the right axillary line and that her hand would get cold. She reported multiple neck complaints, going across her shoulders, which radiated into her chest and sternum as well as the right upper extremity. She reported headaches that were only intermittent. She also reported low back and left foot pain as well as ringing in her ears. As found,

[5] The evaluation with Dr. Primack did not take place, according to the medical records and the parties statements at hearing.

Dr. Shenoi only provided an impairment rating for the neck and foot, without providing a causation analysis of the body parts for which she was providing impairment ratings. Further, she did not rate the lumbar spine or go through the process to assess the lumbar spine range of motion.

21. Dr. McCranie issued a supplemental report on November 5, 2021. Dr. McCranie specifically commented regarding the DIME physician's report. She noted that Dr. Shenoi had specifically erred by failing to perform a causation analysis. She noted as follows:

> A causation analysis is necessary in order to determine if the body part to be rated is applicable for a work-related impairment rating. By stating that she made no causation analysis, Dr. Shenoi is indicating that she is not making an opinion as to whether the rating provided is applicable to the work injury. The rating itself was otherwise technically correct. However, without any causation analysis, there is no indication that the impairment rating is applicable to the work injury of November 11, 2019. According to Desk Aid 11 impairment rating tips number 7, division independent medical examiner may declare that a condition is not work related. This may occur despite the fact the payer has accepted a body part or a diagnosis as part of the claim. In [Claimant]'s case, treatment has occurred and MMI has been declared by an authorized provider. Considering the late onset of [Claimant]'s cervical symptoms, and a new non-accident-related event that caused the onset of these symptoms in April of 2020, it was essential that Dr. Shenoi perform a causation analysis in order to opine as to the relatedness of the cervical impairment.

C. <u>Dr. McCranie's Deposition:</u>

22. Dr. McCranie testified by deposition on June 1, 2022 as a board certified physiatrist and pain medicine specialist, with a Level II accreditation. She noted that she continued to see both private patients, including at Concentra twice a week, and patients for medicolegal evaluations with approximately 30 years of experience. Dr. McCranie indicated she was familiar with the *AMA Guides to the Evaluation of Permanent Impairment,* Third Edition (*Revised*), WCRP and the Impairment Rating Tips of the Colorado Division of Workers Compensation.[6] She specifically noted that Rule 11-3(K) required that each DIME physician make "all relevant findings regarding MMI, permanent impairment, and apportionment of impairment, unless otherwise ordered by an ALJ." Dr. McCranie stated that a causation analysis was an integral part of conducting a determination of permanent impairment. She specified that physician were required to comply with the Rules, the Division materials and Level II accreditation coursework.

23. Dr. McCranie testified that following the review of the medical records and consideration of the history provided by Claimant, March 10, 2020 was the first medically documented problem, including some tension in her neck and some right upper extremity paresthesias. The first documented pain in her cervical spine/neck was on May 15, 2020. Dr. McCranie explained that in order to link a cervical injury to the original date of injury, there needed to be a temporal relationship between the onset of symptoms and the initial

[6] Division's Desk Aid No. 11, Impairment Rating Tips, Division of Workers Compensation Rules of Procedure.

accident, which was not present in this case. What was significant here is that Claimant reported to Dr. McCranie that she was cleaning out her closet in April of 2020, and she was reaching, lifting and moving some hair products, towels and sheets from her closet, and had an acute onset of neck pain and right shoulder pain at the point that brought on a lot of these symptoms, which was a more probable cause of Claimant's neck and shoulder pain.

24. Dr. McCranie specifically noted that Dr. Shenoi was aware that the medical records indicated Claimant had not reported any problems until the March 10, 2020 date when she reported tension in her upper back and neck, that Dr. Shenoi was aware of the "closet" incident, but that Claimant had stated that she had felt a pop in physical therapy as an explanation of when she started to have problems in her neck and upper back. Dr. McCranie explained that it was incorrect to simply rely on a Claimant's claim that any particular injured body part was caused by the injury but it was up to the DIME physician to make and explain the causation analysis. As a DIME physician, it is up to that physician to determine the injuries or body parts that are causally related to the work injury in question and the DIME physician cannot rely on the items check off on the Application for a DIME.

25. Finally, Dr. McCranie opined that Dr. Shenoi committed a clear error in addressing MMI and impairment and declining to address causation of the particular body parts, which rendered her opinions on impairment clearly incorrect under the *AMA Guides*, Third Edition, and the Division training material. Dr. McCranie stated that based on the Division's Rules of Procedures specifically dealing with DIMEs and Level II accreditation, the Division's Impairment Ratings Tips, the training for recertification, the requirement that physicians utilize the methodology in the *AMA Guides*, Third Edition, it is absolutely incumbent on a DIME physician to do a causation analysis.[7] Dr. McCranie also suggested that Dr. Shenoi relied on the fact that the ATPs had provided treatment which was paid for by Respondents. This ALJ agrees with Dr. McCranie's inference that in relying on the fact that Respondent paid for the treatment for the cervical spine that it justifies addressing impairment to that body part as related to the November 11, 2019 work injury, which is clearly incorrect.

26. Dr. McCranie cited to the Impairment Rating Tips. The Section on DIME Panel Physician Notes, under Section 7, the tips emphasize as follows:

> Declaring Condition is Not Related to Injury: Division Independent Medical Examiners may declare a condition is not work-related. This may occur despite the fact a payer has accepted a body part or diagnosis as part of the claim, treatment has occurred, and MMI has been declared by the authorized provider. If this situation arises, an impairment rating must be provided in the report or as an addendum to the DIME report. This information will often be used by the parties for further negotiations and/or settlement of the claim. However, only the work-related impairment ratings are to be recorded on the DIME Examiner's Summary Sheet.

[7] At hearing Dr. McCranie explained that the *AMA Guides to the Evaluation of Disease and Injury Causation* explains a somewhat different and more expansive methodology of causation determinations. However, This ALJ will only rely on the law and rules applicable in this matter.

D. Dr. McCranie's Hearing Testimony:

27. Dr. McCranie's testimony at hearing was consistent with her testimony during the deposition and her reports. She opined that, considering the degenerative disc disease in the spine as verified by the MRI report of the cervical spine and the evidence of acute injury sometime in April or May 2020, when she reported excruciating pain, the incident of the closet was the more likely cause of the neck injury. Further, Dr. McCranie did explain, that sometimes, ATPs take time to make a final causation analysis, which Dr. Matus provided in his MMI report. She opined that the fact that Claimant was sent to multiple providers, including Drs. Chan, Ogin, and Castro, for the neck injuries, was not a *de facto* determination of causation.

28. Dr. McCranie opined that Dr. Shenoi's failure to specifically address causation in her DIME report was clearly incorrect. She explained that, based upon her understanding of the Division of Worker's Compensation Rating Tips, the *AMA Guides to the Evaluation of Permanent Impairment*, Third Ed. (*Revised*), and other medical publications that the failure to perform or provide a causation analysis to support her cervical impairment rating rendered her opinion on medical impairment clearly incorrect because a DIME physician must do a causation analysis for every body part that is rated and that it is insufficient and contrary to the impairment rating tips simply because the claimant had received treatment for the body part to provide a rating. Dr. McCranie also explained that the causation analysis required both an explanation of the temporal relationship of when the symptoms manifested as well as an analysis of the mechanism of injury. Dr. McCranie opined that without this analysis regarding the initial causation, the entire rating process was defective.

E. Risk Manager's Testimony:

29. The Risk Manager for Employer (JO) testified at hearing in this matter. She stated that she handled the workers' compensation claims until the excess policy carrier was activated by large expenses. As the Risk Manager she managed, monitored, reviewed, and made decisions with regard to workers' compensation claims and liability. She was generally involved from day one of a claim. She was the one that issued the First Reports of Injury (FROI) and made sure she was getting the M-164 forms to determine a worker's work status. She commented that she stayed involved in a case until the end of the claim.

30. The Risk Manager explained that Employer saw claims from the perspective of getting workers back to work, so they may authorize medical care that may not necessarily be related to the particular work accident. Employer would frequently request that providers conduct diagnostic testing early on in the case instead of delaying the process, in the hope that conservative care would work and the worker would get back to work sooner.

31. [Redacted, hereinafter MJ] was involved in the case, however, a younger adjuster through the third party administrator, who may not have felt confident enough to question the ATP's causation analysis, was handling the day to day issues. MJ[Redacted] testified she might have handled this case differently but she had a wealth

of approximately 30 years' experience. It was clear that the adjuster continued to authorize care despite a lack of a good causation analysis, until she, as the Employer's Risk Manager, requested the IME with Dr. McCranie.

32. The Risk Manager was very familiar with the modified job offers made to Claimant and was involved in the process. The February 9, 2021 offer was for Claimant to perform some office work and watch safety videos (approximately 50 of them) in order to keep Claimant busy and engaged in work activities. Dr. Matus authorized this modified job offer on the same day and Employer sent the offer of modified work for Claimant to start on February 15, 2021. On March 28, 2021 Claimant advised her supervisor that she had completed the safety videos so modified duty was terminated.

33. Based on the FAL of July 22, 2021, Claimant was originally paid regular salary through December 12, 2019 (pursuant to Sec. 8-42-124, C.R.S.) at which time the Third Party Administrator paid TTD benefits beginning December 13, 2019 through January 27, 2021. Then Claimant was paid temporary partial disability (TPD) on January 28 for one day and TTD resumed as of February 1, 2021 through February 15, 2021. As of February 18, 2021[8] Claimant was paid TPD until March 28, 2021.

34. Then MJ[Redacted] worked with Nutrition Services because they were frequently understaffed. At that time they were making sandwiches for the lunch truck that was provided to the children and community. They were to have Claimant sitting at a conference room table, where other workers would bring the ingredients and Claimant could make the sandwiches.

35. MJ[Redacted] stated that Claimant never went back and that Dr. Matus had said that the job was within her restrictions. The Risk Manager stated that Claimant was not placed back on temporary total disability because Claimant was the one to violate the April 9, 2021 Rule 6 offer of modified employment and that the job was still available. Then school ended on May 27, 2021, and because the bus drivers were paid on a twelve month cycle despite summer time off, they restarted to pay regular wages, despite Claimant not working.

36. MJ[Redacted] stated that while the pay check periods showed payment at the end of the month, the period of payment was not correct because Employer's pay period was really from the middle of the month through the middle of the following month. This ALJ infers from this testimony that, for example, the March 31, 2021 pay check actually paid from February 15 through March 14, 2021. This was confirmed by Claimant.

37. MJ[Redacted] was on vacation through April 26, 2021 and prepared a letter to Dr. Matus, which was sent on May 13, 2021 with a job description of assembling and bagging hoagie sandwiches. On May 14, 2021 Dr. Matus answered stating that the prior restrictions provided by Dr. Ogden were still applicable, as long as the job did not require any work lifting greater than 10 lbs. and that Claimant be able to keep her arm close to her side. As found, this is a new restriction as of May 14, 2021.

---

[8] There was no explanation as to why Claimant was not paid for February 16 and 17, 2021, but it does show on the time log that she worked 6 hours a day for both days and it is to be assumed that those hours were paid by Employer.

38. Respondent argued that Employer should be entitled to a reimbursement for overpayment to Employer of the 24 hours paid to Claimant at the rate of $20.75 per hour for a total of $498.00, if Claimant was entitled to temporary disability benefits. MJ[Redacted] stated that this was for the period of April 27, 2021 through April 30, 2021 paid by Employer.

39. MJ[Redacted] testified that Claimant returned to work as of March 29, 2021 and temporary partial disability benefits stopped per the Final Admission of Liability (FAL) dated July 22, 2021.

40. The statement of earnings showed that in March[9] 2021 Claimant was paid $2,033.49,[10] in April 2021 she was paid $1,523.67, in May she was not paid any wages, in June she was paid $814.44 and in July she was paid $814.44 as well.

41. The hours worked print out showed Claimant working from March 29, 2021 through April 9 2021. This is consistent with what the Risk Manager testified, with the exception that it did not seem that Claimant worked her full hours all days following March 29, 2021. In fact, there were some periods that were listed as "Leave Without Pay."

F. <u>Other Evidence:</u>

42. On May 21, 2021 Claimant secured the signature of the supervisor approving the note stating that Claimant had showed up for work on April 26, 2021 but spoke with both the Nutrition Services Manager (supervisor) and her assistant (JC), that she was unable to make the sandwiches because of the repetitive nature of the job. The supervisor confirmed that she took down Claimant's phone number and advised Claimant to go home. The Manager further confirmed that she would call Claimant "when she found out what they should do." Claimant's testimony in this matter is found credible and supported by the supervisor's signature on the note.

43. The note further stated that Claimant worked on April 22, 2021[11] and could punch the clock at Nutrition Services but the "[Redacted, hereinafter OE]" system would not take her badge number. The time clock report at Exhibit Q, bate 134 seems to indicate that Claimant did, in fact, work on April 22 as it reports "5 Trans_Bus Cleaning" and provides a rate of pay. It is also clear from this print out that Claimant's work was not logged into this system after April 22, 2021. However, Claimant reported working May 24, 25, and 27, 2021 and on June 1, 2021 she received instructions from the Risk Manager to enter May 28, 2021 as work injury leave.[12] Therefore the hourly payroll print

---

[9] Pay periods were calculated on a monthly bases from the first to the last day of any given month and paid generally on the last day of the month.

[10] This ALJ was unable to reach the same calculation by Employer, at least with the March 31, 2021 Employee Statement of Earnings. Claimant's rate of pay was $20.75. The accrual wages showed 108 hours were paid at $1,960.88. However, 108 hours multiplied by $20.75 equals $2,241.00 not $1,960.88. Even if we deduct the leave without pay of 11.50 hours from the 108 hours, that would total 96.5 hours times $20.75 for $2,002.37. There may be something this ALJ is not aware of and certainly was not clarified during MJ's[Redacted] testimony or Claimant's testimony.

[11] The note showed the year 2020 but given the time line of work and when work was offered, this ALJ infers that the correct year was 2021.

[12] Exh. 8.

out is clearly erroneous. Also, no payroll was paid in May and the June payroll earnings statement does not include any hours worked.[13]

44. A second note dated May 24, 2021 stated that on April 23, 2021 Claimant showed up for her work shift but was in pain, feeling she needed to see her doctor, so she would not be working. The front desk receptionist agreed and noted that she would let "them" know.

45. The third note dated May 27, 2021 stated Claimant worked hours for May 24, 25, and 27, 2021. It noted Claimant was working without breaks, took May 26, 2021 off as a personal day, and on May 28, 2021, pursuant to the Assistant, JC, that she should not go into work. Claimant stated this document was signed by another supervisor (JCS-D). These dates and times were also sent to the Risk Manager, who confirmed that May 28, 2021 should be entered as work injury leave.[14]

G. <u>Claimant's Testimony:</u>

46. Claimant testified that she continued to suffer from the effects of the injury at the time of the hearing. She stated that the treatment she received, including physical therapy, massage therapy, and the different injections helped her, but when she returned to her job of injury, she continued to have the symptoms. She also stated that treatment was delayed during some period because of the COVID pandemic and most of 2020 she was off work. Treatment was also delayed because she was struck with pneumonia and was out for multiple weeks without the ability to attend any medical appointments.

47. Claimant stated that she was initially seen at the original WorkWell for her physical therapy but because of how busy they were, she changed over to get PT at the Parker WorkWell. Claimant testified that they treated her neck symptoms in PT from the beginning as well.

48. Claimant testified that she reported the neck complaints from the beginning of her injury to her providers. As found, this was not documented in the medical records provided as evidence in the matter, though there was a dearth of records from the time period of November 11, 2019 through March 9, 2020.

49. Claimant stated that when she returned to work on January 28, 2021, she spoke with the coordinator about having problems driving the bus. She was taken back off work and WC started paying her again. Eventually she receiving the modified duty offer.

50. The offer went to Claimant on April 9, 2021 to start as of April 15, 2021. Claimant testified she started with Nutrition Services on April 22, 2021. Claimant reported that she had concerns that the work was outside her restrictions and was too repetitive. On the following day, April 23, 2021 Claimant showed up to work but left work that day to go to the doctor. On April 26, 2021 she advised her supervisor that the work was violating

[13] Exh. P, bates 111-112.
[14] Exh. 8.

her restrictions. Nutrition Services did not know what to do so they sent her home. As found, Claimant is credible in this matter.

51. When she went to Nutrition Services she would have to reach for the items she needed, which was causing increased symptoms and problems for her. At one point she was delegated to just opening bags, and she had to open over two thousand baggies in one day and was in so much pain, she could not tolerate that work. She testified that she called the Risk Manager and she called Dr. Ogden without response. Claimant was frustrated by the fact that she could not clock in and out of Nutrition Services because officially, she was not one of their employees. Claimant testified that she went to WorkWell and was seen Dr. Ogden's PA on April 23, 2021.

52. She testified that she went to work on April 26, 2021. This was confirmed by signature of the supervisor. She reported that the work was outside of her restrictions. She stated that she never told the Manager or the supervisor that she could not do any of the work, only that she could not do the baggies all day, opening them. Nutrition Services did not know what to do with her. She was willing to do something other than opening the hoagies bags. Dr. Matus never took her off work completely but provided restrictions.

53. Claimant was then sent home by the Nutrition Services supervisor and was told by the supervisor that she would call Claimant when she knew something. Claimant testified that she never received any calls after April 26, 2021 from Nutrition Services, HR or from the Risk Manager. She stated that it really was not her choice to leave. She had, at one point been making cookies from boxes of frozen ones and put them on trays to bake them, something she could do. It was really not her choice to leave but the work of opening baggies repetitively, was too much.

54. She stated that she prepared, typed and took the note dated May 21, 2023 to the Nutrition Services Manager and had her sign it to confirm the statements. Claimant did confirm she did not work in either June or July, as school was out. She did work at the end of May, 2021, after which she was again sent home. Claimant stated that she had worked some days in April and in May, 2021 but did not recall which ones exactly, other than the ones mentioned on the notes that the supervisors signed.

H. <u>Ultimate Findings:</u>

55. As found, Respondents have shown by clear and convincing evidence that Dr. Shenoi was incorrect in her final assessment of Claimant's impairment for the cervical spine being caused to the work accident. Dr. Shenoi failed to accomplish one of the integral requirement of a DIME physician in that she declined to make causation assessments in this matter. While she issued an impairment rating for the cervical spine and the left lower extremity, this does not equate to a determination of causation. A determination of causation cannot be declined or evaded. It is a requirement established by the Act, case law, the AMA Guides, the WCRP, the Level II accreditation materials as well as the Division's Impairment Rating Tips.

56. As found, the lumbar spine and left lower extremities are causally related to the November 11, 2019 work related injury.

57. As found, Claimant reached MMI with regard to the work related medical conditions on July 9, 2021, as opined by both the ATP, Dr. Matus, and Dr. Shenoi.

58. As found, the cervical spine injury was not causally related to the November 11, 2019 work injury and, despite Dr. McCranie's and Dr. Shenoi's rating of the cervical spine, no benefits are indicated in this matter.

59. However, also as found, all providers who address the condition of the left lower extremity indicated that the left lower extremity injury was causally related. This is persuasive. The ATP provided no rating nor did he take any range of motion measurements as required by the *AMA Guides to the Evaluation of Permanent Impairment*. Dr. McCranie, while she mentions that Claimant had full range of motion testing, she did not provide a worksheets upon which to rely, nor did she address the Claimant's loss of sensation. Therefore, as found, Dr. Shenoi's lower extremity impairment is found to be persuasive in this matter. Claimant is entitled to a 1.25% impairment of the lower extremity related to the peroneal nerve loss of sensation.[15]

60. As found, Claimant was under restrictions from March 29, 2021 through July 8, 2021, after which she was placed at MMI by the ATP. Claimant has shown she was entitled to temporary disability benefits from March 29, 2021 through April 9, 2021 and April 22, 2021through July 8, 2021.

61. As found, Respondents failed to show Claimant was responsible for her wage loss. Dr. Ogden's restrictions were "avoiding reaching out or overhead" as well as allowing "position changes sit/stand/walk every 20-30 minutes." Dr. Matus agreed with these restrictions and added that as long as the job did not require any work lifting greater than 10 lbs. and that Claimant should keep her arm close to her side. Dr. Matus again confirmed these restrictions on June 21, 2021 stating Claimant should "Limit use right upper extremity, avoid repetitive reaching out or overhead. Limit lift, push and pull 5 pounds max. Must be able to change positions regularly between sit/stand/walk, recommend at least every 20-30 minutes."

62. As specifically found, Claimant never received a call between April 26, 2021 through the time she returned to work in May, 2021 due to poor communication between the assigned Manager of Nutrition Services and the Risk Manager or HR. Claimant was found to be credible in this matter. As found she was provided instructions to go home and await a phone call. The Manager of Nutrition Services specifically took down Claimant's phone number down and it was reasonable to assume, if Employer wanted Claimant to return to work that the Manager of Nutrition Services or another of Employer's delegated individual would call Claimant or communicate with her in some manner. This was confirmed in the note signed by the Manager on May 21, 2021. Even the note of May 27, 2021, when Claimant was working, showed that Claimant was not provided the required breaks pursuant to Dr. Ogden's and Dr. Matus' recommendations.

63. As found, Claimant is entitled to temporary disability from March 29, 2021 through April 14, 2021, when Claimant should have started work pursuant to the modified job offer dated April 9, 2021. This ALJ infers that Claimant did not stop working as of March 28, 2021 but April 9, 2021, as shown by the wage records, when she was working

[15] As this is an ankle and foot injury, the scheduled impairment is appropriate.

irregular hours. Claimant showed up for work on April 22, 2021 instead of April 15, 2021. Claimant is not entitled to indemnity benefits from April 15, 2021 through April 21, 2021.

64. As found, Claimant is entitled to temporary disability benefits from April 22, 2021 through July 8, 2021, after which Claimant was placed at MMI without restrictions. Claimant credibly testified that she believed the work was not within her restrictions as she was working without breaks and in a repetitive manner. On April 26, 2021 her supervisor at Nutrition Services sent Claimant home, advising Claimant that the supervisor of Nutrition Services would call her when she found out what to do. At no time was any credible evidence provided that Nutrition Services called Claimant back to report to work. Claimant returned to work on May 24, 2021, and worked the 24th, 25th and 27th, the last day the school was open. Claimant was instructed that she should not go into work on May 28, 2021 by the Nutrition Services assistant supervisor (JC). This was confirmed by another supervisor (JCS-D). He also confirmed that Claimant had no breaks, despite the restrictions imposed by Dr. Ogden for breaks every 20-30 minutes.

65. Claimant earned an AWW of $622.50 or a daily rate of $88.93. Since it is deduced from the evidence that wages were paid from mid-month to mid-month in any particular month, it is inferred that the April 2021 employee statement of earnings incorporated Claimant's earnings from March 16, 2021 through April 15, 2021, a period of 31 days. No credible evidence was provide that Claimant missed any other days other than March 29, 2021 through April 14, 2021 during this period. Claimant should have earned $2,756.83.[16] Claimant earned $1,960.88 for a difference of $795.95. As found, temporary disability benefits for this period are owed in the amount of $530.19.

66. As found, Claimant failed to appear to work on April 15, 2021 until April 22, 2021. This is a 7 day period. According to the May 2021 statement of earnings, wages earned from April 16 through May 15, 2021 (30 day period) were $0.00. Therefore, after deducting the 7 days that Claimant failed to appear to work pursuant to the offer of employment, for the remaining 23 days, Claimant should have earned $2,045.39. As found, Claimant is entitled to temporary disability in the amount of $1,363.59 for this period.

67. According to the June 2021 statement of earnings, wages for May 16, 2021 through June 15, 2021, a 31 day period, were $814.44. Claimant should have earned $2,756.83, minus the actual earnings of $814.44, a difference of $1,942.39. As found Claimant is entitled to temporary disability benefits in the amount of $1,294.93 for this period.

68. According to the July 8, 2021 statement of earnings, wages for June 15, 2021 through July 15, 2021 (30 day period) were also $814.44. Claimant was placed at MMI as of July 9, 2021. Claimant's last day of work was May 28, 2021. Therefore, any wages in this period is presumed to be for wages owed after July 8, 2021. For the period of June 15, 2021 through July 8, 2021, Claimant was owed $1,363.59.

69. Claimant has shown by a preponderance of the evidence that she is owed a total of $4,552.30 in temporary disability benefits.

---

[16] Calculated by multiplying the $88.93

70. Testimony and evidence inconsistent with the above findings are not credible, significantly relevant and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming the DIME Physician's determination of MMI and Impairment

Respondent argues that the DIME physician, Dr. Shenoi, was incorrect in multiple manners with regard to Claimant's MMI status and work related impairment ratings. The party challenging a DIME physician's opinions must prove that the DIME physician's determinations were incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003); *In re Claim of Lopez*, 102721 COWC, 5-118-981 (Colorado Workers' Compensation Decisions, 2021). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the determination is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. See *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 2002). Consequently, when a party challenges the DIME physician's opinion, the Colorado Court of Appeals has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning her opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the *AMA Guides* do not mandate that the DIME physician's opinion is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to reach a particular determine is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008); *In re Claim of Pulliam*, 071221 COWC, 5-078-454-001 (Colorado Workers' Compensation Decisions, 2021). Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden

of proof by clear and convincing evidence to overcome that finding of the DIME physician's true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

The Act requires a DIME physician to comply with the *AMA Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the *AMA Guides.* A determination of MMI requires the DIME physician to asses, as a matter of diagnosis, whether various components of the claimant's medical condition are casually related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). In determining whether the physician's rating is correct, the ALJ must consider whether the physician correctly applied the *AMA Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician correctly applied the *AMA Guides* is a factual issue reserved for the ALJ. *McLane W., Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, *supra*. The question of whether the DIME physician's rating has been overcome is a question of fact for the ALJ to determine, including whether the physician correctly applied the *AMA Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *In re Claim of Lopez*, *supra*. Lastly, where an ALJ finds a claimant's description of her present symptoms credible, this is sufficient to overcome the DIME physician's opinion. *In re Claim of Conger*, 100521 COWC, 4-981-806-001 (Colorado Workers' Compensation Decisions, 2021).

It is clear from the evidence that Dr. Shenoi's true opinion is that, as a DIME physician, she need not address the issue of causality with regard to the different components of Claimant complaints of work related injuries. This is inconsistent with the law as established by the Act, the *AMA Guides*, the WCRP, the Division's teachings under Level II accreditation and the Impairment rating tips. Dr. McCranie is persuasive in this matter that the issue of causality is an integral part of the DIME process as well as the medical process of any physician in the workers' compensation system. She persuasively testified that a failure of a DIME physician to conduct a causation analysis before assigning an impairment rating violates the *AMA Guides* as to causation, multiple DOL

rules of procedure as well as recognized standards among level II physicians for performing impairment ratings.

Dr. McCranie's opinion that Dr. Shenoi's impairment rating is "clearly incorrect" is unrebutted in the medical records or in the hearing testimony. Unlike other situations wherein a Court has to interpret multiple or even conflicting opinions from a DIME; in this case there are no such conflicting opinions with regard to causation. In fact, there are no opinions from Dr. Shenoi on causation because she failed to provide one and specifically stated she declined to do so.

Claimant argues that since Dr. Shenoi provided a diagnosis for the neck, that it is to be assumed that it was related to the November 11, 2019 incident. However, Dr. Shenoi also lists upper extremity paresthesias as well as shoulder pain and did not perform an impairment evaluation on those body parts or explain sufficiently why she did not provide ratings for the shoulder injuries. Claimant also argued that it can be assume that Dr. Shenoi adopted a causation analysis because she was aware from the medical records that Claimant had received extensive authorized medical treatment for her cervical spine under this workers compensation claim. However, as testified to by Dr. McCranie, and as set out the Division's Impairment Rating Tips, Division has made it clear to Level II physicians and DIME physicians that simply because a specific condition is identified on a DIME application and/or simply because medical treatment has been voluntarily provided for a specific body part, causation is not to be assumed.

Here, as found, Dr. Shenoi made the assumption that, since treatment was authorized for the cervical spine, that Respondent was liable and therefore rated the cervical spine. As found, Dr. Shenoi was in error. This is further supported by the fact that she discussed Claimant's shoulder issues. She stated that, since the shoulder was not checked off on the Application for a DIME, that she need not address it. This is another assumption that is incorrect. A DIME physician has an obligation to consider all body parts and make causation determinations with regard to those body parts, whether they are or not related to the injury in question, and only then can a DIME physician make determinations whether Claimant has reached MMI for those related conditions and/or if the related conditions justify an impairment rating. Dr. McCranie's testimony in this regard is credible and persuasive. Respondents have shown by clear and convincing evidence that Dr. Shenoi was clearly incorrect and have overcome the DIME physician's opinions by clear and convincing evidence.

C. Maximum Medical Improvement

Where a party has carried the initial burden of overcoming the DIME physician's opinion by clear and convincing evidence, the ALJ's determination of the correct MMI determination or rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When applying the preponderance of the evidence standard the ALJ is "not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence." *Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov.

16, 2006). When the ALJ determines that the DIME has been overcome, the ALJ may independently determine the correct rating or date of MMI. *Lungu v. North Residence Inn*, WC 4-561-848 (ICAO, Mar. 19, 2004). An ALJ may thus determine whether a claimant has reached MMI and assign an impairment rating as a question of fact. *Destination Maternity and Liberty Mutual Insurance Company v. Burren*, 19SC298 (Colo. May 18, 2020); *see Niedzielski v. Target Corporation*, WC 5-036-773-001 (ICAO, Mar. 9, 2020) (when an ALJ determines that a DIME opinion has been overcome, the issue of the claimant's correct impairment rating becomes a question of fact and the ALJ may calculate the impairment based upon a preponderance of the evidence).

In this matter, Claimant's ATP, Dr. Matus, determined that Claimant was at MMI as of July 9, 2021. Claimant continued to have treatment, including therapy for the work related condition until that time. While Dr. McCranie identified an earlier date, based on her review of the medical records, this is only considered speculation as Dr. McCranie did not evaluate Claimant at that point in time. Once Dr. McCranie did evaluate Claimant and the report was provided to the ATP, the ATP had the option to make a determination of when Claimant reached MMI, and he did so by stating Claimant had reached MMI with regard to her lumbar spine and lower extremity injury on July 9, 2021. This opinion is more credible and persuasive than Dr. McCranie's speculative choice. Claimant has proven that she reached MMI as of July 9, 2021.

D. Permanent Impairment Ratings

Here, the parties must show by a preponderance of the evidence what the proper determination of impairment with regard to the work related conditions should be. But before this can be address, it is essential to have a determination of which injuries are causally related to the November 11, 2019 accident.

In this matter, it is found that the cervical spine is not a work related injury caused by the November 11, 2019 work related event. The medical records in evidence, supported the opinion of Dr. Cazden and Dr. McCranie, that Claimant did not have the cervical spine and shoulder complaints until sometime in March or April 2020, well over four months from the date of injury. While Claimant did state that the "closet" incident was not the cause of the neck and shoulder conditions, this was not persuasive. Dr. McCranie persuasively testified that it was more likely that the closet incident was the cause of those conditions and that, in order to link a cervical injury to the original date of injury, there needed to be a temporal relationship between the onset of symptoms and the initial accident, which was not present in this case. This is also true of the Claimant's continuing bilateral upper extremity symptoms. Dr. McCranie credibly opined that Claimant's continuing complaints involving the cervical spine and the right greater than left upper extremity paresthesias, which were not documented until March 10, 2020, were not work related conditions.

Lastly, Dr. McCranie credibly opined that the right shoulder labral tear was not related to the November 11, 2019, injury, as an acute labral tear would cause immediate, severe pain in the shoulder and Claimant did not report shoulder pain for approximately seven months post-accident. Dr. McCranie credibly explained that what was significant here is that Claimant reported to Dr. McCranie (and to Dr. Shenoi) that she was cleaning

out her closet in April of 2020, and she was reaching, lifting and moving some hair products, towels and sheets from her closet, and had an acute onset of neck pain and right shoulder pain at that point that brought on a lot of these symptoms, which was a more probable cause of Claimant's neck and shoulder pain. Respondents have shown that it was more likely than not that the cervical spine condition and the bilateral shoulder conditions are not related to the November 11, 2019 work related accident.

It is further found that Claimant has shown that the lumbar spine and the left lower extremity conditions are related to the claim by a preponderance of the evidence. This determination is supported by the medical records of Claimant's initial treatment records that are available. None of the rating physicians have provided a lumbar spine rating in this matter. Therefore, Claimant's lumbar spine rating is 0%.

Claimant has shown that the lower extremity condition continues to have an impairment cause by loss of sensation due to damage to the peroneal nerve. Dr. Shenoi persuasively rated Claimant's lower extremity impairment at 1.25% of the lower extremity in accordance with the *AMA Guides* to the Evaluation of Permanent Impairment, Third Edition (*Revised*). This was not addressed at all by Dr. McCranie. Therefore, Dr. Shenoi's determination of permanent impairment of the lower extremity cause by the damage to the peroneal nerve is more persuasive than any contrary determination. Claimant has shown by a preponderance of the evidence that it was more likely than not she has a 1.25% lower extremity impairment rating.

E. Temporary Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Sec. 8-42-105(3)(a)-(d), C.R.S.

As found, Claimant was under restrictions from March 29, 2021 through July 8, 2021, after which she was placed at MMI by the ATP. Here, Claimant was paid TTD through March 28, 2021. Claimant credibly testified that, when she completed watching the videos, she advised her supervisor that she had completed her assigned tasks. No further offers of employment were made by Employer between March 29, 2021 until April 9, 2021. As found, Claimant was not responsible for her wage loss. Claimant continued to be under restrictions due to the work related injury at this time. As found, Claimant has shown by a preponderance of the evidence that she was entitled to temporary disability benefits between March 29, 2021 through April 14, 2021,[17] in the amount of $530.19.

On April 9, 2021 Employer sent Claimant an offer of modified duty to begin April 15, 2021. This job offer was approved on April 11, 2021 by one of Claimant's ATPs, Dr. Paul Ogden. The job was to report to Nutrition Services by April 15, 2021. Claimant failed to report until April 22, 2021. Therefore, as found, Claimant was not entitled to temporary disability benefits from April 15, 2021 through April 21, 2021.

Claimant started work on April 22, 2021. On April 23, 2021 Claimant reported to work but was in significant pain due to the repetitive nature of the tasks assigned and went to her provider. On April 26, 2021 Claimant advised her supervisor that the work was violating her restrictions due to the repetitive nature of the job. Nutrition Services did not know what to do so they sent her home. As found, Claimant was credible in this matter and, as found, she was not responsible for her wage loss. While Employer consulted with Claimant's treating provider, Dr. Matus on May 13, 2021 to determine if Claimant's job with Nutrition Services complied with Claimant's restrictions. He stated that "presuming she can keep her arm close to her side this should not preclude assembling sandwiches and placing them in bags." However, Nutrition Services nor the HR manager communicated that new restriction to Claimant nor that they would accept Claimant back to work under those terms. Claimant was credible in this regard. As found, Claimant was not responsible for her wage loss and Claimant has shown by a preponderance of the evidence that she was entitled to temporary disability benefits from April 22, 2021 through July 8, 2021,[18] in the amount of $4,022.11.

ORDER

IT IS THEREFORE ORDERED:

---

[17] The wage records at Respondent's Exhibit Q are specifically found not to be accurate or credible, because we know that Claimant worked on May 24, 25 and 27 and these records fail to show the hours worked. This was confirmed by a supervisor at Exhibit 7 bate 45, and Exhibit 8 email from the Risk Manager.

[18] Employer argued that Employer made a payment of $498.00 for wages paid from April 27, 2021 through April 30, 2021 which should be credited or offset from any benefits paid. However, this is beyond this ALJ's purview and jurisdiction to address. Only benefits under the Act may be determined in this venue. Furthermore, in the calculation of temporary disability above, pursuant to the statements of earnings, Respondents are credited with all benefits reported in the exhibits.

1. The Stipulation of Facts signed by the parties on March 29, 2023 are approved. The Stipulation of Facts is the official transcript of the November 15, 2022 hearing.

2. Respondent overcame Dr. Ranee Shenoi's DIME opinion by clear and convincing evidence.

3. Claimant was at MMI as of July 9, 2021.

4. Respondents shall pay permanent partial disability of 1.25% extremity impairment in accordance with Dr. Shenoi's impairment of the lower extremity for the peroneal nerve injury.

5. Respondents shall pay temporary partial disability benefits from March 29, 2021 through July 8, 2021 in the amount of $4,552.30.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 22nd day of June, 2023.

Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-175-654

ISSUES

I. Whether Claimant established by a preponderance of the evidence he is entitled to Temporary Total Disability ("TTD") benefits May 11, 2022, ongoing.

II. In the alternative, whether Claimant established by a preponderance of the evidence he is entitled Temporary Partial Disability ("TPD") benefits from May 11, 2022 through October 19, 2022 and TTD from October 20, 2022, ongoing.

III. Whether Respondents demonstrated by a preponderance of the evidence Claimant was responsible for his termination from employment.

FINDINGS OF FACT

1. Claimant sustained a work injury to his low back on June 14, 2021.

2. Respondents admitted liability for the work injury and began payment of TTD on June 18, 2021.

3. Claimant underwent treatment with authorized treating physicians ("ATPs") Jonathan Rudolf, M.D. and Maneula Ewing, M.D. at Animas Occupational Medicine.

4. On March 3, 2022, Dr. Rudolf imposed the following temporary work restrictions: lifting, carrying, pushing, pulling up to 25 lbs.; repetitive lifting up to 10 lbs.; walking, standing, and sitting 4 hours per day; and no crawling, kneeling, squatting or climbing. These restrictions were in effect as of March 15, 2022.

5. In a letter dated March 15, 2022, Respondents asked Dr. Rudolf to approve a modified duty position for Claimant. The letter stated, in relevant part:

> The position consists of: WILL ASSIST WITH LIGHT CLEAN UP, PHONES, REGISTER AND DAILY CLEANING TASKS. MAY LIFT, PUSH, PULL AND CARRY UP TO 25 LBS. ALTERNATE BETWEEN SITTING AND STANDING AS NEEDED, NO CRAWLING, KNEELING, SQUATTING OR CLIMBING.
>
> Location of job: 201 N. PINON DR. D, CO 81321
>
> The position is available for 37.5 hours per day and up to 5 days per week.

(Ex. G, p. 22).

6. The letter included a job description which stated "# of Hours Working" as "37.5". Dr. Ewing approved the modified duty position on April 25, 2022.

7. Employer sent Claimant a written offer of modified duty dated March 15, 2022. Employer notified Claimant that light duty was available for Claimant within the restrictions given by his physician. The letter stated: "Schedule: TUESDAY – SATURDAY 8:00AM TO 5:00PM" and "Job Description: will assist with like clean up, phones, register and daily cleaning tasks, may lift, push, pull, and carry up to 25 pounds. alternate between sitting and standing as needed. [N]o crawling, kneeling, squatting, or climbing." (Id. at p. 18). The rate of pay listed is $14.00 per hour. Under the section "Initial Meeting" it states "YOU ARE EXPECTED TO BEGIN YOUR FIRST SHIFT IMMEDIATELY FOLLOWING THE INITIAL MEETING." (Id.) No date is specified for the initial meeting.

8. The letter to Claimant further states "To accept this offer please report to the above scheduled meeting on. [sic]" (Id.) Again, no date for the scheduled meeting is identified. The letter notes that, while participating in the modified employment, Claimant was required to follow all of Employer's HR policies and "[f]ailure to report will be considered an unexcused absence, and you will not be paid for any days missed." (*Id*.) The letter includes the name and telephone number of the individual to contact with questions. The letter notes, "Please be advised that if you decline this offer of light duty work that is within your work restrictions, this may affect your right to receive ongoing Workers' Compensation benefits." (Id.)

9. Claimant checked that he accepted the offer and signed and dated the letter on April 25, 2022. Claimant testified he did so while at a follow-up evaluation with Dr. Ewing on April 25, 2022. On April 25, 2022 Dr. Ewing assigned temporary work restrictions of lifting, repetitive lifting, carrying, pushing, and pulling up 25 lbs.; no reaching over head; walking, standing and sitting 5 hours/day; and no crawling, kneeling, squatting, or climbing.

10. Claimant credibly testified at hearing. Claimant testified that, per his ATPs, he was restricted to working 4 or 5 hours per day at the time he signed the offer of modified employment on April 25, 2022. Claimant testified that, despite the number of hours detailed in the offer letter exceeding his restrictions, he signed the offer accepting the modified employment because he believed it was the only way to keep his workers' compensation benefits. Claimant testified he tried to call "workman's comp" to obtain clarification regarding the hours, but received no response. He did not attempt to contact Employer for clarification. Claimant testified it was his understanding that his attorney was going to address the issue with Respondents. Claimant testified he was not physically capable of working 40 hours per week.

11. No evidence was offered establishing that Claimant received clarification regarding the offer of modified employment or a corrected offer of modified employment.

12. Claimant did not begin the modified employment because the number of hours as detailed in the offer letter exceeded his work restrictions. Claimant has not since returned to work or had any other communication with Employer.

13. On September 7, 2022 Respondents filed a General Admission of Liability ("GAL") for TTD from 6/18/2021 through 5/10/2022 at a weekly rate of $373.33 based on an average weekly wage ("AWW") of $560.00. Under remarks, the adjuster noted Claimant accepted modified duty but did not report to work on 5/10/2022.

14. On October 20, 2022 Claimant called Dr. Rudolf to request modification of his work restrictions. Dr. Rudolf reduced Claimant's lifting limitation from 25 pounds to 20 pounds and the maximum hours worked from 5 to 4 hours per day.

15. [Redacted, hereinafter RW] owns a franchise of Employer, which is a temporary employment agency. RW[Redacted] credibly testified on behalf of Respondents at a post-hearing deposition. RW[Redacted] testified that the letter stating the modified duty position was for 37.5 hours per day was a typographical error. He explained that the offer was to work 3.75 hours per day. RW[Redacted] testified that the schedule of Tuesday to Saturday 8:00am to 5:00pm included in the offer letter represented a range of days and hours during which Claimant could work his 3.75 hours/day, not Claimant's actual work schedule. RW[Redacted] acknowledged that Employer did not communicate these clarifications to Claimant, nor communicate to Claimant the date on which he was to begin the modified employment.

16. RW[Redacted] testified that Employer considered Claimant's failure to begin the modified employment and to otherwise contact Employer as job abandonment, resulting in Claimant's termination:

> Q: So you said my client is listed as inactive. Was he ever formally terminated?
>
> A: Yes. So what we do in that situation where we inactivate an individual that we have not had contact with for some time, we give them a period of time that we try to reach out to them, or in their actual handbook they are supposed to contact us weekly to let us know that they're available or not available.
>
> And once the period of time goes by and we can't get ahold of them or we've had no contact, we inactivate them.

(RW[Redacted] Dep. Tr. 9:13-25).

17. The handbook referred to by RW[Redacted] was not offered as evidence. No evidence was offered indicating Employer attempted to reach out to Claimant after April 25, 2022. RW[Redacted] testified Claimant was not notified of his termination.

18. Claimant testified he was unaware that he was terminated by Employer. No evidence was offered establishing Claimant received the employee handbook or was

otherwise aware of any Employer policy requiring him to contact Employer on a weekly basis.

19. Claimant has not worked since the date of injury. As of the date of hearing, Claimant has not been released to full duty or been placed at maximum medical improvement ("MMI").

20. The ALJ finds that the offer of modified employment presented to Claimant exceeded the work restrictions imposed by Claimant's ATP and that Claimant's ultimate rejection of the offer and failure to begin the modified employment was reasonable under such circumstances. The preponderant evidence establishes Claimant is entitled to TTD benefits from May 11, 2022, ongoing.

21. Respondents failed to prove by a preponderance of the evidence Claimant was responsible for termination of his employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or

none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

TTD

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

The term "modified employment" means employment within the restrictions established by the attending physician. *In re Claim of Willhoit*, W.C. No. 5-054-125-01 (ICAO, July 23, 2018). The modified employment must be reasonably available to the injured worker under an "objective standard*." Id.,* citing *Ragan v. Temp Force*, W.C. No. 4-216-578 (ICAO, June 7, 1996).

Claimant does not dispute the attending physician gave Claimant a written release to return to modified employment or that Claimant failed to begin modified employment. The crux of Claimant's argument is that the modified employment offered to him exceeded his work restrictions, rendering his failure to begin the modified employment reasonable. The ALJ agrees.

As of the date of the letters to the attending physicians and to Claimant, March 15, 2022, Claimant was restricted to working 4 hours per day. As of the date the attending physician Dr. Ewing approved the modified duty position and Claimant accepted the offer, April 25, 2022, Claimant was restricted to working 5 hours per day. RW[Redacted] testified that the actual modified duty position was for 3.75 hours per day, which would be within Claimant's work restrictions. However, such offer was not made to Claimant, nor is there sufficient evidence establishing Claimant knew or reasonably should have known the offer was to work 3.75 hours per day.

The description of modified employment approved by Dr. Ewing stated Claimant would be working 37.5 hours per day, up to five days per week. While a reasonable person would recognize 37.5 hours per day to be a typographical error, the documents provided to the attending physicians and to Claimant do not otherwise provide any context or basis upon which Claimant could reasonably infer the offer was for 3.75 hours per day. The job description notes the number of hours as 37.5 hours without specifying per day, per week, per month or some other computation. The offer letter sent to Claimant does not include any reference to number of hours, but lists a work schedule of 8:00 a.m. to 5:00 p.m., Tuesday through Saturday. Assuming a one-hour lunch period, this equates to working 8 hours per day, 40 hours per week. Such schedule exceeded the work restrictions imposed by Claimant's ATPs.

Although RW[Redacted] testified that the schedule listed in the offer letter was not Claimant's work shift but, rather, a range of days and hours during which Claimant could work 3.75 hours per day, such information was not communicated to Claimant nor was any evidence offered suggesting Claimant knew such information. Without further basis, expecting Claimant to infer that an offer letter denoting a schedule of 40 hours per week was actually an offer for modified employment of 3.75 hours per day is unreasonable. The offer, as proffered to Claimant and as reasonably understood by Claimant, exceeded Claimant's work restrictions.

Claimant credibly testified he signed to accept the offer based on the belief that he had to do so in order to keep his workers' compensation benefits, that he attempted to contact someone with "workman's comp" regarding clarification of the hours, and believed his attorney was addressing the issue with Respondents. No evidence was offered indicating Claimant received clarification or confirmation that the hours were within his restrictions. Claimant did not begin the modified employment because the offer, as presented to him, exceeded his work restrictions. Based on the totality of the circumstances, Claimant's failure to begin the modified employment was reasonable.

Employer did not make any subsequent offers of modified employment to Claimant. Claimant has not returned to modified or regular employment, been released to return to regular employment, or reached MMI. Claimant continues to sustain wage loss as a result of disability caused by the work injury. Accordingly, Claimant is entitled to TTD benefits from May 11, 2022, ongoing.

Responsibility for Termination

Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if he is aware of what the employer requires and deliberately fails to perform. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

As used in the termination statutes, the word "responsible" "does not refer to an employee's injury or injury-producing activity." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo. App. 2002). Therefore, Colorado termination statute §8-42-105(4)(a), C.R.S. is inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. *See Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Colorado Springs Disposal*, 58 P.3d at 1062. Notably, a separation from employment is not necessarily due to an injury simply because it occurs after the injury, and the injured employee need not be offered modified employment before discontinuation of benefits if his was responsible for the separation. *See Gilmore*, 187 P.3d 1129; *Ecke v. City of Walsenburg*, WC 5-002-020-02 (ICAO, May 5, 2017) (injury occurring one day before claimant's previously-announced retirement did not cause claimant's separation from

employment or loss of wages). However, if the injury also leads to wage loss at a claimant's secondary employment, she is eligible for compensation for those wages, even if the separation from primary employer was voluntary or for cause. *Id.*

Subparts (b) and (c) of §Section 8-42-105 C.R.S. provide:

> (b) The claimant's refusal to accept an offer of modified employment under either of the following conditions does not constitute responsibility for termination:
>
> (I) The offer of modified employment would require the claimant to travel a distance of greater than fifty miles one way more than the claimant's pre-injury commute; or
>
> (II) An administrative law judge determines that the claimant's rejection of the offer of modified employment was reasonable considering the totality of the claimant's circumstances, including accounting for:
>
> (A) The consequences of the industrial injury;
>
> (B) The financial hardship that would be imposed on the claimant in order to accept the offer of modified employment; or
>
> (C) Any other reasons that would, in the opinion of the administrative law judge, make it impracticable for the claimant to accept the offer of modified employment.
>
> (c) The circumstances described in paragraph (b) of this subsection (4) are not exhaustive.

As found, Respondents failed to prove it is more probable than not Claimant was responsible for his termination. Respondents contend Claimant was terminated for job abandonment due to Claimant's failure to appear for the modified employment and subsequent failure to contact Employer. As discussed, Claimant's ultimate rejection of the modified employment was reasonable based on the totality of the circumstances. Claimant did not begin the modified employment as the offer presented to Claimant exceeded his work restrictions in terms of the number of hours per day Claimant could work. Claimant credibly testified he initially accepted the offer due to his belief he was required to do so to keep his workers' compensation benefits, and that he believed his attorney would further address the issue with Respondents. No evidence was offered indicating Claimant was informed the modified duty position was for 3.75 hours per day. As Claimant's ultimate rejection of the modified duty position was reasonable, he was not responsible for termination of his employment based on such rejection.

Additionally, there is insufficient credible and persuasive evidence demonstrating that Claimant's failure to subsequently contact Employer as expected by Employer was volitional. RW[Redacted] testified that employees with whom Employer does not have contact for a period of time are terminated. He further testified that the employee

handbook provides that an employee is supposed to contact Employer weekly regarding their availability. No evidence was offered regarding the specific “period of time” referenced by RW[Redacted], whether Claimant received the employee handbook, or whether Claimant was otherwise aware of Employer’s expectation that he contact Employer on a weekly basis in Claimant’s specific circumstances. Additionally, while the offer letter to Claimant states Claimant was expected to begin modified employment immediately after the “initial meeting” and the “scheduled meeting”, the letter contains yet another clerical error by leaving the date of such meetings blank.

There is insufficient evidence Claimant was aware of and deliberately failed to comply with Employer’s expectations. His failure to begin the modified employment was based on the reasonable belief the employment exceeded his work restrictions, and his subsequent failure to contact Employer was based on the belief his attorney was addressing such issue with Respondents. The preponderant evidence does not establish Claimant precipitated his termination by a volitional act that he would reasonably expect to cause the loss of employment. Under the totality of the circumstances, Claimant is not responsible for his termination and thus entitled to TTD benefits.

ORDER

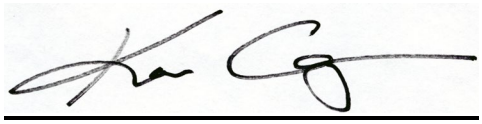
It is therefore ordered that:

1. Claimant is entitled to TTD benefits from May 11, 2022, ongoing until terminated by statute.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 23, 2023



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant established, by clear and convincing evidence, that the maximum medical improvement (MMI) opinion of Dr. Karl Larsen, as the Division Independent Medical Examiner, is highly probably incorrect.

- If Claimant is at MMI, whether Claimant established, by clear and convincing evidence, that Dr. Larsen's impairment rating opinions are highly probably incorrect and if so, what is the correct impairment rating associated with Claimant's industrial injury.

- If Claimant established that he is not at MMI, whether treatment for complex regional pain syndrome (CRPS), vision loss, carpal tunnel syndrome, cervical and lumbar spine is reasonable, necessary or related to the injury as medical benefits.

- If Claimant failed to overcome Dr. Larsen's MMI determination, whether treatment for CRPS, vision loss, carpal tunnel syndrome, cervical and lumbar treatment is reasonable, necessary or related to the injury as maintenance medical benefits.

- Whether Respondents are liable for treatment by Fenix Health LLC, Colorado Springs Neurological Associates, Vision Institute and any of their referrals as authorized providers.

- Whether Claimant established, by a preponderance of the evidence, that he is entitlement to temporary disability benefits and if so, whether such benefits were properly terminated for failure to appear for a modified duty offer on July 31, 2020.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Burns, the ALJ enters the following findings of fact:

1. Claimant suffered an admitted work-related injury to his right pinkie finger on April 20, 2020 while using a jackhammer to break cement located close to an adjacent wall. As Claimant was operating the jackhammer, his right pinkie finger was caught and crushed between the wall and the handle on the jackhammer. *(Respondent's Exhibit (RE), C, p.41*). X-rays were obtained and revealed a comminuted crush fracture to the "distal tuft of the fifth distal phalanx with mild displacement of the fracture fragments. *Id*. *at p. 46, 54*. *See also, RE OO; RE J, p. 1593.*

2. Claimant was referred to orthopedics and was evaluated by their service on April 23, 2020. *(RE C, p. 1471).* Orthopedics recommended nonsurgical treatment and provided a fingertip protector with daily dressing changes. *Id*. Claimant was

released by orthopedics on April 30, 2020 and instructed to return to work as able using his fingertip protector. Id. at p. 1471-1472.

3. After his release from orthopedics Claimant continued to treat with Employers designated provider, UC Health and specifically Dr. Emily Burns as Claimant's authorized treating provider (ATP). Dr. Burns treated Claimant from April 27, 2020 through July 30, 2021. On August 6, 2021, Dr. Burns completed a narrative report outlining Claimant's impairment after she placed Claimant at MMI on July 30, 2021.[1] *(RE C, p. 1470-1477).* Claimant's medical history is complicated and the claim record is voluminous. Indeed, the parties have submitted in excess of 1000 pages of exhibits (including many duplicate documents) and the testimony of Claimant versus Drs. Burns and Mathwich can aptly be described as being at odds with each other. Nonetheless, the record submitted supports a finding that at the time Dr. Burns completed her August 8, 2021 MMI/impairment rating report, Claimant reported continued use of Cymbalta, Lyrica, trazodone, and propranolol. He was also complaining of persistent 10/10 pain with little functional improvement, informing Dr. Burns that he didn't feel like he could drive or return to work. *Id.*

4. Dr. Burns summarized the course of Claimant's treatment in her August 6, 2021 MMI/impairment rating report. According to Dr. Burns' August 6, 2021 report, Claimant had been seen several times via video by June, 2020, during which appointments he complained of "worsening and intense 10 out of 10 pain, with shooting pain up his arm from the right pinkie finger, giving him headaches and watering in his right eye". *(RE C, p. 1472).* Dr. Burns advised Claimant that the extent of his symptoms could not all be attributed to the laceration and fracture in his pinkie finger. *Id*. Accordingly, she advised him to follow up with his primary care provider. *Id.* Dr. Burns also noted that Claimant had returned to his orthopedist on July 23, 2020, who noted that Claimant had been ill at home for several weeks. *Id.* Claimant was apparently advised by his orthopedist that his injury had healed in acceptable alignment. *Id*. Therefore, he was instructed to discontinue the use of his splint and start hand therapy immediately. *Id.* Dr. Burns noted that Claimant had been evaluated by a pain management specialist, Dr. Meyer who was "not convinced" that there is a significant component of CRPS causing Claimant's symptoms and whom noted that Claimant had "significant psychological and stress related issues that cause dysfunction for him in general". *Id*. Regarding the potential of Claimant having CRPS, Dr. Burns noted that Claimant had seen three specialists over the course of his treatment and all three "assessed that his symptoms were not consistent with CRPS and advised no further intervention". *Id at p. 1476*. As noted, Dr. Burns placed Claimant at MMI and assigned a combined whole person impairment of 12%. She also recommended maintenance treatment to include 3 months of refills for Cymbalta and Lyrica to allow Claimant time to follow up with his PCP for discussion about continuing versus tapering these medications. *Id. at p. 1477*. Dr. Burns made it clear that because Claimant had not experienced any functional improvement with these medications that it was not "indicated" that he continue them through workers' compensation beyond the 3 months she recommended. *Id.*

---

[1] *See RE C, pp. 1418-1420.*

5. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Burns' opinions regarding MMI/impairment on August 13, 2021. *(RE LL, pp. 1756-1758)*.[2]

6. Claimant requested a Division Independent Medical Examination which was performed by Dr. Karl Larsen on February 28, 2022. *(RE A, pp. 1-11)*. Dr. Larsen obtained a history surrounding Claimant's injury in addition to completing a records review[3] and a physical examination. *(RE A, pp. 1-2)*. Dr. Larsen's physical examination of the right hand revealed no obvious deformity and while the fingernail on the right pinkie finger was overgrown compared to the surrounding digits, there were no "trophic changes, abnormal hair distribution, or shiny skin changes suggestive of CRPS". *Id*. at p. 2. Claimant was noted to guard his finger making the sensory and vascular examination difficult. Nonetheless, Claimant did have capillary refill in all the digits and a 2+ symmetric radial pulse. *Id*. Although Claimant reported hypersensitivity to attempted light touch in the small finger, his sensation and range of motion in the remaining digits, wrist and elbow were within normal limits. *Id.* Dr. Larsen noted that Claimant had received "extensive" psychological and psychiatric treatment to include medications "directed" at treating anxiety and depression. *Id*. Accordingly, Dr. Larsen adopted (incorporated) the 6% mental health impairment rating into his overall impairment rating assigned to Claimant, noting that it was abundantly "clear that psychological factors [were] having a tremendous impact on [Claimant's] overall function". *Id.*

7. Dr. Larsen diagnosed Claimant with neuropathic pain and hypersensitivity with resultant stiffness and loss of motion in the right pinkie finger "due to disuse and guarding". *(RE A, p. 2).* He noted that Claimant had an "array of nonphysiologic complaints associated with this that [he could not] explain". *Id*. *at pp. 2-3*. Dr. Larsen did not provide a diagnosis of CRPS nor did he recommend CRPS testing, noting further that he could not ascribe "many of the disabilities [Claimant] describes . . . to his injury and hypersensitivity".[4] Consistent with Dr. Burns, Dr. Larsen assigned a combined physical and mental health impairment rating of 12% of the whole person. *Id*. *at p. 3*. Dr. Larsen also adopted Dr. Burns' 3 month recommendations for maintenance care. While Claimant was apparently not using his right hand for activities, Dr. Larsen opined that it was unlikely that he was at risk of re-injuring the right finger if he did so. *Id.* Accordingly, Dr. Larsen indicated he would "allow [Claimant] to perform any activity he feels he can accomplish without restrictions". *Id.* Dr. Burns has repeatedly opined that there are no work restrictions associated with the work injury.

8. After being placed at MMI by Dr. Larsen, Claimant sought treatment on his own from Colorado Springs Neurological Associates. *(RE F).* On March 15, 2022, Claimant was evaluated by Physician Assistant (PA) Chase Alexander Tucker. *(RE F,*

---

[2] *See also, RE KK, pp. 1720-1722*.

[3] Dr. Larsen documented that he reviewed 468 pages of records. *(RE A, p. 1).*

[4] Specifically, Dr. Larsen noted that he could not physiologically related Claimant's reported eye pain/watering or the "twitching" events Claimant described to the April 20, 2020 injury.

p. 1544). PA Tucker noted that following the crush injury to Claimant's finger, he developed "shooting pain which radiates up his right arm into his neck" and down his right leg from the calf to the ankle and up from the ankle to the right knee. *Id*. *at p. 1544-1545.* PA Alexander opined that Claimant's neuropathic pain involving the right arm and leg might be related to CRPS "given the chronicity and onset following crush injury to his hand." *Id*. *at p. 1544*. PA Alexander referred Claimant for NCV/EMG testing of the right arm/leg and an MRI of the cervical spine to rule out other focal neuropathy and instructed Claimant to follow-up on completion of this testing. *Id.*

9. During a follow-up appointment with Dr. Gregory Ales, at Colorado Springs Neurological Associates, April 21, 2022, the mechanism of injury (MOI) was mistakenly identified as a "crush injury to his right hand . . ." rather than the right distal phalanx of the small finger. *(RE F, p. 1550).* Moreover, Dr. Ales indicated that Claimant "[had] been diagnosed with CRPS and was treated with neuropathic pain medications". *Id*. This appointment and the representations of Dr. Ales that the April 20, 2020 MOI was to the right hand and that Claimant was diagnosed with CRPS were after MMI from Dr. Burns and the DIME from Dr. Larsen. More importantly the ALJ is unable to find record support for the conclusion that Claimant crushed his hand and that he was diagnosed with CRPS. In this case, the record is replete with references that the injury was limited to the distal phalanx of the right small finger. Furthermore, there is there is no evidence that Claimant had been tested for or diagnosed with CRPS. As noted above, the authorized workers' compensation providers agree that Claimant did not demonstrate clinical signs of CRPS that would warrant CRPS testing or a diagnosis of CRPS. Indeed, Claimant has never undergone CRPS testing consistent with the Division Guidelines, because that has never been recommended or requested. *(Burns Depo. p. 30, 40, 42).*

10. Respondents filed a FAL adopting the opinions of Dr. Larsen regarding MMI and permanent impairment on May 6, 2022. *(RE HH, pp. 1697-1699).*

11. Claimant attended a follow-up appointment with Dr. Ales on June 30, 2022 after completion of the recommended EMG and cervical spine MRI. *(RE F, p. 1553; 1557).* Claimant's MRI revealed moderate to severe foraminal disease predominantly on the left side. *Id*. *at p. 1557*. EMG testing demonstrated "evidence of a right median sensorimotor neuropathy across the wrist supportive of moderate right CTS (carpal tunnel syndrome)". *Id*. The remainder of Claimant's EMG testing including conductions of the right arm and leg were interpreted as "normal". *Id*. Dr. Ales recommended that Claimant follow-up with pain management through Peak Vista as the neuropathic pain medications he was prescribing were not effective in controlling Claimant's pain. *Id. at p. 1553.*

12. After the representations regarding the Claimant crushing his hand and having been diagnosed with CRPS documented in Dr. Ales' initial April 21, 2022 visit, the other non-workers' compensation providers rendering care through Peak Vista seemingly have carried forward the diagnosis of CRPS. Indeed, during an August 24, 2022 appointment with his primary care provider (PCP) to formulate a treatment plan to

address Claimant's ongoing complaints of pain, Family Nurse Practitioner (FNP) Mark Lynch noted that Claimant's injury was to the right hand rather than the distal phalanx of the right small finger. (RE D, p. 1489). Moreover, without documenting any clinical/objective signs of CRPS on examination, FNP Lynch provided an assessment of "[c]omplex regional pain syndrome type 2 of right upper extremity" for which he prescribed opioid medication. *Id. at p. 1488-1489*. The records from Claimant's subsequent appointments with Nurse Practitioner Veronica Misko are largely unchanged in content[5] and simply adopt the examination findings and assessments of FNP Lynch. *Id. at pp. 1501-1507*. Like FNP Lynch, Ms. Misko also elected not to perform a "focused" physical examination, choosing instead to document that it was not needed. *Id. at pp. 1501, 1504, 1506*.

13. Dr. Brian Mathwich evaluated Claimant on December 13, 2022. He reviewed and summarized all of the medical records. He agreed with Dr. Larsen that Claimant was at MMI. *(RE B).* He agreed with the evaluators before him that there were no clinical signs of CRPS warranting CRPS testing under the Division Guidelines. Dr. Mathwich testified at hearing as a Level II Accredited, Board certified expert in Family Medicine. He described his evaluation of Claimant. Claimant told him he was in 8/10 pain at the time of the evaluation. However, upon distraction, Dr. Mathwich was able to hold the right hand and palpate it quite firmly including the pinkie, without eliciting increased complaints of pain. He did not observe atrophy in the hand or ecchymosis. There was good hair growth, consistent with the left. The hand was not excessively cold or warm, color was normal, capillary refill was normal, and there was no mottling or tight/shiny skin. He opined that Claimant did not meet the objective criteria for CRPS testing. Dr. Mathwich indicated that Claimant is receiving CRPS like treatment from his PCP based upon his subjective verbal reports of pain despite there being no objective findings to establish a diagnosis of CRPS. He noted that providers outside the workers compensation system are not constrained by the same rigors required by the Colorado Workers' Compensation Medical Treatment Guidelines, i.e. WCRP, Rule 17, Exhibit 7 when diagnosing and treating suspected cases of CRPS. He emphasized that subjective complaints alone are insufficient to establish a diagnosis of CRPS. Accordingly, he concluded that Claimant's CRPS treatment was/is not reasonable and necessary.

14. During cross-examination, Claimant confronted Dr. Mathwich with a record from NP Alesha Barker which declared that Claimant met the Budapest Criteria, for a diagnosis of CRPS within a short time of his evaluation of Claimant. *(See NP Barker's 12/16, 2022 report at Claimant Exhibit (CE) A).* Dr. Mathwich reiterated that, under the Medical Treatment Guidelines, both verbal reports of symptoms *and* objective clinical signs, i.e. findings of the clinician must be present to refer Claimant for testing and confirming a diagnosis of CRPS. According to Dr. Mathwich, Claimant does not meet Budapest Criteria, and therefore cannot be diagnosed with CRPS.

15. Careful review of NP Barker's 12/16/2022 report indicates that Claimant's

[5] Except for Claimant's complaints of ongoing severe and increasing pain for which NP Misko prescribed higher doses of narcotic medication.

history of injury is again inaccurately documented. According to NP Barker, Claimant sustained a "crushing injury to his right *hand/wrist* when he was using a 95 lb jackhammer and his *hand* became caught underneath it. (CE A, p. 5)(emphasis added). The report goes on to reflect that Claimant had been diagnosed with CRPS of the right upper extremity (probably from the records of NPs Lynch/Misko without support from objective clinical findings). While Claimant described color and temperature changes, NP Barker's report is devoid of any indication that she completed a physical examination. Consequently, there is no evidence that Claimant's verbal reports of color and temperature changes were independently verified by this clinician. *Id. at pp. 1-6 of the 12/16/2022 report*. Instead, NP Barker simply noted:

> [Claimant] has CRPS of his right upper extremity near his right hand and wrist. He does meet the Budapest Criteria with discoloration to the hand, numbness and burning, and temperature changes that are disproportionate to the rest of his body. . . . Regarding the CRPS, I believe [Claimant] would benefit from a set of 4 stellate ganglion blocks one week apart each.

16. Dr. Burns was deposed, and explained in her testimony that she did not suspect clinically that Claimant had CRPS, did not document or observe additional findings that would indicate CRPS, and did not believe that CRPS testing needed to be done in this case. (*Burns Depo, p. 25-27*). Indeed, Dr. Burns testified: "At the time I saw him, no, we didn't feel like [testing] was reasonable. And it wasn't just me, that was two orthopedic specialists and a pain management specialist." *Id, at p. 30; RE C, 1476.* Despite Claimant's suggestion to his treating psychologist (Sean Kelly) that his providers thought he might have CRPS *(See, RE B, p. 21),* the record evidence supports a finding that the balance of Claimant's treating providers were skeptical of the diagnosis and were in agreement with Dr. Burns that Claimant probably did not have CRPS as evidenced by the following statements of Dr. Mark Meyer: "I've examined it several times and I still am not convinced that there is significant component of CRPS." "I do not think the symptoms are related to his injury on the fifth digit". *(RE I, p. 1592, 1586; RE B, pp. 20-21)* and Dr. Wallace Larson: I do not see any evidence of CRPS. (RE B, p. 18).

17. As referenced above, Claimant has reported anxiety, depression and PTSD associated with his work injury. Claimant's records indicate that he experienced several stressors during the period of time he was treated for his right finger injury. These include two of his brothers having been diagnosed with cancer, one of these being sentenced to prison, Claimant's personal concerns that he may also have cancer, his brother being injured when his car caught on fire ("quite traumatizing to him."), and the very disturbing discovery of one of his brothers frozen to death in his back yard. *(RE H, p. 1573, RE. I, p. 932, 1587, 1592; RE B, p. 17).* Dr. Stephen Moe treated Claimant for anxiety and depression, placed him at MMI and provided a 6% mental impairment rating. *Id. at pp. 1579-1582*. He did not apportion or reduce the rating based upon the non-work causes. *Id*. At the time of his rating, he discussed the Claimant's mental health condition with Dr. Burns. His report says, "She also shared

her concerns, with which I agree, that non-injury factors have contributed to his reported symptoms and impairment, which we both recognize make it challenging to determine his work-related mental impairment." Id. at p. 1579. Dr. Meyer agreed, indicating: "[Claimant] continues to demonstrate a lot of pain behaviors and I do believe that there are some significant psychosocial and emotional issues that contribute to his pain complex." *(RE I, p. 1589).*

18. Respondents submitted surveillance video of Claimant at hearing that was shown to and discussed with Dr. Burns during her deposition. *(RE M; Burns Deposition).* After review of Claimant's activities on June 26, 2022, June 30, 2022, and July 2, 2022, Dr. Burns reiterated her opinion that Claimant can clearly use his right hand. The videos demonstrate Claimant engaged in daily activities using his right hand to carry bags, using his smart phone one handed on the right, place his sensitive right hand into his jeans pocket and walk for an extended period, and open car doors and other doors. Further, he is actively involved in a construction or maintenance job, going in and out of a particular building. He is seen spraying and drying off a window, wearing knee pads, which the ALJ reasonably infers to be for work on the floor, carrying drills, ladders, furniture, a vacuum, and a heavy bag and five gallon bucket with items weighty enough to alter his gait, all with his right hand and frequently with his left hand empty. Moreover, other people, including [Redacted, hereinafter MT], are present in the video with Claimant who are not carrying things, and who could assist if Claimant was incapable or having trouble using his right hand. There is no hesitation in movement, no overt pain behavior, and no sign that Claimant's right pinkie finger is fixed in an "extended position". *(See Disfigurement Award and Order, 11/8/2021, Ex. JJ).* Importantly, Claimant's reports to his PCP, i.e. his Medicaid providers during this same time period was of 10/10 of pain. (See e*.g. RE. D, p. 1489).*

19. Between Claimant's appearance before the court on April 6, 2022 and the May 10, 2023 hearing, additional surveillance was obtained of Claimant's activities. Similar to the June and July 2022 videos, Claimant appears to move without hesitation or signs of overt pain. *(RE M, April 19, 20, 26 & 30, 2023).* He wears a hand covering only on the day that he is being picked up by Medicaid transportation for a doctor's appointment on April 20, 2023. However, while waiting, he displays no difficulty with or sensitivity of the right hand as evidenced by using this hand to hold dog leashes, zip up his pants, manipulate his phone and thrusting that hand into the front pocket of his jeans. Accordingly, the ALJ finds Dr. Larsen's suggestion that Claimant is unable to use his right hand/finger or that his pinkie finger "remains in an extended position" as represented to Judge Cayce during his disfigurement hearing unpersuasive. Indeed, Claimant admitted that he could use the right hand per the 12/16/2022 report of NP Barker. (CE A, p. 6).

20. Of additional concern regarding Claimant's functionality are the conclusions of Dr. Albert Hattem who was asked to comment on Claimant's MMI status on June 4, 2021. As part of his physician advisor opinion, Dr. Hattem was provided Facebook postings which depicted that by November 25 and 29, 2020, approximately 7 months after his 4/20/2020 injury, Claimant was capable of jogging. He posted a picture

at a casino, with his girlfriend on November 2, 2020 and on August 3, 2020, he posted a picture from [Redacted, hereinafter TS] where he had traveled with his significant other. Again during the time of these postings, Claimant was reporting 10/10 pain and other associated symptoms including headaches, nausea, vision changes and severe anxiety he related to his industrial injury. Because Claimant's demonstrated activity level was inconsistent with his severe complaints/symptoms without supporting objective findings, Dr. Hattem concluded that Claimant had reached MMI as of June 4, 2021. *(See RE G; CE B).*

21. Dr. Burns testified that Claimant remains at MMI. (*Burns Deposition, p. 27, ll. 16-19*). She reiterated her opinion that Claimant was medically capable of working. *Id. at ll. 20-22*.

22. Claimant alleges that he suffers visual loss related to CRPS caused by his April 20, 2020 work-injury. Records from Vision Institute were submitted by both parties. There is no indication in these records or the records of any other medical provider that there is a causal link between Claimant's right pinkie finger injury and his vision loss. *(See generally RE E, p. 1525).* Claimant has been diagnosed with glaucoma.

23. Temporary benefits have never been paid under this claim. [Redacted, hereinafter RH] testified as Employer's Human Resources Manager. He testified that he managed the claim and assisted Claimant with return to work issue from the time of his work injury, forward. Claimant returned to work and was accommodated with a light duty position after his April 20, 2020 injury. According to RH[Redacted], Claimant was accommodated with one handed tasks, including computer work and predominately a flagging position where he earned regular wages.

24. Per RH[Redacted], Claimant was working in this modified duty position when he contacted Employer via test message on May 15, 2020 to report that he could not come to work because of COVID-like symptoms. Between May 15 and May 29, 2020, Claimant was provided with COVID pay. Beginning June 2020, RH[Redacted] testified that Claimant was required to provide the results of a COVID test. RH[Redacted] testified that testing results were requested 3 times in June but Claimant never responded. Although the evidence presented supports a finding that Claimant never took a COVID test, he instead provided successive recommendations for isolation from separate "Little Clinic" offices in Erie, Parker, and Westminster Colorado over the next several weeks. *(RE QQ).* The end of the last "self-isolation" period was July 2, 2020*. Id. at p. 1829.* Nonetheless, Claimant did not return to work and did not contact Employer. Employer then submitted a modified duty job description to Dr. Burns. This included the same one-handed job of flagging, and the duties of reviewing safety videos, that claimant was doing before he asserted COVID like symptoms on May 15, 2020. *(RE K, p. 1609).* Dr. Burns approved the position and signed off on this modified job duty letter on July 16, 2020 *(See, in contrast, text representation by claimant July 10, 2020, RE QQ, 1831).* Claimant was sent a modified duty offer on July 22, 2020. *Id at p. 1608.* Claimant's modified duty work was to commence on July 31, 2020. *(RE K).*

Claimant did not appear for work and did not begin that job. Indeed, the evidence presented supports a finding that Claimant did not appear for work at any time after May 15, 2020. Moreover, there is no persuasive evidence that Claimant's work related condition worsened after his failure to appear for modified duty on July 31, 2020. On August 5, 2020, Respondents filed a medical only General Admission of Liability (GAL). *(RE NN, p. 1768).* RH[Redacted] testified that Claimant was eventually terminated on September 30, 2020 after Employer gave Claimant ample time to appear for modified duty as his continued absence was affecting the companies missed work status with OSHA.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent, expert testimony is subject to conflicting

interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion). Generally, the ALJ finds the testimony of Claimant to be inconsistent with the more convincing medical records of Drs. Burns, Meyer, Larsen, Hattem and Mathwich. When considered in its totality, the evidence in this case supports a reasonable inference/conclusion that while Claimant suffers from persistent neuropathic pain, there is insufficient support for the conclusions of NPs Lynch, Misko and Barker that he suffers from CRPS and that the treatment he is receiving through these providers is reasonable, necessary and related to his April 20, 2020 industrial injury.

Overcoming Dr. Larsen's Determination of MMI and Impairment

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI and/or causation is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI and/or the cause of a particular condition asserted to be related to Claimant's industrial injury, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

F. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Based primarily on NP Barker's 12/16/2022 report, Claimant alleges that he has a diagnosis of CRPS, is in need of additional treatment, and is therefore, not at MMI. While he suspects the same, the record evidence does not support such conclusion.

Indeed, careful review of the record supports a finding that none of Claimant's authorized treating physicians have diagnosed him with CRPS.

G. A diagnosis of CRPS is governed by Rule 17, Exhibit 7, of the Medical Treatment Guidelines. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act and provide a vetted consensus regarding the diagnosis of CRPS. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); *See also*, *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: "All health care providers shall use the Guidelines adopted by the Division". *Hall v. Industrial Claim Appeals Office, 74 P.3d 459 (Colo. App. 2003).* "Accordingly, compliance with the Guidelines is mandatory for medical providers." *Chrysler v. Dish Network*, W.C. No. 4-951-475-002 (ICAO, July 15, 2020). In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. Section 8-43-201(3)(C.R.S. 2020). Indeed, Rule 17-4 (A) acknowledges that "reasonable medical care may include deviations from the Guidelines in individual cases." *Chrysler v. Dish Network*, *supra.* Nonetheless, the Guidelines carry substantial weight and should be adhered to unless there is evidence justifying a deviation. *See Hall v. Industrial Claim Appeals Office, supra*; *See Logiudice v. Siemans Westinghouse*, W.C. No. 4- 665-873 (ICAO, January 25, 2011).

H. The ALJ may consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse, supra.* Guidelines concerning the assessment and treatment of complex regional pain syndrome and been prepared by the Colorado Department of Labor and Employment, Division of Worker's Compensation (Division) and are enforceable under the Division's Rules of Procedure. *See* 7 CCR 1101-3. The Medical Treatment Guidelines (MTGs) for Complex Regional Pain Syndrome are found at WCRP 17, Exhibit 7. These Guidelines are applicable regardless of the alleged inflicted extremity. Per Rule 17, Exhibit 7, the "[d]iagnosis of CRPS continues to be controversial and the clinical criteria used by the International Association for the Study of Pain is thought to be overly sensitive and unable to differentiate well between those patients with other pain complaints and those with actual CRPS. Pertinent sections of the CRPS guides provide:

- WCRP, Rule 17, Exhibit 7(G)(2): <u>DIAGNOSTIC COMPONENTS OF CLINICAL CRPS</u>: Patients who meet the following criteria for clinical CRPS, consistent with the Budapest criteria, may begin initial treatment with oral steroids and/or tricyclics, physical therapy, a diagnostic sympathetic block, and other treatments found in the Division's Chronic Pain Disorder Medical Treatment Guideline. All treatment should be periodically evaluated with validated functional measures. Patient completed functional questionnaires such as those recommended by the Division as part of Quality Performance and Outcomes Payments (QPOP, see Rule18-8) and/or the Patient Specific Functional Scale can provide

useful additional confirmation. Further invasive or complex treatment will require a confirmed diagnosis. (Emphasis added).

D. To meet the criteria for initial treatment, the patient must establish the following:

- Continuing pain, which is disproportionate to any inciting event; and

- At least one symptom in 3 of the 4 following categories:

  - Sensory: reports of hyperesthesia and/or allodynia;

  - Vasomotor: reports of temperature asymmetry and/or skin color changes and/or skin color asymmetry;

  - Sudomotor/edema: reports of edema and/or sweating changes and/or sweating asymmetry; or

  - Motor/trophic: reports of decreased range-of-motion and/or motor dysfunction (weakness, tremor, dystonia) and/or trophic changes (hair, nail, skin).

- At least one sign at time of evaluation in 2 or more of the following categories:

  - Sensory: evidence of hyperalgesia (to pinprick) and/or allodynia (to light touch and/or deep somatic pressure and/or joint movement);

  - Vasomotor: evidence of temperature asymmetry and/or skin color changes and/or asymmetry. Temperature asymmetry should ideally be established by infrared thermometer measurements showing at least a 1°C difference between the affected and unaffected extremities;

  - Sudomotor/edema: evidence of edema and/or sweating changes and/or
  sweating asymmetry. Upper extremity volumetrics may be performed by therapists that have been trained in the technique to assess edema; or

  - Motor/trophic: evidence of decreased range-of-motion and/or motor dysfunction (weakness, tremor, dystonia) and/or trophic changes (hair, nail, skin).

- No other diagnosis that better explains the signs and symptoms. It is essential that other diagnoses which may require more urgent treatment, such as infection, allergy to implants, or other neurologic conditions, are diagnosed expediently before defaulting to CRPS.

- Psychological evaluation should always be performed as this is necessary for all chronic pain conditions.

WCRP, Rule 17, Exhibit 7(G)(2)(a-e).

I. Because significant harm can beset patients by over-diagnosing CRPS, including physical harm caused by overreliance on invasive procedures, the MTGs strongly recommend that patients with suspected CRPS undergo "objective testing to verify their diagnosis. *(See WCRP, Rule 17, Exhibit 7 above)*. Simply because Claimant continues to experience pain of increased intensity in his right hand/arm neck and leg following his finger injury does not support a conclusion that she has CRPS or that it is related to his April 20, 2020 industrial injury. In this case, the objective tests to assist in confirming the likelihood of a diagnosis of CRPS have not been performed. Accordingly, the ALJ finds/concludes that the opinions expressed by Dr. Ales, and NPs Lynch, Misko and Barker regarding Claimant's CRPS diagnosis are premature and unconvincing. Their diagnostic impressions are unpersuasive because they doctors completely failed to employ the MTGs in their diagnosis and all failed to appropriately diagnose Claimant with CRPS through objective testing. Indeed, their diagnosis of CRPS, based solely upon Claimant's subjective complaints of pain runs afoul not only of the specific diagnostic requirements found in the CRPS MTG, but also ignores the warnings of premature CRPS diagnosis imbedded within the guideline itself. While Dr. Ales and NPs Lynch, Misko and Barker have strong opinions regarding Claimant's diagnosis, the ALJ finds that making a diagnosis of CRPS based solely on Claimant's subjective reports of pain, without objective testing data or justification for such deviation, contrary to the MTGs. The failure of Drs. Ales and/or NPs Lynch, Misko and Barker to properly utilize the MTGs to diagnose CRPS prior to recommending treatment supports this ALJ's conclusion that their diagnostic impressions are premature and probably incorrect. (*See Goff v. Schwan's Home Services, W.C. No. 947-921-01 (September 7, 2016)(affirming ALJ's denial of treatment for CRPS because MTG diagnostics were not met).*

J. Here, Dr. Burns has repeatedly addressed the question of whether Claimant might have CRPS during the course of her treatment. Indeed, on December 2, 2020, Claimant's wife and spokesperson, MT[Redacted], entered the examination room at the end of Claimant's visit and asked why Dr. Burns had not diagnosed CRPS. Dr. Burns documented that a variety of medications were tried to address the neuropathic symptoms and complaints, with no clear functional benefits from any of the medications. Dr. Burns discussed nerve pain in general and the additional symptoms seen in CRPS, "which the patient does not have at this point". (*RE C, p. 762).* Dr. Burns added that CRPS would not explain the symptoms Claimant was reporting in remote/unconnected parts of his body. *Id.* Six months later, on July 8, 2021, Dr. Burns participated in a Samms conference with Claimant's attorney and Respondents during which the issue/diagnosis of CRPS was raised. (RE C, p. 1360). Dr. Burns specifically addressed why testing for CRPS is not indicated. Indeed the stated reason why testing was not indicated was the lack of "objectively documented additional clinical characteristics"

observed/documented by multiple specialists and herself. Id. In addition, Dr. Burns noted that the "low chance" that such testing would be reliable with such a "minute area of involvement", i.e. the distal phalanx of the little finger in combination that testing would not change the management of Claimant's injury spoke against CRPS and testing. *Id*. Drs. Meyer, Larson (Wallace), Mathwich and Larsen (Karl) all agree with Dr. Burns that Claimant does not have clinical signs consistent with CRPS to warrant testing or a diagnosis of CRPS.

K. After considering the totality of the evidence presented, including the DIME report of Dr. Larsen, the reports of Dr. Burns, Dr. Meyer, Dr. Larson, Dr. Hattem, and Dr. Mathwich along with the balance of the medical record and contrasting them with the reports of Dr. Ales and NPs Lynch, Misko and Barker, the ALJ concludes that Claimant has failed to produce unmistakable evidence establishing that the Dr. Larsen's determination regarding causality and MMI is highly probably incorrect.[6] Rather, the ALJ concludes that the evidence presented regarding Claimant's medical diagnosis and recommendations raised by Dr. Ales and NPs Lynch, Misko and Barker are based upon Claimant's inaccurate and incomplete injury history provided to these providers. Thus, to the extent that the opinions of Dr. Ales and NPs Lynch, Misko and Barker diverge from those of Dr. Larsen, the ALJ concludes that these differences constitute a mere professional difference of opinion regarding whether Claimant has CRPS and if he does, whether it is related to the April 20, 2020 industrial injury. A difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Larsen's opinions concerning causality and MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000); Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000). Consequently, Claimant has failed to meet his required legal burden to set Dr. Larsen's causality (diagnostic) and MMI determinations aside. As such, his request must be denied and dismissed.

Claimant's Entitlement to Treatment for CRPS, Vision Loss, Carpal Tunnel Syndrome, and/or Cervical, Lumbar or Leg Pain

L. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. See § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

[6] Neither party presented evidence challenging Dr. Larsen's permanent impairment rating.

M. The mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 2013.* Based upon the evidence presented, the ALJ concludes that Claimant has failed to establish that the treatment rendered by the Vision Institute, Dr. Ales and NPs Lynch, Misko, Barker is reasonable, necessary and related to his April 20, 2020 industrial injury. As found, the evidence in the instant case persuades the ALJ that Claimant is at MMI for the effects related to his April 20, 2020 right finger injury, that he has not been tested for, but likely does not have CRPS or work related diagnostic or treatment needs for CRPS, that his visual disturbance is likely related to glaucoma and that he needs no further maintenance treatment to cure and relive the symptoms caused by his April 20, 2020 injury or prevent deterioration of his work-related condition. On these issues, the ALJ credits the opinions of Drs. Burns, Meyer, Mathwich and Larsen.

Claimant's Entitlement to Temporary Total Disability (TTD) Benefits

N. To receive temporary disability (TTD) benefits, Claimant must prove the injury caused a disability. In addition, the claimant must prove that the industrial disability lasted greater than three working days. Section 8-42-103(1), C.R.S. 2001; *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability to effectively and properly perform his/her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

O. In this case, the persuasive evidence supports a conclusion that Claimant has failed to establish his entitlement to temporary benefits, having failing to show that he missed work as a result of his work injury. Indeed, Claimant's restrictions were accommodated and he performed modified duty work at full wages following his April 20, 2020 injury to May 15, 2020 when he removed himself from work for an extensive length of time based upon COVID like symptoms. After presenting successive recommendations for isolation from separate "Little Clinic" offices in Erie, Parker, and Westminster Colorado over the next several weeks, Claimant failed to return to work on July 2, 2020, the date the last self-isolation period ran out. Consequently, Employer sent an approved modified job offer which provided that Claimant was to start modified duty on July 31, 2020. The evidence presented supports a conclusion that Claimant did

not contact the employer and did not appear for the modified duty position approved by his authorized treating physician. Consequently, he was terminated. Accordingly, Claimant's wage loss is not attributable to his industrial injury, but rather his conscious decision not to appear for modified duty. Under C.R.S. § 8-42-103(1)(g), Claimant has failed to establish his threshold entitlement to temporary benefits.

P. As noted above, Claimant returned to work for Employer but was subsequently terminated on September 30, 2020 after Employer gave Claimant ample time to appear for modified duty. Moreover, the evidence presented supports a conclusion that Claimant failed to establish that his condition objectively worsened after his termination date. It is well settled that a claimant who might otherwise be considered disabled is not eligible for TTD benefits if he/she was "responsible for termination of employment." *Kerstiens v. All American Four Wheel Drive*, W.C. No. 4-865-825-04 (August 1, 2013). Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). Here, the evidence presented persuades the ALJ that Claimant is responsible for his separation from employment and his resulting wage loss.

Q. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996) (unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008).

R. Considering the entire evidentiary record, the ALJ concludes that Claimant was responsible for the termination of his employment. Claimant exercised a degree of control over the circumstances resulting in his termination by repeatedly ignoring Employer's pleas to present COVID testing results and failing to report to modified duty on July 31, 2020 despite the position being approved by his authorized workers' compensation medical provider, Dr. Burns. The ALJ concludes that any employee would reasonably expect the failure to report for work to result in the loss of employment. Because his termination was not compelled by the natural consequence of the work injury and because he failed to establish a worsening of his condition, Claimant is "responsible" for his wage loss and is not entitled to TTD. Accordingly, the claim for such benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request to set the MMI and impairment rating determinations of Dr. Larsen is denied and dismissed.

2. Claimant's request for additional medical benefits following his release from care by Dr. Burns from Fenix Health LLC, Colorado Springs Neurological Associates, Vision Institute is denied and dismissed. Claimant has not met his burden to prove entitlement to additional reasonable, necessary or related maintenance benefits, including but not limited to treatment for CRPS, his vision, or any other conditions. Accordingly, Claimant's claim for maintenance medical benefits at this time is also denied and dismissed.

3. Claimant's request for TTD benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

Dated: June 23, 2023

Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-212-530-001

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he sustained a compensable injury on May 10, 2022?

2. If Claimant sustained a compensable injury, did Claimant prove by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from December 6, 2022 to January 9, 2023?

3. If Claimant sustained a compensable injury, did Claimant prove by a preponderance of the evidence that medical care, including the neck surgery he underwent and the proposed elbow surgery, are reasonable, necessary and related?

Stipulations

The parties agreed to an average weekly wage (AWW) of $415.37.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 61 year-old man who worked for Employer as a driver. Claimant's primary responsibility included delivering vehicles to customers. (Tr. 18:14-20).

2. Claimant testified that on May 10, 2022, he and the commercial manager, [Redacted, hereinafter ZR], made a delivery to a customer in Delta, Colorado. Claimant was driving a high-profile vehicle that did not have running boards. Once the paperwork for the delivery was completed, Claimant was getting back into the vehicle and as he was doing so, he slipped and grabbed for the steering wheel with his right hand. He testified that felt a pop down his right shoulder and arm, and experienced some tingling and numbness. (Tr. 19:2-13).

3. Claimant further testified that after feeling the pop, his arms dropped onto the seat. He was able to get into the vehicle by crawling, and he drove back to Greeley. Claimant reported the incident to his manager [Redacted, hereinafter JM]. JM[Redacted] gave Claimant a list of medical providers to choose from to seek medical attention. (Tr. 20:1-19).

4. Claimant went to Workwell on May 13, 2022, and was evaluated by Lloyd Luke, M.D. Claimant told Dr. Luke he heard and felt a painful pop in his right upper extremity,

when pulling himself into the truck on May 10, 2022. He described experiencing a pop in his right shoulder area. (Ex. A). Claimant did not complain of neck or elbow pain.

5. Dr. Luke diagnosed Claimant with an injury to the brachial plexus. He ordered physical therapy, and restricted Claimant's work activities to no lifting, pushing, pulling or carrying more than five pounds with the right arm, and no climbing involving the right arm. (Ex. 6).

6. Claimant returned to see, ATP, Dr. Luke, on May 24, 2022. Claimant told Dr. Luke he felt worse. Specifically, Claimant reported experiencing more frequent and intense paresthesia and stinging pains down his right arm, and felt he was weaker in shoulder flexion and elbow supination and pronation. Dr. Luke ordered an EMG of Claimant's right upper extremity, an MRI of his right shoulder, and a physiatry consult with Greg Reichhardt, M.D. Claimant had been seeing Dr. Reichhardt, and he told Dr. Luke that Dr. Reichhardt was his pain specialist. (Ex. 5).

7. Dr. Reichhardt evaluated Claimant on June 29, 2022. Claimant explained he was pulling himself into a pick-up truck and felt a pop, but he was not sure where he felt the pop. Claimant also reported the onset of weakness and numbness in his right arm. Claimant did not report neck pain. Dr. Reichhardt noted Claimant's history of Poland syndrome with congenital hypoplasia of the right upper extremity, primarily in the forearm and hand, including the right pectoralis region. He noted treating Claimant for a prior injury and his forearm and hand did not look grossly different from Claimant's previous visits. Dr. Reichhardt diagnosed Claimant with ulnar neuropathy at the elbow, possible radial neuropathy at the elbow, and possible mild median neuropathy at the wrist. Dr. Reichhardt opined that Claimant's presentation was puzzling, particularly due to his "modest mechanism of injury." (Ex. B).

8. On July 8, 2022, Claimant saw Joshua Snyder, M.D., at Orthopaedic & Spine Center of the Rockies (OCR) for "right elbow pain."[1] Claimant told Dr. Snyder that on May 10, 2022, he was getting into a truck without a running board, and was reaching in with his left arm. He then reached over the steering wheel with his right arm to pull himself up when he "felt immediate pain in his elbow." Claimant reported the pain was "tolerable" but when he went to pick up a bottle of water, he experienced pain and weakness. According to the record, Claimant wanted Dr. Snyder to review the MRI of his right shoulder. The MRI of Claimant's right shoulder was normal, but he was to follow up with a hand and elbow specialist. Claimant did not report any neck pain. (Ex. E.).

9. Claimant told Dr. Luke he felt a pop in his right shoulder. He told Dr. Reichhardt he felt a pop, but was not sure where it was. Claimant told Dr. Snyder he felt immediate pain in his elbow. Claimant did not report neck pain to any of these doctors. The ALJ finds that the descriptions of his injury, which Claimant gave his medical providers, were inconsistent and not credible.

---

[1] Dr. Snyder operated on Claimant in December 2020, performing a right shoulder arthroscopy with labral repair, biceps tenotomy and decompression of cyst and labral debridement. (Ex. E).

10. On July 28, 2022, Claimant returned to OCR and was examined by Bret Peterson, M.D. Claimant had a chief complaint of forearm weakness and stiffness. Claimant told Dr. Peterson he was injured when he pulled himself into his work truck, lost his balance and used his right arm to stabilize himself. He said he "felt some kind of pop and subsequently some pins and needles in his arm and hand." Claimant reported the thing he was upset about was the he could not play golf. Dr. Peterson opined "[w]hile there is electrodiagnostic evidence of median nerve entrapment at the wrist and elbow ulnar nerve entrapment, I am not convinced clinically that these are responsible for his predominant symptoms and certainly what may have occurred at his workplace injury." (Ex. E).

11. Claimant testified he received a Notice of Contest on or about August 18, 2022, and "everything stopped at that point." (Tr. 21:3-9). Claimant's personal physician, Stacy Garber, M.D., at Family Physicians of Greeley, ordered multiple MRIs and referred Claimant to Hans Coester, M.D., at U.C. Health. Dr. Coester was familiar with Claimant because he had performed multiple back surgeries on Claimant. (Ex. D).

12. Zachary Hitchcock, PAC, evaluated Claimant on November 15, 2022, because Claimant wanted an opinion about his cervical spine. Mr. Hitchcock noted in the record that Dr. Garber referred Claimant for evaluation of "cervical disc herniation" and that the cervical MRI that Dr. Garber ordered, showed cervical spondylosis C5-C6. (Ex. D). Claimant told Dr. Hitchcock that he injured himself at work when he "grabbed onto something with his right arm to avoid falling." Claimant reported having progressive issues with his right upper extremity, decreased strength, and altered sensation with occasional zingers down his right arm. Claimant never reported any popping, nor did he describe the mechanism of pulling himself into the truck.

13. There is no objective evidence in the record that Claimant reported experiencing cervical spine pain to either Dr. Luke or Dr. Reichhardt. The ALJ infers that Claimant never reported having cervical spine pain to Dr. Luke or Dr. Reichhardt.

14. Dr. Coester, diagnosed Claimant with C5-6 and C6-7 disk disease and cervical spondylosis with spinal cord impingement and nerve root compression with pain and weakness in the right upper extremity. Dr. Coester operated on Claimant on December 6, 2022. (Ex. 14).

15. Claimant testified that the surgery performed by Dr. Coester helped him restore some of his strength and that he regained movement in some of the fingers in his right hand. Claimant testified that his strength is about 60% better following the surgery as compared with his strength immediately following the work incident. (Tr. 23:9-16). Claimant testified he believed he returned to work January 8, 2023, after being off for about four and a half weeks. (Tr. 22:16-24).

16. Claimant testified he has Poland's Syndrome, and this affected the development of his right arm. Claimant testified that his right upper extremity has always been a little weaker than his left side, by 10-15%, but he has been able to compensate for his limitations his entire life has been able to participate in activities including collegiate baseball. (Tr. 24:12-25:12).

17. Claimant suffered a prior neck sprain while pulling weeds at work in 2016, which resulted in a Workers' Compensation claim. (Ex. H). On June 10, 2016, James Rafferty, D.O. evaluated Claimant and diagnosed him with a "contusion and strain of right shoulder, cervical strain and possible C6 radiculopathy." Dr. Rafferty placed Claimant on restrictions that included no forceful use of the right shoulder, no use of the right arm at or above shoulder level unless stretching. (Ex. C).

18. Claimant testified that this injury resolved and he got better. (Tr. 51:6-10). He testified that the injury did not require any extensive treatment. He did not have physical therapy, an MRI or surgery as a result of the neck sprain that was diagnosed by Dr. Rafferty in 2016. (Tr. 49:15-21). Claimant testified that his neck symptoms resolved and that the 2016 claim was primarily for his back and hip. He continued treatment with Dr. Reichhardt for the back and hip issues. He underwent back surgery and multiple hip surgeries as a result of the work injury of 2016. (Tr. 51:17-52:7).

19. On October 1, 2020, Claimant presented to Dr. Snyder for right shoulder pain after dismounting a stationary bike that began to tip over, and reaching forward with his right shoulder to grab the bike. Claimant complained of increasing soreness going into his neck as well as decreased strength, numbness and tingling down into his fingers. In February 2023, Claimant was still complaining of numbness, tingling and weakness in his fingers as documented in by Dr. Peterson. (Ex. E).

20. Despite Dr. Reichhardt's diagnosis and reference to C6 radiculopathy, Claimant did not disclose his prior neck conditions, or his seeking treatment for possible C6 radiculopathy with his providers. There is no objective evidence in the record that Claimant shared this information with Dr. Luke, Dr. Reichhardt, Mr. Hitchcock, Dr. Peterson, Dr. Snyder or Dr. Coester, who eventually performed the cervical surgery. (Tr. 38:8-21; 40:10-41:16; and 79:9-21).

21. The ALJ finds that Claimant failed to tell any of his providers in the instant claim about his prior neck complaints and possible C6 radiculopathy.

22. Claimant testified that prior to the May 10, 2022 work incident he did not have any neck or elbow pain. (Tr. 18:16-21). The ALJ does not find this testimony credible.

23. Claimant testified he needs additional treatment for his injuries, including treatment for a compressed nerve in his elbow. (Tr. 27:6-12). Dr. Peterson diagnosed Claimant with an ulnar nerve entrapment in the right elbow. (Ex. 17). And Dr. Reichhardt opined that it was reasonable for the claimant to consider ulnar transposition at the elbow with Dr. Peterson. (Ex. 7).

24. Respondents retained Lawrence Lesnak to perform an independent medical examination (IME). As a part of the IME, Dr. Lesnak asked Claimant about his medical conditions. Claimant told Dr. Lesnak he had been diagnosed with hypercholesterolemia and diffuse polyarthritis and depression. Dr. Lesnak asked about other medical conditions, and Claimant denied the same. When Dr. Lesnak asked Claimant to remove his shirt for the examination, he noticed that Claimant's right chest musculature was

absent with atrophy of his right upper extremity. Claimant conceded he had Poland Syndrome after Dr. Lesnak commented on the condition. Claimant also failed to disclose any prior medical care for prior cervical radiculopathy, despite being seen for this condition. (Tr. 60:2-61:12).

25. Dr. Lesnak testified that some expected symptoms associated with Poland Syndrome included weakness and limited range of motion on the underdeveloped side of the body. (Tr. 64:16-24). Claimant had difficulty with supination and pronation and would have to adapt to do certain things. (Tr. 65:9-12). While Claimant testified he had difficulty with supination, Dr. Lesnak documented that Claimant had chronic difficulty with pronation and supination of his right forearm for many decades. (Ex. J).

26. Dr. Lesnak is the only physician who had access to Claimant's pertinent prior records, including those related to Claimant's neck issues and the cervical radiculopathy reports. Unlike the other providers, Dr. Lesnak was able to consider the prior conditions as part of his causation analysis.

27. Dr. Lesnak testified that Claimant's EMG results displayed chronic findings, which are indicative of at least six months or more of pathology. This is distinguishable from acute findings that are present up to several weeks after the accident. (Tr. 70:4-9). He also credibly testified that radiculopathy is an abnormality involving the nerve root and this is identified either through objective EMG findings or clinical findings such as muscle atrophy rather than subjective findings. Some symptoms associated with radiculopathies include weakness, tingling, numbness, and poor range of motion. (Tr. 72:4-20). Claimant told Dr. Lesnak he was experiencing ongoing diffuse weakness and numbness, which are symptoms consistent with radiculopathy. (Ex. J).

28. Dr. Lesnak testified that neuropathic pain-blocking agents, such as Gabapentin are typically prescribed for radiculopathy. Claimant had been taking 600 mg of Gabapentin for the last few years with no change in dosage. (Tr. 73:4-20) Claimant denied taking Gabapentin for radiculopathy, and testified he took it for nerve damage in his right hip. (Tr. 51:11-14).

29. Dr. Lesnak credibly testified that the October 13, 2022 cervical spine MRI showed chronic age-related findings that included multilevel degenerative disc changes, bone spurs, and arthritis with no evidence of any acute findings. (Tr. 74:17-21). He opined that there was no evidence on any diagnostic testing of any signs of injury, trauma, or aggravation of pre-existing conditions. (Tr. 80:22-24). He credibly testified that the May 10, 2022 incident did not result in any disability. (Tr. 81:9-18).

30. Dr. Lesnak credibly testified that the cervical spine surgery Claimant underwent on December 6, 2022 was not reasonable, necessary, or work-related. Specifically, there was no indication Claimant injured his neck in this claim or aggravated any preexisting pathology. Instead, it was the result of chronic conditions. (Tr. 77:2-15). Dr. Lesnak also credibly testified that the elbow surgery recommended by Dr. Peterson is not reasonable, necessary or work-related. Dr. Lesnak explained that the two EMGs showed mild to moderate ulnar neuropathy that was chronic. Lastly, he opined there was no objective

evidence that Claimant injured his elbow and developed or aggravated the chronic nerve pathology. (Tr. 76:18-79:8).

31. The ALJ finds Dr. Lesnak's opinions, specifically those that the alleged incident did not cause the need for medical care or disability, and that neither the elbow surgery nor the neck surgery were reasonable, necessary or causally related to the alleged work injury, are credible and persuasive.

32. The ALJ finds that Claimant's failure to provide his other medical providers recited herein with a complete picture of his medical history ultimately undermines the credibility and persuasiveness of opinions that are contrary to those Dr. Lesnak's.

33. As found Claimant's description of the incident is inconsistent and not persuasive. Based on the totality of the evidence, the ALJ finds that Claimant did not prove by a preponderance of the evidence that he suffered a compensable injury on October 10, 2022.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict

by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa Cnty. Valley School*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

The mere occurrence, however, of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dep't Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *Boulder*, 706 P.2d at 791; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

It is undisputed that Claimant was working on May 10, 2022, when the incident occurred. Claimant, however, failed to prove by a preponderance of the evidence that he suffered a compensable injury. As found, Claimant was neither credible nor persuasive. He reported differing sources of pain and failed to disclose his prior neck injury for which he underwent some treatment and received a diagnosis of possible C6 radiculopathy to his providers. The medical records also contradict Claimant's testimony that his neck condition resolved, as there was documentation of ongoing neck pain with numbness and tingling in 2020.

Dr. Lesnak reviewed Claimant's prior records, including those documenting pre-existing arm and neck symptoms, and he made a causality determination based on a comprehensive understanding of the extent of Claimant's condition. Dr. Lesnak credibly opined that it is not medically probable that the Claimant sustained an injury requiring medical care or causing disability. He also credibly testified that there was no medical evidence to support aggravation of any preexisting condition either. Dr. Lesnak's opinion supports that any incident of May 10, 2022 did not result in a compensable injury. The totality and weight of the evidence supports that even if an incident did occur on May 10, 2022, Claimant did not sustain a compensable injury.

Claimant Failed to Prove Entitlement to an Award of Medical Benefits

In the event of a compensable injury, an employer must provide an injured employee with reasonable and necessary medical treatment to cure and relieve the effects of the injury. § 8-42-101(1)(a) C.R.S. The employee, however, must prove a causal relationship between the injury and the medical treatment for which he is seeking benefits. *Snyder v. ICAO*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). Because Claimant has failed to establish a compensable work injury for the reasons set forth above, he has also failed to prove that he is entitled to reasonable and necessary medical benefits related to this claim.

Further, even had Claimant met his burden of proof, as found, the ALJ finds the opinions of Dr. Lesnak to be credible and persuasive that neither the elbow surgery nor the neck surgery are reasonable, necessary, or related to the May 10, 2022 claim. The treatment that Claimant underwent, such as the cervical spine surgery, and the proposed elbow surgery are related to chronic conditions that are unrelated to the May 10, 2022 claim.

Claimant Failed to Prove Entitlement to an Award of TTD Benefits

An award of TTD benefits is payable if the following conditions exist: (1) the injury or occupational disease causes disability, (2) the injured employee leaves work as a result of the injury, and (3) the temporary disability is total and lasts more than 3 regular working days. *PDM Molding, Inc. v. Stanberg*, 989 P.2d 542, 546 (Colo. 1995). TTD continues until the employee returns to regular or modified employment. § 8-42-105(3), C.R.S. Because Claimant has failed to establish a compensable work injury for the reason as set

forth above, he has also failed to prove that he is entitled to temporary total disability benefits related to the claimed industrial condition. Specifically, any time off work following the surgical procedure is not work-related.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits is denied and dismissed.

2. Claimant's request for TTD benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 28, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-176-104-002

ISSUES

- Respondents are challenging the determination of the Division IME (DIME) doctor that the Claimant is not at MMI.

- Claimant requests additional medical care to cure and relieve the Claimant for his injuries to his neck, left upper extremity and knees.

- Whether the DIME opinions on MMI and Impairment are void for Claimant's violation of Rule 11-4(B)(2).

FINDINGS OF FACT

1. Claimant was employed as a truck driver for the employer driving a vehicle that removes lane stripes on the highway when he was injured in a motor vehicle accident. On June 21, 2021, he was driving south bound on Interstate 25 approaching University Boulevard in the dark and in heavy rain when he encountered a concrete barrier on the highway that was not readily visible under the conditions. He did not see the barrier prior to impact and collided with the concrete "jersey" barrier. Claimant does not recall the collision, but the incident was recorded on a "dash-cam" and that video was submitted into evidence.

2. After the collision occurred, Claimant exited the vehicle and walked around to assess the situation including whether any other vehicles were involved in the collision. Claimant called his supervisor and his supervisor came to the scene and drove him to Aurora Medical Center. Claimant underwent treatment at Aurora Medical Center and received treatment for his left shoulder and left knee.

3. On June 22, 2021 Claimant presented to UCHealth where he was seen by Scott Rinehart, PAC. At that visit Claimant had soreness in his left shoulder, left knee, and down his head. He also had a contusion on his left bicep and abrasions on both forearms and scalp. Claimant was provided with work restrictions of carrying or lifting of no more than 25 pounds from floor to waist, no overhead reaching, no kneeling, no squatting, and no driving.

4. On July 1, 2021 Claimant returned to UCHealth and was seen by P.A. Payton. Contained in the records is a questionnaire filled out by Claimant. In that questionnaire, Claimant is asked to list any specific concerns or issues he would like to address during that day's visit. He hand wrote "Shoulder and arm hurting a lot. Difficulty sleeping because of pain. Pain comes and goes but never fades completely. Radiates from my shoulder down my arm and up my neck". Similarly, the follow up questionnaire has a review of systems and under the musculoskeletal section Claimant checked neck pain both now and in the past. Despite the Claimant's identification of the neck as a

concern, there is no mention in the narrative portion of the chart note of the neck as being injured, evaluated or requiring treatment.

5. Claimant continued to treat at UCHealth in July and August for left shoulder pain and left knee pain. Claimant was seen by Dr. Larimore via telehealth on September 30, 2021 with ongoing complaints of pain in the left shoulder and left knee. Dr. Larimore refilled Claimant's medications and referred him to Dr. Michael Simpson for an orthopedic evaluation.

6. Dr. Simpson saw Claimant on October 11, 2021. Claimant was complaining of left shoulder and left knee pain. Dr. Simpson recommended an MRI arthrogram for the left shoulder and a corticosteroid injection for the left knee.

7. The MRI was reviewed with Claimant on November 10, 2021. Claimant was seen on that date by P.A. Eathough. The MRI showed articular sided fraying of the supraspinatus, labral tearing with biceps involvement and some AC joint arthritis. Mr. Eathough recommended arthroscopic surgery for Claimant's left shoulder. Mr. Eathough also noted that the Claimant reported some left-sided lateral neck pain. Mr. Eathough was not sure if the neck pain would be alleviated by the shoulder surgery.

8. Dr. Simpson performed arthroscopic shoulder surgery on Claimant's left shoulder on December 9, 2021. Surgery consisted of an arthroscopic biceps tenodesis left shoulder, arthroscopic inferior and anterior - inferior capsulorrhaphy, arthroscopic subacromial decompression, and arthroscopy left shoulder with extensive debridement including debridement of posterior-inferior labrum and anterior rotator interval.

9. On December 12, 2021 Claimant was seen by Dr. Larimore for post-surgical follow-up of the left shoulder and recheck of the left knee. Dr. Larimore noted that Claimant was having some right knee difficulty and explained to Claimant that the right knee "would not be covered under this claim."

10. At a follow-up visit with P.A. Eatough on January 10, 2022 it was noted that Claimant's left shoulder was doing well. Mr. Eatough went on to note that Claimant was still having some neck tenderness and encouraged him to bring this up to his authorized treating physician and "work comp" for further evaluation and workup if warranted.

11. Claimant was seen by Elizabeth Bisgard, MD on April 7, 2022. At this visit Claimant gave Dr. Bisgard a detailed history of how he was injured. Furthermore, Claimant showed Dr. Bisgard the dash cam video of the accident. Dr. Bisgard noted that the video showed Claimant striking a jersey barrier. According to the office note of this visit, Claimant told Dr. Bisgard that as he progressed in rehab, his shoulder improved but that cervical spine pain has not. Claimant also told Dr. Bisgard that on some mornings he wakens with no pain but more often than not he awakens with 1-2/10 cervical pain which worsens as the day progresses going up to a 7/10 pain. Claimant related that driving his work truck, manipulating tools, bilateral cervical rotation and flexion extension increase his neck pain. Claimant also related his migraine headaches are more frequent going from one to two a month to 2-3/week. Dr. Bisgard performed a physical examination which

revealed tenderness to palpitation in the bilateral cervical spine without spasm along with decreased range of motion.

12. Dr. Bisgard requested an MRI of the cervical spine due to the chronicity of the symptoms and the mechanism of the injury. Dr. Bisgard opined that her exam is most consistent with cervical facet symptomatology.

13. In a Rule 16 record review dated April 8, 2022 concerning the causality of Claimant's cervical neck syndrome Dr. Gary Zuehlsdorff opined that there is "limited causality" and that Claimant's shoulder surgery could have caused pulling of the cervical spine musculature causing pain and spasm. Dr. Zuehlsdorff wrote that 4-6 chiropractic treatments would be a reasonable treatment modality for the neck.

14. The MRI of the cervical spine taken on April 26, 2022 showed the follow findings:

> 1. At C7-T1 there is stenosis secondary to complex disc bulging and congenital factors with left C8 nerve impingement of the cord.
>
> 2) At C6-7 there is spinal cord compression on the left side secondary to disc protrusion with associated crowding impingement of the proximal left C7 nerve.
>
> 3) At C5-6 there is combined left sided disc protrusion with left ventral cord impingement and probable impingement of the left C6 nerve. There's crowding of the right side of the cord secondary to the disc bulging.
>
> 4) At C4-5 there is disc bulging with moderate left foraminal stenosis and mild left lateral recess stenosis.
>
> 5) At C3-4 there is mild cord impingement and moderate left foraminal stenosis and mild left lateral recess stenosis.

(Claimant's Exhibit 42, p. 348).

15. In her June 1, 2022 note, Dr. Bisgard discussed with Claimant the PT he was receiving in April 2021 for a pre-existing work-related left shoulder injury. Claimant told Dr. Bisgard that in the past he had experienced cervical discomfort and occasional numbness in his hands but it did not limit his function. Dr. Bisgard wrote that she reviewed the PT records from April 26, 2021 through June 18, 2021 and noted that while Claimant was having some neck stiffness and bilateral hand numbness in the beginning of his PT sessions that by May 21, 2021 he was reporting significant improvement and his symptoms from that day up to June 21st was located in the left shoulder. Dr. Bisgard also disagreed that the medical records don't reflect cervical spine problems until 4 months post-accident. Dr. Bisgard reviewed the July 5, 2021 intake paperwork which according to her "clearly documented" that Claimant had neck pain. In addition, Dr. Bisgard noted that Claimant also reported neck pain on September 10, 2021 which was described as stabbing with a dull ache. Dr. Bisgard's opinion regarding causation was that while

Claimant had some cervical symptoms prior to his injury he had a "substantial worsening" following the motor vehicle accident which has not returned to baseline and therefore "meets the definition of permanent aggravation." Dr. Bisgard noted that Claimant has unresolved issues with his cervical spine that need treatment.

16. Following the denial of treatment for the cervical spine, Dr. Bisgard placed the Claimant at maximum medical improvement and assigned a 4% impairment rating of his left upper extremity, after apportionment.

17. As of the date of the hearing, Claimant has not received any treatment for his neck other than physical therapy, primarily for his shoulder, but also therapeutic for his neck.

18. Respondents filed a Final Admission of Liability for the rating and Claimant then timely requested a Division IME (DIME). The DIME was performed by Dr. Rook. Dr. Rook determined that the Claimant was not at MMI since he required curative care for his cervical spine and the need for this treatment was work related. Specifically, he recommended diagnostic and potentially therapeutic spinal injection therapy, which could include an epidural steroid injection versus facet or medial branch block or selective nerve root blocks. He also recommended an electrical study of Claimant's left arm. Finally, He recommended an orthopedic evaluation for both of his knees.

19. Dr. Rook opined that both knees were symptomatic due to motor vehicle accident. He testified that "immediately after the motor vehicle accident, he had severe left-knee pain, because his left knee had struck and penetrated through the dashboard and he was limping. And because of the alteration of his gait, he was bearing more weight on his right leg. And states that within a month of the accident, he was having right knee pain; therefore I believe the worsening of his right knee condition is associated with the alteration of his gait due to the left injury - - left knee injury, which is from the accident. And with that in mind, I chose to provide an impairment rating for range-of motion loss of the right knee. So that was my reasoning why to rate it. I thought it wasn't a direct result of the initial accident, but was an indirect result of sequela from the original accident"." (Rook transcript 4/3/2023, p. 24).

20. Following the DIME with Dr. Rook, Dr. Brian Mathwich performed an IME at the request of Respondents on March 6, 2023. With respect to his cervical spine, Dr. Mathwich opined that Claimant had a temporary exacerbation of a preexisting issue that had resolved and Claimant was back to his baseline. With respect to Claimant's right knee, Dr. Mathwich also testified that "limping for a short time on a - - on an injured extremity is not going to cause impairment in the opposite extremity. And that's why I did not include that as a claim-related injury". (Hearing transcript p. 47).

CONCLUSIONS OF LAW

A. Respondents did not overcome the DIME determination that the Claimant is not at maximum medical improvement.

A DIME's determination regarding Maximum Medical Improvement is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing standard also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME's whole person rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc.*, W.C. No. 4-842-550-01 (March 18, 2016).

Respondents failed to overcome the DIME's determination that the Claimant is not at MMI due to the need for cervical treatment which is causally related to the compensable work injury rating by clear and convincing evidence. Dr. Mathwich's testimony and report constitutes a difference of opinion as to the causal connection of Claimant's cervical spine problems and that of the DIME opinion from Dr. Rook. Additionally, the authorized treating physician, Dr. Bisgard is also of the opinion that the Claimant's cervical spine symptoms are due to a work related aggravation of the Claimant's preexisting cervical condition and requires treatment. Unfortunately, that treatment was denied based on a Rule 16 review. Since the carrier denied authorization of any treatment for the neck, Dr. Bisgard placed the Claimant at MMI.

I find the opinions as to causation of the cervical spine symptoms offered by Dr. Rook and Dr. Bisgard, in this case, to be credible and persuasive. Furthermore, Respondents' IME, Dr. Mathwich does not deny that the Claimant sustained a cervical spine injury, but his opinion is that the injury sustained was a temporary exacerbation rather than a permanent injury. This is a difference of opinion and I conclude that it is not sufficient to overcome Dr. Rook's causation opinion by clear and convincing evidence.

B. Causal relationship of Claimant's right knee

There is no dispute that the Clamant sustained an injury to his left knee in the motor vehicle accident. What is in dispute is whether Claimant's right knee symptoms are work related due to an altered gate. Initially, a determination as to whether the right knee injury is a scheduled or non-scheduled injury must be made in order to determine the appropriate burden of proof. If the injury is a scheduled impairment, the DIME doctor's determination carries no added weight and Respondents are not required to overcome

that causation opinion by clear and convincing evidence. *See, Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). I determine that the right knee is a scheduled injury and Claimant has the burden of proof by a preponderance of the evidence to prove that the right knee is compensable. I conclude that Dr. Mathwich's opinion that the right knee is not related to the work injury is more persuasive than Dr. Rook's opinion that the right knee is work related due to altered gait. Claimant has failed to sustain his burden of proof by a preponderance of the evidence that the right knee is work related.

C. Violation of WCRP 11-4(2)(B)

Respondents argue that Claimant's showing of the video depicting the accident from the vehicle to the DIME physician is a violation of 11-4(2)(B) such that the DIME report should be stricken. However, such a drastic remedy is not mandated by Rule 11. WCRP 11-11 provides that "Non-compliance with this rule may be addressed thought the Dispute Resolution process described in Rule 16 or through any other mechanism of dispute resolution provided for in rule or statute." I conclude that it is not necessary to strike the DIME report of Dr. Rook since the video did not change the opinions of Dr. Rook as to causation of the neck injury but served only to reinforce his preliminary opinions as to causation. In his deposition transcript from April 3, 2023 the following question and answer were obtained.

"Q. And in viewing it then, do you think that you would have been able to have such a clear understanding of those - - that mechanism of injury and the incident itself without viewing that video? For instance, if you hadn't had that video and just reviewed the medical records?

A. Well, I think I would have came (sic) up with the same conclusion. But I think the video was a powerful reinforcement." (Rook Transcript 4/3/23 p. 20).

Based on this testimony, the ALJ concludes that Claimant's showing of the video to the DIME doctor had minimal effect on the conclusions of Dr. Rook that the Claimant is not at MMI and requires treatment for the neck and evaluation of the Claimant's left knee complaints. Furthermore, Respondents are not prejudiced by Claimant showing the dash cam video to Dr. Rook since their IME was given the opportunity to view it and ultimately, Dr. Rook should have also had the opportunity to view the video in order to address Dr. Mathwich's opinions based on his review of that video.

ORDER

It is therefore ordered that:

1. Respondent's request to overcome the DIME's determination that the Claimant is not at MMI is denied and dismissed.

2. Claimant is entitled to medical treatment to cure and relieve him from the effects of his compensable cervical spine injury.

3. Claimant's right knee symptoms are not work related. Claimant's left knee symptoms are work related and Claimant is entitled to an evaluation recommended by Dr. Rook for the left knee.

4. Respondents' request to invalidate the DIME opinions as to causation of the Claimant's cervical spine for a violation of the rules is denied and dismissed.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: June 28, 2023

Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-086-844-004

A hearing in the above captioned matter was held before Administrative Law Judge (ALJ), Richard M. Lamphere on April 26, 2023. By agreement of the parties, the proceeding was conducted virtually via video/teleconference and digitally recorded on the Google Meets platform between 1:00 and approximately 3:51 p.m. Claimant was present by video as was his attorney, Sean E. Goodbody, Esq. Paul Kruger, Esq. appeared via video on behalf of Respondents.

Hearing testimony was taken from Claimant and Dr. Jeffrey Schwartz. In addition to the aforementioned hearing testimony, the ALJ admitted the following exhibits into evidence: Claimant's Hearing Exhibits 1-14 and Respondent's Hearing Exhibits A-JJJ. The ALJ also took administrative notice of the American Medical Association (AMA) *Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised*).

On June 15, 2023, the undersigned ALJ issued a Summary Order. As part of his June 15, 2023 Summary Order, the ALJ determined that Claimant overcame the Division Independent Medical Examination (DIME) opinion of Dr. Linda Mitchell regarding MMI, but did not overcome her opinion regarding permanent impairment. The ALJ also determined that Respondents failed to establish that they were entitled to collect an asserted $89,595.44 overpayment in temporary total disability (TTD) benefits because of Dr. Mitchell's backdating of Claimant's maximum medical improvement (MMI) date. Indeed, the ALJ concluded that, "[b]ecause the alleged over payment arises from the backdating of Claimant's MMI date to November 28, 2018 and because the ALJ concludes that Claimant reached MMI on June 29, 2021 (a date past the May 16, 2021, last payment of TTD per Respondent's FAL), the ALJ concludes that Respondents have failed to prove, by a preponderance of the evidence, that they are entitled to collect the asserted ($85,595.44) overpayment in TTD benefits.

On June 21, 2023, Respondents filed an uncontested motion for a corrected order, asserting that $4,077.04 of the asserted $85,595.44 overpayment arose, not from the backdating of Claimant's MMI date, but because TTD benefits were paid beyond the date of Claimant's return to full wage work. Respondents request repayment of the asserted $4,077.04 overpayment in TTD paid while Claimant earned full wages between May 17, 2021 and June 26, 2021. Review of Respondent's motion and the evidence presented at the April 26, 2023 hearing, including Respondent's Hearing Exhibit B[1] and E[2], persuades the ALJ that the overpayment asserted by Employer did not arise completely from the backdated MMI date. Rather, the ALJ is convinced that

[1] Respondent Exhibit B is the General Admission of Liability dated July 6, 2021, which documents TTD termination on May 16, 2021, based on Claimant's return to full wages. The GAL documents a TTD overpayment of $4,749.23.

[2] Respondent Exhibit E is the indemnity log, which establishes that after Claimant's return to full wages, he received TTD benefits totaling $4,077.04 (May 17, 2021 – June 26, 2021).

$4,077.04 of the asserted $85,595.44 overpayment resulted from Claimant receiving TTD while simultaneously earning full wages. Accordingly, the ALJ agrees with Respondents that the portion of the June 15, 2023 Summary Order, which determined that the asserted overpayment resulted entirely from the backdated MMI date is erroneous and constitutes an inadvertent, but nonetheless, material mistake for which correction is warranted.

Accordingly, for good cause shown, the ALJ GRANTS Respondents' June 21, 2023, motion and issues this CORRECTED SUMMARY ORDER to reflect the following additional findings of fact, conclusions of law concerning the alleged overpayment in this case.

FINDINGS OF FACT

1. Claimant testified that he earns $52,000.00 per year working as a sales manager for a firearms optics company. He is married and his wife works outside the home earning approximately $55,000.00 annually.

2. Claimant and his wife share household expenses including a mortgage of $2,400.00/month. They do not have car payments but spend approximately $350.00/month on utilities, $90.00/month on internet services and $178.00/month for cell phone services. Claimant was unable to estimate a monthly cost for food but did indicate that he has approximately $60,000.00 in student loan debt for which he has a $700.00/month payment obligation; although he testified that he has only been able to make $100.00 to $200.00/month payments towards this loan.

3. Claimant testified that he has not recently been able to set any money aside to contribute to his savings account, which he estimated has a balance of approximately $2,500.00. He testified that his checking account has a balance of approximately $300.00 and that he has a retirement account with Employer that has an approximate value of $5,000.00, but only roughly $2,000.00 if he cashes it out.

4. Based upon the evidence presented, Claimant's household expenses total $3,718.00 assuming a student loan repayment obligation of $700.00 rather than the $100.00 - $200.00/ monthly payments he has been making. Conversely, Claimant and his spouse have a combined income of $107,000.00 annually or $8,916.67/month. Despite Claimant's protestations otherwise, the ALJ is convinced that Claimant's finances support a finding that he has the ability to repay the proven overpayment in TTD benefits of $4,077.04, even assuming additional expenses not testified to by Claimant including food and fuel costs. Indeed, ascribing an addition $1,000.00 in expenses to the household for such things as food and fuel leaves $4,198.67 in income from which a portion can be used to repay the proven overpayment in TTD benefits.

5. In this case, Respondents request repayment of the established overpayment at a rate of $500.00 per month or $125.00/week. Here the established overpaid benefits were paid out over a period of approximately six weeks. In order to

repay the overpaid benefits in a similar time frame, Claimant would need to remit $679.50 week to expunge the proven overpayment. Given that a reduction of $500.00/month from the balance of $4,198.67 would still leave Claimant $3,698.67/month in disposable income to meet additional living expenses combined with the fact that the requested $500.00/month payment is substantially ($554.50/month) less than the $679.50/week payment Claimant would need to remit in order to repay the overpayment in a similar time it took to pay out the TTD in question, the ALJ finds Respondents request for a repayment amount of $500.00/month reasonable. At $500.00/month or $125.00/week, it will take in excess of 8 months to repay an overpayment that took a mere six weeks to create. Simply put the ALJ finds Respondents proposed payment of $500.00 unlikely to create an undue financial hardship on the Claimant.

CONCLUSIONS OF LAW

A. When the parties are unable to agree upon a repayment schedule, the ALJ is empowered, pursuant to § 8-43-207(1) C.R.S. to conduct a hearing to "[r]equire repayment of overpayments. In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo.App. 2009) rev'd on other grounds, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 210), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy concerning repayment. This includes the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. See *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo.App. 1994).

ORDER

IT IS THEREFORE, ORDERED THAT:

1. Claimant shall repay Respondents a total of $4077.04 at a rate of $500.00/month. Claimant's first payment to Respondents is due the first of the month after this order becomes final and subsequent payments of $500.00 are due the first of every month thereafter until the overpayment is extinguished. Claimant's counsel shall contact Respondents' counsel to obtain the necessary details regarding where payments are to be sent.

2. Any and all issues not decided herein are reserved for future determination

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-176-637-001

ISSUE

1. Did Claimant proven by a preponderance of the evidence that he is entitled to maintenance treatment in the form of acupuncture and chiropractic treatment?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 63-year old man who works for Employer as a dock worker, and has worked for Employer since July 2003.

2. On May 12, 2021, Claimant suffered an admitted work-related injury. Claimant injured his neck, left elbow and shoulder. He received treatment from doctors at Concentra, including Stephen Danahey, M.D., who referred Claimant to specialist, John Sacha, M.D., for additional care. (Ex. A).

3. Dr. Sacha performed radiofrequency neurotomies bilaterally at C2-C3 and C3-C4 on Claimant. He also managed Claimant's medications. (Ex. 4).

4. In the September 26, 2022, Physician Progress Report, Dr. Sacha recorded Claimant was 20-30% better, but also noted Claimant was "such a poor historian" it was somewhat difficult to say how he was doing. Dr. Sacha recommended "physical therapy x8 post radiofrequency with strengthening, conditioning and posturing." He did not mention, nor recommend, acupuncture or chiropractic care. (Ex. B)

5. Dr. Sacha saw Claimant for a follow-up appointment on October 10, 2022. Dr. Sacha stated he wanted Claimant to finish physical therapy, and then he would be at maximal improvement. Dr. Sacha again did not discuss, nor did he recommend, chiropractic care and/or acupuncture as treatment recommendations. (Ex. B).

6. On November 21, 2022, Dr. Sacha saw Claimant for an impairment rating. Dr. Sacha noted Claimant had completed all care "without any improvement whatsoever," and Claimant had a "long complex and very sophisticated workup and treatment, but [had] no improvement whatsoever". He further reported that with Claimant there was a "high risk of over utilization of medical resources." Dr. Sacha placed Claimant at maximum medical improvement (MMI) and he recommended maintenance care consisting of eight physical therapy visits, a gym membership with pool pass for six to twelve months and a couple of follow-up visits. He made no mention of chiropractic care or acupuncture. (Ex. B).

7. Claimant saw Dr. Sacha again on December 5, 2022. Dr. Sacha noted in the medical record that Claimant "has completed all care, is at maximum medical improvement, appropriate for case closure and impairment rating." Claimant told Dr. Sacha that he "needs surgery" but could not articulate why he felt he needed surgery. Dr. Sacha explained that cervical facet syndromes are not surgical problems, and Claimant was not a candidate "for further aggressive care." According to Dr. Sacha, Claimant had "progressively become more and more nonphysiologic as time has gone and has progressively gotten to the point where [Dr. Sacha] feel[s] there is a nonmedical component to his ongoing complaints." Dr. Sacha reported an impression of nonphysiologic presentation and physical findings "not consistent with someone who has been having true pain." He found Claimant to have an "extremely high risk for overutilization of medical resources." Dr. Sacha recommended continuation of post-MMI maintenance care, but he did not recommend or discuss chiropractic care or acupuncture. (Ex. B).

8. ATP, Dr. Danahey placed Claimant at MMI on December 9, 2022. Dr. Danahey noted Claimant reported "some ongoing discomfort," but he did not prescribe Claimant any medication. In addressing the need for medical care after MMI, Dr. Danahey noted "N/A" or not applicable. (Ex. A).

9. Claimant returned to see Dr. Sacha on December 23, 2022. Dr. Sacha noted that there had been a "trial of some chiro and acupuncture", but Claimant did "not want to move forward with that." Dr. Sacha, however, without explanation, referred Claimant for chiropractic care and acupuncture with Dr. Aspegren. (Ex. B).

10. Dr. Sacha saw Claimant on January 19, 2023 and February 17, 2023. At both appointments, Dr. Sacha noted that all care had been declined, so they were taking a "wait and see approach." He noted the presence of cervical facet syndrome and that Claimant's conditions were stable. There was no mention as to the necessity of either chiropractic care or acupuncture.

11. Claimant testified he previously received acupuncture and chiropractic care, and his last care of this type was in the summer of 2021. Claimant testified, the acupuncture gave him some relief, but his last treatment was problematic. He further testified that the chiropractic care only gave him temporary relief.

12. There is no objective evidence in the record as to the amount of acupuncture and chiropractic care Claimant received, the dates of such treatment, or the overall efficacy of the treatment.

13. Claimant testified he still has pain at the base of his neck and on his trapezius from the May 12, 2021, admitted work injury. Claimant credibly testified that he would like to receive acupuncture and chiropractic treatment.

14. Dr. Sacha's prescription for chiropractic care and acupuncture was reviewed at Respondent's request by Eddie Sassoon, M.D. In a March 6, 2023 report, Dr. Sassoon

stated that the requested sessions of chiropractic care and acupuncture were not medically necessary. (Ex. C)

15. The ALJ finds that there is no objective evidence in the record as to why Dr. Sacha ordered chiropractic care and acupuncture.

16. The ALJ finds that Claimant failed to prove by a preponderance of the evidence that acupuncture and chiropractic care is medically necessary.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Post-MMI Medical Care

Claimant was placed at MMI on December 9, 2022, and Claimant's ATP, Dr. Danahey, noted that maintenance medical care after MMI was "N/A." There is no objective evidence in the record that Claimant's placement at MMI has been rescinded or

challenged. Thus, the appropriate legal standards for determining Claimant's entitlement to medical benefits are those applicable to post-MMI medical treatment. Generally, medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury may be awarded. § 8-42-101(1)(a)(I), C.R.S. As Claimant has been placed at MMI, no additional treatment is necessary to "cure" the effects of his May 12, 2021, admitted work injury.

Claimant is seeking post-MMI medical treatment in the form of acupuncture and chiropractic care as recommended by Dr. Sacha. Dr. Danahey, Claimant's ATP, specifically found that post-MMI medical care was not necessary, and he did not recommend chiropractic care or acupuncture for Claimant.

Claimant credibly testified that he experienced some unquantified relief from chiropractic care, and that that acupuncture improved his condition with the exception of the final session. Claimant testified that the last time he received acupuncture and chiropractic care was in the summer of 2021, nearly two years ago. As found, there is no objective evidence in record as to the amount of acupuncture and chiropractic care Claimant received, the dates he received the treatment, or the efficacy of the treatment. Claimant credibly testified that he wants chiropractic care and acupuncture. But at his December 23, 2022 appointment with Dr. Sacha, Claimant said he did not want to move forward with acupuncture and chiropractic treatments. Despite Claimant's position, Dr. Sacha prescribed chiropractic care and acupuncture for Claimant. Dr. Sacha, however, provided absolutely no basis or rationale for his recommendation.

An ALJ can order ongoing medical treatment post MMI if a claimant's condition can reasonably be expected to deteriorate so that a greater disability results without the ongoing care. *Milco Constr. v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1990). "[S]uch medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." *Id.* The record must reflect the medical necessity of any requested treatment. *Public Serv. v. Indus. Claim Appeals Office*, 979 P.2d 584, 585 (Colo. App. 1999); *see also Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995) (there must be substantial evidence in the record to support a determination of future medical treatment). Here, there is no objective or persuasive evidence in the record that Claimant's condition can be reasonably expected to deteriorate in the absence of chiropractic care and/or acupuncture.

As found, Claimant has failed to prove, by a preponderance of credible evidence, that he is entitled to chiropractic care or acupuncture.

ORDER

It is therefore ordered that:

1. Claimant's request for chiropractic care and acupuncture is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 30, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-213-399-002

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on February 27, 2023 on issues of compensability, medical benefits that are authorized, reasonably necessary and related to the alleged August 5, 2022 work injury, as well as average weekly wage, temporary total disability from August 6, 2022 and continuing and penalties for failure to insure and failure to admit or deny. Claimant listed permanent partial disability benefits, however, withdrew this issue as premature since her providers have not yet released her from care.

The Notice of Hearing was sent to the employer on March 17, 2023. The NOH sent to employer by the OAC was sent by mail and was not returned to the OAC. This ALJ makes the inference that Employer received notice of the hearing. Claimant also indicated that she forwarded the NOH by email and it was not returned to her either.

Claimant was provided with a pro se advisement. Claimant elected to proceed without counsel.

Claimant filed a Case Information Sheet dated May 17, 2023.

Claimant informed the court that she had been in contact with the Division and the Colorado Uninsured Employer's Fund through the third party administrator, Corvel.

Claimant also informed the court that she had been in contact with the liability insurer for the vehicle she drove and was advised that she was not covered as the vehicle had not been involved in an accident.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she was injured in the course and scope of her employment with Employer on August 5, 2022.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to medical benefits that are authorized, reasonably necessary and related to the alleged injury of August 5, 2022.

III. Whether Claimant has proven what her average weekly wage is at the time of the incident in question.

IV. Whether Claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability benefits from August 6, 2022 and continuing until terminated by law.

V. Whether Claimant has proven by a preponderance of the evidence that she is entitled to a penalty for Employer's failure to carry workers' compensation insurance.

VI. Whether Claimant has proven by a preponderance of the evidence that she is entitled to a penalty for Employer's failure to admit or deny the claim.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is 44 years old at the time of the hearing. She worked as a truck driver for 20 years, since 2001 with different employers, driving flatbeds, reefers (refrigerated trailers), pneumatic trucks (concrete powder containers), 53 foot eighteen wheelers, extended trailers and others.

2. Claimant worked for Employer as a Class A delivery driver beginning the week after July 4, 2022. Employer was a subcontractor of [Redacted, hereinafter XL] Logistics in Henderson, CO, but other than picking up loads from XL[Redacted], Claimant had no contract with XL[Redacted]. Employer required Claimant to send the bills of lading to Employer directly by email at the same email she use to email the Application for Hearing and the Notice of Hearing. Claimant was never provided with a physical address for Employer other than the one on Fraser Way in Denver CO, where Employer would keep his trucks, and trailers and Claimant would pick up the truck from that location. She conducted all her deliveries within the local areas close to Denver.

3. Employer provided the equipment, and always provided her with a specific schedule of delivery from which she was not to deviate. The only thing Claimant provided in order to carry out her work were her personal gloves and the reflective vest. Everything else Employer provided. Employer provided the truck, the trailer, tools, and paid for the fuel with his company card. Employer directed Claimant where to put gas in the truck, and Employer would meet Claimant at the gas station where he had a contract and could use his EFS Fuel Card. Claimant explained that when the driver fuels the truck, at the diesel pump they were required to put in the truck number, the trailer number, the mileage of the truck, and driver ID number and, if needed, any additives to the fuel. In her case, Employer would meet her and he would input the information because he had not issued Claimant her own card at that time like previous employers had done.

4. At the beginning of their relationship, Employer was very professional until her injury when he became very evasive. Later, Employer became unresponsive. Employer did not pay her for the last week of work and Claimant resorted to filing with the Division of Labor Standards and Statistics who advised her she was not an independent contractor and was entitled to wages and needed to file her claim with the Division of Workers Compensation, a separate entity within the Colorado Department of Labor and Employment.

5. On August 5, 2022 Claimant picked up the truck on Fraser Stree, which was white, with a green sign with Employer's logo on the truck, with the DOT matching the one she was assigned. There was a trailer on sight that belonged to Employer as well (with the same logo), but she was advised that it was not her assigned trailer. She did a pre-trip on the tractor truck, which every truck driver is required to do, checking the oil, the fuel, the tires, brakes, and everything else required in order to make sure the truck was safe to drive.

6. Claimant drove to XL[Redacted], located in Henderson, CO, a 25 minutes' drive. She was went to her assigned door, one of probably 100 freight doors, where her trailer No.[Redacted, hereinafter 123], was being loaded. Claimant parked in front of her trailer with the tractor truck, as if to hook up but she got out and locked up, went into the XL[Redacted] office where she was advised that they were finishing up loading the trailer. She located her pallet jack to use on the pallets, which was Employer's equipment. Once they closed up the back of the trailer, Claimant hooked up to the trailer.

7. Claimant again did a pre-trip on the trailer then pulled up to the outbound office to obtain the bill of lading. She looked at the bill of lading for the customer's address, she filled out her portion as the driver receiving product for delivery. (The customer would sign the bill of lading when they received the product being delivered.) Claimant opened up the trailer and compared her bill of lading with the freight that was loaded. Before she left the yard, she texted Employer and the XL[Redacted] representative that she had the load and was leaving the yard.

8. On August 5, 2022, she was driving a day cab with a 28 foot pup trailer, once she arrived at the place of deliver, she found that the freight to be unloaded was behind another pallet that was for a different delivery. She was using a pallet jack, the manual kind that was assigned to her, moved the load to the left, and then went to take the pallet and crate that she needed to deliver at this particular location. There was wood surrounding the pallet and freight, to protect it, going up to above Claimant's height. As she was moving the pallet jack, the wheels got caught and would not come out. She readjusted the pallet jack a little, then attempted to move it, while holding on to the top piece of wood that surrounded the freight. The wood broke, and the momentum of pulling the pallet jack and the wood breaking, sent her flying out of the back of the trailer. She attempted to catch herself on the way out but failed to grab onto the side of the trailer. She fell out of the back of the trailer, about 3 and one half to four feet, to the ground onto her left side.

9. She lost consciousness for some undefined amount of time and came to, noticing that the concrete was hot, and that she was laying on the ground. She hit the whole left side of her body, including her head, her left arm, shoulder, left wrist (which was swollen), ribs, left hip and left leg. No one came to her rescue. No one was there. She tried to get up, noting that she was very weak. When she did get up using the ICC bar (the rear impact bar or bumper), she noticed that the pallet jack and freight on the pallet were only about one foot away from falling off the rear of the truck. She did not see any individuals, so she made her way to the drivers' side door of the tractor. She normally used three point contact to get up into the truck, but because her left side was hurting so much, she was only able to grab onto the bar on the right to pull herself up. She dialed 911 to come get her. She also called Employer to let him know what was going on and so that he could come pick up the truck and trailer with the rest of the load. He must have been in the immediate area, because Employer, I.W. whom Claimant knew to be the owner, arrived before the ambulance.

10. When the EMTs arrived, they assessed her and they administered Fentanyl which helped her with the pain. She asked the ambulance driver to give her boss, I.W. the truck keys. Employer stated that he "hoped she was OK." And that was the last time

Claimant saw her employer. The ambulance took her to UCH Hospital Emergency despite Claimant asking to be taken to St. Joseph Hospital. She was evaluated, they took x-rays, and after a couple of hours of attention and care she was released.

11. Claimant contacted Employer multiple times, speaking with I.W. on the phone. Employer failed to provide Claimant with insurance information or a designated provider list. They discussed it on the phone but he was very vague and evaded her questions. Claimant later found out from the Division that Employer did not have workers' compensation insurance, which explained Employer's attitude and his breaking off all communications with her. Employer did request her ETF information. Claimant completed a Direct Deposit form for the [Redacted, hereinafter WA] and sent it to employer on August 15, 2022. Claimant spoke with multiple individuals at Division, who provided her guidance with regard to where to look for steps to take in proceeding with her claim. Division advised Claimant that Employer had not responded to their inquiries regarding Claimant's claim.

12. Claimant earned a base wage of $250.00 a day, $1,250.00 a week. Claimant was never able to speak with Employer about why her checks were short, after she was hired.

13. Claimant was seen at the UCH Hospital Emergency Care at the Anschutz Medical Campus on August 5, 2022. The ordered x-rays of her left wrist and chest. Claimant was diagnosed with a fall, initial encounter, with a closed nondisplaced fracture of scaphoid of left wrist, unspecified portion of scaphoid, initial encounter, closed fracture of one rib of left side, initial encounter. She was advised to continue to wear a splint until follow-up with either a primary care physician or sports medicine provider for repeat x-rays of her left wrist to evaluate for fracture. She was also advised that failure to wear the left wrist splint could lead to long-term arthritis. They provided acetaminophen and a Lidoderm patch while at the ER and prescribed Tylenol, 1000 mg every 6 hours for pain. Dr. Andra Farcas wrote that Claimant was unable to return to work until follow up on August 12, 2022.

14. Claimant was seen by Hayley Roberson, F.N.P.-C at UC Health Primary Care, Green Valley Ranch on August 10, 2022. Ms. Roberson stated that Claimant was under her care and took Claimant off work from August 10, 2022 through August 19, 2022. In a follow up on August 17, 2022 Ms. Roberson stated that Claimant continued to be off work.

15. On October 6, 2022 Ms. Roberson stated that Claimant she was able to return to work on a reduced schedule, with frequent breaks and a 20 lbs. restriction for lifting, pushing and pulling.

16. A chest CT on November 3, 2022, as read by Scott Loomis, M.D, showed an incompletely healed, nondisplaced fracture of the left anterolateral eighth rib. The CT also revealed some unrelated benign lung nodules on her liver and unrelated nodules in the right lung also believed to be benign. A nurse informed Claimant of the results on November 21, 2022.

17. Claimant was attended again by Nurse Hayley Roberson on May 25, 2023. She noted Claimant was a long time patient with work related accident on August 5, 2022

and was diagnosed with a left rib fracture. She stated that Claimant progressively improved and was able to start working. She stated that Claimant was likely to completely improve from the injury but that she continued with mild discomfort in the left side.

18. Claimant testified that she continued to have pain in the left knee, 8th left rib and left wrist that are related to the work related accident. She further stated that when she was seen initially she advised that her employer did not provide her with insurance information, and UCH took her Medicaid information. She stated that it was likely medical providers had been paid by Medicaid as neither UCH nor Medicaid had sought reimbursement from Claimant for her medical care.

19. Claimant stated that Employer failed to admit or deny her claim. In fact, Claimant had not heard from her employer again after he told her "let it be clear there will be no payment for your work." Claimant did not know how to interpret that information. She stated that Employer had not formally or explicitly made any admission or denial with regard to her claim for compensation.

20. Claimant testified that the lack of payments and Employer's failure to admit or deny the claim has been devastating to her to the point that she had to resort to living in a shelter, which has been very bad. She lost her car, by selling it very cheap in order to get money to live on. She stated she was depressed, stressed and financially strapped, and the lack of ability to care for herself had been horrible for her. She was accustomed to paying her bills and living off of her earnings but her inability to work, and her Employer's failure respond to her communications and to pay her while she was disabled, was extremely hard for her. She also had to resort to getting food stamps. Even now, she only has a temporary living arrangement. She was very confused by the fact that Employer did not have insurance, stating she was unaware that an employer could operate without insurance.

21. As found, Claimant has proven that it was more likely than not she was injured in the course and scope of her employment with Employer on August 5, 2023 when she fell off the back of a trailer while working for Employer injuring her left side, including her head, left shoulder, left wrist, ribs, left hip and left lower extremity.

22. As found, Claimant has shown she is entitled to medical benefits that are reasonably necessary and related including the emergent care she received and the follow up care at UCH.

23. As found, Employer failed to provide a designated provider list pursuant to statute and selection of a provider passed to Claimant. Claimant selected UCHealth and they are deemed authorized.

24. Claimant credibly testified that she earned $1,250.00 per week. As found, Claimant's average weekly wage is determined to be $1,250.00.

25. As found, Claimant has proven by a preponderance of the evidence that she was taken off work as of August 5, 2022 by the emergency physician and that status continued when she went under the care of Nurse Roberson until Claimant was release to return to work on May 25, 2023. Claimant is entitled to temporary total disability benefits from August 5, 2022 through May 2, 2023.

26. As found, the medical records are inconclusive regarding whether Claimant was placed at maximum medical improvement on May 25, 2023, was simply released to return to work or whether the release was to modified or her regular job of driving and delivering freight. The issue of TTD from May 25, 2023 and continuing is reserved.

27. Employer is found to be uninsured at the time of the work related accident of August 5, 2022 and Claimant is entitled to a penalty for failure to insure.

28. As found, Employer, to Claimant's significant detriment, failed to admit or deny the claim made by Claimant. Employer was at the site of the accident by the time the ambulance had arrived. Claimant has shown by a preponderance of the evidence that Employer knew or should have known his responsibility to admit or deny the claim within the statutory time period.

29. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to

be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

Claimant has proven that it was more likely than not she was injured in the course and scope of her employment with Employer on August 5, 2023 when she fell off the back of a trailer while working for Employer injuring her left side, including her head, left shoulder, left wrist, ribs, left hip and left lower extremity. Claimant's claim is determined to be compensable.

C. Medical benefits

Employer is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Claimant must establish the causal connection between the compensable event and the need for medical care with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116

(Colo. 1984); Industrial Commission v. Royal Indemnity Co., supra, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Authorization refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8–43–404(5), C.R.S.2011, gives employers or insurers the right to choose treating physicians in the first instance in order to protect their interest in overseeing the course of treatment for which they could ultimately be held liable. The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury, *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006), and if medical services are not timely tendered by the employer or insurer, the right of selection passes to the employee, *Andrade v. Indus. Claim Appeals Office*, 121 P.3d 328, 330 (Colo.App.2005).

Claimant has shown she is entitled to medical benefits that are reasonably necessary and related. Following Claimant fall from the trailer on August 5, 2022, Claimant immediately contacted 911 and was taken by ambulance to UCH Hospital for medical care. Claimant then selected UCH Primary Care, as Employer failed to provide her with a designated provider list. Claimant has proven by a preponderance of the evidence that Claimant's medical care through UCH was authorized, reasonably necessary medical treatment causally related to the August 5, 2022 accident.

23. In this matter, Employer failed to provide a designated list of providers pursuant to statute and selection of a provider passed to Claimant. Claimant selected UCHealth and they are deemed authorized. Further, Medicaid likely paid for Claimant's treatment at UCH Hospital and UCHealth Primary Care and otherwise financed Claimant's care. Employer is thus financially responsible for the payment of Claimant's medical expenses, including any outstanding lien from the Colorado Department of Health Care Policy & Financing due to payments made by Medicaid.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). Claimant credibly testified that she was contracted in July 2022 to work for $250.00 per day or $1,250.00 per week. As found, Claimant has proven that the fair approximation of her average weekly wage is $1,250.00.

E. Temporary Total Disability Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

The medical records from UCH Hospital and Nurse Roberson show that Claimant was unable to work from the day of her injury through May 24, 2023. On May 25, 2023 Nurse Roberson released Claimant to work. Claimant has clearly shown by a preponderance of the evidence that she is entitled to TTD benefits from August 6, 2022 through May 24, 2023 in the amount of $34,762.60. However, this ALJ cannot determine whether that release was to return to her to her full time job as a delivery driver or not. It intimates that Claimant continues to have limitations and Claimant credibly testified that she continued to have symptoms that limited her activities and ability to work. Claimant's claim for TTD benefits from May 25, 2023 and continuing are reserved.

F. Penalties

Insurance Coverage

Every employer subject to the provisions of the Workers' Compensation Act shall carry Workers' Compensation insurance. Sec. 8-44-101, C.R.S. Sec. 8-43-408(5), C.R.S.[1] in effect at the time of Claimant's August 5, 2022 work related injury provides,

> In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

[1] Due to statutory change as of July 1, 2017. The prior statutory provision of a 50% wage increase was paid to Claimant.

As found, Employer did not have Worker's Compensation insurance on or prior to Claimant's August 5, 2022 date of injury. Claimant spoke directly with her supervisor and boss on multiple occasions following the work injury of August 5, 2022. As found, Employer failed to disclose multiple times to Claimant whether he had workers' compensation insurance coverage. Claimant was informed by Division that no policy could be found for Employer, and that Employer had failed to respond to inquiries from Division. Employer knew or should have known about the accident and his obligations to carry insurance and or respond to Division inquiries regarding insurance and Claimant's claim. As found, it is determined that Employer failed to carry workers' compensation insurance. Neither did Employer file an admission or denial of the claim. Employer was given ample opportunity to respond to the claim and present a defense to these issues. Claimant emailed Employer copies of the Application for Hearing and the Notice of Hearing, the same email address which Claimant utilized to conduct her business with Employer. The Notice of Hearing was mailed to Employer by OAC to the mail address on record. None of the emails sent by Claimant nor the mail sent by the OAC were returned. Further, Employer failed to respond to Claimant's calls. As found, Employer was provided with notice of the hearing in this matter and failed to show. Claimant has shown by a preponderance of the evidence that a penalty is due for failure to insure.

As found, Respondent-Employer is liable for temporary total disability benefits and reasonable and necessary medical treatment related to the work injury. Based on Claimant's AWW of $1,250.00, Claimant's TTD rate is $833.33. Claimant is owed TTD benefits from August 6, 2022 through May 24, 2023, which is 292 days or 41 weeks and 5 days. Claimant is owed TTD benefits in the amount of $34,762.60. It is undisputed Respondent-Employer did not carry workers' compensation insurance at the time of Claimant's industrial injury. Accordingly, Respondent-Employer shall pay as a penalty an additional $8,690.65 (25% of $34,762.60) to the Colorado Uninsured Employer Fund.

Failure to Admit or Deny Liability

It if inferred by Claimant's statements at hearing that Employer knew of the work related injury as he was present when the ambulance arrived and spoke with Claimant about the accident. Employer did not respond to Claimant's filing of the claim, to her emails, to her calls, to Division's inquiries and demands, or to the Notice of Hearing sent by the Office of Administrative Courts. Claimant is entitled to penalties pursuant to the violations of Sec. 8-43-203(1)(a), C.R.S.

Section 8-43-203(1)(a) states that "The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee … within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested…"

Claimant seeks a penalty for failure to admit or deny liability. Pursuant under Sec. 8-43-203(2)(a), C.R.S. The employer must admit or deny liability within 20 days after it learns of an injury that results in "lost time from work for the injured employee in excess of three shifts or calendar days." An employer "may become liable" to the claimant "for up to one day's compensation for each day's failure" to file an admission or notice of contest with the Division. The maximum penalty for failure to admit or deny liability cannot

exceed “the aggregate amount of three hundred sixty-five days’ compensation.” Fifty percent of any penalty shall be paid to the claimant and fifty percent to the Subsequent Injury Fund. See Sec. 8-43-203(2)(a), C.R.S.

The phrase “may become liable” means the imposition of a penalty under Sec. 8-42-203(2)(a), C.R.S. is discretionary. *Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of the requirement to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer’s position so the Division can exercise administrative oversight over the claim process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colo. Civil Rights Comm’n*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Assoc. Bus. Prod. v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Indus. Claim Appeals Office*, 442 P.3d 94 (Colo. 2019). The claimant must prove circumstances justifying the imposition of a penalty under Sec. 8-43-203(2)(a), C.R.S. *Pioneer Hosp. v. Indus. Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

As found, Employer knew or should have known Claimant had a significant injury that occurred on August 5, 2022 after falling from the back of the trailer and had to call the ambulance. Employer was present before the ambulance arrived at the scene of the accident. Claimant was credible in testifying that she had multiple conversations with employer and that Employer was evasive, failed to answer Claimant’s question and eventually failed to answer her mail, emails or phone calls. Employer failed to file an Employer’s First Report and failed to notify the Division what employer’s position was with regard to Claimant’s claim for compensation. Claimant was injured on August 5, 2022 and Employer had 20 days to file an admission or denial, through August 26, 2022, which is 285 days counting through the date of the June 6, 2023 hearing.

Claimant has proven by a preponderance of the evidence that she is entitled to a penalty for failure to admit or deny. Employer was given an opportunity to put on a defense following receiving notice of the hearing and failed to appear at hearing. This ALJ has little information with regard to Employer’s ability to pay. However, given Claimant’s testimony that Employer had multiple drivers and vehicles as well as trailers, this ALJ declines to make any assumption with regard to Employer’s ability to pay. Claimant suffered humiliation, devastation and horror due to her inability to work caused to this August 5, 2022 work related injury, in addition to having to resort to giving up her home, having to sell her truck and having to live in a shelter. This has had a significant impact on Claimant. Therefore, it is determined that a daily penalty of $60.00 per day or $420.00 per week[2] beginning August 26, 2022 through June 6, 2023 is appropriate in this

[2] This constitutes little more than 50% of Claimant’s weekly compensation, which is much less than “up to one day’s compensation for each day’s failure to so notify.

matter for a penalty of $17,100.00, apportioned pursuant to statute, with $8,550.00 to Claimant and $8,550.00 to the subsequent injury fund.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant suffered compensable work related injuries to her head, left shoulder, left wrist, 8th left rib, left hip, and left lower extremity on August 5, 2022 in the course and scope of her employment with Employer.

2. Employer shall pay for all authorized, reasonably necessary treatment related to the August 5, 2022 injury from authorized providers to cure or relieve the effects of Claimant's compensable injury, including but not limited to the charges from UCH Hospital and UCH Primary Care including reimbursement to Medicaid (Colorado Department of Health Care Policy & Financing).

3. Claimant's average weekly wage is $1,250.00 and her temporary disability rate is $833.33.

4. Employer shall pay Claimant TTD benefits at the rate of $833.33 per week from August 6, 2022 through May 24, 2023 in the amount of $34,762.60. Claimant's claim for TTD benefits from May 25, 2023 and continuing are reserved.

5. Respondent-Employer shall pay $8,690.65 (25% of $34,762.60) to the Colorado Uninsured Employer Fund for failure to insure with payment mailed to DOWC Revenue Assessment Unit, 633 17th St. Suite 400, Denver, CO 80202.

6. Employer shall pay penalties to Claimant in the amount of $8,550.00 for failure to admit or deny the claim.

7. Employer shall pay penalties to the subsequent injury fund in the amount of $8,550.00 for failure to admit or deny the claim payable to DOWC Division Trustee and mailed to DOWC Division Trustee c/o Mariya Cassin 633 17th St. Suite 400 Denver, CO 80202.

8. In lieu of payment of the above compensation and benefits to Claimant, Employer shall:

a. Deposit the sum of $60.553.25, adding 4% per annum, with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to DOWC Division Trustee, c/o Mariya Cassin, 633 17th St. Suite 400, Denver, CO 80202; cdle_revenueassess_dowc@state.co.us

or

b. File a bond in the sum of $60.553.25 with the Division of Workers' Compensation, which guarantees payment of the compensation and benefits awarded, within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

c. Employer shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

10. Employer shall pay statutory interest at the rate of 8% per annum on benefits not paid when due.

11. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or order authorizing distribution provides otherwise.

12. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 28th day of June, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-186-156-001; and 5-079-064-006

ISSUES

FINDINGS OF FACT

The ALJ make the following factual findings based on the admitted evidence:

Background and Procedural History

1. Claimant worked in Employer's meat packing plant for approximately seventeen years, removing sweetbreads[1] from hanging cattle carcasses on a moving conveyor system. Claimant's position required her to use a hook in her left hand to hold the sweetbreads, and cut them free from the carcass with a knife in her right hand. Claimant performed these tasks approximately every 2-4 seconds over her eight-hour shift. Claimant testified that on a typical day, she would remove sweetbread from 2,550 to 2,800 cow carcasses, and each carcass was divided into two sections, each of which would require sweetbread to be removed. As a result, Claimant removed between 5,100 and 5,600 sweetbreads over an eight-hour shift. Most of Claimant's work was performed between waist and shoulder level. Employer's Job Demands Summary indicates that Claimant's position required her to constantly lift, carry, push, and pull up to ten pounds, and required constant repetitive use of the hands and arms. (Ex. 12)

2. **WC No. 5-079-064-006**: On May 16, 2018, Claimant filed a Workers' Claim for Compensation alleging injuries to her left arm, from the shoulder to hand, arising out of her Employment with Employer. (Ex. L). Respondents filed a Notice of Contest on June 21, 2018, contesting Claimant's claim as not work-related. (Ex. L). Claimant filed an Application for Hearing in the present matter on January 6, 2022.

3. **WC No**. **5-186-156-001**: On October 26, 2021, Claimant filed a Workers' Claim for Compensation alleging repetitive motion injuries to the "bilateral upper extremities" with a date of "injury/disease" of June 7, 2018. (Ex. J). On February 18, 2022, Respondents filed a Notice of Contest stating claim was denied or contested because the alleged injury is not work-related. (Ex. K). Claimant filed an Application for Hearing on this claim on January 17, 2022.

4. On March 9, 2022, the two matters were consolidated for the purposes of hearing. Hearing commenced on May 25, 2022, but was continued to August 22, 2022. The record was held open to permit the parties to conduct post-hearing depositions, and the record

[1] A "sweetbreads" are a portion of the cow located in the neck.

was ultimately closed on April 17, 2023, when the final deposition transcript was lodged with the OAC.

Claimant's Medical History

5. In 2011, Claimant received treatment at Employer's clinic for pain in her right elbow and upper arm. (Ex. 4). Cathy Smith, M.D. diagnosed Claimant with right elbow lateral epicondylitis and a right shoulder strain. (Ex. 5). Claimant received physical therapy at Pro Active Physical Therapy for approximately one month, and Dr. Smith indicated Claimant's epicondylitis had resolved by November 28, 2011. (Ex. G & 5).

6. Between August 2, 2016 and August 12, 2016, Claimant was seen at Employer's in-house clinic and reported pain in her left shoulder, hand, and elbow. She was evaluated and received treatment consisting of cold compresses, "Biofreeze," and ibuprofen. The individuals who evaluated Claimant noted an assessment of "alteration in comfort," but provided no diagnosis for Claimant's condition. No evidence was admitted indicating Claimant was examined by a physician for these issues. (Ex. 3).

7. Between September 7 and September 9, 2017, Claimant was seen again at Employer's in-house clinic reporting bilateral shoulder pain and pain in the right hand and forearm. Claimant was treated with cold compresses, "Biofreeze," and provided a wrist guard. No evidence was admitted indicating Claimant was examined by a physician for these issues, nor was any diagnosis provided. (Ex. 2).

8. From April 6, 2018 to April 27, 2018, Claimant was evaluated and treated for pain in the neck on the left with radiation to the left elbow. The treatment records are labeled as "ART Daily Session Notes," and appear to indicate Claimant received "Active Release Techniques." The records contain no indication of the provider who performed the treatment, no substantive information regarding the nature of the treatment, and no diagnosis for Claimant's condition. (Ex. 7). Claimant testified that a therapist gave her massages during ART treatment.

9. On May 16, 2018, Claimant was seen at the Employer's in-house clinic reporting pain in her left arm, extending from her neck to her wrist. Claimant completed a pain diagram showing pain in her the left side of her neck, left shoulder, and down her left arm into her hand. Claimant reported she was performing her job saving sweetbread cutting meat with her left hand, pulling back, and throwing product to the side and behind her into a "combo" when she began to experienced pain in her left hand and arm. It was noted that Claimant reported a similar injury in September 2017. The individual who saw Claimant – [Redacted, hereinafter SS] - documented dark discoloration on the forearm below the elbow, less resistive strength in the left arm, and a positive "Jamar" test in the left hand. The assessment was "alteration in comfort," and Claimant was treated with a cold compress, ibuprofen, and Biofreeze. She was advised to take ibuprofen and home and apply cold therapy at home. (Ex. 1).

10. On May 17, 2018, Claimant was placed on modified duty, consisting of a "quarter count," meaning she would work 25% of her normal workload. These restrictions

remained in effect until at least May 30, 2018. (Ex. 1). Claimant's payroll records indicate she was paid her full wages during this time, and did not have a loss of earnings during this time. (Ex. I).

11. Over the next few weeks, through May 30, 2018, Claimant continued to report to the clinic twice per day, as requested. During this time, the clinic treated Claimant with cold and warm compresses, Biofreeze, and ibuprofen. Throughout, Claimant's "assessment" was "alteration in comfort." Claimant was not provided with a formal diagnosis, and did not see a physician between May 16, 2018 and May 30, 2018. (Ex. 1).

12. On May 25, 2018, Claimant reported bilateral trapezius pain at Employer's clinic. (Ex. 1). With the exception of these reports, Claimant did not report right-sided pain to either her shoulder or arm from November 28, 2011 until December 2020.

13. On June 5, 2018, Claimant saw Anjmun Sharma, M.D., at Banner Health for her continued left neck, shoulder, and arm complaints. Dr. Sharma examined Claimant's shoulder and cervical spine and opined that Claimant's symptoms were cervical in nature, a chronic issue, and not work-related because her job did not require overhead use of her left arm. His shoulder examination showed full range of motion and no shoulder weakness. He provided no work restrictions, placed Claimant at maximum medical improvement (MMI), and indicated Claimant was able to return to full duty on that day. (Ex. 6). Dr. Sharma did not refer Claimant for any additional treatment, and recommended that she take over the counter medications, use ice every 2-3 hours, and perform range of motion exercises.

14. Claimant testified that she selected Dr. Sharma from a list provided to her by Employer's clinic. She also testified that she did not recall whether she selected him from a list of doctors given to her by Employer. No other plausible explanation was provided for Claimant coming under Dr. Sharma's care. The ALJ finds that Claimant selected Dr. Sharma from a list of physicians provided to her by Employer. Dr. Sharma was Claimant's authorized treating physician (ATP), when he saw Claimant on June 5, 2018.

15. Claimant testified she returned to normal work after seeing Dr. Sharma, but was unable to perform the job without restrictions due to the pain in her left shoulder and arm. Claimant has not returned to Employer since, and voluntarily terminated her employment with Employer in June 2018. The date Claimant terminated her employment was not clearly articulated in the evidence, but medical records appear to indicate it was on or about June 7, 2018. (*See* Ex. C, p. 58). Claimant has not attempted to return to work since leaving Employer. She testified she does not believe she can return to work for Employer because of pain and repeated movements. Claimant applied for and received unemployment benefits at the rate of $287.00 per week beginning in January 2019 for an undetermined period.

16. Dr. Sharma was admitted as an expert in family and occupational medicine and testified through post-hearing depositions in lieu of live testimony. Dr. Sharma's testimony was inconsistent, confusing, and not credible. For example, he testified he is Board-

certified by the American Board of Family Practice (ABFP), and later that he has not been Board-certified by the ABFP since 2018, when his certification lapsed.

17. With respect to his opinions, the evidence demonstrates that Dr. Sharma based his opinion that Claimant's condition is not work-related on incomplete medical records and medical history and an incomplete understanding of her job duties. With respect to medical records and medical history, Dr. Sharma was not aware Claimant had been seen at Employer's clinic for approximately three weeks before seeing him, and appears to have assumed he was the first health care provider to evaluate her. He was not provided Claimant's records from Employer's clinic, and did not request them. He testified that he "was not aware [Claimant] had gone to physical therapy," but also documented in his June 5, 2018 treatment note that Claimant "went to physical therapy to better understand her symptoms." He then testified that he "did not ask her where she had gone to physical therapy." (Sharma, Vol. II, p. 65). He also testified he "was under the impression that she had been going for a non-work-related condition," because "she told me that she had been having pain for quite some time, and I don't recall why." (Sharma Vol. 2, p. 65). No credible evidence was admitted indicating Dr. Sharma asked Claimant the reason she had been in physical therapy. He offered no cogent explanation for this impression, and no credible evidence was admitted indicating Claimant had sought or received treatment for any non-work-related injury to her left shoulder. (No records were admitted indicating Claimant attended physical therapy in the months before she saw Dr. Sharma, although she was seen in Employer's clinic and attended ART treatment during this period.)

18. With respect to Claimant's job duties, Dr. Sharma testified that he reviewed a job description of Claimant's position, but his testimony and records demonstrate he had an incomplete understanding of Claimant's job duties when he made the determination that her condition was not work-related. He understood Claimant's job to be moving meat with a hook and placing it on a conveyor belt, and that the job did not require overhead movement. However, he was not aware of Claimant's the weight Claimant was required to move, her production quotas, the frequency she performed the task, how long she had performed the job, or whether her job required the use of both hands. Given that much of this information is contained in the Job Demands Assessment admitted as Exhibit H, the ALJ infers that Dr. Sharma did not review this document. Notwithstanding, his testimony demonstrated he did not consider the repetitive movements Claimant performed in her job when reaching his opinions.

19. Dr. Sharma testified that he believed Claimant's pain was chronic, non-work-related, and cervical in nature, but offered no cogent, credible explanation for this opinion. that Claimant's complaints were caused by something other than her employment. No credible evidence was admitted indicating Dr. Sharma attempted to determine whether Claimant's symptoms were related to any non-work-related activity. Based on his testimony and records, the ALJ finds that Dr. Sharma's opinion that Claimant did not sustain a work-related injury to her left shoulder unpersuasive and not credible.

20. No evidence was submitted indicating Claimant requested a Division independent medical examination to challenge Dr. Sharma's opinion that Claimant was at MMI as of June 5, 2018.

21. On June 8, 2018, Claimant self-referred to the SCHC Monfort Family Clinic, and was seen by Kelsey Hrenko, PA-C for her continued left shoulder pain. Claimant reported left shoulder pain radiating to her fingers. On examination, Ms. Hrenko noted tenderness to palpation over the left scapula, with full strength and range of motion, and recommended a chiropractic evaluation and possible referral to orthopedics. (Ex. 9). A left shoulder x-ray taken on June 8, 2018 was interpreted as unremarkable. (Ex. 8).

22. Claimant returned to the Monfort Clinic on June 19, 2018, and saw Steve Ponicsan, P.A. Mr. Ponicsan noted hypertonicity of the left trapezius with trigger point nodule that was painful to palpation. (Ex. 9).

23. On January 23, 2019, Claimant returned to the Monfort Clinic, and saw Ludia Battaglia, FNP. Claimant reported continued left shoulder pain with difficulty lifting her arm overhead, and attributed the condition to her job at Employer. Ms. Battaglia opined that Claimant's injury was likely from overuse at her former job. (Ex. 9). A left shoulder x-ray taken on January 23, 2019 was interpreted as unremarkable. (Ex. 8).

24. On November 14, 2019, Claimant saw Sara Curzon, PA-C, at the Monfort Clinic with continued reports of left shoulder pain. Ms. Curzon's assessment was left shoulder pain, resulting from overuse Claimant's prior job, and recommended physical therapy. (Ex. 9).

25. Claimant was next seen for her left shoulder on March 23, 2020, when she again saw Ms. Curzon. Ms. Curzon noted that physical therapy had helped somewhat, but Claimant's left shoulder pain persisted. Her assessment was of continued left shoulder pain, with suspected impingement. Based on her examination, Ms. Curzon recommended an MRI of Claimant's left shoulder, however the MRI was not performed. (Ex. 9).

26. Claimant returned to the Monfort Clinic on September 1, 2020, and saw Ms. Hrenko for continued left shoulder pain and to obtain an MRI referral, indicating that the prior MRI referral had been canceled. (Ex. 9). The MRI was performed on October 19, 2020, and showed a full-thickness tear of the supraspinatus tendon. (Ex. 8).

27. Claimant then came under the care of Mark Grossnickle, M.D., at UC Health. No credible evidence was admitted indicating whether Claimant was referred to Dr. Grossnickle or self-referred. Claimant initially saw Dr. Grossnickle on October 21, 2020, however no substantive medical records from that visit were offered into evidence. On December 3, 2020, Dr. Grossnickle examined Claimant and found left shoulder pain radiation from the neck to the fingers with numbness in the left hand. Claimant reported having left shoulder pain that was tolerable, except when lifting away from her body or above shoulder height. He noted that Claimant's left shoulder had positive impingement signs, and mild weakness on abduction. With respect to Claimant's right shoulder, Claimant reported that she had worsening shoulder pain over the "last few months" which was worse with activity. He noted positive impingement signs over the right supraspinatus tendon, positive Speed and empty can tests, mild biceps tenderness and weakness in external rotation and abduction. Dr. Grossnickle suspected a right rotator cuff tear and

ordered a right shoulder MRI. Dr. Grossnickle diagnosed Claimant with impingement syndrome of both shoulders. (Ex. B).

28. On December 13, 2021, Claimant had a right shoulder MRI which was interpreted as showing high-grate tearing of the supraspinatus tendon, suspicion of a torn superior labrum, and moderate lateral acromial down sloping, which was thought to contribute to impingement. (Ex. 8). Claimant reported to multiple providers that her right shoulder pain began a few months before December 2020. Claimant testified that she did not recall when her right shoulder symptoms started.

29. On January 7, 2021, Dr. Grossnickle reviewed Claimant's right shoulder MRI and recommended right shoulder surgery to address the torn supraspinatus tendon and SLAP lesion. When addressing causation of Claimant's right shoulder, Dr. Grossnickle stated "this could be the result of the repetitive trauma from work but it would be difficult to say with certainty as it has been a few years it sounds like since she was actually working. I do not have all those old records for review." (Ex. B). Claimant did not return to Dr. Grossnickle and has not had the surgery he recommended.

30. On August 11, 2021, Claimant saw James Ferrari, M.D., for evaluation of both shoulders. Based on his examination and review of Claimant's right shoulder MRI, he diagnosed Claimant with non-traumatic bilateral rotator cuff tears. He opined that Claimant's rotator cuff tears were "secondary to the repetitive motion and that lifting she did for 17 years as a meat packer…" Dr. Ferrari recommended surgery on both shoulders. (Ex. D). No credible evidence was admitted indicating who referred Claimant to Dr. Ferrari.

31. Dr. Ferrari was admitted as an expert in orthopedic surgery, and testified at hearing. Dr. Ferrari examined Claimant and evaluated both shoulders, and reviewed the MRI reports. He did not review medical records at the time of his initial evaluation, but later reviewed medical records, including records from Employer's clinic, Dr. Grossnickle, and Banner Health.

32. Dr. Ferrari testified that Claimant's MRIs show tears in the rotator cuffs of both arms. He testified that patients of Claimant's age (*i.e.*, 50s), there is typically an underlying cause for rotator cuff tears, such as lifting a lot of weight, jobs with repetitive motion or old injuries. He testified that the motions Claimant employed in her job placed significant force and load on the shoulder joint, which increased when moving weight. He opined that the most medically probable cause of Claimant's rotator cuff tears is the repetitive motion used In her job over a period of years. He noted that there are no other documented non-work-related injuries or probable causes of the rotator cuff pathology. Dr. Ferrari also credibly testified that a person does not have to reach overhead to put strain on the rotator cuff.

33. With respect to her right shoulder, he testified that sometimes when a patient has bilateral rotator cuff pathology, only one side may be symptomatic, and that the tear can enlarge over a period of years.

34. Dr. Ferrari's opinion that Claimant's left shoulder injury Is causally related to her employment is credible and persuasive. However, with respect to Claimant's right shoulder, the ALJ finds Dr. Ferrari's opinion unpersuasive. No credible evidence was offered to cogently explain why Claimant's right shoulder would be asymptomatic from 2018 to 2020, if the Injury were work-related.

Claimant's Testimony

35. At hearing, Claimant demonstrated the motions she performed in the course of her job saving sweetbreads, using a hook and knife. Claimant held the knife in her right hand and the hook in her left. Claimant's right hand was partially extended away from her body at the mid-chest level using the knife, she cut sweetbread from the carcass. Once the sweetbread was on the hook, Claimant used the hook to throw it over her right arm at approximately biceps level into a tray behind her (*i.e.*, internally rotating her shoulder across her body).

36. She testified that she had pain in her left shoulder in the Spring of 2018., and that she received treatment in Employer's in-house clinic twice per day. She testified that her symptoms did not improve with the treatment provided by Employer's clinic. Claimant testified that she could not reach across her body or over her head with her left arm without causing pain, and that she had difficulty pushing up with her arm, such as getting out of a chair.

37. Claimant testified she had no outside activities that would account for her shoulder or arm pain. She had not been in any automobile accidents, or sustained any other injuries to her shoulder outside of work.

38. Claimant's testimony was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to ensure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; without bias toward either claimant's or respondents' rights; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if

other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

WC 5-186-156-001

Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose

out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Marjorie Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO, Apr. 9, 2014).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, W.C. No. 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified, or aggravated the disease for which compensation is sought. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner, supra*. In this regard, the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO Aug. 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Claimant has failed to establish by a preponderance of the evidence that she sustained a repetitive motion injury to her right shoulder arising out of the course of her employment with Employer. Claimant's first report of right shoulder pain consistent with a rotator cuff or impingement issue was in December 2020 when she saw Dr. Grossnickle. Claimant indicated the pain began a few months earlier. At hearing, Claimant testified that she did not recall when her right shoulder pain started. While Dr. Grossnickle commented that Claimant's right shoulder condition "could" have been caused by the repetitive motions associated with her job, he did not opine it was likely.

As found, Dr. Ferrari's opinion regarding Claimant's right rotator cuff injury is not persuasive. Dr. Ferrari's opinion fails to account for the significant gap in Claimant's complaints of right shoulder pain. When Claimant first reported right shoulder pain to Dr. Grossnickle, she had not worked for Employer for approximately 30 months, and had no documented complaints of right shoulder pain in the interim, despite seeing multiple health care providers for her left shoulder during that time. No credible evidence was admitted which explained how right shoulder pain that began in December 2020 was causally related to work activities occurring more than two and a half years earlier. Dr. Ferrari's opinion that Claimant's right shoulder condition was caused by her work activities that ended in June 2018 unpersuasive. Claimant not met her burden of establishing her right shoulder condition is work-related.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970). Medical benefits are not owed for a non-compensable claim.

Because Claimant has failed to establish a compensable injury to her right shoulder, Claimant has failed to establish an entitlement to medical benefits for her right shoulder condition.

Statute of Limitations

Notwithstanding the lack of causation, Claimant's claim for her right shoulder is time-barred by the Act. Under § 8-43-103 (2), C.R.S., Claimant's right to compensation and benefits is barred unless a "notice claiming compensation is filed with the division" within two years of the date of injury.[2] Claimant asserts her right shoulder injury began on or before June 7, 2018, her last date of employment with Employer. Accordingly, she had to file a claim with the Division before June 7, 2020. Claimant, however, did not file a

[2] Although exceptions to the two-year limitation period exist for certain causes of injury, the exceptions are not applicable. Claimant does not asset her injuries were the result of exposure to radioactivity, fissionable materials, uranium poisoning, asbestos, silicosis or anthracosis.

Worker's Claim for Compensation with the Division related to this alleged injury until October 26, 2021, more than three years later. Claimant has not established any reasonable excuse for the failure to file the required notice with the Division. Consequently, Claimant's claim designated as WC 5-186-156-001 is time-barred, and dismissed.

Because Claimant's claim related to her right shoulder is denied and dismissed, the remaining issues related to right shoulder surgery are moot.

WC 5-079-064-006

Compensability

Claimant has established by a preponderance of the evidence that she sustained a repetitive motion injury to her left shoulder arising out of the course of her employment with Employer. Although Dr. Sharma indicated he found no injury to Claimant's shoulder, her later providers did find objective evidence of shoulder pathology and clinical evidence of shoulder impingement. Claimant began reporting left shoulder problems in May 2018. She sought treatment from Employer's in-house clinic, and reported symptoms radiating from her neck throughout her left arm. Over the course of the next two-plus years, Claimant consistently reported the same symptoms to multiple health care providers.

Dr. Sharma's opinion that Claimant's position with Employer was not likely to cause a shoulder injury was not credible or persuasive. Claimant worked in the same position for nearly all of her 17 years working for Employer. Her job required her to use her left arm, removing sweetbreads with a hook and transferring them into a bin every 2-4 seconds (*i.e.*, 15-30 times per minute), for approximately seven and a half hours a day, for 17 years. Conservatively, Claimant repeated the same motion with her left arm 5,000-6,000 times per day, over the course of 17 years. Dr. Ferrari credibly testified that these repetitive motions of Claimant's were the most medically probable cause of her left shoulder rotator cuff tears. No credible evidence was admitted indicating Claimant participated in other activities which would have placed the same stress on her left shoulder as those sustained while working for Employer. The ALJ credits Dr. Ferrari's opinion and finds it more credible and persuasive than Dr. Sharma's. It is more likely than not the repetitive motion involved in Claimant's work with Employer resulted in the full-thickness tear of the supraspinatus tendon identified on Claimant's October 19, 2020 MRI.

Authorized Treating Physician

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written

list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing."

The term "select," is unambiguous and means "the act of making a choice or picking out a preference from among several alternatives." *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant "selects" a physician when she "demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury." *Williams v. Halliburton Energy Serv.,* WC 4-995-888-01 (ICAO, Oct. 28, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri, supra*.

Claimant could not recall whether she was provided a list of providers, but also testified she selected Dr. Sharma from a list given to her by Employer. The ALJ finds Claimant was, more likely than not, provided a list of physicians by Employer and selected Dr. Sharma (or Banner Health) from that list of physicians. Notwithstanding, if Respondents did not provide a list of physicians, Claimant, through her actions, selected Dr. Sharma for treatment and evaluation of her injury. As found, Dr. Sharma was Claimant's authorized treating physician.

Medical Benefits

Because Claimant has established a compensable injury to her left shoulder, Claimant has also established an entitlement to authorized medical treatment reasonably necessary to cure or relieve the effects of her industrial injury.

Specific Medical Benefits

The Act imposes upon respondents the duty to furnish medical treatment "as may reasonably be needed at the time of the injury…and thereafter during the disability to cure and relieve the employee from the effects of the injury." § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Claimant has failed to establish an entitlement to specific medical benefits for treatment provided by Monfort Clinic, UC Health, Dr. Grossnickle, or Dr. Ferrari, or for the recommended left shoulder surgery. As found, Dr. Sharma did not refer Claimant for further treatment after June 5, 2018. No credible evidence was admitted indicating

Claimant sought authorization from Respondents to obtain treatment through the Monfort Clinic, UC Health, Dr. Grossnickle, or Dr. Ferrari. As such, these were not ATPs or within the chain of referral from Dr. Sharma. Respondents are not required to pay for treatment that is unauthorized, even where the treatment is reasonable, necessary, and related to the industrial injury. § 8-43-404 (7), C.R.S., *see also Johnston v. Hunter Douglas, Inc.*, W.C. No. 4-879-066-001 (ICAO Apr. 29, 2014).

Similarly, although Claimant has established by a preponderance of the evidence that surgical repair of her left rotator cuff injury is reasonably necessary to cure or relieve the effects of her industrial injury, the procedure was not recommended by an ATP. Because no ATP has recommended surgery, the ALJ is without jurisdiction to authorize such treatment. *Potter v. Ground Serv. Co.*, W.C. No. 4-935-523-04 (ICAO, Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Mgmt. of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995).

Temporary Disability Benefits

Claimant seeks Temporary Total Disability benefits beginning on June 7, 2018, the date Claimant terminated her employment with Employer. Claimant asserts that because Dr. Sharma released her to full duty and Claimant was physically unable to perform her job without restrictions after that date, she was entitled to TTD benefits. For the reasons set forth below, Claimant has failed to establish an entitlement to TTD benefits after June 5, 2018.

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) of the Colorado Revised Statutes requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). Impairment of wage-earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Once an injured worker becomes entitled to TTD benefits, those benefits continue until terminated pursuant to § 8-42-105 (3), C.R.S., which provides: “Temporary total disability benefits shall continue until the first occurrence of any one of the following: (a) The employee reaches maximum medical improvement; (b) The employee returns to

regular or modified employment; (c) The attending physician gives the employee a written release to return to regular employment; or (d) (I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment."

The evidence establishes that Claimant had a medical incapacity to perform her work due to pain and restrictions in her left shoulder beginning on or about May 16, 2018. At that time, the provider in Employer's clinic determined that Claimant had diminished strength in the left arm, difficulty with range of motion, and pain to palpation. The following day, Claimant was placed on a restriction to work a ¼ count (*i.e.*, 25% of her normal workload). Claimant then continued to work in a modified capacity, but she sustained no loss of earning capacity, because she was paid her full wages, and was not entitled to TTD benefits.

On June 5, 2018, Dr. Sharma found Claimant was at MMI, and released Claimant to return to regular employment. Claimant credibly testified that the condition of her left neck, arm and shoulder prevented her from performing her regular employment duties, and she stopped working for Employer on or about June 7, 2018. Because Dr. Sharma placed Claimant at MMI on June 5, 2018, her entitlement to TTD ended on that date.

Pursuant to section 8-42-107(8)(b), C.R.S., "if either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examination may be selected in accordance with section 8-42-107.2…" *See also* 8-42-107.2 (b), C.R.S. No credible evidence was admitted indicating Claimant requested a DIME to challenge Dr. Sharma's MMI determination. Thus, Claimant's request for medical benefits is a constructive challenge to Dr. Sharma's MMI determination. The ALJ lacks authority to decide the issue because no DIME was requested or performed to challenge Dr. Sharma's MMI determination. *See Ayala v. Conagra Beef Co.*, W.C. 4-579-80 (ICAO June 22, 2004).

ORDER

It is therefore ordered that:

WC 5-186-156-001

1. Claimant's claim designated for right shoulder injuries as WC 5-186-156-001 is denied and dismissed.

2. Claimant's requests for medical benefits and authorization of right shoulder surgery are denied and dismissed.

WC 5-079-064-006

3. Claimant has established by a preponderance of the evidence that she sustained a left shoulder repetitive use injury arising out of the course of her employment with Employer on or about May 18, 2018.

4. Claimant has established an entitlement to authorized medical care that is reasonable and necessary to cure or relieve the effects of Claimant's left shoulder injury.

5. Claimant's request for authorization of left shoulder surgery is denied. .

6. Claimant's request for temporary total disability benefits is denied and dismissed.

7. Claimant's authorized treating physician is Anjun Sharma, M.D.

8. Determination of Claimant's average weekly wage is moot.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 2, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the respondent has demonstrated, by a preponderance of the evidence, that on July 12, 2022, the claimant was not an employee of the employer, but rather an independent contractor.

2. If the claimant is deemed an employee of the employer, whether the claimant has demonstrated, by a preponderance of the evidence, that she sustained an injury arising out of and in the course and scope of her employment.

3. If the claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that the medical treatment she received was authorized.

4. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she received was reasonable and necessary to cure and relieve her from the effects of the injury.

5. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits.

6. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that penalties shall be assessed pursuant to Section 8-43-408, C.R.S. for the respondent's alleged failure to obtain and maintain worker's compensation insurance.

FINDINGS OF FACT

The parties provided conflicting versions of events in this matter. The ALJ has considered the evidence and testimony presented at hearing and makes the following findings of fact:

1. The respondent operates a funeral and cremation business. The claimant previously worked for the employer and returned in May 2022. [Redacted, hereinafter MG] asserts that the claimant was an independent contractor when she returned to work for the respondent in May 2022.

2. Upon her return the claimant worked as the general manager and funeral director. The claimant's business cards identified these as the claimant's titles. The claimant's job duties included all facets of operating the respondent's business. The

claimant was paid $20.00 per hour. The claimant was paid via check. These checks were issued to the ciaimant in her own name.

3. On July 7, 2022, MG[Redacted] authored a letter stating that the claimant was paid $2,500.00 per month. The purpose of this letter was to assist the claimant with obtaining a mortgage. The ALJ calculates that this would be equal to $576.92 per week ($2,500.00 times 12 months in a year is $30,000.00; divided by 52 weeks is $576.92.)

4. On July 12, 2022[1], the respondent's workforce met at a local cemetery to engage in upkeep of the cemetery. This included painting a sign and cutting grass around headstones. On that date, the claimant operated a riding lawnmower at the cemetery. This specific piece of equipment has a mechanism that allows the driver to raise and lower the blade while in operation. This is done by pressing down a foot pedal with one's right foot.

5. Typically as the respondent's general manager and funeral director the claimant would not have been engaged in mowing activities. However, on July 12, 2022 it was necessary for the claimant to mow, because the respondent was short-handed and the claimant had absorbed a number of job duties, including mowing.

6. On July 12, 2022, the claimant used the pedal mechanism on the mower to raise and lower the blade while mowing around headstones and sprinklers. While operating the mower in this manner and pushing down on the foot lever, the claimant felt a pop in her right knee and experienced pain symptoms.

7. Other workers were present when the claimant felt this pop and pain in her knee, including [Redacted, hereinafter MRG]. The claimant was allowed to stop working and sat in a vehicle while the others continued working.

8. After July 12, 2022, the claimant continued to perform all of her normal job duties, despite ongoing pain and swelling in her right knee. The claimant utilized a knee brace and crutches. The claimant asked MRG[Redacted] to provide her with information for filing a workers' compensation claim. MRG[Redacted] repeatedly assured the claimant that the company did have workers' compensation insurance and promised to provide her with the relevant information. MRG[Redacted] did not provide the claimant with the requested workers' compensation information.

9. Initially, the claimant believed that her knee was simply sprained and she attempted to self-treat her symptoms. However, the claimant's right knee symptoms did not improve and she sought medical treatment.

[1] The date of July 13, 2022 appears in the medical records and on the claimant's Application for Hearing. The ALJ is persuaded by the claimant's testimony that this was a typographical error, and the incident at issue occurred on July 12, 2022.

10. On August 11, 2022, the claimant again requested the insurance information from MRG[Redacted] via text message. MRG[Redacted] responded "[Redacted, hereinafter PE] and some other company. I can get numbers etc tomorrow."

11. On August 12, 2022, the claimant was seen by her primary care provider (PCP) Dr. Tarek Arja with Grand Valley Family Medicine. The claimant did not see Dr. Arja prior to that date for three primary reasons: 1) she hoped her knee would improve without medical treatment; 2) she was busy working for the respondent; and 3) MRG[Redacted] was not providing workers' compensation insurance information to her.

12. On August 12, 2022, the claimant's appointment with Dr. Arja was via "telehealth" and no examination was performed. On that date, the claimant reported to Dr. Arja that she had injured her right knee one month prior while operating a riding lawn mower for her employer. The claimant reported that her right knee symptoms included pain, swelling, decreased range of motion, and instability. Dr. Arja recommended the claimant rest and elevate her right knee. He also recommended the use of a knee brace, ice, and heat. Finally, Dr. Arja ordered x-rays[2] of the claimant's right knee.

13. On August 12, 2022, MRG[Redacted] texted the claimant and stated that the parties "should go other routes ... I don't like the lack of respect for each other. Not good. I appreciate all you have done I really do". When the claimant asked if she was being terminated, MRG[Redacted] responded "Yes I'm sorry". Thereafter, the claimant was provided a letter dated August 12, 2022 in which the respondent notified the claimant that her employment was terminated as of that date. The letter did not provide a reason for the termination. MRG[Redacted] testified that the claimant was terminated due to poor performance.

14. On August 18, 2022, the claimant was examined by Dr. Arja. On that date, Dr. Arja listed the claimant's right knee symptoms as pain, swelling, locking, instability, decreased range of motion, and decreased weight bearing. In addition, Dr. Arja noted that the claimant experienced a popping sound in her right knee at the time of the injury. On examination, Dr. Arja noted that the claimant had moderate right knee tenderness on palpation "about the anterior aspect, over the lateral joint line, over the medial joint line and over the patella". Dr. Arja recommended the continued use of the knee brace and over-the-counter pain medications. Dr. Arja also referred the claimant to physical therapy. The claimant was restricted from all work on August 18, 2022.

15. The claimant began physical therapy on August 23, 2022. The claimant continued to be restricted from all work.

16. The claimant had a telehealth visit with Dr. Arja on August 27, 2022. Dr. Arja continued to recommend physical therapy and use of a knee brace.

[2] It is unclear from the records entered into evidence whether the x-rays recommended by Dr. Arja were ever taken.

17. A letter dated September 2, 2022[3], was admitted into evidence at the hearing. The respondent stated that the claimant's employment was terminated "due to the lack of not following the vision we have set forth as a company." The letter further stated that the claimant's "business and leadership practices were not to our standards, expectations and processes that weren't being followed. You had total supervision and management over the staff and some things weren't handled properly." In that letter the respondent also stated that the company does have workers' compensation insurance.

18. On January 5, 2023, Dr. Arja authored a letter in which he stated that the claimant was released to full work duty as of December 20, 2022.

19. While working for the respondent, the claimant worked a varied schedule depending upon the company workload. At times the claimant would report to work as early as 7:00 a.m. At other times, the claimant would arrive by 9:00 a.m. The claimant's workday typically ended between 3:00 p.m. and 3:30 p.m. A time sheet for a two week period in May 2022 demonstrates that the claimant worked 61 hours during that time.

20. Based upon the time sheet entered into evidence, the ALJ calculates that the claimant typically worked 6 hours per day, five days per week for a total of 30 hours per week. At $20.00 per hour this is equal to $600.00 per week. The ALJ determines that $600.00 per week was the claimant's average weekly wage (AWW) with the respondent as of the date of her work injury.

21. While working for the respondent, the claimant had two other part-time jobs as a home health worker. The claimant worked for [Redacted, hereinafter CK] and was paid $15.25 per hour. In the 12-week period leading up to July 12, 2023 the claimant had earnings with CK[Redacted] of $3,685.92. The claimant also worked for [Redacted, hereinafter KS] providing care for her mother. That employer paid the claimant $15.00 per hour. Based upon the claimant's testimony, the ALJ infers that the claimant worked approximately 15 hours per week while working for KS[Redacted].

22. As a result of the work restrictions placed by Dr. Arja on August 18, 2022, the claimant was unable to perform her job duties for CK[Redacted] and KS[Redacted]. The claimant retired to work with CK[Redacted] on January 17, 2023. She returned to work for KS[Redacted] on January 22, 2023.

23. With regard to her concurrent employment with CK[Redacted] and KS[Redacted], the ALJ makes the following calculations. The claimant's AWW with CK[Redacted] was $307.16; ($3,685.92 divided by 12 weeks is equal to $307.16 per week). The claimant's AWW with KS[Redacted] was $225.00; ($15.00 per hour at 15 hours per week equals $225.00).

[3] The claimant testified that she did not receive the September 2, 2022 letter until she was provided with the exhibits of this hearing.

24. The claimant asserts that the employer does not have workers' compensation insurance, as evidenced by the employer's failure to provide her with that information. MRG[Redacted] testified that the respondent does carry workers' compensation insurance for their employees. However, no evidence was provided of the respondent's workers' compensation policy and/or related coverage. In addition, no insurance company has been identified in this matter.

25. With regard to whether the claimant was an independent contractor, the ALJ credits the claimant's testimony and the various documents entered into evidence. The ALJ finds that the respondent has failed to demonstrate that it is more likely than not that the claimant was an independent contractor. In reaching this finding, the ALJ notes that the claimant was paid an hourly rate and was paid in her own name. The claimant's business cards identified her as a general manager and funeral director. The respondent stated that the claimant "had total supervision and management over the staff'. The ALJ finds that such oversight and management would not be delegated to a contractor. In addition, the respondent provided the claimant with instruction, training, and tools. These facts indicate that the respondent exercised direction and control over the claimant in the performance of the work. The ALJ finds that the claimant did not engage in an independent trade or business providing similar services to others, nor did she intend to do so at the time of the injury. For all of the foregoing reasons, the ALJ concludes that the claimant was an employee of the respondent and was not an independent contractor.

26. The ALJ further credits the claimant's testimony and the medical reports entered into evidence. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that on July 12, 2022, the claimant suffered a right knee injury while working for the employer.

27. The ALJ credits the claimant's testimony and the medical reports entered into evidence and finds that the claimant has demonstrated that it is more likely than not that the treatment she received for her right knee from Dr. Arja and the recommended physical therapy was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the July 12, 2023 work injury.

28. The ALJ credits the claimant's testimony, the medical records, and wage records entered into evidence and finds that the claimant has demonstrated that it is more likely than not that for the period of August 18, 2022 through January 5, 2023 the claimant suffered a wage loss due to her work restrictions.

29. The ALJ calculates that as of July 12, 2022, the claimant's AWW from all employers was $1,132.16; (the total of $600.00, $307.16, and $225.00). The claimant's rate for temporary total disability (TTD) benefits is $860.44; (two-thirds of the AWW of $1,132.16).

30. The ALJ is not persuaded that the claimant was at fault for the termination of her employment with the respondent.

31. The ALJ finds that the claimant has demonstrated that it is more likely than not that as of July 12, 2022, the respondent did not obtain and/or maintain workers' compensation insurance.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation... under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

5. Under Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

6. As found, the claimant provided services to the respondent and was paid for her services. Therefore, the claimant is presumed to be an employee of the respondent.

7. The respondent has the burden of proving that the claimant was an independent contractor rather than an employee. Section 8-40-202(2)(b)(II), C.R.S., sets forth nine factors to balance in determining if claimant is an employee or an independent contractor. *See Carpet Exchange of Denver, Inc. v. Industrial Claim Appeals Office,* 859 P.2d 278 (Colo. App. 1993). Those nine factors are whether the person for whom services are provided:

- required the individual to work exclusively for the person for whom services are performed; (except that the individual may choose to work exclusively for that person for a finite period of time specified in the document);

- established a quality standard for the individual; (except that such person can provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed);

- paid a salary or hourly rate but rather a fixed or contract rate;

- may terminate the work during the contract period unless the individual violates the terms of the contract or fails to produce results that meet the specifications of the contract;

- provided more than minimal training for the individual;

- provided tools or benefits to the individual; (except that materials and equipment may be supplied);

- dictated the time of performance; (except the completion schedule and range of mutually agreeable work hours may be established);

- paid the individual personally, instead of making checks payable to the trade or business name of the individual; and,

- combined their business operations in any way with the individual's business, or maintained such operations as separate and distinct.

8. A document may satisfy the requirement to prove independence, but a document is not required. Section 8-40-202(2)(b)(III), C.R.S, provides that the existence of any one of those factors is not conclusive evidence that the individual is an employee. Consequently, the statute does not require satisfaction of all nine criteria in Section 8-40-202(2)(b)(II) in order to prove by a preponderance of the evidence that the

individual is not an employee. See *Nelson v. Industrial Claim Appeals Office,* 981 P.2d 210 (Colo. **App.** 1999).

9. In *Industrial Claim Appeals Office v. Softrock Geological Services,* 325 P.3d 560 (Colo. 2014) the Supreme Court revised the standard previously used to analyze whether or not an employee is customarily engaged in an independent trade or business. The previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court stated "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565. Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in Section 8-202(2)(b)(II), but also any other relevant factors. *Pierce v. Pella Windows & Doors.* W.C. No. 4-950-181, May 4, 2015.

10. The *Softrock* Court pointed to *Long View Systems Corp. v. Industrial Claim Appeals Office,* 197 P.3d 295 (Colo. App. 2008) in which the Panel was asked to consider whether the employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the employer. See *Pierce v. Pella Windows* & Doors, W.C. No. 4-950-181, May 4, 2015.

11. Section 8-40-202(b)(IV), C.R.S., provides that a written document may create a rebuttable presumption of an independent contractor relationship if it meets the nine criteria listed in Section 8-40-202(b)(II), C.R.S. and includes language in boldface font or underlined typed that the worker is not entitled to workers' compensation benefits and is obligated to pay all necessary taxes. Additionally, the document must be signed by both parties. Here there was no written contract.

12. The ALJ has considered the nine factors listed in Section 8-40-202(2)(b)(II), C.R.S. and the totality of the circumstances of the relationship of the parties and concludes that the claimant was an employee of the respondent. The respondent has failed, by a preponderance of the evidence, to overcome the presumption of an employee-employer relationship. In reaching this conclusion the ALJ notes that the claimant was paid an hourly rate and was paid in her own name. The claimant's business cards identified her as a general manager and funeral director. The respondent stated that the claimant "had total supervision and management over the

staff'. As found, such oversight and management would not be delegated to an independent contractor. In addition, the respondent provided the claimant with instruction, training, and tools. These facts indicate that the respondent exercised direction and control over the claimant in the performance of the work. The ALJ finds that the claimant did not engage in an independent trade or business providing similar services to others, nor did she intend to do so at the time of the injury.

13. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." See *H & H Warehouse v. Vicory, supra.*

14. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered an injury that arose out of and in the course and scope of her employment with the respondent on July 12, 2022. As found, the claimant's testimony and the medical records are credible and persuasive.

15. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.,* W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion...." *Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985), *citing,* 2 A. Larson, *Workers' Compensation Law* Section 61.12(9)(1983).

16. There is no persuasive evidence in the record to indicate that the respondent provided the claimant with a list of designated medical providers, upon learning of the claimant's work injury. In the absence of a selection of physician by the respondent, the claimant has demonstrated by a preponderance of the evidence that choice of medical provider passed to the claimant. Therefore, the medical treatment the claimant received as a result of the July 12, 2022 work injury is authorized medical treatment.

17. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

18. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment she received following the July 12, 2022 injury was reasonable and necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the testimony of the claimant are credible and persuasive.

19. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra,* requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra.* The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inabiUty to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy* & Co., 964 **P.2d** 595 (Colo. **App.** 1998).

20. As found, the claimant has demonstrated, by a preponderance of the evidence, that the July 12, 2022 work injury caused disability that resulted in a wage loss from August 18, 2022 through January 5, 2023. Therefore, the claimant is entitled to TTD benefits during that period of time. As found, the medical records and the testimony of the claimant are credible and persuasive.

21. The ALJ must determine a claimant's AWW by calculating the monetary rate at which services are paid to the claimant under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon her AWW on a date other than the date of the injury. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid* & *Waldron v. Vigil,* 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning

capacity. *Ebersbach v. United Food & Commercial Workers Local No.* 7, W.C. No. 4-240-475 (ICAO, May 7,

22. As found, the claimant's AWW is $1,132.16 and her TTD rate is $860.44. The ALJ calculates that the claimant is owed unpaid TTD benefits totalling $17,331.72.

23. Sections 8-43-408(1) and (2) C.R.S., provide that in cases in which a claimant suffers a compensable injury and the employer failed to comply with the insurance provisions of the Colorado Workers' Compensation Act, the employer shall pay the Colorado uninsured employer fund an amount equal to the present value of all unpaid compensation or benefits.

24. Section 8-43-408(1)(5), C.R.S., provides that in cases in which a claimant suffers a compensable injury and the employer failed to comply with the insurance provisions of the Colorado Workers' Compensation Act, the employer shall also pay the Colorado uninsured employer fund an amount equal to twenty five percent (25%) of the compensation or benefits due to the claimant. Based upon the calculations above, 25 percent of the TTD owed is $4,332.93.

ORDER

It is therefore ordered:

1. On July 12, 2023, the claimant was an employee of the respondent.

2. The claimant suffered a compensable injury on July 12, 2022.

3. The respondent is responsible for the medical treatment the claimant received for her right knee including treatment with Dr. Arja beginning August 12, 2022 and physical therapy.

4. The claimant's average weekly wage (AWW) is $1,132.16.

5. The claimant is entitled to temporary total disability (TTD) benefits for the period of August 18, 2022 through January 5, 2023, totalling $17,331.72.

6. For failing to maintain workers' compensation insurance, the respondent shall pay the Colorado uninsured employer fund $17,331.72. The respondent shall also pay to the Colorado uninsured employer fund an amount equal to 25% of the TTD benefits due to the claimant for the period of August 18, 2022 through January 5, 2023, which is $4,332.93. The employer shall send such payment to the Colorado Uninsured Employer Fund to the Division of Workers' Compensation, 633 17th St., Suite 400, Denver, CO 80202, Attention: Iliana Gallegos.

7. In lieu of payment of the above compensation and benefits to the claimant, the respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $21,664.65 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, 633 17th St., Suite 400, Denver, CO 80202, Attention: Gina Johannesman, Trustee; **OR**

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $21,664.65 with the Division of Workers' Compensation within ten (10) days of the date of this order:

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

ii. Issued by a surety company authorized to do business in Colorado.

iii. The bond shall guarantee payment of the compensation and benefits awarded.

8. The respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

9. The filing of any appeal, including a petition to review, shall not relieve the respondent of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

10. All matters not determined here are reserved for future determination.

Dated May 2, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-083-958-004

ISSUES

I. Whether Claimant has proven by preponderance of the evidence that he was injured in the course and scope of his employment on June 15, 2018.

II. If Claimant proved compensability, whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits that were reasonably necessary and related to the June 15, 2018 work injury.

III. If Claimant proved compensability, what is his average weekly wage.

IV. If Claimant proved compensability, whether he has proven by a preponderance of the evidence he is entitled to temporary total disability benefits beginning June 15, 2018 until through 2019.

V. If Claimant proved compensability, whether he has proven by a preponderance of the evidence that he is entitled to penalties for failure to admit or deny the claim as required by law.

PROCEDURAL HISTORY

Upon review of the file from the Office of Administrative Courts, this ALJ noted that three prior Applications for Hearing (AFH) were previously filed on Claimant's behalf. The first was on September 4, 2018 by attorney Robert F. James, Esq., on the same issues set for this hearing. No hearing was scheduled. A second AFH was filed also by counsel on October 10, 2018. A hearing was scheduled for February 7, 2019 at the OAC. The hearing was cancelled by counsel. The third AFH was filed on April 15, 2022 by pro se Claimant[1] on the same issues set for this hearing. There is an indication that the hearing was set for June 21, 2022 but no documents were in the file indicating why the hearing did not take place.

Pro se Claimant filed an Application for Hearing dated September 23, 2022 on the issues of compensability, medical benefits that are reasonably necessary and related to the injury, average weekly wage, permanent partial disability benefits, disfigurement and penalties from July 20 to December 2022.[2]

Respondents were provided notice at multiple addresses and failed to file a Response to Application for Hearing.

[1] There is no indication in the OAC file that counsel withdrew from representation. However, the Division chronological history form shows counsel filed a Motion to Withdraw on February 19, 2019 and it was granted on March 8, 2019.
[2] This ALJ inferred that the "July 20" date was July 20, 2018.

A Notice of Hearing for the December 20, 2022 hearing was sent to Employer at multiple addresses and all the notices were returned to the Office of Administrative Courts.

The December 20, 2022 hearing was convened and Claimant was provided with a *pro se* advisement. Claimant requested that the hearing proceed as he had attempted to obtain counsel and also Claimant attempted to go through a mediator, [Redacted, hereinafter NS], without success.

During the hearing, this ALJ noticed that all the NOH were returned and surmised that Employer did not have notice of the hearing.

Claimant provided a new address and a corrected address which coordinated with the one the Division had on file. This ALJ continued the hearing to be reset by the Office of Administrative Courts.[3]

The hearing was rescheduled for this 24th day of April, 2023 at 8:30 a.m. NOH were sent to all four addresses for Employer that were available. Additionally Claimant indicated that he had made a copy of the order and the NOH and sent a text directly to the Employer at his advertised telephone number, which is the same telephone number seen on a copy of a check from Employer to Claimant. This ALJ noted that three of the NOH were returned to the OAC and one of the NOH was not. The one that was not returned was the same address as was seen on a copy of a check from Employer to Claimant as well as in the Division file. This ALJ presumed that employer had notice of the hearing and the hearing proceeded as scheduled.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant stated that he was working for Employer on June 15, 2018 as a laborer in the roofing industry. The accident happened at a customer's home close to Florida and Federal in Federal Heights, Denver Colorado. They were in the process of installing a new roof. Claimant was told by his boss that he needed to get down from the roof to retrieve a saw and bring it back up to the roof to cut some plywood for some roof repairs. He was carrying a measuring tape and a chalk line in his hand as he was going down the ladder.

2. The ladder was not correctly placed or secured. He was going down the rungs of the ladder from the roof, when the latter shifted and he lost his footing on the rung of the ladder, fell and immediately hit his head on a 2x6 an then fell onto his left side hurting his left upper extremity, his low back and left hip. Claimant fell onto a whole pile of wood. Claimant stated he had a left shoulder, left elbow, left arm, head, neck, low back and hip injury.

[3] The delay in resetting this hearing was cause by difficulties with communication by the OAC with Claimant, and was not Claimant's fault.

3. Immediately following the fall, his boss came down from the roof and tried to reassure Claimant that he was well. Claimant reported that he was not well and had a fracture of his arm.

4. Claimant was initially taken by his supervisor and boss (FM) to a chiropractor close to where they were working. But the chiropractor informed them that Claimant had a serious fracture of his left arm and needed to see a surgeon.

5. His boss then took Claimant to Denver Health Medical Center (DHMC). Claimant testified that his boss simply dropped him off at the hospital and did not stay with him.

6. Claimant stated that he was attended at DHMC but that they did not do the surgery for his right arm right away. They had to reduce the dislocation of the shoulder and allow it to heal first. The process was not easy. It was very painful. He was in the hospital for three days and then was sent home where he had to wait at home until his surgery was set up. He received a bill for $12,500.00. He was instructed to reinforce his defenses in order to be able to withstand the surgery because he was very weak. While Claimant was in the hospital, he called his boss, who came to the hospital to speak with him. His boss was not very nice. He screamed at him and gave him a box of noodle soup.

7. A month went by while Claimant was in very serious pain. He was in really bad shape as the pain was intolerable to the extent that he sometimes felt like he was going to die. Since he had heard nothing from the hospital to schedule his surgery, Claimant called them. The hospital staff were surprised that he had not had his surgery yet.

8. Claimant stated that he called his boss again, about a month later, which was when his boss gave him that last check of money that had been owed to him from work he had performed. That was all his boss gave him. This ALJ notes that the check mentioned by Claimant is dated July 2, 2018 in the amount of $400.00.

9. DHMC scheduled the surgery, which occurred around July 18, 2018. Claimant remained in the hospital approximately four days after the surgery. The surgery involved the elbow and up the upper arm. They placed a metal plate secured with screws to repair the severe fracture. Following the surgery he received a bill for $42,750.00. Claimant estimated that his medical bill were approximately $64,000.00. He believed Medicaid paid for his treatment.

10. Claimant credibly testified that he was off of work from the date of the injury on June 15, 2018, through all of the rest of 2018 until February 28, 2019 because the healing process took a long time. Claimant was in serious pain and unable to move his left upper extremity both at the elbow and the left shoulder for a very long time.

11. Claimant stated that to the day of the hearing, he continued to have pain going from the elbow to the shoulder. He also continued to have pain in his low back, his neck and in his left shoulder. Though the areas that continued to be the most painful included the left upper extremity from the elbow to the shoulder due to the severe fractures of the bone as well as dislocation of the shoulder joint.

12. This ALJ noted that Claimant was wearing a prosthesis on his left hand. Claimant explained that he had a crush injury to his left hand during a car accident on December 19, 2015 and the hand at the wrist was amputated. The amputation was not related to his work related claim of June 15, 2018.

13. Claimant had further communications from his boss who advised him that he had no insurance to take care of Claimant and that he was not to bother him any further because he was dealing with his own health problems, including diabetes. He advised Claimant to contact the contracting company [Redacted, hereinafter CG] directly. Claimant advised his boss that if the company was not going to help, then he would be filing a complaint. Claimant further credibly stated that he had also shown up at his boss' home to ask for help and was told never to show up there again. The boss told Claimant that if he filed a claim against him or the company that the boss would hire an attorney to fight the claim.

14. Claimant filed a Workers' Claim for Compensation on August 7, 2018. The form indicated that Claimant lost his balance and fell approximately 8 feet, hitting his head on a 2x6 board and injuring his left shoulder, left elbow, left arm, head, neck and hip, including a left distal humerus fracture.

15. Claimant clarified that the fall might have been approximately twelve feet instead of just eight, as it was a full floor and he was at the top of the ladder. The wood of the roof was rotten in the area that the ladder was attached with some screws and cord, which came loose when Claimant started his descent from the roof.

16. On August 10, 2018 Division sent Claimant's boss a letter, which enclosed a copy of the Workers' Claim for Compensation, requesting Employer's workers' compensation insurance information that was supposed to be submitted to Division within 20 days of the date of the letter. This ALJ noted that the address on this letter from Division to Employer is the same address of the NOH that was not returned to the OAC and this ALJ infers that this is a correct address for Employer.

17. Claimant had called his boss on many occasions. Always to the same phone number, the same number that is on the most recent website. He never said whether he would pay for benefits. He just said repeatedly that he would contact his attorney but never gave Claimant any information of how or if he would be compensated. Claimant's boss stated that he would no longer employ Claimant.

18. While he was in the hospital, he was provided with a check dated July 2, 2018 in the amount of $400.00, which were past due wages. Claimant testified that his earnings varied and was sometimes paid $720.00, sometimes $800.00 and sometimes $900.00 per week. Claimant stated that they would normally complete the roofs of two to four houses a week, depending on how big the houses were and the labor force.

19. Claimant was evaluated by Dr. Anthony Beardmore of DHMC and he was initially placed into a brace. Claimant was required to wait for a full month before they scheduled him for surgery with Dr. Beardmore.

20. Claimant was provided with multiple notes stating that he should continue off work. On August 27, 2018 Dr. Cyril Mauffrey of DHMC noted that Claimant should remain out of work until he was seen next in the Ortho Trauma Clinic in four weeks' time.

It states that they were following him for his left lower upper arm fracture. They placed a 10 lb. restriction on Claimant.

21. On September 6, 2018 Nurse Kelly Schmadeke on behalf of Dr. Mauffrey issued a second note. It stated as follows:

> It is my medical opinion that [Claimant] should remain out of work until his next appointment on September 24, 2018. At this visit, we will update his plan of care and are happy to write another work letter at [Claimant]'s request. If he is cleared to bear weight on affected arm on 9/24/18, he may likely need an additional 1-3 weeks to progress to full weight bearing and safely climb ladders, lift, etc.
>
> If you have any questions or concerns, please don't hesitate to call.

22. On September 11, 2018, Division sent Employer a letter requesting they respond, as they had sent Employer prior communication requesting Employer's insurance carrier. The letter informed Claimant that he could proceed with a hearing noting that Employer could be liable for medical bills, temporary and permanent disability, penalties in the amount of 25% of awarded benefits for failure to carry insurance. They were further advised that an additional penalty up to $250 per day could be assessed for failure to carry coverage. Claimant was evaluated on September 24, 2018 by Dr. Parker Prusick of DHMC Ortho Trauma Clinic. He noted that Claimant should continue off work until October 22, 2018 as he was still recovering from his injuries that required operative fixation. After that day he would be cleared to return to work.

23. Claimant indicated that he had no billing statements because they covered him under a waiver or government program. He was not aware of any other outstanding billing statements.

24. He received physical therapy and rehabilitation for some time as well, but had to stop sometime in 2019 because he no longer had the ability to pay, even though it was not much. He continued with a lot of pain in his left upper extremity, he did not know if it was just dysfunction or problems with the screws. But that continued for a long time. Now he is somewhat better but he has never returned to the way he was before the work injury. He has tried to work but it has been very difficult due to the loss of his left arm. He also continues with problems with his low back and neck.

25. Claimant showed the disfigurements related to his surgery of the left upper extremity. The main surgical scar was 7 inches long and started at right above the level of the elbow. This scar was discolored, white compared to rest of the skin on his upper extremity and looked indented. A large second area of scarring at the base of the surgical scar, which looked like it had been an open wound that had healed, was significantly discolored, was one inch round and somewhat keloid. A third scar of approximately three quarters inch that comes out from the surgical scar was also discolored. There were multiple stich scars that surrounded the main surgical scar that were also white in color and very visibly showing the appearance almost like a zipper. Further, it was noticeable that Claimant could not straighten his left elbow and there was swelling at the elbow, which Claimant stated really still bothered him, and which is larger than the opposite elbow. Claimant explained that he did not finish his rehabilitation to try and get his arm to straighten out due to his inability to pay for his care.

26. The ALJ finds and concludes that as a result of the June 15, 2018 work injury, Claimant has a visible disfigurements to the left upper extremity. Claimant's testimony was credible. Claimant, and on inspection by this ALJ, described surgical scars. The ALJ hereby finds that Claimant has sustained serious permanent disfigurements to areas of the body normally exposed to public view, which entitles Claimant to additional compensation pursuant to Section 8-42-108 (1), C.R.S.

27. Claimant called as a witness a coworker (JP). Mr. JP testified that he was working the day Claimant fell off of the roof. He was working on top of the roof. He heard the noise of the fall. And he went down to find out what had happened. But he did not see Claimant fall. He asked Claimant what had happened and Claimant showed him his head injury. He saw the elbow problem was not normal. After Claimant had fallen off the ladder, he could not work anymore because of the injuries.

28. Claimant testified that he had a significant damage to his head, which required seven stitches. Claimant showed the area where the scar was on the back of his head but it was not visible to the eye as he had a head full of hair. Around his waist line, he also had a scrape or an abrasion on the side of his ribs but it is no longer visible.

29. As found, Claimant has proven by a preponderance of the evidence that he incurred multiple injuries in the course and scope of his employment with Employer on June 15, 2018, including to his head, neck, hip, low back and left upper extremity. Claimant's testimony is credible. Further, Claimant's testimony was supported by the testimony of his coworker, JP.

30. As found, Claimant was taken personally by his supervisor and boss to Denver Health Medical Center, where he was treated for his injuries, including surgery and rehabilitation. DHMC is an authorized provider and the medical care he received was reasonably necessary and related to the June 15, 2018 work related injuries.

31. This ALJ determined that the fair computation of Claimant's average weekly wage was $806.67.

32. Claimant proved by a preponderance of the evidence that he is entitled to temporary disability benefits. TTD benefits at the rate of $537.78 from June 16, 2018 through February 28, 2019 are calculated to be $19,745.31.

33. Claimant has proven by a preponderance of the evidence that Employer failed to carry workers' compensation insurance and failed to admit or deny the claim, causing Employer to be responsible for penalties in this matter.

34. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable

cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Sec. 8-41-301(1)(b), C.R.S. (2022); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold *D/B/A Atlas Logistics*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

The preponderance of the evidence demonstrates that Claimant's June 15, 2018 accident occurred within the scope of Claimant's employment when he was complying with his boss' request to retrieve the saw. As further found, Claimant's accident occurred arising out of Claimant's employment activities as he fell from the ladder, which his boss had secured to the roof and came lose, causing Claimant to fall hitting his head on a 2x6 and then to the concrete ground, causing injuries to his head, neck, left upper extremity, hip and low back. As found, Claimant met his burden of proof and Claimant's claim for injuries caused on June 15, 2018 are compensable.

C. Medical Benefits

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Sec. 8-42-101(1)(a), C.R.S., *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo.1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012); *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999)

As a result of the work injury of June 15, 2018, Claimant received medical treatment, including two stays at Denver Health Medical Center, undergoing surgery in July 2018 for the fractured left distal humerus at DHMC as well as physical therapy and rehabilitation. Claimant has proven by a preponderance of the evidence that he is entitled

to reasonably necessary medical benefits to cure and relieve him of the compensable work related conditions caused by the June 15, 2018 accident.[4]

As found, Medicaid likely paid for Claimant's treatment at Denver Health Medical Center and otherwise financed his care. Employer is thus financially responsible for the payment of Claimant's medical expenses, including any outstanding lien from the Colorado Department of Health Care Policy & Financing due to payments made by Medicaid.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services were paid to the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

Here, the wage records are not available. Claimant credibly testified that he would earn sometimes $720.00 per week, but at other times he would earn $800.00 or $900.00 in a given week. This ALJ determined that the fair approximation and calculation was to average out the three amounts, which provides for an average weekly wage of $806.67.

E. Temporary Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. There is no statutory requirement that a claimant must present medical

[4] This does not include any treatment due to the amputation of the left hand at the wrist.

opinion evidence from of an attending physician to establish his physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbios* Logic, 952 P.2d 831 (Colo. App. 1997).

As found, the persuasive evidence shows Claimant was disabled by the June 15, 2018 injury because he could not use his left upper extremity. He was initially several days in the hospital following the reduction of the left shoulder dislocation. Then was sent home to recover in order to be able to proceed with the surgery for the left arm fracture. The surgery was performed in July 2018, when he stayed again in the hospital for several days. Further, following the surgery, Claimant could not work without limitations pursuant to multiple provider's restriction letters, including Dr. Mauffrey's. As found, Claimant was unable to return to work beginning on June 16, 2018. Claimant credibly testified that he was unable to return to work due to his injuries until March 2019. Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits beginning on June 16, 2018 through February 28, 2019. Based on Claimant's AWW of $806.67 and Claimant's TTD rate is $537.78, Claimant is owed TTD benefits from June 16, 2018 through February 28, 2019. TTD benefits calculated through February 28, 2019 (257 days or 36 week and 5 days) are in the amount of $19,745.31.

Any claim for temporary partial disability benefits from March 1, 2019 through the present is reserved.

F. Penalties

Insurance Coverage

Every employer subject to the provisions of the Workers' Compensation Act shall carry Workers' Compensation insurance. Sec. 8-44-101, C.R.S. Sec. 8-43-408(5), C.R.S.[5] in effect at the time of Claimant's June 15, 2018 injury provides,

> In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

As found, Employer did not have an active Worker's Compensation insurance policy effective on or prior to Claimant's June 15, 2018 date of injury. Claimant spoke directly with his supervisor and boss on multiple occasions following the work injury of June 15, 2018. As found, Employer conveyed to Claimant that he did not have workers' compensation insurance coverage and that Claimant needed to communicate with the contractor. The contractor and Employer were provided with notice of the hearing in this matter and failed to show. Therefore, based on the evidence presented, it must be

[5] Due to statutory change as of July 1, 2017. The prior statutory provision of a 50% wage increase was paid to Claimant.

assumed that Employer did not have insurance on the date of the work injury. Claimant has shown that a penalty is due and owing for failure to insure.

As found, Respondent-Employer is liable for temporary total disability benefits and reasonable and necessary medical treatment related to the work injury. The ALJ was unable to determine the amount of unpaid medical benefits, as the evidence offered was an estimate and not the exact amount of the related medical costs incurred by Claimant other than an approximate cost of $64,000.00 based on Claimant's testimony. Based on Claimant's AWW of $806.67, Claimant's TTD rate is $537.78. Claimant is owed TTD benefits from June 16, 2018 until February 28, 2019. TTD benefits calculated through February 28, 2019 are in the amount of $19,745.31. It is undisputed Respondent-Employer did not carry workers' compensation insurance at the time of Claimant's industrial injury. Accordingly, Respondent-Employer shall pay an additional $4,936.33 (25% of $19,745.31) to the Colorado Uninsured Employer Fund.

Failure to Admit or Deny Liability

It if inferred by Claimant's statements at hearing Claimant argues that since the Division issued letters dated August 10, 2018 and September 11, 2018, stating that Division had not received a timely admission or denial from Respondents, that Claimant is entitled to penalties pursuant to alleged violations of Section 8-43-203(1)(a), C.R.S..

Section 8-43-203(1)(a) states that "The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee … within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested…"

Claimant seeks a penalty for failure to admit or deny liability. Pursuant under Sec. 8-43-203(2)(a), C.R.S. The employer must admit or deny liability within 20 days after it learns of an injury that results in "lost time from work for the injured employee in excess of three shifts or calendar days." An employer "may become liable" to the claimant "for up to one day's compensation for each day's failure" to file an admission or notice of contest with the Division. The maximum penalty for failure to admit or deny liability cannot exceed "the aggregate amount of three hundred sixty-five days' compensation." Fifty percent of any penalty shall be paid to the claimant and fifty percent to the Subsequent Injury Fund. See Sec. 8-43-203(2)(a), C.R.S.

The phrase "may become liable" means the imposition of a penalty under Sec. 8-42-203(2)(a), C.R.S. is discretionary. *Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of the requirement to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise administrative oversight over the claim process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colo. Civil Rights Comm'n*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Assoc. Bus. Prod. v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Indus. Claim Appeals Office*, 442 P.3d 94 (Colo. 2019). The claimant must prove circumstances justifying the imposition of a penalty under Sec. 8-43-203(2)(a), C.R.S. *Pioneer Hosp. v. Indus. Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

As found, Employer knew or should have known Claimant had a significant injury that occurred on June 15, 2018 as employer was the one to take Claimant from the home that was being worked on to, first the chiropractor and then, the emergency room at Denver Health Medical Center. Claimant was credible in testifying that he had multiple conversations with employer and that Employer himself knew he was off work for greater than three shifts. Employer failed to file an Employer's First Report and failed to notify the Division what employer's position was. Division sent Employer a copy of the Workers' Claim for Compensation dated August 7, 2018 on August 10, 2018. Division further followed up advising Employer that it was likely that penalties may assessed against Employer by letter dated September 11, 2018. Claimant has suffered significantly by Employer's failure to comply with the requirements of the law. As found, Employer knew Claimant filed a Workers' Compensation Claim (WCC) on August 7, 2018, as Division provided Employer a copy of the WCC to Employer with their letter of August 10, 2018. Further, Employer knew that they may be subject to penalties pursuant to Division's letter of September 11, 2018. The deadline to admit or deny liability was August 30, 2018, but certainly no later than October 1, 2018. Employer has never filed an admission or denial of liability regarding Claimant's injuries.

Claimant's hearing initially started on December 20, 2022, but was continued to April 24, 2023 due to lack of notice to Employer. Claimant's case was been delayed, and Claimant has been prejudiced, by Employer's failure to admit or deny liability. Claimant's multiple filings, including the two Applications for Hearing filed by his prior counsel and later by Claimant, who stated he struggled to understand the workers' compensation process and had been suffering from the ongoing consequences of the work related injury, have created procedural challenges for Claimant in this case.

The ALJ finds Employer should be penalized $18,250.00, (calculated for $50.00 per day for 365 days)[6] for failure to admit or deny liability from August 30, 2018 through August 30, 2019. Respondents not only failed to admit or deny, but they failed to show at the hearing and presented no defenses or mitigating circumstances in challenge to the penalty. Further, Claimant testified to the hardships that he endured related to his injuries, including having no income and having to terminate his medical care due to lack of funds. The penalty of $18,250.00 is sufficient to penalize Employer's violation of the law and encourage future compliance without being excessively punitive. Fifty percent (50%) of this penalty shall be paid to Claimant in the amount of $9,125.00 and fifty percent (50%) to the Subsequent Injury Fund.

G. Disfigurement

[6] The maximum allowable by statute was 365 times Claimant's daily rate of $76.83 for a potential total of $28,042.95.

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." A disfigurement is an observable impairment of the natural appearance of a person, including a limp. See *Arkin v. Industrial Commission*, 358 P.2d 879, 884, 145 Colo. 463, 472 (Colo. 1961); *Piper v. Manville Products Corp*., W.C. No. 3-745-406 (July 29, 1993); *Josefiak v. Green and Josefiak, P.C.,* W.C. No. 3-783-081 (March 12, 1987); Marcelli v. Echostar Dish Network, W.C. No. 4-776-535, ICAO (August 30, 2012); *In re Claim of Nagle,* W.C. No. 5-105-891 (July 24, 2020). The ALJ finds and concludes that as a result of the June 15, 2018 work injury, Claimant has visible disfigurements to the left upper extremity. Claimant's testimony was credible. Claimant, and on inspection by this ALJ, described the surgical scars as stated above. As found, Claimant has sustained serious permanent disfigurements to areas of the body normally exposed to public view, which entitles Claimant to additional compensation pursuant to Section 8-42-108 (1), C.R.S. As determined, Respondent shall pay Claimant five thousand nineteen dollars and eighty three cents ($5,019.83) for those disfigurement as described above.[7]

H. Payment to Trustee or Posting of Bond

Under Sec. 8-43-408(2), C.R.S. Employer must pay to the trustee of the Division of Workers' Compensation ("Division") an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. Alternatively, "employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado."

As found, this Order awards no ongoing benefits, so the present value equals the total benefits awarded. The Order awards no specific medical benefits at this time, but indemnity benefits of $19,745.31, disfigurement of $5,019.83, and penalties totaling 23,186.33[8], for total compensation of $47,951.47, which does not include the approximately $64,000.00 in medical benefits which was either paid by Medicaid or discounted by the provider. Employer is thus required to pay the trustee of the Division a total amount of $47,951.47. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by a surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

IT IS THEREFORE ORDERED:

---

[7] Maximum allowable disfigurement for injuries occurring between July 1, 2017 and June 30, 2018.
[8] Only $9,125.00 of the total penalties are to be paid to Claimant.

1. Claimant suffered compensable work related injuries to his head, neck, low back and hip as well as his left upper extremity, including the elbow and left shoulder, on June 15, 2018 in the course and scope of his employment with Employer.

2. Respondent shall pay for all authorized, reasonably necessary treatment related to the June 15, 2018 injury from authorized providers to cure or relieve the effects of Claimant's compensable injury, including but not limited to the charges from Denver Health Medical Center and reimbursement to Medicaid (Colorado Department of Health Care Policy & Financing).

3. Claimant's average weekly wage is $806.67 and his temporary disability rate is $537.78.

4. Respondent shall pay Claimant TTD benefits at the rate of $537.78 from June 16, 2018 through February 28, 2019 in the amount of $19,745.31.

5. Employer shall pay penalties to Claimant in the amount of $9,125.00 for failure to admit or deny the claim.

6. Employer shall pay the Colorado Uninsured Employer Fund a total of $4,936.33 in penalties for failure to insure.

7. Employer shall pay the Subsequent Injury Fund a total of $9,125.00 in penalties for failure to admit or deny benefits in a timely manner.

8. In lieu of payment of the above compensation and benefits to Claimant, Employer shall:

a. Deposit the sum of $47,951.47, adding 4% per annum, with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Trustee; or

b. File a bond in the sum of $47,951.47 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

c. Employer shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

10. Employer shall pay statutory interest at the rate of 8% per annum on benefits not paid when due.

11. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or order authorizing distribution provides otherwise.

12. Pursuant to Sec. 8-42-101(4), C.R.S., any medical provider or collection agency shall immediately cease any further collection efforts from Claimant because Employer is solely liable and responsible for the payment of all medical costs related to Claimant's work injury.

9. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 3rd day May, 2023.

ISSUES

- Did Claimant overcome the DIME's 14% whole person rating by clear and convincing evidence?
- If Claimant overcame the DIME rating, what is the proper rating, based on a preponderance of the evidence?
- Did Claimant prove his average weekly wage should be increased to $1,029.65?
- The parties stipulated Insurer is entitled to a credit for PPD previously paid in this claim if additional PPD is awarded.
- The parties agreed to reserve the issue of overpayment, pending the outcome of the hearing.
- There is no current dispute regarding medical treatment. The parties stipulated Claimant is entitled to a general award of post-MMI *Grover* medical benefits from authorized providers, subject to Respondents' right to contest the reasonable necessity or causal relationship of any specific treatment.
- Because the hearing was conducted virtually, the parties agreed to reserve the issue of disfigurement for determination on a future in-person docket.

FINDINGS OF FACT

1. Claimant worked for Employer as a medical assistant. The job was physically demanding and required frequent patient transfers. Claimant occasionally lifted up to 100 pounds, although the heavier patients were more commonly moved with a "two-person lift" approach.

2. Claimant suffered an admitted low back injury on January 16, 2014 while transferring a patient from a wheelchair to an x-ray table.

3. Claimant had a prior injury to his low back on October 27, 2004 while working as an automotive technician for [Redacted, hereinafter FM] He was treated conservatively, and put at MMI on March 10, 2005 with no impairment or restrictions. A Final Admission of Liability (FAL) dated May 19, 2005 shows no PPD was awarded. The only maintenance care admitted was a single follow up with the ATP within six months of MMI.

4. Claimant did not object to the May 19, 2005 FAL, and the claim closed.

5. Claimant underwent an L5-S1 microdiscectomy with Dr. Steven Zielinski on April 4, 2006. The surgery was covered by Claimant's private health insurance.

6. On April 20, 2006, Claimant filed a Petition to Reopen the 2004 claim based on a change in condition. Claimant attached Dr. Zielinski's surgical report to the Petition. The insurance carrier on the 2004 claim did not voluntarily reopen the claim, and Claimant did not pursue a hearing. The ALJ infers the Petition to Reopen was abandoned.

7. Claimant received no PPD award or settlement for the 2004 injury.

8. Claimant recovered well after the 2006 surgery and returned to work with no restrictions or limitations. He started working for Employer in 2007. Despite performing a demanding job, Claimant missed no work and never modified his job in any way because of the previous injury. Nor did Claimant have any difficulty engaging in regular exercise, including running and weightlifting.

9. Employer presented no persuasive evidence to refute Claimant's testimony regarding the exertional requirements of his job or his functional abilities before the 2014 work accident.

10. Claimant received no treatment for his low back from 2007 until 2014. However, imaging studies were performed on his low back approximately one year before the work accident. Lumbar x-rays on December 11, 2012 showed some minor osteophytes at L3-4, but no acute findings. According to the report, the clinical indication for the x-rays was "Back pain."

11. Claimant subsequently had a lumbar MRI on January 7, 2013. The indication was listed as "Chronic back pain. Surgery in 2005." The MRI showed an L5-S1 disc osteophyte complex with facet arthropathy, postsurgical scarring, and a small lateral recess disc protrusion.

12. The MRI report identifies the ordering provider as Dr. Robert Nolan, a physician in Employer's practice. Claimant testified that Dr. Noland ordered the MRI "as a favor," to investigate the cause of persistent gastrointestinal issues. Respondents' IME, Dr. Primack, doubted Claimant's explanation because "[Dr. Noland] could be in a lot of hot water . . . by putting something in there, quote, just to get it scanned." Nonetheless, there are no treatment records from Dr. Noland, and no persuasive evidence Dr. Noland recommended any treatment.

13. There are no additional records relating to Claimant's low back until the work accident on January 16, 2014.

14. After the January 2014 injury, Claimant was sent to physical therapy and prescribed medications. A lumbar MRI on February 10, 2014 showed no nerve root compression or other acute pathology. Comparison with the previous MRI from January 2013 showed interval improvement in an L5 S1 disc protrusion.

15. Claimant underwent right L2-L5 rhizotomies in March 2014, which were helpful.

16. Dr. Daniel Olson at CCOM put Claimant at MMI on July 28, 2014. Dr. Olson calculated a 16% whole person rating, comprised of 10% for specific disorders under Table 53, combined with 7% for range of motion. However, Dr. Olson noted Claimant's previous work-related low back injury in 2004, with an L5-S1 laminectomy in 2006. Even though Dr. Olson noted Claimant "was released without restrictions and evidently had no problems with his back since the [2005] surgery," he apportioned the rating because the prior injury was work-related. Dr. Olson subtracted 8% for the prior surgery from the 10% specific disorder rating. Dr. Olson did not apportion the range of motion impairment because he had no evidence showing functional impairment or treatment within 12 months before the current injury. Dr. Olson provided an overall rating of 9% whole person after apportionment.

17. Insurer filed a Final Admission of Liability (FAL) on September 30, 2014, admitting for Dr. Olson's 9% rating and for medical benefits after MMI. Claimant did not contest the FAL, and the claim closed. Insurer paid Claimant $18,261.59 in PPD benefits.

18. Claimant received regular post-MMI treatment, including multiple epidural steroid injections (ESIs) and repeat rhizotomies. He was eventually referred for a surgical consultation because of continued and progressive back and leg symptoms.

19. Dr. Bryan Castro performed an L5-S1 laminectomy, microdiscectomy, and decompression on December 12, 2019.

20. Insurer voluntarily reopened the claim and reinstated TTD benefits in December 2019 based on Claimant's worsened condition and surgery.

21. Claimant initially reported complete resolution of his leg symptoms after surgery. However, his right leg pain recurred after approximately four months. An MRI on April 18, 2020 showed a central disc protrusion at L5-S1 producing right L5 nerve root effacement and postoperative scar formation.

22. Claimant followed up with Dr. Castro on May 15, 2020. Dr. Castro did not believe the MRI showed recurrent herniation. He recommended ESIs.

23. Bilateral L5-S1 ESIs were performed on June 30, 2020, and provided approximately 75% pain relief.

24. Dr. Thomas Centi put Claimant at MMI on July 30, 2020. He released Claimant to full duty with no restrictions and referred him to Dr. Malinky for maintenance care.

25. Dr. Dwight Caughfield performed a DIME on January 12, 2021. Dr. Caughfield determined Claimant was not at MMI "given his progressive leg pain and cramps that presented before MMI and have resulted in gradual functional declined that is not responding well to injections." Dr. Caughfield recommended lower extremity

electrodiagnostic testing, a repeat MRI, a psychological evaluation, and a "surgical second opinion" to consider a possible fusion.

26. Claimant was referred to Dr. Timothy Sandell to complete the DIME recommendations. Dr. Sandell performed electrodiagnostic testing on February 23, 2021. The testing was normal with no evidence of nerve entrapment or radiculopathy.

27. A repeat lumbar MRI was completed on March 9, 2021. It was largely unremarkable aside from post-surgical changes and a slight bulge at L5-S1.

28. Claimant was evaluated by Dr. Sana Bhatti, a neurosurgeon, on April 23, 2021. Claimant described severe low back pain and radiating pain and numbness in his thighs. Dr. Bhatti reviewed the MRI and considered it "essentially unremarkable" with no evidence of neurologic compromise or other findings to account for Claimant's symptoms. Dr. Bhatti did not think Claimant was a surgical candidate and recommended therapy and pain management.

29. Claimant underwent additional injections and rhizotomies with Dr. Malinky in July 2021.

30. Dr. Sandell put Claimant at MMI on August 4, 2021. Dr. Sandell calculated a 16% whole person rating, including 13% under Table 53 and 4% for range of motion. Dr. Sandell did not perform apportionment because he was "unclear" whether Claimant had previously received a rating for the 2014 injury or for the 2004 injury. Dr. Sandell recommended a permanent work restriction of no lifting more than 50 pounds. He recommended periodic follow-up with Dr. Malinky as maintenance care.

31. Claimant had a follow-up DIME with Dr. Caughfield on November 2, 2021. Dr. Caughfield determined that Claimant reached MMI as of September 16, 2021.[1] Dr. Caughfield calculated a 21% whole person rating, based on 9% under Table 53 and 13% for range of motion loss. Dr. Caughfield further opined,

> However, since he had a lumbar Laminectomy at L5-S1 prior to 2008 (2004 surgical date), apportionment is appropriate Per Division Apportionment Calculation Worksheet. His prior table 53 impairment is IID lumbar which is 8%. This is apportioned from his current injury table 53 rating of 9% for one percent table 53 impairment apportionment. There is no prior injury ROM or impairment available to apportion the ROM impairment which results in a 13% whole person impairment for range of motion. . . . [H]is total lumbar spine impairment is 14% whole person apportioned.

32. Dr. Caughfield attached a copy of the Apportionment Calculation Worksheet he completed to determine whether apportionment applied to the rating. The worksheet reflects a critical error at Step 2:

---

[1] This date appears to correspond with the date of the electronic signature on Dr. Sandell's August 4, 2021 report.

Step 2: The date of the *current injury* is:

☑ **Before** July 1, 2008 → Apportion - proceed to **Step 4**

☐ **After** July 1, 2008 → Proceed to **Step 3**

33. Claimant's "current injury" occurred in 2014, which is "After July 1, 2008." Therefore, Dr. Caughfield should have moved to Step 3 of the worksheet. Instead, he applied Step 4, which simply instructs the physician to "Apportion by subtracting the previous impairment from the current total rating." As a result of this error, he neglected to consider the appropriate factors under the version of the apportionment statute applicable to Claimant's injury.

34. Dr. Caughfield noted Claimant had "No residual symptoms or functional impairment" after the 2006 surgery.

35. Respondents filed a FAL on November 29, 2021 admitting for Dr. Caughfield's 14% rating.

36. Dr. Scott Primack performed an IME for Respondents on May 25, 2022. Dr. Primack documented, "[Claimant] tells me that he did extremely well following his [2006] spine operation and was able to return to work." Dr. Primack agreed with Dr. Caughfield's rating methodology. He opined apportionment for the 2006 surgery was necessary "to prevent double dipping." However, Dr. Primack could point to no evidence showing Claimant's prior low back condition was "disabling" before January 16, 2014.

37. Claimant overcame the DIME's 14% rating by clear and convincing evidence. Dr. Caughfield's application of apportionment was highly probably incorrect because it is inconsistent with the law in effect on the date of injury. Although Claimant had a prior work-related low back injury in 2004, he received no award or settlement. Moreover, he recovered well from the 2006 surgery and the prior injury was not "independently disabling" at the time of the 2014 injury. Therefore, apportionment is not permitted.

38. Claimant proved the correct rating is 21% whole person, the rating calculated by Dr. Caughfield before apportionment.

39. Insurer initially admitted an AWW of $559.49 based on Claimant's earnings on the date of injury.

40. When the claim was reopened in December 2019, Insurer voluntarily increased the admitted AWW to $661.84, based on post-injury pay raises.

41. Claimant continued working for Employer until July 2020, when he left to take a new job at [Redacted, hereinafter PM]. Claimant was earning on average $760 per week when he resigned from Employer. Claimant changed jobs because of COVID-related issues and commuting time, not the effects of the work injury.

42. Claimant earned $720 per week at PM[Redacted], from August 2020 until February 2021.

43. Claimant was unemployed from February 2021 until October 2021. Claimant conceded he was still unemployed on the date of MMI.

44. In October 2021, Claimant started a new job for Employer as an anesthesia technician. His base pay in the new position is $22.90 per hour.

45. Claimant failed to prove his AWW should be increased to $1,029.65. Claimant's AWW is most fairly calculated by his earnings immediately before he left Employer in 2020, which is $760 per week. In reaching this conclusion, the ALJ has considered the alternative computations of $661.84 (the admitted AWW), $720 (Claimant's wage immediately before MMI), and $1,029.65 (advocated by Claimant for his post-MMI position).

CONCLUSIONS OF LAW

A. Claimant overcame the 14% DIME rating by clear and convincing evidence

A DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing burden also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc.*, W.C. No. 4-842-550-01 (March 18, 2016).

Apportionment of permanent medical impairment is governed by § 8-42-104 (the "apportionment statute").[2] The current statute distinguishes work-related and nonwork-related prior impairments. Sections 8-42-104(5)(a), (b). If the prior impairment was work-related, apportionment applies if the prior impairment involved "the same body part" and resulted in "an award or settlement" in a workers' compensation claim. In such a case, the prior rating "as established by the award or settlement" is subtracted from the rating for the current injury. In the case of prior nonwork-related impairment, the statute only allows apportionment if the prior impairment was "independently disabling" at the time of the subsequent injury.

[2] There have been several iterations of the apportionment statute since 1991. From July 1, 1991 to June 30, 1999, apportionment of PPD was codified in § 8-42-104(2). From July 1, 1999 to June 30, 2008, apportionment of PPD was codified in § 8-42-104(2)(b). Effective July 1, 2008, apportionment of PPD is governed by § 8-42-104(5).

The parties disagree whether Dr. Caughfield performed "apportionment" or made a "causation" determination regarding prior impairment. If the issue is "apportionment," the rating can only be reduced if the requirements of § 8-42-104(5) are satisfied. On the other hand, if the issue is solely one of "causation," the apportionment statute is not applicable, and Claimant must overcome the causation determination by clear and convincing evidence. The *AMA Guides* define apportionment as "the determination of the degree to which each of various occupational and nonoccupational factors have contributed to a particular impairment." *See also, Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). By contrast, the issue of "causation" involves whether an entire component of the claimant's impairment is or is not related to the industrial injury. *E.g.,* Coble v. Pioneer Group Inc., W.C. No. 4-290-596 (August 24, 2001); *Johnson v. Christian Living Campus*, W.C. No. 4-354-266 (October 5, 1999).

Several factors persuade the ALJ that Dr. Caughfield addressed "apportionment" rather than "causation." First, Dr. Caughfield explicitly stated "apportionment is appropriate," and he used the term "apportion" or "apportionment" no less than five times. Second, he applied the algorithm set forth in the Division's Apportionment Calculation Worksheet, which attempts to distill the requirements for apportionment under § 8-42-104(5). Third, and more important, his methodology was the essence of apportionment, *i.e.*, he calculated an overall rating and subtracted the prior impairment rating to the same body part. This is to be contrasted with a "causation" determination wherein an entire body part or component of impairment is simply not included in the rating. *E.g., Hernandez v. Dairy Farmers of America*, W.C. No. 5-028-658-001 (February 4, 2020).

As found, Claimant overcame the DIME's 14% rating by clear and convincing evidence.[3] Dr. Caughfield's application of apportionment was highly probably incorrect because it is inconsistent with the law in effect on Claimant's date of injury. Although Claimant had a prior work-related low back injury in 2004, he received no award or settlement for any permanent impairment. Moreover, Claimant recovered well from the 2006 surgery and the prior injury was not "independently disabling" at the time of the 2014 injury.

Admittedly, Claimant's testimony that his low back was asymptomatic before the January 16, 2014 work accident is not entirely credible. As Dr. Primack pointed out, the x-rays and MRI in December 2012 and January 2013 indicate he probably had some symptoms at the time. But he received no treatment for any such symptoms. Regardless, the apportionment statute focuses on prior "disability," which is not synonymous with "symptoms." The term "disability" pertains to a claimant's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). The persuasive evidence clearly and convincingly shows Claimant was not "disabled" by the prior back injury immediately

[3] Arguably, the DIME's determinations regarding apportionment are not entitled to presumptive weight, and the applicability of § 8-42-104(5)(a) and (b) are factual issues for determination by the ALJ under the preponderance standard. *Public Service Co. v. Industrial Claim Appeals Office*, 40 P.3d 68, 71 (Colo. App. 2001). But in this case, the persuasive evidence strong enough to overcome the DIME even under the clear and convincing evidence standard.

before the 2014 work accident. Claimant maintained a physically demanding job for years, with no restrictions, limitations, or difficulty. He also engaged in strenuous avocational activities such as weightlifting and running. Claimant worked many years for Employer, and the ALJ expects Respondents would have called a manager or coworker at hearing were Claimant's testimony regarding his pre-injury functional abilities exaggerated or untrue.

B. The correct rating is 21% whole person

When the DIME rating is overcome "in any respect," the proper rating becomes a matter for the ALJ's determination based on the preponderance of the evidence. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (September 5, 2001). The ALJ is not limited to merely choosing from competing ratings offered by Level II physicians, but may independently determine the rating based on the evidence in the case. *Garlets v. Memorial Hospital, supra*. The only constraint is that the rating must be supported by the evidence and consistent with the *AMA Guides* and other rating protocols. *Gallegos v. Lineage Logistics Holdings LLC*, W.C. No. 5-054-538-002 (February 11, 2020). Even if the ALJ finds the DIME rating has been overcome, the ALJ does not have to reject every other component of a DIME rating. *Lee v. J. Garlin Commercian Furnishings*, W.C. No. 4-421-442 (December 17, 2001).

Claimant proved the correct rating is 21%, as calculated by Dr. Caughfield. Aside from the erroneous apportionment, Dr. Caughfield's rating is otherwise supported by the evidence and consistent with the *AMA Guides*.

C. Average weekly wage

Section 8-42-102(2) provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Avalanche Industries v. Clark*, 198 P.3d 589 (Colo. 2008). The "entire objective" of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

The "discretionary exception" is frequently invoked to account for post-injury wage increases when calculating temporary disability benefits. *E.g., Campbell v. IBM Corp.*, *supra; Romero v. Cub Foods*, W.C. No. 4-218-823 (September 28, 2000). This is because of the direct correlation between the claimant's "actual wage loss" during a period of temporary disability and "a salary a claimant was actually earning when forced to stop working." *Avalanche Industries, supra*, at 596.

Here, Claimant did not endorse temporary disability as an issue for hearing, so any adjustment to the AWW is moot with respect to TTD and TPD. The only issue for

determination in this proceeding is whether the AWW should be increased for purposes of calculating PPD benefits.

The discretionary authority to deviate from the "default" AWW formula extends to PPD benefits, which compensate a claimant for a permanent loss of "future earning capacity." *Pizza Hut v. Industrial Claim Appeals Office*, 18 P.3d 867 (Colo. App. 2001). But such cases are less common than those involving TTD, partly because the correlation between a claimant's *future* earning capacity and wages earned in a specific post-injury job is more tenuous with respect to permanent disability benefits.

The outcome in *Pizza Hut* was heavily influenced by the relatively unique circumstances in that case. At the time of the injury, the claimant was working part-time as a pizza delivery person while attending nursing school. By the time he reached MMI, the claimant had already received his degree and was working full time as a nurse, earning much higher wages than during the pizza delivery job. Ultimately, the ALJ determined it was manifestly unjust to calculate the claimant's PPD award—which is intended to compensate for loss of future earning capacity—based on wages from a temporary, part-time pizza delivery job. The court upheld the ALJ's determination as a reasonable exercise of the discretionary authority regarding AWW.

Similarly, in *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850, 857 (Colo. 1992), the court cited several "unique" factors in finding the "default" AWW provision to be manifestly unjust with respect to calculating the claimant's permanent total disability benefits.

As found, Claimant failed to prove his AWW should be increased to $1,029.65. Instead, the ALJ agrees with Respondents that the most appropriate AWW at the time of MMI is $760. This case presents no "unique" or unusual circumstances, such as those in *Pizza Hut* and *Vigil*. Claimant's only permanent work restrictions is a 50-pound lifting limit, and there is no persuasive evidence that this relatively liberal restriction has or will impact his future earning capacity. In fact, Claimant secured a higher-paying job after MMI, despite the restrictions. Increasing Claimant's AWW to $760 accounts for all post-injury pay raises in the job Claimant held at the time of his injury, and "fairly compensates" for his loss of future earning capacity.

ORDER

It is therefore ordered that:

1. Claimant's request to increase his average weekly wage to $1,029.65 is denied and dismissed.

2. Claimant's AWW is $760 as of the date of MMI.

3. Insurer shall pay Claimant PPD benefits based on a 21% whole person rating. Insurer may take credit for any PPD previously paid in connection with this claim.

4. Insurer shall pay statutory interest of 8% per annum on all compensation not paid when due.

5. Insurer shall cover reasonably necessary and related medical treatment after MMI from authorized providers.

6. The issues of disfigurement and overpayments are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-195-255-001

ISSUE

Whether Claimant has established by a preponderance of the evidence that the robotic repair of his paraesophageal hiatal hernia requested by Authorized Treating Physician (ATP) Philip Woodward, M.D. and performed on December 5, 2022 was reasonable, necessary and causally related to his admitted December 30, 2021 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a firefighter. He explained that in 2001 he was diagnosed with Gastroesophageal Reflux Disease (GERD) or acid reflux. He received omeprazole, generically named "Prilosec" to control his symptoms. Claimant specifically took 20mg of Prilosec twice daily to subdue the burning sensation in his stomach.

2. On December 30, 2021 Claimant was assigned to assist with evacuations during the [Redacted hereinafter MF] fire in the town of [Redacted, hereinafter SC]. He was specifically locating individuals and taking them to safety. Claimant was not wearing a respirator or breathing mask. He worked from 10:35 p.m. on December 30, 2021 until he was relieved at 11:30 a.m. on December 31, 2021.

3. Claimant explained that during the evacuations he was exposed to large quantities of smoke from burning vegetation, houses, plastics, trash cans and various other materials. He was coughing and found it difficult to breathe at times. Claimant also experienced a runny nose, watery eyes and a sore throat.

4. On January 14, 2022 Claimant visited Authorized Treating Physician (ATP) Workwell Occupational Medicine for an initial evaluation. He reported wheezing and shortness of breath with exertion as a result of his December 30, 2021 work activities. Claimant did not mention any increase in GERD symptoms. He was diagnosed with respiratory conditions due to smoke inhalation and received work restrictions.

5. On January 24, 2022 Claimant returned to Workwell and visited Felix Meza, M.D. for an examination. Because Claimant's respiratory symptoms failed to improve, Dr. Meza referred him to National Jewish Health for an evaluation.

6. On February 6, 2022 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged that Claimant was entitled to receive medical and Temporary Total Disability (TTD) benefits.

7. On March 17, 2022 Claimant visited Annyce Mayer, M.D. at National Jewish for an examination. Dr. Mayer remarked that Claimant had a previous diagnosis of

seasonal asthma and a prescription for albuterol that he rarely used. She also recounted that Claimant had been diagnosed with GERD in 2001 and had good symptom control by taking 20mg of omeprazole every morning. Dr. Mayer noted that Claimant had not only suffered more heartburn since the MF[Redacted] fire, but began to develop acid brash in his mouth that aggravated his cough. She commented that Claimant sleeps with his bed elevated 15 to 20 degrees with a wedge and tries not to eat anything two hours before bedtime to alleviate his GERD symptoms.

8. At the March 17, 2022 evaluation Dr. Mayer concluded that Claimant's exposure to smoke and other inhalants on December 30, 2021 exacerbated his GERD condition. She detailed that Claimant suffered the following:

> Significant exacerbation of previously well-controlled GERD on daily omeprazole, with frequent heartburn and symptoms of brash. GERD is an established sequelae of [Redacted hereinafter WC] exposures, and given the high level exposure and prolonged exposure to the complex mixture including irritant vapors, dust, gas, and fumes contained within the smoke in the absence of respiratory protection, in my opinion to a reasonable degree of medical probability was also swallowed and caused the exacerbation of his previously well-controlled GERD.

9. On April 29, 2022 Claimant returned to National Jewish for an examination. Dr. Mayer prescribed Famotidine to address Claimant's stomach acid and reflux. Additionally, Claimant's Prilosec was doubled to 40mg twice daily prior to address his symptoms.

10. On July 8, 2022 Claimant again visited National Jewish for an evaluation. Dr. Mayer recounted that, because of additional GERD symptoms, Claimant "had increased his omeprazole to 40mg in the morning and 20mg at night that did help the reflux but did not change the symptoms in his throat." Claimant also remained on Famotidine for his GERD.

11. On August 22, 2022 Pranav Periyalwar, M.D. at National Jewish Health, Division of Gastroenterology performed an "Ambulatory Gastroesophageal and Supraesophageal Reflux Monitoring" test on Claimant. The testing involves the placement of electrodes in the esophagus to determine whether ph levels decrease due to increased acid levels from reflux. The monitoring revealed normal results with 0.2% total distal esophageal acid exposure. Overall acid and nonacid reflux events remained within normal levels throughout the daytime and while lying down at night. Although Claimant reported three drug and 21 respiratory symptoms they did not correlate with observed underlying reflux events. Notably, because there were zero observed episodes of supra-esophageal reflux events, the study was considered within normal limits.

12. Based on a referral from Dr. Meza, Claimant underwent a psychological evaluation with Melanie Heto, Psy.D. on August 30, 2022. Claimant reported stressors predominantly with the uncertainty of his condition, perceived delays in treatment, and wondering if his providers were withholding information about their prognosis. He was

concerned about his future health. The thoughts were consuming 70-80% of his day. Claimant reported that "his stress response included a high level of irritability, anger, feeling 'super negative,' and feeling helpless to provide for his family."

13. After extensively interviewing Claimant, Dr. Heto performed a battery of psychological testing. On the Beck Depression Inventory – Second Edition (BDI-II), Dr. Heto documented the following:

> [Claimant] has a total level of depressive symptoms in the severe range. He endorsed moderate distress from the following symptoms: feelings of failure, self-disappointment, self-criticism, loss of interest, difficulty making decisions, feelings of worthlessness, loss of energy, loss of sleep, increased appetite, and loss of interest in sex. He endorsed mild sadness, pessimism, loss of pleasure, guilt, passive suicidal ideation without intent, crying, restlessness, irritability, difficulty concentrating, and fatigue.

14. On the Beck Anxiety Inventory (BAI), Dr. Heto documented that Claimant had endorsed a total level of anxiety in the moderate range. On the Battery for Health Improvement (BHI-2), Dr. Heto noted the following:

> His level of somatic complaints was higher than that seen in 94% of patients, indicating the perception of severe illness symptoms. He endorsed 20 of the 26 Somatic Complaints items. This level of complaints is very unusual. Patients with this profile tend to be preoccupied with their physical functioning. Somatic hypervigilance may be present, with the patient interpreting common symptoms as being problematic.

15. On September 27, 2022 Claimant returned to National Jewish for an evaluation. Dr. Mayer remarked that Claimant had "normal pulmonary function testing, negative methacholine challenge testing and high-resolution CT imaging revealing only mild large and small airway collapse." She commented that he had significant acceleration of his underlying GERD that was likely the result of prolonged exposure to fumes and smoke. Dr. Mayer commented "whether or not this is the cause of his ongoing burning of the throat and swallowing difficulties remains to be determined." She remarked that Claimant remained on Famotidine and 40mg of omeprazole twice daily.

16. Dr. Mayer also addressed the results and data from Dr. Periyalwar's "Ambulatory Gastroesophageal and Supraesophageal Reflux Monitoring" test, the maximum multistage exercise treadmill test and continuous laryngoscopy performed at National Jewish. Regarding reflux monitoring, Dr. Mayer only noted an "Abnormal study on PPI and H2 blocker." She failed to document Dr. Periyalwar's findings of a "normal study," and that "overall acid and non-acid reflux events remain[ed] within normal limits throughout the daytime upright and nocturnal recumbent monitoring." Dr. Mayer also did not mention Claimant's inconsistent reported complaints "that did not correlate with

observed underlying reflux events." Specifically, there were zero episodes of supra-esophageal reflux events observed during the study.

17. On October 4, 2022 the medical providers at National Jewish submitted a request to Respondents for a GI consultation. On October 11, 2022 Respondents authorized the procedure.

18. On October 21, 2022 Claimant presented to Dr. Periyalwar for a consultation. He remarked that Dr. Mayer referred Claimant because of a history of irritant exposure based on a "high level of ongoing GERD and abnormal impedance testing despite max does of omeprazole 20 mg twice daily and famotidine 40 mg at night." Dr. Perioyalwar commented that he reviewed Claimant's previous ph impedance testing that showed significant nonacid reflux but no elevated acid exposure. He recommended an upper endoscopy and a screening colonoscopy.

19. On November 18, 2022 Claimant visited Philip Woodward, M.D. at the "Institute for Esophageal and Reflux Surgery" for a GI consultation. Dr. Woodward stated that Claimant suffered from the primary symptom of regurgitation. He remarked that Claimant was not able to lie down on flat surfaces because gastric juices come into his mouth. He requested surgical authorization for a "Robotic Repair of PEH and ARS (A180) … with Fundo/MSA (Simple)." On November 30, 2022 Respondents denied Dr. Woodward's request based on a Peer Review by Mahdy Flores, D.O.

20. On December 5, 2022 Claimant underwent robotic surgery of his paraesophageal hiatal hernia with Dr. Woodward under private insurance. Claimant remarked that the surgery significantly improved his condition so that he no longer requires any medication for GERD.

21. On January 6, 2023 J. Tashof Bernton, M.D. performed an independent medical examination of Claimant. He conducted a physical examination and reviewed Claimant's medical records. Dr. Bernton also testified at the hearing in this matter. He concluded that that Claimant's robotic paraesophageal hiatal hernia was not reasonable, necessary and causally related to his December 30, 2021 work exposure to smoke and other irritants.

22. In reviewing Claimant's medical history prior to the December 30, 2021 incident, Dr. Bernton noted that Claimant had diagnoses of asthma and GERD. He remarked that, although prior records reflect that Claimant suffered from pre-existing asthma, testing after the exposure revealed that he does not suffer from the condition. In fact, Dr. Bernton described that Claimant underwent methacholine challenge testing that induces asthma symptoms and is the gold standard for assessing the condition. However, Claimant had a negative result. Moreover, Claimant exhibited 98% maximum oxygen consumption on an exercise treadmill test. Dr. Bernton thus reasoned that Claimant does not have asthma. Instead, Claimant likely suffers from a somatoform disorder that constitutes a significant portion of his symptoms.

23. In addressing Claimant's alleged aggravation of GERD as a result of the December 30, 2021 exposure, Dr. Bernton commented that, in Claimant's initial evaluation at Workwell two weeks after the smoke exposure, he did not mention any increase in his GERD symptoms. However, Dr. Bernton remarked that, if Claimant's GERD had been aggravated by his occupational exposure on December 30, 2021, his symptoms would have been the most pronounced shortly after the incident. Moreover, Dr. Bernton explained that physicians performed ambulatory gastroesophageal and supraesophageal reflux monitoring on August 22, 2022 to assess Claimant's GERD condition. The testing involves the placement of electrodes in the esophagus to determine whether ph levels decrease due to increases in acid levels from reflux. The monitoring revealed normal results with .2 percent total distal esophageal acid exposure. Overall acid and nonacid reflux events remained within normal levels throughout the daytime and while lying down at night. Claimant had reported three drug and 21 respiratory symptoms but they did not correlate with observed underlying reflux events. Dr. Bernton summarized that there was no acid coming into Claimant's esophagus or mouth and the events that Claimant correlated to his symptoms were not attributable to acid based on long-term monitoring. He reasoned that Claimant thus did not suffer from GERD. In conjunction with the asthma testing, Dr. Bernton explained that Claimant has reported symptoms for conditions that do not exist. Testing simply did not support Claimant's subjective complaints of both asthma and GERD.

24. Dr. Bernton further discussed the importance of Claimant's somatoform condition in assessing his reported symptoms.

> [P]sychologic evaluation did show not only anxiety and depression, but findings consistent with a somatoform contribution to the patient's symptom profile with a level of somatic complaints, which was described as "higher than that seen in 94% of patients."
>
> Further, it is clear that a somatoform component plays a major role in the patient's symptom presentation, and simply relying on subjective symptoms as reported by the patient over time is not a sufficient basis to determine an occupational causation without objective correlation. The patient's ambulatory study for gastroesophageal and supraesophageal reflux monitoring on 08/22/2022 was normal.

25. In his hearing testimony Dr. Bernton further clarified his reasons for determining that Claimant's robotic paraesophageal hiatal hernia was not reasonable, necessary and causally related to his December 30, 2021 work exposure to smoke and other irritants.

> The work-relatedness…even if you accept his symptoms at face value, the record doesn't document an abrupt increase in those symptoms at the time or directly after that event.
>
> Second, at the time of the work-related impact the symptoms would have been the greatest and they were not. So the second thing is, I have had

> an opportunity to review the literature on WC[Redacted] workers and esophageal reflux, and it's not very strong. I mean, they found that some workers had -- and I can quote the specific literature if that's helpful -- but they found that some workers had an increased risk of esophageal reflux, but those workers were workers that also specifically had pulmonary disease. And, also, it wasn't correlated to the amount of time that they were exposed to the site. So, you know, that's -- it's a pretty weak association to begin with. And that goes to the work-relatedness of it. The reasonableness of it is directly contradicted by that study. You don't do fundoplication for acid reflux on patients with normal acid studies, and he had one. And that's -- that, I think, speaks for itself.

Dr. Bernton also determined that Claimant's surgery "clearly wasn't medically necessary."

26. Claimant has failed to establish that it is more probably true than not that the robotic repair of his paraesophageal hiatal hernia requested by ATP Dr. Woodward and performed on December 5, 2022 was reasonable, necessary and causally related to his admitted December 30, 2021 industrial injury. Initially, Claimant explained that while assisting with evacuations from the MF[Redacted] fire, he was exposed to large amounts of smoke from burning vegetation, houses, plastics, trash cans and various other materials. On January 14, 2022 Claimant visited Workwell for an evaluation and reported wheezing and shortness of breath with exertion as a result of his December 30, 2021 work activities. Claimant did not mention any increase in GERD symptoms. After a referral to National Jewish, Dr. Mayer concluded that Claimant suffered a "significant exacerbation of previously well-controlled GERD." She reasoned that, based on Claimant's prolonged exposure to irritant vapors, dust, gas, and fumes contained within the smoke in the absence of respiratory protection, Claimant aggravated his pre-existing GERD condition. Claimant ultimately underwent robotic surgery of his paraesophageal hiatal hernia with Dr. Woodward under private insurance to alleviate his GERD symptoms.

27. Despite Dr. Mayer's opinion, the record reveals that Claimant likely did not suffer an aggravation of his GERD condition during the course and scope of her employment with Employer on December 30, 2021. Objective testing for GERD was normal. Specifically, in his report of August 22, 2022, Dr. Periyalwar documented that the ambulatory gastroesophageal and supraesophageal reflux monitoring test was a "normal study" and "considered within normal limits." As Dr. Bernton persuasively explained, the testing revealed normal results with .2 percent total distal esophageal acid exposure. Overall acid and nonacid reflux events remained within normal levels throughout the daytime and while lying down at night. Claimant had reported three drug and 21 respiratory symptoms but they did not correlate with observed underlying reflux events. Dr. Bernton summarized that there was no acid coming into Claimant's esophagus or mouth and the events that Claimant correlated to his symptoms were not due to acid based on long-term monitoring. Similarly, as Dr. Bernton reasoned, Claimant does not have a diagnosis of asthma. The methacholine challenge test, or gold standard of asthma testing was negative for reactive airway disease. Furthermore, the exercise treadmill test demonstrated 98% of predicted maximum oxygen consumption. Therefore, Dr. Bernton reasoned that Claimant does not suffer from asthma.

28. Dr. Bernton persuasively explained that Claimant's somatoform disorder was the most likely source of his perceived symptoms. He agreed with Dr. Heto's psychological evaluation and report from August 30, 2022. The BHI-2 testing noted that Claimant's "level of somatic complaints was higher than that seen in 94% of patients indicating the perception of severe illness symptoms…somatic hypervigilance may be present with the patient interpreting common symptoms as being problematic." Dr. Bernton commented that Claimant was not likely consciously misrepresenting his symptoms but instead presented precisely what he actually perceived. However, the diagnostic testing revealed that there was no physiological basis for Claimant's complaints. Specifically, objective testing for GERD and asthma demonstrated that the symptoms are not physiologically-based. Therefore, Claimant's somatoform condition is the source of his perceived symptoms.

29. Based on the medical records and persuasive opinion of Dr. Bernton, the surgery performed by Dr. Woodward was not reasonable, necessary and causally related to Claimant's December 30, 2021 work activities. The surgery was intended to address Claimant's GERD symptoms. However, the objective diagnostic record is replete with evidence that Claimant did not, and does not, suffer from GERD. Furthermore, because Claimant did not suffer from GERD on December 30, 2021, his work activities at the MF[Redacted] fire did not aggravate his condition and require surgery. The surgery was thus not causally related, reasonable or necessary. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn Manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the

course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to establish by a preponderance of the evidence that the robotic repair of his paraesophageal hiatal hernia requested by ATP Dr. Woodward and performed on December 5, 2022 was reasonable, necessary and causally related to his admitted December 30, 2021 industrial injury. Initially, Claimant explained that while assisting with evacuations from the MF[Redacted] fire, he was exposed to large amounts of smoke from burning vegetation, houses, plastics, trash cans and various other materials. On January 14, 2022 Claimant visited Workwell for an evaluation and reported wheezing and shortness of breath with exertion as a result of his December 30, 2021 work activities. Claimant did not mention any increase in GERD symptoms. After a referral to National Jewish, Dr. Mayer concluded that Claimant suffered a "significant exacerbation of previously well-controlled GERD." She reasoned that, based on Claimant's prolonged exposure to irritant vapors, dust, gas, and fumes contained within the smoke in the absence of respiratory protection, Claimant aggravated his pre-existing GERD condition. Claimant ultimately underwent robotic surgery of his paraesophageal hiatal hernia with Dr. Woodward under private insurance to alleviate his GERD symptoms.

9. As found, despite Dr. Mayer's opinion, the record reveals that Claimant likely did not suffer an aggravation of his GERD condition during the course and scope of her employment with Employer on December 30, 2021. Objective testing for GERD was normal. Specifically, in his report of August 22, 2022, Dr. Periyalwar documented that the ambulatory gastroesophageal and supraesophageal reflux monitoring test was a "normal study" and "considered within normal limits." As Dr. Bernton persuasively explained, the testing revealed normal results with .2 percent total distal esophageal acid exposure. Overall acid and nonacid reflux events remained within normal levels throughout the daytime and while lying down at night. Claimant had reported three drug and 21 respiratory symptoms but they did not correlate with observed underlying reflux events. Dr. Bernton summarized that there was no acid coming into Claimant's esophagus or mouth and the events that Claimant correlated to his symptoms were not due to acid based on long-term monitoring. Similarly, as Dr. Bernton reasoned, Claimant does not have a diagnosis of asthma. The methacholine challenge test, or gold standard of asthma testing was negative for reactive airway disease. Furthermore, the exercise treadmill test demonstrated 98% of predicted maximum oxygen consumption. Therefore, Dr. Bernton reasoned that Claimant does not suffer from asthma.

10. As found, Dr. Bernton persuasively explained that Claimant's somatoform disorder was the most likely source of his perceived symptoms. He agreed with Dr. Heto's psychological evaluation and report from August 30, 2022. The BHI-2 testing noted that Claimant's "level of somatic complaints was higher than that seen in 94% of patients indicating the perception of severe illness symptoms…somatic hypervigilance may be present with the patient interpreting common symptoms as being problematic." Dr. Bernton commented that Claimant was not likely consciously misrepresenting his

symptoms but instead presented precisely what he actually perceived. However, the diagnostic testing revealed that there was no physiological basis for Claimant's complaints. Specifically, objective testing for GERD and asthma demonstrated that the symptoms are not physiologically-based. Therefore, Claimant's somatoform condition is the source of his perceived symptoms.

11. As found, based on the medical records and persuasive opinion of Dr. Bernton, the surgery performed by Dr. Woodward was not reasonable, necessary and causally related to Claimant's December 30, 2021 work activities. The surgery was intended to address Claimant's GERD symptoms. However, the objective diagnostic record is replete with evidence that Claimant did not, and does not, suffer from GERD. Furthermore, because Claimant did not suffer from GERD on December 30, 2021, his work activities at the MF[Redacted] fire did not aggravate his condition and require surgery. The surgery was thus not causally related, reasonable or necessary. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 3, 2023.

ISSUES

I. Whether Claimant established by a preponderance of the evidence the C4-C6 ACDF surgical procedure recommended by authorized treating provider ("ATP") Michael Rauzzino, M.D. is reasonable, necessary and related medical care.

FINDINGS OF FACT

1. Claimant, who is 46 years of age, worked for Employer as a return ramp agent. His job duties included inspecting returned rental cars, providing receipts to customers and driving customers to the airport. Claimant also works as a barber.

2. Claimant sustained an admitted industrial injury on March 22, 2022 when he was involved in a rollover motor vehicle accident ("MVA") while traveling on the highway at approximately 45 miles per hour. Claimant was the restrained driver in a vehicle that rolled over at least once and landed on the driver's side. Claimant extricated himself from the vehicle by kicking out the front windshield.

3. Denver paramedics arrived at the scene of the MVA. The paramedics noted chief complaints of dizziness and nausea. Under "Assessments" no abnormalities were documented. Claimant was alert and able to walk to the ambulance without assistance.

4. An ambulance transported Claimant to the emergency department at UC Health for further evaluation. The ambulance records note reports of dizziness, visual disturbance/photosensitivity, giddiness, low back pain, leg pain and nausea. Physical assessment revealed tenderness to palpation of left lower back and left lower leg. No visible head trauma or other visible signs of injury or abnormality were documented.

5. Claimant was admitted at the emergency department at UC Health at approximately 8:41 a.m. The approximately 56-page medical record from this visit notes Claimant was evaluated by multiple providers over the course of several hours. Jenn Fickes, RN noted at 8:43 a.m. that Claimant reported pain in the left lower back and left lower extremity and headache, but denied neck, abdomen and chest pain. Claimant endorsed light sensitivity and back pain. A musculoskeletal review of symptoms was positive for back pain. Attending physician Barbara Kay Blok, M.D. noted on examination tenderness to palpation of the lower thoracic T11-T12, left paraspinal and the left anterior forehead. There was no tenderness to palpation to the cervical spine with full cervical range of motion without paresthesia. Claimant underwent x-rays of the chest and pelvis, as well as a brain CT, none of which revealed any abnormalities. A CT scan and x-rays of the lumbar spine demonstrated anterior wedge compression deformities at L1 and L2.

6. Angela E. Downes, M.D. performed a neurosurgical consultation of Claimant at approximately 1:20 p.m. Review of systems was negative for facial swelling, neck pain, neck stiffness and arthralgias and back pain. HENT was documented as normocephalic, atraumatic. On examination, Dr. Downes noted midline lumbar spine tenderness with no neurological deficits.

7. Michael Cripps, M.D. in the acute care surgery trauma unit evaluated Claimant at approximately at 3:36 p.m. Dr. Cripps documented Claimant's chief complaint as neck/back pain. The review of symptoms for HENT was positive for neck pain and back pain. Dr. Cripps noted cervical tenderness on examination.

8. The emergency department providers diagnosed Claimant with a lumbar compression fracture and discharged him with instructions to follow up with his primary care provider.

9. Claimant established care for the work injury with authorized provider Concentra on March 29, 2022. Claimant initially presented to Nicole K. Huntress, M.D. who noted Claimant was involved in a rollover MVA with injuries to his head and back. Claimant reported back soreness. Dr. Huntress also noted Claimant "Reports R thumb numbness which he states was preexisting and he is following with his PCP." (Cl. Ex. 7, p. 259). Specific cervical complaints and examination of the cervical spine are not documented. Dr. Huntress diagnosed Claimant with a work related lumbar compression fracture and released him to modified duty.

10. Claimant saw Kathy Okamatsu, FNP at Concentra on March 31, 2022. Claimant complained of soreness in the mid spine of his lower back. Specific cervical complaints and examination of the cervical spine are not documented. NP Okamatsu's assessment was a lumbar compression fracture.

11. Claimant subsequently saw either NP Okamatsu or Leah Johansen, M.D. on April 4, April 11, April 25, May 9, May 23, and June 6, 2022. These evaluations focused on Claimant's lumbar condition. Specific cervical complaints and examination of the cervical spine are not documented.

12. Claimant attended several physical therapy sessions for his low back from April 6, 2022 through June 8, 2022. The physical therapy records from these sessions do not specifically document cervical spine complaints or examination of the cervical spine.

13. On June 14, 2022 Claimant presented to Ruth Vanderkooi, M.D. at Concentra. Claimant reported that he was having right arm pain for which he went to see his primary care physician, who ordered a cervical MRI. Dr. Vanderkooi noted that the cervical MRI obtained on June 3, 2022 showed

> C3-4 disc bulge and posterior endplate degenerative change, eccentric to the right with mild facet arthropathy, mild canal and moderate neural foraminal stenosis, C4-5 right central disc protrusion moderate to severe tight and mild left foraminal narrowing, C5-6 broad based disc bulge with mild facet arthropathy mild to moderate thecal sac, moderate right and

> mild to moderate left foraminal narrowing, C6-7 moderate right and mild to moderate left foraminal narrowing, C6-7 mild facet arthropathy, no stenosis, C7-T1 mild facet arthropathy, no stenosis.

(Cl. Ex. 7, p. 204).

14. Claimant complained to Dr. Vanderkooi of right neck pain with right arm loss of strength and numbness. Dr. Vanderkooi noted Claimant "[t]ried going back to work for 5 h, was sent home because right side seized up. Not able to do job – requires too much neck and arm movement." (Id. at 205). Physical examination of the shoulder was normal. Cervical spine range of motion was limited and there was a positive Spurling's test. Dr. Vanderkooi assessed Claimant with, *inter alia*, cervical radiculopathy due to degenerative joint disease of the spine. She noted, "Pt also has cervical disc disease with radiculopathy (new diagnosis) likely causally related to the MVA." (Id.). She referred Claimant to John Aschberger, M.D. for evaluation of his neck pain.

15. Claimant presented to Dr. Aschberger on June 22, 2022. Dr. Aschberger noted,

> [Claimant] was involved in a motor vehicle rollover accident on 3/22 and did have workup regarding the head and brain. He subsequently developed issues of cervical tightness and his main complaints are radiating symptoms to the upper extremities. He indicates to the lateral arm and radial forearm to the thumb and index finger. He has numbness, tingling, as well as pain predominantly proximal at the arm. He has had findings of weakness in therapy. Numbness has been fairly constant form.

(Id. at 200).

16. On examination, Dr. Aschberger noted good cervical flexion with mild restriction and irritation with extension. Spurling's maneuver was positive with radiating symptoms to the radial forearm. Facet loading showed no localized irritation. Dr. Aschberger assessed Claimant with cervical radiculitis, noting symptom distribution in a C6 pattern. He further noted that the 6/3/2022 cervical MRI showed disc protrusions and bulging at multiple levels C3 through C7 with moderate to severe C4-C5 foraminal narrowing on the right and moderate at C5-C6. Dr. Aschberger recommended proceeding with an EMG. He also referred Claimant to Robert Kawasaki, M.D. for a cervical epidural injection.

17. Claimant returned to Dr. Vanderkooi on June 28, 2022 reporting constant pain in the right side of his neck and down his right arm. Shoulder exam was normal. Examination of the cervical spine revealed tenderness in right paraspinal and right trapezius muscle and limited range of motion.

18. At a follow-up evaluation with NP Okamatsu on July 13, 2022, NP Okamatsu noted Claimant reported experiencing constant pain in the right trapezius and right side of his neck with an onset approximately 3-4 weeks prior. He reported that he was unable to feel his right arm and had constant numbness and decreased feeling in his

fingers. On examination NP Okamatsu noted tenderness in right paraspinal and right trapezius muscle, no bilateral muscle spasms, and full cervical range of motion with painful flexion. NP Okamatsu noted similar complaints and exam findings on July 27, 2022.

19. Claimant returned to Dr. Aschberger on August 3, 2022 with continued pain at the right neck with radiation of symptoms to the right arm, radial forearm to the thumb and index finger. On examination, Dr. Aschberger noted positive Spurling's maneuver with radiation into the arm, thumb and index finger. Facet loading was negative. Dr. Aschberger performed EMG testing of the right upper extremity and associated cervical paraspinal musculature. The EMG did not identify any abnormalities indicating a radicular process. Nerve conduction values were within normal range. Dr. Aschberger's assessment was persistent symptoms of cervical radiculitis.

20. On August 5, 2022 Claimant reported to Dr. Huntress increased neck pain, pain in his right arm, and numbness in his thumb and second digit. Dr. Huntress noted the cervical MRI demonstrated moderate foraminal narrowing at C5-6 and moderate to severe foraminal narrowing at C4-5. She remarked that Claimant's symptoms were consistent with C6 radiculopathy. Examination revealed tenderness of the cervical spine and right trapezius muscle with full range of motion and sensory deficits of the right thumb and lateral aspect of the second digit.

21. Claimant began physical therapy for his neck on August 15, 2022. Katrina Palmer Seal, PT at Concentra noted

> Pt reports that he has been experiencing neck pain and radicular symptoms since the accident on 3/22/22. He states that he thought it was originally related to his lower back compression fractures, however did not improve. MRI showed compression of C6 nerve root. He states that he primarily has pain along the R side of his neck and R UE. He has constant numbness in this thumb and index finger. Pain radiates from lateral shoulder to volar forearm into radial hand. Symptoms increase with any activity.

(Cl. Ex. 7, p. 168).

PT Palmer Seal noted tenderness to cervical paraspinals, normal cervical range of motion, and a positive Spurling's test on the right. Claimant subsequently attended multiple physical therapy sessions at Concentra for treatment to his neck, which did not result in any significant improvement.

22. Claimant presented to Dr. Kawasaki on August 24, 2022 with complaints of neck pain with radiation down the right upper extremity with numbness and tingling. Dr. Kawasaki noted that a cervical MRI showed evidence of right-sided foraminal narrowing at C5-6. He administered a right C5-C6 transforaminal epidural steroid injection/C6 spinal nerve block to Claimant at this visit.

23. On September 15, 2022 Dr. Aschberger noted Claimant underwent a right C5-6 transforaminal injection on 8/24/2022, with pain level pre-injection of 5-8/10 and post-injection 0-2/10. Claimant confirmed relief of symptoms from the injection, including decreased irritation in the arm and hand but persistent recurrent numbness. On examination, Dr. Aschberger noted mild restriction of cervical extension and lateral flexion. Spurling's maneuver resulted in radiation to the lateral arm. There was mild weakness in the triceps compared to the left side. Dr. Aschberger opined Claimant had a diagnostic response to the first injection and referred Claimant for second injection at C7-T1.

24. On October 12, 2022 Claimant underwent a right C7-T1 interlaminar epidural steroid injection performed by Dr. Kawasaki.

25. On October 27, 2022 Dr. Aschberger noted Claimant's pain levels pre-injection on 10/12/2022 were 4-9/10 and post injection pain levels were 0-3/10. Claimant reported no long term gains from the second injection with persistent neck pain radiating into the right arm. Spurling's test resulted in radiation down to the radial forearm and radial hand. Dr. Aschberger opined that the second injection was diagnostic but provided no long term benefit. He referred Claimant for a surgical consultation for his C6 radiculopathy, noting Claimant had a positive Spurling's maneuver and corresponding MRI.

26. Claimant first presented to neurosurgeon Michael Rauzzino, M.D. on November 7, 2022. Dr. Rauzzino noted that the first injection by Dr. Kawasaki was diagnostic, but not therapeutic and the second injection was not helpful. He further noted that the cervical spine MRI showed disc herniation at C5-6 and foraminal stenosis at C4-5. On examination there was a positive Spurling maneuver sign with paresthesia in the right C6 distribution along with some weakness at his biceps on the right compared to the left. Dr. Rauzzino discussed Claimant's treatment options, including undergoing either a two-level ACDF or two-level disc replacement. He recommended Claimant undergo an updated cervical MRI, CT, and x-rays.

27. A repeat cervical MRI was performed on November 14, 2022. William Wall, M.D. gave the following impression: C4-C6 age-indeterminate disc protrusion with moderate central canal narrowing and severe bilateral neural foraminal narrowing; C5-C6 degenerative disc osteophyte complex with moderate central canal narrowing and severe right and moderate left neural foraminal narrowing; cervical cord is normal without cervical cord compression, myelomalacia, syrinx formation, or cord lesion; no fracture or spondylosis; no evidence of ligamentous injury. (Cl. Ex. 16, p. 271).

28. Claimant also underwent a CT scan of the cervical spine on November 14, 2022 which demonstrated multilevel degenerative disc disease and degenerative central canal and neural foraminal narrowing.

29. On November 22, 2022 John Burris, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. As part of his examination, Dr. Burris reviewed Claimant's medical records, noting that despite Claimant denying any

prior back or neck injuries, a review of a 2020 physical therapy record for his lumbar spine documented a prior MVA in 2005 involving fractures of some bones in his back. Dr. Burris noted that the medical records contained no documentation of significant neck complaints until approximately two months after the March 22, 2022 MVA. On examination, Dr. Burris noted diffuse tenderness in the right paraspinal region without muscle spasm or trigger points and positive Spurling's on the right with reported radiation down the right arm. There was reported decrease in sensation in the thumb and index finger of the right hand. Dr. Burris gave an assessment of low back pain, neck pain and cervical radiculitis. He opined that Claimant's cervical spine condition is not causally related to the March 22, 2022 MVA, based on lack of involvement of the neck with the original injury, and a significant delay in the onset of neck symptoms.

30. Claimant returned to Dr. Rauzzino on December 5, 2022. Dr. Rauzzino reviewed Claimant's updated imaging, noting the most recent cervical MRI demonstrated disc protrusion at C4-C5 with central and foraminal stenosis and C5-C6 with central narrowing and severe right greater than left foraminal stenosis. He wrote,

> Based on my direct review of the MRI, I do not believe the component C5-C6 is actually a somewhat acute free fragment. It is a free fragment of disc. We reviewed the CT as well as the MRI and he does have a significant kyphosis at this level. I think based on his anatomy and the need adequately decompress the nerves, I think he would be best served with a two-level ACDF.

(Cl. Ex. 7, p. 104)

He further stated,

> On my examination, he continue to have signs, symptoms of a right greater than left cervical radiculopathy. He has a positive Spurling's on the right producing paresthesia in the right C6-C6 distribution. He continues to have numbness and tingling in the first 3 digits of his right hand. He has had diagnostic but not therapeutic injections and he would like to have definitive surgical treatment, in the far hands this would be a C4-C6 ACDF. This is how he would like to proceed.

(Id.).

31. Dr. Rauzzino submitted a request for authorization of C5-C7 ACDF on December 8, 2022.

32. Dr. Burris testified by pre-hearing deposition on January 5, 2023. Dr. Burris testified as Level II accredited expert in occupational medicine. Dr. Burris testified that Claimant denied to him any prior injuries or pain involving his neck, right arm and low back; however, prior medical records from 2020 documented left-sided low back pain with left-sided sciatica and a prior history of MVA in 2005 with some fractured bones in his back but complete recovery. Dr. Burris testified that Claimant's the findings on Claimant's cervical MRI were largely degenerative and preexisting. He explained that

bony changes are preexisting and disc changes are non-specific and commonly seen in degenerative conditions. Dr. Burris testified that it is very common to see degenerative changes in asymptomatic individuals.

33. Dr. Burris testified that there was no evidence in medical records from the date of injury through June 6, 2022 indicating Claimant suffered radicular symptoms from his cervical spine. He stated that it was highly unlikely three independent providers at Claimant's emergency department evaluation would fail to document cervical complaints and findings. Dr. Burris testified that the first positive Spurling's test was documented on June 14, 2022. He opined that, while possible the MVA resulted in a cervical injury, it was not probable, based on the significant delay in the onset of symptoms. Dr. Burris acknowledged that there were findings on his examination, as well as the examinations of Drs. Aschberger, Kawasaki and Rauzzino of protentional nerve root irritation as an indication for surgery. He deferred to Dr. Rauzzino's opinion as to whether the surgery would improve Claimant's condition, but maintained that the surgery is not causally related to the work injury.

34. On January 17, 2023 John Hughes, M.D. performed an IME at the request of Claimant. Claimant reported to Dr. Hughes that his lumbar spine began to improve during physical therapy but during this time he also had cervical spine pain. On examination, Dr. Hughes noted cervical paraspinous tenderness without palpable hypertonicity, positive right-sided Spurling's and guarded range of motion. There was also upper extremity right thenar muscular atrophy and diminished sensation in a right C6 distribution. Dr. Hughes concluded Claimant sustained a cervical spine sprain/strain injury as a result of the March 22, 2022 MVA, that only gradually became symptomatic with cervical spine pain and right upper extremity radiculopathy. He opined that it was reasonable to relate the high-energy rollover MVA with documented closed head injury with Claimant's emerging cervical spine disc herniation with right radiculopathy. He agreed with the findings of Dr. Rauzzino's December 5, 2022 report and opined that the recommended cervical surgery is reasonable, necessary and related to the March 22, 2022 MVA.

35. Dr. Hughes testified at both a pre-hearing deposition on March 9, 2023 as well as at hearing. Dr. Hughes testified as a Level II accredited expert in occupational medicine. He testified consistent with his IME report and continued to opine the March 22, 2022 MVA caused a cervical spine injury. Dr. Hughes acknowledged that Claimant's medical records dated March 31, 2022 through June 14, 2022 do not document cervical spine pain and that his diagnostic tests do not establish the definitive age or cause of Claimant's pathology. Nonetheless, he testified that the mechanism of injury, along with Claimant's objective pathology and symptoms, are consistent with trauma sustained in the work-related MVA. Dr. Hughes explained that a high-energy MVA necessitating a brain CT is sufficient to cause injury to the cervical spine. He testified that it was not impractical for Claimant to not experience immediate severe neck symptoms and to become more symptomatic over a short period of time. Dr. Hughes testified that the findings of Claimant's June 2022 and November 2022 cervical MRIs correlate with Claimant's symptoms. He further explained that Claimant's exam findings, including positive Spurling's results as documented by multiple physicians, are also consistent

with Claimant's MRI findings. Dr. Hughes testified that Claimant's injections were diagnostic. Dr. Hughes opined that the surgery recommended by Dr. Rauzzino is reasonably necessary to address Claimant's radiating pain, numbness and weakness.

36. Claimant testified at hearing that he struck his head on the driver's side window during the MVA. He testified that he experienced neck and back pain at the time, but that that the back pain was the most problematic. Claimant testified he told his providers of his neck complaints and ultimately went to his primary care physician because his providers were not addressing his neck and arm. He testified that he did not have any neck treatment or neck injuries prior to the work injury. Claimant further testified he experiences continued symptoms and functional limitations.

37. Dr. Burris testified by post-hearing deposition on March 23, 2023. He continued to opine that there is no objective evidence the March 22, 2022 MVA caused a cervical spine injury, based on the delay of documented neck complaints and findings in the records. Dr. Burris opined that Claimant the recommended surgery is necessary, but not causally related. He further testified that the Medical Treatment Guidelines recommend that a psychological evaluation is completed prior to surgery, which Claimant has not had.

38. The ALJ finds the opinions of Drs. Hughes, Aschberger, Rauzzino and Vanderkooi, as supported by the medical records and Claimant's credible testimony, more credible and persuasive than the opinion of Dr. Burris.

39. Claimant proved it is more probably true than not the C4-C6 ACDF requested by Dr. Rauzzino is reasonable, necessary and related medical care.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact

finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

Respondents are liable for medical treatment that is causally related and reasonably necessary to relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S.; *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found, Claimant proved it is more probably true than not the surgery recommended by Dr. Rauzzino is reasonably necessary and causally related medical treatment. Respondents argue that the work-related MVA did not result in any injury to Claimant's cervical spine, relying on the opinion of their IME physician Dr. Burris. Dr. Burris opined that no causal relationship exists between the work injury and Claimant's cervical complaints, based on what he considered to be significant delay in Claimant's documented neck complaints in the medical records. While, at different points in the emergency department records, providers document no cervical complaints or findings, Dr. Cripps specifically documented Claimant's reports of neck pain and cervical tenderness on examination. Claimant credibly testified that he experienced neck pain at

the time of his injury, although the primary symptoms at the time were in his low back. Subsequent records indicate a focus on Claimant's low back until June 2022. Dr. Hughes credibly opined that Claimant sustained a cervical spine sprain/strain injury as a result of the MVA, that gradually became symptomatic with cervical spine pain and right upper extremity radiculopathy. Dr. Hughes' opinion that Claimant's cervical condition is work-related is supported by the opinion of Dr. Vanderkooi, who also opined that Claimant's cervical condition is likely related to the MVA.

Claimant credibly testified that prior to the work injury he did not have any neck injury or treatment. While Dr. Huntress noted some pre-existing right thumb numbness, no evidence was offered indicating Claimant's pre-existing symptoms and limitations were similar to those post work injury. Since the work injury, Claimant has experienced a gradual onset of neck pain radiating into his right upper extremity. To the extent Claimant had pre-existing degenerative pathology, the evidence demonstrates it is more likely than not the MVA aggravated, accelerated or combined with Claimant's pre-existing condition to produce disability and the need for treatment. Thus, the totality of the evidence establishes that the recommended surgery is causally related medical treatment.

The preponderant evidence also establishes the recommended surgery is reasonably necessary to cure and relieve the effects of Claimant's cervical condition. There is extensive objective medical evidence of Claimant's cervical pathology and need for the recommended surgery, including exam findings, MRI findings and diagnostic injections. Dr. Rauzzino recommended the surgery based on Claimant's anatomy and need to adequately decompress the nerves. Dr. Hughes credibly opined the surgery would likely help in relieving Claimant's symptoms. While Dr. Burris disagrees the surgery is causally related, he acknowledges the necessity of the surgery. Accordingly, Claimant has met his burden to demonstrate the C4-C6 ACDF is also reasonable and necessary medical treatment.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for the C4-C6 ACDF surgical procedure requested by Dr. Rauzzino.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory

reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 4, 2023

Kara R. Cayce
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-127-145-003

ISSUE

1. Did Respondents establish by a preponderance of the evidence that they should be able to withdraw the General Admission of Liability (GAL)?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 62 year-old woman who has worked for Employer since approximately November 2, 2018, and continues to work for Employer as a cashier.

2. In June 2019, Claimant lived with a co-worker, [Redacted, hereinafter SS], a dispatcher for Employer. Claimant testified that SS[Redacted] owned the home, and Claimant rented a room from her. Two of Claimant's co-workers, [Redacted, hereinafter RS] and [Redacted, hereinafter TM], lived together two houses down from Claimant. TM[Redacted] was Claimant's manager.

3. Claimant testified that in 2019 she would make and sell burritos at work to supplement her income. On July 22, 2019, Claimant exchanged text messages with RS[Redacted]. He had ordered burritos earlier, but wanted two more. Claimant texted RS[Redacted] saying she would be over by 9:30 a.m. At 10:41, Claimant texted RS[Redacted] and said "[j]ust don't tell SS[Redacted] you paid me she'll be upset." (Ex. A). Claimant testified that SS[Redacted] did not want Claimant to charge her friends for burritos.

4. Claimant testified that while going to RS[Redacted] house to deliver the burritos, she fell on the walkway to the house, and landed on her knees. There is nothing in the e-mail exchange on July 22, 2019 between Claimant and RS[Redacted] regarding the fall. The only subsequent text on that date related to not telling SS[Redacted] that RS[Redacted] paid for the burritos. (Ex. A).

5. Claimant credibly testified that she did not have any scars or abrasions on her knees from her fall on July 22, 2019. Further, Claimant did not seek medical attention following the fall. There is no objective evidence in the record that Claimant injured herself, or that she had any difficulty walking following her fall on July 22, 2019.

6. On July 26, 2019, Claimant went to Aurora Family Practice Group, P.C. for a new patient visit, and Mark Nathanson, D.O. evaluated her. Claimant credibly testified that the main reason for her July 26, 2019, doctor's appointment was get her thyroid medication filled, since she recently got insurance. She further testified that she told the doctor she experienced cracking and popping in her knees. In the medical record Dr.

Nathanson noted that Claimant's gait was within normal limits. He also noted "R knee with effusion vs patellar edema." Dr. Nathanson ordered bilateral x-rays of Claimant's knees. (Ex. B). The radiology reports for both knees noted that Claimant had bilateral knee swelling and popping sensation over last five years, but the impression was normal for both knees. (Ex. C and D).

7. On August 2, 2019, Claimant returned to Dr. Nathanson for an annual examination. Claimant completed a "Well-Woman Exam" form, and under the section asking her to describe any concerns she had, Claimant wrote "my knee and my thyroid haven't taken med for it." She also noted in the "exercise" section that she stopped walking four miles at a time because of "her knee." Dr. Nathanson diagnosed Claimant with patellofermoral syndrome. He gave Claimant a steroid injection in her right knee. (Ex. E).

8. The ALJ finds that Claimant went to see Dr. Nathanson on July 26, 2019 to establish a physician-patient relationship and on August 2, 2019 to have an annual examination. The ALJ further finds that the doctor visits on July 26, 2019 and August 2, 2019, were not related to Claimant's fall on July 22, 2019.

9. Claimant testified that on August 15, 2019, she arrived at work and parked her car. She was walking through the gate to the valet when she fell and hit her left knee and left elbow on the curb. Claimant testified she was limping through the parking lot, and her general manager ordered an Uber and sent her to Concentra. The ALJ finds this testimony credible.

10. Claimant was evaluated by Michael Roberts, P.A. at Concentra. Claimant told Mr. Roberts that she tripped on poured concrete and landed on her left knee. She further reported never having a previous knee injury. Mr. Roberts diagnosed Claimant with a left knee contusion, and noted that she had a small abrasion on her left knee. He gave her an Ace wrap and crutches. She declined a referral for physical therapy at that time. Claimant's restrictions were that she "must use crutches/non weight bearing/should be sitting 90% of the time." (Ex. F.)

11. Claimant testified she was in so much pain on August 15, 2019, she forgot to tell Mr. Roberts about the injection in her right knee a few weeks prior. The ALJ finds this testimony credible.

12. On August 21, 2019, Claimant returned to Concentra for a follow up appointment. Claimant reported that the bruising on her left knee had worsened, as had the pain right below her kneecap. She told Devin Jacobs, P.A., that her right knee had increased pain and a lump due to putting more pressure on it. Mr. Jacobs noted in the medical record that Claimant's PCP gave Claimant an injection in her right knee at the "beginning of the month." Mr. Jacobs gave Claimant a referral for physical therapy. She was to continue using the Ace wrap and crutches. Her work restrictions continued. (Ex. G).

13. Claimant continued treatment with Concentra. On May 22, 2022, Respondents filed a GAL admitting to medical benefits, temporary total disability benefits, and temporary partial disability benefits. (Ex. 3)

14. Subsequent to the May 22, 2022 GAL, Respondents learned of a text message Claimant sent RS[Redacted] on August 15, 2019, the day of the incident at work. The text reads:

> I said I fall in the parking lot, hope you did tell TM[Redacted] that fall at your house? I'm at Concenta Bing checked ☹ hurt my left knee

(Ex. A).

15. Claimant testified that the August 15, 2019 text was mistakenly sent to RS[Redacted], but was intended for SS[Redacted]. She further testified that she was trying to tell her roommate, SS[Redacted], that she had fallen in the parking lot, but when she was picked up by the Uber immediately following her fall, Claimant put her phone in her purse, and was unaware of the text until it was brought to her attention. When asked what she meant by "your house", Claimant had no explanation. She further testified that she had never fallen at SS's[Redacted] house. Claimant explained she is simply "not that great" with texting. Claimant also testified that she needs new glasses and that may have caused the error.

16. The ALJ does not find Claimant's testimony regarding the August 15, 2019 text message to RS[Redacted] to be credible. The ALJ, however, does not find Claimant's August 15, 2019 text message, to be evidence that she did not fall at work on August 15, 2019.

17. As found, Claimant suffered a compensable injury on August 15, 2019, when she fell on her left knee in the parking lot at work. Claimant's failure to disclose the previous steroid injection in her right knee, at her initial Concentra visit, was not a material misrepresentation or concealment. Claimant did not materially misrepresent a workers' compensation claim resulting in Respondents filing an admission of liability.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in

the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

An injury is compensable under the Act if incurred by an employee in the course and scope of employment. § 8-41-301(1)(b), C.R.S.; *Price v. Indus. Claim Appeals Office,* 919 P.2d 207 (Colo. 1996). The claimant must show a connection between the employment and the injury such that the injury has its origin in the employee's work-related functions, and is sufficiently related to those functions to be considered part of the employment contract. *See Madden v. Mountain W. Fabricators*, 977 P.2d 861 (Colo. 1999). To prove causation medical evidence is not necessary and the claimant's testimony, as well as the constellation of facts surrounding the claimant's injury, have sufficed to establish the requisite *nexus* between her injury and work. *See Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). If a pre-existing condition is stable but aggravated by an occupational injury the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siefried v. Indus. Comm'n*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce a disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Additionally, if the industrial injury aggravates, accelerates or combines with a pre-existing disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Duncan*, 107 P.3d at 1001.

The ALJ found Claimant's testimony regarding her fall on August 15, 2019 at work, to be credible. Claimant's testimony concerning the work relatedness of her left knee injury is supported by the medical records. The evidence reflects that Claimant had a contusion on her left knee and she was restricted to using crutches. Claimant had a history of swelling and popping in her knees, but she was not required to use crutches or go to physical therapy prior to her August 15, 2019 injury. Although Claimant did not tell her treating providers at her first visit of the cortisone injection in her right knee in mid-

July, six days later at the August 21, 2019 visit she did make that representation. Additionally, the injection was in Claimant's right knee, and Claimant's original admitted injury involved her left knee. The medical records are consistent that Claimant's left knee required treatment in the form of crutches, physical therapy, and a leg sleeve following the August 15, 2019 injury. As found, Claimant suffered a compensable injury on August 15, 2019.

Withdrawal of a General Admission of Liability

Section 8-43-203(1)(c) of the Colorado Revised Statutes provides:

> The employer or, if insured, the employer's insurance carrier may not withdraw initial admission of liability on the issue of compensability filed pursuant to this subsection (1) if two years or more have elapsed since the date the initial admission of liability was filed with the division, except in cases of fraud.

Because admissions of liability may not ordinarily be withdrawn retroactively, the party seeking reopening bears the burden of proof by a preponderance of the evidence to establish the existence of fraud. § 8-43-201(1) C.R.S; *see Salisbury v. Prowers Cnty. School District*, WC 4-702-144 (ICAO June 4, 2012). Where the evidence is subject to more than one interpretation, the existence of fraud is a factual determination for the ALJ. *In re Arcynski*, WC 4-156-147 (ICAO Dec. 15, 2005).

Here, Respondents seek to withdraw the May 22, 2022 GAL based upon fraud. To prove fraud or misrepresentation, Respondents must show: (1) a false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) knowledge on the part of one making the representation that it is false; (3) ignorance on the part of the one to whom the representation is more, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) making of the representation or concealment of the fact with the intent that it be acted upon; (5) action based on the representation or concealment resulting in damage. *In re Arczynksi, supra, citing Morrison v. Goodspeed*, 68 P.2d 458 (Colo. 1937).

As found, Claimant suffered a compensable injury on August 15, 2019. Although the circumstances surrounding Claimant's August 15, 2019 text message are confusing, and Claimant's testimony regarding the text message was not credible, the text message standing alone without any other collaborating evidence does not undermine the fact that Claimant has had extensive medical care, all of which Claimant's designated physicians have deemed to be related to her workplace injury of August 15, 2019. But for the one text message, no medical provider has questioned Claimant's injury, symptoms, or the need for treatment. As found, Claimant's failure to disclose the previous steroid injection at her first Concentra appointment is not material, and it was not a concealment of a material fact. Respondents have failed to demonstrate by the preponderance of the

evidence that Claimant knowingly made a false representation to Employer indicating she sustained work injuries to gain workers' compensation benefits.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she suffered an injury in the course and scope of her employment on August 15, 2019.

2. Respondents have failed to establish by a preponderance of the evidence that Claimant perpetrated a fraud.

3. Respondents' request to withdraw the General Admissions of Liability is denied.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 4, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-201-797-001

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he is entitled to temporary total disability ("TTD") benefits from August 28, 2022, ongoing until terminated pursuant to statute.

II. Whether Claimant made a proper showing justifying a change of physician.

STIPULATIONS

At hearing the ALJ approved the parties' stipulation to an average weekly wage ("AWW") of $680.00.

FINDINGS OF FACT

1. Claimant is 68 years of age. Claimant's regular job duties involved cleaning and picking up debris on construction sites and moving drywall.

2. Claimant sustained an admitted industrial injury on January 18, 2022. Claimant experienced pain in his low back when lifting and pulling a sheet of drywall.

3. Claimant reported the incident to his supervisor, who advised Claimant to go see a doctor of Claimant's choosing. Employer did not provide Claimant a list of designated providers.

4. The following day Claimant went to what he describes as a "Mexican store" and underwent some injections that provided him some benefit.

5. Claimant then sought treatment at Clinica Family Health ("Clinica") on January 20, 2022 with complaints of low back pain and decreased mobility and weakness in his legs. Claimant presented with a walker. On examination, Chelsea Batten, PA noted increase pain with all movement of the lower extremities as well as tenderness in the lumbar region. She gave an assessment of acute midline low back pain without sciatica and weakness of both lower limbs. PA Batten prescribed Claimant Tylenol and prednisone and referred him for a lumbar spine MRI and physical therapy.

6. Claimant underwent a lumbar spine MRI on January 20, 2022. Trent Paradis, M.D. provided the following impression:

1. Minimal to mild multilevel degenerative disc disease. No disc herniation or high-grade spinal canal or neuroforaminal narrowing.

2. Small right foraminal disc protrusion at L3-4 causes mild neuroforaminal narrowing but does not contact the nerve root.

3. Marrow edema in L5 pars interarticularis region and pedicles bilaterally, right greater than left, is a potential source of low back pain. This is likely due to chronic stress reaction. No discrete fracture is seen. There is also mild bilateral facet arthrosis at L5-S1.

(Cl. Ex. 7).

4. Claimant returned to Clinica on January 25, 2022 with complaints of worsening back pain and decreased mobility and tingling in his legs. Diane Asher, NP reviewed the January 20, 2022 lumbar MRI and documented the same assessment. On examination she noted decreased strength in the bilateral lower extremities, lumbar spine tenderness, decreased lumbar spine range of motion, and an antalgic gait. NP Asher prescribed Claimant Meloxicam for pain.

5. At a follow-up evaluation at Clinica on January 31, 2022 Claimant complained of mid and low back pain radiating into his bilateral thighs. He reported that his symptoms were aggravated by bending, daily activities, rolling over in bed, sitting, standing, twisting and walking. On examination, the provider noted an antalgic gait, muscle spasms in the thoracic and lumbar spine, thoracic tenderness, and pain in Claimant's right and left buttocks. Claimant underwent an injection of Toradol in his left buttock for pain and was prescribed Lidocaine patches for pain and Flexeril for muscle spasms.

6. Claimant began physical therapy at Therahand Physical Therapy on February 4, 2022. Andrew Klein, PT noted that Claimant presented with decreased muscle strength, decreased muscle flexibility, impaired gait, positive special test, and impaired posture. Claimant attended 14 physical therapy sessions between February 11, 2022 and May 18, 2022, at times reporting some improvement but continued symptoms.

7. On February 7, 2022 Claimant saw Jesus Santana PA-C at Clinica. Claimant reported some relief with the injections but persistent pain. Claimant was now wearing a back brace along with using a walker. On examination PA Santana noted an antalgic gait, and lumbar spine spasms and tenderness. His diagnosis was acute midline low back pain and bilateral sciatica. Claimant underwent a Toradol injection to his right buttock.

8. On February 21, 2022 Rachel Laaff, NP at Concentra noted Claimant was not improving with conservative treatment. She referred Claimant for a neurosurgical evaluation and prescribed Claimant Cymbalta for additional pain relief.

9. Claimant returned to Clinica on March 4, 2022 with continued symptoms. Claimant reported that the spoke with the neurosurgery department but elected not to proceed with an evaluation due to the cost and work. The provider noted Claimant was using a walker and belt brace for added support. Claimant underwent an injection to his left deltoid.

10. Claimant underwent an injection to his right deltoid on March 18, 2022 at Clinica.

11. On March 21, 2022 W. Rafer Leach, M.D. performed an Independent Medical Examination ("IME") at the request of Claimant. On examination of the lumbar spine Dr. Leach noted myospasm, positive facet examination, limited range of motion, a positive SI joint Fortin finger test, and diffuse gluteal spasm. Based on his interview with Claimant, review of records, and physical examination, Dr. Leach diagnosed Claimant with headaches; cervical thoracic, lumbar and gluteal myospasm; cervical axial pain with clinical facet syndrome; thoracic strain; lumbosacral axial pain concerning facet syndrome; nonspecific bilateral thoracolumbar radiculitis; sacroiliitis; adjustment disorder with depression and anxiety and repetitive sleep intrusion. Dr. Leach concluded that Claimant's symptoms and injuries were causally related to the January 18, 2022 work incident. He opined that Claimant had not reached maximum medical improvement ("MMI"), recommending additional treatment including, inter alia, 48 more sessions of physical therapy, lumbar flexion and extension x-rays to evaluate instability, and L4-5 and L5-S1 bilateral facet injections, possible medial branch blocks. Dr. Leach recommended the following work restrictions: maximum lifting, pushing, pulling and carrying of 10 pounds infrequently; no repetitive lifting, carrying, pushing or pulling; 15 minutes of position change per hour of static posture; and work limited to four hours per day, three days per week.

12. Claimant returned to NP Laaff on March 29, 2022 with continued low back pain radiating into bilateral lower extremities. NP Laaff noted Claimant did not have any significant improvement with treatment. Claimant underwent a repeat Toradol injection into his deltoid muscle.

13. On August 8, 2022 Dr. Leach issued a response to letter from Claimant's counsel regarding Claimant's work restrictions. Dr. Leach opined that the work restrictions he recommended in his March 2022 IME report applied as of the date of the injury and continued through such time as further medical care was implemented and Claimant's response to such care was evaluated. He opined Claimant had been medically unable to work his regular employment since the date of the work injury.

14. PA Santana reevaluated Claimant on September 27, 2022. Claimant continued to report low back pain. On examination PA Santana noted lumbar spine tenderness and reduced range of motion. He prescribed Claimant Naproxen and Tizanidine and referred him for more physical therapy.

15. On December 30, 2022 Claimant saw Pamela Guthrie M.D. at Clinica. Claimant reported continuing symptoms. He further reported that he remained unable to lift heavy items but that he could now walk. Claimant was referred for physical at North Boulder Physical Therapy.

16. Claimant began physical therapy at North Boulder Physical Therapy on January 4, 2023. Claimant reported pain with lifting, sleeping, walking a distance of more than one mile, carrying things, and performing household chores. He reported that he was unable to resume work, and that he was unable to walk well and experienced tension

throughout his back when standing and walking. Elizabeth Paige Dow, PT noted an antalgic gait, decreased lumbar spine range of motion, muscle guarding and tension in the lumbar paraspinals. Claimant attended 5 physical therapy sessions at North Boulder Physical Therapy from January 16, 2023 through February 13, 2023, reported some improvement in his symptoms and function.

17. Dr. Leach performed a follow-up IME on February 10, 2023 during which he reexamined Claimant and reviewed additional records. Claimant complained of severe pain in his low back radiating into his buttocks, hip region and lower extremities. Claimant reported that his low back symptoms were aggravated by prolonged sitting and standing, sleep, lifting, bending, sneezing, coughing, recreational activities, driving and traveling. He had mild improvement with medication. Dr. Leach noted that his physical examination was generally unchanged from the March 2022 exam. He continued with the same diagnosis as well as recommendations for treatment and restrictions in his March 2022 IME report.

18. Dr. Leach credibly testified at hearing on behalf of Claimant. He testified consistent with his IME report. He reiterated his opinion that Claimant suffered from a work-related injury and requires further treatment and restrictions. Dr. Leach testified that Claimant is unable to perform his regular work duties and is not at MMI. Dr. Leach testified that he did not examine Claimant as a treating doctor and was paid by Claimant for his IME.

19. Other than Dr. Leach's IME reports, the medical records do not address work restrictions.

20. Claimant credibly testified at hearing. Claimant testified he continues to experience constant low back pain as well as pain on his sides and his bilateral lower extremities. Claimant testified he has not worked since the date of the work injury due to the work injury. Claimant testified he is unable to perform his regular job duties. Claimant testified that he selected Clinica as his provider because he had no money. Claimant testified that Clinica did not refer him to Dr. Leach.

21. Claimant offered to testimony or other evidence as to why he is requesting a change in physician. Claimant did not indicate any particular reason for his request to change physicians nor indicate any specific dissatisfaction with his medical care at Clinica.

22. Claimant has not worked since the date of the work injury. From the date of injury through August 27, 2022 Employer continued paying Claimant his regular wages of $17.00 per hour for 40 hours per week. Claimant subsequently incurred wage loss due to the work injury.

23. The ALJ credits the testimony of Dr. Leach and Claimant, as supported by the medical records, and finds that Claimant proved it is more probably true than not he is entitled to TTD benefits from August 28, 2022, ongoing.

24. Claimant failed to make a proper showing to justify a change of physician.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection

between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME’s MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

Respondents contend that Claimant failed to demonstrate entitlement to TTD benefits from August 28, 2022 and ongoing as Claimant’s treating physicians did not remove Claimant from work. That the records of Claimant’s treating providers do not specifically address work restrictions does not preclude Claimant from an award of TTD benefits based on the totality of the evidence.

A claimant is not required to present medical evidence to prove the work injury rendered him physically unable to perform his regular employment. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). A claimant’s testimony alone is sufficient to demonstrate a disability. (*Id*.). Claimant’s regular job duties of cleaning and moving items inherently required continuous lifting, carrying, bending, standing and walking. Claimant credibly testified, and consistently reported, that he was unable to perform his regular job duties as a result of the work injury. No evidence was offered indicating Claimant had issues performing his job duties prior to the work injury. The medical records document findings of pain, decreased range of motion, antalgic gait, and spams. Various records also document Claimant’s use of a walker and back brace. Dr. Leach credibly and persuasively opined that Claimant’s work-related condition has continued to render Claimant unable to perform his regular employment.

Claimant was unable to effectively and properly perform his regular employment due to the work injury. As a result, he has not worked since January 18, 2022. Claimant began to incur actual wage loss as a result of the disability on August 28, 2022 as Employer ceased paying him his regular wages as of that date. No evidence was offered demonstrating that Claimant has reached MMI, returned to regular or modified employment, or that the attending physician has given Claimant a written release to

return to regular or modified employment. Accordingly, the preponderant evidence demonstrates that Claimant is entitled to TTD benefits from August 28, 2022 and ongoing, until terminated by operation of law.

Change of Physician

Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* WC 4-597-412 (ICAO, July 24, 2008). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, WC 4-570-904 (ICAO, June 19, 2006). Because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretion to determine whether the circumstances justify a change of physician. *Gutierrez Lopez v. Scott Contractors*, WC 4-872-923-01, (ICAO Nov. 19, 2014).

As found, Claimant failed to make a proper showing justifying his request to change physicians. Claimant offered no explanation regarding his request to change physicians. Claimant did not allege nor offer any evidence of even "mere dissatisfaction" with Clinica's treatment. It is not alleged there is any bias or incompetence on the part of Clinica. The ALJ is left to infer that Claimant would simply prefer that Dr. Leach act as his treating physician, which is insufficient in this case to establish a proper showing justifying a change in physician.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits from August 28, 2022, ongoing, until terminated by operation of law.

2. Claimant failed to make a proper showing justifying a change of physician. Claimant's request for a change of physician is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with Employer?

- Whether Respondents have proven by a preponderance of the evidence that Claimant is an independent contractor for Employer?

- If Claimant has proven that he suffered a compensable injury, whether Claimant has proven by a preponderance of the evidence that he received medical treatment that was reasonable, necessary and related to cure and relieve Claimant from the effects of his industrial injury and provided by a physician who was authorized to treat Claimant for his injury?

- If Claimant has proven that he suffered a compensable injury, whether Claimant has proven by a preponderance of the evidence that that he is entitled to temporary total disability ("TTD") benefits from September 27, 2021 to December 6, 2021?

- If Claimant has proven that he suffered a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary partial disability ("TPD") benefits from December 7, 2021 and ongoing?

- If Claimant has proven by a preponderance of the evidence that that he is entitled to temporary disability benefits, whether respondents proven by a preponderance of the evidence that the temporary disability benefits may be terminated by statute.

- If Claimant has proven that he suffered a compensable injury, what is Claimant's average weekly wage ("AWW")?

FINDINGS OF FACT

1. Claimant was hired by Employer to perform services associated with being a catering chef. Employer is a catering company operating in the Aspen area that caters to private events in the area. [Redacted, hereinafter KF], the owner for Employer, testified that Employer would cater events that included meals to clients' homes/residences, birthdays, weddings, bar mitzvahs and corporate events. KF[Redacted] testified that Employer has been in business for 25 years and has three employees, himself, [Redacted, hereinafter TJ], the executive chef, and [Redacted, hereinafter LM], the sous chef. Employer leases space at a building owned by the [Redacted, hereinafter FE] which includes a kitchen and refrigerators that are used by Employer.

2. Claimant testified he began working for Employer on or around August 2019. Claimant testified he was September 26, 2021 when he was descending stairs at the FE[Redacted] building and fell. Claimant testified he was loading a car with food to take to an event when he was injured. Claimant testified he had worked earlier that day on a catering event for Employer and then returned to the kitchen at the FE[Redacted] for another catering event for Employer when he fell. Claimant testified TJ[Redacted] was eventually called and took Claimant to the Aspen Valley Hospital Emergency Room ("ER") for treatment for his injuries. Claimant was diagnosed at the ER with a fracture of two process vertebra of his thoracic spine, a cervical strain and a facial laceration. Claimant was provided with work restrictions of no lifting greater than five pounds and no carrying, pushing/pulling or reaching overhead until cleared by orthopedics. The ALJ finds that the treatment obtained from the ER was reasonable emergency medical treatment that resulted from his September 26, 2021 injury.

3. Claimant testified at hearing that he was not referred to a physician by Employer to treat his injuries. Claimant subsequently sought treatment with Dr. Anderson at the Steadman Clinic based on the referral from the ER physician. Claimant had previously been treated by Dr. Khan-Farooqi with the Steadman Clinic in June 2021 for complaints involving his left foot.

4. Claimant was initially seen by Dr. Anderson on October 18, 2021. Dr. Anderson noted that Claimant reported that following his fall, his experience mid back, left knee and left wrist pain along with post-concussion symptoms. Claimant reported that after about one week, his mid back and head symptoms improved, but his left wrist and left knee pain worsened. Dr. Anderson performed x-rays of the lumbar spine and recommended a magnetic resonance image ("MRI") of the left wrist. Dr. Anderson recommended physical therapy.

5. Claimant testified that following the injury, Claimant requested that Employer file a workers' compensation claim, but was informed by KF[Redacted] that Claimant was not covered by workers' compensation insurance.

6. KF[Redacted] testified that Employer is a seasonal business with peak times occurring during ski season and in the summer. KF[Redacted] testified that Employer typically shuts down for approximately 6 weeks from mid-April to Memorial Day or early June along with from late September until early December.

7. KF[Redacted] indicated that it is standard in the catering industry in Aspen to hire independent contractors to help with catering. KF[Redacted] testified the number of independent contractors that Employer may need would *vary.*

8. KF[Redacted] testified that he had a conversation with Claimant about him being an independent contractor when he hired Claimant. KF[Redacted] testified Claimant did not express any concerns about being an independent contractor rather than an employee. KF[Redacted] testified Claimant was happy about the arrangement since he did have any withholdings taken out of his pay. Claimant signed a W-9 for Employer and

was sent a 1099 form for tax purposes. However, KF[Redacted] did not have Claimant sign a contract identifying himself as an independent contractor when Claimant was hired.

9. Claimant was not required to work exclusively for Employer as was free to work for other catering companies. Claimant worked for a separate entity at the [Redacted, hereinafter JF] in Snowmass over the Labor Day holiday in September 2021. Claimant testified that he had worked approximately 7-10 days for the separate company during this time frame.

10. KF[Redacted] testified that the catering business is dictated by supply and demand and Claimant did not have a set schedule for Employer. However, the invoices provided by Claimant demonstrate that Claimant was consistently working in excess of 30 hours per week for Employer in June, July and August of 2021. Claimant and KF[Redacted] agreed that Claimant would be assigned catering jobs to work and if Claimant was not available, he could reject the catering job.

11. Claimant was paid by Employer by submitted billing invoices to Employer. The invoices would indicate which catering job he worked on, how many hours he worked on the catering job, the hourly rate Employer allowed him to charge for the job, and reimbursement of any supplies he personally bought for the catering job. KF[Redacted] testified that people who work for Employer can submit their invoices however they choose and Employer does not require any specific format be used. Claimant created his invoices using a software program/application called "[Redacted, hereinafter SK]." Claimant was not provided with business cards from Employer, was not provided with letterhead and was not listed on Employer's website and did not have an email address associated with Employer.

12. Claimant testified that at times, he would be provided with a company credit card from [Redacted, hereinafter TJ] to purchase supplies, but would otherwise be reimbursed by invoice. Claimant testified that at times he would be reimbursed a fee for gas on occasion in cases in which he had to travel a significant distance for a client. This testimony was confirmed by KF[Redacted]. Employer did not provide Claimant with a company vehicle to deliver the food. Employer did not provide Claimant with health insurance or a company phone.

13. Claimant and KF[Redacted] both testified that Claimant was paid an hourly rate based on the job he was performing and the client he was performing the job for. For instance, Claimant would be paid $25 per hour for preparation work associated with the catering job and between $35 and $40 per hour for being on site at a catering event and cleaning up. Once Claimant submitted invoices, Claimant was paid by check made out to Claimant individually.

14. There was some testimony at hearing as to whether Claimant was required to use the recipes provided by Employer or if he could use his own recipes. KF[Redacted] testified that Claimant would be provided with project sheets. KF[Redacted] testified that the project sheets would be developed as a collaboration between himself, the office and the chef with the client also being involved. Claimant testified that he

would occasionally bring in his own food and provide it to co-workers with the idea that if the co-workers liked the food, it could be used for clients at a later time. There was additional testimony as to whether Claimant could change aspects of the recipes for projects provided by Employer. The ALJ finds that whether or not Claimant could make adjustments to the Employer's recipes is not outcome determinative to the finding of whether or not Claimant was an employee of Employer. Most importantly however, the testimony of KF[Redacted] establishes that the menu in question was primarily prepared by TJ[Redacted], the executive chef for Employer, and the client. Claimant would then be provided with the menu to prepare for the client. KF's[Redacted] testimony that Claimant could change the menu is found to be not credible. KF[Redacted] testified that Claimant could add "twists" to the menu or personal touches is not the same as changing the menu. While Claimant may have been able to add a personal touch to the menu, this is not sufficient to establish independence in how Claimant performed his work for Employer.

15. Claimant testified that Employer provided the ingredients for which the food was to be prepared, but if fresh ingredients were necessary, he would purchase the fresh ingredients and submit for reimbursement from Employer. Claimant used the kitchen provided by Employer including the stoves, pots, pans and utensils provided by Employer. Claimant testified that he did use his own set of knives and knife sharpener along with specific items such as an apple corer in preparing the food for Employer. KF[Redacted] testified that while typically food preparation was performed at Employer's kitchen at the FE[Redacted], Claimant could prepare food at his home. Claimant testified he only prepared food at his home on one occasion and that occurred when the power was out at Employer's kitchen. The ALJ finds Claimant's testimony credible with regard to the location where the food preparation occurred.

16. Claimant testified his work as a chef was overseen by Employer. However, Claimant was not provided with specific training as a chef. Claimant was provided by Employer a checklist for the event which included the location, information regarding food allergies, menu options, and how much staffing was needed. However in providing the necessary staffing, Employer was responsible for providing individuals to serve the food and drinks at the events. Testimony was presented at the hearing that Claimant could request specific staff work events that Claimant was assigned, but no credible evidence was presented that Claimant actually requested specific staff to work events that he was assigned.

17. With regard to the catering event Claimant was working on when he was injured, Claimant noted that this was a family that had specifically requested that he prepare food for the family and the food was to be delivered to the home where the family was staying. KF[Redacted] acknowledged that even though Claimant was specifically requested as the chef for the family, Claimant would not be able to perform the services of catering to the family because Claimant would not be allowed to steal clients from Employer.

18. Due to the fact that there was no contract for hire that identified Claimant as an independent contractor pursuant to Section 8-40-202(b)(III), the burden of proof to

establish independence pursuant to Section 8-40-202(b)(II). Section 8-40-202(2)(b)(II) provides in pertinent part that in order to prove independence it must be shown that the person for whom services are performed does not:

- Require the individual to work exclusively for the person for whom services are pertormed; except that the individual may choose to work exclusively for such person for a finite period of specified in the document;

- Establish a quality standard for the individual; except that the person may provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed;

- Pay a salary or at an hourly rate instead of a fixed or contract rate;

- Terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets the specifications of the contract;

- Provide more than minimal training for the individual;

- Provide tools or benefits to the individual; except that materials and equipment may besupplied;

- Dictate the time of performance; except that a completion schedule and a range of negotiated and mutually agreeable work hours may be established;

- Pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and

- Combine the business operations of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

19. In this case, Claimant was not required to work exclusively for Employer and Claimant was not provided training by Employer. Likewise, Claimant was provided with a mutually agreed upon work hours that were effectively dictated by the client (notably the time Claimant was required to be at the event).

20. Factors that demonstrate that Claimant was not independent from Employer include the fact that Claimant was paid individually and was paid an hourly rate, as opposed to a contract rate. Additionally, testimony demonstrated that after Claimant's injury, Claimant sought to have the FE[Redacted] cover the cost of his medical expenses and wrote a letter seeking compensation from the FE[Redacted] for the injury as the injury had occurred on the FE[Redacted] premises. This resulted in the FE[Redacted] advising Employer that they did not want Claimant on the premises, and Claimant was effectively

terminated by Employer. This demonstrates that Employer maintained the right to terminate Claimant's performance without Claimant violating the terms of his service agreement.

21. Moreover, Employer provided Claimant with the prep kitchen at the FE[Redacted] where Claimant performed his prep work. This is the area where the injury occurred and where Employer kept most of the ingredients used by Claimant to prepare the meals to be provided at the catered events.

22. Based on weighing the 9 factors in determining whether Claimant was engaged in an independent occupation, the ALJ finds that Respondents have failed to prove by a preponderance of the evidence that Claimant was free from the direction and control of Employer in performing the duties assigned to Claimant by Employer.

23. The ALJ would also note that testimony presented by Claimant and KF[Redacted] at the hearing established that the Claimant was not allowed to do projects for clients of Employer, even if requested by the client, without putting the project through Employer's business. Claimant's work in this regard had to be performed under Employer's business and could not be performed directly for the client by Claimant.

24. While Claimant was allowed to work other projects for other catering companies, specifically the Labor Day concert testified to by Claimant and KF[Redacted], the ALJ finds that this is no different than any other employee of a company who may be allowed to set a schedule that allowed the employee to work at an event that the employee sought to work at. Notably, no credible evidence was presented at hearing that Claimant's work at the Labor Day concert event was performed under a subcontractor business maintained by Claimant, nor was any credible evidence presented with regard to the nature of the work performed by Claimant at the Labor Day concert event that would indicate the work completed by Claimant was performed as an independent contractor as opposed to an employee.

25. Following Claimant's injury, Claimant was off of work through December 7, 2021 at which time he continued to work for Employer. Claimant was eventually terminated by Employer after authoring a letter to the FE[Redacted] requesting a payment of $10,000 to settle any potential liability against FE[Redacted] as a result of the fall that occurred on their premises. Claimant testified that KF[Redacted] issued an email to Claimant that terminated Claimant's employment. This testimony is consistent with KF's[Redacted] testimony that when the FE[Redacted] advised KF[Redacted] that they did not want Claimant on the premises, KF[Redacted] was trying to be respectful of the request of his landlord.

26. KF[Redacted] testified that Employer is a seasonal business and that they would have been shut down for the autumn and did not have work during the time after Claimant's injury and prior to December 7, 2021. While this may be the case, Employer's seasonal operations do not provide a basis for denial of temporary disability benefits where Claimant was taken off of work by the ER physician based on the five pound work restrictions set forth in the ER.

27. The ALJ credits Claimant's testimony and finds that Claimant has established by a preponderance of the evidence that he is entitled to an award of TTD benefits for the period of September 27, 2021 through December 7, 2021 when Claimant returned to work for Employer.

28. Because Claimant was never released to work without restrictions by a treating physician, Claimant is entitled to an award of temporary partial disability benefits beginning December 7, 2021.

29. For the period between June 22, 2021 through September 26, 2021 when Claimant was injured, Claimant's invoices reflect that Claimant was paid $15,152.50 in hourly wages. This 96 day period of time results in a daily wage of $157.84 which equates to an AWW of $1,104.88.

30. Following Claimant's injury, Claimant sought treatment with Dr. Anderson Dr. Armstrong and Dr. Khan-Farooqi. Most notably, Claimant had treated with Dr. Khan-Farooqi prior to his work injury for a left toe injury which was diagnosed as a left great toe bunion on June 18, 2021. Dr. Khan-Farooqi noted during the June evaluation that Claimant may need aspiration or steroid injections in the future. Dr. Khan-Farooqi noted that Claimant had a history of gout.

31. Following Claimant's injury, Claimant returned to Dr. Khan-Farooqi on November 3, 2021. Dr. Khan-Farooqi noted Claimant had ongoing turf toe and left foot pain and noted Claimant feel down the stairs on September 26 which resulted in multiple injuries and aggravated his left bunion. Dr. Khan-Farooqi noted there was increased pain and swelling on the first metatarsophalangeal joint ("MTPJ") medially and dorsally. Dr. Khan-Farooqi noted in his report that the increased pain and swelling occurred after a high energy fall onto his right side. Dr. Khan-Farooqi recommended an MRI of the left foot to look for turf toe injury given the swelling and crease valgus deformity. Dr. Khan-Farooqi obtained x-rays of the left foot and noted that they showed bipartitie medial sesamoid versus a fracture medial sesamoid.

32. Claimant returned to Dr. Khan-Farooqi on January 21, 2022. Dr. Khan-Farooqi diagnosed Claimant wlth a symptomatic turf toe and arthritic MTPJ. Dr. Khan-Farooqi recommended physical therapy and noted that injections or possible surgery may be necessary.

33. Claimant underwent a second MRI at the request of Dr. Armstrong on April 15, 2022. Dr. Armstrong recommended Claimant undergo osteophyte excision based on the MRI results. Claimant returned to Dr. Khan-Farooqi on May 3, 2022 after being evaluated by Dr. Armstrong. Dr. Khan-Farooqi noted Claimant reported a failure to improve despite maximal physical therapy, chiropractic care, rest, orthotics, injections and home exercise. Dr. Khan-Farooqi recommended surgery.

34. Claimant eventually underwent surgery under the auspices of Dr. Khan-Farooqi on July 15, 2022.

35. Respondents obtained an independent medical evaluation ("IME") with Dr. Messenbaugh on July 1, 2022. Dr. Messenbaugh reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Messenbaugh opined that as a result of Claimant's fall he had a laceration of his left forehead, a strain of his lower back that had resolved, transverse process fractures involving the T3 and T4 level, a left wrist strain and a left shoulder and left knee contusion that had resolved. Dr. Messenbaugh opined that Claimant had not sustained an injury to his left great toe as a result of the September 26, 2021 accident. Dr. Messenbaugh opined Claimant was at MMI with no permanent impairment.

36. Dr. Messenbaugh further opined that Claimant's surgery involving his left great toe was not at all related to his fall of September 26, 2021.

37. Claimant was also evaluated at Aspen Medical Care by Dr. Bryan C. Gieszl on April 14, 2022 for a "new workers' comp injury" that occurred September 26, 2021. Dr. Gieszl eventually referred Claimant to be treated by Dr. Armstrong. There is a lack of information contained in the records as to how Claimant came to be treated by Dr. Gieszl and Claimant's testimony fails to establish that Dr. Gieszt was within the chain of referrals for medical treatment related to Claimant's injury. Therefore, the ALJ concludes that the treatment provided by Dr. Gieszl and Dr. Armstrong are not within the chain of referrals and are not "authorized" medical treatment.

38. Claimant testified at hearing that his pain in his left big toe was much more severe after his work injury. The ALJ credits the testimony of Claimant at hearing along with the reports from Dr. Khan-Farooqi and finds that Claimant has proven that it is more probable than not that Claimant's fall on September 26, 2021 aggravated accelerated or combined with Claimant's pre-existing condition to cause the need for medical treatment with Dr. Khan-Farooqi beginning November 3, 2021. The ALJ further finds that Dr. Khan-Farooqi is within the chain of authorized referrals as he was a referral from Dr. Anderson, who was the physician Claimant was referred to by the ER.

39. The ALJ further notes that because the Employer did not provide Claimant with a list of treating physicians at any time following his injury, the choice of treating physician was waived and Claimant chose to treat with Dr. Anderson and the Stedman Clinic. The ALJ finds the treatment provided by Dr. Anderson, Dr. Khan-Farooqi and the Stedman Clinic to be reasonable and necessary to cure and relieve Claimant from the effects of his work injury.

40. The ALJ therefore finds that Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with Employer and Respondents are liable for the cost of the medical treatment provided by Dr. Anderson, Dr. Khan-Farooqi and the Stedman Clinic. The ALJ further finds that Claimant has proven by a preponderance of the evidence that he is entitled to an award of TTD benefits for the period of September 27, 2021 through December 6, 2021 based on an AWW of $1,104.88. Claimant has further proven that he is entitled to an award of TPD benefits from December 7, 2021 through ongoing based on an AWW of $1,104,88.

41. With regard to Respondents' argument that there is a statutory cut off for TTD benefits, the ALJ notes that Jade Golden, PA-C with Dr. Gieszl's office filled out a report dated April 15, 2022 which checked a box indicating that Claimant was at MMI. However, Claimant was under the care of Dr. Khan-Farooqi for the compensable foot injury for which Dr. Khan-Farooqi subsequently performed surgery. PA-C Golden specifically notes in the report that the MMI was for "head injury, right shoulder, thoracic spine, left knee only" and reported Claimant was still being evaluated for left foot and wrist. Therefore, the ALJ does not find that this report provides a basis to terminated temporary disability benefits.

CONCLUSIONS OF LAW

1. The purpose of the 'Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8- 43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Section 8-40-202(2)(a), C.R.S., provides that an individual performing services for another is deemed to be an employee:

> [U)nless such individual is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed.

5. Section 8-40-202(2)(b)(II), *supra,* then sets forth nine factors to balance in determining if claimant is an employee or an independent contractor. *See Carpet Exchange of Denver, Inc. v. Industrial Claim Appeals Office,* 859 P.2d 278 (Colo. App. 1993). The nine factors include:

> (1) whether the person for whom services are performed does not require the individual to work exclusively for the person for whom services are performed;
> (2) whether the person for whom services are performed does not establish a quality standard for the individual;
> (3) whether the person for whom services are performed does not pay a salary or at an hourly rate instead of a fixed or contract rate;
> (4) whether the person for whom services are performed does not terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets expectations of the contract;
> (5) whether the person for whom services are performed does not provide more than minimal training for the individual;
> (6) whether the person for whom services are performed does not provide tools or benefits to the individual, except that materials and equipment may be supplied;
> (7) whether the person for whom services are performed does not dictate the time of performance;
> (8) whether the person for whom services are performed does not pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and
> (9) whether the person for whom services are performed does not combine the business operation of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

6. A document may satisfy the requirement to prove independence, but a document is not required. Section 8-40-202(2)(b)(III), *supra,* provides that the existence of any one of those factors is not conclusive evidence that the individual is an employee. Consequently, the statute does not require satisfaction of all nine criteria in Section 8-40-202(2)(b)(II) in order to prove by a preponderance of the evidence that the individual is not an employee. See *Nelson v. Industrial Claim Appeals Office,* 981 P.2d 210 (Colo. App. 1999).

7. As found, no document existed as to the requirements to prove independence. Because no document exists to establish the requirements set forth at Section 8-40-202(2)(b)(II), it is Respondents' burden of proof by a preponderance of the evidence that Claimant's work for Employer was performed as an independent contractor. As found, based on the evidence presented at hearing, the ALJ finds that

Respondents have failed to establish that claimant was an independent contractor with regard to the work performed as a chef.

8. In *Industrial Claim Appeals Office v. Softrock Geological Services, Inc.,* 325 P.3d 560 (Colo. 2014), the Colorado Supreme Court noted that whether an individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed is a question of fact that can only be resolved by analyzing several factors and whether the individual worked for another is not dispositive of whether the individual was engaged in an independent business. *See Softrock, supra.* The Colorado Supreme Court held that the determination must be based on a totality of the circumstances test that evaluates the dynamics of the relationship between the putative employee and the employer. The Court in *Softrock* further held that while the nine fact test may be relevant to determining whether the individual is an independent contractor, the test does not provide an exhaustive list of factors that may be considered.

9. In considering other factors outside of the nine factors set forth by Section 8-40-202(2)(b)(II), C.R.S., the ALJ finds no other factors establish that Claimant was performing work as an Independent Contractor as opposed to an employee.

10. Notably, in this case, Claimant was paid an hourly rate that was set by Employer for the work performed by Claimant which varied depending on the work Claimant was performing for Employer. Claimant was not paid at a contract rate per job. Claimant was paid personally by Employer and was not paid to a business entity. Claimant was provided with a menu by Employer and was then responsible for preparing the meal or meals in accordance with the instructions by Employer. As found, any personal touches Claimant may have been able to add to the menu is insufficient to establish independence in order to determine Claimant was not an employee of Employer.

11. Based on the facts presented in this case, including that Claimant was paid an hourly rate, the money was paid to Claimant personally as opposed to a business, the Employer provided Claimant with the kitchen to perform the prep work, the injury occurred at the building where the kitchen was located while Claimant was performing work for Employer, Claimant was provided with contact sheets and advised of the date and time to provide services to the clients.

12. The ALJ finds and concludes that Respondents have failed to prove by a preponderance of the evidence that Claimant was free from direction and control in the performance of the duties of his employment.

13. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not

change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office,* 931 P.2d 570 (Colo. App. 1996).

14. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.,* W.C. No. 4-304- 437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion...." *Greager v. Industrial Commission,* 701 P.2d
168 (Colo. App. 1985), *citing,* 2 A. Larson, *Workers' Compensation Law* § 61.12(9)(1983).

15. As found, Respondents failed to refer Claimant to an authorized treating provider by Respondents after his work injury. Therefore, the Claimant then has the right to select the physician to treat with for the injuries sustained in the accident.

16. As found, the treatment Claimant received was authorized emergency medical treatment that resulted from Claimant's compensable work injury. As found, Dr. Anderson was selected by Claimant as the physician to treat Claimant for his injury. As found, Dr. Anderson subsequently referred Claimant to Dr. Armstrong and Dr. Khan-Farooqi for his injury.

17. As found, Claimant has proven by a preponderance of the evidence that the treatment with Dr. Anderson, Dr. Armstrong and Dr. Khan-Farooqi was reasonable medical treatment necessary to cure and relieve the Claimant from the effects of the industrial injury. As found, although Dr. Khan-Farooqi had treated Claimant prior to his work injury for ongoing turf toe and left foot pain, Dr. Khan-Farooqi also noted that Claimant's fall at work resulted in multiple injuries and aggravated Claimant's left bunion resulting in increased pain and swelling on the first MTPJ medially and dorsally. As found, the ALJ credits the medical reports of Dr. Khan-Farooqi's and finds Claimant has proven by a preponderance of the evidence that the treatment provided by Dr. Khan- Farooqi was reasonable medical treatment necessary to cure and relieve the Claimant from the effects of the industrial injury.

18. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra,* requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra.* The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume

his prior work. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.,* 964 P.2d 595 (Colo.App. 1998).

19. As found, Claimant has proven by a preponderance of the evidence that he sustained an injury resulting in a disability that lasted for longer than three days after he was hospitalized following his fall at work on September 26, 2021. The mere fact that Employer was a seasonal business that did not operate during the autumn months until the beginning of ski season is not a defense to a claim for temporary disability benefits where Claimant's injury results in a disability lasting for longer than three days.

20. As found, Claimant returned to work for Employer on December 7, 2021 earning less wages than he was earning at the time of his industrial injury. During this time, Claimant was still receiving medical treatment for his work injury and had not yet been released to return to work without restrictions. As found, Claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary partial disability benefits beginning December 7, 2021 and continuing until terminated by law or statute.

21. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). As found, based on the evidence presented at hearing, the ALJ finds that Claimant has established an AWW of $1,104.88.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of the industrial injury, including the medical treatment provided by the ER, Dr. Anderson, Dr. Armstrong and Dr. Khan-Farooqi.

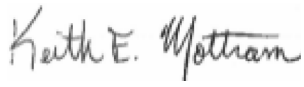
2. Respondents shall pay Claimant TTD benefits for the period of September 27, 2021 through December 6, 2021 based on an AWW of $1,104.88.

3. Respondents shall pay Claimant TPD benefits for the period of December 7, 2021 through ongoing based on an AWW of $1,104.88.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. In **addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: May 8, 2023



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on September 3, 2022.

2. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination from employment under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits after September 3, 2022.

3. Whether Respondents have established by a preponderance of the evidence that Claimant willfully failed to obey a reasonable safety rule in violation of §8-42-112(1)(b) C.R.S. on September 3, 2022 and his non-medical benefits should thus be reduced by fifty percent.

FINDINGS OF FACT

1. Employer is a retail and pharmacy store that sells a variety of items to customers. On April 4, 2020 Claimant began working for Employer as a Customer Service Associate (CSA). His primary job duties involved operating a cash register.

2. Claimant acknowledged that during the course of his employment with Employer he received training involving workplace violence, safety, and dealing with shoplifters. Although Claimant explained that he has not personally interacted directly with shoplifters, he has witnessed numerous shoplifting incidents on a daily basis. He remarked that sometimes coworkers permitted the shoplifters to leave, other times shoplifters were told to pay for their items and occasionally coworkers have gone outside the store and became involved in physical altercations with shoplifters. Claimant was unaware whether coworkers had received warnings or been terminated for their actions with shoplifters.

3. Claimant testified that on September 3, 2022 his shift lasted from 2:00 p.m. until 10:00 or 10:30 p.m. He was working with supervisor [Redacted, hereinafter NF]. NF[Redacted] told Claimant there was a shoplifter in the store. Claimant then noticed that NF[Redacted] was talking to the shoplifter near the front of the store and they began to struggle over a shopping cart filled with merchandise. When Claimant saw the shoplifter swinging at NF[Redacted], he left his register. As Claimant approached, the suspect exited the store. Claimant then recounted that NF[Redacted] told him to get the shoplifter's vehicle license plate number.

4. Claimant exited the store and attempted to take a picture of the shoplifter's license plate number with his phone but was unsuccessful. He acknowledged that he had

never previously been asked, nor heard that anyone else had ever been asked, to obtain a license plate number of a shoplifter's vehicle. Claimant then picked up and threw two rocks at the suspect's truck but missed. He testified he threw the rocks because he could not get a good description of the suspect and wanted to break the vehicle's headlight so the police would have an easier time identifying the shoplifter. Claimant noticed the shoplifter's truck coming in his direction and sought to leave the area. However, he slipped and the truck drove onto the sidewalk. The vehicle then struck Claimant in front of Employer's store. NF[Redacted] called 9-1-1 for assistance. Paramedics took Claimant by ambulance to St. Anthony's North Hospital, where he was admitted and remained for treatment that included multiple surgeries.

5. On the following day or September 4, 2022 Store Manager [Redacted, hereinafter MW] visited Claimant in the hospital. MW[Redacted] told Claimant he had been fired for the shoplifter altercation and NF[Redacted] had already resigned her position.

6. On cross-examination Respondents' played excerpts from surveillance video of the September 3, 2022 shoplifting incident. The video showed Claimant working behind the cash register and then moving to help MH[Redacted] as she was engaged in an altercation with a suspected shoplifter. Claimant then followed the shoplifter outside the store. Claimant was outside the store with the suspect for just four seconds, allegedly attempting to take pictures of the shoplifter's vehicle, before he determined he was unable to take the pictures. He then picked up two rocks and threw them at the suspect's truck, but missed. The video depicts Claimant in the middle of the parking lot approaching the suspect's vehicle and throwing rocks at the truck prior to being struck by the vehicle.

7. Claimant acknowledged that Employer had a policy prohibiting employees from touching or attempting to apprehend suspected shoplifters. He also recognized that he had received training regarding workplace violence and handling confrontational situations. In fact, the record reveals that in 2020 and 2021 Claimant completed numerous trainings. The materials related to Employer's workplace violence policy, shoplifting deterrence, responding to shoplifting incidents, and handling confrontational situations. Claimant was required to obtain passing scores during training quizzes in order to continue employment.

8. MW[Redacted] also testified at the hearing in this matter. He explained that his duties as Employer's Store Manager involve overseeing all operations of the establishment including merchandizing, hiring and training. Although MW[Redacted] asked MH[Redacted] to complete a statement about the September 3, 2022 shoplifting incident, she simply resigned her position and provided no specific details about the event. MH[Redacted] generally explained that she became involved in a tussle with the suspect after her glasses were knocked off. MW[Redacted] noted that MH[Redacted]never mentioned she told Claimant to exit the store to take a picture of the shoplifter's license plate.

9. MW[Redacted] also testified about Employer's policies involving shoplifting, workplace violence and handling confrontation. The general purpose of the policies was

to keep employees safe. Employees were never trained employees to physically engage with shoplifters. The only reason for a physical confrontation with a suspected shoplifted was if the situation was unavoidable and involved purely self-defense. Notably, MW[Redacted] emphasized that employees are always told that it is a policy violation to leave the store to pursue a suspect. Workplace violence policies were designed to de-escalate situations and keep employees safe. MW[Redacted] explained that Employer never intended for employees to fight, throw objects, or act physically aggressive towards customers or shoplifters.

10. MW[Redacted] also discussed the implementation of Employer's policies regarding confrontational situations, workplace violence and safety. He detailed that employees receive training on Employer's shoplifting and workplace violence policies at the outset of their employment and then undergo refresher training on an annual basis. Employer specifically downloads trainings into employee accounts that include deadlines for completion. There are also periodic, brief meetings on important topics, including shoplifting guidelines, in order to refresh employees. MW[Redacted] remarked that the policies were enforced by telling employees that any violation could result in disciplinary action up to and including termination. In fact, termination for both MH[Redacted] and Claimant was recommended after the September 3, 2022 incident, but MH[Redacted] quit her position. Importantly, MW[Redacted] stated that Claimant was not acting within his job duties and violated Employer's policies by throwing objects at the shoplifter outside the store on September 3, 2022. He testified that Claimant's act of throwing of rocks at the suspect's vehicle did not provide any benefit to Employer. Claimant should have stopped at the exit and let the suspect leave the store.

11. Employer's policies include a "Preventing and Handling Shoplifting SoftStop Reference Guide." The first line of defense to shoplifting includes the following: (1) greeting every customer; (2) making eye contact with customers; (3) offering assistance to customers; (4) keeping stores neat, displays full, and trash off floor; (5) keeping aisles properly faced to easily notice discrepancies; and (6) using the designated security code over the intercom to alert management of a shoplifter. Notably, the policies specify that it is especially important to remember:

> …no employee is allowed to physically touch suspected shoplifters;
>
> …no employee is allowed to leave the store premises during the apprehension of a shoplifter;
>
> …if the shoplifter refuses or resists, let him or her leave the premises, and then call 911;
>
> …while waiting for the police to arrive, a witness must be with the shoplifter the entire time.

The training also involves 46 slides of hypotheticals and asks employees how to appropriately respond to shoplifting incidents. The slides include multiple choice responses requiring employees to choose the correct answers.

12. Respondents' also introduced Employer's Combined Shoplifting Policy and Training (Shoplifting Policy) into evidence. The Shoplifting Policy specifies that an employee should not place himself between a suspected shoplifter and the exit door. Moreover, an employee is prohibited from following an individual who is carrying stolen merchandise out the door in an attempt to obtain a license plate number. Employer also produced policies involving "Guidance for shoplifting Prevention and Response." Pursuant to Employer's training, if a suspected shoplifter refuses to give up merchandise, employees are directed to allow the suspect to leave the premises. One question specifically inquires, "If an individual walks out the door with stolen merchandise you should follow the person and try to get their license plate number." The correct answer is "False."

13. Among the Standard Operating Procedures for Handling Confrontational Situations are rules stating that employees are not to block or stand in the entryway, not touch or try to apprehend an individual, and "do not leave the store to obtain information about the individual such as a license plate number. If the individual attempts to exit the store, allow him/her to leave as quickly as possible to help ensure the safety of everyone." Notably, the Standard Operating Procedures specify that employees are not to attempt to stop the individual and "do not leave the store in an attempt to follow after him/her. Let the individual leave and report the situation to law enforcement when they arrive." Moreover, Employer's "Guidance for Shoplifting Prevention and Response" within the Workplace Violence Policy is designed to deter and handle shoplifting. Employees are trained that inappropriate behavior includes "creating unsafe working conditions by engaging in physical aggression or other dangerous or offensive behavior, including but not limited to fighting, throwing objects, and horseplay." The Policy Against Workplace Violence was Employer's "overarching policy regarding workplace violence. It describes the requirements for appropriate behavior at work and for keeping the workplace safe."

14. Claimant has failed to demonstrate it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer on September 3, 2022. Initially, Claimant worked for Employer as a CSA or cashier. While working behind the cash register on September 3, 2022 Claimant saw his supervisor MH[Redacted] engaged in an altercation with a suspected shoplifter. As Claimant left the register area and approached the altercation, the shoplifter exited the store. Although Claimant stated that MH[Redacted] then asked him to exit the store to obtain the suspect's license plate number, his testimony was not corroborated and is in direct conflict with Employer's store policies. Moreover, MW[Redacted] noted that MH[Redacted] never mentioned that she told Claimant to exit the store to take a picture of the shoplifter's license plate before abruptly resigning after the incident. Nevertheless, Claimant then followed the shoplifter outside. Surveillance video shows Claimant in Employer's parking lot approaching the suspect's vehicle and throwing rocks at the truck. The shoplifter subsequently struck Claimant with his vehicle.

15. Many of Employer's policies permit employees to approach or interact with suspected shoplifter's to deter shoplifting and de-escalate confrontational situations inside Employer's store. Employees are encouraged to greet, make eye contact and offer assistance. The directives in Employer's trainings reveal they were designed to regulate

the conduct of employees while performing their job duties and address appropriate behavior in dealing with potential shoplifters inside Employer's store.

16. However, employees are strictly prohibited from leaving store premises to confront shoplifters or obtain license plate information. Claimant acknowledged that he received training and was required to pass quizzes relating to Employer's workplace violence policy, handling confrontational situations, and shoplifting deterrence policy during his employment. Employer specifically forbid employees from leaving the store during a shoplifting incident. In fact, Employer's SoftStop Reference Guide specifies that "no employee is allowed to leave the store premises during the apprehension of a shoplifter." Moreover, Employer's Standard Operating Procedures direct employees to "not leave the store to obtain information about the individual such as a license plate number. If the individual attempts to exit the store, allow him/her to leave as quickly as possible to help ensure the safety of everyone." An employee is simply prohibited from following an individual who is carrying stolen merchandise out the door in an attempt to obtain a license plate number. As MW[Redacted] explained, nothing in Claimant's job duties as a CSA allowed him to exit the store to pursue a shoplifter and throw objects.

17. By exiting Employer's store, walking into the middle of the parking lot and throwing rocks at the shoplifter's vehicle, Claimant removed himself from the employment relationship. Employer's detailed training and instructions regarding exiting the store and obtaining a license plate number limited Claimant's sphere of employment by creating a restriction on the scope of Claimant's job. Employer's directives were specific and reflected a clear intent to limit the sphere of the employment relationship. The training and directives evidenced an intent to cease the employment relationship for a violation. Claimant's actions of exiting Employer's store on September 3, 2022 to obtain a license plate number and throw rocks at a suspected shoplifter's vehicle directly contravened Employer's directives and exceeded the realm of his job duties. By acting outside the scope of employment Claimant severed the causal relationship between his job function and injuries.

18. The present case is distinguishable from *Sewald v. Safeway, Inc.*, WC 5-188-401 (ICAO, Dec. 21, 2022). In *Sewald*, the injury occurred when an employee encountered a shoplifter inside the store, reached for his shopping cart and fell when the shoplifter pulled the cart away. The ALJ in *Sewald* explained that the employer provided the claimant with training about interacting with suspected shoplifters, but the directives did not evidence an intent to cease the employment relationship for a violation. Instead, the directives in the employer's shoplifting guidelines and training were intended to regulate the claimant's conduct while performing her duties and not to limit the scope of her employment. However, the present case is distinguishable from *Sewald* and provides a bright-line rule for defining the "sphere of employment." Critically, Employer's policies about exiting the premises after a shoplifter are designed to prohibit interaction and promote safety. Once the suspected shoplifter has left the store, employees are not encouraged to approach or interact with the shoplifter, but rather must refrain from pursuit. By the time a suspect has exited the store, deterrence has failed and employees are no longer performing their job duties by pursuing the shoplifter outside.

19. As illustrated in 2 A. Larson, *Workmen's Compensation Law* § 33.02 (2013) cited in *Sewald*, there is a distinction between an employer's instruction sufficient to remove an employee's activity from the realm of employment and an instruction only directed at the "method" of carrying out a work function. Specifically, "rules and prohibitions may define the ultimate 'thing' which the Claimant is employed to do, or they may describe the methods which he may or may not employ in accomplishing that ultimate thing." Here, some of Employer's training encourages interaction in dealing with suspected shoplifters. They are designed to regulate employees' conduct while performing job duties. However, leaving the store to pursue a shoplifter and throwing rocks at a vehicle removed Claimant's activity from the realm of his employment as a CSA. Claimant's actions in pursuing a shoplifter were not encompassed within his duties to discourage or limit shoplifting inside Employer's store. Rather than prescribing the method in which Claimant was to perform his job, Employer's policies and training prohibiting the pursuit of shoplifter's outside the store limited Claimant's sphere of employment. Claimant simply acted outside the realm of his employment on September 3, 2022.

20. The directives about not pursuing shoplifters outside the store reflect Employer's intent to cause the cessation of employment even on a temporary basis. By exiting Employer's store, walking into the middle of the parking lot and throwing rocks at the shoplifter's vehicle, Claimant removed himself from the employment relationship. As MW[Redacted] stated, Claimant was not acting within his job duties and violated Employer's policies by throwing objects at the shoplifter outside the store on September 3, 2022. Claimant should have stopped at the exit and let the suspect leave the store. Employer's detailed policies and training, store video, and MW's[Redacted] credible testimony demonstrate that Claimant's injuries while outside Employer's store and throwing rocks at a suspect shoplifter's vehicle occurred outside the sphere of employment. Therefore, Claimant's violation of Employer's instructions governing the sphere of employment severed the causal relationship between his employment and his injuries. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967).; *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As a general rule, an employer has the right to issue directives concerning what an employee may do, and when she may do it. *In re Eelorriaga*, WC 5-047-389-01 (ICAO, June 19, 2018). In such circumstances the employer's instructions are said to limit

the “sphere” of the employment. *Id.* The employee’s violation of the employer’s instructions governing the “sphere” of employment severs the causal relationship between the employment and the injury, rendering the injury non-compensable. *Bill Lawley Ford v. Miller*, 672 P.2d 1031, 1032 (Colo. App. 1983); *see Escobedo v. Midwest Drywall Company*, W.C. No. 4-700-127 (ICAO, July 13. 2007). Conversely, the violation of rules and directives relating only to the employee's conduct within the sphere of employment do not remove injuries from the realm of compensability. *Bill Lawley Ford* 672 P.2d at 1032. Importantly, the direction “may limit the sphere of the employment relationship, or it may simply regulate the employee’s conduct while he is engaged in such employment.” *Ramsdell v. Horn*, 781 P.2d 150, 152 Colo. App. 1989).

8. There are several factors to be considered in discerning whether a direction has limited the sphere of employment as opposed to only regulating the employees’ conduct. *Nielson v. PXC Denver*, W.C. No. 4-241-772 (ICAO Mar. 5, 1996). The factors include the circumstances under which the directive was given, what the employer intended to prohibit, and the manner in which the claimant interpreted the order. *Id.* The distinction between an employer’s instruction that is sufficient to remove an employee’s activity from the realm of employment and one that is only directed at the “method” of completing a work function is illustrated in 2 A. Larson, *Workmen's Compensation Law* § 33.02 (2013):

> We have here to do with a simple distinction: that between “thing” and “method.” Rules and prohibitions may define the ultimate “thing” which the claimant is employed to do, or they may describe the methods which he may or may not employ in accomplishing that ultimate “thing.” The only tricky feature of this distinction is that it can, by a play upon words, be converted into a contradiction of itself. For example, it seems clear enough that if the claimant’s main job is to lift flour sacks, the raising of the flour sacks is the “thing” for which he is employed. If, in violation of instruction, he rigs up a rope hoist to do the job, it should be clear enough that his departure is merely from the method prescribed.

See Sewald v. Safeway, Inc., WC 5-188-401 (ICAO, Dec. 21, 2022).

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on September 3, 2022. Initially, Claimant worked for Employer as a CSA or cashier. While working behind the cash register on September 3, 2022 Claimant saw his supervisor MH[Redacted] engaged in an altercation with a suspected shoplifter. As Claimant left the register area and approached the altercation, the shoplifter exited the store. Although Claimant stated that MH[Redacted] then asked him to exit the store to obtain the suspect’s license plate number, his testimony was not corroborated and is in direct conflict with Employer’s store policies. Moreover, MW[Redacted] noted that MH[Redacted] never mentioned that she told Claimant to exit the store to take a picture of the shoplifter’s license plate before abruptly resigning after the incident.

Nevertheless, Claimant then followed the shoplifter outside. Surveillance video shows Claimant in Employer's parking lot approaching the suspect's vehicle and throwing rocks at the truck. The shoplifter subsequently struck Claimant with his vehicle.

10. As found, many of Employer's policies permit employees to approach or interact with suspected shoplifter's to deter shoplifting and de-escalate confrontational situations inside Employer's store. Employees are encouraged to greet, make eye contact and offer assistance. The directives in Employer's trainings reveal they were designed to regulate the conduct of employees while performing their job duties and address appropriate behavior in dealing with potential shoplifters inside Employer's store.

11. As found, however, employees are strictly prohibited from leaving store premises to confront shoplifters or obtain license plate information. Claimant acknowledged that he received training and was required to pass quizzes relating to Employer's workplace violence policy, handling confrontational situations, and shoplifting deterrence policy during his employment. Employer specifically forbid employees from leaving the store during a shoplifting incident. In fact, Employer's SoftStop Reference Guide specifies that "no employee is allowed to leave the store premises during the apprehension of a shoplifter." Moreover, Employer's Standard Operating Procedures direct employees to "not leave the store to obtain information about the individual such as a license plate number. If the individual attempts to exit the store, allow him/her to leave as quickly as possible to help ensure the safety of everyone." An employee is simply prohibited from following an individual who is carrying stolen merchandise out the door in an attempt to obtain a license plate number. As MW[Redacted] explained, nothing in Claimant's job duties as a CSA allowed him to exit the store to pursue a shoplifter and throw objects.

12. As found, by exiting Employer's store, walking into the middle of the parking lot and throwing rocks at the shoplifter's vehicle, Claimant removed himself from the employment relationship. Employer's detailed training and instructions regarding exiting the store and obtaining a license plate number limited Claimant's sphere of employment by creating a restriction on the scope of Claimant's job. Employer's directives were specific and reflected a clear intent to limit the sphere of the employment relationship. The training and directives evidenced an intent to cease the employment relationship for a violation. Claimant's actions of exiting Employer's store on September 3, 2022 to obtain a license plate number and throw rocks at a suspected shoplifter's vehicle directly contravened Employer's directives and exceeded the realm of his job duties. By acting outside the scope of employment Claimant severed the causal relationship between his job function and injuries.

13. As found, the present case is distinguishable from *Sewald v. Safeway, Inc.*, WC 5-188-401 (ICAO, Dec. 21, 2022). In *Sewald*, the injury occurred when an employee encountered a shoplifter inside the store, reached for his shopping cart and fell when the shoplifter pulled the cart away. The ALJ in *Sewald* explained that the employer provided the claimant with training about interacting with suspected shoplifters, but the directives did not evidence an intent to cease the employment relationship for a violation. Instead,

the directives in the employer's shoplifting guidelines and training were intended to regulate the claimant's conduct while performing her duties and not to limit the scope of her employment. However, the present case is distinguishable from *Sewald* and provides a bright-line rule for defining the "sphere of employment." Critically, Employer's policies about exiting the premises after a shoplifter are designed to prohibit interaction and promote safety. Once the suspected shoplifter has left the store, employees are not encouraged to approach or interact with the shoplifter, but rather must refrain from pursuit. By the time a suspect has exited the store, deterrence has failed and employees are no longer performing their job duties by pursuing the shoplifter outside.

14. As found, as illustrated in 2 A. Larson, *Workmen's Compensation Law* § 33.02 (2013) cited in *Sewald*, there is a distinction between an employer's instruction sufficient to remove an employee's activity from the realm of employment and an instruction only directed at the "method" of carrying out a work function. Specifically, "rules and prohibitions may define the ultimate 'thing' which the Claimant is employed to do, or they may describe the methods which he may or may not employ in accomplishing that ultimate thing." Here, some of Employer's training encourages interaction in dealing with suspected shoplifters. They are designed to regulate employees' conduct while performing job duties. However, leaving the store to pursue a shoplifter and throwing rocks at a vehicle removed Claimant's activity from the realm of his employment as a CSA. Claimant's actions in pursuing a shoplifter were not encompassed within his duties to discourage or limit shoplifting inside Employer's store. Rather than prescribing the method in which Claimant was to perform his job, Employer's policies and training prohibiting the pursuit of shoplifter's outside the store limited Claimant's sphere of employment. Claimant simply acted outside the realm of his employment on September 3, 2022.

15. As found, the directives about not pursuing shoplifters outside the store reflect Employer's intent to cause the cessation of employment even on a temporary basis. By exiting Employer's store, walking into the middle of the parking lot and throwing rocks at the shoplifter's vehicle, Claimant removed himself from the employment relationship. As MW[Redacted] stated, Claimant was not acting within his job duties and violated Employer's policies by throwing objects at the shoplifter outside the store on September 3, 2022. Claimant should have stopped at the exit and let the suspect leave the store. Employer's detailed policies and training, store video, and MW's[Redacted] credible testimony demonstrate that Claimant's injuries while outside Employer's store and throwing rocks at a suspect shoplifter's vehicle occurred outside the sphere of employment. Therefore, Claimant's violation of Employer's instructions governing the sphere of employment severed the causal relationship between his employment and his injuries. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed. *See Escobedo v. Midwest Drywall Company*, W.C. No. 4-700-127 (ICAO, July 13. 2007) (where ALJ determined that the sphere of employment was limited by the employer's direction to either go home or wait for scaffolding to be repaired and claimant was told not to perform his duties, the claimant's subsequent injuries were not compensable). *Compare Sewald v. Safeway, Inc.*, WC 5-188-401 (ICAO, Dec. 21, 2022) (concluding that, because Employer's direction to employees not to grab or step in front

of a suspected shoplifter's cart was aimed at the method for stopping shoplifter activity, it did not represent an intent to cease the employment relationship); *In re Claim of Eelorriaga*, W.C. No. 5-047-389-001 (ICAO, June 19, 2018) (because the employer's directive prohibiting phone calls while driving constituted an effort to control the claimant's method of carrying out her duties and not a regulation concerning the sphere of employment, her injuries were compensable).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant did not suffer compensable injuries during the course and scope of his employment with Employer on September 3, 2022.

2. It is unnecessary to address whether Claimant was responsible for his termination from employment or committed a safety rule violation.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-213-534-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered a compensable injury at work on July 27, 2022.

2. If Claimant proved he suffered a compensable work injury, did he prove by a preponderance of the evidence that he is entitled to reasonable, necessary and related medical benefits as a result of the alleged injury on July 27, 2022?

3. If Claimant proved he suffered a compensable work injury, did he prove by a preponderance of the evidence that he is entitled to temporary total disability benefits commencing July 28, 2022 and continuing?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 55 year-old male who worked as a day laborer for Employer. Claimant began working for Employer on July 21, 2022. Employer assigned Claimant to work at [Redacted, hereinafter PW], starting July 21, 2022. PW[Redacted] is a manufacturer of tape products.

2. Claimant's supervisor at PW[Redacted] was [Redacted, hereinafter MS]. MS[Redacted] was responsible for assigning daily tasks to temporary employees, including Claimant. MS[Redacted] testified that some temporary workers were assigned to perform production duties inside the warehouse. Other workers were assigned to work outside, primarily working on tree removal for a fence project. Generally, the temporary employees working outside would cut down trees and throw the branches away.

3. Claimant was assigned to work outside on July 22, 2022. That day, he picked up logs and branches, and threw them into the dumpster.

4. On July 27, 2022, Claimant was assigned to work outside again. This day, however, Claimant and other temporary workers were directed to clear out materials in the back of the warehouse yard. Claimant testified that the yard was full of broken pallets and large rolls of plastic. He further testified that MS[Redacted] was operating a forklift outside to move the heavy broken pallets and rolls of plastic. MS[Redacted] initially testified that he did not "think" there were any large materials out back that needed removing. On cross examination, Claimant showed MS[Redacted] pictures of the property, and this refreshed MS's[Redacted] recollection. (Ex. 3). MS[Redacted] testified that he was indeed operating a forklift outside on July 27, 2022. At some point, MS[Redacted] was needed elsewhere, so he turned the operation of the forklift over to

his brother. Claimant testified that MS's[Redacted] brother was unable to separate the plastic rolls and pallets with the forklift. Claimant tried to assist by sitting on top of the materials and pushing them with his legs to try to separate them. Claimant testified that while doing this, he felt a sensation in his low back and right leg. Claimant continued to work the rest of the day. According to the daily work slips, Claimant began work at 6:00 a.m. that day, and worked 10 hours. (Ex. D).

5. MS[Redacted] testified that on July 27, 2022, Claimant approached him about speaking with "HR" because he was having issues with another employee. He also told MS[Redacted] he would not be available on July 28, 2022, but would return on July 29, 2022. This is consistent with Claimant's testimony that he told MS[Redacted] he would not be back at work until July 29, 2022. Claimant's July 27, 2022, work slip also noted Claimant needed a day sub on July 28, 2022, but he would return on July 29, 2022. (Ex. D).

6. Even though Claimant spoke with MS[Redacted] on July 27, 2022, he did not tell him that he allegedly injured his back working that day. MS[Redacted] testified that there is a procedure in place for reporting injuries. Had Claimant reported any injury to him, he would have recorded this in the comment section of the daily ticket and he would have reported the injury to his safety manager. The ALJ finds that Claimant did not report his alleged injury to MS[Redacted] on July 27, 2022.

7. There is no objective evidence in the record that Claimant contacted Employer on July 27, 2022, to report the alleged work-related injury to his back.

8. Employer's "Job Site Safety" guidelines are set forth in the Employee Handbook. The handbook states Employees are required to wear safety equipment, and to ask the supervisor if additional equipment is needed to perform the job safely. (Ex. 9). Claimant testified he was not provided any safety gear while working at PW[Redacted]. MS[Redacted] confirmed that Claimant was not provided any safety gear because safety gear was not necessary. According to the daily work slips, the only equipment that was necessary to perform the work was a pair of steel toe boots. (Ex. D). There is no objective evidence in the record that Claimant asked MS[Redacted] or anyone at PW[Redacted] for any additional safety equipment at any time while he worked there.

9. The ALJ finds MS's[Redacted] testimony credible, and finds that safety equipment was not necessary, or required, to perform the work at PW[Redacted] that Claimant was assigned to do.

10. [Redacted, hereinafter is JA] is a Machine Operator and line lead at PW[Redacted]. JA[Redacted] testified her duties included organizing workers in the morning, and operating a production machine throughout the day. JA[Redacted] testified that she was responsible for monitoring the work being performed outside, and periodically checking up on the temporary workers.

11. JA[Redacted] testified that she provided supervision and an explanation of duties to Claimant on July 27, 2022. She testified that the temporary employees were cleaning

the back area, removing branches and trees to make room for a new fence. JA[Redacted] testified that she checked on the crew periodically to see if they needed anything and that everyone was okay. JA[Redacted] also testified that Claimant did not tell her about any back pain or injury, and he did not ask her for Aspirin for his back.

12. The ALJ does not find JA's[Redacted] testimony to be credible. As found, on July 27, 2022, Claimant was moving pallets and large rolls of plastic in the back of the warehouse yard, he was not removing branches and trees that day.

13. Claimant testified that about 11:30 a.m., he spoke to "[Redacted, hereinafter AA]" and told her that his back was killing him, and asked if she had any Advil. Claimant questioned JA[Redacted] about him asking her, not AA[Redacted], for Aspirin on July 27, 2022. Although it was unclear who Claimant spoke to, the ALJ credits Claimant's testimony and finds that he asked a female employee at PW[Redacted] for Advil or Aspirin some time on July 27, 2022.

14. Claimant testified that the following day, July 28, 2022, he developed pain from his low back up to his neck with tingling in both legs and feet, and extreme urinary incontinence.

15. Claimant did not return to work at PW[Redacted]. The last day he worked there was July 27, 2022. Claimant testified that he did not like the job and it was "horrible." The ALJ finds that Claimant did not return to work at PW[Redacted] because he no longer wanted to work there.

16. Claimant did not report the alleged July 27, 2022 injury until August 17, 2022. On the "Employee's Report of Injury Form," Claimant marked "yes" to the question "[w]as the supervisor notified about injury." (Ex. C). This is contrary to both Claimant's testimony and MS's[Redacted] testimony. Claimant further wrote that his lower back was injured at 12:00 "while on top of the material I was pushing with my legs to assist forklift driver so the material wouldn't tip over." Claimant selected Concentra as his designated provider.

17. Claimant testified that between July 27, 2022 and August 17, 2022, he stayed home, and this is why it took him a while to report the injury. Claimant further testified he thought his back would improve.

18. There is no objective evidence in the record that Claimant was unable to work because of his alleged back injury.

19. A year prior, in 2021, Claimant injured his back while working out. Claimant testified he was doing squats when he injured himself. In the medical records, the injury is described as the result of Claimant using the leg press machine. The ALJ finds Claimant injured his back in 2021 while working out.

20. Claimant testified that on August 17, 2022, he saw to Ron Rasis, PA at Concentra Medical Center. According to the medical records[1], Claimant told Mr. Rasis that he was injured from repeatedly lifting tree branches and logs, and throwing debris, including large sections of a tree, over a fence. Claimant testified that he did not describe the other mechanism of injury involving the forklift and pushing materials with his legs to Mr. Rasis.

21. Concentra referred Claimant to physical therapy. Claimant completed five of the six physical therapy sessions. Claimant testified that he wanted an x-ray, but Mr. Rasis informed him it was not necessary. Claimant also wanted a cortisone shot, but Mr. Rasis did not feel this was necessary either. Claimant's last visit to Concentra was in August 2022.

22. F. Mark Paz, M.D., conducted an Independent Medical Examination (IME) of Claimant at Respondent's request on November 23, 2022. (Ex. A). As part of the IME, Dr. Paz testified that he examined Claimant, collected a direct history, and reviewed available medical records regarding this claim. Dr. Paz did not take an MRI of Claimant's back. The ALJ finds that Dr. Paz was not required to order an MRI as that was not a part of the IME.

23. Dr. Paz testified that Claimant reported low back pain, mid back pain, neck pain and lower extremity pain, all of which he related to a work incident on July 27, 2022, where Claimant was pushing a "large container" with his legs. Claimant reported developing acute pain that day. Dr. Paz testified that Claimant's description of the mechanism of injury, was inconsistent with the Concentra records and Claimant's reported symptoms. Dr. Paz credibly testified that according to the Concentra records, Claimant developed pain after moving branches and logs, but the pain did not include radicular symptoms or pain in the upper back and neck. Dr. Paz testified that Claimant asserted all the symptoms he described at the IME and documented on the pain diagram were present on the date of injury. (Ex. A) Dr. Paz testified that when Claimant first sought treatment, he only reported low back pain, which Dr. Paz concluded was myofascial. Claimant did not report radicular symptoms until August 29, 2022, well after his initial report of injury.

24. Dr. Paz reviewed the radiology reports admitted into evidence on behalf of Claimant. On June 9, 2021, Claimant had an x-ray of his lumbar spine for his low back pain. And on June 11, 2021, he had an MRI of his lumbar spine. (Ex. 1 pp 27-29). Dr. Paz testified that the imaging showed advanced age-related degenerative changes in Claimant's lumbar spine. He further testified that the imaging also showed a right-sided cyst attached to the facet of the lumbar spine that pushed against the right L5 nerve root. The MRI noted that the imaging was ordered to address low back pain and radicular symptoms.

25. Claimant testified he recovered from his gym injury in 2021 after receiving injections. Dr. Paz testified that the medical records and findings were consistent with Claimant's described mechanism of injury in 2021. He further testified that any injections

[1] Claimant's Concentra records were not offered as exhibits or admitted into evidence. The records were summarized, however, by F. Mark Paz, M.D.

Claimant received were palliative, so the objective degenerative changes of his spine would not go away following injections, but would continue to advance with age.

26. Dr. Paz testified that there are no objective findings in the Concentra records to support Claimant's claim of an acute low back injury at work. He testified that Claimant's symptoms, particularly in the upper back and neck, were not consistent with the mechanism of injury Claimant reported. Dr. Paz further testified it is not medically probable that Claimant experienced an aggravation or acceleration of his low back symptoms from his 2021 non-work injury because Claimant did not report the same radicular symptoms at the outset of his treatment. Dr. Paz credibly testified that the 2021 MRI describes the source of Claimant's ongoing radicular symptoms as the natural progression of his degenerative condition, not the result of Claimant's work at PW[Redacted]. Dr. Paz concluded that Claimant likely had myofascial pain, which does not involve the lumbar spine. The ALJ finds Dr. Paz's opinion to be credible and persuasive.

27. The ALJ credits Claimant's testimony that on July 27, 2022, he was working outside, clearing large pallets and rolls of plastic, and at one point he pushed a heavy object with his legs to try to move it. There is no objective evidence in the record, however, to prove Claimant suffered an injury within the course and scope of his employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936);

Bodensieck v. Indus. Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. § 8-41-301(1)(b), C.R.S. (2006); *see Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of, or natural progression of, a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dep't Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question

of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *Boulder*, 706 P.2d at 786; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant's description of his alleged injury was inconsistent. Claimant testified that he injured his back on July 27, 2022 while pushing heavy materials with his legs. But when Claimant went to Concentra on August 17, 2022, he reported that he injured his back by moving branches and logs. This is contrary to Claimant's testimony, and the description of mechanism of injury Claimant provided to Dr. Paz. Claimant also failed to report any alleged injury to his supervisor, MS[Redacted], even though he spoke with MS[Redacted] on July 27, 2022 to discuss an "HR" issue and to tell him he would not be at work on July 28, 2022. Yet, when Claimant reported his injury on August 17, 2022, he asserted that he told his supervisor about his injury. Claimant's description of his alleged injury is inconsistent, and not credible.

Furthermore, Claimant presented no objective evidence from either the Authorized Treating Provider, or his own personal physician to demonstrate he suffered a work-related incident that caused an injury within the course and scope of his employment. Claimant provided radiology reports from 2021 of his lumbar spine. (Ex. 1 pp 27-29). As found, these radiology reports demonstrate that Claimant has a pre-existing degenerative condition. Dr. Paz credibly testified that the imaging showed advanced age-related degenerative changes in Claimant's lumbar spine. He further testified that the imaging also showed a right-sided cyst attached to the facet of Claimant's lumbar spine that pushed against the right L5 nerve root. According to the MRI, the imaging was ordered to address low back pain and radicular symptoms. Dr. Paz testified that the 2021 MRI indicates that Claimant's radicular symptoms are due to a pre-existing condition. Dr. Paz credibly testified that Claimant's pre-existing condition was not aggravated or accelerated by any work incident, because had it been, the radicular symptoms would have been present immediately on July 27, 2022, which they were not. When Claimant reported his alleged injury on August 17, 2022, he only reported lower back pain, not radicular symptoms. As found, Dr. Paz's testimony is credible and persuasive. Based on the totality of the evidence, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable injury.

Medical Treatment

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. V. Nofio*, 886 P.2d 714, 716 (Colo. 1994). The question of whether the need for treatment is causally-related to an industrial injury is one of fact. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). Claimant is seeking an MRI of his back and cortisone shots. As found, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable industrial injury, so Respondents are not liable for any medical treatment.

Temporary Total Disability Benefits

Claimant has the burden of proving entitlement to temporary total disability benefits in the first place. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). Temporary total disability benefits are payable if Claimant proves a causal connection between his industrial injury and the temporary loss of wages. As found, Claimant did not suffer a compensable injury, so he is not entitled to temporary total disability benefits.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable work injury.

2. Claimant's request for medical benefits is denied and dismissed.

3. Claimant's request for temporary total disability benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 8, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on November 1, 2022 on issues that included medical benefits that are authorized and reasonably necessary, and penalties as follows:

> Medical benefits ordered by Administrative Law Judge Nemechek March 3, 2022, and July 6, 2022. Failure to pay Claimant and medical providers pursuant to 7/6/2022 ICAO Order, attached, and failure to make any meaningful attempt to arrange payment. $1000 per day since 8/26/2022. Section 8-43-401 (2)(a), CRS Respondents owe 8% of the amount of wrongfully withheld benefits. Respondents have unilaterally changed PTD benefits payment scheduled without Division or Claimant approval. Respondents owe 8% interest on all late direct deposit payments. Section 8-43-401 (2)(a).

Respondent filed a Response to November 1, 2022 Application for Hearing on December 1, 2022 listing as issues reasonably necessary, authorized and related medical benefits. Respondent also listed an affirmative defense to Claimant's alleged penalties as follows:

> C.R.S § 8-43-304(4) in Claimant has not stated with specificity the grounds on which the penalty is being asserted, therefore, pursuant to C.R.S. § 8-43-304(4), Respondents reserve the right to cure any alleged violation, if any, within 20 days of Claimant specifying the violation; statute of limitations

Respondent also listed under other issues:

> Relatedness; pre-existing injury and/or condition; idiopathic injury and/or condition; Respondents deny any change of authorized treating physician; Respondents deny that the PTD benefits payment schedule has been changed, payments are issued biweekly and have been so issued since September 22, 2020, as such the one-year statute of limitation has run on penalties pursuant to C.R.S. § 8-43-304(5); Respondents properly denied medical treatment consistent with Rule 16; Credits; Offsets; Overpayments; Upon further investigation and discovery of this matter, Respondents may agree to withdraw or add affirmative defenses.

Claimant's exhibits 1 through 8 were admitted into evidence. Also admitted over Respondent's objection were Claimant's Exhibit 9, Exhibit 10 bates 0001-0003 and 0006 (for purposes of a timeline and date documents were exchanged not for the truth of the matter asserted in the body of the email), Claimant's Exhibits 12 through 15, 17 and 18. This ALJ will take judicial notice of Exhibit 16 as part of the Act. Respondent's exhibits A through C and E were admitted into evidence.

On March 30, 2023[1] this ALJ issued an Order noting that the issues for hearing were to be bifurcated and that this ALJ would issue a separate Findings of Fact, Conclusions of Law and Order regarding the issue of authorization of medical benefits in this matter. The parties were granted through April 6, 2023 to provide briefs, post-hearing position statements or proposed orders with regard to the bifurcated authorization of medical benefits issue.

On April 13, 2023 this ALJ issued a Summary Order on the bifurcated issue of authorization of medical benefits determining that selection of authorized provider had passed to Claimant and Claimant selected Dr. Ryan Bozzell. The order was served to the parties on the same day. The Order specified that the parties were required to submit a request for a full order within ten working days of the date of service. Neither party requested a full order pursuant to Section 8-43-215 (1), C.R.S., so the Order issued on April 13, 2023 is final. Claimant's authorized treating provider (ATP) in this matter is now Dr. Bozzell, and any providers within the chain of referral he refers Claimant to are authorized with regard to Claimant's orthopedic, pulmonary and urological problems related to this claim.

STIPULATIONS OF THE PARTIES

At the time of the hearing on March 29, 2023 Claimant withdrew the penalty with regard to late indemnity benefits. This is considered a stipulation of the parties. Therefore both parties agreed to withdraw exhibits related to this issue, Claimant's Exhibit 11 and Respondent's Exhibit D.

Further, Claimant offered to stipulate to the admission of Respondent's Exhibit E, which would not normally be admitted under the Act automatically or without laying a foundation and would be considered hearsay, with the following conditions:

A. That the exhibit be utilized only as a per unit or per line example of fair costs of the items Claimant itemized in Exhibit No. 17, not to represent the total owed to Claimant and only be utilized to calculate the expenses Claimant has had in the past, not for future costs.

B. That Claimant be allowed to testify about her usage of the items enumerated in Claimant's Exhibit 17, including how much she is currently using the items listed and how much she used them in the past as well as how she will be using them in the future.

C. That Claimant will, from the March 29, 2023 hearing forward, obtain receipts of all supplies purchased and submit them to Respondent for payment.

D. That the bills paid by BC[Redacted] be paid in full by virtue of Sec. 8-42-101(6)(a) & (b), C.R.S.

E. That Respondent provide the items listed that Claimant requires and are reasonably necessary or accept the receipt of the costs from Claimant in the

[1] The order was mistakenly dated December 30, 2023 instead of March 30, 2023.

future, reimbursing Claimant the full value of what Claimant has paid out of pocket pursuant to Sec. 8-42-101(6)(b).

This ALJ accepted that Exhibit E is not a document that would normally be admitted into evidence, without the laying of foundation, and notes that Claimant's conditions are reasonable. Respondent neither acquiesced nor provided sufficient arguments supporting an objection to the stipulation.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that Respondent failed to comply with ALJ Nemechek's March 2, 2023 Findings of Fact, Conclusions of Law and Order following closure of the appeal process by July 27, 2022.

II. If Respondent failed to comply with the Order, what are the reasonably necessary and related maintenance medical benefits that Claimant or any insurers owed?

III. If Respondent failed to comply with the Order, whether Claimant proved by a preponderance of the evidence that she is owed eight percent (8%) interest on all benefits past due and owing pursuant to Sec. 8-43-401, C.R.S.

IV. If Respondent failed to comply with ALJ Nemechek's March 2, 2022 Order to pay Claimant and medical providers within a reasonable time, whether Claimant proved by a preponderance of the evidence if a penalty is owed pursuant to Sec. 8-43-304 and 8-43-305, C.R.S. and the appropriate penalty, considering the *Demi* test.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. This matter is an adjudicated permanent total disability claim where Claimant was injured in the course and scope of her employment with Employer on July 23, 2015.[2] Claimant was working as an assistant produce manager for Respondent-Employer when she was injured while pulling a pallet of heavy bags of potatoes. The pallet began moving very fast and Claimant was thrown into a set of double doors. Claimant then fell on her back and left hip. Claimant initially received conservative medical treatment care, including physical therapy, injections, and medications. However, she continued to experience pain and urinary incontinence, which worsened over time.

2. Claimant is currently 58 years old and has trouble with mobility, function, and urinary incontinence, in addition to low back pain, left lower extremity radicular problems, breathing problems and chronic pain.

[2] Claimant testified that she had been injured on July 24, 2015 but all three of the prior orders issued by other ALJs as well as pleadings submitted all cite to July 23, 2015 as the date of the injury.

3. ALJ Kimberly Turnbow issued Findings of Fact, Conclusions of Law and Order on June 26, 2017 ordering further neurosurgical evaluation with Scott P. Falci, M.D. Claimant underwent surgery for her low back in 2017 under Dr. Falci. During the surgery her lungs collapsed. Subsequent to the surgery, Claimant developed problems breathing as a consequence of the lung collapse. Claimant also had urinary incontinence as a consequence of her low back injury. ALJ Turnbow specifically found that

> The ALJ is concerned about the possibility of continuing progressive worsening of the urinary incontinence and left leg weakness conditions, and possible right leg weakness and even bowel incontinence as described by Dr. Falci. This ALJ finds and concludes that all reasonable conservative treatment and diagnostics have been exhausted, and is that Claimant's conditions are significant and require urgent care. The ALJ notes that Claimant's description of her urinary incontinence was credible and compelling.

4. ALJ Turnbow ordered that:

> Respondents shall pay for a repeat neurosurgical consultation with Dr. Falci and, if he offers a spinal untethering surgery, Respondents shall pay for all reasonable and related pre-operative, operative, and postoperative expenses, according to the Colorado Fee Schedule, that are related to such surgery.

5. Following ALJ Turnbow's decision, Claimant did, in fact, follow up with Dr. Falci and he performed the untethering surgery. She stated that the low back surgery, while it did not solve all her problems with her lumbar spine or her urinary incontinence, and added additional pulmonary issues, the surgery helped her to stand up straight, when she had been bent over due to the pain for a long time. She explained that the surgery was necessary to stop the progression of nerve damage in the spine, going into her lower extremities and bladder problems.

6. On June 11, 2020 ALJ Glen B. Goldman issued Findings of Fact, Conclusions of Law and Order awarding permanent total disability benefits, and stated that "Respondents shall provide Claimant maintenance medical benefits for her back injury and urinary incontinence." ALJ Goldman noted that Claimant required the following supplies:

. Incontinence pads, extra heavy, two bags per week, since August 2015.
· Periodic visits with Dr. Paulsen who has assumed direct care.
· Wipes, which she has bought herself.
· Urinary pads for the bed, which she has bought on her own.
· Self-Catheterization supplies.
· Oxygen and oxygen supplies.
· Cane which she bought.
· Grabber which she has bought.
· Large ball, small ball, one and 3-pound weights, balancing pad, recumbent bike recommended by her physical therapist.

7. ALJ Goldman noted that "[D]uring her testimony, Claimant asked for a bathroom break, cried several times, and changed chairs because of discomfort." This ALJ noted similar behavior during her March 29, 2023 hearing, as Claimant was uncomfortable, would frequently shift, tear up during testimony and discussion of her claim, and required breaks.

8. In addition to making a finding that Claimant was permanently and totally disabled, ALJ Goldman found that:

> 58. Claimant's urinary incontinence and need for medical treatment for such condition was caused by her work injury when she suffered a contusion to her sacral nerve.
>
> 59. Claimant requires maintenance medical treatment to relieve her from the effects of her work injury and to maintain MMI.
>
> 60. Claimant requires maintenance medical treatment for her back injury and urinary incontinence.

9. On August 25, 2020, Respondent filed a Final Admission of Liability ("FAL") in which it admitted for reasonable necessary and related medical benefits for Claimant's back injury and urinary incontinence pursuant to ALJ Goldman's Order.

10. ALJ Timothy L. Nemechek issued a Summary Order on November 26, 2021 ordering as follows:

> 1. Claimant established by a preponderance of the evidence that she is entitled to maintenance medical benefits under the Colorado Workers' Compensation Act.
>
> 2. Respondents shall provide medical benefits to Claimant required to treat the effects of her work injury and to maintain MMI, pursuant to the Colorado Workers' Compensation Medical Fee schedule. Specifically, Respondent shall pay for the following:
>
> - All medical supplies related to Claimant's urinary incontinence (including catheters, small and large wipes).
> - Oxygen concentrator (reimbursement for expenses previously incurred).
> - CPAP machine and supplies (including cannula, tubing mask/headgear).
> - The walking cane, 4-wheel walker, wheelchair.
> - Exercise equipment (large and small exercise balls, 1 and 3 pound weights, treadmill, exercise bands, balancing pad, and recumbent bike), [reimbursement for expenses previously incurred].
>
> 3. Claimant's request for a one-year gym membership is denied and dismissed.[3]

11. These findings were supported by a letter issued by Dr. Paulsen dated August 26, 2020 which noted that Claimant would require the following items and that Respondent had denied liability for the medical supplies by letter dated October 6, 2020:

> I. Urinary Incontinence Supplies:
> 1. Urinary pads – 2 bags/week
> 2. Wipes – 10 bags/year
> 3. Cloth urinary pads for bed – 8 pads/year

[3] This was denied because Claimant was no longer in the Granby, Colorado area and had moved to New Mexico.

II. Mobility Items:

4. Cane
5. 4 wheel walker
6. Wheelchair
7. Grabber

III. Exercise equipment including:

8. Large exercise ball
9. Small exercise ball
10. One and three pound weights
11. Treadmill
12. Exercise bands
13. Balancing pad
14. Recumbent bike
15. Suction handrails for bathroom
16. Pool therapy access
17. Annual pass to Durango Rec. Center

12. ALJ Nemechek noted that "Counsel for Respondent stipulated to pay for the co-pays of (sic.) incurred by Claimant for urinary incontinence pads totaling $360.00. This Stipulation was accepted by the Court and is made part of this Order." However, Claimant stated that none of the items she listed on the request for reimbursement were part of any reimbursement. Claimant stated that did not receive the $360.00. Further, in examining the medical benefits payment log, no check was issued to Claimant following the date the stipulation was made on November 10, 2020 to the last payment to medical providers on February 28, 2022.

13. ALJ Nemechek specified Dr. Paulsen's testimony that Claimant required supplies for urinary incontinence, assistive devices for mobility and oxygen supplies was persuasive. Further, ALJ Nemechek found Claimant's testimony, that she requires the supplies, persuasive.

14. The hearings before ALJ Nemechek, took place on November 10, 2020. At that time Claimant testified that she had moved to New Mexico. The move was specifically noted in both the Summary Order and the Findings of Fact, Conclusions of Law and Order that was issued by ALJ Nemechek on March 2, 2022. This Order was consistent with his prior Summary Order in listing Respondent's same responsibilities to pay.

15. The process for the hearing before ALJ Nemechek likely started no later than August 2020, as a hearing is generally set between 80 to 100 days. Claimant stated that she had been waiting before this to receive payments without response. She stated that she had been excited to receive ALJ Nemechek's order with the hope that she would get the care and equipment she needed but after the order was issued nothing happened. She felt disappointed and disheartened when nothing happened. She felt emotionally drained by the process and was depressed, though she had good days and bad days. The same was true of her physical abilities, that she has good and bad days. She has had to take money out of her limited grocery budget to get needed supplies that are indispensable, like pads and wipes. Claimant was noted to breakdown on multiple

occasions, and explaining what happened with her hopes of getting some resolution for medical care and reimbursement for items that she required was one of those occasions.

16. Respondent appealed the decision of ALJ Nemechek and a Final Order was issued by the Industrial Claim Appeals Office (ICAO) on July 6, 2022 affirming ALJ Nemechek's decision of March 2, 2022. ICAO noted that Respondent had 21 days to file a Notice of Appeal to the Colorado Court of Appeals. Pursuant to Sec. 8-43-301(10), C.R.S., after July 27, 2022, the right to appeal was closed and the order was final.

17. The Application for Hearing dated November 1, 2022 before this ALJ listed Claimant's address in Farmington, New Mexico and was sent to Respondent's. In Respondent's Response to Application for hearing dated December 1, 2022, Respondent listed Claimant's address in Farmington, New Mexico.

18. At the current hearing Claimant stated that she moved from Granby, Colorado to Farmington, New Mexico, a little over two and one half years ago. She lived in Granby for approximately eight to nine years, where she had worked for Employer. She testified that she was planning to live in Farmington for the foreseeable future. She moved because most of her family lived in New Mexico and she wanted to live at a lower elevation. She explained that she had been using the oxygen machine almost all the time when she lived in Granby and the lower elevation helped her breath easier.

19. But while in Colorado Claimant suffered from pulmonary issues following her 2017 surgery requiring her to use both a CPA machine and an oxygen machine from that time until she moved to New Mexico. She currently continues using her CPA machine nightly but not her oxygen machine as the lower altitude has help significantly. She does, however, continue to keep track of what her oxygen levels are, in case she has to start using the oxygen machine again.

20. After Claimant moved, starting in approximately May 2021, after she last saw Dr. Paulson, she was no longer able to continue with her Colorado treating provider, because Dr. Paulson declined to do telemedicine, especially to prescribe medications long distance or have Claimant travel from New Mexico to Colorado simply to see her treater. Claimant stated that she required a physician that could make the appropriate referrals, including to an orthopedic specialist, an urologist as well as a pulmonologist, to continue appropriate maintenance care.

21. Claimant has been seeing her personal treating provider, Dr. Ryan Bozzell, a family doctor, in Farmington, New Mexico for her conditions, including for her low back and bladder incontinence problems but because he was not designated by Respondent as an authorized medical provider for the workers' compensation claim, Claimant had only seen him in a limited capacity for this claim. Claimant has other conditions which Dr. Bozzell has also addressed, including her rheumatoid arthritis and her ankylosing spondylitis. She has been on Medicare and Medicaid since approximately July 2020, when she moved to New Mexico. Dr. Bozzell is approximately ten minutes from where she has lived for over two years. She has been seeing him for approximately one year. He has been paid by Medicaid and Medicare.

22. This ALJ issued a Summary Order on April 13, 2023 that determined the selection of authorized provider had passed to Claimant and Claimant selected Dr. Ryan

Bozzell. Dr. Bozzell is now Claimant's authorized treating physician as the period to appeal that order has expired making the order final.

23. Since Claimant's July 23, 2015 work related injury to the present, Claimant has had bladder problems and incontinence. This was determined related by ALJ Turbow in her June 26, 2017 order. She specifically stated that "ALJ finds credible and persuasive Dr. Falci's theory that a stretched spinal cord suffered in her fall at work in conjunction with Claimant's low-lying conus explains why Claimant suffers from urinary incontinence and left leg weakness." Claimant has been using pads, cloth wipes, bed pads, cleansing wipes and antibacterial hand wash since that time or shortly thereafter. Further, following the surgery of 2017, claimant had to use catheters and urine bags for approximately 10 months. As found these are all reasonably necessary as previously found by ALJ Nemechek. Respondent is liable for these medical benefits and costs that are reasonably necessary and related to the claim. Claimant's estimate of usage and length of time of use is credible and are laid out below.

24. This ALJ found the price on the receipt Claimant submitted from Walmart as the actual cost Claimant incurred for maximum absorbency pads, which is what Claimant actually uses. (See ALJ Goldman Order of June 2020 listing "[I]ncontinence pads, extra heavy, two bags per week," and Dr. Paulson's letter of August 26, 2020 cited in ALJ Nemechek's Order.) This ALJ also determines that the antibacterial soap was critical to avoid infections and to remain sanitary in light of Claimant having to deal with dirty pads, wipes and accidents caused by the incontinence, including changing wet bedding and clothing. While Claimant may have used this product before her surgery in 2017, she credibly testified that she started using it regularly after her 2015 accident.

25. Claimant purchased a cane for walking, which cost her approximately $20.00, but has since purchased two others. She also bought a four wheel walker from a garage sale for approximately $25.00. Both of these items are shown in the pictures within Claimant's Exhibits. Claimant did not obtain receipts for these items and the costs were approximated. Claimant stated she required the use of these items to allow her to be as functional as possible. Claimant stated that she uses the cane in her home, and the walker when she leaves the house. Her left leg frequently gives out and is notstable so she needs the wheel chair to prevent any further falls. Both the cane and the four wheel walker (not the aluminum two wheel one listed by [Redacted, hereinafter OM) were determined to be reasonably necessary medical benefits related to Claimants injury by ALJ Nemechek. As found, the canes and the walker should be reimbursed to Claimant.

26. It has become more and more difficult for Claimant to get around and she requires a wheel chair that has the outer large wheels so she can operate the chair herself and not have to rely on others to push her around in the chair. When there is a family outing that requires too much walking, she cannot participate because of her inability to be on her feet for long. She showed a picture of the kind of wheel chair she required

(Empower lightweight wheelchair)[4] that was priced at $319.98. As found, this chair is reasonably necessary and related to the July 23, 2015 work injury.[5]
