OFFICE OF ADMINISTRATIVE COURTS STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-130-043-005

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that recommended medical treatment is reasonable and necessary to maintain the claimant at maximum medical improvement (MMI). The specific medical treatment at issue includes:

   a. a referral from Dr. Craig Stagg for a neurosurgical consultation;

   b. a referral from NP Sara Winsor for a consultation with physiatrist Dr. Bain;

   c. a referral from NP Winsor for magnetic resonance imaging (MRI) of the claimant's lumbar spine; and

   d. a referral from NP Winsor for lumbar spine transforaminal epidural steroid injections {TFESIs).

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to reimbursement of costs pursuant to Section 8-42-101(5), C.R.S.

3. Whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to additional mileage reimbursement from the respondents.

FINDINGS OF FACT

1. On February 1, 2020, the claimant was injured while working for the employer. Specifically, the claimant's left foot and ankle were crushed between two pieces of steel. The respondents have admitted liability for the February 1, 2020 work injury.

2. Immediately following the injury the claimant underwent surgery to his left foot and ankle. Initially, the claimant's authorized treating provider (ATP) was Dr. Robert McLaughlin. The claimant has also seen Dr. Craig Stagg as his ATP.

3. On April 7, 2021, the claimant attended an independent medical examination (IME) Dr. Katherine Mccranie. In connection with the IME, Dr. Mccranie reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In her IME report, Dr. Mccranie opined that the

claimant suffered a left lower extremity crush injury resulting in the need for surgical intervention. Dr. Mccranie also listed a diagnosis of left lower extremity peroneal neuropathy. These diagnoses were identified as being related to the claimant's work injury. Dr. Mccranie further opined that the claimant did not suffer a lumbar spine injury as a result of the February 1, 2020 incident. With regard to maximum medical improvement (MMI), Dr. Mccranie opined that the claimant would be placed at MMI at his next appointment with Dr. McLaughlin. Dr. Mccranie assessed a permanent impairment rating of 15 percent for the claimant's left lower extremity. She did not assess any other permanent impairment.

4. On May 3, 2021, Dr. McLaughlin placed the claimant at MMI. In addition, Dr. Mclauglin assessed permanent impairment of 17 percent for the claimant's left lower extremity, and 15 percent for the claimant's lumbar spine. With regard to maintenance medical treatment, Dr. McLaughlin recommended chiropractic treatment (12 visits); physical therapy (12 visits); use of a TENS unit; and topical creams.

5. On September 2, 2021, the respondents filed a Final Admission of Liability (FAL) reflecting Dr. McLaughlin's May 3, 2021 report.

6. After reviewing additional medical records, on February 14, 2022, Dr. Mccranie authored a second report. Dr. Mccranie was asked to state an opinion regarding recommendations for the claimant to undergo a neurologic consultation and medical massage. With regard to both modes of treatment, Dr. Mccranie opined that the treatment was neither reasonable nor necessary. With regard to her recommendations for maintenance medical treatment, Dr. Mccranie stated: 12 visits of physical therapy over 12 to 18 months; 12 chiropractic visits over 12 to 18 months; a TENS unit; one to three follow-ups with specialists Dr. Matsumura and/or Dr. Githens. Dr. Mccranie reiterated her opinion that the claimant did not suffer an injury to his lumbar spine. Therefore an lumbar ESI would not be related to the work injury.

7. Additional maintenance medical treatment has been recommended for the claimant. specifically, Dr. Craig Stagg has recommended a neurosurgical consultation. In addition, NP Sara Winsor had recommended the claimant see physiatrist Dr. Bain; undergo a lumbar spine MRI; and receive lumbar spine transforaminal epidural steroid injections (TFESIs). These modes of treatment have each been denied by the respondents.

8. After reviewing additional medical records, on June 15, 2022, Dr. Mccranie authored a third report. Dr. Mccranie was specifically asked to address whether the recommendations of NP Winsor for a consultation with Dr. Bain; a lumbar spine MRI; and lumbar spine TFESIs. Dr. McCranie was also asked to opine regarding the reasonableness and relatedness of Dr. Stagg's recommendations for a neurosurgery evaluation and injections. With regard to these recommended treatments, Dr. Mccranie opined that the treatment was neither reasonable nor necessary.

9. Dr. McCranie's deposition testimony was consistent with her written reports. Dr. Mccranie testified that it continues to be her opinion that the claimant's lumbar spine issues are not related to his work injury. In support of this opinion, Dr. Mccranie noted that when Dr. McLaughlin placed the claimant at MMI "he could not say with certainty whether or not the disc herniation was due to [the claimant's] work injury". Dr. Mccranie specifically testified that a consultation with a neurosurgeon would not be related to the claimant's work injury. Dr. Mccranie testified that the claimant's lumbar spine was a new body part unrelated to the injury. Dr. Mccranie also testified that the claimant does not need to undergo treatment with a physical medicine and rehabilitation specialist. Likewise, the recommended lumbar spine MRI is not related to the work injury. Dr. Mccranie further testified that the claimant does not require lifetime medical maintenance treatment. She explained that the claimant's work injury was to his ankle, and those injuries have stabilized. It is Dr. McCranie's opinion that an altered gait would not cause a lumbar disc protrusion.

10. Dr. Mccranie testified that with regard to maintenance medical treatment, claimants generally stabilize within six months to a year after MMI. Therefore, it is Dr. McCranie's recommendation that the claimant have maintenance treatment of a total of 12 physical therapy visits over 18 months; 12 chiropractic visits total over 12 months; a TENS unit for 18 months; and one to three visits total with a physical medicine doctor, with no further follow ups beyond 18 months.

11. With regard to the recommended neurosurgical consultation, Dr. Mccranie explained such a consultation is not related to the work injury because his lumbar disc herniation is not related to the February 1, 2022 work injury. Dr. Mccranie also testified that the treatment with a neurologist would be duplicative. Dr. Dean evaluated the claimant and performed electrodiagnostic testing. It is Dr. McCranie's opinion that there is no reason for it to occur again.

12. Dr. Mccranie explained the referral for the lumbar spine injection would not be indicated as she explained that the lumbar disc herniation was not related to the accident. Dr. Mccranie elaborated that the claimant's EMG testing ruled out lumbar radiculopathy and the MRI demonstrated degenerative disc disease consistent with his age. Dr. Mccranie explained that while an altered gait may cause some temporary discomfort in the sacroiliac region, the claimant's mechanism of injury would not cause a disc protrusion with radiculopathy. Therefore, lumbar ESIs would not be related to the claimant's work injury.

13. The ALJ credits the medical records and the opinions of Dr. Mccranie regarding the recommended maintenance medical treatment. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended maintenance medical treatment (including a neurosurgical consultation; consultation with physiatrist Dr. Bain; a lumbar spine MRI; and lumbar spine TFESIs) is reasonable and necessary to maintain the claimant at MMI.

14. The claimant requests reimbursement of costs related to the medical treatment at issue at this time, pursuant to Section 8-42-101(5) C.R.S. The amount requested is $384.82.

15. On June 17, 2022, the claimant submitted a request for mileage to the respondents. This request was for a total of $582.08 for 1,144 miles. This mileage was for dates from September 27, 2021 through January 12, 20221. On June 23, 2022, the insurer issued a payment to the claimant in the amount of $152.00 for mileage. The respondents agree that they did not provide the claimant with written notification that mileage requests must be submitted within 120 days of the date of service.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

[1] The request was for mileage rates of $0.52 per mile for 2021, and $0.50 per mile for 2022.

5. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the recommended maintenance medical treatment (including a neurosurgical consultation; consultation with physiatrist Dr. Bain; a lumbar spine **MRI;** and lumbar spine TFESIs) is reasonable and necessary to maintain the claimant at **MMI. As** found, the medical records and the opinions of Dr. Mccranie are credible and persuasive.

7. The claimant has requested costs related to the current Application for Hearing. Section 8-42-101(5), C.R.S. provides:

> If any party files an application for hearing on whether the claimant is entitled to medical maintenance benefits recommended by an authorized treating physician that are unpaid and contested, and any requested medical maintenance benefit is admitted fewer than twenty days before the hearing or ordered after application for hearing is filed, the court shall award the claimant all reasonable costs incurred in pursuing the medical benefit. Such costs do not include attorney fees.

8. **As** the ALJ has not ordered any of the requested medical treatment, Section 8-42-101(5), C.R.S. is not applicable at this time. The claimant's request for costs is denied and dismissed.

9. On September 7, 2021, Section 8-42-101(7) C.R.S.[2] became effective. That section states, in pertinent part:

> A claimant must submit a request for mileage expense reimbursement for travel reasonably necessary and related to obtaining compensable treatment, supplies, or services specified in subsection (1)(a} of this section to the employer or, if insured, to the employer's insurer no later than one hundred twenty days after the date the expense is incurred,

[2] This section was further amended effective August 10, 2022 to include language regarding advance mileage. As the claimant's request in this matter was made on June 17, 2022, the ALJ does not address that version of the statute.

unless good cause for a later submission is shown. Good cause includes a failure by the employer or employer's insurer to provide the notice in the brochure required by section 8-43-203 (3)(c)(IV).

10. WCRP 16-8-2(8) provides similar language, specifically: "Injured workers shall submit requests for mileage reimbursement within 120 days of the date of service or reimbursement may be denied unless good cause exists."

11. The claimant has demonstrated that he is entitled to the full amount of mileage reimbursement requested ($582.08). Here, the respondents have admitted their failure of notifying the claimant of the 120 day requirement. Section 8-42-101(7) C.R.S. specifically identifies this failure to act as good cause for a late request for mileage reimbursement. Therefore, the claimant is entitled to the balance of the mileage reimbursement requested of $370.08.

ORDER

It is therefore ordered:

1. The claimant's requests for maintenance medical treatment of a neurosurgical consultation; consultation with physiatrist Dr. Bain; a lumbar spine MRI; and lumbar spine TFESIs; is denied and dismissed.

2. The respondents shall pay the claimant mileage reimbursement of $370.08.

3. The claimant's request for costs is denied and dismissed.

4. All matters not determined here are reserved for future determination.

Dated January 3, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor,

Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the

ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-210-260-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that the surgical procedure requested by Dr. Rumley, including a three-level fusion, is reasonable and necessary?

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed by Employer, when he was injured in the course and scope of his employment on June 29, 2022. *Hrg. Trans. pg. 11 lns. 16-22*.
2. While lifting objects from low shelves, Claimant felt immediate pain in his lower back. Over time, Claimant began experiencing numbness and shooting pains in his lower extremities, as well as bouts of incontinence. Claimant also began experiencing weakness in his left leg, drop foot, and needing assistive devices to walk. *Hrg. Trans. pg. 12 lns. 1-25, pg. 13 lns. 1-5*.
3. At the time of hearing, Claimant's body mass index (BMI) was 39 and he had been continuing to lose weight since his injury. *See Hrg. Trans. pg. 13 lns. 6-17*.
4. Having failed all prior conservative treatment measures, Dr. Jacob Rumley, Claimant's authorized treating orthopedic specialist, has recommended a transforaminal lumbar interbody fusion (TLIF) procedure for L2-L5. *See Ex. 5, Bates 34.*
5. Claimant has discussed the pros/cons, and risks/potential benefits of the proposed TLIF procedure. Having engaged in thorough shared decision making with Dr. Rumley, Claimant has accepted the surgical risks and wishes to proceed with Dr. Rumley TLIF surgical recommendation. *See Hrg. Trans. pg. 14 lns. 1-10*.
6. Dr. Rumley is a fellow in the American Academy of Orthopedic Surgeons, is a member of the North American Spine Society and AO Spine, and he is board-certified in orthopedic surgery. His training includes a spine fellowship at Augusta University which was a level 1 trauma and deformity center. Moreover, he currently trains fellows in spine surgery and therefore maintains an academic role. Dr. Rumley is also level II accredited. *See Rumley Depo. pgs. 7-8.*
7. Dr. Rumley explained that a patient's signs are objective findings that support a patient's reported subjective symptoms. *See Rumley Depo. pg. 9 lns. 14-20*.
8. Claimant suffers from claudication-type symptoms. "Claudication is progressive symptoms with inactivity either being ambulation or upright posture." Typical examples include increased leg pain, leg symptoms, and urinary incontinence. *Rumley Depo. pg. 10 lns. 10-21*.

9. Claimant underwent a lumbar MRI on July 14, 2022. The findings show that Claimant had significant stenosis of his foramen, lateral recess, and central canal. There was also significant lumbar disc degeneration. *Rumley Depo. pg. 11 lns. 1-10; Rspndt. Ex. H, Bates 51.*

10. Claimant also underwent an EMG nerve conduction study and it revealed that Claimant was experiencing radiculopathy as a result of nerve compression at multiple levels of his lower back.

11. The TLIF procedure recommended by Dr. Rumley includes decompression of Claimant's nerves by way of a laminectomy. A laminectomy is the removal of bone from the lumbar spine, which results in the foramen being opened and relieving the nerve compression. *See Rumley Depo. pg. 12 lns. 14-17*.

12. Claimant also has sagittal malalignment. This means that Claimant's spine is outside of normal alignment ranges when compared to the position of his pelvis. The positional difference is significant as a person of Claimant's young age (54), should be at or near 0 but Claimant is at a difference of 13. *See Rumley Depo. pgs. 14-16*.

13. The purpose of the recommended TLIF procedure is to decompress the nerves in Claimant's lumbar spine to allow the nerves to function properly—thereby resolving Claimant's claudication symptoms. *Rumley Depo. pg. 17 lns. 4-8, pg. 33 lns. 17-19, pg. 34 lns. 14-16*.

14. As a result of bone removal from laminectomies, instability of the lumbar spine is anticipated. The expected instability is one reason for Claimant to undergo fusion as part of the decompression procedure. *Rumley Depo. pg. 18 lns. 6-19*.

15. Dr. Brown is Respondents retained expert. While Dr. Brown is board certified, he is board certified in neurology, and not orthopedic surgery. Moreover, Dr. Brown is not fellowship trained as is Dr. Rumley. As a result, Dr. Brown's skillset might be different than Dr. Rumley's and not as innovative or advanced – since he is not fellowship trained.

16. Dr. Brown indicated that he believes Claimant may have untreated NIDDM—otherwise known as Type 2 diabetes. *Ex. A, Bates 13; Rumley Depo. pg. 19 lns. 5-10.*

17. Claimant's symptoms are more likely related to his lumbar injury then they are to polyneuropathy potentially caused by diabetes. *See Rumley Depo. pg. 19 lns. 15-17, pg. 20 lns. 1-18.*

18. At the time of hearing, Claimant's BMI was 39 and Dr. Rumley explained that it is an acceptable BMI to proceed with the recommended surgery because it is under 40. Rumley Depo. pg. 21 lns. 10-23. When a patient has a BMI of 40 or more, the risks of surgery are increased and include higher rates of infection, deep vein thrombosis, and perioperative complications. *Rumley Depo. pg. 22 lns. 1-13*.

19. Dr. Brown agrees that Claimant needs to undergo decompression surgery, but he suggests an alternative procedure using tubes to decompress three levels of the spine. *Ex. A, Bates 14*.

20. Dr. Rumley strongly disagrees with Dr. Brown that tubular decompression is the superior procedure for Claimant to undergo for several reasons. First, the TLIF

procedure is far more likely to result in a better decompression of Claimant's lumbar nerves (especially related foraminal stenosis such as Claimant's), which is the main goal of both possible surgeries. Second, Claimant has an underlying structural deformity (*i.e.*, the sagittal imbalance). The tubular decompression surgery would not address this deformity, while the TLIF procedure recommended by Dr. Rumley will. To not address the deformity in conjunction with decompression will set Claimant up for a worse long-term outcome and increase the likelihood he would need to undergo another lumbar surgery in the future because the structure will worsen over time. As a result addressing the deformity is a necessary component of the overall surgical procedure recommended by Dr. Rumley. *Rumley Depo. pgs. 23-24, pg. 34 lns. 10-22, pg. 35 lns. 16-18.*

21. Dr. Brown has indicated the tubular decompression procedure he has proposed does not guarantee that Claimant will be without lumbar instability. *Brown Depo. pg. 16 lns. 4-5.*

22. Dr. Rumley has performed tubular decompression surgeries. Dr. Rumley noted that those patients do not tend to do as well post-operatively as patients that undergo TLIF. *Rumley Depo. pg. 28 lns. 21-25, pg. 29 lns. 1-2*.

23. Dr. Rumley is routinely referred patients that have previously undergone spine surgery by others. When he sees patients that have previously undergone tubular decompression, those patients commonly have structural instability, or the decompressions were incomplete in the first place. This is yet another reason why the TLIF procedure is superior to tubular decompression. The revision surgery for those patients is TLIF and carries with it increased risks and complications as a revision surgery. *See Rumley Depo. pg. 29 lns. 3-25, pg. 30 lns. 1-2*.

24. Generally, Dr. Brown avoids operating on anyone that is morbidly obese. *See Brown Depo. pg. 11 lns. 6-8*.

25. Dr. Brown concedes that TLIF, as recommended by Dr. Rumley, "is certainly an option." *Brown Depo. pg. 12 lns. 1-2*. He also concedes that TLIF "provides a good decompression." *Id. at pg 12 lns. 7-12*.

26. In support of his recommended tubular decompression procedure, Dr. Brown referenced a publication indicating "that a decompression, a simple decompression, versus a fusion Improved back pain . . . ." *Brown Depo. pg. 17 lns. 21-24*. As noted above, however, the primary focus and need for Claimant's surgery is decompression of the nerves to address his claudication symptoms—not generalized back pain.

27. Dr. Brown also expressed concern about future adjacent level degeneration. This concern, however, was based on unverified cited statistics related to the cervical spine—not the lumbar spine. *Brown Depo. pg. 20 lns. 2-10*.

28. When asked if Dr. Rumley's recommended TLIF procedure was unreasonable, Dr. Brown said that it was aggressive and not within the *Guidelines*[1] and normal standards. *See Brown Depo. pg. 20 lns. 18-21.*

[1] Workers' Compensation Rules of Procedure, 17, Ex. 1, Low Back Pain Medical Treatment Guidelines.

29. Based on his qualifications, training, experience, and analysis set forth in his testimony, the ALJ finds Dr. Rumley's opinions to be credible and highly persuasive.

30. On the other hand, Dr. Brown was retained to perform an independent medical examination. He came to Colorado from Florida for a single examination for the sole purpose of litigation as he does routinely once per month. Dr. Brown does not treat patients in Colorado. *Brown Depo. pg. 23 lns. 19-22, pgs. 24-25, pg. 26 lns. 4-7*. Moreover, as specifically stated in his report, Dr. Brown advised Claimant that merely performing the IME does not create a physician patient relationship between Claimant and Dr. Brown. Moreover, and most importantly, Dr. Brown does not have as much training as Dr. Rumley. As found, Dr. Rumley is fellowship trained and Dr. Brown is not. Thus, the ALJ does not find Dr. Brown's opinions to be as persuasive as Dr. Rumley's.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the

motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that the surgical procedure requested by Dr. Rumley, including a three-level fusion, is reasonable and necessary?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Off.,* 53 P.3d 1192 (Colo. App. 2002).

When determining whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines (*Guidelines*) because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the *Guidelines* is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather, the ALJ may give evidence regarding compliance with the *Guidelines* such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., WC* 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). See also: Section 8-43-201(3), C.R.S.

There is no dispute that Claimant needs lumbar surgery and that such surgery is causally related to his work injury. The dispute that exists is which procedure is the most appropriate for Claimant.

Dr. Rumley, as a treating physician, has concluded that the TLIF procedure is not only the superior procedure, but it is also reasonable and necessary. When asked directly, Dr. Brown did not specifically say the TLIF procedure was unreasonable—but yet he did say that it was aggressive and not within normal standards. Thus, he believes the procedure is not reasonable.

Dr. Brown's belief that the TLIF procedure is not reasonable, is based on three primary arguments—all of which are unpersuasive.

The first is that the TLIF procedure is for three levels and the *Guidelines* indicate that no more than two levels should be done in the case of fusion surgeries.

As pointed out by Dr. Rumley, the *Guidelines* are just that—guidelines. They are not absolutes. So while the *Guidelines* do provide guidance as to when certain procedures should or should not be done, there is the ability to deviate from the *Guidelines* in appropriate circumstances and the Court finds that such circumstances exist here.

Both Dr. Rumley and Dr. Brown recognize that Claimant has objective findings by way of MRI, EMG, and diagnostic injections confirming that Claimant has claudication symptomatology stemming from three levels of his lumbar spine. While the procedure is different, even Dr. Brown's recommended tubular procedure is for three levels. Both physicians appear to agree that if three levels are symptomatic, they should all be addressed.

Dr. Rumley has convincingly shown that TLIF involving laminectomy is likely to lead to better results for decompressing Claimant's lumbar nerves and resolve his claudication symptoms which is the primary goal of both surgical recommendations. As Dr. Rumley pointed out, it does not make sense to address two levels with fusion only to leave out a third that is symptomatic to satisfy a general guideline.

Risks coincide with any type of surgery. The issue becomes whether the risks are outweighed by the benefits. Here, Dr. Rumley and Claimant have engaged in a shared decision-making process and decided that TLIF is most likely to result in the most benefit to Claimant.

Dr. Brown's second basis of recommending tubular decompression over TLIF is that Claimant does not currently have lumbar instability. Recommendation 153 of WCRP 17, Ex. 1, Sec. 8.b.iii, in the *Guidelines*, states that one of the diagnostic indications for fusion includes "surgically induced segmental instability." This means that one need not necessarily have instability to undergo fusion surgery, but such instability may be a likely result as part of another surgery—like decompression by laminectomy. Even tubular decompression as recommended by Dr. Brown may result in segmental instability which would require fusion. The fusion needed from tubular decompression would be a later, second surgery, only serving to place additional risks the chance for complications on Claimant.

Further reason exists here for Claimant to undergo TLIF involving three-level fusion and that is to address his structural deformity. Even though Claimant's work injury did not cause the deformity, it nevertheless interplays with his nerve compression and claudication. By correcting the deformity, Claimant is likely to experience far better decompression of the nerves. Moreover, correcting the deformity will greatly reduce the chances for the need of future lumbar surgery as the condition progressively deteriorates. Plus, correcting the deformity also improves the overall outcome of the surgery to treat Claimant's work injury. As a result, fixing the deformity is inextricably intertwined with treating Claimant's work injury and is therefore reasonably necessary to cure and relieve Claimant from the effects of his injury.

Finally, Dr. Brown consistently stresses that Claimant's BMI is high, and it invites increased risk for TLIF, thereby making the TLIF surgery unreasonable. Dr. Rumley convincingly explained that Claimant's BMI of 39 is within acceptable range for the TLIF procedure. It is worth noting that, as demonstrated by the medical records, Claimant's BMI was 39 as of the hearing date down from more than 42 in January 2023, when he first saw Dr. Rumley, and it was continuing to trend downward due to continued weight loss.

Morbid obesity is a relative contraindication to fusion per WCRP 17, Ex. 1, Sec. 8.b.ii. But it is not an absolute contraindication. The difference is that relative

contraindication only means that caution should be used when doing fusion procedure and the procedure is acceptable if the benefits outweigh the risk.

Table 52 of WCRP 17, Ex. 1, Sec. 8.b (Surgical Interventions) of the *Guidelines* indicates that there is good evidence to suggest functional improvement from most back surgery is similar between patients with BMI under 25 and those with a BMI between 25 and 35. As discussed, Claimant's last known BMI was 39, but it was declining due to continued weight loss. This means that Dr. Brown's concerns lessen regarding Claimant's BMI with each pound Claimant loses before surgery and the closer he gets to a BMI of 35.

Dr. Rumley explained that a BMI of 40 or more would remove Claimant as a surgical candidate until the BMI is again below 40. This is based on studies that indicate risks and complications are far less when the patient's BMI is under 40. The *Guidelines* do not have such an explicit line in the sand for fusions. The only area of the Guidelines where a BMI of 40 or more as a contraindication related to lumbar surgery is in WCRP 17, Ex. 1, and Sec. 8.b.iv of the *Guidelines* for total disc replacement surgery— which is not contemplated or recommended here.

Dr. Rumley is a board-certified expert in his field of orthopedic surgery. Plus, Dr. Rumley also trained via a spine fellowship at Augusta University which was a level 1 trauma and deformity center. Lastly, he currently trains fellows in spine surgery and therefore maintains an academic role. These additional qualifications adds to the persuasiveness of his opinion and conclusion for the recommended surgery. Plus, what might be considered aggressive to Dr. Brown, might not be considered aggressive by Dr. Rumley who is a fellow trained spinal surgery. As a result, the ALJ finds and concludes that Dr. Rumley has convincingly concluded that the TLIF is the most appropriate procedure for Claimant, and Claimant has indicated that he wishes to proceed with TLIF understanding the associated pros and cons as well as the risks and benefits.

As a result, the ALJ finds and concludes that Claimant has proven by a preponderance of the evidence that the lumbar decompression and fusion surgery recommended by Jacob Rumley, D.O. as reasonable and necessary treatment related to his admitted June 29, 2022, industrial injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

I. Respondents shall pay for the lumbar decompression and fusion surgery recommended by Jacob Rumley, D.O. as reasonable and necessary treatment related to Claimant's industrial injury.

II. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 1, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-202-948-002

ISSUES

- Did Claimant prove she suffered a compensable injury to her right shoulder on March 7, 2022?
- Did Claimant prove medical treatment she received for the right shoulder was reasonably needed, authorized, and causally related to a compensable injury?
- Did Claimant prove entitlement to TTD benefits from April 6, 2022 through June 6, 2022?
- Did Respondents prove Claimant was responsible for termination of her employment?
- Did Claimant prove Respondents should be penalized for failure to timely admit or deny liability?
- Did Claimant prove Respondents should be penalized for failure to timely exchange the claim file and wage records as required by § 8-43-203(4) and WCRP 5-4(D)?
- The parties stipulated to an average weekly wage of $443.01.

FINDINGS OF FACT

1. Claimant worked for Employer as a housekeeper. Her primary duties included cleaning hotel rooms between guest stays. The job is physically demanding and requires lifting, pushing, and pulling heavy objects such as furniture and linens.

2. Claimant alleges any injury to her right shoulder on March 7, 2022, while lifting a mattress to change the sheets. Claimant testified she lifted one corner of the mattress and felt "a really hard pain" in her shoulder. Nevertheless, she kept working and finished her shift.

3. Claimant did not report an incident or injury to anyone on March 7, 2022. Claimant testified she did not report the injury because she was afraid she might lose her job. However, she had previously reported allergic skin reactions from cleaning chemicals, which her supervisor tried to remedy, with no adverse impact on her job.

4. Claimant worked her regular duties without limitation until she was suspended on April 6, 2022, for noninjury-related reasons. Although Claimant testified she had difficulty performing the job during that time, there is no persuasive evidence from any co-worker or supervisor to corroborate that her performance was limited in any way.

5. Claimant was suspended on April 6, 2022, for theft of guest property. Claimant took a pair of Apple AirPods from a guest room (Room 610) on March 6, 2022. Claimant had been responsible for cleaning Room 610 that day. The guest eventually tracked the location of the AirPods to Claimant's residence. On April 5, 2022, [Redacted, hereinafter SA] questioned Claimant about the AirPods, but Claimant denied having them or knowing where they were. However, the next day, Claimant returned to work and gave the AirPods to SA[Redacted]. Claimant alleged she had found the AirPods in a conference tote bag ("swag bag") she took from the room after the guests had checked out. Claimant claimed she did not realize the AirPods were in the bag until she checked after being questioned by SA[Redacted].

6. Claimant testified to the same story at hearing.

7. Respondents convincingly refuted Claimant's testimony about the AirPods. The tote bag in question was from a conference held at the hotel in mid-February. Given Employer's rigorous cleaning and inspection procedures, it is highly unlikely a tote bag from the conference would still have been in the room when the guest that owned the AirPods checked in several weeks later. It is far more likely that Claimant intentionally took the AirPods and fabricated a cover story after learning they had been tracked to her home.

8. Claimant was placed on administrative leave on April 6, 2022, pending completion of Employer's investigation. After determining Claimant's explanation was untrue and she had probably stolen the AirPods, Employer formally terminated her employment on May 14, 2022.

9. On April 18, 2022, Claimant filed a workers' compensation claim alleging a right shoulder injury.

10. Claimant sought no treatment for many weeks after the alleged injury.

11. Claimant was evaluated by Darielle Johnson, NP at Peak Vista Community Health Center on April 25, 2022. Claimant stated she injured her right shoulder and both knees at work. She said the shoulder injury occurred on April 6, 2022. Examination of the shoulder showed positive impingement signs and limited range of motion, but "no evidence" of a rotator cuff tear.

12. Claimant started working as a custodian at [Redacted, hereinafter DO] on June 7, 2022. The job involves customary institutional cleaning tasks such as trash removal, cleaning windows, and cleaning bathrooms. There is no persuasive evidence Claimant requested, received, or required any accommodations or limitations on the regular duties of the position.

13. Claimant underwent a right shoulder MRI on July 20, 2022. It showed a full-thickness supraspinatus tear, supraspinatus and infraspinatus tendinosis, a possible biceps tear, and a subtle SLAP tear.

14. On January 25, 2023, Claimant saw Kelsey Jackson, NP, at Kinetic Orthopedics. Claimant told Ms. Jackson her shoulder pain started when she was making a bed at work on March 7, 2022. Ms. Jackson recommended surgery.

15. Dr. Lawrence Lesnak performed an IME for Respondents on January 24, 2023. Dr. Lesnak noted numerous nonphysiologic findings on examination, including exaggerated pain response to light touch, give-way weakness throughout the right arm, and highly inconsistent shoulder range of motion depending on body position. Dr. Lesnak opined the MRI findings were likely degenerative in nature, with no indication of any acute injury or trauma-related pathology. Dr. Lesnak noted Claimant was still working full-time as a custodian "without any restrictions whatsoever." Claimant told Dr. Lesnak her shoulder pain severely worsened several months after she was terminated by Employer. Dr. Lesnak opined that Claimant suffered no work-related injury and any treatment she required for her shoulder was related to a purely personal medical condition.

16. Dr. Lesnak's opinions are credible and persuasive.

17. SA's[Redacted] testimony is credible and persuasive.

18. Claimant's testimony is not credible.

19. Claimant failed to prove a compensable injury to her right shoulder.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which they seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove she suffered a compensable injury to her right shoulder. SA's[Redacted] testimony is credible and persuasive. Dr. Lesnak's analysis and opinions are credible and persuasive. Claimant's testimony is not credible. Claimant abused a position of trust and stole property from a hotel guest. She compounded the dishonesty with a false explanation after being caught. She told the same story at hearing under oath. Considering Claimant's repeated untruthfulness, the ALJ is unwilling to credit her testimony with respect to any disputed material fact. There is no direct proof to support Claimant's alleged injury, such as witness statements or immediately contemporaneous medical records showing evidence of acute trauma. Nor does the circumstantial evidence support her claim. Claimant told no one about any injury until after she had been placed on administrative leave. She continued working her regular job for a month after March 7, 2022, with no persuasive evidence showing any functional limitations or reduced efficiency. Claimant sought no treatment for more than six weeks after the alleged injury. The initial evaluation by Ms. Johnson showed "no evidence" of a rotator cuff tear, and the

July 2022 MRI that showed a tear was not completed until after Claimant started working for a new employer as a custodian. Claimant told Dr. Lesnak her shoulder severely worsened after she was terminated, which further reduces the likelihood of a causal connection to her employment. The preponderance of persuasive evidence fails to establish that Claimant's right shoulder pathology and need for treatment were proximately caused by an injury at work on March 7, 2022.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-228-938-002

ISSUES

1. Whether Respondent has proven by a preponderance of the evidence that Claimant's claim is barred by the statute of limitations in §8-43-103(2), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease in the form of bilateral Carpal Tunnel Syndrome (CTS) that began on October 24, 2022 during the course and scope of her employment with Employer.

3. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment designed to cure and relieve the effects of her October 24, 2022 occupational disease.

FINDINGS OF FACT

1. Claimant worked for Employer as a Prevention Unit Manager. Her job responsibilities included data entry, data analysis, report development, investigation research and documentation, publications, process development, public health recommendation letters, email communications, grant development and reporting, position development, and evaluations. Claimant has worked continuously for Employer since September 1999.

2. The record reflects that Claimant has a long history of bilateral upper extremity symptoms. Initially, Claimant reported a work-related injury/condition on May 12, 2014. Employer completed a First Report of Injury on May 20, 2014. Respondent filed a Notice of Contest on May 22, 2014. Claimant did not file a Workers' Claim for Compensation or Application for Hearing seeking benefits related to the May 12, 2014 injury.

3. On May 12, 2014 Claimant sought treatment with Authorized Treating Provider (ATP) Concentra Medical Centers for her bilateral upper extremity symptoms. She associated her symptoms with "being on the computer." Claimant reported a sudden increase of pain that made her unable to use her left hand. Providers noted the "pain is so bothersome it wakes her up at night (numbness, tingling, electric shocks), she has to switch back and forth between her two hands while driving because they 'go dead on her'…pain 6/10 with pain to left greater than right." Claimant's symptoms included wrist and forearm pain, tingling, numbness in her fingers and loss of strength.

4. On October 28, 2014 Claimant visited orthopedic surgeon Edmund B. Rowland, M.D. for an examination. She reported numbness and tingling in both hands, as well as numbness in her thumb and fingers. Claimant noted that "activity modification and ergonomic changes to the workstation have been somewhat beneficial." She was

struggling to write and it was more difficult to use her keyboard. Dr. Rowland assessed Claimant with bilateral Carpal Tunnel Syndrome (CTS) from possible overuse. He noted "bilateral upper extremity complaints in a worker who feels typing has played a significant role in this."

5. On November 5, 2014 Claimant was evaluated by John J. Aschberger, M.D. He assessed "bilateral upper extremity pain localized predominantly at the wrists, paresthesias noted distally," and determined there "may be a component of tendinitis at the wrists as well."

6. On November 5, 2014 Claimant underwent EMG testing. Dr. Aschberger reviewed the EMG and concluded "there are very mild findings consistent with a diagnosis of [CTS] with indications of median neuropathy at the right wrist. No abnormalities suggested for the left upper extremity with nerve conduction testing and electromyographic testing shows no indications of nerve injury or irritation for either upper extremity."

7. Claimant's medical treatment and evaluation concluded in 2014. She received guidance to alleviate her symptoms that consisted of utilizing wristbands and performing home exercises. From 2014 until her October 24, 2022 Workers' Compensation claim, Claimant continued to experience flare-ups in her upper extremities that never completely resolved. Claimant followed the recommendations prescribed by her 2014 treating physicians for controlling her symptoms.

8. Claimant testified that when the COVID-19 pandemic began in March 2020 she was deployed for COVID-19 response and investigated outbreaks in healthcare settings. Her duties involved traveling throughout Colorado, participating in drive-up clinics, helping providers set up outdoor clinics, writing recommendations and providing guidance for health care workers.

9. Because of Respondent's office closure, Claimant began working remotely in late March 2020 and started experiencing flare-ups of her CTS symptoms in April 2020. Claimant noted her symptoms included increased pain at the wrist and numbness in the fingers that radiated up the arms. She explained that when a "flare-up" started, she implemented the suggestions and exercises she had learned including adjustments to her workstation. Notably, in June 2022 Claimant purchased her own workstation that included a desk and screen mount. Nevertheless, subsequent to beginning work from home, the combination of increased hours at her computer and changes to her workstation ergonomics exacerbated Claimant's symptoms.

10. On October 24, 2022 Claimant reported her symptoms and Employer completed a First Report of Injury. Claimant specifically noted symptoms including numbness, pain in fingers, elbow pain, cold hands, dexterity issues, shaking, twitching in the left hand, and left arm pain. She received a designated provider list and selected Concentra as her ATP.

11. On October 31, 2022 Claimant visited Cynthia Rubio, M.D. at Concentra for an examination. Dr. Rubio reviewed Claimant's medical history and conducted a physical examination. She commented that Claimant had been diagnosed with right CTS in 2014. Although Claimant's right wrist remained symptomatic, she was experiencing more left-sided symptoms. Because Claimant had suffered a flare-up of her condition, she underwent an ergonomic evaluation of her workstation in June 2022 but had not followed-up with the recommendations. Claimant remarked that she had been doing "fairly well" until mid-October 2022. Dr. Rubio diagnosed Claimant with bilateral CTS. However, she concluded that her objective findings were not consistent with a work-related mechanism of injury. Dr. Rubio noted that Claimant could immediately return to work with no restrictions.

12. On November 3, 2022 Claimant visited David Hnida, D.O. at Concentra. Dr. Hnida reviewed Claimant's medical history and conducted a physical examination. He considered Claimant's history of CTS and remarked that she had reached her functional goal but was not at the "end of healing." Dr. Hnida recorded that "since 2014 she has not had any periods of time when she was symptom free – she has waxed and waned since then, but things usually get better…Her symptoms, in sum, have been present for years, with this being a recent flare that has not subsided. It is noted she is hypothyroid." He assessed Claimant with bilateral wrist pain as well as numbness and tingling. Dr. Hnida concluded that objective findings were not consistent with a work-related mechanism of injury. He commented that Claimant could immediately return to work with no restrictions. Dr. Hnida noted that the "timeline of this bilat complaint presents causality challenges. I believe a worksite eval is warranted."

13. On November 28, 2022 Claimant returned to Dr. Hnida for an evaluation. Claimant's symptoms remained unchanged. Dr. Hnida reiterated that objective findings were not consistent with a work-related mechanism of injury. He referred Claimant for an EMG study.

14. On December 12, 2022 Claimant presented to Robert W. Kawasaki, M.D. for an evaluation. Dr. Kawasaki completed an EMG nerve conduction study and compared it to the previous study performed by Dr. Aschberger in 2014. The 2014 EMG demonstrated right mild CTS while the left upper extremity testing was normal. However, the December 12, 2022 EMG study revealed bilateral moderate CTS. Dr. Kawasaki diagnosed bilateral CTS and median neuropathy at the wrist. He recommended using splints at night. Dr. Kawasaki noted that steroid injections and surgical CTS releases could be considered.

15. On December 19, 2022 Claimant underwent a surgical evaluation with Rudy Kovachevich, M.D. Claimant reported she had been working in excess of 60-70 hours per week over the past few years because of the pandemic. She noted bilateral hand numbness and paresthesias that has waxed and waned over the past 10 years. Dr. Kovachevich diagnosed Claimant with bilateral CTS, left cubital tunnel syndrome, left lateral epicondylitis, and right lateral epicondylitis. He concluded that "it appears [Claimant] did sustain an injury to bilateral hands arising out of and caused by the

industrial exposure of 10/24/22." Dr. Kovachevich recommended surgical intervention including a left CTS release and left "UND" release at elbow with possible soft tissue rearrangement/transposition.

16. Contrary to Claimant's reports of working in excess of 60-70 hours each week because of the COVID-19 pandemic, the record reveals she has worked the following hours since 2020:

- 2020: average of 48.3 hours per week
- 2021: average of 48.0 hours per week
- 2022: average of 45.1 hours per week

17. A Job Demands Analysis (JDA) was initially scheduled to occur in this matter on December 28, 2022 with Joseph B. Blythe, MA, CRC. However, when Mr. Blythe arrived, Claimant advised that an evaluation would not provide him with an opportunity to observe her typical job duties. Claimant received alternate dates to complete the JDA and selected January 9, 2023.

18. On January 9, 2023 Mr. Blythe performed a JDA for the position of Prevention Unit Manager. He noted the Prevention Unit Manager is responsible for oversight of the services, staff, and partnerships within the agency. Claimant also was responsible for planning, developing, and implementing policies, procedures, goals, and objectives to ensure the provision of quality services. Mr. Blythe remarked that Claimant had been diagnosed with bilateral CTS. Relying on the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (MTGs), Mr. Blythe did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties for Employer.

19. Mr. Blythe conducted time studies while observing Claimant over a 4.5-hour period to ascertain her Primary and Secondary Risk Factors pursuant to the MTGs. Based on a 10-hour workday, he specifically found the following:

- no force and repetition of Claimant's left upper extremity and 30 minutes/day or 15% of the secondary threshold of pinch force for the right upper extremity;
- regarding "awkward posture and repetition," 1.7 hours per day or 57% of the secondary threshold for left elbow flexion and 1.6 hours per day or 54% of the secondary threshold for right elbow flexion;
- no supination/pronation of 45 degrees with power grip or lifting;
- mouse use of 2.7 hours or 66% of the 4.0 hours per day threshold;
- keyboarding of 2.5 hours per day;
- no vibratory hand tools or cold work environment; and
- regarding the additional study of bilateral elbow and forearm contact, 1.7 hours per day of the left upper extremity and 1.1 hours per day of the

right upper extremity.

20. Mr. Blythe subsequently reviewed Claimant's daily timesheets from January 2022 through December 2022. He issued a revised JDA on August 6, 2023. Mr. Blythe documented work days that lasted between four and 15 or more hours. Notably, 47% of the time, or much larger than any other hour interval, Claimant worked for eight hours each day. The second most common length of a workday was nine hours or 13% of the total. Although Claimant worked 14 hours each day only 1% of the time, Mr. Blythe issued a revised JDA on August 6, 2023 in which he considered Claimant's Primary and Secondary Risk Factors over the course of 11-14 hour workdays. He again did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's job duties.

21. Claimant testified that just before Mr. Blythe was going to leave after observing her for 4.5 hours, she stated his observations did not represent her typical job duties. Although she was about to begin her regular job tasks, Mr. Blythe left. In contrast, Mr. Blythe remarked that Claimant never mentioned he was not observing her typical job duties. He explained that, if she had advised that he had not observed her regular duties, he would have rescheduled the JDA just as he had done on December 28, 2022. Similarly, if Claimant had stated she was about to begin her typical activities he would have stayed longer.

22. On January 10, 2023 Dr. Kovachevich submitted a request for surgical authorization. Respondent subsequently denied the request.

23. On January 10, 2023 Claimant visited ATP Thomas Corson, D.O. at Concentra for an examination. Dr. Corson assessed Claimant with bilateral wrist pain, CTS, numbness and tingling. He concluded that his objective findings were not consistent with a work-related mechanism of injury. Dr. Corson noted that Claimant could immediately return to work with no restrictions.

24. On February 24, 2023 and October 5, 2023 Carlos Cebrian, M.D. conducted records reviews of Claimant's claim. He also testified at the hearing in this matter. After reviewing Claimant's medical records and considering Mr. Blythe's JDA, Dr. Cebrian conducted a causation analysis pursuant to the MTGs. Dr. Cebrian explained that, in order to perform a medical causation analysis for a cumulative trauma condition, the first step is to make a diagnosis, the next step is to clearly define the job duties and the third step is to compare the job duties with the delineated Primary Risk Factors. He initially noted that Claimant had been diagnosed with bilateral CTS. Notably, none of Claimant's treating physicians performed a causation analysis pursuant to the MTGs to determine whether her symptoms were related to her work activities.

25. Dr. Cebrian compared Claimant's job duties with the delineated Primary Risk Factors in the MTGs. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. Dr. Cebrian noted that the Table requires six hours of the use of two pounds of pinch force or 10 pounds of hand force for three times or more per minute. An additional Primary Risk Factor category is Awkward Posture and

Repetition/Duration. The category requires four hours of wrist flexion > 45 degrees, extension > 30 degrees, or ulnar deviation > 20 degrees. Other risk factors in the category are six hours of elbow flexion > 90 degrees or six hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Dr. Cebrian also noted that computer work can be a Primary Risk Factor, but up to seven hours per day at an ergonomically correct workstation is not a risk factor. Continuous mouse use of greater than four hours each day is also a risk factor. Dr. Cebrian concluded Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum thresholds in the MTGs.

26. When there are no Primary Risk Factors, step four of a causation analysis involves a review of Secondary Risk Factors. Any Secondary Risk Factor must be physiologically related to the diagnosis. Force and Repetition/Duration must be for three hours using two-pounds pinch force or 10 pounds of hand force three times or more per minute. Additional Secondary Risk Factors for Force and Repetition/Duration are three hours of lifting 10 pounds > 60X per hour or three hours of use of hand held tools weighing two pounds or greater. Another Secondary Risk Factor category is Awkward Posture and Repetition/Duration. The preceding Factor requires three hours of elbow flexion > 90 degrees or three hours of Supination/pronation of 45° with power grip or lifting. Computer Work and mouse use are not Secondary Risk Factors. Handheld vibratory power tools can be a Secondary Risk Factor if used for two hours when combined with other risk factors. After evaluating Claimant's job duties, Dr. Cebrian concluded she does not have Secondary Risk Factors for the development of a cumulative trauma condition. Because Claimant did not have a Secondary Risk Factor, the Diagnosis-based risk factor table is not used.

27. Dr. Cebrian explained that the MTGs show an association of cumulative trauma conditions, including cubital tunnel syndrome or ulnar neuritis and CTS, with certain medical conditions. The conditions include hypothyroidism, increasing age, and the female sex. Based on the medical records, Dr. Cebrian remarked that Claimant is a 45-year-old female who was diagnosed with hypothyroidism. Moreover, Dr. Cebrian stated that, pursuant to the MTGs, conditions must be physiologically related to job activities. The Diagnosis-based risk factor table for lateral epicondylitis and cubital tunnel syndrome or ulnar neuritis reflects they are not physiologically related to keyboarding and mouse use. In fact, the MTGs specify there is good evidence that keyboarding is not related to the preceding conditions.

28. Relying on the MTGs, Dr. Cebrian concluded that it is "not medically probable that [Claimant's] bilateral upper extremity complaints were directly or indirectly causally related to her work activities for [Employer] nor were they the proximate result of her work activities." He explained that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum thresholds in the MTGs. Dr. Cebrian commented that further evaluation, diagnosis, and treatment under the Workers' Compensation system was not medically reasonable, necessary, or causally related to Claimant's symptoms. Claimant thus did not suffer an occupational disease in the form of a cumulative trauma condition as a result of her work activities for Employer.

29. Respondent has failed to prove it is more probably true than not that Claimant's claim is barred by the statute of limitations in §8-43-103(2), C.R.S. The record reveals that Claimant has a long history of bilateral upper extremity symptoms. Initially, Claimant reported a work-related injury/condition to her upper extremities on May 12, 2014 and obtained medical care with ATP Concentra. After undergoing conservative treatment, Claimant's medical care and evaluation concluded later in 2014. Nevertheless, Claimant's flare-ups of numbness in her upper extremities never completely resolved. Because of the COVID-19 pandemic, Claimant began working remotely in late March 2020 and started experiencing flare-ups of her CTS symptoms in April 2020. The combination of increased hours at her computer and changes to workstation ergonomics exacerbated Claimant's symptoms. On October 24, 2022 Claimant reported her symptoms, Employer completed a First Report of Injury, and she again received treatment with ATP Concentra. In her first visit with ATP Dr. Rubio, Claimant specifically reported that she had been doing "fairly well" until mid-October, 2022. On November 3, 2022 Claimant reported to ATP Dr. Hnida that she suffered a recent flare-up that had not subsided.

30. The preceding chronology reflects that Claimant has experienced upper extremity symptoms sporadically since at least 2014. However, Claimant's present claim is predicated on a request for compensation from October 24, 2022. Although Respondent asserts that Claimant's current claim is barred by the two-year statute of limitations in §8-43-103(2), C.R.S., the record reflects that Claimant did not recognize the nature, seriousness, and probable compensable character of her injury until October 2022. Claimant's occasional flare-ups prior to the date of reporting were not disabling, and Claimant continued to perform her job duties. After Claimant began working from home and suffering increased pain, she attempted to alleviate her symptoms and made adjustments to her workstation. However, she was ultimately unsuccessful and reported her claim for compensation in a timely fashion. The record reflects that, although Claimant's upper extremity pain waxed and waned over the years, she was doing fairly well until she suffered a flare-up of symptoms in October 2022. Notably, she developed left-sided symptoms and was no longer able to alleviate her pain. Because Claimant filed a notice claiming compensation within two years of discovering the work-related nature of her injury, Respondent has not demonstrated that her October 24, 2022 claim is barred by the statute of limitations in §8-43-103(2), C.R.S.

31. Claimant has failed to demonstrate it is more probably true than not that she suffered an occupational disease in the form of bilateral CTS that began on October 24, 2022 during the course and scope of her employment with Employer. Initially, the record reflects that Claimant has suffered a long-history or upper extremity symptoms since at least 2014. Claimant commented that the combination of increased hours at her computer and changes to workstation ergonomics exacerbated her upper extremity symptoms. On October 24, 2022 she reported her symptoms and began receiving treatment with ATP Concentra. She was diagnosed with bilateral CTS. After undergoing conservative treatment, Dr. Kovachevich concluded that Claimant suffered industrial injuries to her bilateral upper extremities as a result of her work activities and recommended surgical

intervention.

32. Despite Claimant's testimony and Dr. Kovachevich's opinion, the record reflects that Claimant's bilateral CTS symptoms are not causally related to her work activities for Employer. Importantly, ATPs Drs. Rubio, Hnida and Corson concluded that their objective findings were not consistent with a work-related mechanism of injury. The doctors also noted that Claimant could immediately return to work with no restrictions. Moreover, on January 9, 2023 a JDA performed by Mr. Blythe did not find evidence of any Primary or Secondary Risk Factors for the development of Claimant's symptoms. Specifically, relying on the MTGs and conducting time studies, Mr. Blythe determined that Claimant's job activities did not reach the minimum thresholds for either the Primary or Secondary Risk Factors for a cumulative trauma condition. Although Claimant explained that the 4.5 hour JDA did not constitute an accurate representation of her typical job duties, the record reflects she was aware Mr. Blythe sought to observe her typical work activities and the JDA could be rescheduled if she was not performing her regular job duties. Nevertheless, Claimant chose to proceed with the evaluation. Thus, based on the credible testimony of Mr. Blythe, the JDA constituted an accurate portrayal of Claimant's typical work activities.

33. The persuasive testimony of Dr. Cebrian demonstrates that Claimant did not likely suffer a cumulative trauma condition as a result of her work activities for Employer. Initially, Dr. Cebrian is the only physician in the present matter who conducted a formal causation assessment pursuant to the MTGs. He persuasively determined that Claimant's bilateral upper extremity complaints are not causally related to her work activities. Dr. Cebrian reasoned that it is "not medically probable that [Claimant's] bilateral upper extremity complaints were directly or indirectly causally related to her work activities for [Employer] nor were they the proximate result of her work activities." He explained that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum thresholds in the MTGs. Dr. Cebrian commented that further evaluation, diagnosis, and treatment under the Workers' Compensation system was not medically reasonable, necessary, or causally related to Claimant's symptoms. Claimant thus did not suffer an occupational disease in the form of a cumulative trauma condition as a result of her work activities for Employer.

34. Based on Mr. Blythe's JDA, a review of Claimant's job duties and the persuasive opinion of Dr. Cebrian, Claimant did not engage in forceful and repetitive activities for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant has failed to demonstrate it is more probably true than not that she suffered an occupational disease in the form of bilateral CTS that began on October 24, 2022 during the course and scope of her employment with Employer. Her claim for Workers' Compensation benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Statute of Limitations

4. Section 8-43-103(2), C.R.S. requires a claimant to file a notice claiming compensation within two years of discovery of the work-related nature of an injury or within three years if a reasonable excuse exists and no prejudice results to respondents. The notice must apprise the Division and respondents of the claimant's intent to seek compensation. The preceding requirement is not satisfied by the employer filing a first report of injury, the Division's assignment of a claim number, claimant's counsel's entry of appearance or the claimant's service of interrogatories. *Packard v. Indus. Claim Appeals Off. and City and County of Denver,* 456 P.3d 473 (Colo. App. 2019). The limitation period commences when "the claimant, as a reasonable [person], should recognize the nature, seriousness, and probable compensable character of [the] injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *City of Colorado Springs v. Indus. Claim Appeals Off.*, 89 P.3d 504 (Colo. App. 2004). For a claimant to appreciate an injury's seriousness and probable compensable nature, the injury must be "to some extent" disabling. *City of Colorado Springs*, 89 P.3d at 506. The "seriousness" of the injury refers to the claimant's recognition of the "gravity of the medical condition." *Burnes v. United Airlines*, WC 4-725-046 (ICAO. Apr. 17, 2008). The claimant must recognize all three of the preceding factors to trigger the running of the statute of limitations. *Id.* The question of when the claimant recognized the nature, seriousness, and probable compensable character of the injury is one of fact for determination by the ALJ. *Id.*

5. As found, Respondent has failed to prove by a preponderance of the evidence that Claimant's claim is barred by the statute of limitations in §8-43-103(2), C.R.S. The record reveals that Claimant has a long history of bilateral upper extremity symptoms. Initially, Claimant reported a work-related injury/condition to her upper extremities on May 12, 2014 and obtained medical care with ATP Concentra. After undergoing conservative treatment, Claimant's medical care and evaluation concluded later in 2014. Nevertheless, Claimant's flare-ups of numbness in her upper extremities never completely resolved. Because of the COVID-19 pandemic, Claimant began working remotely in late March 2020 and started experiencing flare-ups of her CTS symptoms in April 2020. The combination of increased hours at her computer and changes to workstation ergonomics exacerbated Claimant's symptoms. On October 24, 2022 Claimant reported her symptoms, Employer completed a First Report of Injury, and she again received treatment with ATP Concentra. In her first visit with ATP Dr. Rubio, Claimant specifically reported that she had been doing "fairly well" until mid-October, 2022. On November 3, 2022 Claimant reported to ATP Dr. Hnida that she suffered a recent flare-up that had not subsided.

6. As found, the preceding chronology reflects that Claimant has experienced upper extremity symptoms sporadically since at least 2014. However, Claimant's present claim is predicated on a request for compensation from October 24, 2022. Although Respondent asserts that Claimant's current claim is barred by the two-year statute of limitations in §8-43-103(2), C.R.S., the record reflects that Claimant did not recognize the nature, seriousness, and probable compensable character of her injury until October 2022. Claimant's occasional flare-ups prior to the date of reporting were not disabling, and Claimant continued to perform her job duties. After Claimant began working from home and suffering increased pain, she attempted to alleviate her symptoms and made adjustments to her workstation. However, she was ultimately unsuccessful and reported her claim for compensation in a timely fashion. The record reflects that, although Claimant's upper extremity pain waxed and waned over the years, she was doing fairly well until she suffered a flare-up of symptoms in October 2022. Notably, she developed left-sided symptoms and was no longer able to alleviate her pain. Because Claimant filed a notice claiming compensation within two years of discovering the work-related nature of her injury, Respondent has not demonstrated that her October 24, 2022 claim is barred by the statute of limitations in §8-43-103(2), C.R.S.

Compensability

7. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

8. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

9. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

10. The Colorado Division of Workers' Compensation has developed specific MTGs for Cumulative Treatment Conditions in Rule 17, Exhibit 5. The MTGs provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p. 20.

11. The MTGs include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires six hours of two pounds of pinch force or 10 pounds of hand force three or more times per minute. Other Primary Risk Factors involving Force and Repetition/Duration include six hours of lifting 10 pounds in excess of 60 times per hour and six hours of using hand tools weighing two pounds or more. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees, six hours of elbow flexion greater than 90 degrees, four hours of supination/pronation with task cycles 30 seconds or less or awkward posture for at least 50% of a task cycle. Secondary Risk Factors require three

hours of two pounds of pinch force or 10 pounds of hand force three or more times per minute. Other Secondary Risk Factors involving Force and Repetition/Duration include three hours of lifting 10 pounds greater than 60 times per hour and three hours of using hand tools weighing at least two pounds. Finally, Secondary Risk Factors for Awkward Posture and Repetition/Duration include three hours of elbow flexion greater than 90 degrees and three hours of supination/pronation with a power grip or lifting. If neither Primary nor Secondary Risk Factors are present, the MTGs provide that "the case is probably not job related." W.C.R.P. Rule 17, Exhibit 5, pp. 24-26.

12. Rule 17, Exhibit 5 instructs physicians about using risk factors for assessing causation of a cumulative trauma condition. After determining a diagnosis and defining the job duties of the worker, physicians should compare the worker's duties with the Primary Risk Factor Definition Table. The MTGs specify that "[h]ours are calculated by adding the total number of hours per day during which the worker is exposed to the defined risk. Breaks, time performing other activities, and inactive times are not included in the total time. W.C.R.P. Rule 17, Exhibit 5, p. 21.

13. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease in the form of bilateral CTS that began on October 24, 2022 during the course and scope of her employment with Employer. Initially, the record reflects that Claimant has suffered a long-history or upper extremity symptoms since at least 2014. Claimant commented that the combination of increased hours at her computer and changes to workstation ergonomics exacerbated her upper extremity symptoms. On October 24, 2022 she reported her symptoms and began receiving treatment with ATP Concentra. She was diagnosed with bilateral CTS. After undergoing conservative treatment, Dr. Kovachevich concluded that Claimant suffered industrial injuries to her bilateral upper extremities as a result of her work activities and recommended surgical intervention.

14. As found, despite Claimant's testimony and Dr. Kovachevich's opinion, the record reflects that Claimant's bilateral CTS symptoms are not causally related to her work activities for Employer. Importantly, ATPs Drs. Rubio, Hnida and Corson concluded that their objective findings were not consistent with a work-related mechanism of injury. The doctors also noted that Claimant could immediately return to work with no restrictions. Moreover, on January 9, 2023 a JDA performed by Mr. Blythe did not find evidence of any Primary or Secondary Risk Factors for the development of Claimant's symptoms. Specifically, relying on the MTGs and conducting time studies, Mr. Blythe determined that Claimant's job activities did not reach the minimum thresholds for either the Primary or Secondary Risk Factors for a cumulative trauma condition. Although Claimant explained that the 4.5 hour JDA did not constitute an accurate representation of her typical job duties, the record reflects she was aware Mr. Blythe sought to observe her typical work activities and the JDA could be rescheduled if she was not performing her regular job duties. Nevertheless, Claimant chose to proceed with the evaluation. Thus, based on the credible testimony of Mr. Blythe, the JDA constituted an accurate portrayal of Claimant's typical work activities.

15. As found, the persuasive testimony of Dr. Cebrian demonstrates that Claimant did not likely suffer a cumulative trauma condition as a result of her work activities for Employer. Initially, Dr. Cebrian is the only physician in the present matter who conducted a formal causation assessment pursuant to the MTGs. He persuasively determined that Claimant's bilateral upper extremity complaints are not causally related to her work activities. Dr. Cebrian reasoned that it is "not medically probable that [Claimant's] bilateral upper extremity complaints were directly or indirectly causally related to her work activities for [Employer] nor were they the proximate result of her work activities." He explained that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum thresholds in the MTGs. Dr. Cebrian commented that further evaluation, diagnosis, and treatment under the Workers' Compensation system was not medically reasonable, necessary, or causally related to Claimant's symptoms. Claimant thus did not suffer an occupational disease in the form of a cumulative trauma condition as a result of her work activities for Employer.

16. As found, based on Mr. Blythe's JDA, a review of Claimant's job duties and the persuasive opinion of Dr. Cebrian, Claimant did not engage in forceful and repetitive activities for an amount of time that meets the threshold for a cumulative trauma condition. Claimant's employment activities did not cause, intensify, or, to a reasonable degree, aggravate her condition to produce a need for medical treatment. Claimant has failed to demonstrate it is more probably true than not that she suffered an occupational disease in the form of bilateral CTS that began on October 24, 2022 during the course and scope of her employment with Employer. Her claim for Workers' Compensation benefits is thus denied and dismissed.

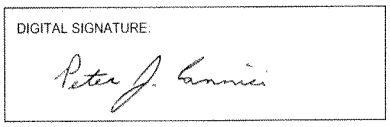
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 1, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she sustained a work related injury within the course and scope of her employment on March 6, 2023.

IF THE CLAIM IS DEEMED COMPENSABLE:

II. Whether Claimant has proven by a preponderance of the evidence that she was entitled to reasonably necessary and related medical care for the compensable work related injury including whether she was entitled to select Dr. David Yamamoto as an authorized treating physician.

III. Whether Claimant has proven by a preponderance of the evidence what her average weekly wage was.

IV. Whether Claimant has proven by a preponderance of the evidence that she was entitled to temporary total disability benefits from March 7, 2023 until terminated by law.

V. Whether Respondents have proven by a preponderance of the evidence that Claimant was terminated for cause.

STIPULATIONS

The parties stipulated that, if the claim was found compensable, Claimant's average weekly wage was $720.00, not including the costs of replacing health insurance benefits or other benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally

1. Claimant was a housekeeper for Employer, working full time in the critical care unit (CCU) for approximately thirty (30) years and was 55 years old at the time of the hearing. She was 5' 5" tall. Claimant was responsible for cleaning her assigned floor which included sixteen (16) rooms, the waiting area, the public bathrooms and the nurses' station, including lifting trash, wet linens, mopping and sweeping. She worked the 5:30 a.m. to 2:00 p.m. shift. Claimant considered this very heavy and hard work.

2. Claimant was assigned a housekeeping closet where she kept her cart and the supplies needed to perform her job. The closet also had a sink, a floor sink or drain and a mobile wire rack or cart where the supplies were kept. The room was just big enough to fit her cart, her supplies and herself. When she arrive at work first thing in the

morning, she would enter her housekeeping closet, though it was a tight fit. She would typically stand between her cart, that reached right below her chest[1] and the supply cart, which was lined up against the wall next to the sink.

3. Prior to her work related accident, she had no problems with either her low back or her right shoulder.

B. The accident

4. Claimant was working her normal schedule and job on March 6, 2023. She was injured when, the door of her closet closed shut and when she tried to exit the housekeeping closet, the door handle and the cart stuck together, effectively locking her in the closet with her cart. Claimant contacted the housekeeping office and asked the individual that answered to help her get out. After waiting approximately 15 minutes, Claimant was worried that she had to start work and that her time was counting.

5. On March 6, 2023, Claimant lifted the cart from the bottom to disentangle it from the door handle and while she was doing that, she twisted, injuring her right shoulder and low back going into the buttock area, though she was able to exit the closet. Claimant felt a stabbing sensation, like a nail had stabbed her in the low back.

6. It was not until after she was out of the housekeeping closet that the night team lead arrived to help. They removed the cart and Claimant proceeded to begin working.

7. Claimant's supervisor contacted Claimant to request she clean a specific room and Claimant reported that she had hurt herself. His response was "Dear, dear, dear, one clean, one discharge," explaining that the room where the patient was discharged needed to be done right away. Claimant continued her duties and when her supervisor approached her again, Claimant again explained that she was hurt that morning. Her supervisor did not send her to a provider. He insisted she continue cleaning her floor and advised her he would not assign her any extra work. Claimant proceeded to complete her floor, though she had a lot of difficulty due to the pain, especially with the trash, the linens and mopping. Claimant then went to the office to punch out early, at approximately 11:30 a.m. or 12:00 p.m. The housekeeping Assistant Director provided her a patch to put on her back and an ice pack, advising her not to return to work the following day. The Assistant Director counselled her that she would be better with some rest, probably by the next day. That is why Claimant did not go to the emergency room that day.

8. On March 7, 2023, when she woke up, she continued to have pain in both her low back and her right shoulder. The housekeeping Assistant Director contacted Claimant that day and requested Claimant report to the office to complete and sign some paperwork. Her husband accompanied her. The Assistant Director did not speak Spanish, so the clerk helped with translation. The paperwork included a "write up." Claimant explained that she had not done anything wrong and what happened to her on March 6, 2023 was simply an accident. Claimant understood the Assistant Director to

[1] Claimant is 5' 5" tall so if her cart reached just below her chest, it would be at least 3 and one half (3 ½) foot tall.

say that if Claimant wished to have medical attention that she had to sign the document. She understood that it was a new company policy to issue write ups when an employee had an accident. Claimant declined to sign something that held her responsible for her accident. When she declined, Claimant understood the Assistant Director to advise Claimant that if she did not sign, that she was terminated. She was not provided a copy of the paperwork she needed to complete. Claimant left the office. At no time did anyone send her for medical care or provide her the name and address of a provider. Neither did anyone from her Employer contact her as she would have recognized the phone number. Claimant never contacted Employer as she believed she had been fired.

9. Claimant went immediately thereafter to the St. Anthony emergency room. At that time she was in pain, felt nausea, like she was about to vomit. They provided her with pain medications, which helped for a time but the pain returned.

10. She did not obtain any other medical care because she did not have the funds or insurance, but she continued to have pain in her right shoulder and low back. Claimant indicated that she wished to have medical care and has some urgency because of the pain.

11. She indicated that she could not work in the condition she was in at this time because the work was heavy and she did not have strength in her low back because of the pain.

C. Medical Records

12. Claimant was seen at the St. Anthony Hospital Emergency Department on March 7, 2023 by Erin Steins, R.N. and Scott Wesley Branney, M.D. They documented that Claimant had been lifting something heavy “at work starting yesterday while working”, and twisted while doing so, and felt a “pop” in her low back which caused persistent pain, greater on the left side than the right side. She rated her pain upon arrival at 9, then after she was given medications in the hospital including a Toradol injection for the pain, at a 6 out of 10, with radiation into the posterior left buttocks and posterior left leg. Dr. Branney gave a differential diagnosis of cauda equine syndrome, acute disc herniation, sciatica and muscle strain. He noted that examination was consistent with muscle strain with left sided sciatica, recommended medications including anti-inflammatories, oxycodone-acetaminophen, Methocarbamol as well as Lidoderm patches. She was instructed to follow up with another provider for further care. The CT was simply read as “normal” by Dr. Blaze Cook.

13. Dr. John J. Aschberger conducted an Independent Medical Examination pursuant to Respondents’ request. Dr. Aschberger took a history of the mechanism of the injury, which included a lifting and twisting motion, injuring her low back and right shoulder. He reviewed the emergency room records. He noted that he questioned Claimant regarding her treatment and Claimant indicated that she was dissatisfied with the care they provided and that they were focused on her low back so did not address the right shoulder.

14. Claimant reported that she continued with pain in the lower lumbar area and "waist" with radiation to the gluteal musculature and into the groins. She had "numbness" in both legs, predominantly on the left with electrical shock sensation occurring

intermittently, again bilaterally, but predominantly on the left. She reported pain at the right shoulder anteriorly and laterally, like "a nail going in." She indicated the onset began with the initial injury. She had difficulty with motion at the shoulder with no radiation.

15. On exam, Dr. Aschberger noted tenderness in the sacral sulcus on the left, limited range of motion of the lumbar spine, extension being restricted with increased pain in the lower back, lateral flexion was tight bilaterally, with pulling at the lumbosacral areas, the left SI joint was locked with forward flexion, Claimant was positive for facet loading, and a markedly positive Patrick's test on the left. Dr. Aschberger specifically noted that pain behaviors were not excessive. Dr. Aschberger remarked that exam of the right shoulder showed a negative impingement test, Spurling's and full range of motion, but noted that Claimant had anterior tenderness, weakness with supraspinatus testing and external rotation, and had tight trapezial musculature. He specifically noted that there were objective limitations with a consistent examination.

16. Dr. Aschberger provided a provisional impairment of 20% whole person (WPI) that included a 12% right upper extremity impairment which converted to a 7% WPI, a Table 53IIB 5% for the lumbar spine and a 9% loss of range of motion of the spine. He recommended further medical care for the lumbar spine including medication management with anti-inflammatories, muscle relaxants, and sleep medication, as well as intervention with physical therapy and/or chiropractic care. He also stated that, if Claimant continued to fail to improve, that further imaging might be warranted. He also recommended further diagnostic evaluation for the right shoulder.

D. Employment Records

17. The Floor Tech Position, initialed by Claimant in 2016, which is the description of Claimant's job, noted that Claimant was required to be able to lift up to 40 lbs. frequently with lifting of equipment and other items up to 100 lbs., being able to stand, walk, squat, bend, twist, kneel, and reaching continuously, pushing and pulling a maids' cart, linen cart, or various equipment on tile or carpeted floors continuously, handle and interact with chemicals, dust, vacuum, mop and use the wringer for the mop as well as clean and detail bathrooms, among other duties.

18. The Employer's First Report of Injury (FROI) was completed by Claimant's supervisor on March 10, 2023. He reported that Claimant had injured her shoulder on March 6, 2023 and that Claimant had "notified" Employer of it on March 6, 2023. The report stated that Claimant "reported to manager on duty that she had been stuck in her housekeeping closet which claims she was in before clocking in. In the process of being stick/trapped (sic.) inside her initial chief complaint was of soreness in the shoulder. The TM[2] insisted on comp." This ALJ infers from this statement that Claimant had other complaints other than those initially reported. It is further deduced that Employer knew or should have known that Claimant was claiming a work injury and required care as she insisted on having compensation benefits.

19. Claimant filed a Worker's Claim for Compensation on March 27, 2023. Claimant reported that she had been in the process of taking mops to the janitor closet,

[2] This ALJ infers that TM means team member.

when she had to lift the cleaning cart to move it, hurting her low back and hip on March 6, 2023.

20. Claimant's wage records, pay check stubs, and compensation summary all indicate that Claimant's rate of pay was $18.00 per hour and $720.00 per week. They further showed Claimant was unlikely to have had any benefits such as medical insurance which would increase her average weekly wage.

E. Housekeeping Assistant Director Testimony

21. The Assistant Director for Employer had been working for them for approximately seven years, and had been the Director of Housekeeping but, at the time of Claimant's work injury, she was the Assistant Director. She was familiar with Claimant. She stated that the paperwork for work-related injuries was completed by the Director or Assistant Director. She stated

> When an injury is reported there is paperwork that needs to be filled out by both the injured party and then the management team. And then it is up to the injured if they want to be treated for their injury. They could accept or they can decline. And then there is a form that needs to be signed, which is a verbal coaching.
> …
> So there are a couple of forms that need to be filled out. It is just the injured party stating and acknowledging that, yes, she was injured, or, no, she was not injured. Or, yes, she was injured but she declined medical treatment. And then there is a form that needs to be filled out, which is a verbal coaching, saying that, you know, this is going to go into your record. You acknowledge that a policy was violated, so not practicing work safe mechanics while on the job.

22. She described the housekeeping closets as a six foot by four foot room, though they varied in size depending on the floor. She stated that the Claimant's cart was approximately three feet wide by four feet long, weighing approximately 60 lbs. if it was fully stocked. The Assistant Director disagreed that Claimant would be able to fit in her closet between her cart and the wire rack of supplies.

23. The Assistant Director believed Claimant first reported the injury to her supervisor. She reported that Claimant had gone into the office to speak with her and when asked if Claimant required medical care, Claimant answered that she did. Her admin assistant interpreted for them. When presented with the write-up, Claimant became upset, was speaking Spanish to her husband and declined to sign the paperwork, after which they left.

24. The Assistant Director indicated she had not conveyed to Claimant that she would be fired for not signing the warning and that Claimant did not complete any of the paperwork. She stated Claimant never re-contacted Employer or provided any doctor's note.

25. She stated that she did not know when Claimant was finally terminated from her employment with Employer but that she was not longer an employee. She believed there was an employee file that had not been produced to Claimant's counsel but that she did not have access to the file or the write-up form, Form 230. The Assistant Director did not believe that Claimant was written-up for failure to show to work. She did not mail

a designated provider list (DPL) to Claimant, stating that it was “in her file if we still have it.”

F. Conclusory Findings

26. As found, Claimant was injured in the course and scope of her employment with Employer on March 6, 2023. She was in her housekeeping closet. When she went to leave the closet, she noted that the handle of her cart was entangled with the closet door handle. She was unable to move it so she lifted the cart to get out. While doing so, she twisted and injured her right shoulder and low back. As found, this likely was to be anticipated as the closet was very small and there was little room to move in order to lift her cart.

27. As found, Claimant reported her injuries to her supervisor, though he did not send her to a provider and required that she complete the floor before she could go home to rest. She left approximately two hours before the end of her normal schedule. As found, Claimant went to clock out early in the housekeeping office and she was provided with an ice pack and a patch to put on her back and instructed not to show the next day in order to recuperate. As found, Claimant was credible and persuasive.

28. As found, Claimant was called in the following day and she, again, reported her injuries, this time to the Assistant Director of Housekeeping. She advised she required a medical provider but was advised that she needed to sign the “write-up” before she would be given any documentation or referral. As found, Claimant declined to state that she had violated any company safety policy. Claimant was never sent a designated list of providers. Claimant was appropriately attended at the emergency room on March 7, 2023. Further, as found, the right of selection of an authorized provider passed to Claimant when Respondents failed to send Claimant the DPL despite Claimant having reported her injury on multiple occasions, including to her supervisor, the Assistant Director and by filing a WCC.

29. As found, Claimant requires medical attention as recommended by Dr. Branney and Dr. Aschberger. Claimant continues to have symptoms and complaints that have not been addressed and she is requesting further medical care. Claimant is credible and persuasive.

30. As found, Claimant has been unable to return to work due to her ongoing physical limitations related to the injuries which were caused by the March 6, 2023 accident.

31. As found, the Assistant Director of Housekeeping was not persuasive in her arguments that Claimant elected to be terminated. As found, Claimant believed that the clerk interpreting for her on March 7, 2023 stated that Claimant had to sign the admission of guilt (write-up) to obtain medical care and Claimant reasonably declined to sign a statement that she did not believe was correct. As found, Claimant’s understanding was supported by the fact that Employer took no further steps to provide Claimant with a DPL by mail or contact Claimant to discuss the alleged misunderstanding. Respondents’ complete disregard for an employee that had been working for Employer for 30 years speaks for itself. As found, Claimant did not act in a volitional manner. Claimant is more credible and persuasive over the contrary testimony of the Assistant Director.

32. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See Industrial Commission v. Riley, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See Bodensieck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. Arenas v. ICAO, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. University Park Care Center v. Industrial Claim Appeals Office, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. Cordova v. ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See Burnham v. Grant, 24 Colo. App. 131, 134 P. 254 (1913); see also Heinicke v. ICAO, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or

unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See Prudential Ins. Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

A compensable industrial accident is one that resulted in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To establish a compensable injury an employee must prove by a preponderance of the evidence that her injury arose out of the course and scope of employment with her employer. Section 8-41-301(1)(b), C.R.S. (2020); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury had its "origin in an employee's work-related functions and was sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there was a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. It is for the ALJ to determine the weight and credibility to be assigned to the evidence presented. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO Apr. 9, 2014).

As found, Claimant has shown that she was injured in the course and scope of her employment. Claimant was in the process of tending to work activities, including taking a mop into her housekeeping closet. Claimant would typically go into her closet while her housekeeping cart was in the closet to supply it, and it was a tight fit. Claimant's testimony

in this regard is more credible and persuasive than that of the Assistant Director of Housekeeping who stated that it was not possible for Claimant to be in her closet at the same time as her cart because they could not fit. Clearly, Claimant had been performing this job for 30 years and had a system or routine. Claimant has shown that it was more likely than not that she was within the course and scope of her work related activities when she injured her shoulder and low back, lifting the housekeeping cart, which was entangled with the doorknob, in order to exit the closet. This is supported by the medical records, the FROI and the Worker's Claim for Compensation.

Further, Claimant has shown by a preponderance of the evidence that she injured her shoulder and low back in the process of lifting her cart and required medical attention and continues to require medical attention. Claimant was attended at the emergency room at St. Anthony. Dr. Branney and Nurse Steins took roughly consistent histories of the mechanism of injury as credibly described by Claimant. Even Respondents' IME physician, Dr. Aschberger, described the mechanism consistently. These medical providers are credible and persuasive. It is particularly persuasive that, since the closet was so small, she had to twist in the limited space in order to manipulate the 60 lb. cart away from the door so she could get out, after been locked in the confined space for a quarter hour. As found and concluded, it is more likely than not that Claimant sustained injuries to her right shoulder and low back which were proximately caused by the accident at work on March 7, 2023.

C. Medical benefits

Employer is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). A claimant must establish the causal connection between the compensable event and the need for medical care with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Authorization refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Indus. Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8-43-404(5)(a)(I)(A), C.R.S. allows the employer to choose the claimant's treating physician "in the first instance," in order to protect their interest in overseeing the course of treatment for which they could ultimately be held liable. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006); *Loofbourrow v. Indus. Claim Appeals Office*, 321 P.2d 548 (Colo. App. 2011). If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury. *Brunch, supra*. An employer is deemed notified of an injury when it

has some knowledge of accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim. See Sec. 8-42-101(1)(a), C.R.S.; *Jones v. Adolph Coors Co.,* 689 P.2d 681, 684 (Colo. App. 1984); *Berends v. Town of Kiowa*, I.C.A.O., W.C. No. 5-162-468 (August 28, 2023).

The respondents are liable for emergency and authorized medical treatment reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777, 781 (Colo. App. 1990)("[I]in an emergency situation, an employee need not give notice to the employer nor await the employer's choice of a physician before seeking medical attention."). Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, *supra*; *see also* W.C.R.P. 8-3. The question whether medical treatment was reasonable and necessary to cure and relieve the effects of the injury is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The emergency exception is not necessarily limited to life-threatening situations, and whether a “bona fide emergency” existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). Since Claimant was not provided a list of providers, she was initially seen at St. Anthony Hospital where it was determined her condition was significant enough to inject her with Toradol and provide her with narcotic medications. Claimant requested medical care and Employer failed to provide her with any documentation of where she was to be attended. This information should not have been held hostage by Employer simply because Claimant declined to agree and sign a verbal coaching that required Claimant to admit that she was responsible for a policy violation in not working safely. Respondents failed to even allege that they had provided Claimant with any documentation they were alleging Claimant failed to complete. Claimant has shown that this was an emergent need for care and St. Anthony Hospital and its providers are authorized. Respondents are liable for payment of Claimant’s St. Anthony emergency room visit on March 7, 2023.

As further found, Employer knew of the injury. Claimant was credible and persuasive that she reported her injury right after it happened, was in instructed that she could go home after finishing her floor, which she did approximately two hours before her regularly scheduled time to leave, and was told that her condition might very well resolve overnight. Claimant met with the Assistant Director the day following the accident and again reported her accident. Respondents never referred Claimant to a medical provider to treat the injuries. Rule 8-2(1)(A) is very clear that, when an employer has notice of an on-the-job injury, the employer or insurer “shall provide” the injured worker with a verifiable written list of designated providers, which clearly did not take place here. Accordingly, the right of selection passed to Claimant and she may now see a doctor of her choice. In this case Claimant has designated Dr. Yamamoto, who is now an authorized treating physician.

Claimant has shown she is entitled to medical benefits that are reasonably necessary and related. Claimant was credible and persuasive that she needed further medical care and was asking for further medical care for her March 6, 2023 work related

injuries. Respondents' own IME physician, Dr. Aschberger, noted that Claimant needed medical care for the lumbar spine including medication management with anti-inflammatories, muscle relaxants, and sleep medication, as well as intervention with physical therapy and/or chiropractic care. He stated that, if Claimant continued to fail to improve, that further imaging might be warranted. He also recommended further diagnostic evaluation for the right shoulder. This ALJ infers from Dr. Aschberger's report that the imaging needed is an MRI of the right shoulder in order to determine if Claimant requires further medical care related to the shoulder. Dr. Branney also recommended that Claimant follow up with another provider. As found and concluded, Claimant requires medical attention that is reasonably necessary and related to the injuries to her right shoulder and lumbar spine as well as the sequelae of both injuries, which Claimant sustained as a consequence of the March 6, 2023 work related accident. Claimant has shown that the medical care in question are proximately caused by the March 6, 2023 accident and authorized medical treatment is reasonably necessary to cure and relieve Claimant from the effects of a work related injuries.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The parties stipulated that Claimant's average weekly wage was $720.00, which is also supported by the evidence. The parties' stipulation is approved and part of this order.

E. Temporary Total Disability Benefits

To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Claimant's testimony and the medical records support Claimant's inability to return to her regular employment. Claimant credibly and persuasively testified that she was unable to perform the work in housekeeping after March 6, 2023 because it was very heavy for her and she would not be able to do what was required of her. While she

followed her supervisor's instructions to finish her floor on March 6, 2023, it is found that Claimant had a lot of difficulty doing so and left at least two hours before her scheduled time to leave, and she left due to her injuries. Claimant has continued to be off work since her work related injury of March 6, 2023, causing her wage loss. Further, she credibly testified that she was unable to work at this time due to the pain and lack of treatment. Nothing in the portions of Dr. Aschberger's report that was in evidence nor the emergency room records indicated that Claimant would be able to physically return to work at this time. In light of the lack of substantial medical records to the contrary, this ALJ is persuaded by the totality of the evidence that Claimant is unable to work at this time and is entitled to temporary total disability benefits beginning the day following her work injury on March 6, 2023 to the present until terminated by law. Claimant has proven by a preponderance of the evidence that she is owed TTD benefits.

Claimant is owed TTD at least to the date of the hearing, including interest pursuant to statute for benefits which were not paid when due. Benefits through the date of the hearing and interest are calculated below. Further, Respondents continue to owe benefits following this date, including interest, until terminated by law.

[Redacted, hereinafter BC]

F. Responsible for Termination and Termination for Cause

The termination statutes, Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. both provide that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." The respondents must prove that a claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

Here, it is clear that Claimant reasonably believed that she was terminated by Employer's representative, the Assistant Director. Employer communicated through the admin assistant of the Assistant Director, who was translating for Claimant. Claimant understood the Assistant Director to state that, if she did not sign the "write-up" or "verbal coaching" that she could not be attended by a medical provider and was terminated. The

admin assistant did not testify and this ALJ found the Claimant's testimony credible, especially in light of the Assistant Director's explanation that the verbal coaching noted that the write-up was going into Claimant's permanent record and that it was Claimant's acknowledgement that a policy was violated because Claimant was not practicing safe work mechanics while on the job. It is clear from the Employer's job description that Claimant would, at the very least, be required to lift items of up to 100 lbs. on an occasional basis. The cart was no more than 60 lbs. as stated by the Assistant Director. Further, Claimant called the office and was locked in the closet, for what clearly seemed a long time to Claimant, without assistance. As found, Claimant acted reasonably in extricating herself from a situation that was not in any way volitional and it was unreasonable of Employer to require that Claimant sign a document requiring her to admit to being guilty of a policy violation when there was no policy violation in the acts Claimant exercised in moving her cart. As found, the act of refusing to sign such a document also is found not to be a policy violation. Respondents failed to provide persuasive evidence that there was a policy in place at the time of Claimant's work related injury that required Claimant to sign a document admitting to some kind of responsibility for the accident that occurred. Of course, there was no documentation in evidence of what the policy was other than testimony of the Assistant Director, who was not credible. There were no further write-ups of policy violations following Employer's termination of Claimant, no employment file showing the documentation that Employer was asking Claimant to sign nor any other documents or other actions by Employer following the termination. From the totality of the evidence, as found, Claimant was found credible and persuasive that Employer terminated Claimant on March 7, 2023 and Claimant was not at fault for the termination.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant proved by a preponderance of the evidence that she sustained work related injuries to her right shoulder and low back on March 6, 2023.

2. Respondents shall pay for reasonably necessary and related medical benefits for the treatment of Claimant's right shoulder, low back and any sequelae of the injuries in this matter, including the emergency visit to St. Anthony Hospital.

3. The right to select an authorized treating physician passed to Claimant and Claimant selected Dr. David Yamamoto who is now an authorized treating physician.

4. The parties stipulation is accepted and ordered, noting that Claimant's average weekly wage was $720.00 per week and her TTD rate is $480.00.

5. Respondents shall pay for TTD from March 7, 2023 until terminated by law.

6. Respondents shall pay interest on all benefits not paid when due pursuant to Sec. 8-43-410(2), C.R.S.

7. Respondents shall pay the benefits due through the date of the hearing in the amount of $14,928.58. Respondents shall continue to pay until terminated by law.

8. Respondents failed to show by a preponderance of the evidence that Claimant was either responsible for her termination or was terminated for cause.

9. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts** or email the Petition to Review to **oac-ptr@state.co.us**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 4th day of December, 2023.

By: _____

Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that Claimant's August 24 and 25, 2022 hospitalization was reasonably necessary to cure and relieve Claimant of the effects of his April 21, 2020 work injury, and whether Respondents are liable for the cost of that treatment.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on April 21, 2020, consisting of contraction of COVID-19. Respondents filed an admission of liability for the injury.

2. Claimant was admitted at Sky Ridge Medical Center beginning on April 24, 2020, where he was intubated until May 10, 2020, then transferred to Spaulding Rehabilitation Hospital on May 21, 2020, and then to the Medical Center of Aurora where he was treated for pulmonary embolism from May 23, 2020, through May 26, 2020, before he was readmitted to Spaulding Rehabilitation treating with Dr. Castro.

3. In June 2020, Claimant complained of severe, right sided flank and low back pain from kidney stones. Medical records document an acute kidney injury following his COVID diagnosis. Claimant testified that he is more susceptible to get kidney stones as a result of his work-related acute kidney injury. Symptoms related to his acute kidney condition included significant right flank and right lower back pain. Claimant also later testified that his authorized treating physician, Dr. Ramaswamy, advised him to go to the emergency room should he experience such pain because he had serious kidney problems requiring dialysis as a result of his COVID infection.

4. On August 24, 2022, more than two years after his initial hospitalization, Claimant sought unauthorized emergency care outside the chain of referral UC Health Emergency Department complaining of problems with his knee and his abdomen. Claimant believed he was suffering from work-related kidney stones, as his symptoms were consistent with those he experienced with the work-related kidney stones in 2020. The clinical impression was acute flank pain with right-sided low back pain without sciatica. Claimant underwent an ultrasound of his kidneys which was normal. There were no kidney stones. Claimant was treated with a lidocaine patch for his back pain and discharged on August 25, 2022, with a prescription for

physical therapy. Claimant was counseled on the need to follow up with his primary care provider.

5. Claimant underwent independent medical examinations with Dr. Scott Primack at Respondents' request on November 16, 2021, and February 16, 2023. In his report from the February 16, 2023, Dr. Primack addressed whether the August 24, 2022 hospital visit was related to Claimant's April 2020 COVID-19 hospitalization: "Based upon his history, clinical examination, knowing that this patient had work-related Covid, this most recent hospitalization, in no way shape or form would be considered work-related." He reasoned that Claimant's symptoms were more in line with sciatica, which he felt to be unrelated to Claimant's prior COVID-19 diagnosis.

6. Dr. Ramaswamy, after reviewing Dr. Primack's report, opined that Claimant's August 24 and 25, 2022 hospital stay was not work related and noted that "low back pain, sciatica, flank pain would not relate to this injury or to treatment related to this injury."

7. At hearing, Claimant testified that he felt compelled to go to the emergency room based on his weakened condition, pain levels, and Dr. Ramaswamy's advice to seek emergency treatment if he experienced kidney pain.

8. Dr. Primack testified that the cardiopulmonary issues caused by the COVID-19 results in acute kidney injuries. However, Dr. Primack testified that more than two years after his COVID-19 hospitalization any kidney stones would not be related to Claimant's COVID-19 diagnosis. Furthermore, Dr. Primack opined that Claimant's type-II diabetes, which Claimant had had for more than twenty years, doubled Claimant's risk for kidney stones. Therefore, in his opinion, the kidney stones were more likely due to Claimant's diabetes than his COVID-19.

9. The Court finds Claimant's testimony to be credible insofar as Claimant did subjectively believe that he had COVID-19-related kidney stones and sought treatment on August 24, 2022, based on Dr. Ramaswamy's prior advice to seek emergency treatment should he experience symptoms similar to those of kidney stones in the future. The Court also finds Dr. Primack's and Dr. Ramaswamy's opinions credible insofar as they opined that Claimant did not in fact have a kidney stone in August 2022, that his pain was related to sciatica, and that the sciatica was not related to Claimant's COVID-19 diagnosis.

10. The Court finds that the treatment Claimant received on August 24 and 25, 2022, was not reasonably necessary to cure and relieve Claimant of the effects of the work-related April 21, 2020 COVID-19 contraction.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – August 24 and 25, 2022 Hospitalization

The Colorado Workers' Compensation Act ("the Act") provides that an employer must provide medical care "as may reasonably be needed . . . to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S.

In a dispute over medical benefits that arises after the filing of a general admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the on-the-job injury and the need for medical treatment. *Snyder v. Indus. Claim Appeals Office of the State of Colo.*, 942 P.2d 1337, 1339 (Colo.App.1997).

Claimant argues that the emergency care obtained on August 24 and 25, 2022, was reasonably necessary to cure and relieve Claimant of the effects of his admitted injury. Specifically, he argues that his symptoms were identical to those he experienced in 2020 as a result of work-related kidney stones, and that he reasonably believed he was experiencing a new episode of work-related kidney stones and therefore sought treatment based on Dr. Ramaswamy's prior advice. In support thereof, Claimant cited *Sims v. Indus. Claim Appeals Off. of the State of Colo.*, 797 P.2d 777 (Colo.App.1990), for the proposition that an employee need not give notice to the employer prior to seeking medical care in an emergency situation.

Claimant argues that the fact that Claimant did not in fact have kidney stones is not relevant and that the investigation at the hospital was reasonably necessary to rule out work-related kidney stones. He reasons, "It is no different than an injured worker seeking further diagnostics sometime after the date of injury because of, for example, increased shoulder pain. If diagnostics of the hypothetical shoulder condition did not produce an explanation, it would not be later claimed unnecessary for purposes of establishing entitlement to medical benefits."

Respondents, in turn, argue that they are responsible only for that medical treatment that is reasonably necessary to cure and relieve Claimant of the effects of his work injury. Respondents contend that Claimant's subjective belief and actions, such as following advice from Dr. Ramaswamy, do not automatically render the treatment work-related, emphasizing the need for a proximate cause.

Regarding emergency medical care, Respondents argue that even if Claimant genuinely believed it to be a bona fide emergency, Respondents are not liable unless the need for treatment was caused by the work injury. Respondents cite *Madonna v. Walmart*, W.C. No. 4-997-641-02 (August 21, 2017), to support the assertion that liability for emergency medical treatment arises only when it is proximately caused by the work injury.

In *Sims*, 797 P.2d 777, a claimant obtained emergency treatment for an accident. The claimant's emergency physician then referred him to another physician, a physician not on the employer's designated provider list, with whom he sought treatment. An ALJ later determined that the treatment with the post-emergency doctor was not authorized by the employer. Although the ALJ in that case determined that the claimant did not sustain a compensable injury, the ALJ in that case did not address whether the employer was responsible for payment for the emergency treatment. *See Madonna* ("[T]he holding in *Sims* does not dictate the conclusion that the respondents may be held liable for emergency medical care for an injury that is not compensable.")

In the following years, various panels of the ICAO have reviewed cases implicating *Sims*. In *Mctaggart-Kerns v. Dell*, W.C. No. 4-915-218-02 (May 29, 2014), a claimant was involved in a motor vehicle accident arising out of and in the course of her employment. She sought treatment immediately at the emergency room with various pain complaints and due to a concern that a medication she had been taking made her particularly susceptible to a brain bleed. At the emergency room, all tests were negative. An ALJ later determined that the claimant did not sustain any injuries arising from the accident, and therefore there was no compensable claim, thus denying the claimant's request for the respondents to pay for the emergency room visit. The claimant appealed, arguing that the emergency room evaluation was necessary in order to evaluate her for a possible brain bleed or other injuries. The ICAO panel held that § 8-42-101(1)(a), C.R.S., does not provide for medical benefits where no injury in fact results from the accident.

Several years later, in *Madonna v. Walmart*, W.C. No. 4-997-641-02 (August 21, 2017), a panel of ICAO addressed a similar issue. In *Madonna*, an ALJ determined the claim was not compensable but nevertheless ordered the respondents to pay for the emergency medical treatment initially obtained by the claimant. The ICAO panel reversed the ALJ, holding that "since the ALJ did not find a causal relationship between the claimant's need for medical treatment and the work incident . . . the respondents may not be held liable for emergency medical treatment provided to the claimant."

In *Madera v. GCA Services Group*, W.C. No. 5-048-431 (May 6, 2020), an ICAO panel addressed a somewhat different, yet distinguishable set of facts. In *Madera*, an ALJ found that the claimant did not sustain a compensable injury and that concluded that the issue of medical benefits was therefore moot. The claimant appealed, arguing that where the respondents accepted and paid for medical treatment with designated providers while the claim was under a denial for further investigation, the claimant should not later be held liable for the medical expenses, citing § 8-42-101(6)(a), C.R.S., which provides in part, "An employer, insurer, carrier, or provider may not recover the cost of care from a claimant where the employer or carrier has furnished medical treatment except in the case of fraud." The respondents argued in turn that *Madonna* controlled insofar as it held that respondents are not liable for medical care that is not reasonably necessary to cure and relieve the effects of a compensable injury. The ICAO panel rejected the respondents' argument, noting that *Madonna* involved emergency care, not care furnished by the employer, and therefore was distinguishable. Therefore, the panel held that the issue of medical benefits was not moot, thus remanding the issue to the ALJ for further findings.

The facts of the present case are unique from those of *Sims*, *Madonna*, and *Madera*. Specifically, in this case, the injury involved an admitted claim in which Claimant had already selected an authorized treating physician. At least one of Claimant's authorized treating physicians, Dr. Ramaswamy, recommended that Claimant go to the ER should he experience such pain because he had serious kidney problems requiring dialysis as a result of his COVID infection. Claimant did in fact have serious pain that he reasonably believed to be related to his work injury and therefore sought medical

treatment based on Dr. Ramaswamy's past advice. However, it turned out that the pain and the treatment were wholly unrelated to Claimant's compensable condition.

However, despite Claimant having sustained a compensable injury in this case, the Court finds that Claimant's need for treatment on August 24 and 25, 2022, did not arise from his April 2020 work injury. Section 8-42-101(1)(a), C.R.S., provides that respondents are liable for costs of medical treatment only where the need for treatment arises from a compensable injury. In this case, the need for treatment does not.

Although Claimant argues that the emergency room visit was reasonably necessary to rule out the possibility of another kidney stone related to the injury and should therefore be compensable, the ICAO rejected a similar argument in *Mctaggart-Kerns*. Based on the rationale in *Mctaggart-Kerns*, this Court concludes that it may not order Respondents to pay for otherwise unauthorized emergency medical treatment obtained only to rule out the involvement of a compensable condition.

While § 8-42-101(6)(a), C.R.S., provides that an employer may not recover the costs of medical treatments furnished by the employer, the Court finds that Respondents did not furnish the treatment for the episode of care on August 24 and 25, 2022. Therefore, because Respondents did not furnish the August 24 and 25, 2022 treatment, and because that treatment was not reasonably necessary to cure and relieve Claimant of the effects of the April 21, 2020 injury, Respondents are not liable for the cost of medical treatment for the episode of care of August 24 and 25, 2022.

ORDER

It is therefore ordered that:

1. Claimant's request for compensation for the August 24 and 25, 2022 episode of medical care is denied.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 4, 2023.

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has proved by a preponderance of the evidence that the sacroiliac joint injection and chiropractic care recommended by Dr. Miller on April 4, 2023, are reasonable, necessary, and related to the industrial injury.

2. Whether Respondent has proved by a preponderance of the evidence that maintenance medical care is no longer reasonably necessary to maintain Claimant's status at maximum medical improvement.

FINDINGS OF FACT

1. Claimant was a parts clerk for Respondent who sustained an admitted injury on August 29, 2019, when he developed low back and neck pain while bending over to reposition a heavy metal frame onto a rack.

2. The following day, Claimant obtained treatment with his authorized treating physician, Dr. Kirk Holmboe, at Midtown Occupational Health Services. Claimant complained of tenderness over his left sacroiliac area. Dr. Holmboe performed a physical examination and noted left low back pain. He diagnosed Claimant with a left sacroiliac strain and a cervical strain.

3. Claimant began undergoing physical therapy and chiropractic care. At Claimant's September 12, 2019 visit with chiropractor Dr. Jason Gridley, Dr. Gridley performed a Patrick's test and sacroiliac joint loading maneuvers with positive reproduction of symptoms in Claimant's left sacroiliac joint.

4. On October 10, 2019, Dr. Marc Steinmetz, one of Claimant's authorized treating physicians referred Claimant for a lumbar MRI. Claimant underwent the MRI on November 5, 2019. The MRI showed multilevel degeneration at the L4-L5, L5-S1, broad based left paracentral disc protrusion at L4-L5, and disc herniation at L5-S1 impinging the left L5 nerve root in the foramen.

5. Claimant was referred for psychological counseling with Ms. Susie Love, M.A., L.P.C, under the supervision of Dr. Timothy Shea, Psy. D. Claimant was diagnosed with adjustment disorder, anxiety, and insomnia. Notably, Claimant complained of intermittent left sacroiliac joint pain.

6. On January 21, 2020, Claimant underwent left L4-L5 and L5-S1 transforaminal epidural steroid injections. Several weeks later, on February 5, 2020, Claimant saw Dr. Miller and reported substantial improvement in his pain. Claimant also saw Dr. Steinmetz that day who assigned Claimant temporary work restrictions of maximum lifting of 40 pounds.

7. Claimant again had increased pain at his May 11, 2020 appointment and underwent additional epidural steroid injections two days later.

8. At Claimant's June 3, 2020 appointment with Dr. Steinmetz, Claimant reported improvements in his pain with his therapy and chiropractic treatment. Dr. Steinmetz released Claimant to full duty.

9. On June 30, 2020, Claimant complained to Dr. Steinmetz of increased back pain after having returned to full duty.

10. At Claimant's October 8, 2020 visit with Ms. Love, Ms. Love observed that Claimant's coping skills and mood management had improved. She recommended additional sessions to help Claimant with his continued anxiety.

11. Claimant was ultimately placed at maximum medical improvement by Drs. Steinmetz and Miller on December 2, 2020. Claimant was still experiencing left low back pain and lateral upper left thigh discomfort at that time. Dr. Steinmetz recommended maintenance medical treatment consisting of continued visits with Dr. Miller. He also provided Claimant with permanent work restrictions of lifting up to twenty pounds.

12. Claimant requested a Division independent medical examination, which took place with Dr. John Douthit on April 12, 2021. Dr. Douthit concurred with Drs. Steinmetz and Miller regarding Claimant's date of MMI. Respondent consequently filed a Final Admission of Liability consistent with Dr. Douthit's report and admitted for open medical maintenance benefits.

13. Claimant continued with chiropractic care under his maintenance medical care. On April 13, 2021, Claimant reported to Dr. Gridley that he was experiencing pain across the lower lumbar region and left upper sacroiliac joint region. Dr. Gridley's evaluation was consistent with mild sacroiliac joint restriction on the left.

14. On May 1, 2021, Claimant saw Dr. Steinmetz. Claimant continued to complain of back pain and discomfort. However, he was also concerned that he would not be able to find employment within his permanent work restrictions. Claimant requested that Dr. Steinmetz loosen his restrictions. However, Dr. Steinmetz was not comfortable doing so and referred Claimant to Dr. Miller.

15. Claimant followed up with Dr. Miller. At that appointment, he complained of tenderness over his sacroiliac joint. Claimant requested Dr. Miller loosen his

restrictions. Dr. Miller agreed to have Claimant undergo a functional capacity evaluation to determine what loosened restrictions would be appropriate.

16. Claimant underwent an independent medical examination with Dr. Carlos Cebrian at Respondent's request on July 9, 2021. Dr. Cebrian concurred with the date of MMI and found that the recommended maintenance care was reasonable and necessary.

17. On August 6, 2021, Dr. Miller assigned Claimant loosened permanent work restrictions of below-waist lifting maximum of sixty pounds occasionally and forty pounds frequently, above-waist lifting to sixty pounds occasionally and fifty pounds frequently, sitting maximum of forty minutes per hour, standing maximum of one hour, maximum pushing of sixty-five pounds, and maximum pulling of seventy-five pounds.

18. Claimant returned to Dr. Miller on November 5, 2021, complaining of a flare up in back pain. On physical examination, Dr. Miller noted tenderness of the left sacroiliac joint with a positive Yeomans and Patrick's tests. Dr. Miller recommended a repeat rhizotomy.

19. Claimant saw Dr. Gridley on November 23, 2021, and complained of diffuse back pain, primarily in the lumbosacral junction and sacroiliac joint.

20. On December 6, 2021, Dr. Miller performed the rhizotomy. Claimant reported that the procedure was very helpful and resulted in a 70 percent improvement of his symptoms.

21. Claimant returned to Dr. Miller on March 20, 2022. At that appointment, Claimant requested that Dr. Miller release him to full duty, which Dr. Miller did. Claimant later testified that he had not been allowed to work for Respondent due to his work restrictions. However, after his work restrictions were lifted, he was able to return to working for Respondent.

22. Claimant saw Dr. Miller again on September 28, 2022, complaining of increased stiffness and diminished range of motion in his back after having returned to work for Respondent. Dr. Miller noted that Claimant continued to use lidocaine patches for his low back pain. Dr. Miller ordered another rhizotomy procedure, which Claimant underwent on November 14, 2022.

23. When Claimant next saw Dr. Miller on November 29, 2022, Claimant reported only minimal relief from the rhizotomy. Dr. Miller performed Yeomans and Patrick's tests, both of which were positive on the left, suggesting sacroiliac joint pain. Dr. Miller recommended continued use of lidocaine patches, chiropractic care, medications, and his home exercise program. Dr. Miller indicated he would consider a left sacroiliac joint injection if Claimant did not experience pain relief in the coming weeks.

24. At an appointment on January 5, 2023, Claimant stated that he did not experience an obvious benefit from the ablation. Dr. Miller opined that Claimant's symptoms were now more consistent with an SI joint condition. However, because Claimant felt better overall, Dr. Miller deferred a recommendation for a SI injection.

25. Claimant returned to Dr. Miller on April 4, 2023, with continued pain. Dr. Miller again performed Yeomans and Patrick's tests, both of which were positive, suggesting sacroiliac joint pain. Dr. Miller recommended left sacroiliac joint injections and additional chiropractic care.

26. Respondent obtained a medical record review performed by Dr. Joseph Fillmore to address whether the requests for the SI injection and further chiropractic care was reasonable, necessary, and related to the original workplace injury on behalf of Respondent. Dr. Fillmore determined that the SI joint injection did not relate to his claim, noting that the SI joint was not an initial pain generator.

27. Based on Dr. Fillmore's record review, Respondent denied Dr. Miller's request for prior authorization for left sacroiliac joint injections and additional chiropractic care. Consequently, Claimant filed an Application for Hearing to challenge the denials. Respondent in turn endorsed the issue of withdrawing its admission for medical maintenance.

28. Claimant underwent an independent medical examination with Dr. Robert Kleinman on June 16, 2023. Dr. Kleinman noted that Claimant had initially been diagnosed with adjustment disorder and that Dr. Shea had recommended six sessions of psychotherapy. However, Dr. Kleinman noted that Claimant had undergone eighty-five sessions and continued to receive treatment despite returning to work and managing stress. Noting [Redacted, hereinafter JC] progress, Dr. Kleinman suggested terminating psychotherapy, asserting that it was no longer reasonable or necessary under workers' compensation. He recommended a maximum of two additional sessions over four weeks for consolidation and termination of treatment, leaving the option for further therapy outside workers' compensation if desired.

29. On July 12, 2023, Claimant underwent an independent medical examination with Dr. Cebrian. Dr. Cebrian noted Claimant's initial diagnoses included "lumbar strain with facet-mediated disease and lumbar radiculopathy, and cervical strain." Notably, Dr. Cebrian left out Claimant's "left sacroiliac strain" that was also included in his initial, August 30, 2019, diagnoses. Dr. Cebrian stated "there has been no consistent SI joint complaints as part of his claim." He opined that Claimant's sacroiliac joint pain was unrelated to his work claim and no further maintenance treatment was necessary.

30. Claimant testified at hearing that he rarely lifts heavy things at work—at most ten to twenty-five pounds. Claimant testified that he continued to go to the gym even

after he was placed at maximum medical improvement. He testified that his pain is normally about a two out of ten. However, it will increase to five or seven out of ten on days when he works. Claimant testified that after a five-day workweek, his pain would be miserable. He testified that his pain was much less when he was still receiving maintenance medical treatment. Nevertheless, Claimant testified that he was still able to perform his work, albeit with pain.

31. The Court finds Claimant's testimony credible.

32. Dr. Cebrian testified as an expert in occupational medicine. Dr. Cebrian testified about the relatedness of the sacroiliac joint injection recommended by Dr. Miller, which he felt would not be related to Claimant's injury. He reasoned that when Claimant was injured it was the facet joints on the left side that were determined at that time to be the pain generator, as determined by the outcome of the medial branch blocks. Specifically, he clarified that Claimant would not have had the diagnostic response to the medial branch blocks that he did had it not been the facet joints that were the pain generator, as the blocks were directed at Claimant's facet joints. Dr. Cebrian testified that it was only the facet joints that were addressed with regard to Claimant's pain from 2019 through 2023. Dr. Cebrian's understanding was that it was not until Claimant had the most recent unsuccessful rhizotomy that Dr. Miller began to suspect the sacroiliac joint as the source of Claimant's symptoms.

33. Regarding Claimant's chiropractic care, Dr. Cebrian testified that the chiropractic care would have been reasonable before and shortly after Claimant reached MMI, but he felt it was no longer necessary. He explained that chiropractic care might be reasonable when there is an increase in activity, but that it should not be used for long-term care, and what Claimant had exceeded what was recommended by the Medical Treatment Guidelines.

34. The Court does not find Dr. Cebrian's testimony credible or persuasive. Dr. Cebrian's opinions rely in significant part on the premise that the pain generator of Claimant's early symptoms was not the sacroiliac joint and that treatment for that region was not recommended until later in his treatment. However, the records clearly document complaints of sacroiliac joint pain throughout Claimant's treatment. Although Dr. Cebrian noted a negative Patrick's maneuver on physical examination, Claimant's treating providers documented positive Patrick's maneuvers, including Dr. Gridley on September 12, 2019, and Dr. Miller on November 5, 2021, November 29, 2022, and April 4, 2023.

35. The Medical Treatment Guidelines recommend a sacroiliac joint injection only if the patient exhibits "at least 3 positive physical exam maneuvers (e.g. Patrick's sign, Faber's test, Ganslen, distraction or gapping, or compression test.)." Rule 17, WCRP, Exhibit 1 (8)(a)(iii), p. 52. While it appears that Dr. Miller performed only the Patrick's test, he repeated the test several times over the course of several

years, obtaining a positive response each time, which was consistent with the positive result obtained by Dr. Gridley.

36. Dr. Kleinman also testified at hearing as an expert in psychology and psychiatry. Dr. Kleinman testified that Claimant had more than eighty therapy appointments with Ms. Love, which is well beyond what is recommended by the medical treatment guidelines. He testified that the objective of the therapy was to help Claimant with getting back to work and managing his anxiety in the process. He felt that Claimant had developed an emotional dependence on his psychotherapy sessions. Since Claimant had not seen Ms. Love in nine or ten months, Dr. Kleinman felt that Claimant may not need any closing appointments, though a couple of closing sessions might be reasonable.

37. The Court finds Dr. Kleinman's testimony credible and his opinions persuasive.

38. Although Claimant has continued to work full duty for Respondent despite a cessation of his maintenance medical care, the Court finds that, based on the totality of the circumstances, Claimant's level of function is likely to diminish should his sacroiliac joint pain worsen.

39. The Court finds that the left sacroiliac joint injections and additional chiropractic care recommended by Dr. Miller on April 4, 2023, are reasonably necessary to relieve Claimant of the effects of his injury and prevent further deterioration of his condition. Therefore, the Court finds that Claimant continues to require maintenance medical treatment to maintain his status at maximum medical improvement.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it

is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – sacroiliac joint injections and chiropractic care

The Colorado Workers' Compensation Act ("the Act") provides that an employer must provide medical care "as may reasonably be needed . . . to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S.

It is well settled that even though a respondent is found liable to pay for ongoing maintenance medical benefits, either by order or by admitting in a final admission of liability, it is not precluded from later contesting liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo.App.1997). Further, when the respondent contests liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1998); *Snyder*, supra.

Even where an ATP makes a recommendation at maximum medical improvement for only a limited set of maintenance medical benefits, treatment beyond that recommendation "merely becomes an element of the claimant's burden to prove the disputed treatment is reasonable, necessary and causally related to the industrial injury." *Karathanasis v. Chili's Grill & Bar*, Claimant, W. C. No. 4-461-989 at *3 (Aug. 8, 2003).

Claimant argues that his sacroiliac joint pain is well documented in the record and that Dr. Miller is in the best position to determine what ongoing maintenance medical treatment is appropriate to maintain Claimant at maximum medical improvement. Respondent, in turn, argues that there is insufficient evidence that Claimant's pain originates at the sacroiliac joint and that, even if it does, it would not be related to

Claimant's work injury, as a sacroiliac joint injury was insufficiently documented over the course of Claimant's treatment for his injury. Furthermore, Respondent argues that chiropractic care is appropriate only for temporarily managing flare-ups in symptoms when patients increase their activity level.

As found above, Claimant's sacroiliac joint pain is well documented in the record from early on in his treatment through those most recent records documenting Claimant's maintenance medical treatment. Dr. Miller has performed sufficient testing such that sacroiliac injections are reasonably necessary to maintain Claimant's status at maximum medical improvement. Also, as found above, Claimant's chiropractic treatment is reasonably necessary to maintain Claimant's status at maximum medical improvement, as he has testified that his symptoms are much less when he is receiving maintenance care. Consequently, the Court finds and concludes that sacroiliac joint injections and continued chiropractic care are reasonably necessary to relieve Claimant of the effects of his work-related injury and prevent deterioration of his condition.

Medical Benefits – termination of maintenance

A claimant may receive medical treatment reasonably necessary to relieve the effects of a claimant's industrial injury or to prevent further deterioration of the claimant's condition. *See* § 8-42-101(1)(a), C.R.S.; *see also Grover v. Industrial Commission*, 759 P.2d 705 (Colo.1988) (authorizing receipt of reasonably necessary medical treatment after permanent disability award). However, the burden of proof is on the claimant to establish entitlement to Grover medical benefits. *Grover v. Industrial Commission, supra*; *Cordova v. Foundation Builders Inc.*, W.C. No. 4-296-404 (April 20, 2001). In order to receive such benefits, at the time permanent disability benefits are determined the claimant must present substantial evidence that future medical treatment is or will be reasonably necessary to relieve the claimant from the effects of the injury or to prevent deterioration of the claimant's condition. *See Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo.App.2003*); Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995).

However, where, as here, respondents have admitted for maintenance medical benefits in a final admission of liability, the burden is on respondents to prove by a preponderance of the evidence that no further maintenance medical treatment is reasonably necessary. Under section 8–43–201(1), a party seeking to modify a general or final admission, a summary order, or a full order has the burden to prove by a preponderance of the evidence that such a modification should be made. *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014).

As found above, sacroiliac joint injections and continued chiropractic care are reasonably necessary to relieve Claimant of the effects of his work-related injury and prevent deterioration of his condition. Therefore, because there is maintenance medical treatment that remains appropriate under this claim, Respondent has not proved by a preponderance of the evidence that a withdrawal of the admission for maintenance medical benefits is appropriate.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the sacroiliac joint injections and chiropractic care recommended by Dr. Miller on April 4, 2023.

2. Respondent's request to withdraw its admission for maintenance medical benefits is denied.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 4, 2023.

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to his right eye arising out of the course of his employment with Employer on July 8, 2021. Claimant had worked for Employer for approximately four years. Claimant stopped working for Employer on June 28, 2023. At the time of his injury, Claimant was also employed by [Redacted, hereinafter BO], where he had worked for more than 20 years.

2. On November 7, 2022, Respondents filed a Final Admission of Liability admitting for temporary disability and permanent partial disability benefits. Respondents admitted to an average weekly wage (AWW) of $1,073.03, which was calculated based solely on his wages earned from Employer. (Ex. A). No credible evidence was admitted indicating Respondents calculation of Claimant's AWW earned from his work for Employer was incorrect. However, Respondents' AWW calculations did not account for Claimant's earnings from BO[Redacted].

3. Claimant's Exhibit 3 includes wage records from BO[Redacted] from January 2018 to April 2023, and show Claimant was paid bi-monthly. (Ex. 3). For the three months preceding his work injury (*i.e.*, April 1, 2021 to June 30, 2021, a period of 91 days), Claimant worked 260.5 hours (averaging 20.04 hours per week) at an hourly rate of $15.63, and earned $4,071.62. This corresponds to an AWW of $313.20, calculated as follows:

BO[Redacted] WAGES FROM 4/1/21 – 6/30/21	
Hourly Rate	$15.63
Days from 4/1 - 6/30/21	91
Total Hours for Period	260.5
Total Wages (Hr. Rate x Total Hrs.)	$4,071.62
Daily Wage (Total Wages/days)	$44.74
AWW (Daily Wage x 7)	$313.20

4. Claimant received an hourly wage increase on July 1, 2021 (seven days before his injury), to $15.87 per hour. (Ex. 3).

5. Claimant continued to work for BO[Redacted], and received periodic hourly wage increases. In March 2022, Claimant's hourly wage at BO[Redacted] was increased to $19.00. It was again increased in April 2022 to $19.95. (Ex. 3). Claimant testified at hearing that his current hourly wage is $21.00, although this is not reflected in Claimant's

employment or wage records. Claimant testified that these raises were given to all BO[Redacted] employees.

6. Following his injury, Claimant did not work for BO[Redacted] for approximately two months, and returned sometime during the first two weeks of September 2021, working periodically until the week of November 16, 2021. (Ex. 3). Claimant was released to work full-duty with no restrictions effective November 2, 2021. (Ex. A, p.23). Claimant then returned to working for BO[Redacted] on the week of November 16, 2021, working without interruption until at least April 30, 2023, averaging approximately 36.5 hours per week. (Ex. 3). Claimant testified he currently works for BO[Redacted] and another employer.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). "This discretionary authority permits the ALJ to calculate the average weekly wage based on earnings from concurrent employments which the claimant held at the time of the injury." *Contreras v. Chimr*, W.C. No. 4-399-293 (ICAO Jun. 20, 2007). However, there is no *ipso facto* rule requiring the inclusion of wages from concurrent employment. *Id*.

The objective of wage calculation is to determine a fair approximation of a claimant's wage loss and diminished earning capacity. *Avalanche Indus., Inc. v. Indus. Claim Appeals Office,* 166 P.3d 147, 153 (Colo. App. 2007), *aff'd sub nom. Avalanche Indus., Inc. v. Clark*, 198 P.3d 589 (Colo. 2008), as modified on denial of reh'g (Jan. 20, 2009). Thus, wages from current employment may be included in the calculation of AWW where appropriate. *Broadmoor Hotel & Cont'l Ins. Co. v. Indus. Claim Appeals Off. of State of Colo.*, 939 P.2d 460, 462 (Colo. App. 1996).

Claimant has established that his AWW should be increased to include his wages earned at BO[Redacted] at the time of his injury. Because Claimant was concurrently employed, a fair approximation of his hourly wage at the time of injury includes the income earned from all employment at the time of injury. Respondents' admitted AWW of $1,073.03, does not include the Claimant's wages earned from BO[Redacted] at the time of is injury. The ALJ finds that Claimant's AWW for his employment with BO[Redacted] should be calculated based on the hourly rate he was receiving at the time of his injury (*i.e.*, $15.87 per hour). Applying the same formula used in Finding of Fact 3, above, Claimant's AWW from BO[Redacted] at the time of injury was $318.01.

BO[Redacted] AWW CALCULATION		
Hourly Rate	$15.63	$15.87
Days from 4/1 - 6/30/21	91	91
Total Hours for Period	260.5	260.5
Total Wages (Hr. Rate x Total Hrs.)	$4,071.62	$4,134.14
Daily Wage (Total Wages/days)	$44.74	$45.43
AWW (Daily Wage x 7)	$313.20	$318.01

Claimant's AWW at the time of injury was therefore $1,391.04 (*i.e.*, $1,073.03 + $318.01).

Claimant asserts his AWW should be further increased to reflect his current hourly wage of $21.00, rather than his hourly rate at the time of injury. While an AWW

determination may consider post-injury wage increases, the inclusion of such increases is discretionary. *See Waalkes v. The Salvation Army*, W.C. No. 4-533-879 (Sep. 30, 2003); *Pizza Hut v. Indus. Claim Appeals Office,* 18 P.3d 867, 868 (Colo. App. 2001).

In his position statement, Claimant contends that including Claimant's wage increase is supported by both *Pizza Hutt, supra*, and *Waalkes, supra*. Claimant's case, however, is distinguishable from both *Waalkes* and *Pizza Hut*. Unlike *Pizza Hut*, Claimant did not change careers after his work injury, but remained in the same position with BO[Redacted]. Thus, the rationale for applying a higher AWW in *Pizza Hut* is not present. In *Waalkes*, the ICAO found that the ALJ could reasonably infer that the claimant's industrial injury resulted in permanent medical restrictions which may impair the claimant's ability to maintain employment at his hourly wage. Here, the record before the ALJ does not indicate Claimant has permanent work restrictions which may impact his future career, or his ability to earn wages. To the contrary, Claimant was released to work full duty, without work restrictions, on November 2, 2021, and earned more post-injury than before. Claimant has articulated no persuasive argument for including post-injury wage increases in the calculation of his AWW.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage at the time of injury was $1,391.04.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. 5-210-260-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that the surgical procedure requested by Dr. Rumley, including a three-level fusion, is reasonable and necessary?

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was employed by Employer, when he was injured in the course and scope of his employment on June 29, 2022. *Hrg. Trans. pg. 11 lns. 16-22*.
2. While lifting objects from low shelves, Claimant felt immediate pain in his lower back. Over time, Claimant began experiencing numbness and shooting pains in his lower extremities, as well as bouts of incontinence. Claimant also began experiencing weakness in his left leg, drop foot, and needing assistive devices to walk. *Hrg. Trans. pg. 12 lns. 1-25, pg. 13 lns. 1-5*.
3. At the time of hearing, Claimant's body mass index (BMI) was 39 and he had been continuing to lose weight since his injury. *See Hrg. Trans. pg. 13 lns. 6-17*.
4. Having failed all prior conservative treatment measures, Dr. Jacob Rumley, Claimant's authorized treating orthopedic specialist, has recommended a transforaminal lumbar interbody fusion (TLIF) procedure for L2-L5. *See Ex. 5, Bates 34.*
5. Claimant has discussed the pros/cons, and risks/potential benefits of the proposed TLIF procedure. Having engaged in thorough shared decision making with Dr. Rumley, Claimant has accepted the surgical risks and wishes to proceed with Dr. Rumley TLIF surgical recommendation. *See Hrg. Trans. pg. 14 lns. 1-10*.
6. Dr. Rumley is a fellow in the American Academy of Orthopedic Surgeons, is a member of the North American Spine Society and AO Spine, and he is board-certified in orthopedic surgery. His training includes a spine fellowship at Augusta University which was a level 1 trauma and deformity center. Moreover, he currently trains fellows in spine surgery and therefore maintains an academic role. Dr. Rumley is also level II accredited. *See Rumley Depo. pgs. 7-8.*
7. Dr. Rumley explained that a patient's signs are objective findings that support a patient's reported subjective symptoms. *See Rumley Depo. pg. 9 lns. 14-20*.
8. Claimant suffers from claudication-type symptoms. "Claudication is progressive symptoms with inactivity either being ambulation or upright posture." Typical examples include increased leg pain, leg symptoms, and urinary incontinence. *Rumley Depo. pg. 10 lns. 10-21*.

9. Claimant underwent a lumbar MRI on July 14, 2022. The findings show that Claimant had significant stenosis of his foramen, lateral recess, and central canal. There was also significant lumbar disc degeneration. *Rumley Depo. pg. 11 lns. 1-10; Rspndt. Ex. H, Bates 51.*

10. Claimant also underwent an EMG nerve conduction study and it revealed that Claimant was experiencing radiculopathy as a result of nerve compression at multiple levels of his lower back.

11. The TLIF procedure recommended by Dr. Rumley includes decompression of Claimant's nerves by way of a laminectomy. A laminectomy is the removal of bone from the lumbar spine, which results in the foramen being opened and relieving the nerve compression. *See Rumley Depo. pg. 12 lns. 14-17*.

12. Claimant also has sagittal malalignment. This means that Claimant's spine is outside of normal alignment ranges when compared to the position of his pelvis. The positional difference is significant as a person of Claimant's young age (54), should be at or near 0 but Claimant is at a difference of 13. *See Rumley Depo. pgs. 14-16*.

13. The purpose of the recommended TLIF procedure is to decompress the nerves in Claimant's lumbar spine to allow the nerves to function properly—thereby resolving Claimant's claudication symptoms. *Rumley Depo. pg. 17 lns. 4-8, pg. 33 lns. 17-19, pg. 34 lns. 14-16*.

14. As a result of bone removal from laminectomies, instability of the lumbar spine is anticipated. The expected instability is one reason for Claimant to undergo fusion as part of the decompression procedure. *Rumley Depo. pg. 18 lns. 6-19*.

15. Dr. Brown is Respondents retained expert. While Dr. Brown is a board-certified neurosurgeon, Dr. Brown is not fellowship trained as is Dr. Rumley. As a result, Dr. Brown's skillset might be different than Dr. Rumley's and not as innovative or advanced – since he is not fellowship trained.

16. Dr. Brown indicated that he believes Claimant may have untreated NIDDM—otherwise known as Type 2 diabetes. *Ex. A, Bates 13; Rumley Depo. pg. 19 lns. 5-10.*

17. Claimant's symptoms are more likely related to his lumbar injury then they are to polyneuropathy potentially caused by diabetes. *See Rumley Depo. pg. 19 lns. 15-17, pg. 20 lns. 1-18.*

18. At the time of hearing, Claimant's BMI was 39 and Dr. Rumley explained that it is an acceptable BMI to proceed with the recommended surgery because it is under 40. Rumley Depo. pg. 21 lns. 10-23. When a patient has a BMI of 40 or more, the risks of surgery are increased and include higher rates of infection, deep vein thrombosis, and perioperative complications. *Rumley Depo. pg. 22 lns. 1-13*.

19. Dr. Brown agrees that Claimant needs to undergo decompression surgery, but he suggests an alternative procedure using tubes to decompress three levels of the spine. *Ex. A, Bates 14*.

20. Dr. Rumley strongly disagrees with Dr. Brown that tubular decompression is the superior procedure for Claimant to undergo for several reasons. First, the TLIF procedure is far more likely to result in a better decompression of Claimant's lumbar

nerves (especially related foraminal stenosis such as Claimant's), which is the main goal of both possible surgeries. Second, Claimant has an underlying structural deformity (*i.e.*, the sagittal imbalance). The tubular decompression surgery would not address this deformity, while the TLIF procedure recommended by Dr. Rumley will. To not address the deformity in conjunction with decompression will set Claimant up for a worse long-term outcome and increase the likelihood he would need to undergo another lumbar surgery in the future because the structure will worsen over time. As a result addressing the deformity is a necessary component of the overall surgical procedure recommended by Dr. Rumley. *Rumley Depo. pgs. 23-24, pg. 34 lns. 10-22, pg. 35 lns. 16-18.*

21. Dr. Brown has indicated the tubular decompression procedure he has proposed does not guarantee that Claimant will be without lumbar instability. *Brown Depo. pg. 16 lns. 4-5.*

22. Dr. Rumley has performed tubular decompression surgeries. Dr. Rumley noted that those patients do not tend to do as well post-operatively as patients that undergo TLIF. *Rumley Depo. pg. 28 lns. 21-25, pg. 29 lns. 1-2*.

23. Dr. Rumley is routinely referred patients that have previously undergone spine surgery by others. When he sees patients that have previously undergone tubular decompression, those patients commonly have structural instability, or the decompressions were incomplete in the first place. This is yet another reason why the TLIF procedure is superior to tubular decompression. The revision surgery for those patients is TLIF and carries with it increased risks and complications as a revision surgery. *See Rumley Depo. pg. 29 lns. 3-25, pg. 30 lns. 1-2*.

24. Generally, Dr. Brown avoids operating on anyone that is morbidly obese. *See Brown Depo. pg. 11 lns. 6-8*.

25. Dr. Brown concedes that TLIF, as recommended by Dr. Rumley, "is certainly an option." *Brown Depo. pg. 12 lns. 1-2*. He also concedes that TLIF "provides a good decompression." *Id. at pg 12 lns. 7-12*.

26. In support of his recommended tubular decompression procedure, Dr. Brown referenced a publication indicating "that a decompression, a simple decompression, versus a fusion Improved back pain . . . ." *Brown Depo. pg. 17 lns. 21-24*. As noted above, however, the primary focus and need for Claimant's surgery is decompression of the nerves to address his claudication symptoms—not generalized back pain.

27. Dr. Brown also expressed concern about future adjacent level degeneration. This concern, however, was based on unverified cited statistics related to the cervical spine—not the lumbar spine. *Brown Depo. pg. 20 lns. 2-10*.

28. When asked if Dr. Rumley's recommended TLIF procedure was unreasonable, Dr. Brown said that it was aggressive and not within the *Guidelines*[1] and normal standards. *See Brown Depo. pg. 20 lns. 18-21.*

[1] Workers' Compensation Rules of Procedure, 17, Ex. 1, Low Back Pain Medical Treatment Guidelines.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that the surgical procedure requested by Dr. Rumley, including a three-level fusion, is reasonable and necessary?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Off.,* 53 P.3d 1192 (Colo. App. 2002).

When determining whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines (*Guidelines*) because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the *Guidelines* is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather, the ALJ may give evidence regarding compliance with the *Guidelines* such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., WC* 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). See also: Section 8-43-201(3), C.R.S.

There is no dispute that Claimant needs lumbar surgery and that such surgery is causally related to his work injury. The dispute that exists is which procedure is the most appropriate for Claimant.

Dr. Rumley, as a treating physician, has concluded that the TLIF procedure is not only the superior procedure, but it is also reasonable and necessary. When asked directly, Dr. Brown did not specifically say the TLIF procedure was unreasonable—but yet he did say that it was aggressive and not within normal standards. Thus, he believes the procedure is not reasonable.

Dr. Brown's belief that the TLIF procedure is not reasonable, is based on three primary arguments—all of which are unpersuasive.

The first is that the TLIF procedure is for three levels and the *Guidelines* indicate that no more than two levels should be done in the case of fusion surgeries.

As pointed out by Dr. Rumley, the *Guidelines* are just that—guidelines. They are not absolutes. So while the *Guidelines* do provide guidance as to when certain procedures should or should not be done, there is the ability to deviate from the *Guidelines* in appropriate circumstances and the Court finds that such circumstances exist here.

Both Dr. Rumley and Dr. Brown recognize that Claimant has objective findings by way of MRI, EMG, and diagnostic injections confirming that Claimant has claudication symptomatology stemming from three levels of his lumbar spine. While the procedure is different, even Dr. Brown's recommended tubular procedure is for three levels. Both

physicians appear to agree that if three levels are symptomatic, they should all be addressed.

Dr. Rumley has convincingly shown that TLIF involving laminectomy is likely to lead to better results for decompressing Claimant's lumbar nerves and resolve his claudication symptoms which is the primary goal of both surgical recommendations. As Dr. Rumley pointed out, it does not make sense to address two levels with fusion only to leave out a third that is symptomatic to satisfy a general guideline.

Risks coincide with any type of surgery. The issue becomes whether the risks are outweighed by the benefits. Here, Dr. Rumley and Claimant have engaged in a shared decision-making process and decided that TLIF is most likely to result in the most benefit to Claimant.

Dr. Brown's second basis of recommending tubular decompression over TLIF is that Claimant does not currently have lumbar instability. Recommendation 153 of WCRP 17, Ex. 1, Sec. 8.b.iii, in the *Guidelines*, states that one of the diagnostic indications for fusion includes "surgically induced segmental instability." This means that one need not necessarily have instability to undergo fusion surgery, but such instability may be a likely result as part of another surgery—like decompression by laminectomy. Even tubular decompression as recommended by Dr. Brown may result in segmental instability which would require fusion. The fusion needed from tubular decompression would be a later, second surgery, only serving to place additional risks the chance for complications on Claimant.

Further reason exists here for Claimant to undergo TLIF involving three-level fusion and that is to address his structural deformity. Even though Claimant's work injury did not cause the deformity, it nevertheless interplays with his nerve compression and claudication. By correcting the deformity, Claimant is likely to experience far better decompression of the nerves. Moreover, correcting the deformity will greatly reduce the chances for the need of future lumbar surgery as the condition progressively deteriorates. Plus, correcting the deformity also improves the overall outcome of the surgery to treat Claimant's work injury. As a result, fixing the deformity is inextricably intertwined with treating Claimant's work injury and is therefore reasonably necessary to cure and relieve Claimant from the effects of his injury.

Finally, Dr. Brown consistently stresses that Claimant's BMI is high, and it invites increased risk for TLIF, thereby making the TLIF surgery unreasonable. Dr. Rumley convincingly explained that Claimant's BMI of 39 is within acceptable range for the TLIF procedure. It is worth noting that, as demonstrated by the medical records, Claimant's BMI was 39 as of the hearing date down from more than 42 in January 2023, when he first saw Dr. Rumley, and it was continuing to trend downward due to continued weight loss.

Morbid obesity is a relative contraindication to fusion per WCRP 17, Ex. 1, Sec. 8.b.ii. But it is not an absolute contraindication. The difference is that relative contraindication only means that caution should be used when doing fusion procedure and the procedure is acceptable if the benefits outweigh the risk.

Table 52 of WCRP 17, Ex. 1, Sec. 8.b (Surgical Interventions) of the *Guidelines* indicates that there is good evidence to suggest functional improvement from most back surgery is similar between patients with BMI under 25 and those with a BMI between 25 and 35. As discussed, Claimant's last known BMI was 39, but it was declining due to continued weight loss. This means that Dr. Brown's concerns lessen regarding Claimant's BMI with each pound Claimant loses before surgery and the closer he gets to a BMI of 35.

Dr. Rumley explained that a BMI of 40 or more would remove Claimant as a surgical candidate until the BMI is again below 40. This is based on studies that indicate risks and complications are far less when the patient's BMI is under 40. The *Guidelines* do not have such an explicit line in the sand for fusions. The only area of the Guidelines where a BMI of 40 or more as a contraindication related to lumbar surgery is in WCRP 17, Ex. 1, and Sec. 8.b.iv of the *Guidelines* for total disc replacement surgery— which is not contemplated or recommended here.

Dr. Rumley is a board-certified expert in his field of orthopedic surgery. Plus, Dr. Rumley also trained via a spine fellowship at Augusta University which was a level 1 trauma and deformity center. Lastly, he currently trains fellows in spine surgery and therefore maintains an academic role. These additional qualifications adds to the persuasiveness of his opinion and conclusion for the recommended surgery. Plus, what might be considered aggressive to Dr. Brown, might not be considered aggressive by Dr. Rumley, who is a fellow trained spinal surgeon. As a result, the ALJ finds and concludes that Dr. Rumley has convincingly concluded that the TLIF is the most appropriate procedure for Claimant, and Claimant has indicated that he wishes to proceed with TLIF understanding the associated pros and cons as well as the risks and benefits.

As a result, the ALJ finds and concludes that Claimant has proven by a preponderance of the evidence that the lumbar decompression and fusion surgery recommended by Jacob Rumley, D.O. as reasonable and necessary treatment related to his admitted June 29, 2022, industrial injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

I. Respondents shall pay for the lumbar decompression and fusion surgery recommended by Jacob Rumley, D.O. as reasonable and necessary treatment related to Claimant's industrial injury.

II. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 5, 2023.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his admitted September 30, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. after reaching Maximum Medical Improvement (MMI) on September 17, 2020.

2. Whether Claimant has demonstrated by a preponderance of the evidence that a total hip arthroplasty constitutes reasonable, necessary, and causally related medical care for his September 30, 2019 industrial injury.

FINDINGS OF FACT

1. Claimant has worked as a Delivery Driver for Employer for over 25 years. On September 30, 2019 he sustained admitted work injuries to his right hip and lower back. Claimant subsequently obtained medical treatment through Authorized Treating Provider (ATP) Concentra Medical Centers.

2. On December 6, 2019 Claimant underwent a lumbar spine MRI without contrast. The imaging revealed "[s]pinal canal narrowing at L4-5 primarily due to hypertrophic changes about the facet joints and a posterior disc protrusion."

3. On December 6, 2019 Claimant underwent an MRI of his right hip. The imaging showed the following:

> 1. Findings suggesting mild cam-type of femoral acetabular impingement. There is increased signal traversing the anterosuperior labrum raising concern for a nondisplaced labral tear. 2. Mild tendinosis with mild undersurface and interstitial tearing of the right common hamstring tendon origin on the ischial tuberosity.

4. On February 25, 2020 Claimant underwent surgical intervention for his September 30, 2019 lower back injuries. He specifically had a bilateral microdiscectomy and right-sided far lateral microdiscectomy at L4-L5.

5. On September 17, 2020 Frederic Zimmerman, D.O. determined that Claimant had reached Maximum Medical Improvement (MMI) for his admitted industrial injuries. He assessed Claimant with the following: (1) a lumbar discogenic injury, that had been surgically repaired, with chronic radicular symptoms down the right lower extremity; and (2) a right hip labral tear that had been treated non-surgically with a steroid injection. Dr. Zimmerman noted that Claimant had plateaued in his recovery. He assigned a 24% whole person permanent impairment rating, released Claimant to full duty employment, and recommended medical maintenance care. The MMI report specified that Claimant

would follow-up with Nathan Faulkner, M.D. at Orthopedic Centers of Colorado in 18 months for possible hip surgery.

6. On November 23, 2020 Dr. Faulkner recommended right hip arthroscopic surgery. He reasoned that Claimant had failed conservative treatment and suffered persistent pain as a result of his labral tear.

7. On July 13, 2021 Claimant underwent a Division Independent Medical Examination (DIME) with Justin D. Green, M.D. He concluded that Claimant had not reached MMI. Dr. Green remarked that Claimant's symptomatic labral tear required additional orthopedic evaluation.

8. On December 13, 2021 Claimant returned to Dr. Faulkner for an examination. He noted that Claimant had good relief from a diagnostic injection that suggested most of the pain was coming from his right hip joint. Based on Claimant's failure of conservative treatment, positive response to the hip injection and continued symptoms, Dr. Faulkner recommended a total hip replacement.

9. On December 20, 2021 Claimant visited Angie Schack, PA-C for an examination. After reviewing Claimant's medical records and performing a physical examination PA-C Schack recommended a total right hip arthroplasty. She suggested a right hip injection and referred Claimant to David C. Loucks, M.D.

10. On December 22, 2021 Respondents and Claimant's former attorney executed a Stipulation. The parties agreed that Claimant had reached MMI on September 17, 2020. The Stipulation was approved on December 28, 2021.

11. On January 4, 2022 Claimant returned to Dr. Faulkner for an examination. Dr. Faulkner remarked that Claimant's right hip MRI showed a labral tear with mild chondromalada. He also commented that Claimant obtained good relief from a diagnostic Injection that suggested most of his pain was coming from his hip joint. Dr. Faulkner concluded that, based on Claimant's failure of conservative treatment, persistent pain/dysfunction and positive diagnostic response, Claimant should proceed with a total hip replacement. He noted the procedure provides a quicker recovery and has a more predictable outcome in patients of Claimant's age with a cartilage Injury.

12. On January 19, 2022 Claimant visited Dr. Loucks for a surgical evaluation. He recounted that in early December 2021 Claimant had undergone an MRI that revealed moderate to high grade changes of the right hip with partial labral tearing and femoral acetabular impingement. Dr. Loucks noted that nine days earlier Claimant had received a repeat intra-articular right hip injection that provided approximately 60% relief of his groin and buttocks symptoms.

13. On February 18, 2022 Claimant returned to Dr. Loucks for an examination. After conducting a physical examination and reviewing Claimant's medical records, Dr.

Loucks assessed Claimant with a tear of the right acetabular labrum and femoral acetabular impingement. He recommended a total right hip arthroplasty.

14. On January 5, 2023 Claimant visited Pressley Swann, M.D. for an evaluation of his right hip pain. Dr. Swann remarked that Dr. Loucks referred Claimant for a second opinion about proceeding with a total right hip arthroplasty. He conducted a physical examination and reviewed pertinent imaging. Dr. Swann agreed with Dr. Loucks' recommendation for a total right hip replacement. He explained that x-rays revealed "some pincer based acetabular and impingement as well as a cam type impingement with a loose body in his joint."

15. On February 16, 2023 Claimant visited Barry Nelson, D.O. at Concentra. In addressing Claimant's right hip, Dr. Nelson noted that he had no additional recommendations for conservative treatment. He explained that Claimant had the option of an arthroscopic repair of the right hip or a total hip arthroplasty. Dr. Nelson left the decision about the appropriate surgery with orthopedic surgeons Drs. Loucks and Swann.

16. Claimant testified at the hearing in this matter. He explained that at the time of MMI he was experiencing pain in the right hip, groin and buttocks area. However, his buttocks and groin symptoms have worsened since he reached MMI. Furthermore, Claimant's right leg has become more unstable.

17. Claimant has established it is more probably true than not that he should be permitted to reopen his admitted September 30, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. On September 17, 2020 ATP Dr. Zimmerman determined that Claimant had reached MMI. He assessed Claimant with the following: (1) a lumbar discogenic injury, that had been surgically repaired, with chronic radicular symptoms down the right lower extremity; and (2) a right hip labral tear that had been treated non-surgically with a steroid injection. On July 13, 2021 DIME Dr. Green concluded that Claimant had not reached MMI. He remarked that Claimant's symptomatic labral tear required additional orthopedic evaluation. The parties subsequently stipulated that Claimant had reached MMI on September 17, 2020.

18. The record reveals that Claimant has suffered a worsening of his right hip condition since reaching MMI on September 17, 2020. At the time of MMI Claimant's right hip labral tear had been treated non-surgically and required additional orthopedic evaluation. Claimant credibly testified that his right hip pain has subsequently worsened. The pain has affected his well-being and overall ability to function. The records are consistent with Claimant's testimony. The medical records note that Claimant underwent extensive care after MMI to help maintain his condition. Claimant's ATP's provided detailed documentation about his persistent right hip symptoms and need for a total hip replacement.

19. Dr. Faulkner determined that Claimant had good relief from a diagnostic injection that suggested most of the pain was originating from his right hip joint. Based on Claimant's failure of conservative treatment, persistent pain/dysfunction and positive

diagnostic response, Dr. Faulkner recommended proceeding with a total hip replacement. Similarly, Dr. Loucks concluded that a total right hip arthroplasty was warranted. An MRI had revealed moderate to high grade changes of the right hip with partial labral tearing and femoral acetabular impingement. Dr. Loucks noted that Claimant had received a repeat intra-articular right hip injection that provided approximately 60% relief of his groin and buttocks symptoms. Finally, Dr. Swann agreed with Dr. Loucks' recommendation for a total right hip replacement. He explained that x-rays revealed "some pincer based acetabular and impingement as well as a cam type impingement with a loose body in his joint."

20. The persuasive medical records, in conjunction with Claimant's credible testimony, reflect that Claimant has suffered a change in his right hip condition since reaching MMI on September 17, 2020. Claimant has suffered a worsening of his right hip symptoms that warrants additional medical treatment in the form of a total hip arthroplasty. He has experienced persistent pain and dysfunction in his right hip that has been resistant to conservative treatment. Accordingly, Claimant has demonstrated that he is entitled to reopen his admitted September 30, 2019 Workers' Compensation claim.

21. Claimant has demonstrated by a preponderance of the evidence that a total hip arthroplasty constitutes reasonable, necessary, and causally related medical care for his September 30, 2019 industrial injury. The record reveals that Claimant has received significant conservative treatment for his right hip condition. Nevertheless, he continues to suffer persistent right hip and groin symptoms. Treating physicians have assessed Claimant with a tear of the right acetabular labrum and femoral acetabular impingement. The persuasive opinions of Drs. Faulkner, Loucks and Swann suggest that, based on Claimant's failure of conservative treatment, persistent pain/dysfunction and positive diagnostic response to injections, a total right hip arthroplasty is warranted. Dr. Faulkner specifically noted that the procedure provides a quicker recovery and has a more predictable outcome in patients of Claimant's age with a cartilage Injury. The record thus reveals that Claimant's work activities aggravated, accelerated, or combined with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant has proven that a total right hip arthroplasty is reasonable, necessary and causally related to his September 30, 2019 admitted industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Reopening for Change of Condition

4. At any time within six years of the date of injury, an ALJ may reopen an award on the grounds of fraud, overpayment, error or mistake, or change in condition. §8-43-303(1) C.R.S. The intent of the statute is to provide a remedy to claimants who are entitled to awards of both medical and disability benefits. *Cordova v. Indus. Claim Appeals Off.*, 55 P.3d 186 (Colo. App. 2002). In seeking to reopen a claim based on a change in condition, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Off.,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Off.,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Off.,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Off.,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004). An ALJ's decision to grant or deny a petition to reopen may therefore "be reversed only for fraud or clear abuse of discretion." *Wilson v. Jim Snyder Drilling*, 747 P.2d 647, 651 (Colo. 1987); *see also Heinicke* 197 P.3d at 222 ("In the absence of fraud or clear abuse of discretion, the ALJ's decision concerning reopening is binding on appeal.").

5. As found, Claimant has established it is more probably true than not that he should be permitted to reopen his admitted September 30, 2019 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. On September 17, 2020 ATP Dr. Zimmerman determined that Claimant had reached MMI. He assessed Claimant with the following: (1) a lumbar discogenic injury, that had been surgically repaired, with chronic radicular symptoms down the right lower extremity; and (2) a right hip labral tear that had been treated non-surgically with a steroid injection. On July 13, 2021 DIME Dr. Green concluded that Claimant had not reached MMI. He remarked that Claimant's symptomatic labral tear required additional orthopedic evaluation. The parties subsequently stipulated that Claimant had reached MMI on September 17, 2020.

6. As found, the record reveals that Claimant has suffered a worsening of his right hip condition since reaching MMI on September 17, 2020. At the time of MMI Claimant's right hip labral tear had been treated non-surgically and required additional orthopedic evaluation. Claimant credibly testified that his right hip pain has subsequently worsened. The pain has affected his well-being and overall ability to function. The records are consistent with Claimant's testimony. The medical records note that Claimant underwent extensive care after MMI to help maintain his condition. Claimant's ATP's provided detailed documentation about his persistent right hip symptoms and need for a total hip replacement.

7. As found, Dr. Faulkner determined that Claimant had good relief from a diagnostic injection that suggested most of the pain was originating from his right hip joint. Based on Claimant's failure of conservative treatment, persistent pain/dysfunction and positive diagnostic response, Dr. Faulkner recommended proceeding with a total hip replacement. Similarly, Dr. Loucks concluded that a total right hip arthroplasty was warranted. An MRI had revealed moderate to high grade changes of the right hip with partial labral tearing and femoral acetabular impingement. Dr. Loucks noted that Claimant had received a repeat intra-articular right hip injection that provided approximately 60% relief of his groin and buttocks symptoms. Finally, Dr. Swann agreed with Dr. Loucks' recommendation for a total right hip replacement. He explained that x-rays revealed "some pincer based acetabular and impingement as well as a cam type impingement with a loose body in his joint."

8. As found, the persuasive medical records, in conjunction with Claimant's credible testimony, reflect that Claimant has suffered a change in his right hip condition since reaching MMI on September 17, 2020. Claimant has suffered a worsening of his right hip symptoms that warrants additional medical treatment in the form of a total hip arthroplasty. He has experienced persistent pain and dysfunction in his right hip that has been resistant to conservative treatment. Accordingly, Claimant has demonstrated that he is entitled to reopen his admitted September 30, 2019 Workers' Compensation claim.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

10. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

11. As found, Claimant has demonstrated by a preponderance of the evidence that a total hip arthroplasty constitutes reasonable, necessary, and causally related medical care for his September 30, 2019 industrial injury. The record reveals that Claimant has received significant conservative treatment for his right hip condition. Nevertheless, he continues to suffer persistent right hip and groin symptoms. Treating physicians have assessed Claimant with a tear of the right acetabular labrum and femoral acetabular impingement. The persuasive opinions of Drs. Faulkner, Loucks and Swann suggest that, based on Claimant's failure of conservative treatment, persistent pain/dysfunction and positive diagnostic response to injections, a total right hip arthroplasty is warranted. Dr. Faulkner specifically noted that the procedure provides a quicker recovery and has a more predictable outcome in patients of Claimant's age with a cartilage Injury. The record thus reveals that Claimant's work activities aggravated, accelerated, or combined with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant has proven that a total right hip arthroplasty is reasonable, necessary and causally related to his September 30, 2019 admitted industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen his September 30, 2019 admitted claim based on a change in condition pursuant to §8-43-303(1), C.R.S. is granted.

2. Claimant is entitled to receive reasonable, necessary and causally related medical benefits including a total right hip arthroplasty as recommended by Drs. Faulkner, Loucks and Swann.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you

mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-214-646-001

ISSUES

1. Whether Respondents' March 20, 2023 Final Admission of Liability (FAL) was defective and thus failed to close the present claim.

2. Alternatively, if the March 20, 2023 FAL was sufficient to close the claim, whether Respondents should be permitted to reopen the matter based on a mutual mistake of material fact pursuant to §8-43-303(1) C.R.S.

3. Whether Respondents have proven by a preponderance of the evidence that they are entitled to terminate Claimant's Temporary Total Disability (TTD) benefits based on a modified duty job offer.

4. Whether Respondents have established by a preponderance of the evidence that Claimant's disability was triggered by the intervening event of cancer treatment that terminated his entitlement to TTD benefits.

FINDINGS OF FACT

1. Claimant worked as a Caregiver at Employer's facility. On June 17, 2022 he sustained an admitted industrial injury during the course and scope of his employment with Employer. Claimant was specifically assaulted by a patient and suffered injuries to his right shoulder and right wrist.

2. On June 22, 2022 Claimant began treatment through Authorized Treating Provider (ATP) Concentra Medical Centers. He received restrictions of no lifting or carrying over 10 pounds, limited pinching or gripping, and no reaching overhead or away from the body.

3. On June 23, 2022 Respondents provided Claimant with an offer of transitional duty. The employment involved serving meals, helping with resident activities, spending one-on-one time with residents, cleaning laundry, and other tasks as assigned. Although Claimant accepted the position, there is no evidence that the job duties were reviewed or approved by Claimant's treating physician.

4. On June 24, 2022 Claimant returned to Concentra for an examination. He received increased restrictions of no lifting or carrying more than five pounds, limited pinching or gripping, and no reaching overhead or away from the body. Respondents did not subsequently provide a modified duty job offer.

5. On July 1, 2022 Claimant was restricted to no use of his right upper extremity/right arm. The restrictions were renewed on July 6, July 29, August 29, September 2, and September 30, 2022.

6. On November 2, 2022 Employer's Business Office Coordinator [Redacted, hereinafter BG] confirmed to Insurer's Adjuster that Employer could not accommodate Claimant's restrictions.

7. While Claimant's restrictions were still in place, he underwent treatment for cancer. Respondents have not offered any evidence related to Claimant's cancer treatment. Notably, there is no evidence that Claimant was under any restrictions due to his treatment.

8. On November 11, 2022 Claimant's ATP reiterated the restrictions of no use of the right upper extremity, no patient contact, and to avoid hazardous conditions, i.e., grabbing of the right hand/wrist. The preceding restrictions were renewed on December 9, 2022.

9. On December 12, 2022 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged Temporary Total Disability (TTD) benefits from June 23, 2022 and continuing.

10. On February 3, 2023 the ATP placed Claimant at Maximum Medical Improvement (MMI) with permanent right arm restrictions including no reaching overhead and away from the body, a five-pound lifting limit with the right hand, and a two-pound repetitive lifting maximum. He received a 29% upper extremity impairment rating that converts to a 17% whole person impairment.

11. On March 2, 2023 Respondents filed a Final Admission of Liability (FAL). The FAL erroneously acknowledged a 17% whole person impairment, rather than the 29% scheduled impairment. The FAL also recognized the previously admitted TTD benefits for the period June 23, 2022 until February 2, 2023.

12. On March 28, 2023 the Colorado Division of Workers' Compensation (DOWC) issued an error Notice regarding the FAL. The Notice requested Respondents to file a corrected FAL within 10 days, admit to a scheduled impairment, and specify a correct amount of TTD benefits. The Notice specifically provided:

> The admission states a position on 17% whole person/non-scheduled impairment, however, the medical report appears to indicate the impairment rating is 29% scheduled impairment to the upper extremity (body code 01). In addition, the required impairment worksheet was not attached to the admission.

The Notice directed Respondents to file a corrected FAL "with a current certificate of mailing date and any required supporting documentation to all parties within 10 days of receipt of this letter."

13. Instead of filing a new FAL as directed by the DOWC, Respondents filed an Application for Hearing (AFH) on April 7, 2023. Respondents' sought to withdraw the FAL on the basis of mutual mistake of material fact.

14. Respondent filed a "Response to Division of Workers Compensation Notice Regarding Final Admission of Liability" with their AFH. They remarked that they were "raising the issue of withdrawal of the FAL based on the mutual mistake of the parties." Respondents elaborated that the mutual mistake included "Respondents' mistakenly admitting to whole person impairment and the mistake regarding Claimant's restrictions and ability to work as claimant was undergoing cancer treatment simultaneously with treatment for the related Workers' Compensation injuries."

15. On April 24, 2023 Respondents filed a new GAL attempting to rescind the entire period of TTD benefits and acknowledge medical benefits only.

16. In response, the DOWC sent a second letter to Respondents dated May 22, 2023. The letter specified that "[t]emporary benefits may not be modified without complying with Rule 6 or through the hearing process. Within 15 days, please provide correspondence regarding your position or file an amended decision reinstating the previously admitted temporary benefits with a current certificate of mailing date."

17. On May 30, 2023 Respondents notified the DOWC that a hearing was scheduled on the issues. They specified that they were "disputing the period during which Claimant was entitled to TTD benefits, as Claimant was undergoing treatment for health issues not related to a work incident." Respondents also sought an overpayment of TTD benefits.

18. The record reveals that Respondents' March 20, 2023 FAL was defective and thus failed to close the present claim. Notably, the FAL erroneously acknowledged a 17% whole person impairment rather than the 29% scheduled impairment. The DOWC advised Respondents that the medical report suggested the admitted impairment should be a 29% scheduled rating to the upper extremity. The DOWC also noted that the required impairment worksheet was not attached to the FAL.

19. After the DOWC informed Respondents that the FAL was defective, Respondents did not file an amended FAL. Instead, Respondents filed an AFH within 10 days to withdraw the FAL. By failing to amend the FAL and clarify the benefits to which Claimant was entitled, Claimant did not receive all the information necessary to make an informed decision. Moreover, Respondents did not attach the required impairment worksheet to the document. Claimant thus lacked sufficient information about whether to challenge the FAL. Therefore, the March 20, 2023 FAL was defective and failed to close any issues.

20. Respondents have failed to prove it is more probably true than not that they are entitled terminate Claimant's TTD benefits based on a modified duty job offer. At no point after June 23, 2022 and prior to MMI did Claimant return to regular or modified duty employment. Although Claimant received an "offer of transitional duty" on June 23, 2022,

it did not comply with Rule 6-4. Despite Claimant's acceptance of the position, there is no evidence that the job duties were reviewed or approved by Claimant's treating physician. He also never received a written release to return to regular employment. The offer of transitional duty thus did not comply with WCRP Rule 6-4. It was therefore insufficient to terminate TTD benefits. Even if the modified job offer was sufficient to cease TTD benefits, Claimant received increased restrictions on the following day. Respondents would thus have had to provide a new modified duty job offer complying with Rule 6-4. Respondents have not met their burden to modify previously admitted TTD benefits because none of the statutory conditions enumerated in §8-42-105(3)(a)-(d), C.R.S. were satisfied until Claimant reached MMI. Claimant is thus entitled to receive TTD benefits for the period June 23, 2022 until terminated by statute on February 3, 2023.

21. Respondents have failed to establish it is more probably true than not that Claimant's disability was triggered by the intervening event of cancer treatment that terminated his entitlement to TTD benefits. Respondents have not demonstrated that Claimant's cancer treatment severed the causal connection between his industrial injury and wage loss. They have simply offered no evidence that Claimant was under any restrictions due to his cancer treatment. The record reveals that Claimant was consistently restricted from using his right upper extremity until he reached MMI on February 3, 2023. While undergoing cancer treatment, Claimant was under the same restrictions of not using his right arm. Notably, by November 2, 2022, Respondents confirmed that they could not accommodate Claimant's work restrictions. Because Claimant received permanent restrictions and an impairment rating, his industrial injury contributed to his wage loss throughout the entirety of his claim. Accordingly, Claimant is entitled to receive TTD benefits for the period June 23, 2022 until terminated by statute on February 3, 2023.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Validity of the March 20, 2023 FAL

4. The presence of a valid FAL is a jurisdictional prerequisite to the closure of a claim. *McCotter v. U.S. West Communications*, W.C. No. 4-430-792 (ICAO, Mar. 25, 2002). In the absence of full compliance with §8-43-203(2), C.R.S. the claimant's failure to object to a final admission does not close the claim. *Reed v. Demetre Painting*, W.C. No. 3-069-138 (ICAO, Jan. 15, 1993). Specifically, in *Reed* the respondents failed to attach the medical report on which the final admission for permanent disability benefits was predicated. The Panel concluded that, under the circumstances, the claimant's failure to contest the defective final admission did not close the issue of permanent disability. Similarly, in *Burns v. Northglenn Dodge*, W.C. No. 4-486-911 (ICAO, May 12, 2003), the Panel determined that a final admission containing the wrong notice under §8-43-203(2), C.R.S. was invalid and did not close any issues, even absent an objection from the claimant. *See Maloney v. Ampex Corporation*, W.C. No. 3-952-034 (ICAO, Feb. 27, 2001) (failure to attach medical reports as required by statue vitiated effectiveness of FAL). Therefore, if the FAL is insufficient to close the issue of permanent disability benefits, it is also insufficient to close the issue of temporary total disability benefits. *See Bargas v. Special Transit* W.C. No. 4-534-551 (ICAO, June 4, 2004); *Siegmund v. Fore Property Company,* W.C. No. 4-649-193 (ICAO, Jan. 30, 2007). One obvious purpose of the requirements of §8-43-203(2)(b), C.R.S. and Rule 5-5(A) is to provide the claimant with notice of the exact basis of admitted or denied liability in order to permit an informed decision about whether to challenge the final admission. *Silva v. Poudre School Dist.*, W.C. No. 4-651-643 (ICAO, Apr. 30, 2008).

5. As found, the record reveals that Respondents' March 20, 2023 FAL was defective and thus failed to close the present claim. Notably, the FAL erroneously acknowledged a 17% whole person impairment rather than the 29% scheduled impairment. The DOWC advised Respondents that the medical report suggested the admitted impairment should be a 29% scheduled rating to the upper extremity. The DOWC also noted that the required impairment worksheet was not attached to the FAL.

6. As found, after the DOWC informed Respondents that the FAL was defective, Respondents did not file an amended FAL. Instead, Respondents filed an AFH within 10 days to withdraw the FAL. By failing to amend the FAL and clarify the benefits to which Claimant was entitled, Claimant did not receive all the information necessary to make an informed decision. Moreover, Respondents did not attach the required impairment worksheet to the document. Claimant thus lacked sufficient information about whether to challenge the FAL. Therefore, the March 20, 2023 FAL was defective and failed to close any issues.

Temporary Total Disability Benefits

7. To prove entitlement to TTD benefits a claimant must demonstrate that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Off.*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). Eligibility for TTD benefits requires only that the work-related injury contributes "to some degree" to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

8. WCRP Rule 6-4 enumerates the procedures for terminating TTD benefits based on a modified duty job offer:

> (4) A copy of a written offer delivered to the claimant with a signed certificate of service, containing both an offer of modified employment, setting forth duties, wages and hours and a statement from an authorized treating physician that the employment offered is within the claimant's physical restrictions.
>
> (a) A written offer of modified duty may only be used to terminate benefits pursuant to this subsection if:
>
> i) A copy of the written inquiry to the treating physician is provided to the claimant by the insurer or employer at the time the authorized treating physician is asked to provide a statement on the claimant's capacity to perform the offered modified duty; and

ii) The claimant is provided a period of 3 business days from the date of receipt of the offer to return to work in response to the offer of modified duty.

9. As found, Respondents have failed to prove by a preponderance of the evidence that they are entitled terminate Claimant's TTD benefits based on a modified duty job offer. At no point after June 23, 2022 and prior to MMI did Claimant return to regular or modified duty employment. Although Claimant received an "offer of transitional duty" on June 23, 2022, it did not comply with Rule 6-4. Despite Claimant's acceptance of the position, there is no evidence that the job duties were reviewed or approved by Claimant's treating physician. He also never received a written release to return to regular employment. The offer of transitional duty thus did not comply with WCRP Rule 6-4. It was therefore insufficient to terminate TTD benefits. Even if the modified job offer was sufficient to cease TTD benefits, Claimant received increased restrictions on the following day. Respondents would thus have had to provide a new modified duty job offer complying with Rule 6-4. Respondents have not met their burden to modify previously admitted TTD benefits because none of the statutory conditions enumerated in §8-42-105(3)(a)-(d), C.R.S. were satisfied until Claimant reached MMI. Claimant is thus entitled to receive TTD benefits for the period June 23, 2022 until terminated by statute on February 3, 2023.

Intervening Event of Cancer Treatment

10. The existence of an intervening event is an affirmative defense to the respondents' liability. *In Re Granados*, W.C. No. 5-146-480 (ICAO, Dec. 5, 2022). Consequently, it is the respondents' burden to prove that the claimant's disability is attributable to the intervening injury or condition and not the industrial injury. *See Owens v. Indus. Claim Appeals Off.*, 49 P.3d 1187 (Colo. App. 2002). The intervening event does not sever the causal connection between the injury and the claimant's condition unless the disability is triggered by the intervening event. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). Whether the respondents have sustained their burden to prove the claimant's disability was triggered by an intervening event is a question of fact for resolution by the ALJ. *See City of Aurora v. Dortch*, 799 P.2d 462 (Colo. App. 1990).

11. As found, Respondents have failed to establish by a preponderance of the evidence that Claimant's disability was triggered by the intervening event of cancer treatment that terminated his entitlement to TTD benefits. Respondents have not demonstrated that Claimant's cancer treatment severed the causal connection between his industrial injury and wage loss. They have simply offered no evidence that Claimant was under any restrictions due to his cancer treatment. The record reveals that Claimant was consistently restricted from using his right upper extremity until he reached MMI on February 3, 2023. While undergoing cancer treatment, Claimant was under the same restrictions of not using his right arm. Notably, by November 2, 2022, Respondents confirmed that they could not accommodate Claimant's work restrictions. Because

Claimant received permanent restrictions and an impairment rating, his industrial injury contributed to his wage loss throughout the entirety of his claim. Accordingly, Claimant is entitled to receive TTD benefits for the period June 23, 2022 until terminated by statute on February 3, 2023.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' March 20, 2023 FAL was defective and thus failed to close the present claim.

2. Claimant shall receive TTD benefits for the period June 23, 2022 until terminated by statute when he reached MMI on February 3, 2023.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the follow up sleep study and prescription for Losartan is reasonable and necessary medical treatment related to Claimant's admitted injury?

- Prior to the hearing, the parties agreed that Respondent would pay the outstanding medical bills for Claimant's home supply of oxygen and oxygen concentrator.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to her right shoulder while employed by Employer on or about December 18, 2020 when she lifted a seventy five (75) pound ski bag. Claimant subsequently underwent two (2) surgeries to her right shoulder to repair her rotator cuff. Claimant testified that during the second surgery, she had an injection that paralyzed her phrenic nerve and paralyzed her right hemidiaph ragm.

2. Claimant testified that her current symptoms include shortness of breath and that she now uses a BiPAP machine at night when she sleeps along with 2 liters of oxygen. Claimant testified that prior to her workers' compensation injury, she did not use oxygen and did not experience shortness of breath. Claimant testified that prior to the work injury, she had not been diagnosed with asthma.

3. Following Claimant's February 17, 2022 surgery with Dr. Bynum that resulted in her phrenic nerve injury, Claimant sough t treatment with Dr. Hirsch. Dr. Hirsch had Claimant undergo a series of tests that demonstrated Claimant had reduced oxygen intake as a result of the phrenic nerve injury. On May 13, 2022, Dr. Hirsch recommended Claimant obtain a BiPAP machine to assist Claimant with her nighttime hypoxia and shortness of breath.

4. Claimant was subsequently referred for spirometry testing on May 31, 2022. The spirometry testing demonstrated Claimant presented with reduced FEV1 and FVC levels with significant bronchodilator response. Claimant was subsequently referred to National Jewish Hospital where she was initially evaluated on August 23, 2022.and underwent a series of tests.

5. Claimant returned to National Jewish Hospital on September 13, 2022 and was evaluated by Dr. Lin. Dr. Lin noted Claimant's accident history and surgeries and summarized the testing results from Claimant's August visit. Dr. Lin referred Claimant for additional evaluation with Dr. Metjian.

6. Claimant was examined by Dr. Lee at Montrose Regional Health on December 29, 2022. Dr. Lee noted that Claimant had discordant blood pressure readings and hypertension. Dr. Lee noted Claimant had a history of white coat hypertension. Claimant reported to Dr. Lee that she would have her blood pressure tested frequently and never had discordant readings until after her rotator cuff surgery. Claimant was instructed to keep a daily log of her blood pressure and return to discuss use of antihypertensives.

7. Claimant was examined by Dr. Shelton on January 9, 2023. Dr. Shelton noted that Claimant's blood pressure was appropriate for her age, but at times borderline. Claimant reported she would like to avoid medicines for her blood pressure if possible. Dr. Shelton indicated that he believed Claimant's blood pressure would be improved by the receipt of her BiPAP machine and ambubag.

8. Claimant returned to Montrose Regional Health on February 27, 2023. Nurse Pimetel noted Claimant continued to have elevated blood pressure and noted that they may recommend medications including Losartan at a follow up examination in six months.

9. Claimant presented to National Jewish Hospital on April 28, 2023 and was evaluated by Dr. Metjian. Dr. Metian noted Claimant's medical history and her use of the BiPAP machine along with using an ambubag 2-3 times per day. Dr. Metian recommended Claimant start Albuterol and recommended Claimant undergo a sleep study for PAP Titration.

10. Claimant presented the testimony of Dr. Lin at hearing. Dr. Lin is a physician specializing in pulmonary medicine. Dr. Lin testified she treated Claimant when she previously worked at National Jewish Hospital. Dr. Lin testified that Claimant was diagnosed with a paralyzed right diaphragm that was related to her rotator cuff surgery. Dr. Lin testified Claimant underwent a pulmonary function test ("PFT") on May 31, 2022 that showed Claimant had a bronchodilator effect.

11. Dr. Lin testified at hearing that the sleep study recommended by Dr. Metrian was intended to make sure the air pressure in the bypass is at the right level to keep Claimant's lungs open. Dr. Lin opined that the follow up sleep study was appropriate for Claimant's ongoing care.

12. Dr. Lin noted in her testimony that Claimant had been diagnosed with mild asthma after her work injury. Dr. Lin testified that Claimant reported she was asymptomatic from a respiratory stand point prior to her work injury. Dr. Lin testified that when Claimant sustained the injury to her diaphragm, it made it difficult for her to compensate for her underlying asthma. Dr. Lin testified that the proposed sleep study would not be related to Claimant's underlying asthma.

13. Dr. Lin testiffeid that Claimant had reported that she had improvement with her symptoms when she used the ambubag and BiPAP machine. Dr. Lin explained that the BiPAP machine does not treat the phrenic nerve, but instead helps support the

paralyzed diaphragm and allows the body to heal on its own. Dr. Lin testified that the sleep study would help determine what BiPAP pressure settings were effective in preventing Claimant from having low oxygen at night while sleeping.

14. With regard to Claimant's development of hypertension, Dr. Lin testified that weight gain and inactivity could aggravate Claimant's high blood pressure. Dr. Lin also testified that contributing factors for high blood pressure could include anxiety, stress and pain.

15. Dr. Shelton testified for Claimant at the hearing in this matter. Dr. Shelton testified he treats Claimant for the effects of her work injury. Dr. Shelton noted that as a result of the work injury, Claimant sustained an injury to her right rotator cuff which required surgery. Dr. Shelton noted that after Claimant's second surgery, Claimant developed shortness of breath and was diagnosed with phrenic nerve paralysis.

16. Dr. Shelton testified Claimant eventually underwent a plication surgery to her right hemidiaphragm. Dr. Shelton noted that after the plication surgery Claimant reported some improvement, but still had issues with her oxygen levels. Dr. Shelton noted that Claimant had a sleep study recommended that would be a two night study. Dr. Shelton testified that it was his opinion that the sleep study was reasonable and necessary as it could show if Claimant improved after the plication surgery.

17. Dr. Shelton testified that after Claimant's injury she developed high blood pressure. Dr. Shelton testified that he eventually prescribed medication (Losartan) for Claimant's high blood pressure. Dr. Shelton testified that after Claimant's plication surgery, he took Claimant off the medication as she was not tolerating the medications and after the surgery, Claimant's high blood pressure came down to an acceptable level. Dr. Shelton testified that prior to Claimant's high blood pressure coming under control after the surgery, the Losartan was reasonable and necessary medical treatment that was related to Claimant's work injury.

18. Respondent obtained a records review independent medical examination ("IME") of Claimant with Dr. Lesnak on June 23, 2023. Dr. Lesnak summarized Claimant's medical treatment and opined that any treatment for Claimant's diagnosis of reactive airway disease (likely asthma), symptomatic GERO, or episodic hypertension would be unrelated to her diagnosis of a right phrenic nerve injury palsy. Dr. Lesnak further opined that Claimant's hypertension was not related to her work injury.

19. Respondent obtained a records review IME of Claimant with Dr. Schwartz on October 16, 2023. Dr. Schwarz issued a report following his review of the records that summarized Claimant's medical treatment and set forth his opinions involving Claimant's case. Dr. Schwartz opined in his report that Claimant's hypertension was not related to her work injury. Dr. Schwartz noted that Claimant's echocardiogram that was performed on December 1, 2022 showed concentric left ventricular hypertrophy, thickening of the heart that typically occurs from years of untreated hypertension.

20. Dr. Schwartz testified at hearing in this matter and agreed that Claimant had a paralysis of the phrenic nerve that is a rare complication of the nerve block Claimant had during her surgery. Dr. Schwartz testified that Claimant has paralysis of the right diaphragm, so the diaphragm will become flaccid and billow upwards and put pressure on the base of the right lung. Dr. Schwartz testified that the plication procedure involves the surgeon going in and sewing up the diaphragm to keep the diaphragm sitting in a lower position and keeping it from putting pressure on the lung. Dr. Schwartz testified that this procedure doesn't fix the condition, but does improve the condition and will take some time to heal.

21. Dr. Schwartz testified that he would recommend that Claimant undergo a breathing capacity test. Dr. Schwartz testified that this testing could be performed while Claimant was recumbent, but not necessarily asleep. Dr. Schwartz testified that the results of this testing would show whether Claimant needed oxygen at night. Dr. Schwartz also recommended testing of Claimant's oxygen levels with activity to determine whether Claimant needed oxygen during activity.

22. Dr. Schwartz opined in his testimony that Claimant needed oxygen while she sleeps but did not need the BiPAP machine. Dr. Schwartz further opined that a sleep study would not be related to her work injury. Dr. Schwartz opined that if Claimant had sleep apnea, it would not be related to her diaphragm injury.

23. Dr. Schwartz testified that Claimant had thickening of the heart as shown on the echocardiogram was the result of longstanding hypertension and not related to Claimant's workers' compensation injury.

24. With regard to the sleep study, the ALJ credits the Claimant's testimony at hearing along with the testimony of Dr. Lin and Dr. Shelton and finds that Claimant has established that it is more probable than not that the sleep study is reasonable medical treatment necessary to cure and relieve Claimant from the effects of the work injury. The ALJ finds the testimony of Dr. Lin that the sleep study would demonstrate the appropriate levels of oxygen for Claimant to use at night to be credible and persuasive.

25. With regard to the prescription for Losartan, the ALJ credits the testimony of Dr. Shelton that Claimant's blood pressure stabilized after her plication surgery to the point that she no longer needs medication for her high blood pressure. The ALJ further credits the testimony of Dr. Schwartz that the findings of the echocardiogram show evidence of long standing hypertension. The ALJ further credits the testimony of Dr. Schwartz that the work injury did not cause Claimant's hypertension as it preexisted her work injury.

26. The ALJ therefore finds that Claimant has failed to prove that it is more probable than not that the Losartan medication was causally related to her December 19, 2020 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S., 2013 The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. **App.** 1990).

4. As found, Claimant has proven by a preponderance of the evidence that the medical treatment involving the sleep study recommended by National Jewish Hospital is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her injury. As found, the testimony of Claimant, Dr. Shelton and Dr. Lin are found to be credible and persuasive with regard to this issue.

5. As found, Claimant has failed to prove by a preponderance of the evidence that the prescription for Losartan is reasonable medical treatment related to Claimant's December 19, 2020 work injury. As found, the testimony of Dr. Schwartz is found to be credible with regard to this issue.

ORDER

It is therefore ordered that:

1. Respondent is liable for the sleep study recommended by National Jewish Hospital as reasonable medical treatment necessary to cure and relieve the Claimant from the effects of the injury.

2. Claimant's request for an Order requiring Respondent to pay for the Losartan prescription is denied and dismissed.

3. All issues not herein decided are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 27, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-git@state.co.us.**

DATED: December 11,2023

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-156-485-004

ISSUES

1. Whether claimant has proven by a preponderance of the evidence that he sustained an injury in the course and scope of his employment on October 13, 2020;

2. Determination of Claimant's average weekly wage (AWW);

3. Whether, in what amounts, and for what periods Claimant is entitled to temporary total or temporary partial disability (TTD or TPD) benefits;

4. Whether Respondents are liable to pay for medical care provided to Claimant to treat his compensable injury;

5. Whether and as of what date Claimant reached maximum medical improvement (MMI);

6. Whether and in what amount Claimant entitled to permanent partial disability (PPD) benefits;

7. Whether and in what amount Claimant is entitled to an award of disfigurement benefits;

8. Whether and in what amount each party is liable for the attorney fees of the other party.

FINDINGS OF FACT

1. Claimant date of birth is December 2, 1955. He was sixty-seven years old at the time of hearing.

2. Claimant was first employed by employer in 2007 as EMT/Paramedic and Assistant Chief of Operations. While he was a full-time employee, Respondent-Employer provided Claimant with health insurance benefits. He worked continuously as a full-time employee for employer until he resigned effective January 1, 2021, as Claimant was unable to work full-time and perform the duties required of his positions. Claimant worked PRN for Respondent-Employer beginning January 1, 2021, doing tasks assigned to him by employer.

3. On September 23, 2020, while he was at work at the [Redacted, hereinafter PS], Claimant was required to receive, and did receive, the flu vaccine, GFK

Fluarix, 0.5 ml.

4. Since June 2020, Claimant had been treated for left quadriceps tendon repair which he had suffered in a non-work related fall. He had surgery and was receiving physical therapy at Rocky Mountain Physical Therapy in Pagosa Springs for the torn quad. The physical therapist reported Claimant had been doing well until October, and on October 13, 2020, he reported Claimant demonstrated bilateral leg weakness with significant difficulty with walking.

5. During October 2020, Claimant was treated by orthopedist Dr. William Webb, for the increasing bilateral leg weakness and rapid loss of function of his legs.

6. An MRI and a low back epidural steroid injection were done to treat low back stenosis identified at L3-S1, which had worsened since Claimant had undergone an L4-S1 fusion in 2013.). There was no improvement in the leg weakness from this treatment.

7. On October 31, 2020 and November 3, 2020, Claimant suffered dislocations of his right hip which required emergency and orthopedic care to reduce the dislocations. The emergency care in November included a lumbar puncture the findings from which were consistent with Guillain-Barre Syndrome (GBS).

8. On November 3, 2020, Claimant was transferred by air transport to University of Colorado Health Memorial Hospital in Colorado Springs where the GBS diagnosis was confirmed and he was treated by specialists including orthopedics, neurology, neurosurgery, radiology, and physiatry. He was treated by intravenous immuno-globulin for five (5) days and experienced significant relief of leg weakness and lack of function.

9. Claimant was transferred to University of Colorado Health Rehabilitation. He was discharged from there on November 19, 2020. He consulted Spine Colorado about the worsened low back stenosis. He was evaluated by his family physician, Dr. Buchner, in Pagosa Springs. He relocated to Denver and attended physical therapy at Spalding Rehabilitation for the GBS symptoms.

10. On December 14, 2020, orthopedic physician Dr. Jennings examined Claimant and opined that Claimant's hip dislocations were due to the effects of the GBS and the generalized lower extremity weakness resulting therefrom, and not due to the prior hip prosthesis revision which Claimant had undergone in 2019.

11. On December 4, 2020, Claimant reported the injury of GBS due to the flu vaccine to the employer. Employer filed a first report of injury on December 11, 2020.

12. On December 16, 2020, Respondents issued a Notice of Contest pending further investigation.

13. Claimant continued outpatient treatment at Spalding Rehabilitation through February, 2021. Improvement occurred, but he continued to experience weakness and fatigue, and balance issues with difficulty walking on any surface other than a flat even surface.

14. On February 5, 2021, Claimant suffered a third right hip dislocation. According to Dr. Jennings at Colorado Joint Replacement, the dislocation was caused by the GBS. The dislocation was reduced by the emergency department of the Medical Center of Aurora.

15. Claimant relocated back to Pagosa Springs from Denver and received care from Dr. Buchner and Rocky Mountain Physical Therapy.

16. On July 11, 2021, Claimant experienced his fourth right hip dislocation while walking. The Pagosa Springs Hospital Emergency Department reduced the dislocation.

17. Claimant received care from Spine Colorado. On January 1, 2022, Dr. Orndorff recommended a L3-4 lumbar fusion. After a second opinion from Dr. Wong in Denver, Dr. Orndorff did the fusion surgery on May 31, 2022. The surgery has relieved the leg pain symptoms from the low back, but the symptoms of generalized weakness, fatigue, balance problems, and coordination attributed to GBS, persist. Claimant described them as ongoing and currently present.

18. Respondents arranged for an independent medical evaluation of Claimant with Elizabeth Bisgard, MD, MPH, FACOEM on October 10, 2022. Dr. Bisgard is certified by the State of Colorado as a Level II accredited physician. Dr. Bisgard reviewed extensive medical records covering Claimant's medical care from May 2010 through May 2022. She wrote a twenty-six (26) page medical record review. She met with Claimant via Zoom and issued a nine (9) page narrative report on October 14, 2020. Dr. Bisgard opined that the GBS is probably related to the flu vaccine, and Claimant's presentation is consistent with post-vaccine GBS, that his four right hip dislocations are secondary to the weakness in his leg from GBS, and therefore are causally connected. She opined that Claimant's lumbar spine condition, bi-lateral shoulder conditions, and Achilles heel issues discussed in her report are unrelated to Claimant's GBS and are outside the scope of the workers' compensation claim. She opined Claimant reached MMI on September 16, 2021. Dr. Bisgard agreed with Claimant's treating physicians that Claimant was able to work in a sedentary position, but that he does not meet the qualifications to work as a paramedic in the field. She opined Claimant's future medical maintenance care for GBS may include physical therapy treatment three to four times a year to upgrade his home exercise program. The parties stipulated to the accuracy and correctness of those opinions. This ALJ finds that Dr. Bisgard's opinions are well supported by the medical records, by Claimant's testimony, and the record as a whole,

and that her reports and opinions are credible and accepted as fact.

19. Dr. Bisgard also opined Claimant has a thirty percent (30%) whole person permanent impairment based on the *AMA Guides, Third Edition (Revised), 1991, Neurologic Table, page 109*, A. The parties declined to stipulate to this opinion as they understand the issue of permanent partial disability benefits (PPD) is not yet ripe and not before this court at this hearing.

20. Claimant testified he had reviewed Dr. Bisgard's report and agreed with her medical record report and with her opinions in her narrative report. The parties stipulated and the record supports that the medical care he has received to treat the effects of the GBS has all been from authorized providers. Claimant testified and reaffirmed that he has had certain medical issues and treatment since the onset of the GBS which were unrelated to the GBS, including an Achilles tear, the lumbar surgery, and shoulder problems.

21. Claimant applied for a hearing on May 10, 2023, on the issues presented herein.

22. Claimant started receiving Social Security retirement benefits beginning January 1, 2021. Exhibits 62-65 document the dollar amount paid for Social Security Retirement and his receipt of Medicare benefits as of January 1, 2021.

23. Claimant's wage and health insurance records of the employer are Exhibits 35-59. Although the first report of injury states Claimant's AWW was $1,420.41, the parties stipulated that Claimant's average weekly wage at the time of injury on October 13, 2020, was $1,446.13. The wage records and exhibits support the parties' stipulation. The AWW as of October 13, 2020, was $1,446.13.

24. Claimant's health insurance benefits from the employer terminated on December 31, 2020. His loss of health insurance benefits increased his average weekly wage. The parties stipulated to an increased average weekly wage commencing January 1, 2021 at the rate of $1,500.00. The exhibits support the parties' stipulation. The AWW beginning January 1, 2021, is $1,500.00.

25. Claimant testified he was able to work part time and remotely due to the GBS symptoms after October 13, 2020, and he worked while he was hospitalized and receiving treatment for GBS and while he was outpatient living at home. The wage records show impairment of his regular historical earnings through reduced hours and wages since the injury through MMI of September 16, 2021. The parties stipulated to the calculated amounts of temporary disability on account of the wage impairment during his disability until MMI as follows: (a) Temporary partial disability compensation from October 13, 2020 to January 1, 2021, in the amount of $5,073.58; and, (b) Beginning January 1, 2021, the parties stipulated that Claimant's average weekly wage increased, as noted

above, and that respondents are entitled to take the statutory offset of fifty percent (50%) predicated upon the initial award of Social Security Benefits. The parties stipulated that Claimant was entitled to temporary partial disability benefits beginning January 1, 2021, through MMI on September 16, 2021, in the total amount of $19,426.07. The exhibits support the stipulations and this ALJ accepts the stipulations as fact.

26. Claimant's testimony is undisputed, and well supported by the exhibits. This ALJ finds that Claimant is credible.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S., 2010. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2006).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); S*ee City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P. 2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Iriando,* 811

P.2d, 379, 383 (Colo. 1991). The claimant must prove a casual nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961, P.2d 571 (Colo.App.1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo.App.2004); *H & H Warehouse v. Vicory*, 805, P.2d 1167 (Colo.App.1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (Oct. 2, 2015).

5. Based upon the evidence and the law, this ALJ concludes that Claimant has established by the preponderance of the evidence that he sustained a compensable injury in the course and scope of his employment on October 13, 2020. As found, Claimant contracted GBS and other causally related conditions, as determined by Dr. Bisgard.

6. Section 8-42-102(2), C.R.S., requires the ALJ to calculate Claimant's average weekly wage based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly, or other earnings. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, §8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3), C.R.S. establishes the so-called "discretionary exemption". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App.1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d 77; *Avalanche Indus v. ICAO*, 166 P.3d 147 (Colo.App.2007). Where the Claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity the ALJ is vested with the discretionary authority to use an alternative method of determining fair wage. *See id.*

An ALJ may base an AWW determination "not only on the claimant's wage at the time of the injury, but on other relevant factor when the case's unique circumstances require." *Avalanche Indus, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008), rev'd on other grounds, *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010). The ALJ's discretionary authority permits the ALJ to consider post-injury pay increases a claimant would have received absent the work-related injury. *See In Re Tibbs,* W.C. No. 4-422-333 (ICAO, Apr. 12, 2001); *Wheeler v. Archdiocese of Denver Management Corp.,* W.C. No. 4-669-708 (Dec. 21, 2010). But, an ALJ may not base an award on speculation or conjecture. *Nanez v. Industrial Claim Appeals Office,* 444 P.3d 820 (Colo. 2018); *Upchurch v. Industrial Commission*, 80 P.2d 628 (Colo. App. 1985). To that end, the alleged post-injury wage increase must be "sufficiently definite" to support an increase in the AWW. *Tibbs, supra; Ebersbach v. UFCW local No. 7,* W.C. No. 4-240-475 (May 5, 1997); *Romero v. Cub Foods,* W.C. No. 4-218-823 (Sept. 28, 2000).

7. Based on the evidence and the law, this ALJ concludes that Claimant's AWW should be calculated to include his average earnings, including overtime, and after the loss of Claimant's health insurance, the AWW should be increased to account for his loss of the fringe benefit of health insurance. This ALJ concludes that the calculation of

the AWW should not and will not include any additional amount in the calculation, such as from loss of bonuses, any contributions for social security, retirement or pension contributions, or any other employment benefits. The ALJ concludes that the parties' stipulation and calculation of the AWW is supported by the evidence and the law, and that the AWW from October 13, 2020 to January 1, 2021, is $1446.13, and that the AWW beginning January 2021, is $1,500.00.

8. To prove entitlement to temporary partial disability benefits a claimant must demonstrate by a preponderance of the evidence that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. See §8-42-105 and 106, C.R.S.; *Anderson v. Longmont Toyota,* 102P. 3d 323 (Colo. 2004). *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1) (a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain disability benefits. The term "disability" connotes two elements; (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Acce Electric*, 971 nP.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.,* 964 P.2d 595, 597 (Colo.App.1998)(citing *Ricks v. Indus. Claim Appeals Off.,* P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lumburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

9. Temporary partial disability (TPD) benefits are 66 2/3 percent of the difference between the employee's AWW at the time of the injury (and later as it is increased for lost health insurance benefits), and the employee's AWW during the continuance of his temporary partial disability. Those benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-106 (1) - (2), C.R.S.

10. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TPD benefits for the period October 13, 2020 until the date of MMI, September 16, 2021, in the total amount of $24,499.65.

11. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1), C.R.S.; *Colorado Comp. Ins. Auth. V. Nofio,* 886 P2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.* 107 P.3d 999, 1001 (Colo.App.2004). The question of whether a particular disability is the result of the natural

progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *Univ. Park Care Center v. Indus. Claim Appeals Off.,* 43 P.3d 637 (Colo.App.2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. In *re Parker*, W.C. No. 4-517-537 (May 31, 2006); In re *Frazier*, W.C. No. 3-920-202 (Nov. 13, 2000).

12. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct casual relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. See *Subsequent Injury Fund v. Indus. Claim Appeals Off.*, 131 P.3d 1224 (Colo.App.2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo.App.2001).

13. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his October 13, 2020 industrial injuries resulting from the September 23, 2020, flu vaccination required by employer.

14. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1998). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.* Based upon the evidence and the law, this ALJ concludes that Dr. Bisgard's opinions on maintenance medical care are well supported by the evidence, and adopts them: Claimant is entitled to maintenance medical care after the MMI date of September 16, 2021, of four to six physical therapy visits per year.

15. Maximum medical improvement means a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-4-201 (11.5). Dr. Bisgard credibly opined that Claimant attained MMI on September 16, 2021. Claimant and Respondents concur with Dr. Bisgard's opinion regarding the date of MMI, and so stipulated at hearing. As found, this ALJ recognizes the parties' stipulation, and concludes that the evidence and the law support Dr. Bisgard's determination that Claimant reached MMI on September 16, 2021.

16. Permanent partial disability benefits are paid after the claim is found compensable by respondents to a claimant when a claimant's injury results in permanent

medical impairment, either scheduled or nonscheduled, and an opinion of permanent impairment is provided, depending on the circumstances of each case, by either a treating physician, or an independent medical examiner, Section 8-42-107.2, C.R.S. This ALJ agrees with the parties' counsel's statements at hearing that the determination of PPD benefits is premature. The parties have agreed to address the issue of PPD benefits after the hearing order is final.

17. Section 8-43-403, C.R.S. addresses attorney fees under the Colorado Workers' Compensation Act and provides for a 20% contingency fee paid by a claimant to his attorney. The few exceptions noted in that Section do not apply to this claim. There are no provisions for respondents to pay the attorney fees of a claimant's attorney except in limited circumstances that do not apply here, such as the setting of a hearing on issues unripe for determination. Section 8-43-211 (2)(d), C.R.S., provides, "if any person requires a hearing or files a notice to set a hearing on issues which are not ripe for adjudication at the time such request or filing is made, such person shall be assessed the reasonable attorney fees and costs of the opposing party in preparing for such hearing or setting." This statute authorizes a party to seek its fees and costs incurred before the hearing and without reference to the guidelines for seeking attorney fees and costs provided by other statutes or by court rules. Whether attorney fees and costs are reasonable is considered under an abuse of discretion standard. An ALJ does not abuse discretion unless the order is beyond the bounds of reason, as where it is unsupported by the law or contrary to the evidence. *Pizza Hut v. Industrial Claim Appeals Office*, 18 P.3d 867 (Colo.App.2001). Since it was Claimant's application for hearing that commenced the litigation and issues presented to the Court herein, this Court concludes that there is no basis for Respondents to pay Claimant's attorney fees.

18. Disfigurement benefits may be awarded to an employee who is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, in addition to all other compensation benefits. §8-42-108, C.R.S. Claimant averred that he has not sustained disfigurement, and he presented no evidence at hearing providing a basis upon which to award disfigurement benefits. Therefore, this Court declines to award disfigurement benefits.

19. The last issue is whether respondents should pay Claimant's litigation costs. In the Colorado Workers' Compensation Act, like attorney fees, costs are generally the responsibility of the party incurring them. One exception is found in Section 8-42-101(5), C.R.S., involving unpaid maintenance medical care bills. Neither that issue nor any exception applies here. This ALJ concludes that each party shall pay their own respective litigation costs.

ORDER

It is therefore ordered that:

1. Claimant sustained an injury in the course and scope of his employment on October 13, 2020.
2. Claimant's average weekly wage at the time of injury was $1,446.14. On

January 1, 2021, Claimant's average weekly wage increased to $1,500.00.

3. Respondents shall pay claimant $5,073.58 as temporary partial disability compensation for the time period beginning October 13, 2020 through December 31, 2020, and temporary partial disability compensation of $19,426.07 for the time period beginning January 1, 2021 through the date of maximum medical improvement on September 16, 2021. The total of temporary disability benefits owed by respondents to claimant through September 16, 2021, is $24,499.65.
4. Respondents shall pay for the reasonable and necessary medical care related to the Guillian-Barre Syndrome (GBS) and consequential care for the Gullian-Barre Syndrome (GBS), in accordance with Dr. Bisgard's opinions in her report discussed above, which includes, but is not limited to the four incidents of the right hip dislocation.
5. Claimant reached MMI on September 16, 2021.
6. The issue of PPD is deferred for future determination.
7. Claimant's application for disfigurement is denied and dismissed.
8. Claimant is not entitled to an award for his attorney's fees and/or litigation costs. Each party shall pay their respective attorney fees and costs.
9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 11, 2023

/s/ Stephen J. Abbott

_____

Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, Colorado 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his right shoulder on or about January 18, 2023.

II. If Claimant established that he suffered a compensable right shoulder injury, whether he also established, by a preponderance of the evidence, that the surgery recommended to treat his right shoulder condition is reasonable, necessary, and related to said industrial injury.

III. If Claimant established a compensable injury, whether he also proved that he is entitled to temporary total disability ("TTD") benefits beginning May 26, 2023 and ongoing.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Raschbacher, the ALJ enters the following findings of fact:

1. Claimant is a former heavy equipment mechanic for Employer.[1] On January 18, 2023, Claimant was tasked with changing the batteries and repairing the thumb linkage on an excavator owned by Employer.

2. After changing the batteries without misfortune, Claimant turned his attention to repairing the linkage. Claimant testified that the linkage was difficult to remove and he had to resort to using a 10 pound hand held sledge hammer to loosen/remove the pins holding the linkage to the machine. While hammering, Claimant experienced a sudden onset of pain in his right shoulder.[2]

3. Claimant testified that he reported his injury to his supervisor, [Redacted, hereinafter AW] who was nearby at the time. According to Claimant he said: "I think I hurt my shoulder working on this thing", to which AW[Redacted] replied, "Are you gonna be okay?" Claimant testified that he was able to finish his work shift, albeit in pain. He went home for the evening and took Ibuprofen for his persistent pain.

4. Claimant testified that no written report regarding the incident was completed on the date of the alleged injury.

---

[1] At hearing, Claimant testified that he was not sure if he is still employed by [Redacted, hereinafter PC]; however, he added that his last day of work for Employer was May 26, 2023. Moreover, in his position statement, Counsel for Respondents notes specifically that Claimant "was" employed by PC[Redacted] (Employer) as their lead mechanic. Accordingly, the ALJ has elected to characterize Claimant as a former employee of PC[Redacted].

[2] Claimant is right hand dominate. (Resp. Ex. A, p. 1).

5. Claimant testified that he returned to work on January 19, during which shift he worked with a painful shoulder. Again, no conversations occurred between Claimant and his Employer regarding the alleged January 18 injury during this shift and no accident report was completed.

6. Because his shoulder symptoms were not improving with time, Claimant testified that he felt needed to do something for his pain. Accordingly, Claimant testified that on January 24, 2023, he told AW[Redacted] he needed to see a doctor. Neither an incident report nor an employer's first report of injury were completed at this time and Claimant was not referred to a designated medical provider.

7. Claimant proceeded to the offices of his primary care physician (PCP) on January 24, 2023, where he was evaluated by Physician Assistant (PA) Stanley Johnson. PA Johnson noted that Claimant presented with a chief complaint of right shoulder pain during the week prior to his appointment. No specific mechanism of injury (MOI) was documented. Instead, PA Johnson simply noted: "[N]o new trauma old injury not sure, heavy equipment mechanic." (Resp. Ex. C, p. 14).

8. Claimant testified that he went to his personal doctor on January 24 because he did not know that he was supposed to use a workers' compensation doctor and no one referred him to a workers' compensation physician. He testified further that, he told his provider that he was injured on the job. When asked why the provider stated that he said there was no trauma Claimant replied, "I have no idea on that." Based on the brevity of the information contained in the "History of Present Illness" section of PA Johnson's January 24, 2023 report, the ALJ credits Claimant's testimony to find it probable that he told PA Johnson he was injured at work and PA Johnson omitted additional details regarding the history and mechanism of Claimant's injury (MOI) when completing his report.

9. An x-ray of the right shoulder was obtained during Claimant's January 24, 2023 appointment.[3] The indication for imaging was documented as: "Pt. c/o pain in right shoulder that extends down RUE to Rt. Thumb. "Pt. denies trauma, surgery, and prior known injury. Pt states frequent use and heavy lifting." *Id*. at p. 16. Claimant's x-ray revealed: "Moderate joint space narrowing and enthesophyte formation of the acromioclavicular joint" and "[n]o displaced fracture." *Id.*

10. An "Employer's First Report of Injury" (FROI) was completed on January 25, 2023. (Resp. Ex. H, p. 35). The form is only partially completed and is unsigned. *Id.* Consequently, it is unknown who completed the form. Claimant testified that he did not complete the form and was never asked to provide or verify any information contained on the form itself. Regarding the MOI, the FROI contains the following statement: "Employee states that between the days of 1/16/23 and 1/20/23 he thinks he injured his shoulder while either removing batteries from excavator." *Id*. Nothing follows the words "while either removing batteries from excavator." Thus, it is unknown

[3] It was noted that Claimant would need an MRI following his x-ray. (Resp. Ex. C, p. 13).

what other activity Claimant reported to the author of the FROI regarding the activity that allegedly caused his shoulder injury. As presented, the ALJ finds the FROI unverified, incomplete and of limited utility in helping determine the issues endorsed for hearing. *Id*.

11. On February 2, 2023, approximately two weeks after his claimed injury date, Claimant underwent an MRI of the right shoulder. No prior MRIs were available for comparison, which the ALJ finds consistent with Claimant's testimony that he has never had any prior injuries to or treatment for his right shoulder. According to the interpreting radiologist, this MRI revealed a small amount of fluid in the subacromial/subdeltoid bursa consistent with subacromial/subdeltoid bursitis. Additionally, there was a near complete tear of the supraspinatus tendon; however, as interpreted by the radiologist, the remaining tendons of the rotator cuff, including the infraspinatus, subscapularis and the long head of the biceps were unremarkable and normally located. (Resp. Ex. C, p. 16).

12. Following his MRI, Claimant was referred to the Orthopedic Centers of Colorado for evaluation. On March 8, 2023, Claimant was evaluated by Shannon M. Constantinides, Nurse Practitioner (NP) for Dr. David Weinstein.

13. NP Constantinides obtained the following history regarding Claimant's January 18, 2023 injury: "[Claimant] is a pleasant 48-year-old RHD (right hand dominate) heavy equipment operator who reports today for orthopedic evaluation of chronic right shoulder pain. . . . He states that he was working on a piece of equipment that required a bit of heavy lifting. He noticed a fairly acute onset of right shoulder pain." (Resp. Ex. D, p. 17). NP Constantinides also reviewed and independently interpreted Claimant's February 2, 2023 MRI. According to NP Constantinides, Claimant's MRI revealed "low-grade partial-thickness tearing of the subscapularis tendon" along with "high-grade partial-thickness (essentially full thickness) intratendinous tearing of the supraspinatus." *Id*. at p. 18. In addition to this tearing, the MRI demonstrated fluid in the subacromial space, an attenuated appearance to the long head of the biceps with degenerative change at the biceps and labral anchors and degenerative change at the AC joint with subchondral cystic edema. *Id*. NP Constantinides noted that Claimant's history, symptoms, exam and imaging were consistent with the following:

- *Traumatic* Complete Tear of the Rotator Cuff, Sequela
- Tendinopathy of Right Rotator Cuff
- Biceps Tendinopathy, Right
- Degenerative Superior Labral Anterior-To-Posterior (SLAP) Tear OF Right Shoulder
- Arthrosis of Right Acromioclavicular Joint

(Resp. Ex. D, p. 19) (Emphasis added).[4] Regarding treatment, NP Constantinides makes the following observations/comments:

> Radiographically, there are perhaps a few remaining fibers intact of [Claimant's] supraspinatus, however, his tear pattern is essentially full-thickness. . . . The likelihood of this doing well without surgery is low. Conservative care would be aimed at temporizing pain symptoms. This would include rest, activity modification, use of anti-inflammatories, physical therapy, and cortisone injections. Again, the patient was counseled that conservative care will not cure a nearly full-thickness intratendinous rotator cuff tear. Definitive treatment would be in the form of a right shoulder arthroscopic decompression, rotator cuff repair, and possible biceps tenodesis.

(Resp. Ex. D, p. 19).

14. Claimant expressed a desire to proceed to surgery and advised NP Constantinides that he would discuss the same with Employer. (Resp. Ex. D, p. 20).

15. Following completion of the FROI and Claimant's apparent discussion with Employer regarding his desire to proceed with surgery, Insurer, through their third party administrator, denied liability for Claimant's asserted injury by "Notice of Contest" filed March 23, 2023. (Resp. Ex. G, p. 32). Liability was denied due to Insurer's need to investigate the claim and obtain Claimant's medical records since he "sought treatment outside of w/c provider." *Id.*

16. Claimant would not see a workers' compensation doctor until May 30, 2023, when he would be evaluated by PA Michael Gottus at Concentra Medical Centers (Concentra). (Resp. Ex. E, pp. 21-26). During the May 30, 2023 appointment PA Gottus noted Claimant's chief complaint as: "The patient presents today with pt states working on excavator installing batteries injuring right shoulder in January, has already seen specialist and has imaging."[5] *Id*. at p. 21. PA Gottus' report further states, "While working overhead on heavy equipment felt dull ache in rt shoulder. d/w boss. No pop." *Id.* at p. 22. Claimant testified that lifting the batteries overhead was not the cause of the injury because you cannot lift them overhead given their weight. In reference to PA Gottus' indication that Claimant's injuries were caused while working overhead, Claimant testified, "I don't know why he put that statement in."

---

[4] Based upon the content of NP Constantinides evaluation, the ALJ finds that Claimant likely has acute on chronic pathology in the right shoulder. Indeed, the ALJ is convinced that the right, essentially complete (full thickness) intratendinous supraspinatus tear is probably acute and traumatic in nature while the subscapularis tear, SLAP tear and bicipital tendon changes are degenerative in origin.

[5] The ALJ finds this documentation incomplete. Indeed, PA Gottus failed to note what Claimant presented with. Nonetheless, based upon the totality of the evidence presented, the ALJ infers that PA Gottus probably meant to indicate that Claimant presented with right shoulder pain.

17. PA Gottus referred Claimant back to Dr. Weinstein. He also imposed a 5 pound lifting and 20 pound carrying restriction with the right arm. (Resp. Ex. E, p. 24). He precluded Claimant from reaching overhead and climbing with use of the right arm. *Id.* Claimant testified that Employer did not accommodate these restrictions. Consequently, Claimant testified that his last day of work for Employer was May 26, 2023. According to Claimant, he was referred to Human Resources (HR) to apply for short-term disability (STD) benefits. Claimant testified that his claim was approved and he was paid STD benefits through September 3, 2023. Claimant testified upon termination of his STD benefits on September 3, 2023, he has had no income from any source.

18. Respondents sent Claimant to Dr. John Raschbacher for an independent medical examination (IME) on July 11, 2023. In his IME report, Dr. Raschbacher documents the following concerning the MOI: "[Claimant] was repairing a linkage on an excavator. This was in his shop. The piece he was working on was on the machine. He was standing in front of it using a sledgehammer to try to break it free or separate the sides of the linkage. This was about at his face level, and he was pounding with the sledgehammer. He had [an] acute onset of pain while doing this. He was striking the linkage to get it off the pin. The shoulder pain in the right shoulder developed acutely, and the next day he was worse, and it was aching pretty good. He was first seen for it on 1-24, and worked in the interim between the 18th and the 24th. He denies any prior or similar problem, injury, or condition of the shoulder." (Resp. Ex A, p. 2).

19. Following a medical records review and physical examination, Dr. Raschbacher opined that based upon Claimant's history, physical examination and medical record review, his "injury is likely work related in causation and should be accepted as work related and treated as such." (Resp. Ex. A, p. 3). Dr. Raschbacher specifically noted, "The mechanism of injury he described is appropriate for either or both rotator cuff tear and labral tear, and at this point the appropriate treatment is to proceed with surgical repair." *Id.*

20. Dr. Raschbacher issued an addendum to his July 11, 2023 IME report on July 25, 2023. (Resp. Ex. B, p. 12). In his addendum, Dr. Raschbacher notes that the conclusions referenced in his July 11, 2023 IME report assumed that Claimant provided an "accurate history of the mechanism of injury", noting further that if the MOI was "other than what was described" by Claimant or there were "different histories with respect to mechanism of injury, then the conclusions concerning work-relatedness may need to be withdrawn or altered. *Id.*

21. As noted, Dr. Raschbacher testified by deposition on September 14, 2023.[6] Dr. Raschbacher is board certified in family medicine but has exclusively practiced occupational medicine for the past 20 years. (Depo. Tr. Dr. Raschbacher, hereinafter Depo. Tr., p. 5, ll. 3-7). Dr. Raschbacher testified as a Level II accredited expert in occupation medicine. (Depo. Tr., p. 5, ll. 9-11; p. 6, ll. 1-5). When asked about Claimant's diagnosis, Dr. Raschbacher testified that "based on his imaging tests,

[6] Mistakenly identified as June 14, 2023 in Respondents' post-hearing position statement.

Claimant had a rotator cuff tear and a labral tear and "also some preexisting non-work related degenerative changes at the shoulder on the right." (Depo. Tr. p. 7, ll. 6-9). Regarding the supraspinatus tear specifically, Dr. Raschbacher testified that there is no reason to think that it wasn't acute. Indeed, he agreed that it should be assumed that it was an acute tear. (Depo. Tr. p. 8, ll. 21-25; p. 9, ll. 1-9).

22. Dr. Raschbacher testified that PA Johnson did not delineate an actual MOI in his January 24, 2023 report. (Depo. Tr. p. 10, ll. 1-6). When asked about his understanding of the mechanism of the injury, Dr. Raschbacher testified that during the IME, Claimant reported that he first experienced symptoms January 8, 2023,[7] while repairing an excavator's linkage in Employer's shop. *Id.* at p. 12, ll. 5-11). Dr. Raschbacher understood Claimant's report to indicate that he was not involved in bench work but rather standing in front of the machine and striking the linkage at face level in an effort to break it free with the sledge hammer. *Id*. at ll. 10-17.

23. When asked whether he believed that using a sledgehammer could have been the mechanism of the injury, Dr. Raschbacher testified that it fit with his diagnosis, noting further that "slinging a sledge at face level, arms up swinging and then the impact could have torn the rotator cuff." (Depo. Tr. p. 13, ll. 15-21).

24. Dr. Raschbacher was also asked whether he believed that changing the batteries in the excavator could have caused the injuries in question. In response, Dr. Raschbacher testified, "I wouldn't expect, generally installing or replacing batteries, that you likely tear a rotator cuff or injure the shoulder." (Depo. Tr. p. 13, ll. 1-14).

25. Dr. Raschbacher was also asked what type of response he would expect from person who experienced an acute event. He testified that he would "expect somebody to say I was doing this and my shoulder started to hurt." He also testified, "You don't stub your toe on Monday, and say, Ouch, on Wednesday. I'd expect you to report it pretty quickly." (Depo. Tr. p. 15, ll. 19-25; p. 16, ll. 1-3). The evidence presented persuades the ALJ that Claimant probably reported his symptoms to AW[Redacted] on January 18, 2023 and presented to a medical providers office within a week. Accordingly, the ALJ finds that Claimant reported his injury and sought treatment expeditiously.

26. Regarding the compensable nature of Claimant's asserted injury, Dr. Raschbacher testified:

> Well that's going to depend on you all and the ALJ. My opinion is that if he gave an accurate history and was pounding with a sledge that could account for an acute rotator cuff tear. If that history is not accurate, and he was not doing that, and didn't give us an accurate history, then I don't see any reason to consider it work-related.

[7] Based upon the totality of the competing evidence, the ALJ finds Dr. Raschbacher's reference to a symptom onset date of 1/8/2023 erroneous. Indeed, Dr. Raschbacher subsequently clarified that the actual date of injury is 1/18/2023. (Depo. Tr. p. 17, ll. 1-16).

(Depo. Tr. p. 16, ll. 4-13).[8]

27. Dr. Raschbacher testified that if the claim is determined to be compensable and Claimant remains symptomatic, sufficient time has passed such that Claimant should proceed expeditiously with the recommended surgery. (Depo. Tr. p. 19, ll. 17-23; p. 23, ll. 11-18).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Compensability

A. A "compensable injury" is one that requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(l)(b), C.R.S.*

B. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions.

---

[8] Interestingly, Dr. Raschbacher had the 1/24/23, 3/8/23 and 5/30/23 medical reports at his disposal during the 7/11/23 IME but chose not to raise alarm about the asserted differences between the MOIs raised in those reports and the MOI Claimant reported during his 7/11/23 IME. Rather, he plainly elected to credit Claimant's verbal report regarding the MOI to find the injury "work related in causation". (Resp. Ex. A, p. 3). Based upon the evidence presented, the ALJ finds it probable that Dr. Raschbacher was contacted by Respondents or their counsel after receipt of Dr. Raschbacher's July 11, 2023 IME report at which time they probably discussed the concern Dr. Raschbacher outlined in his July 25, 2023 addendum. Nonetheless, Dr. Raschbacher did not comment further and did not "withdraw or alter" his opinion regarding causality, except to state during his testimony that it was up to the ALJ to determine Claimant's credibility.

In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co., 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Conversely, the "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). In this case, Respondents contend that Claimant failed to establish that he suffered a compensable injury because he "gave vague, changing, and speculative reports of the mechanism of injury when seeking medical treatment" which Respondents argue "weighs in favor of a finding that Claimant has not proven a compensable injury under the Act by a preponderance of the evidence." As support for their assertion, Respondents cite to the documented history of present illness contained in the medical records from the different providers who have evaluated Claimant. The ALJ is not persuaded.

C. The determination of whether there is a sufficient "nexus" or causal relationship between the Claimant's employment related duties and the alleged injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Based upon a totality of the evidence presented, the ALJ is persuaded that Claimant's right shoulder symptoms have their origins in his work related functions, and is sufficiently related to those functions, i.e. repair and maintenance of Employers equipment, so as to be considered part of his service to Employer. Here, Claimant testified that he has had no history of prior symptoms or treatment directed to the right shoulder and no evidence was presented to refute this testimony. Moreover, the tearing of the supraspinatus appeared "traumatic" and "acute." Accordingly, the ALJ is convinced that Claimant's symptoms and need for treatment "arose out of" his work duties on January 18, 2023 when Claimant developed pain in the shoulder while using a sledge hammer to break the linkage on an excavator his was assigned to fix. Consequently, the record evidence also supports a conclusion that Claimant's alleged injury occurred within the time and place limits of his employment and during an activity connected to his work-related functions as a mechanic for Employer, namely changing the batteries and fixing the linkage on Employer's excavator. Based upon the evidence presented, the ALJ is persuaded that the alleged injury occurred in the course and scope of Claimant's employment.

D. In support of this conclusion, the ALJ credits Claimant's testimony to find it probable that his various treating providers documented an incomplete and inaccurate history regarding the MOI in this case. Indeed, as pointed out by Dr. Raschbacher, PA Johnson's January 24, 2023 report does not delineate an actual MOI. Moreover, the ALJ finds the March 8, 2023 and May 30, 2023 reports from NP Constantinides and PA Gottus regarding Claimant's MOI vague. Claimant has no control over what aspects of the history he provided to a particular provider get documented and he seemed genuinely surprised when questioned regarding the content of those reports. In contrast to PA Johnson, NP Constantinides and PA Gottus, Dr. Raschbacher obtained a history and MOI substantially consistent to what Claimant provided at hearing, which MOI is capable, according to Dr. Raschbacher, of causing the type of injury and tearing

revealed in an MRI obtained approximately 2 weeks after the inciting event. In this case, the ALJ concludes that the totality of the evidence presented is sufficient to justify an inference that Claimant's symptoms, need for treatment and disability were caused by the activities associated with fixing the thumb linkage on Employer's excavator on or about January 18, 2023.[9] Accordingly, the ALJ is convinced that there is a sufficient nexus between Claimant's January 18, 2023 work activities and the alleged injury to establish compensability.

Claimants Entitlement to Medical Benefits

E. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). However, Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, supra.*

F. As noted, Claimant has proven that he suffered a compensable right shoulder injury. Moreover, the ALJ is convinced that the recommended surgery in this case is reasonable, necessary and related to Claimant's January 18, 2023 industrial injury. Indeed, the radiographic findings of Claimant's right rotator cuff demonstrate that Claimant's supraspinatus tear was acute and that there were "perhaps a few remaining fibers intact of the supraspinatus; however, his tear pattern is essentially full thickness". (RHE D, p. 19). NP Constantinides has opined that the "likelihood of doing well without surgery is low" and that further "conservative care will not cure a nearly full thickness intratendinous tear". *Id*. The ALJ credits Claimant's testimony regarding his persistent symptoms and notes Dr. Raschbacher's agreement that because sufficient time has passed since the incident in question, Claimant should "proceed expeditiously" with the recommended surgery if he remains symptomatic. Based upon this evidence, the ALJ persuaded that the recommended right shoulder surgery is reasonable, necessary and

[9] Based in part upon Claimant's probable report to his providers that he was injured at work while pounding with a sledge hammer in combination with his testimony that he did not engage in activities outside work likely to cause injury and the imaging which supports a conclusion that Claimant suffered an acute/traumatic, near full-thickness intratendinous supraspinatus tear which appears superimposed on other degenerative findings.

related to Claimant's January 18, 2023 injury. Accordingly, the ALJ concludes that Respondents are liable for this and all other treatment designed to cure and relieve Claimant from the ongoing effects of his January 18, 2023 industrial injury.

Claimant's Entitlement to Temporary Total Disability

G. To receive temporary disability benefits, Claimant must prove the injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1), C.R.S. 2001; *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability to effectively and properly perform his/her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

H. In this case, it has been determined that Claimant sustained a compensable injury to his right shoulder. The evidence also supports a finding that Claimant was returned to work in a modified capacity by Dr. Daniel Peterson following his May 30, 2023 appointment with PA Gottus. (RHE E, pp. 24-26). Claimant testified and the ancillary evidence supports a conclusion that Employer could not accommodate his physical restrictions and referred him to Human Resources (HR) to initiate the paperwork necessary to secure short-term disability benefits (STD). Claimant testified that his claim for STD benefits was approved and that his last day of work was May 26, 2023. According to Claimant, he has not returned to work and has had no income from any source since September 3, 2023.[10] Again, no contrary evidence was presented to refute Claimant's testimony.

I. Based upon the evidence presented, the ALJ is convinced that Claimant's ability to perform his regular employment as heavy mechanic was probably impaired by both a restriction of bodily function, i.e. shoulder pain from his compensable injury and the restrictions imposed on him by his authorized treating providers at Concentra. Consequently, the ALJ is convinced that Claimant has proven that he suffered a disability. Moreover, since he has had no earnings since his last STD benefits were paid and the evidence presented fails to support a finding that a triggering event has

[10] Claimant agrees that, if he is entitled to TTD benefits, Respondents would be entitled to an offset in his benefits due to his receipt of STD benefits between May 26, 2023 and September 3, 2023.

occurred by which Respondents could terminate ongoing TTD, Claimant has proven that he has suffered an actual wage loss as a direct and proximate consequence of the above referenced compensable right shoulder injury. Because the ALJ concludes that Claimant has proven that he is "disabled" and that this disability has resulted in an actual wage loss within the meaning of § 8-42-105, C.R.S., he has proven that he is entitled to TTD benefits beginning May 26, 2023 and continuing until those benefits can be terminated in accordance the provisions of the Workers' Compensation Act. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO, June 11, 1999); C.R.S. § 8-42-105(3)(a)-(d). Respondents shall be entitled to credit the amount of short-term disability benefits paid between May 26, 2023 and September 3, 2023 against TTD benefits owed.[11]

ORDER

It is therefore ordered:

1. Claimant's January 18, 2023 right shoulder claim is compensable.

2. Respondents are liable for all reasonable, necessary and related medical treatment to cure and relieve Claimant of the effects of his January 18, 2023 industrial injury, including the recommended right shoulder surgery. All medical expenses shall be paid pursuant to the workers' compensation medical benefits fee schedule.

3. Respondents shall pay TTD in accordance with C.R.S. § 8-42-103(1)(b), for the period beginning May 26, 2023 and ongoing, subject to any applicable offsets, at a rate of sixty-six and two-thirds percent of Claimant's average weekly wage (AWW), until such benefits can be properly terminated by operation of law.

4. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

Dated: December 12, 2023.

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

[11] At hearing, the issue regarding the amount of Claimant's average weekly wage and the amounts to be paid in TTD was reserved pending the ALJs determination regarding the compensable nature of Claimant's right shoulder injury.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at https://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-223-042-002

ISSUES

1. Whether Claimant established by a preponderance of the evidence that an L4-5 microdiscectomy performed by Adam Hebb, M.D., was reasonable and necessary to cure or relieve the effects of Claimant's June 5, 2021 work injury.

FINDINGS OF FACT

1. Claimant is a firefighter employed by Respondent who sustained an admitted injury on June 5, 2021. Claimant sustained an injury to her lower back while participating in a work-related training exercise.

2. Claimant has a history of back issues dating to November 2016, when she sustained an injury lifting weights. (Ex. 7). Following the November 2016 injury, Claimant was diagnosed with lumbar radiculopathy and lumbar spondylosis. (Ex. 9). An MRI performed on July 18, 2017 mild to moderate lumbar spine degeneration, with a an moderate L4-5 broad-based central disc protrusion, with moderate bilateral neuroforaminal and lateral recess narrowing. (Ex. 8).

3. Claimant received physical therapy through Cascade Physical Therapy on a regular basis through May 2021. In the year before June 5, 2021, Claimant attended nine physical therapy visits. Claimant's physical therapy records from 2017 through 2021 document that Claimant experienced pain and stiffness in her lower back aggravated by sitting, lifting, and bending. Claimant's records document Claimant being active in weight training, CrossFit, skiing, and physical work as a firefighter.

4. Claimant reported the June 5, 2021 incident to Employer on the day it occurred. Claimant described the incident as follows "We were practicing victim removal. I wrapped my arms around a victim around his middle to lift him up [and] felt a harp pain in the lower-middle of my back. I felt dizzy, I let him back down and told my supervisor. I did not pass out." (Ex. 11). At hearing, Claimant testified that the "victim" she lifted in the training exercise was a 180-pound co-worker, and that she immediately felt pain in her lower back at her belt line. Claimant further testified that she had not experienced similar pain in the past.

5. Following the injury, Claimant reported the incident to her supervisor, and contacted a nurse via Employer's "OUCH Line." Claimant testified, credibly, that she was advised to wait a couple of days to see if her condition improved, and then to seek help if it did not. On June 8, 2021, Claimant returned to Cascade Physical Therapy for treatment for her injury, and treated solely with Cascade until April 2022.

6. On April 8, 2022, Claimant filed a second report of injury for her June 5, 2021 injury. Claimant reported that she was still having lower back pain and glute numbness, and that

her back was continually aggravated by her work duties. Claimant was advised by the OUCH Line nurse to seek treatment with a physician.

7. On April 11, 2022, Claimant saw Elizabeth Esty, M.D., and Douglas C. Scott, M.D., at Denver Health. Claimant reported that her symptoms had not improved with physical therapy, and that she was experiencing occasional anterior left thigh numbness, and symptoms in her left gluteal area. Dr. Esty reviewed Claimant's November 2016 MRI report. Based on her examination and review of records, Dr. Esty opined that Claimant's problem was a work-related exacerbation of her pre-existing condition, and ordered a new lumbar MRI. (Ex. 15).

8. The lumbar MRI was performed on April 15, 2022, and showed at L4-5, "Desiccation of the disc with a broad-based central/left subarticular disc protrusion with mild to moderate bilateral facet arthrosis. There is moderate spinal stenosis with compression of the descending left L5 nerve and contact of the descending right L5 nerve within the subarticular recess. Mild to moderate left and mild right foraminal stenosis." (Ex. 16).

9. Claimant returned to Denver health on April 18, 2022, and saw Dr. Scott. Dr. Scott reviewed the MRI and noted that it showed possible irritation of the left L5 and S1 nerve roots, and referred Claimant to a physical medicine and rehabilitation physician and for EMG/NCV testing. (Ex. 16).

10. On May 6, 2022, Claimant saw Samuel Chan, M.D., on referral from Dr. Scott. An EMG/NCV test he performed was normal. On June 9, 2022, Dr. Chan performed a left L5S1 transforaminal epidural steroid injection (TESI), which Claimant later reported provided no benefit. (Ex. 18, 19 & 20). On July 14, 2022, Dr. Chan referred Claimant for an orthopedic surgery evaluation. (Ex. 21).

11. On August 23, 2022, Claimant saw Maria Kaplan, PA, physician assistant for Stephen Pehler, M.D., at Orthopedic Consultants of Colorado. Based on Claimant's MRI, and lack of response to conservative treatment, Ms. Kaplan recommended Claimant undergo a bilateral L4-5 microdiscectomy. (Ex. 22).

12. After consultation with Dr. Scott, Claimant sought a second opinion regarding spine surgery from David Wong, M.D., on September 19, 2022. Dr. Wong offered Claimant additional potential treatment options, including continued conservative therapy and injections. Dr. Wong opined that Claimant was not an ideal candidate for fusion surgery, but did not address performance of a microdiscectomy. (Ex. 25).

13. Claimant consulted with Dr. Pehler on October 21, 2022. Dr. Pehler recommended Claimant undergo a bilateral L4-5 microdiscectomy and decompression surgery. (Ex. 26). On October 24, 2021, Dr. Scott agreed with Dr. Pehler's recommendation for surgery.

14. On November 9, 2022, Claimant underwent an independent medical examination (IME) with Lawrence Lesnak, D.O., at Respondent's request. (Ex. E). Dr. Lesnak testified at hearing and was admitted as an expert in occupational medicine. Based on his review of records and examination of Claimant, Dr. Lesnak opined that Claimant sustained a

work-related lumbosacral sprain/strain. He further opined that Claimant did not require any further medical care for her work-related injury, and that Claimant had reached maximum medical improvement (MMI), and that she was not a surgical candidate. (Ex. E).

15. Dr. Lesnak opined that Claimant's April 2022 MRI showed "similar if not the exact findings" as her July 2017 MRI, that "**appeared to be completely unrelated to her 06/05/2021 reported occupational incident**." (Emphasis original). (Ex. E). The ALJ notes that Dr. Lesnak did not review the 2017 MRI film, and his opinion relies on the radiologist report for the 2017 MRI. Contrary to Dr. Lesnak's testimony, the July 2017 does not document "similar if not the exact same findings." For example, the July 2017 MRI report does not document compression of the left L4-5 nerve root, nor does it document a left-sided disc protrusion, both of which are shown on the April 2022 MRI. Dr. Lesnak's testimony on this issue is not credible or persuasive. Similarly, his opinion that Claimant sustained only a soft tissue injury, and that she was not a surgical candidate is neither credible nor persuasive.

16. On December 5, 2022, Dr. Scott responded to correspondence from Respondent which requested that Dr. Scott review Dr. Lesnak's report, and comment on whether he agreed Claimant had reached MMI. Dr. Scott responded "NO" and wrote "I recommended that she proceed [with] recommended lumbar spine surgery, but apparently not authorized by insurance carrier." (Ex. 29).

17. Claimant returned to Dr. Scott on March 20, 2023, reporting that her back conditioned seemed worse. He noted that the request for surgery was denied by Respondent, and that Claimant continued to receive physical therapy for which she paid out of pocket. He referred Claimant for additional physical therapy, and back to Dr. Chan for a repeat ESI. (Ex. 31).

18. On April 5, 2023, the parties entered into a stipulation noting that Claimant's request for surgery had been denied, but stipulating that Claimant could proceed with the recommended surgery through her private health insurance – [Redacted, hereinafter KR], and that if the procedure was found reasonable, necessary and related to her work injury, Respondent would waive any defense related to authorization of the care or provider under WCRP 16. (Ex. 21).

19. On April 6, 2023, Claimant had another lumbar MRI, which showed at L4-5: "Disc desiccation. There is a focal disc herniation/extrusion located at the left central zone measuring 4 mm. Disc herniation contacts and posteriorly displaces the descending left S1 nerve root and contacts the medial margin of the exiting left L5 nerve root." (Ex. 32).

20. On April 14, 2023, Claimant returned to Dr. Chan for a new EMG study. Dr. Chan noted that she had MRI findings impingement on the L5 and S1 nerve roots, which could be a pain generator, and clinical findings consistent with left L5 and S1 radiculitis. However, Claimant's EMG was normal. He offered Claimant an additional ESI injection, which Claimant did not pursue. (Ex. 33).

21. On May 10, 2023, Claimant saw Adam Hebb, M.D., a neurosurgeon at Kaiser Permanente regarding surgery. Dr. Hebb recommended a left L4-5 hemilaminectomy and microdiscectomy, and scheduled the Claimant for surgery, which was performed on June 8, 2023. (Ex. 35 and 38). Approximately two months following surgery, on August 16, 2023, Claimant saw Dr. Hebb and reported that her back pain had resolved, she reported that she continued to have left calf pain in an L5 distribution, but that it was improved compared to before surgery. (Ex. 44).

22. On July 25 and 27, 2023, Claimant underwent an IME with L. Barton Goldman, M.D., at Claimant's request. Dr. Barton opined that Claimant's MRIs demonstrated "clear evidence of a significant change in the patient's underlying anatomy between 2017 and April 15, 2022 that is quite consistent with the change of her symptom presentation to more left lower extremity referred pain within 2 weeks of the June 5, 2021 work-related injury." He opined that as a result of Claimant's work injury, she sustained an aggravation of a pre-existing chronic lumbosacral strain and L4-5 disc protrusion leading to L4-5 disc herniation and extrusion. He opined that the Claimant's L4-5 surgery was work-related, stating "it is highly medically probable that were it not for the patient's work-related injury of June 5, 2021 that she would not have required the surgery she underwent on June 8, 2023. " The ALJ finds Dr. Goldman's opinion credible and persuasive.

23. On September 18, 2023, Dr. Lesnak issued an addendum report to his previous IME report, in which he reiterated his prior opinions, stating "There is absolutely no medical evidence to support that [Claimant] required any type of lumbar spine surgical procedures whatsoever as it would in any way pertain to her 06/05/21 occupational incident claim." (Ex. D). Dr. Lesnak's opinions are contrary to the opinions of Drs. Scott, Pehler, Hebb, and Goldman, and are not persuasive.

24. At hearing, Claimant testified that her position as a firefighter is a physically demanding job which she was able to perform prior to June 5, 2021 without difficulty. After her June 5, 2021 injury, Claimant continued to work, self-limited her work, due to difficulty performing certain tasks. Although Claimant did not have formal work restrictions, she testified that she received assistance from coworkers in performing heavy lifting tasks, and that her lieutenant was aware of her injuries and limitations.

25. Claimant testified that the June 5, 2021 incident caused significant pain in a single spot in her back that she had not previously experienced. She acknowledged that she had received treatment at Cascade for the same area of her lower back, but that the June 5, 2021 injury felt very different. Claimant testified that her back continued to worsen over time, and she was experiencing pain into her leg, calf and toes, and had pins and needles sensation in her left leg. She testified that these symptoms were different than those she previously experienced. Before the June 5, 2021 injury, she had not been referred to a surgeon nor had surgery been recommended. She credibly testified that the June 8, 2023 surgery resolved her back pain and most of her radicular symptoms. She indicated she has no foot numbness and occasional nerve pain in the left calf, which is decreasing. Claimant returned to work full time and full duty in October 2023. She testified that she no longer requires assistance in the performance of her job. Claimant's testimony was consistent and credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals*

Office, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).” *In the Matter of the Claim of Bud Forbes, Claimant*, W.C. No. 4-797-103 (ICAO Nov. 7, 2011). When the respondents challenge the claimant’s request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009)

Claimant has established by a preponderance of the evidence that the June 9, 2023 surgery was reasonable and necessary to cure or relieve the effects of her June 5, 2021 industrial injury. The credible evidence demonstrates that while Claimant had a preexisting back condition, that condition was aggravated and worsened by the June 5, 2021 work-injury. The ALJ credits the opinions of Drs. Scott, Pehler, Hebb, and Goldman that Claimant was an appropriate surgical candidate. The ALJ also credits Dr. Goldman’s opinion that but for Claimant’s June 5, 2021 work injury, she would not have required surgery. Claimant’s April 2022 MRI shows anatomical changes in the Claimant’s back that did not exist on the July 2017 MRI, including a left-sided disc protrusion and compression of the left L4-5 nerve, conditions addressed by Dr. Hebb in surgery.

ORDER

It is therefore ordered that:

1. The June 9, 2023 surgery performed by Dr. Hebb was reasonable and necessary to cure or relieve the effects of Claimant’s June 5, 2021 industrial injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 12, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant established by a preponderance of the evidence that he sustained a work-related injury on December 1, 2021.

    a. If Claimant established a compensable injury occurring on December 1, 2021, whether Claimant establish by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment to cure or relieve the effects of that injury.

    b. If Claimant established a compensable injury occurring on December 1, 2021, whether Claimant established by a preponderance of the evidence an entitlement to temporary disability benefits related to that injury.

2. Whether Claimant established by a preponderance of the evidence that he sustained a work-related injury on June 13, 2022.

    a. If Claimant established a compensable injury occurring on June 13, 2022, whether Claimant establish by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment to cure or relieve the effects of that injury.

    b. If Claimant established a compensable injury occurring on June 13, 2022, whether Claimant established by a preponderance of the evidence an entitlement to temporary disability benefits related to that injury.

STIPULATIONS

1. The parties stipulated that Claimant's average weekly wage is $789.90.

FINDINGS OF FACT

1. Claimant began working for Employer on October 6, 2021, as a food services technician at [Redacted, hereinafter PV] Hospital. Claimant's duties included preparing food, setting up and breaking down his station, cleaning, stocking, and various other duties.

2. Claimant testified that on November 30 or December 1, 2021, he was taking out trash when a co-worker asked him to lift a box of potatoes. Claimant testified that he felt a "slight pop" in his stomach. He then went to the restroom, lifted his shirt, and noticed a small ½ inch bulge above his navel. Claimant testified that the bulge was not painful, and that he did not inform Employer of the incident on that date.

3. On December 1, 2021, Claimant had a telephone consultation with Heather Schnorr, FNP the UCHealth Family Medicine Center for medication refills for an unrelated condition. Ms. Schnorr documented that Claimant had "some concerns for a hernia – Reports having a lean 6 pack and has tissue that pops through and he is able to push it in. Not painful." The medical record does not document any work-related activity causing the condition. Claimant was advised to follow up with his primary care provider. (Ex. U). Claimant's testified he informed [Redacted, hereinafter SR] that the hernia occurred at work while lifting a box of potatoes.

4. Claimant's next documented medical visit was December 29, 2021, when he saw Joshua Hammond, M.D., at UCHealth Family Medicine Center. Dr. Hammond noted a new umbilical hernia, which Claimant believed resulted from lifting at work, and requested a surgical referral. Claimant reported working out frequently, and that the bulge caused discomfort. Dr. Hammond diagnosed Claimant with an umbilical hernia without obstruction or gangrene, and referred Claimant to general surgery to discuss treatment options. (Ex. V).

5. Claimant's returned to Dr. Hammond on January 26, 2022, noting that he had not yet scheduled hernia surgery. (Ex. X). Claimant had additional visits with Dr. Hammond on February 16, 2022, and March 23, 2022, during which his hernia was not addressed, other than listing the diagnosis of umbilical hernia. (Ex. Y, Z, AA).

6. On April 6, 2022, Claimant saw John Hunter, M.D., at UCHealth for further evaluation of the umbilical hernia. Claimant reported noticing a small bump over the umbilicus for a few months, which he characterized as bothersome, but not severely painful. Dr. Hunter noted there was "No inciting event or injury. He works at PH[Redacted] in Food services but does not have to do a lot of strenuous lifting or anything there." Based on his evaluation, Dr. Hunter recommended a laparoscopic hernia repair, with mesh. (Ex. BB).

7. On June 9, 2022, Claimant underwent surgery for repair of the umbilical hernia. (See Ex. FF).

8. Claimant returned to work on June 13, 2022, working in the kitchen for Employer. As part of his job duties, Claimant moved a large bin full of ice from a rolling cart onto a counter when he felt a pull, and pain in his stomach. Claimant testified he informed his supervisor, and went to the emergency room.

9. On June 13, 2022, Claimant went to the UCHealth emergency department at Poudre Valley Hospital, reporting that he was moving ice that morning when he felt a "tear" in his abdomen. On examination, it was noted that Claimant's surgical incisions were intact, and that there was no swelling, bruising, or recurrence of the hernia. Claimant reported mild pain to palpation, but no other significant symptoms. Upon discharge, Claimant's symptoms had improved. Claimant had a previously scheduled appointment with Dr. Hunter for that day, and was instructed to keep the appointment. (Ex. F).

10. On June 13, 2022, saw Dr. Hunter, reporting experiencing increased pain after lifting a tray of ice at work. On examination, Dr. Hunter noted that Claimant's surgical incisions were intact, and that Claimant was mildly tender at the incision, but no other significant symptoms. Dr. Hunter advised Claimant to avoid strenuous activity or lifting more than 20 pounds for two to three weeks from the date of surgery. (Ex. EE). Dr. Hunter authored a June 13, 2022 letter advising that Claimant was unable to participate in sports or perform strenuous activities from June 9, 2022 through July 3, 2022. He indicated Claimant could return to work at full duty effective July 4, 2022. (Ex. FF)

11. On June 17, 2022, Claimant saw Kevin O'Toole, D.O., at the UCHealth occupational medicine clinic. Claimant reported on his intake form that his injury occurred on December 29, 2021, while "lifting 50-pound boxes of potatoes for coworkers." Claimant reported to Dr. O'Toole that the initial hernia was not bad, and he waited to have surgery until his symptoms worsened. Claimant reported to Dr. O'Toole that after surgery, he was assigned temporary lifting restrictions of no more than 20 pounds, and returned to work on June 13, 2022. He reported that he was "assigned to move an ice cart" and felt a "tear" in his left abdomen. On examination, Dr. O'Toole noted no palpable defect, no swelling, bulging or pain complaint with Valsalva maneuver. Dr. O'Toole's assessment was that Claimant's hernia was not probably work-related, and that there was no evidence of worsening following the June 13, 2022 work incident, and opined that "it is not medically probable that [Claimant was] seeking treatment for a work-related disease." He placed Claimant at maximum medical improvement and recommended no maintenance care or permanent impairment rating. (Ex. HH).

12. On June 22, 2022, Respondents filed a Notice of Contest, indicating that Claimant's injury was not work-related. (Ex. A).

13. On June 28, 2022, Claimant returned to Dr. Hunter's office for a post-surgical wound check with Allison Kennedy, RN. Ms. Kennedy noted that Claimant's incisions were well healed, without signs of swelling, or infection, and that Claimant did not need medication for pain. Claimant requested to return to work on July 4, 2022. (Ex. II).

14. Claimant returned to Dr. Hammond on July 20, 2022, August 17, 2022, and March 1, 2022, for unrelated medical problems. During these visits, claimant did not report issues with the hernia. (Ex. LL, MM, & NN).

15. On May 31, 2023, Claimant saw Dr. Hammond, and reported that bulging above the hernia repair site while doing sit-ups. (Ex. OO). Claimant did not report additional symptoms after May 31, 2023.

16. Claimant testified that, on December 29, 2021, he informed his manager of food services, [Redacted, hereinafter WA], that he was diagnosed with an umbilical hernia, but did not complete any written report. After being diagnosed with the hernia on December 29, 2021, Claimant continued with his normal job activities. Claimant testified that he did not receive any treatment for the hernia between December 2021 and April 2022, because it was not painful, and did not interfere with his personal or job activities.

17. Claimant testified he returned to work after his June 9, 2022 surgery because he believed he would be doing cashier work, and would not be lifting more than ten pounds. Claimant testified that prior to his surgery, he spoke with supervisor, [Redacted, hereinafter SS], and WA[Redacted], and informed them he would be having hernia surgery. Claimant testified that he had submitted a written request for time off for surgery. Claimant testified that his post-surgery restrictions included no lifting of more than 10 to 20 pounds, and that he understood he would be training as a cashier following surgery.

18. After the June 13, 2022 incident, Claimant did not return to work until July 4, 2022. Claimant testified that after returning to work in July 2022, he did not have any further problems with his hernia, although the surgical scars remain. Claimant has since moved to a different job for Employer working with patient transport, which he described as extremely physical.

19. SS[Redacted] testified at hearing that she works with Claimant as a "team lead" and that she often worked with Claimant when he was worked as a food services technician. She testified that Claimant did not tell her he had sustained a work-related hernia in December 2021, and she learned about the hernia a few weeks before Claimant's surgery in June 2022. She indicated Claimant requested two days off work for his surgery, and he did not tell her it was work-related. SS[Redacted] testified she was not aware of any restrictions placed on Claimant when he returned to work on June 13, 2022. Claimant only worked a couple of hours before he had to leave due to pain. SS[Redacted] testified that if she was aware of any restrictions, she would not have allowed Claimant to lift ice on June 13, 2022.

20. WA[Redacted] was the manager of food services during the times relevant to the issues in this case. WA[Redacted] testified that Claimant did not discuss a hernia with him in December 2021, and he first learned Claimant had sustained a hernia when Claimant submitted a vacation request approximately two to three weeks before Claimant's June 2022 surgery. WA[Redacted] did not recall Claimant telling him how the hernia occurred, or that it was work-related. WA[Redacted] testified that he was not aware of any specific work restrictions after Claimant's surgery, and if he was aware of restrictions he would have assigned Claimant job duties that did not require heavy lifting, such as making pizzas or sandwiches.

21. [Redacted, hereinafter KB], an investigative claims unit adjuster for Insurer testified at hearing. KB[Redacted] testified she became aware that Claimant was asserting that he sustained a work-related injury on June 14 or 15, 2022. She spoke with Claimant on June 16, 2022, and he informed her he had already scheduled an appointment with Dr. O'Toole for the following day. KB[Redacted] testified that Dr. O'Toole is an authorized treating physician, from Insurer's perspective. She testified that Insurer did not authorize treatment with Dr. Hammond or Dr. Hunter.

22. Respondents submitted Dr. O'Toole's post-hearing deposition in lieu of live testimony. Dr. O'Toole was admitted as an expert in occupational medicine, and testified he did not see evidence that Claimant sustained a re-herniation at his June 17, 2022 examination. He further testified that umbilical hernias may occur spontaneously without

an inciting event, and that the most common cause is a congenital weakness in the abdominal musculature. He testified that the June 13, 2022 incident did not lead to a substantial or permanent aggravation of Claimant's hernia, and that there was no need for additional treatment due to the June 13, 2022 incident. Dr. O'Toole's testimony on these issues was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa Cty. Valley Sch. Dist. #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dept. Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish that he sustained a compensable injury arising out of the course of his employment with Employer on either November 30, 2021, December 1, 2021, or June 13, 2022. Claimant's assertion that he sustained an injury on November 30, 2021 or December 1, 2021 while working for Employer is not supported by credible evidence. Although Claimant did report to SR[Redacted] a bulge in his abdomen on December 1, 2021, the record does not reference any cause of the event, or that the hernia was a recent occurrence. The ALJ does not find it credible that Claimant reported the injury as occurring at work while lifting a box of potatoes, or that SR[Redacted] would have failed to document such a report

When Claimant saw Dr. Hammond on December 29, 2021, it was documented that Claimant thought the hernia resulted from lifting at work, however, no specifics of how the incident occurred were documented. Claimant saw Dr. Hunter on April 6, 2022, it was documented that there was "no inciting event or injury." Claimant's first documented report of sustaining and injury while lifting potatoes at work was on June 17, 2022, when he saw Dr. O'Toole. Between December 29, 2021 and June 17, 2022, Claimant had at least eight visits with health care providers for various issues (including visits with Dr. Hammond and Dr. Hunter specifically for a hernia) and did not report any specific work-related incident causing a hernia. Moreover, none of Claimant's treating medical providers have opined that Claimant's hernia was the result of work-related activities.

Although Claimant testified that on or around December 29, 2021, he informed WA[Redacted] he sustained a hernia at work, the ALJ finds more credible the testimony of WA[Redacted] and SS[Redacted] that Claimant did not report a hernia occurring at work to either of them. The ALJ concludes that Claimant has not met his burden of establishing that it is more likely than not that he sustained a hernia on or about December 1, 2021 arising out of the course of his employment with Employer.

The evidence demonstrates that Claimant did experience a "tearing" sensation while working on July 13, 2022. However, this incident did not result in any exacerbation or aggravation of Claimant's condition, beyond transient pain, and the incident itself did not necessitate Claimant's time off from work. Claimant's contention in position statements that the July 13, 2022 incident caused a tear in the mesh implanted during the June 9, 2022 surgery is not supported by the medical records. Claimant was examined by four different providers (twice on June 13, 2022, once on June 17, 2022, and once on June 28, 2022), none of these medical professionals documented disruption of the surgical sutures, or other findings indicating the surgical mesh became torn. The ALJ finds credible Dr. O'Toole's opinion that the June 13, 2022 incident did not require additional treatment, and did not cause an aggravation of Claimant's hernia. The ALJ concludes that while Claimant did experience pain at work on June 13, 2022, the incident did not aggravate or exacerbate his condition, and merely resulted in transient pain which resolved. Claimant's time off work between June 13, 2022 and July 4, 2022, was not the result of a work-injury, but was the result of his non-work-related hernia surgery. Claimant has failed to meet his burden of establishing that he sustained an injury arising out of the course of his employment with Employer on June 13, 2022.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish that he sustained a compensable injury, Claimant has failed to establish an entitlement to medical benefits.

Temporary Total Disability

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103 (1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Because Claimant has failed to establish that he sustained a compensable injury, Claimant has failed to establish an entitlement to temporary total disability benefits.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that he sustained a work-related hernia on November 30, 2021, or December 1, 2022.

2. Claimant has failed to establish that he sustained a work-related injury on June 13, 2022, or that he aggravated or exacerbated a pre-existing condition.

3. Claimant's request for medical benefits is denied.

4. Claimant's request for temporary total disability and temporary partial disability benefits is denied.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 12, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-151-120-003

ISSUES

- Did Claimant prove [Redacted, hereinafter WM] is a statutory employer with respect to a left knee injury Claimant suffered on August 7, 2020?
- Medical benefits.
- Average weekly wage.
- Temporary Total Disability benefits.

PROCEDURAL ISSUES

During the hearing, it was learned that Claimant's actual employer, [Redacted, hereinafter CF], had an active bankruptcy case pending in the United States Bankruptcy Court for the District of Colorado, denominated Case No. [Redacted, hereinafter CA]. Pursuant to 11 U.S.C. § 362(a), filing a bankruptcy petition automatically stays the commencement or continuation of any judicial or administrative action against the debtor to recover a claim that arose before the commencement of the bankruptcy case. The ALJ agreed to receive the parties' evidence at the hearing, subject to further investigation into the status of the bankruptcy matter. At a post-hearing status conference on February 27, 2023, it was agreed that (1) the parties would forthwith file a motion for relief from the stay with the Bankruptcy Court, (2) no decision would be rendered regarding Claimant's workers' compensation claim without approval of the Bankruptcy Court, and (3) any decision will be limited to WM's[Redacted] potential liability as Claimant's statutory employer.

FINDINGS OF FACT

1. CF[Redacted] was a mushroom farm that grew, harvested, and sold mushrooms to retailers, food distributors, and restaurants.

2. Claimant worked for CF[Redacted] as a mushroom harvester.

3. On August 7, 2020, Claimant injured her left knee when she lost her balance and twisted her knee. She was diagnosed with meniscal tears and ultimately underwent arthroscopic surgery.

4. CF[Redacted] was uninsured for workers' compensation liability at the time of Claimant's injury. CF[Redacted] directly paid $5,722.00 for medical bills related to the injury, including the surgery. CF[Redacted] also paid Claimant wage continuation for an unknown period when she was off work because of the injury.

5. WM[Redacted] and CF[Redacted] executed a contract under which CF[Redacted] produced and packaged mushrooms for WM's[Redacted] "private label" brand, "[Redacted, hereinafter HS]" (hereinafter "HS[Redacted]"). The contract provides standards for products sold to WM[Redacted], including allowed ingredients, a non-GMO requirement, product sustainability requirements, nutrition analysis, and taste standards.

6. In August 2020, CF[Redacted] produced mushrooms for approximately 7 to 12 retailers and food distributors, including WM[Redacted], [Redacted, hereinafter SK], [Redacted, hereinafter FT], and several smaller companies. CF[Redacted] previously supplied mushrooms for [Redacted, hereinafter RR], although the contract ended sometime before 2020.

7. The mushrooms CF[Redacted] sold to most customers were packaged in containers identified with the CF[Redacted] company name and label. However, mushrooms sold to WM[Redacted] were packaged in containers bearing the HS[Redacted] label. Similarly, mushrooms sold to RRs[Redacted] during the pendency of its contract were labeled with RRs[Redacted] private brand name(s).

8. Claimant's supervisor instructed her to harvest certain types and sizes of mushrooms each day. Claimant had no control over the assignments and did not know which customers would be receiving the mushrooms she harvested on any given day. Claimant does not know whether the mushrooms she was harvesting at the time of the injury were intended for WM[Redacted] or any other customer of CF[Redacted].

9. CF[Redacted] shipped mushrooms to WM[Redacted] under the HS[Redacted] label on August 10 and August 13, 2020. No mushrooms were shipped on August 7, 2020.

10. There is no persuasive evidence any mushrooms Claimant was harvesting at the time of her injury were sold and shipped to WM[Redacted] under the HS[Redacted] label.

11. Claimant failed to prove WM[Redacted] is a statutory employer with respect to her injury. There is no persuasive evidence that Claimant was harvesting mushrooms for WM's[Redacted] HS[Redacted] brand when the injury occurred.

CONCLUSIONS OF LAW

Under § 8-41-401(1)(a), a company that contracts out part or all its work to any subcontractor is considered the statutory employer of the subcontractor and the subcontractor's employees. If the subcontractor is uninsured, the subcontractor's employees may reach upstream to the statutory employer for workers' compensation benefits. *Finlay v. Storage Technology Corp*., 764 P.2d 62 (Colo. 1988). The purpose of the statutory employer provision is to prevent employers from avoiding liability for workers' compensation benefits by contracting out their regular business to uninsured independent contractors. *Id*.

The test for whether an employer is a "statutory employer" is whether the work contracted out is part of the employer's regular business as defined by its total business operation. *Finlay v. Storage Technology Corp., supra*; *Humphrey v. Whole Foods Market*, 250 P.3d 706 (Colo. App. 2010). In applying this test, courts should consider elements of routineness, regularity, and the importance of the contracted service to the regular business of the employer. *Id*. The work must be "such a part of [its] regular business operation as the statutory employer ordinarily would accomplish with [its] own employees." *Snook v. Joyce Homes, Inc*., 215 P.3d 1210, 1217 (Colo. App. 2009).

As found, Claimant failed to prove WM[Redacted] is a statutory employer with respect to her injury. Even if we accepted the premise that growing, harvesting, and packaging produce is sufficiently integral to WM's[Redacted] regular business to render it a statutory employer, there is no persuasive evidence that Claimant was processing mushrooms bound for WM[Redacted] at the time of her injury.

This deficiency is fatal to the claim. Under the Act, a defining element of an individual's status as an "employee" is the performance of services "*for* another." Section 8-40-202(2)(a) (emphasis added). Although the statutory employer provision expands the pool of entities that can be deemed a claimant's "employer," there is no persuasive basis to conclude it was intended to change the definition of an "employee," or obviate the fundamental requirement that an injury arise out of services performed "for" the putative employer.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits from WM[Redacted] and [Redacted, hereinafter ZH] is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he was entitled to reasonably necessary and related medical benefits to include a left shoulder surgery recommended by Dr. Cary Motz.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally

1. Claimant was employed with Employer as a truck driver and would do rounds to pick up dumpsters and barrels full of grease.

2. On September 14, 2022 he had made a stop, which was hard because he would have to push the grease barrel across the parking lot, over a drain grate and up to the truck to dump it. The tank was fairly big, and when it was completely full, it would weight about 2,500.00 lbs. The tank was on small casters or wheels and had to be manipulated to move it. He would have to push, pull and use a pry bar in order to get it to the truck, attach the chains and dump the tank's contents. Sometimes he would just pump the grease out but in this case, the tank was so far away from the truck, it was impossible to do so.

B. The Accident

3. On September 14, 2022 at approximately 3 a.m. he was pushing the tank across the parking lot, up an incline when it got stuck on a grate. He was pushing and pulling, trying to hurry up because he was previously yelled at when he made too much noise at this stop. While he was doing this, he felt pain in both shoulders. It was a sharp pain in the front of his shoulders and above the glenohumeral joint. He stated that as the day and night progressed, he had more and more pain in the shoulder. By the time he went to bed the pain was really bad.

4. Once he reached home, he googled his symptoms, which lead him to a "beer can" test, and was something he did to see if there was anything wrong with his shoulder. He extended his arms out, as if he was holding a beer can, then he turned his arm so that the can would be upside down, then push on his hand to see if there was pain, which would be indicative of an injury to the shoulder. He felt an increase in pain.

C. Claimant's Testimony

5. He reported the injury to his bilateral shoulders to his supervisor.

6. Employer did not send him to be attended for a couple of days to see how he did. He was then seen at Workwell a few days later. He was examined and provided restrictions.

7. Claimant returned to modified work, riding with a new hire to instruct him on how to perform the job. But because he was getting worse, climbing in and out of the truck and driving, he was referred to get an MRI of the bilateral shoulders. He discussed the findings with both Dr. Bates and Dr. Javernick. Dr. Javernick conveyed that had a fairly large but not complete tear of the left rotator cuff. Claimant continued physical therapy and had an injection into the left shoulder, which improved the shoulder some for a short time, but the pain returned. Dr. Javernick then recommended surgery for both the right and the left shoulders, stating that the left side tear was larger than what the MRI report indicated. The pain in the left side was always more than that of the right side despite the complete tear on the right, compared to the partial tear on the left.

8. Claimant had an earlier incident in April 2022 when he was pushing a dumpster with his left knee and it popped. He had an MRI but the knee was intact so he had therapy and was released.

9. Claimant had a subsequent incident in October 2022, where he was getting into the cab of the truck, when his right shoulder pain was so bad that the arm suddenly gave out and he slipped off the truck step, falling on his left side and injuring his left knee. His left shoulder pain also caused some slight decrease in range of motion. He was sent to Concentra for treatment and eventually to Dr. Mark Failinger.

10. Claimant continued to have pain in his left shoulder with reaching, pulling, holding onto anything, had worse pain symptoms at night, and decreased strength. He was getting sharp pains and aching in his left shoulder when carrying something heavy. He was eventually transferred to Concentra to keep all his medical appointments at one clinic. He was seen by Dr. Failinger for the left shoulder, which was when Dr. Failinger advised him of his impending retirement, transferring Claimant's care to Dr. Cary Motz.

11. He did continue the physical therapy at Concentra but that did not really show much improvement or lasting benefit.

12. Dr. Motz recommended surgery and Claimant continues wanting to proceed with the left shoulder surgery recommended.

13. Claimant had never had any injuries to his left shoulder prior to September 14, 2022, nor any medical care.

D. Medical Records

14. Claimant was first evaluated by PA-C Donald Downs of Workwell on September 19, 2022. Claimant provided him a history that was consistent with Claimant's testimony. Mr. Downs noted that it was more likely than not that Claimant's history of injury and the physical exam that Claimant's complaints were work related. Claimant was positive for joint pain, had tenderness at the bicipital groove, good strength but pain with endpoints of overhead movements, increased pain with posterior beltline lift off, with empty can test, and a positive Hawkins' test. Mr. Downs found no ecchymosis, erythema or edema, and found good strength on belly press. Claimant was referred to physical

therapy, recommended ice and heat as needed for pain and swelling, provided medications and restrictions, and was given a diagnosis of strain of the left shoulder joint.

15. Claimant started physical therapy on the same day. David Schulteis, DPT documented that Claimant had bilateral shoulder pain that was getting worse and that before this work injury on September 14, 2022, Claimant did not have prior problems with the shoulders. Claimant gave a history of mechanism of injury that was consistent with his testimony. He noted that following the injury Claimant had weakness with manual muscle testing for shoulder abduction, a positive empty can testing, decreased range of motion (ROM), weakness, limited work tolerance, and limited functional tolerance.

16. On September 21, 2022 Claimant returned with continued bilateral shoulder pain, left greater than right. Dr. Daniel Bates evaluated Claimant stating that his primary problem was dull and sharp pain located in the left shoulder. Dr. Bates noted that Claimant had pain in the anterior bicipital groove, palpable biceps tendon in the groove with moderate tenderness, with tenderness to palpation along the supraspinatus muscle belly in the subacromial and a positive empty can test. He diagnosed left shoulder joint sprain. Dr. Bates noted that Claimant's complaints were likely work related.

17. Claimant returned to see Dr. Bates on September 27, 2022. Claimant was complaining of worsening symptoms of pain and discomfort from physical therapy and working, getting in and out of the truck, including bilateral shoulder pain though he had some relief with a TENS unit and icing. He documented tenderness to palpation of the left shoulder bicipital groove, subacromial tenderness, supraspinatus muscle belly tenderness, with positive Hawkins, Neer's, empty can test, with poor strength. Dr. Bates referred Claimant for an MRI of the left shoulder and discontinued physical therapy.

18. Claimant had an MRI performed at Health Images Fort Collings on September 30, 2022. Dr. Steven Ross noted a low to moderate grade intrasubstance supraspinatus tendon tear, a low grade intrasubstance subscapularis tendon tear, and significant inflammation of the acromioclavicular joint.

19. Dr. Bates reviewed the MRIs of the bilateral shoulders on October 5, 2022. He noted a mild to moderate tearing which was partial thickness tearing of the infraspinatus. He documented that Claimant continued to worsen. On exam he noted moderate tenderness to palpation over the infraspinatus muscle belly, and at the posterior inferior shoulder. He provided work restrictions of no use of the arm over shoulder height, and no lifting, pushing or pulling over 40 lbs., only from floor to waist. He continued to diagnose left shoulder joint sprain and made a referral to an orthopedic surgeon. He stated that objective findings were consistent with the work related mechanism of injury.

20. Claimant was seen by Justin Kutz, PTA on October 18, 2022. Claimant was improving with pain tolerance but had bilateral shoulder pain frequently, especially with reaching overhead with the left arm, when he would feel a very sharp pain.

21. On October 20, 2022 Dr. Bates noted that Claimant was awaiting authorization for the right full thickness tear surgery but would proceed with steroid injection into the left shoulder. On exam of the left shoulder, he documented that Claimant showed tenderness to palpation in the subacromial space and along the supraspinatus

muscle belly as well as a positive Hawkins, positive Neel's, and positive empty can. He performed no other exam or testing.

22. Claimant started treatment with Concentra for a left ACL injury on October 24, 2022 that happened when his right arm gave out while getting into the passenger side of the cab. Claimant also provided a history of the bilateral shoulder claims and that he was awaiting surgery. Claimant fell to the ground on his left side, causing worsening symptoms of his left shoulder. The October 25, 2022 note also provided a history of Claimant's treatment related to his prior left knee injury of April 18, 2022, which resolved with treatment. Dr. Wendy Carle recommended that Claimant be seen for any aggravation to the left shoulder related to this new fall onto his left side. She noted loss of range of motion of the left shoulder but did not document any other testing.

23. Dr. Bates continued seeing Claimant and documenting the same exam findings. He performed an ultrasound guided subacromial injection on October 28, 2022. At that time he reduced Claimant's weight limit to 25 lbs. lifting, pushing and pulling floor to waist, no kneeling, crawling, squatting or climbing and not commercial driving. In follow up visits he noted that insurer had yet to authorize the surgery for the right shoulder.

24. As found, the records from Workwell fail to show that any of the providers even assessed for AC joint pain or pathology by performing an O'Brien's test (an active compression test), a shear test or an AC joint provocation tests. As found, the Workwell providers listed those tests that were negative or normal in their reports, leading this ALJ to conclude that they simply did not test the AC joint for pain or tenderness.

25. John R. Schwappach, M.D. evaluated Claimant on January 20, 2023 for a Independent Medical Examination requested by Respondents. He issued a report on February 2, 2023. This report focused more on Claimant's knee ACL rupture than the shoulder injuries, though he noted that Dr. Failinger recommended shoulder surgery take place before completing ACL reconstruction. The physical exam only documented decreased range of motion measurements and no other physical findings regarding the shoulders, though he made normal findings regarding other body parts. He opined that the ACL findings were caused by Claimant's October 24, 2022 work injury and required reconstruction surgery.

26. Dr. Matthew A. Javernick of Orthopaedic & Spine Center of the Rockies evaluated Claimant on February 1, 2023. He read the left shoulder MRI as showing a high-grade interstitial tear greater than 50% of the supraspinatus. He recorded that Claimant had left greater than right shoulder pain, had pain with overhead activity, lifting objects away from the body and at night. He noted a positive Hawkins', Neer's, empty can test, though no tenderness of the AC joint at that point in time. Dr. Javernick commented that Claimant elected to proceed with surgery on the left, including rotator cuff repair, biceps tenotomy, subacromial decompression, "and any other indicated procedures."

27. Dr. Schwappach performed a medical records review on February 6, 2023 at Respondent's request. He noted a history generally consistent with Claimant's testimony. He reviewed the records from Workwell noting Claimant's ROM deficits of the left shoulder. He noted that the left shoulder MRI scan demonstrated a low grade intrasubstance tear of the supraspinatus tendon and subscapularis tendons. He opined

that it was most consistent with a rotator cuff strain as there was no full thickness rotator cuff tear or labral pathology detected in the left shoulder. He also noted the acromioclavicular inflammation. He stated that Claimant sustained an acute exacerbation to the right shoulder pathology and left shoulder rotator cuff strain, which was conservatively treated and that Claimant had reached maximum medical improvement (MMI) by October 20, 2022.

28. On March 15, 2023 Dr. Javernick's office finally reached the correct adjuster and noted a request for surgery would be faxed.

29. Claimant was evaluated by Mark Failinger on March 16, 2023 on his multiple issues including the left knee ACL, and the bilateral shoulder rotator cuff pathology. Claimant reported of the three body parts that the left shoulder was the worst and requested that the surgery for the left shoulder take place before the ACL reconstruction. He noted bilateral shoulder pain and left knee pain. Dr. Failinger noted that, while Claimant believed the adjuster was making arrangement for all three conditions be treated at Concentra, Dr. Failinger had no authority to proceed with assessment and treatment of the shoulder conditions. Dr. Failinger noted that, since he would be retiring that he would refer Claimant to Dr. Motz for further care.

30. Cary Motz, M.D., an orthopedic surgeon, issued a report on March 21, 2023 detailing Claimant's history of injuries beginning with the April 18, 2022 left knee injury which resolved with treatment, the bilateral shoulder injuries of September 14, 2022 and the subsequent left knee injury of October 24, 2022. At that time, Claimant was complaining of moderate left shoulder pain with pain at night, pain with overhead use and pain about the superior aspect of the shoulder. The right shoulder had moderate discomfort with use, pain with overhead use, and some pain at night. The left knee had occasional swelling and feelings of instability. On exam of the left shoulder he indicated that Claimant had moderate AC joint tenderness with positive cross-arm adduction test, mild limitation of motion with positive impingement Hawkins test and tenderness over the biceps tendon. He commented that the MRI showed partial thickness intrasubstance supraspinatus tear and significant edema in the distal clavicle at the AC joint with degenerative changes.

31. Dr. Motz opined that the September 14, 2022 work injury was the cause of Claimant's left shoulder pain and AC joint pain, showing signs of impingement. He noted that the subacromial steroid injection did not give much improvement. He recommended a steroid AC joint injection to determine if it provided diagnostic and therapeutic effects and that it was necessary to retain and/or regain further bodily function and return to pre-injury functionality, which was performed on that day, and also referred Claimant to further physical therapy for the left shoulder. Dr. Motz stated that, following the injection, if Claimant continued to have persistent issues, that he would be evaluated for rotator cuff surgical intervention and repair. He recommend that they repair the rotator cuff as the first procedure and then address Claimant's knee, but if they were going to be significantly delayed due to denial of prior authorization with the right shoulder, or for that matter the left shoulder, that Claimant required surgical intervention and that Dr. Motz would proceed with the ACL reconstruction in the interim.

32. Jeffrey Wallace, PA-C, attended Claimant on a telehealth visit. He assessed Claimant with a left AC sprain on March 24, 2023 and ordered physical therapy for the shoulders. He noted that the cases were being combined. As found, this is the point in time that Claimant fully transferred to Concentra for the left shoulder injury. PA Wallace also referred Claimant to Dr. Motz for the left shoulder.

33. Dr. Motz documented on April 5, 2023 that the injection gave Claimant good relief for a few days but his symptoms returned. He noted that surgery for the left ACL reconstructions was approved but both the left shoulder and right shoulder surgeries had been denied. Claimant continued to report that the left shoulder was the most painful of his injuries. On exam he noted AC joint tenderness of the left shoulder, positive cross arm adduction test, and mild limitation of motion. He also remarked that Claimant had signs of impingement and partial tearing of the rotator cuff and that the AC joint injection was diagnostic. He discussed an arthroscopy with debridement, decompression, and distal clavicle excision, which should significantly improve Claimant's symptoms in left shoulder and should be a fairly quick recovery

34. Dr. Schwappach issued a third report on April 5, 2023. He noted that the records reviewed were unable to demonstrate a surgical lesion of Claimant's left shoulder, and again opined that Claimant only sustained a left shoulder strain of the rotator cuff.

35. Mr. Wallace evaluated Claimant on April 10, 2023 and noted no issues with his shoulders and did not distinguish between the shoulders on exam, though he stated that Claimant had not progressed with either steroids or physical therapy and that Claimant was awaiting surgery. This report and subsequent reports from this provider were neither credible nor persuasive as the reports focused primarily on the lower extremity injury and repeated the exact same findings multiple times, causing this ALJ to believe that they were copied and pasted. He noted that objective findings were consistent with the work related mechanism of injury.

36. On April 24, 2023 Mr. Wallace ordered further PT for the left AC joint sprain and sequelae and provided work restrictions of less than light duty work.

37. Claimant's next visit, on May 30, 2023, was with Dr. Carle who noted that Claimant had limited range of motion of the left shoulder, with an 8/10 pain and symptoms worse at night, with joint pain, swelling and stiffness, and was still awaiting approval of left shoulder surgery. She found tenderness in the AC joint, in the superior shoulder and in the posterior shoulder, with abnormal ROM with pain (estimates) with forward flexion and abduction. The last report from Concentra still had a restriction of no driving commercial vehicles.

38. Physical therapy records for treatment of the left knee indicated that the Claimant recovered from the April 18, 2022 left knee injury after injections and 9 PT visits. There was little mention of the shoulder injury before March 30, 2023 other than to state Claimant was holding the knee surgery until after his shoulder surgery. Claimant was eventually transferred to a home exercise program for the knee. PT restarted on March 30, 2023 with assessment of the bilateral shoulders when care for the shoulders was transferred from Workwell to Concentra. Mr. Caymen Menard noted that they "[i]ntroduced ROM for B shoulders, light RTC activation/strengthening as well. Pt has ROM and strength deficits to be expected with ongoing B RTC injuries. Added B shoulder

goals to reflect pivot from knee to shoulders here in therapy." Mr. Menard found abnormal range of motion and worked with Claimant to improve motion.

39. On May 2, 2023 Mr. Menard noted that they would be stopping pre surgery PT for the shoulders as Claimant was to have knee surgery the following week. He noted that they would restart after the surgery. When Claimant restarted PT on May 31, 2023, it was only for the left knee. Mr. Menard documented that Claimant was having worsening shoulder symptoms as a result of using crutches following surgery. At that point, Claimant was only allowed to do toe touch weight bearing. Once he was allowed to discontinue the crutches, his shoulders started to improve again.

40. Claimant followed up with PA Wallace on June 13, 2023. He noted Claimant had tenderness in the AC joint and had a positive painful arc when performing rotator cuff test. He noted that Claimant was awaiting authorization for left shoulder surgery under Dr. Motz and that objective findings were consistent with the work related mechanism of injury.

E. Dr. Motz's Testimony

41. Cary Motz, M.D. testified, on behalf of Claimant, as a board certified expert in orthopedic sports medicine as well as a Level II accredited physician. He first evaluated Claimant on March 23, 2023. He took a history and reviewed the medical records, including the MRI images and reports of the left shoulder. He noted that the images showed an inflamed acromioclavicular joint with some mild arthritis, and a moderate partial thickness rotator cuff tear. He disagreed with the radiologist that the tear was low grade. In fact he agreed with Dr. Javernick, the other orthopedic surgeon, that Claimant had a high grade interstitial tear of the rotator cuff that appeared to be greater than fifty percent thickness as well as a low grade subscapularis tear. He did not have the prior surgeon's report though, when he reviewed the records originally. Dr. Motz opined that there was inflammation due to the trauma to the September 14, 2022 left shoulder injury and not some arthritic inflammatory process. He stated that the lack of prior problems with his shoulders indicated it was more likely to be traumatic in nature. He opined that it was more likely than not that the partial thickness left rotator cuff tear was related to the traumatic injury of September 14, 2022. He also opined that the symptoms caused by the partial thickness tear were consistent with the reported mechanism of injury.

42. On exam he noted that Claimant had signs of impingement syndrome and had pain in the AC joint and some weakness. Claimant had a positive cross-arm adduction test which indicated pain in the AC joint and was positive. Claimant also had positive impingement, and Hawkins signs showing that Claimant had either bursitis or symptomatic rotator cuff pathology. Dr. Motz also explained that an empty can test was also indicative of rotator cuff pathology or impingement. A positive Neer's test can also indicate rotator cuff pathology or impingement. These are all objective test performed by providers and he expected Claimant's tests to be positive given his MRI findings, with the impingement, Hawkins and empty can test confirming the partial thickness tear and the AC joint pain and crossed arm adduction test correlating to the AC joint pathology. He did discuss that Claimant only had mild loss of range of motion (ROM) of the shoulder though he had pain with ROM.

43. Following his exam, Dr. Motz recommended arthroscopy with a decompression and extensive debridement and an AC joint resection/distal clavicle excision and possible rotator cuff repair, upon evaluating the cuff during surgery to assess the cuff's condition. Further, because both the subacromial steroid injection and the AC joint steroid injection gave similar response, he opined that it was difficult to say whether the majority of the pathology and symptoms are coming from the rotator cuff or the AC joint. He stated he would be unable to say definitely until he could see the cuff first hand.

44. Dr. Motz stated that the purpose of the surgery would be to debride the bursitis, remove a section of the distal clavicle to decompress the AC joint, and evaluate the rotator cuff to see if it required repair. He opined that the left shoulder surgery was reasonable and necessary to proceed with since Claimant had been through over a year of conservative treatment, including more than one injection and extensive physical therapy, and Claimant met all the criteria for proceeding with surgery under the Medical Treatment Guidelines for the shoulder as well as it being necessary to alleviate his left shoulder pain.

45. Dr. Motz did both Claimant's left knee surgery in May 2023 and his right shoulder surgery in August 2023 and noted that Claimant had done really well from both surgeries. Dr. Motz expected the same from the left shoulder surgery.

46. He opined that Claimant had not reached MMI for the left shoulder injury because he needed the left shoulder surgery in order to reach MMI. He opined that the surgery was needed to address the September 14, 2022 work related injuries and trauma to the left shoulder. He opined that the small amount of arthritis in the AC joint was aggravated with the injury and that they had not been able to calm that down with "the injection and physical therapy and anti-inflammatories and topical treatments and all the other things" or treatments.

47. Dr. Motz opined that absent any other mechanisms, events, or history or injuries to the left shoulder, Claimant sustained a left shoulder injury on September 14th, 2022, and that the findings on the MRI of September 30, 2022 were causally related to the September 14, 2022. He explained that it was clear that the AC joint was inflamed, but there was also a moderate small partial thickness rotator cuff tear. He opined that the inflammation found in the AC joint was due to trauma. He also opined that the partial thickness tear was also more likely than not due to the traumatic work injury. He based his opinion, at least partially, on the fact that Claimant had no prior history of left shoulder problems, and had a mechanism injury sufficient enough to cause tears in the rotator cuffs.

48. He noted that the same analysis for causation that Dr. Schwappach used with regard to Claimant's knee injury would apply to Claimant's left shoulder. Specifically that in an otherwise health forty one year old with good left shoulder motion and no other contraindicated pathology, Claimant should have left shoulder surgery as recommended. Dr. Motz also stated that Dr. Schwappach failed to perform essential tests in order to render an opinion regarding the left shoulder including provocative maneuvers, empty can test, adduction, positive beltline, Neer's or Hawkins as he did not document those measurements. He further vehemently disagreed with Dr. Schwappach's opinion that Claimant's ongoing problems were not caused by the September 14, 2022 accident.

49. Dr. Motz was not suggesting or recommending a biceps tenotomy as recommended by Dr. Javernick. He opined that the Claimant's pain generator is a combination of the partial thickness tear and the AC joint inflammation. He stated that the MRI which took place two weeks after the accident showed both pathology and that Claimant had continuing problems with both the rotator cuff and the inflamed AC joint. Dr. Motz specifically opined that the pain was limiting his function, which needed to be addressed in order to restore and improve his function. He opined that the sources of Claimant's pain comes from both the inflamed AC joint and the rotator cuff and that both pathologies were present when he had his MRI. He continued to recommend a left shoulder arthroscopy to repair the rotator cuff, subacromial decompression to address the impingement or issues regarding a bone spur of the bone above the rotator cuff and resect the coracoacromial ligament, debridement, and distal clavicle excision to address the AC joint inflammation. He stated that the vast majority of shoulder surgeries were undertaken to alleviate the patient's pain symptoms.

F. Dr. Schwappach's testimony

50. John R. Schwappach, M.D. testified, on behalf of Respondents, as a board certified expert in orthopedic surgery and as a Level II accredited physician. He stated that he initially did a record review but he also performed an Independent Medical Examination of Claimant. He performed an examination that included range of motion of the shoulders as well as some provocative tests, which he did not record. He reviewed the MRI film of the left shoulder and disagreed with Dr. Javernick's and Dr. Motz's opinions that there was a high grade tear, stating he would consider it a low grade one. He stated that, based on his exam of the left shoulder, Claimant had a partial interstitial tearing but not a significant one, that is tearing within the fibers of the tendinous tissue, and that Claimant's findings were more consistent with a rotator cuff strain than a tear.

51. Dr. Schwappach stated that the MRI scan raised the question whether Claimant had inflammation from some sort of arthritic process at the AC joint, which was clearly present, or was it post-traumatic. The fact that there was change from the first surgical request from Dr. Javernick, to the second surgical recommendation told him that something was occurring in the pathology subsequent to the work event, the industrial accident, that was causing that change in symptoms. Dr. Schwappach opined that a different process was involved than the industrial accident in causing the need for the distal clavicle excision. He opined that the procedure might be an indicated procedure, but it did not fall under the auspice of the industrial accident. He did not state that the initial AC joint pathology had resolved, only that it was not related to the accident. He opined that the arthroscopy with a debridement, decompression, and distal clavicle excision recommended by Dr. Motz may be reasonably necessary but not related to the September 2022 work injury.

52. He explained that assessment of whether the partial tear was a high grade or a low grade tear was subjective depending on the reviewer's own subjective opinion and it was his opinion that Claimant had a low grade partial tear. This information was only one piece of information used to generate an opinion, the other was the physical exam. He also opined that the AC joint inflammation was due to arthritis and not any trauma to the joint.

G. Conclusive Findings

53. As found, Claimant did not have any problems or symptoms into his left shoulder until the September 14, 2022 incident where Claimant was pushing a very heavy container of grease across the parking lot when the small wheels got caught in a grate and Claimant had to struggle to get it out, and injured his bilateral shoulders. Despite the immediate pain, he continued to the truck on an incline in order to empty the container.

54. As found, Dr. Motz's opinions were more credible and persuasive than the contrary opinions of Dr. Schwappach. Dr. Motz' opinions that Claimant injured his left shoulder during the event of September 14, 2022, and that the ongoing symptoms and pathology were injured or aggravated at that time, especially the facts that the findings on the MRI of the left shoulder including the partial tear and the AC joint inflammation were caused by the September 14, 2022 work injury. Further, Dr. Motz credibly opined that the findings on the MRI were supported by his and other authorized provider's positive findings on exam, including Dr. Javernick's and Dr. Bates's opinions. On the other hand, Dr. Schwappach was not persuasive in his explanation that when he examined Claimant he performed all the provocative maneuvers and tests, found nothing, and simply did not document them in his report. Neither was Dr. Schwappach persuasive in his opinion that the pathology found on the MRI was not caused or aggravated by the September 14, 2022 accident.

55. As found, Dr. Motz was persuasive in explaining that Claimant has two distinct pathologies, the AC joint inflammation and the partial rotator cuff tear as found on MRI. As found, Dr. Motz's opinion with regard to the more likely cause of Claimant's ongoing symptoms is the AC joint pathology which was aggravated by the September 14, 2022 accident, though he had positive response, though short lived, to the injection of the AC joint and the subacromial space. As found, the AC pathology and significant inflammation of the acromioclavicular joint showed on the MRI only two weeks after the accident supported Dr. Motz's opinion that Claimant had an aggravation of his underlying AC pathology.

56. As found, Dr. Motz's recommendations for surgery including arthroscopy with decompression, extensive debridement, AC joint resection/distal clavicle excision and possible rotator cuff repair, are reasonably necessary and related to the admitted September 14, 2022 work injury which is intended to restore Claimant's function, ability to use his left upper extremity and either resolve or ameliorate his pain in the left shoulder.

57. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See Industrial Commission v. Riley, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See Bodensieck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. Arenas v. ICAO, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. University Park Care Center v. Industrial Claim Appeals Office, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. Cordova v. ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See Burnham v. Grant, 24 Colo. App. 131, 134 P. 254 (1913); see also Heinicke v. ICAO, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See Prudential Ins. Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Authorized Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537, (ICAO May 31, 2006). A claimant must prove by preponderance of evidence direct and proximate causal relationship between an injury and the need for medical treatment sought. C.R.S. Sec. 8-43-301(b)-(c), *Lutz v. Indus. Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999). Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). The claimant is entitled to medical benefits for treatment of pain so long as the pain is proximately caused by the employment related activities and not the underlying pre-existing condition. *Merriman v. Indus. Commission*, 120 Colo. 400, 210 P.2d 449 (1949). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colo. Springs School Dist*., W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

As found, Claimant was credible and persuasive that he was in the course and scope of his employment on September 14, 2022 when he was pushing a barrel full of grease across the parking lot and it got stuck on a grate. In pushing and pulling the barrel, and then pushing it up the parking lot incline, Claimant injured his left shoulder. Since the injury, Claimant consistently complained to his providers that his left shoulder pain was worse than either the right shoulder torn rotator cuff pain or the pain caused by ruptured ACL of the left knee. Claimant had no prior injuries or symptoms in the left shoulder before September 14, 2022. Further, as found, Claimant's testimony was consistent with the medical records in describing the mechanism of injury. This was also consistent with medical providers, including PA Downs who stated that it was more likely than not that Claimant's history of left shoulder injury, and the physical exam, that Claimant's complaints were work related. PA Wallace and Dr. Bates also stated that objective findings were consistent with the work related mechanism of injury.

Dr. Motz was also found more credible and persuasive over the contrary opinion provided by Dr. Schwappach. As found, Dr. Motz credibly explained that his physical examination of Claimant, including positive Hawkins', positive Neer's, and impingement signs and the pathology found on the left shoulder MRI imaging, all were consistent with rotator cuff pathology and cross body adduction which was consistent with the AC joint pathology. Dr. Motz's credible and persuasive opinion that the left shoulder pathology and subsequent symptoms were caused by the September 14, 2022 admitted work injury and that the surgery he was recommending, a decompression, extensive debridement, AC joint resection/distal clavicle excision and possible rotator cuff repair, was reasonably necessary and related to the September 14, 2022 accident were also credible and very persuasive. From the totality of the credible and persuasive evidence, Claimant has shown that the surgery recommended by Dr. Motz is reasonably necessary and related to cure and relieve Claimant of his admitted injuries of September 14, 2022, including the arthroscopy with decompression, extensive debridement, AC joint resection, distal clavicle excision and possible rotator cuff repair.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall pay for the Claimant's left shoulder surgery as recommended by Dr. Cary Motz.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED this 14th day of December, 2023.

By: _____
ELSA MARTINEZ TENREIRO
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-220-534-002

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffered a lower back injury during the course and scope of his employment with Employer on October 25, 2022.

2. Whether Claimant has proven by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2.

3. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant chose Dr. Nelson at Concentra Medical Centers as his ATP and they are not responsible for medical treatment, including the January 27, 2023 lower back surgery, performed by John Rives Barker, M.D. at Rocky Mountain Spine Clinic, P.C.

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his October 25, 2022 industrial injury.

5. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 26, 2022 through May 15, 2023.

6. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Employer is a construction company with a primary focus on residential building and foundations. Claimant is a 17-year-old male. On September 14, 2022 Claimant was hired to work for Employer as a General Laborer. His job duties involved performing manual labor including carrying tools, digging holes and using basic tools.

2. Claimant asserted that on October 25, 2022 he sustained an injury to his lower back while working for Employer. He specifically contended that he was digging a trench and removing dirt using buckets with attached ropes when he felt a pain in his lower back.

3. For the six-week period that Claimant worked for Employer prior to his injury, he earned gross wages of $5,247.94. Dividing $5247.94 by 6 weeks equals an Average Weekly Wage (AWW) of $874.65.

4. On October 25, 2022 Claimant visited the office of Project Manager [Redacted, hereinafter AG] and reported that "[he had] to go to the chiropractor because [his] sciatic [was] acting up again." Claimant did not specifically report a work injury or how he injured his back. In additional text message exchanges with AG[Redacted], Claimant still did not report any specific work injury.

5. On October 26, 2022 Claimant also sent the following text message to Director of Sales Operations [Redacted, hereinafter PH]:

> Hey PH[Redacted], I talked to AG[Redacted] yesterday after work and took a day off today because I screwed up my back. Saw a doctor today.
>
> I have a herniated disc in my back. I've been unable to move today from inflammation.
>
> I'm getting MRI done and a bunch of chiropractic work. My doctor said I should not be working this week.
>
> I can get a note if it helps.

6. Claimant subsequently provided a note from chiropractor Kimberly Kesner, DC that mentioned a back strain and took him off work for four days. Notably, Claimant attended four chiropractic sessions between October 25, 2022 and October 31, 2022.

7. On October 27, 2022 Claimant visited Southmoor Emergency and Urgent Care Center. Claimant explained that he felt pain after lifting buckets out of a trench for an extended period of time at work. Further, the record reveals that Claimant was experiencing right-sided lower back pain with left-sided sciatica. Claimant explained that he subsequently could not work because of his symptoms. He noted that movement caused shooting pain.

8. On November 7, 2022 PH[Redacted] sent a text message to Claimant to check on his status. In response, Claimant informed PH[Redacted] that he had filed a claim for Workers' Compensation.

9. On November 9, 2022 Employer completed a First Report of Injury. The Report specified that on October 25, 2022 Claimant injured his back. Specifically, Claimant was lifting seven gallon buckets of dirt and rocks out of a 10-foot hole. After repeated motion for several hours Claimant's back began to tighten and he felt pain down his left leg from his hip to his ankle. Claimant told his foreman that he needed to cease working and rest. Although the record includes a First report of Injury, Claimant did not receive a list of at least four designated medical providers.

10. On November 18, 2022 Claimant began medical treatment with Barry Nelson, D.O. at Concentra Medical Centers. Claimant recounted that he felt pain in his lower back and hip after pulling rocks and dirt out of a hole. Dr. Nelson diagnosed

Claimant with: (1) lumbar back pain with radiculopathy affecting left lower extremity and (2) left hip pain. He determined that his objective findings were consistent with a work-related mechanism of injury. Dr. Nelson limited Claimant to modified duty with no lifting in excess of five pounds. He prescribed medications, ordered a left hip MRI and requested a lumbar spine MRI. Dr. Nelson also referred Claimant to a neurosurgeon, physiatrist, and physical therapy three times per week for two weeks.

11. On November 22, 2022 Claimant visited Michael J. Rauzzino, M.D. for a neurosurgery evaluation at Concentra. Claimant reported that he "felt his back gave out on him. He asked to be taken off his work, still his boss told him he could not stop working." Claimant then noted his pain became worse and localized in his back down his left leg. Dr. Rauzzino noted that Claimant likely had a herniated disc at L4-L5. He recommended an MRI and injection therapy.

12. On December 2, 2022, Claimant underwent MRIs of hip and lumbar spine. His lumbar spine MRI revealed multilevel, multifactorial, degenerative changes superimposed on a developmentally small spinal canal. There was also advanced spinal canal stenosis at L4-5 and L5-S1.

13. On December 20, 2022 Claimant returned to Dr. Rauzzino for an examination. After reviewing Claimant's MRI, Dr. Rauzzino noted a large herniated disc on the left side at L4-L5. He explained that Claimant was likely a candidate for an immediate decompression of the nerve. Additionally, Dr. Rauzzino offered to refer Claimant through Concentra. However, Claimant rejected the offer and noted he would likely seek treatment outside of the Workers' Compensation system because his claim had been denied. Notably, Dr. Rauzzino commented that Claimant had likely suffered a compensable occupational injury.

14. Claimant did not immediately pursue surgery. Instead, he took a vacation to Mexico around January 14, 2023.

15. After his vacation, Claimant attended an evaluation with John Rives Barker, M.D. on January 23, 2023 at Rocky Mountain Spine Clinic, P.C. The record does not reveal any referral from Concentra physicians. Claimant reported that he began developing back pain while removing dirt from a hole at work. Dr. Barker noted that Claimant had a large disc herniation at L4-L5 with severe stenosis. He recommended a decompression instead of a fusion or disc arthroplasty due to Claimant's young age. The recommended surgery consisted of a laminectomy at L4-5 and L5-S1 as well as a discectomy at L4-5. The surgery was scheduled for January 27, 2023.

16. On January 26, 2023 Claimant returned to Dr. Nelson at Concentra for an examination. Dr. Nelson reviewed Claimant's MRI and notes from Dr. Rauzzino. He remarked that Claimant was scheduled to undergo surgery with Dr. Barker on the following day.

17. On January 27, 2023 Claimant underwent surgery with Dr. Barker. The surgery specifically consisted of a laminectomy at L4-L5 and L5-S1 as well as a discectomy at L4-L5.

18. On February 9, 2023 Claimant underwent an Independent Medical Examination (IME) with Orthopedic Surgeon David H. Effenbein, M.D. Dr. Effenbeim recounted that Claimant is a 17-year-old male who was working for Employer as a Laborer. He noted that on October 25, 2022 Claimant was lifting buckets of dirt out of a ditch by pulling up on a rope. Claimant had to prop his left leg against something while he was bending over at the waist to lift the heavy buckets of dirt. After a few hours Claimant developed pain in his lower back and tingling in the left leg. After receiving conservative medical treatment, Claimant then underwent lower back surgery with Dr. Barker. After reviewing Claimant's medical records and conducting a physical examination, Dr. Effenbein concluded that Claimant's back injuries were related to his October 25, 2022 work activities. He concisely reasoned that Claimant "is a 17-year-old high school student. He had only been working as a laborer for six weeks when his injury happened. He reports no prior problems with his lower back or left leg." Dr. Effenbein also noted that Claimant's medical treatment was related to his October 25, 2022 work injuries.

19. On February 13, 2023 Claimant returned to Dr. Barker for a post-surgical follow-up. Dr. Barker noted some residual leg pain and increased Claimant's medications for continued healing. The record does not reveal any further notes from Dr. Barker.

20. On February 23, 2023 Claimant again visited Dr. Nelson for an examination. Dr. Nelson recommended beginning physical therapy in two weeks and noted that Claimant would continue to follow-up with Dr. Barker.

21. On April 26, 2023 Claimant returned to Dr. Nelson and reported continued symptoms. Notably, Dr. Barker had ordered a repeat MRI. Dr. Nelson commented that Claimant would continue to follow-up with Dr. Barker and would undergo the MRI as planned.

22. Claimant has established it is more probably true than not that he suffered a lower back injury during the course and scope of his employment with Employer on October 25, 2022. Claimant's testimony and the persuasive medical records reveal that Claimant injured his lower back while at work. Initially, Claimant explained that he was digging a trench and removing dirt by using buckets with attached ropes when he began developing lower back symptoms. Although Claimant mentioned back pain to AG[Redacted] on the date of the incident, he did not attribute his symptoms to his work activities. Furthermore, a text message on the following day to PH[Redacted] also reveals that Claimant injured his back and was going to seek chiropractic treatment, but Claimant did not connect his condition to his work activities. Claimant did not complete a First Report of Injury until November 9, 2022. Despite initially failing to delineate that he injured his back at work, the medical records reveal that Claimant suffered a compensable injury to his lower back area while performing his job duties on October 25, 2022.

23. On November 18, 2022 Claimant began medical treatment with Dr. Nelson at Concentra. Claimant recounted that he felt pain in his lower back and hip after pulling rocks and dirt from a hole at work. Dr. Nelson diagnosed Claimant with: (1) lumbar back pain with radiculopathy affecting left lower extremity and (2) left hip pain. He determined that his objective findings were consistent with a work-related mechanism of injury. Similarly, after reviewing Claimant's MRI, Dr. Rauzzino noted a large herniated disc on Claimant's left side at L4-L5. Notably, Dr. Rauzzino commented that Claimant had likely suffered a compensable occupational injury. Finally, at a February 9, 2023 IME with Dr. Effenbein, Claimant reported he was lifting buckets of dirt out of a ditch by pulling up on a rope. After a few hours he developed pain in his lower back and tingling in the left leg. Dr. Effenbein reasoned that Claimant's work activities on October 25, 2022 caused his lower back and left leg symptoms.

24. Based on Claimant's consistent account and a review of the persuasive medical records, Claimant suffered a lower back injury that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant's work activities aggravated, accelerated or combined with his pre-existing to produce a need for medical treatment. Accordingly, Claimant suffered a compensable lower back injury on October 25, 2022.

25. Claimant has proven it is more probably true than not that the right to select an ATP passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2. The record reflects that Claimant did not receive a list of at least four designated medical providers. Respondents have not met the requirements of WCRP 8-2 by tendering a written letter within seven days of the injury. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to him.

.

26. Because the right of selection passed to Claimant, the central issue is whether he demonstrated by his words or conduct that he chose Concentra for treatment. Respondents have demonstrated by a preponderance of the evidence that Claimant chose Dr. Nelson at Concentra as his ATP. Respondents are thus not responsible for medical treatment, including the January 27, 2022 lower back surgery, provided by Dr. Barker.

27. Following his October 25, 2022 injury, Claimant waited several weeks and then specifically sought treatment with Dr. Nelson on November 18, 2023. Claimant subsequently continued to receive treatment through the referrals made by Dr. Nelson and Dr. Rauzzino. On December 20, 2022 Claimant rejected a surgical referral from Dr. Rauzzino and expressed his preference to go outside of the Workers' Compensation system for lower back surgery. Claimant then waited approximately one month, went on vacation to Mexico, and sought treatment with Dr. Barker at Rocky Mountain Spine Clinic, P.C. on January 23, 2023. The record does not reveal any referral from Concentra

physicians. On January 27, 2023 Claimant underwent surgery with Dr. Barker that consisted of a laminectomy at L4-L5 and L5-S1 as well as a discectomy at L4-L5.

28. Claimant did not suggest that he wished to change his ATP and continued to treat regularly with Dr. Nelson after his surgery. Claimant returned to Dr. Nelson for monthly follow-up visits on February 23, 2023, March 23, 2023 and April 26, 2023. The record thus reveals that Claimant has clearly demonstrated through his conduct that he has chosen Dr. Nelson as his ATP. Accordingly, by continuing to obtain treatment for several months at Concentra without concerns, Claimant exercised his right of selection.

29. Claimant has also failed to establish the existence of a medical emergency that required surgical intervention with Dr. Barker on January 27, 2023. Although Dr. Barker urged Claimant to obtain the surgery, Claimant had known about the likely need for surgery for approximately one month. Specifically, on December 20, 2022 ATP Dr. Rauzzino suggested that Claimant would be a candidate for surgery and offered to make a referral. Nevertheless, Claimant refused and suggested he would go outside of the Workers' Compensation system. Even with knowledge of the need for surgery, Claimant failed to seek treatment until he attended an evaluation with Dr. Barker on January 23, 2023. It appears that no emergency existed and Claimant had time to go on a vacation to Mexico approximately one or two weeks before his follow-up with Dr. Barker. Based on the extended timeframe and Claimant's knowledge that he required surgery as early as December 20, 2022, Dr. Barker's surgical intervention did not constitute a bona-fide emergency to justify an exception to the authorization requirement. Accordingly, Respondents are not liable for the unauthorized treatment, including the January 27, 2023 surgery, rendered by Dr. Barker.

30. Claimant has demonstrated it is more probably true than not that he is entitled to reasonable, necessary and causally related medical benefits for his October 25, 2022 industrial injury. Specifically, Respondents are financially responsible for Claimant's treatment and referrals through Concentra. However, Claimant has submitted a number of medical bills and requests for mileage reimbursement that do not have corresponding supporting medical documentation. He has thus not met his burden to establish an entitlement to the medical benefits or mileage reimbursement. Specifically, Claimant has not provided medical documentation and Respondents are not liable for treatment with the following providers: (1) Dr. Sydney Dittman, Centura Health 5351 S. Rosyln St.; (2) Dr. Hashim Khan, Dr. Robert Gessman, Spine One Health, 8500 Park Meadows Dr.; (3) evaluations with Dr. John Barker following February 13, 2023; (4) Colorado Athletic Condition, 10450 Park Meadows Dr.; (5) Healthone Services, Rocky Mountain Spine Clinic, 10103 Ridge Gate Pkwy.

31. Claimant has proven it is more probably true than not that he is entitled to receive TTD benefits for the period October 26, 2022, through May 15, 2023. The record reveals that Claimant only provided initial work restrictions from his chiropractor Dr. Kesner for four days following October 26, 2023 or through October 30, 2022. On October 27, 2022 Claimant visited Southmoor Emergency and Urgent Care Center because of his lower back pain after lifting buckets out of a trench for an extended period of time at work. Claimant explained that he subsequently could not work because of his pain symptoms.

He specifically noted that movements caused shooting pain. Claimant did not provide additional work restrictions until he attended an evaluation with Dr. Nelson on November 18, 2022. Dr. Nelson specifically limited Claimant to modified duty with no lifting in excess of five pounds.

32. Although Claimant did not provide work restrictions for the period October 31, 2022 through November 17, 2022, his testimony reflects that he suffered an impairment of wage earning capacity as demonstrated by his inability to resume his prior work. Claimant's testimony, in conjunction with the work restrictions assigned by treating medical providers, reflects that his October 25, 2022 lower back injury impaired his ability to effectively and properly perform his regular employment. Claimant's October 25, 2022 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Claimant is thus entitled to receive TTD benefits for the period October 26, 2022 through May 15, 2023.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re*

Swanson, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has established by a preponderance of the evidence that he suffered a lower back injury during the course and scope of his employment with Employer on October 25, 2022. Claimant's testimony and the persuasive medical records reveal that Claimant injured his lower back while at work. Initially, Claimant explained that he was digging a trench and removing dirt by using buckets with attached ropes when he began developing lower back symptoms. Although Claimant mentioned back pain to AG[Redacted] on the date of the incident, he did not attribute his symptoms to his work activities. Furthermore, a text message on the following day to PH[Redacted] also reveals that Claimant injured his back and was going to seek chiropractic treatment, but Claimant did not connect his condition to his work activities. Claimant did not complete a First Report of Injury until November 9, 2022. Despite initially failing to delineate that he injured his back at work, the medical records reveal that Claimant suffered a compensable injury to his lower back area while performing his job duties on October 25, 2022.

8. As found, on November 18, 2022 Claimant began medical treatment with Dr. Nelson at Concentra. Claimant recounted that he felt pain in his lower back and hip after pulling rocks and dirt from a hole at work. Dr. Nelson diagnosed Claimant with: (1) lumbar back pain with radiculopathy affecting left lower extremity and (2) left hip pain. He determined that his objective findings were consistent with a work-related mechanism of injury. Similarly, after reviewing Claimant's MRI, Dr. Rauzzino noted a large herniated

disc on Claimant's left side at L4-L5. Notably, Dr. Rauzzino commented that Claimant had likely suffered a compensable occupational injury. Finally, at a February 9, 2023 IME with Dr. Effenbein, Claimant reported he was lifting buckets of dirt out of a ditch by pulling up on a rope. After a few hours he developed pain in his lower back and tingling in the left leg. Dr. Effenbein reasoned that Claimant's work activities on October 25, 2022 caused his lower back and left leg symptoms.

9. As found, based on Claimant's consistent account and a review of the persuasive medical records, Claimant suffered a lower back injury that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer. Claimant's work activities aggravated, accelerated or combined with his pre-existing to produce a need for medical treatment. Accordingly, Claimant suffered a compensable lower back injury on October 25, 2022.

Right of Selection/Authorized Treating Physician

10. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Off.,* 996 P.2d 228, 229 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires respondents to provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Indus. Claim Appeals Off.,* 148 P.3d 381, 383 (Colo. App. 2006).

11. The term "select," is unambiguous and should be construed to mean "the act of making a choice or picking out a preference from among several alternatives." *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant "selects" a physician when she "demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury." *Williams v. Halliburton Energy Services,* WC 4-995-888-01 (ICAO, Oct. 28, 2016); *Loy v. Dillon Companies*, W.C. No. 4-972-625 (Feb. 19, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO, Sept. 18, 2000).

12. Although §8-43-404(5)(a), C.R.S. grants employers the initial authority to select the ATP, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical

provider. *Sims v. Indus. Claim Appeals Off,,* 797 P.2d 777, 781 (Colo. App. 1990). The purpose of the medical emergency exception is to allow an injured worker the ability to obtain immediate treatment without undergoing the delay inherent in notifying the employer and obtaining a referral or approval. *Delfosse v. Home Services Heroes, Inc.*, W.C. No. 5-075-625-001 (ICAO, Apr. 26, 2021). Once the emergency has ended the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Off.,* 148 P.3d 381, 384 (Colo. App. 2006); *see* W.C.R.P. 8-3. Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* WC 3-969-031 (ICAO, June 29, 2005).

13. As found, Claimant has proven by a preponderance of the evidence that the right to select an ATP passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2. The record reflects that Claimant did not receive a list of at least four designated medical providers. Respondents have not met the requirements of WCRP 8-2 by tendering a written letter within seven days of the injury. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to him.

14. As found, because the right of selection passed to Claimant, the central issue is whether he demonstrated by his words or conduct that he chose Concentra for treatment. Respondents have demonstrated by a preponderance of the evidence that Claimant chose Dr. Nelson at Concentra as his ATP. Respondents are thus not responsible for medical treatment, including the January 27, 2022 lower back surgery, provided by Dr. Barker.

15. As found, following his October 25, 2022 injury, Claimant waited several weeks and then specifically sought treatment with Dr. Nelson on November 18, 2023. Claimant subsequently continued to receive treatment through the referrals made by Dr. Nelson and Dr. Rauzzino. On December 20, 2022 Claimant rejected a surgical referral from Dr. Rauzzino and expressed his preference to go outside of the Workers' Compensation system for lower back surgery. Claimant then waited approximately one month, went on vacation to Mexico, and sought treatment with Dr. Barker at Rocky Mountain Spine Clinic, P.C. on January 23, 2023. The record does not reveal any referral from Concentra physicians. On January 27, 2023 Claimant underwent surgery with Dr. Barker that consisted of a laminectomy at L4-L5 and L5-S1 as well as a discectomy at L4-L5.

16. As found, Claimant did not suggest that he wished to change his ATP and continued to treat regularly with Dr. Nelson after his surgery. Claimant returned to Dr. Nelson for monthly follow-up visits on February 23, 2023, March 23, 2023 and April 26, 2023. The record thus reveals that Claimant has clearly demonstrated through his conduct that he has chosen Dr. Nelson as his ATP. Accordingly, by continuing to obtain treatment for several months at Concentra without concerns, Claimant exercised his right of selection. *See Murphy-Tafoya v. Safeway, Inc.*, WC 5-153-600 (ICAO, Sept. 1, 2021) (where right of selection passed to the claimant, six months of treatment with personal

provider following her work injury demonstrated that the claimant had exercised her right of selection); *Rivas v. Cemex Inc*, WC 4-975-918 (ICAO, Mar. 15, 2016) (through his words and conduct in obtaining treatment from Workwell for five weeks the claimant selected Workwell as his authorized provider); *Pavelko v. Southwest Heating and Cooling*, WC 4-897-489 (ICAO, Sept. 4, 2015) (the claimant exercised his right of selection when he obtained treatment for two years from provider recommended by the employer); *Tidwell v. Spencer Technologies*, WC 4-917- 514 (ICAO, Mar. 2, 2015) (where the employer failed to designate an authorized medical provider and claimant obtained treatment from personal physician Kaiser for his industrial injury, the claimant selected Kaiser as his authorized treating physician through his words or conduct).

17. As found, Claimant has also failed to establish the existence of a medical emergency that required surgical intervention with Dr. Barker on January 27, 2023. Although Dr. Barker urged Claimant to obtain the surgery, Claimant had known about the likely need for surgery for approximately one month. Specifically, on December 20, 2022 ATP Dr. Rauzzino suggested that Claimant would be a candidate for surgery and offered to make a referral. Nevertheless, Claimant refused and suggested he would go outside of the Workers' Compensation system. Even with knowledge of the need for surgery, Claimant failed to seek treatment until he attended an evaluation with Dr. Barker on January 23, 2023. It appears that no emergency existed and Claimant had time to go on a vacation to Mexico approximately one or two weeks before his follow-up with Dr. Barker. Based on the extended timeframe and Claimant's knowledge that he required surgery as early as December 20, 2022, Dr. Barker's surgical intervention did not constitute a bona-fide emergency to justify an exception to the authorization requirement. Accordingly, Respondents are not liable for the unauthorized treatment, including the January 27, 2023 surgery, rendered by Dr. Barker.

Medical Benefits

18. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

19. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Indus. Claim Appeals Off.,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Indus. Claim Appeals Off.,* 914 P.2d 501

(Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Indus. Claim Appeals Off.,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Off.,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Yeck v. Indus. Claim Appeals Off.,* 996 P.2d 228 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020) (reasoning that the surgery performed by an unauthorized provider was not compensable because the employer had furnished medical treatment after receiving knowledge of the injury).

20. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his October 25, 2022 industrial injury. Specifically, Respondents are financially responsible for Claimant's treatment and referrals through Concentra. However, Claimant has submitted a number of medical bills and requests for mileage reimbursement that do not have corresponding supporting medical documentation. He has thus not met his burden to establish an entitlement to the medical benefits or mileage reimbursement. Specifically, Claimant has not provided medical documentation and Respondents are not liable for treatment with the following providers: (1) Dr. Sydney Dittman, Centura Health 5351 S. Rosyln St.; (2) Dr. Hashim Khan, Dr. Robert Gessman, Spine One Health, 8500 Park Meadows Dr.; (3) evaluations with Dr. John Barker following February 13, 2023; (4) Colorado Athletic Condition, 10450 Park Meadows Dr.; (5) Healthone Services, Rocky Mountain Spine Clinic, 10103 Ridge Gate Pkwy.

Temporary Total Disability Benefits

21. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must demonstrate that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Off.*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is

sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

22. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period October 26, 2022, through May 15, 2023. The record reveals that Claimant only provided initial work restrictions from his chiropractor Dr. Kesner for four days following October 26, 2023 or through October 30, 2022. On October 27, 2022 Claimant visited Southmoor Emergency and Urgent Care Center because of his lower back pain after lifting buckets out of a trench for an extended period of time at work. Claimant explained that he subsequently could not work because of his pain symptoms. He specifically noted that movements caused shooting pain. Claimant did not provide additional work restrictions until he attended an evaluation with Dr. Nelson on November 18, 2022. Dr. Nelson specifically limited Claimant to modified duty with no lifting in excess of five pounds.

23. As found, although Claimant did not provide work restrictions for the period October 31, 2022 through November 17, 2022, his testimony reflects that he suffered an impairment of wage earning capacity as demonstrated by his inability to resume his prior work. Claimant's testimony, in conjunction with the work restrictions assigned by treating medical providers, reflects that his October 25, 2022 lower back injury impaired his ability to effectively and properly perform his regular employment. Claimant's October 25, 2022 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Claimant is thus entitled to receive TTD benefits for the period October 26, 2022 through May 15, 2023.

Average Weekly Wage

24. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *see In re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell,* 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury, the ALJ may elect to apply §8-42-102(3), C.R.S. and determine whether

fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability instead of the earnings on the date of injury. *Id.*

25. As found, the record reveals that for the six-week period that Claimant worked for Employer prior to his injury, he earned gross wages of $5,247.94. Dividing $5247.94 by 6 weeks equals an AWW of $874.65. An AWW of $874.65 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

1. Claimant suffered a compensable lower back injury on October 25, 2022 during the course and scope of his employment with Employer.

2. The right to select an ATP passed to Claimant through Respondents' failure to provide a written list of at least four designated medical providers

3. Claimant selected Concentra as his ATP.

4. Respondents are financially responsible for payment of Claimant's authorized, reasonable and necessary medical expenses for the treatment of his lower back injury. However, Respondents are not liable for unauthorized treatment, including the January 27, 2023 surgery, rendered by Dr. Barker, Furthermore, Claimant has not provided medical documentation and Respondents are not liable for treatment with the following providers: (1) Dr. Sydney Dittman, Centura Health 5351 S. Rosyln St.; (2) Dr. Hashim Khan, Dr. Robert Gessman, Spine One Health, 8500 Park Meadows Dr.; (3) evaluations with Dr. John Barker following February 13, 2023; (4) Colorado Athletic Condition, 10450 Park Meadows Dr.; (5) Healthone Services, Rocky Mountain Spine Clinic, 10103 Ridge Gate Pkwy.

5. Claimant is entitled to receive TTD benefits for the period October 26, 2022 through May 15, 2023.

6. An AWW of $874.65 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

7. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see*

Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-128-978-001

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that the medical procedure she underwent with Aaron Liddell, MD, DMD, FACS on September 8, 2023 was reasonable and necessary and causally related to her January 21, 2020 admitted industrial injury.

2. Whether Respondents should reimburse Claimant for the $5,039.00 she incurred in out-of-pocket expenses for fixed partial dentures and veneers.

NOTICE OF THE PROCEEDINGS

1. Respondents failed to attend the November 15, 2023 video hearing in this matter. Therefore, prior to entering an order, the ALJ must consider whether Claimant had adequate notice of the proceedings.

2. Office of Administrative Courts Rules of Procedure for Workers' Compensation Hearings (OACRP) Rule 24 governs the entry of orders against non-appearing parties at hearings. Rule 23 provides, in relevant part:

> If a party fails to appear at a hearing after the OAC has sent notice of the hearing to that party, prior to entering any orders against the non-appearing party as a result of that hearing, the judge will consider:
>
> A. The addresses to which the notice of hearing was sent are the most recent addresses provided by the non-appearing party to either the OAC or the Division of Workers' Compensation; or
>
> …
>
> C. A copy of a record or other written statement from the OAC or the Division of Workers' Compensation containing the most recent address provided by the non-appearing party to either of those agencies shall be sufficient to create a rebuttable presumption that the non-appearing party received notice of the hearing.

3. On September 8, 2023 the Office of Administrative Courts (OAC) sent a Notice of Hearing to Respondents' Claims Representative [Redacted, hereinafter MH] at [Redacted, hereinafter SK] with the following e-mail address: [Redacted, hereinafter MHE]. The Notice specified that the hearing would be conducted on November 15, 2023 at the OAC, 1525 Sherman St., 4th Floor Denver, CO 80203.

4. On November 6, 2023 PALJ Eley conducted a pre-hearing conference in the present matter. He recounted that Respondents had been notified of the proceeding, but failed to participate. PALJ Eley specified:

> The Division served notice of this prehearing conference (PHC) on 11/2/23. Notice was sent to MH[Redacted] at SK[Redacted] via email at MHE[Redacted]. A Google Meets invitation was sent to the same email address on 11/3/23 with instructions on attending the meeting. This PALJ attempted to contact MH[Redacted] by telephone at [Redacted, hereinafter MHP] at 9:02AM, again at approximately 9:10AM, and left voicemails. Despite these efforts, Respondents failed to appear or participate.

The Division sent a copy of the pre-hearing order to Respondents at the following address: Claims Representative MH[Redacted] MHE[Redacted].

5. On November 14, 2023 the OAC sent an Amended Notice of Hearing. The OAC emailed the parties details of the virtual hearing to be conducted on November 15, 2023 through Google Meet. The parties were notified of the option to attend either by video (by clicking the hyperlink) or by telephone. The telephone number and access code were provided on the invitation. The OAC again sent the Notice to Respondents' Claims Representative MH[Redacted] at SK[Redacted] with the following e-mail address: MHE[Redacted].

6. Despite the preceding notice of the November 15, 2023 video hearing, Respondents failed to appear. At the outset of the hearing, the ALJ reviewed the record to determine whether Respondents had received adequate and proper notice of the 8:30 a.m. hearing. Based on a review of the file and comments from Claimant's counsel, the ALJ was satisfied Claimant had proper and adequate notice of the matter. Because the case involved Claimant's Application for Hearing (AFH), the ALJ proceeded with the hearing.

7. The preceding chronology reflects that Respondents had adequate notice of the November 15, 2023 hearing in this matter. The Notice of Hearing was sent to Respondents' email address on file with the OAC. Moreover, on November 14, 2023 the OAC sent an Amended Notice of Hearing. The OAC emailed the parties details of the virtual hearing to be conducted on November 15, 2023 through Google Meet. The parties were notified of the option to attend either by video (by clicking the hyperlink) or by telephone. The record thus demonstrates sufficient evidence to create a rebuttable presumption that Respondents received notice of the hearing. Respondents have failed to rebut the presumption. Because Respondents had adequate notice of the November 14, 2023 hearing but chose not to appear, entry of an order is appropriate.

FINDINGS OF FACT

1. On January 21, 2020 Claimant suffered admitted industrial injuries to her face and mouth during the course and scope of her employment with Employer.

2. Claimant subsequently received medical treatment paid for and authorized by Respondents. The treatment included care with Aaron Liddell, MD, DMD, FACS at Colorado Oral Surgery.

3. On August 7, 2023 Dr. Liddell communicated with Respondents regarding Claimant's need for additional dental treatment. He detailed the following:

> I have been working with [Claimant] over the course of the past 3 years. In brief, she presented to my office s/p mechanical fall wherein she sustained an avulsive injury to tooth #9, in addition to bilateral mandibular condyle fractures. Ultimately, we have completed bilateral TMJ total joint replacement to rehabilitate her condyle fractures. This was because her condyle fractures were not able to be operated on at the time of the injury, based on the location of the fractures. She developed a secondary malocclusion which was addressed with orthodontics and joint replacement. She is now nearing completion of her orthodontic treatment. She is pending final reconstruction of her dentition, which will be completed with a fixed partial denture and veneers.

Dr. Liddell summarized that Claimant had completed significant treatment, but still required care in the form of fixed partial dentures and veneers.

4. MH[Redacted] is a Claims Representative for SK[Redacted]. MH[Redacted] has not responded to the provider at any time regarding the request for medical authorization for the fixed partial denture and veneers.

5. Respondents made no attempt to communicate with Claimant's counsel about the disputed issues in this matter. The record reveals that Respondents refused to attend multiple pre-hearing conferences and the scheduled hearing on November 15, 2023. MH[Redacted] has not communicated with Claimant's counsel since August 24, 2023.

6. In an attempt to regain use of her mouth and eat solid food, Claimant underwent the preceding reconstruction with Dr. Liddell on September 8, 2023. Claimant elected to pay out-of-pocket for the procedure. She specifically paid $5,039.00 for the dental work using her personal credit card on September 8, 2023.

7. Claimant has demonstrated it is more probably true than not that the medical procedure she underwent with Dr. Liddell on September 8, 2023 was reasonable, necessary and causally related to her January 21, 2020 admitted industrial injury. Initially, Claimant suffered facial and dental injuries while working for Employer. As persuasively recounted by Dr. Liddell, Claimant underwent significant dental treatment and required specific orthodontic care based on a secondary malocclusion. To complete the treatment, Claimant required final reconstruction of her dentition with a fixed partial denture and veneers. The record reveals that the treatment constituted causally related, reasonable and necessary care for her admitted industrial injuries.

8. Claimant is also entitled to recover the $5,039.00 she incurred in out-of-pocket expenses for her fixed partial denture and veneers. The record reveals that she underwent the procedure with Dr. Liddell on September 8, 2023 and incurred out-of-pocket expenses in the amount of $5,039.00. Respondents shall thus reimburse Claimant $5,039.00 for her costs.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition or the subsequent aggravation or acceleration of that condition is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

6. As found, Claimant has demonstrated by a preponderance of the evidence that the medical procedure she underwent with Dr. Liddell on September 8, 2023 was reasonable, necessary and causally related to her January 21, 2020 admitted industrial injury. Initially, Claimant suffered facial and dental injuries while working for Employer. As persuasively recounted by Dr. Liddell, Claimant underwent significant dental treatment and required specific orthodontic care based on a secondary malocclusion. To complete the treatment, Claimant required final reconstruction of her dentition with a fixed partial denture and veneers. The record reveals that the treatment constituted causally related, reasonable and necessary care for her admitted industrial injuries.

7. As found, Claimant is also entitled to recover the $5,039.00 she incurred in out-of-pocket expenses for her fixed partial denture and veneers. The record reveals that she underwent the procedure with Dr. Liddell on September 8, 2023 and incurred out-of-pocket expenses in the amount of $5,039.00. Respondents shall thus reimburse Claimant $5,039.00 for her costs.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. The medical procedure Claimant underwent with Dr. Liddell on September 8, 2023 was reasonable, necessary and causally related to her January 21, 2020 admitted industrial injury.

2. Respondents shall reimburse Claimant $5,039.00 for her out-of-pocket costs for her fixed partial denture and veneers.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 18, 2023.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-219-793-001

ISSUE

1. Did Claimant overcome the Division Independent Medical Examination (DIME) physician's opinion that Claimant is at maximum medical improvement (MMI) by clear and convincing evidence?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 47 year-old male who worked for Employer. He was hired on February 28, 2022, to work as a carpenter. (Ex. A).

2. On May 2, 2022, Claimant was helping Employer with some cement work. Claimant testified they were pouring cement in a column when he slipped on a wet step, twisting his left leg. Claimant further testified that when he fell, his weight, including his tools, fell on his leg, causing him to hurt his leg and back. (Tr. 15: 1-19).

3. Later that day, Claimant went to Midtown Occupational Health Services, and he was evaluated by Marc Steinmetz, M.D. Claimant's safety supervisor, [Redacted, hereinafter OT], accompanied Claimant to the appointment. According to the medical record, Claimant reported that he "kind of slipped and almost fell and twisted his left knee." His chief complaint was knee pain. There was no mention of any back pain. Claimant was diagnosed with a left knee sprain, and was advised to treat with Advil, Tylenol, ice, and compression. (Ex. G).

4. OT[Redacted] testified that he filled out the Employer's First Report of Injury form on behalf of Claimant. (Tr. 30:23-31:11). Under the section "body part affected," OT[Redacted] wrote "twisted left knee" and under the description of the nature of the injury he wrote "slipped in mud cause[d] twisted left knee." (Ex. A).

5. Claimant had a follow-up appointment on May 4, 2022 with Dr. Steinmetz. He reported slight improvement with his left knee sprain. Claimant had less pain, swelling and stiffness. If Claimant continued to have medial knee joint pain, Dr. Steinmetz would consider ordering an MRI. (Ex. G).

6. On May 13, 2023, Claimant underwent an MRI of his left knee and left quadriceps area. Imaging of the knee revealed a complex degenerative tear of the medial meniscus; tricompartmental chondromalacia, including medial femoral, tibial, and patellofemoral compartment arthritis. The quadriceps MRI showed mild quadriceps tendinosis distally but there was no evidence of a muscle tear. (Ex. R, p. 140).

7. Dr. Steinmetz evaluated Claimant on May 16, 2022. Claimant reported feeling much better. He had a little discomfort in the distal lateral left thigh, but the knee joint did not bother him. Claimant had an appointment with an orthopedic surgeon to review the MRI. There was no documentation of Claimant complaining of back pain. (Ex. G).

8. Michael Hewitt, M.D. evaluated Claimant's left knee on May 18, 2022, and reviewed Claimant's MRI images. Dr. Hewitt reviewed the different treatment options for a medial meniscus tear. He recommended Claimant start with physical therapy, a brace, and anti-inflammatories. Claimant could also consider an injection. (Ex. 7).

9. Claimant participated in physical therapy from May 25, 2022 through June 30, 2022. The therapy addressed Claimant's left knee and distal thigh. There is nothing in the physical therapy records to indicate Claimant was experiencing any back issues. (Ex. J).

10. In June or July 2022, Claimant received a steroid injection in his left knee but it did not provide Claimant with long-term relief. (Ex. R, p. 142).

11. On July 13, 2022, Claimant saw Dr. Steinmetz for a follow-up appointment. Claimant told Dr. Steinmetz he was still experiencing pain in his left thigh distally. He also reported having some back pain "now." The record states, "[o]riginally he did not for [sic] back pain but he says he has some back pain now." The ALJ infers Dr. Steinmetz meant Claimant did not originally have back pain, but now was reporting back pain. Dr. Steinmetz examined Claimant's back. He noted that Claimant said his back was tender, but there was no spasm and Claimant had a grossly normal range of motion, and he had no sciatica. Dr. Steinmetz specifically noted in the medical record that "the notes don't currently support any back issues." With respect to Claimant's knee, Dr. Steinmetz noted that therapy was not likely helping, and he would follow up with Dr. Hewitt regarding surgery. Additionally, he referred Claimant to Samuel Chan, M.D. for an EMG consultation related to Claimant's leg numbness, which was a part of his original complaint. (Ex. K).

12. The ALJ finds that July 13, 2022, is the first time there is any documentation in Claimant's medical records referencing low back pain. The ALJ further finds that this is the first time Claimant reported having any back pain.

13. Claimant saw Dr. Hewitt on July 29, 2022. They discussed Claimant's minimal improvement following conservative management of his knee. Claimant elected to proceed with an arthroscopy of his left knee. (Ex. 7).

14. On August 5, 2022, Claimant had an initial physiatric consultation with Dr. Chan. Claimant's chief complaint was "numbness on outside of the quad." Dr. Chan examined Claimant, including his lumbar spine. Dr. Chan noted there was no tenderness to palpate over bilateral PSIS and sacral sulcus. Straight leg raising was negative, as was Patrick's, Gaenslen's, FABER's and Yeoman's testing. Dr. Chan performed EMG testing on Claimant's left lower extremity. He noted that the EMG was not diagnostic for mearalgia paresthetica. In other words, the EMG was normal. (Ex. L).

15. On August 23, 2022, Claimant underwent an arthroscopic meniscectomy and chondroplasy on his left knee with Dr. Hewitt. (Ex. P).

16. Claimant saw Dr. Steimetz, on October 7, 2022, for a follow-up appointment. Claimant's chief complaint was postop left knee numbness and pain. There is no mention in the medical records regarding Claimant experiencing back pain. To the contrary, under the physical examination section, it notes that Claimant's spine is normal without deformity or tenderness, and he has a normal range of motion. (Ex. M).

17. On October 12, 2022, Claimant went to Midtown Occupational Services as an unscheduled walk-in. Dr. Steinmetz was not there, so Claimant was examined by Lawrence Cedillo, D.O. Claimant complained of low back pain, and he rated his pain as being 10/10. Claimant reported having intermittent low back pain since the date of the work injury. He stated the pain had been at the 10/10 level since October 9, 2022. Claimant also said that he has had lumbar back pain at a 5-6/10 level since the date of his injury. Claimant reported to Dr. Cedillo that he told his coworkers about his back pain on the day of his injury, and that he also told the therapists and other providers he had seen about his back. Dr. Cedillo examined Claimant, and reviewed Claimant's past medical records. Dr. Cedillo opined that Claimant's current complaint of back pain was unrelated to his work injury on May 2, 2022. (Ex. 6).

18. Dr. Chan ordered an MRI of Claimant's lumbar spine. The impression was "[m]ultilevel degenerative changes . . . worse at L4-L5, without significant stenosis." (Ex. 8).

19. On November 16, 2022, Dr. Chan saw Claimant for a follow-up appointment. Dr. Chan placed Claimant at MMI. Dr. Chan assigned Claimant work restrictions and gave him a 12% impairment rating of the lower left extremity. Regarding Claimant's lumbar spine, Dr. Chan noted, "MRI has been reviewed and there are no correlated findings. Lumbar spine is not related to the case on May 2, 2022." (Ex. P).

20. Claimant returned to see Dr. Steinmetz on November 28, 2022. Dr. Steinmetz noted Claimant was at MMI per Dr. Chan. Claimant, however, wanted a different opinion because he still had knee pain, leg tingling and back pain. Dr. Steinmetz noted in the medical record "[h]is main issue is he wants a different opinion regarding MMI issues." (Ex. Q).

21. On December 30, 2022, Claimant presented to Carlos Cebrian, M.D., for an Independent Medical Examination (IME). Dr. Cebrian reviewed Claimant's medical records and examined him. He noted that Claimant's current complaints included left knee pain, left thigh numbness, and low back pain. Dr. Cebrian noted that the first documentation of lumbar spine complaints did not occur until over two months after the industrial injury. Dr. Cebrian agreed with Dr. Chan and Dr. Steinmetz that Claimant's lumbar spine complaints are not causally related to the May 2, 2022, work injury. Dr. Cebrian also agreed with Dr. Chan that Claimant reached MMI on November 16, 2022. Dr. Cebrian completed an IME report dated, December 30, 2022. (Ex. R).

22. On January 5, 2023, Respondents' filed a Final Admission of Liability (FAL) in accordance with Dr. Chan's report, and admitted to a 12% scheduled impairment rating of the lower left extremity, and a November 16, 2022 MMI date. (Ex. B).

23. Claimant objected to the FAL and requested a DIME. On April 6, 2023, DIME physician, S. D. Lindenbaum, M.D. evaluated Claimant. Dr. Lindenbaum opined that "there is no evidence . . . objectively of lumbar disease on MRI to substantiate an acute lumbar spine process. Furthermore, there was no documentation of any mentioned by the patient based on the clinic notes that were reviewed by several doctors of anything stating he had back pain until almost 5 months after the injury." Dr. Lindenbaum agreed with the November 16, 2022 MMI date, and he assigned claimant a 21% impairment rating for Claimant's left knee. (Ex. S).

24. As found, Claimant first reported back pain at his July 13, 2022 appointment with Dr. Steinmetz, approximately two and a half months after his injury. The ALJ infers that Dr. Lindenbaum is referencing Claimant's October 12, 2022 report of back pain of 10/10, which was five months after his injury. The ALJ finds that Dr. Lindenbaum's failure to reference Claimant's July 13, 2022 complaint of back pain does not affect the conclusions he reached regarding MMI. The ALJ finds Dr. Lindenbaum's opinion to be credible and persuasive.

25. On April 11, 2023, Respondents' filed a Final Admission of Liability in accordance with Dr. Lindenbaum's evaluation of a 21% scheduled impairment rating of the lower left extremity, and an MMI date of November 16, 2022. (Ex. D).

26. As found, Drs. Chan, Steinmetz, Cebrian, and Lindenbaum all declined to relate Claimant's lower back complaints to the workplace injury that occurred on May 2, 2022. They based this decision on clinical findings, imaging, and delayed onset of symptoms. The ALJ finds these opinions to be credible and persuasive.

27. Claimant testified he told Dr. Steinmetz about his back pain, but Dr. Steinmetz ignored him. (Tr. 17:3-19). The ALJ does not find this testimony to be credible nor persuasive. At Claimant's July 13, 2022 appointment with Dr. Steinmetz, Claimant complained of back pain. Dr. Steinmetz examined Claimant's back and noted upon examination Claimant said his back was tender, but there was no spasm and Claimant had a grossly normal range of motion, and no sciatica. (Ex. K). The ALJ finds that Dr. Steinmetz did not ignore Claimant's complaint of back pain.

28. At the hearing, Claimant's safety supervisor at the time of the incident, OT[Redacted], testified that Claimant complained of back pain from the onset of the initial injury. (Tr. 28:11-29:1). OT[Redacted] also testified that he completed the First Report of Injury on behalf of Claimant, and he did not document any injuries to Claimant's back. (Tr. 30:23-31:11). He only documented Claimant's injury to his left knee. (Ex. A). OT's[Redacted] testimony that Claimant complained of back pain at the time of the injury is not credible, nor is it persuasive.

29. As found, Claimant did not complain of back pain until July 13, 2022. The ALJ finds that Claimant's low back complaints are not causally related to the May 2, 2022 admitted work injury. The ALJ finds that Claimant did not prove by clear and convincing evidence that Dr. Chan's DIME opinion that Claimant reached MMI on November 6, 2022 is incorrect.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. *See* § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Burden to Overcome DIME on MMI

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transp. v. Indus. Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Indus. Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Constr. Mgmt.,* WC 4-356-512 (ICAO, May 20, 2004).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colo. Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *Id.; MGM Supply Co. v. Indus. Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002).

Claimant argues that the DIME in incorrect, and he is not at MMI because he is still experiencing back pain. Specifically, Claimant asserts that his low back pain complaints are causally related to the industrial accident and therefore necessitate medical treatment. The only evidence Claimant presented to support his assertion that he injured his back in the May 2, 2022 admitted work injury is his testimony, and the testimony of OT[Redacted]. As found, Mr. OT's[Redacted] testimony is inconsistent with his written statements generated at the time of the accident and it is neither credible nor persuasive. The medical records, the First Report of Injury, and the opinions of Dr.

Lindenbaum, Dr. Cebrian, Dr. Chan, and Dr. Steinmetz directly contradict Claimant's assertion that he experienced low back pain immediately following the industrial accident.

The weight of the evidence presented shows that Claimant's low back complaints are not causally related to the May 2, 2022 claim. Claimant has failed to demonstrate, by clear and convincing evidence, that Dr. Lindenbaum's DIME opinion is incorrect.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome the DIME's finding that Claimant is at MMI by clear and convincing evidence.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 18, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Has Claimant demonstrated, by a preponderance of the evidence, that the prescription medication Ubrelvy is reasonable medical treatment necessary to maintain Claimant at maximum medical improvement (MMI)?

2. Has Claimant demonstrated, by a preponderance of the evidence, that he is entitled to reimbursement of costs pursuant to Section 8-42-101(5), C.R.S.? Specifically, Claimant has requested reimbursement of costs totalling $1,703.52.

FINDINGS OF FACT

1. On December 31, 1998, Claimant suffered a compensable work injury. On that date, Claimant fell over 17 feet from an oil rig, striking his head on a steel beam. Claimant was hospitalized and underwent two surgical procedures to treat his head injury. Claimant testified that he underwent additional surgical procedures in June 1999 and then again in 2003 or 2004. Since the December 31, 1998 work injury, Claimant has experienced migraine headaches and neck pain.

2. On February 29, 2012, Respondents filed a Final Admission of Liability (FAL). In the FAL, Respondents admitted for 33 percent whole person impairment, and an MMI date of January 20, 2012. In addition, Respondents admitted for "post MMI medical treatment provided by the [authorized] treating physician that is reasonable, necessary [and] related to the compensable injury."

3. Since the December 31, 1998 work injury, Claimant has experienced migraine headaches and neck pain. Claimant testified that when he has a migraine it feels as though his left eye is being pulled from his eye socket.

4. During this claim, Claimant has undergone treatment for his migraines under the direction of his ATPs, Dr. Joel Dean[1] and Dr. Ellen Price. Under the care of Drs. Dean and Price, Claimant has been prescribed a number of medications. In addition, Dr. Price has administered Botox injections.

5. Based upon the medical records entered into evidence, Dr. Price first recommended Ubrelvy to Claimant on January 6, 2021. On February 12, 2021, Claimant returned to Dr. Price. The medical record of that date indicates that Claimant had tried the Ubrelvy and it was effective. Dr. Price provided Claimant with additional Ubrelvy samples and prescribed him 50 mg.

[1] Dr. Dean retired from practice in late 2022.

6. On May 14, 2021, Claimant reported to Dr. Price that the Botox injections were helping his symptoms. He also reported that he was using Ubrelvy, but "much less than before". Specifically, Claimant reported that he had been taking it three to four times per month, "but now he does not take it at all."

7. On February 10, 2023, Claimant returned to Dr. Price. At that time, Claimant reported that Ubrelvy samples were helpful in relieving his symptoms, but he was unable to get a prescription. Dr. Price provided Claimant with 100mg samples of Ubrelvy and prescribed 16 tablets per month.

8. On March 14, 2023, Claimant was seen by Dr. Price and again reported relief when using Ubrelvy. However, the prescription was not authorized by Insurer.

9. On March 27, 2023, Dr. Price submitted a prescription to Injured Workers Pharmacy for 100mg of Ubrelvy.

10. At the request of Respondents, on March 28, 2023, Dr. Eddie Sassoon reviewed the request for Ubrelvy. In his report, Dr. Sassoon recommended denial of Ubrelvy. In support of this recommendation, Dr. Sassoon noted that the "Guidelines" provide for the use of Ubrelvy as a first or second line treatment of migraines "with documentation or contraindication, failure, or intolerance to [two] or more triptans." Dr. Sassoon further noted that he did not see evidence that Claimant has failed first line triptans. The guidelines Dr. Sasson was referencing in his report were identified as "ODG"[2] It does not appear that Dr. Sassoon referenced the Colorado Medical Treatment Guidelines.

11. Based upon the opinions of Dr. Sassoon, Respondents denied authorization of Ubrelvy.

12. After the retirement of Dr. Dean, On May 12, 2023, Claimant was seen for a neurological consultation at the office of Dr. Seth Kareus. On that date, Claimant reported to Paulina Good, PA that he was using Ubrelvy to manage his migraines. PA Good noted the effectiveness of the Botox injections administered by Dr. Price. PA Good recommended a CGRP drug to address the breakthrough migraines, specifically Emgality. PA Good also recommended the continued use of 100mg of Ubrelvy because it had been very effective to treat Claimant's headaches, without side effects. PA Good did not recommend topiramate because of Claimant's history of kidney stones. She also did not recommend amitriptyline because of Claimant's age. Finally, PA Good did not recommend propranolol because of Claimant's history of depression.

13. On July 5, 2023, Claimant returned to Dr. Price and reported that the monthly Emgality injection was helping his symptoms. Dr. Price recommended Claimant continue Ubrelvy, but no more than 12 tablets per month.

---

[2] The ALJ takes administrative notice that OOG appears to stand for Official Treatment Guidelines, which are utilized in Arizona, New Mexico, Oklahoma, and Tennessee. Colorado has not adopted the ODG.

14. On September 20, 2023, Dr. Price authored a letter in which she responded to a number of questions posed to her by Claimant's counsel. In that letter Dr. Price opined that Claimant's migraine headaches are related to the December 31, 1998 work injury. Dr. Price also opined that Ubrelvy was effective treatment of Claimant's migraines and was reasonable and necessary. Specifically, Dr. Price noted that with the use of Ubrelvy, Claimant has been able to "manage his headaches more effectively and be more functional". Dr. Price also noted that the other medications Claimant was using for his headaches, and the Botox treatments, work prophylactically to treat Claimant's migraines, while the Ubrelvy is an abortive treatment.

15. On October 11, 2023, Claimant reported to Dr. Price that the most recent Botox injections had provided 80 percent relief for four weeks. Claimant further reported that he was getting migraines 15 times per month, sometimes lasting as long as five hours. Claimant also reported that Ubrelvy was helping as much as the Emgality. In that same medical record, Dr. Price opined that Claimant should continue with Ubrelvy and Emgality.

16. Claimant testified that his current treatment regime of his migraines are Ubrelvy, Botox injections, Baclofen, and the monthly Emgality injection. Claimant explained that the Botox and Emgality are used before the onset of any migraine. When a migraine does occur, he then takes the Ubrelvy. Claimant further testified that before he used Ubrelvy, a migraine would result in him sitting on the couch, in the dark, until the migraine ended. Since using Ubrelvy, his migraines do not last as long, and he is able to function normally.

17. Dr. Ellen Price testified regarding her treatment of Claimant. Dr. Price began treating Claimant in 2006. Dr. Price explained that the focus of her treatment was Claimant's myofascial pain and headaches, including migraine headaches. Dr. Price testified that in an effort to address Claimant's migraines over the years he has been prescribed Trazadone, Baclofen, Vicodin, Corguard, Flexeril, and Topamax. Dr. Price explained that the newer CGRP drugs have fewer side effects when treating migraines. With regard to Claimant's treatment, Botox injections and Emgality have been effective in preventing the onset of migraines. However, when a migraine does occur, Ubrelvy acts as a "rescue" medication to abort the migraine symptoms, while also allowing Claimant to function. It continues to be Dr. Price's opinion that Ubrelvy is reasonable and necessary to treat Claimant's migraine headaches.

18. The ALJ credits the medical records, Claimant's testimony, and the opinions of Dr. Price over the contrary opinions of Dr. Sassoon. The ALJ finds that the use of Ubrelvy is effective in reducing Claimant's migraine symptoms while allowing him to maintain function. Therefore, ALJ finds that Claimant has successfully demonstrated that it is more likely than not that Claimant's continued use of Ubrelvy is reasonable medical treatment necessary to maintain Claimant at MMI.

19. The ALJ credits the records admitted into evidence and finds that Claimant has demonstrated that it is more likely than not that he has accrued costs totalling $1,703.52 in pursuing this matter.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306,592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

5. Although Dr. Sassoon recommended denial of Ubrelvy because of his understanding of the ODG, the ALJ finds Dr. Price's opinions on this issue to be more persuasive. As found, Claimant's use of Ubrelvy has been effective in treating his migraine symptoms, while also allowing him to remain functional. As found, Claimant has demonstrated, by a preponderance of the evidence, that the prescription medication

Ubrelvy is reasonable medical treatment necessary to maintain Claimant at MMI. Respondents shall pay for the requested prescription, Ubrelvy, pursuant to the Colorado Medical Fee Schedule.

6. The claimant has requested costs related to the current Application for Hearing. Section 8-42-101(5), C.R.S. provides:

> If any party files an application for hearing on whether the claimant is entitled to medical maintenance benefits recommended by an authorized treating physician that are unpaid and contested, and any requested medical maintenance benefit is admitted fewer than twenty days before the hearing or ordered after application for hearing is filed, the court shall award the claimant all reasonable costs incurred in pursuing the medical benefit. Such costs do not include attorney fees.

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to reimbursement of costs pursuant to Section 8-42-101(5), C.R.S. related to the requested prescription. As found, Claimant is entitled to costs totalling $1,703.52.

ORDER

It is therefore ordered:

1. Respondents shall pay for the requested prescription, Ubrelvy, pursuant to the Colorado Medical Fee Schedule.

2. Respondents shall pay $1,703.52 for the costs incurred as a result of this matter.

3. All matters not determined here are reserved for future determination.

Dated December 19, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 27. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 27(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **It is recommended that you send a courtesy copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

INTERPRETER

[Redacted, hereinafter SS] was present to assist Claimant with interpretation and translation from Punjabi to English at Respondents' request. Claimant understands English and speaks English. He did not want word-for-word translation/interpretation, and the ALJ allowed Claimant to use the interpreter as needed.

EXHIBITS

After filing his hearing application on July 18, 2023, Claimant sent the OAC four PDFs of records presumably intended to be hearing submissions. Claimant's submissions were not organized, numbered or otherwise marked with a discernible method of identification. Included in Claimant's submissions were the following: (1) a 78 page packet of records submitted on November 2, 2023, identified by the ALJ at hearing as Claimant's Exhibit 1; (2) Claimant's hand written answers to Respondents' Interrogatories dated October 18, 2023, submitted to the OAC on October 18, 2023, identified by the ALJ at hearing as Claimant's Exhibit 2; (3) Respondents' Interrogatories to Claimant dated September 6, 2023, also submitted by Claimant to the OAC on October 18, 2023, identified by the ALJ at hearing as Claimant's Exhibit 3; and (4) a 148 page PDF of records submitted by Claimant at 6:50 p.m. on November 13, 2023, the night before hearing, identified by the ALJ as Claimant's Exhibit 4. The ALJ admitted Claimant's Exhibits 1-3 into evidence.

Exhibit 4 consists of various medical bills, Claimant's handwritten description of what he is entitled to, Claimant's apartment rental documents, additional UCHealth medical records, Respondents' Interrogatories to Claimant dated September 6, 2023, and Claimant's Responses to Interrogatories dated October 18, 2023. Respondents did not object to Claimant's November 8, 2023 UCHealth medical records, and they were admitted into evidence. However, Respondents objected to the remainder of Claimant's Hearing Exhibit 4 because the records were not timely exchanged and irrelevant. The ALJ sustained Respondents' objections. Therefore, the only record admitted into evidence contained within Claimant's Exhibit 4 is the November 8, 2023 UCHealth report of Peter Lennarson, M.D.

The ALJ admitted Respondents' Hearing Exhibits A-FF into evidence.

RELEVANT PROCEDURAL HISTORY

On October 16, 2020 a hearing was held before ALJ Kabler on Respondents' attempt to overcome the Division Independent Medical Examination (DIME) opinions of Ranee Shenoi, M.D. on cervical and mental permanent impairment. Claimant also raised issues that included: (1) overcoming Dr. Shenoi's DIME opinion on causation (lumbar/thoracic), MMI and permanent impairment; (2) a request for additional Temporary Total Disability (TTD) benefits, Permanent Total Disability (PTD) benefits, and additional medical benefits. On December 8, 2020 ALJ Kabler issued Findings of Fact, Conclusions

of Law, and Order, determining Respondents overcame Dr. Shenoi's opinion that Claimant sustained cervical spine injuries and mental impairment. He further determined that Claimant suffered no permanent impairment under the claim. ALJ Kabler also reasoned Claimant failed to overcome Dr. Shenoi's opinions regarding MMI, causation and permanent impairment. He further concluded that Claimant failed to prove entitlement to TTD benefits, PTD benefits, and additional medical benefits.

Claimant appealed ALJ Kabler's Order to the Industrial Claim Appeals Office (ICAO) and the ICAO affirmed. Claimant then appealed the ICAO's Order to the Colorado Court of Appeals, but the Court also affirmed. Finally, on February 21, 2023 the Colorado Supreme Court denied Claimant's Petition for Writ of Certiorari. Consequently, the issues determined in ALJ Kabler's December 8, 2020 Order, as subsequently acknowledged by Respondents in a January 12, 2021 Final Admission of Liability (FAL), closed by operation of law.

On March 15, 2023 Claimant applied for hearing on issues including medical benefits, Average Weekly Wage (AWW), disfigurement, TTD benefits, PPD benefits, PTD benefits, penalties, and "other issues." On April 4, 2023 Respondents filed a motion to strike Claimant's hearing application because the issues were closed by operation of law or moot. On April 11, 2023 ALJ Lovato issued an order granting in part Respondents' motion to strike Claimant's hearing application. ALJ Lovato specifically struck compensability, TTD benefits, PPD benefits, PTD benefits, medical benefits and AWW because each issue had been litigated and thus closed as a matter of law. The only issues that remained open and ripe for litigation involved disfigurement, penalties, and "other."

A hearing was then held before ALJ Goldman on July 18, 2023. ALJ Goldman determined that Claimant failed to identify any penalty that could be assessed under the Act. Furthermore, Claimant failed to identify and issue under the "other issues" section of his hearing application that was open and ripe for litigation. Thus, the only remaining issue for hearing was disfigurement. On September 5, 2023 ALJ Goldman issued Findings of Fact, Conclusions of Law, and Order denying and dismissing Claimant's request for disfigurement benefits. Because Claimant did not appeal the Order, disfigurement also closed by operation of law.

On July 18, 2023 Claimant also filed the present hearing application. Claimant identified many of the same issues previously litigated and closed, but on this occasion he also endorsed Petition to Reopen. On August 17, 2023 PALJ Sandberg issued a prehearing order granting Respondents' motion to clarify issues for hearing, striking certain issues as unripe, and finding that the only issue for hearing was reopening. PALJ Sandberg specifically noted "[a]ny and all claims for an increase in average weekly wage, additional temporary disability benefits or medical benefits, are contingent upon a finding of change (worsening) of medical condition as determined by the administrative law judge at hearing." On August 17, 2023 Respondents filed a Response to Application for Hearing endorsing reopening defenses.

ISSUE

Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his Workers' Compensation claim based on error, mistake

or change in condition pursuant to §8-43-303(1), C.R.S. after reaching Maximum Medical Improvement (MMI) on November 14, 2019.

FINDINGS OF FACT

Pre-existing Medical History

1. The record reflects that Claimant has a significant history of injuries based on at least four motor vehicle accidents (MVAs) prior to the present claim. The MVAs occurred in 2004, on December 11, 2007, on April 12, 2015, and on May 12, 2017. Claimant's December 2007 MVA was reportedly a head-on collision at 55 mph – 60 mph.

2. Following his December 11, 2007 MVA, Claimant received extensive and continuous medical care leading up to his March 3, 2019 work injury. Claimant's symptoms involved his neck/cervical spine with radiculopathy into his arms/hands, bilateral shoulders, head/brain (including headaches/migraines), upper back/thoracic spine, chest/ribs, lower back including radiculopathy into his legs/feet, and mental disorders (depression, anxiety, PTSD, somatoform disorder). During the period Claimant received treatment for sleep disturbances, hypertension, dizziness, tinnitus, vestibular issues, neurological concerns, and memory problems. As a result of his plethora of medical issues, Claimant was totally disabled and continuously unemployed for more than ten years.

3. From 2007 to March 3, 2019 Claimant regularly received medications that included narcotics, muscle relaxers, anti-depressants, anti-anxiety medications, sleep aids, and anticonvulsants. He also underwent physical therapy, massage therapy, chiropractic care, acupuncture, cervical injections, trigger point injection. Claimant underwent seven cervical MRIs, and a multi-level cervical fusion was recommended but not pursued.

4. The record reveals that Claimant has a long history of a somatoform disorder. Notably, on July 7, 2011 J. Tashof Bernton, M.D. explained that Claimant

> has symptom magnification and/or somatoform problems in which emotional issues result in increased fixation on bodily symptoms and resultant physical complaints. The patient's clinical course is classic for a somatic presentation including a pattern of increasing symptoms over time, presentation to the emergency room for physical symptoms diagnosed as anxiety, failure of physically based treatments to result in improvement and multiple negative diagnostic evaluations. Disability seeking behavior and identification with the disabled role may play a significant part in the patient's pain complaints as well.

Four years later, on December 9, 2015, Randall J. Bjork, M.D. similarly noted Claimant had somatic fixation and engaged in extensive reporting of symptomatology. On March 1, 2016 Dr. Bjork diagnosed depression with somatic fixation in addition to post concussive headaches, neck pain, back pain, shoulder pain, and chronic PTSD.

5. In a report dated July 24, 2017 Jonathon Scott, M.D. at Blue Sky Neurology documented Claimant's history of chronic cervical issues, noting he had been on disability for years and had chronic disabling neck pain. On December 1, 2017, Dr. Scott noted that, because Claimant did not wish to pursue neck surgery, he had nothing else to offer. On July 19, 2018 Dr. Scott's partner Lisa Roeske-Anderson, M.D. referred Claimant to a pain clinic for cervical injections.

6. On October 1, 2018 Claimant began treatment with pain management specialist Giancarlo Checa, M.D. Claimant complained of neck pain with pain radiating down his arms to his hands with numbness and tingling, shoulder pain, upper thoracic/mid back pain, and lower back pain with symptoms radiating down his left leg. Dr. Checa's diagnoses included cervicalgia, myofascial pain syndrome, lumbar radiculopathy, and lumbago. He ordered a lumbar MRI, prescribed medications, and referred Claimant to spine surgeon Adam Smith, M.D. for an evaluation.

7. On October 26, 2018 Claimant visited Dr. Smith for an examination. He noted that Claimant reported years of neck and back pain with a previous cervical fusion recommendation. After reviewing Claimant's July 26, 2017 cervical MRI, Dr. Smith remarked that Claimant might require a C4-5 and C5-6 anterior cervical discectomy and fusion (ACDF). He also considered Claimant's MRI and recommended lumbar surgery.

8. On November 15, 2018 Claimant underwent lumbar surgery with Dr. Smith. The procedure was specifically described as a left L2, L3 and L4 hemilaminectomy, bilateral partial facetectomy of L2, L3, and L4, and intradural intramedullary resection of a conus/filum mass.

9. On January 8, 2019 Claimant returned to Dr. Smith complaining of continued severe neck pain and a litany of other chronic issues. Dr. Smith documented that Claimant continued to have limited cervical range of motion and high anxiety. He also noted Claimant "[c]ontinues to be very anxious. Fearful body wide pain never getting better. Fearful that he will not have his pain meds. He states: 'I'm uncontrolled. I can't survive without pain medication. If someone stopped my pain medication, I would just go to the ER every day.'" Dr. Smith determined Claimant needed to be weaned off of pain medications and control his anxiety before pursuing more surgery.

March 3, 2019 Workers' Compensation Injury

10. On March 3, 2019 Claimant was involved in a MVA while working as a taxi driver for Employer. The MVA is the basis for the present claim. He visited Rose Medical Center Emergency Department and reported left-sided neck pain. Claimant's attending physician observed "[p]atient with relatively minor mechanism of injury. Patient has no cervical spine tenderness. Patient has some mild left paracervical muscle tenderness. No neurological deficits. No other signs of serious injuries. Patient does not require any x-rays or CTs at this time. Supportive care with Tylenol, ibuprofen and muscle relaxer."

11. On March 6, 2019 Claimant began treatment with Authorized Treating Physician (ATP) Annu Ramaswamy, M.D. Dr. Ramaswamy ordered a thoracic x-ray (normal), a lumbar x-ray (spondylosis), and a chest x-ray (normal). Claimant's cervical x-ray showed only degenerative issues and muscle spasms.

12. On April 11, 2019 Claimant returned to Smith for an evaluation. Claimant's complaints were virtually identical to those documented by Dr. Smith prior to the MVA, including a 5/10 pain level, throbbing and clicking in his neck, and high anxiety. Claimant specified that if he missed even one dose of his narcotics he would have a panic attack. Dr. Smith reiterated that Claimant was not a surgical candidate because of psychological concerns and narcotic dependence.

13. On May 9, 2019 ATP Dr. Ramaswamy remarked that Claimant exhibited somatic complaints and pain behaviors. Similarly, on May 15, 2019 Lawrence Lesnak, D.O. noted a significant number of psychosocial factors affecting Claimant's symptoms, and he believed there was an underlying somatoform disorder. On June 5, 2019 Dr. Lesnak documented that Claimant's multitude of significant complaints did not correspond to objective findings. Similarly, on June 11, 2019 neuropsychologist Kevin Reilly, Psy.D., reported that Claimant's psychological testing showed symptom magnification and negative response bias indicative of non-organic factors. Claimant's testing also revealed symptom magnification.

14. On August 6, 2019 Dr. Ramaswamy determined Claimant was able to return to full duty work. On August 12, 2019 he explained that Claimant's work-related conditions had resolved.

15. On October 14, 2019 psychiatrist Stephen Moe, M.D. remarked that Claimant had reached psychiatric MMI for his work injury and assigned a 5% mental impairment rating. On November 6, 2019 Dr. Ramaswamy noted that he reviewed Dr. Moe's reports and concluded Claimant had reached MMI for all aspects of his March 3, 2019 MVA with a 5% mental impairment rating as determined by Dr. Moe. Dr. Ramaswamy also reviewed surveillance video and observed that Claimant was able to bend, turn his head and push a car without difficulty.

16. On March 15, 2020 Claimant underwent a Division Independent Medical Examination (DIME) with Ranee Shenoi, M.D. Dr. Shenoi addressed MMI, permanent impairment and apportionment of cervical, thoracic, lumbar, and psychological conditions. She determined that Claimant sustained a cervical strain as a result of the March 3, 2019 MVA. Dr. Shenoi determined Claimant reached MMI on November 14, 2019. She commented that Claimant suffered a cervical strain with reactive issues of anxiety exacerbation following the March 3, 2019 MVA.

17. Dr. Shenoi reasoned that Claimant's cervical spine and psychiatric condition qualified for permanent impairment ratings. She thus assigned a 12% whole person cervical rating and 5% mental impairment rating. In response to the DIME Unit requiring a basis for her mental impairment rating, Dr. Shenoi issued an addendum dated April 7, 2020 and stated she did not have time to conduct her own mental impairment evaluation. Dr. Shenoi simply confirmed Dr. Moe's rating. The DIME Unit then required Dr. Shenoi to review prior medical records and submit an addendum report. In an addendum report dated April 13, 2020, Dr. Shenoi stated that, after reviewing prior medical records, her opinions that Claimant sustained a 12% whole person cervical spine impairment rating and a 5% mental impairment rating related to the March 3, 2019 MVA had not changed. In support of her opinion that Claimant's cervical impairment was

related to the March 3, 2019 MVA, Dr. Shenoi noted that his pre-existing cervical condition had resolved prior to March 3, 2019.

18. After reviewing additional medical records Dr. Moe determined the March 3, 2019 work injury did not result in an onset of new symptoms. Claimant sustained no mental impairment related to his claim.

19. Respondents retained Kathleen D'Angelo, M.D. to perform a records review. In a report dated June 3, 2020 Dr. D'Angelo detailed Claimant's medical history before and after the March 3, 2019 MVA and summarized surveillance video. Dr. D'Angelo determined that Claimant did not sustain any work injury on March 3, 2019 except for cervical myofascial irritation. She explained Claimant had self-limited symptoms that required no further treatment, impairment, work modification or maintenance care. Dr. D'Angelo further reasoned that Claimant was at MMI for his work injury.

20. On December 8, 2020 ALJ Kabler issued Findings of Fact, Conclusions of Law, and Order. He found against Claimant on all litigated issues. ALJ Kabler concluded that Claimant achieved MMI on November 14, 2019 with no permanent impairment and no entitlement to additional medical care for his March 3, 2019 MVA. He specifically commented that, "[t]aking the evidence as a whole, the ALJ finds that it is highly probable and free from serious or substantial doubt that Claimant recovered from his March 3, 2019 work injury by at least August 12, 2019, and that physical symptoms and complaints he exhibited after that date were not related to the March 3, 2019 work injury." Therefore, whatever physical issues Claimant experienced subsequent to August 12, 2019 were not causally related to his claim.

Claimant's Subsequent Treatment

22. After Dr. Ramaswamy released him from care, Claimant sought medical treatment outside the Workers' Compensation system primarily through UCHealth. On October 22, 2021 Claimant was evaluated by Chantal O'Brien, M.D. in the UCHealth Neurology Headache Clinic. Claimant presented with chronic migraines without aura, cervicogenic headaches and psychophysiological insomnia. Dr. O'Brien identified a long list of other medical care and work-up Claimant had received, including medications, Botox injections, spinal MRIs, occipital blocks, trigger point injections (TPIs), selective nerve blocks, cervical facet injections, and costochondral steroid injections. She did not perform a causation evaluation or address whether any of Claimant's work-related symptoms had worsened since he reached MMI in November 2019.

23. On May 13, 2022 Claimant returned to Dr. O'Brien's Headache Clinic. Claimant reported symptoms including neck pain, myofascial muscle pain, cervical pain, chronic bilateral low back pain with sciatica, chronic pain syndrome, nonintractable chronic migraine, headache, visual disturbance, and chronic migraine without aura. Dr. O'Brien specifically did not relate any of Claimant's symptoms to his work injury or worsening of condition since he reached MMI on November 14, 2019.

24. On September 6, 2023 Respondents served Claimant with interrogatories directed at the reopening issues. Notably, Respondents' Interrogatory Number 3 asked

Claimant if he believed his claim should be reopened secondary to error or mistake. Claimant answered "I don't know what you taking about what error or mistake on this claim …." Respondents' Interrogatory Number 5 asked Claimant to state whether he agreed with Dr. Sharma's statement that he was not at MMI as of November 14, 2019. In response, Claimant wrote "Yes I agree with Doctor Sharma on June, 2023 assessment about Nov 14, 2019 he not reached maximum medical improvement do agree."

25. Respondents' Interrogatory Number 6 specifically asked Claimant whether his condition had improved, worsened or stayed the same since November 14, 2019. Respondents' Interrogatory 7 queried: "If you believe your condition has worsened since November 14, 2019, state how you were doing on November 14, 2019, and what condition(s) have worsened since November 14, 2019, and in what respect have those identified conditions worsened." Claimant responded that he is now better than before and he did not believe his condition had worsened since November 14, 2019. Instead, his condition has worsened since his work accident.

26. Jeffrey Raschbacher, M.D. performed a comprehensive records review of Claimant's claim. In a report dated October 20, 2023 he specifically considered whether Claimant's Workers' Compensation claim should be reopened. Dr. Raschbacher concluded:

> [t]here is no objective basis or objective finding that warrants re-opening this case. Prior reported symptoms are not supported by objective findings and are not likely true and accurate reports of subjective symptoms (or lack thereof). My medical opinion is that the opinions of Dr. Sharma are without merit. Treatment at UC or elsewhere are not supported by medical evidence or objective findings. He remains at MMI, with no medical evidence supporting a reopening of the case.

Dr. Raschbacher summarized that Claimant has not sustained a worsening or change of his work-related condition since he reached MMI on November 14, 2019.

27. On November 8, 2023 Claimant visited Peter Lennarson, M.D. at the UCHealth Neurology clinic. Dr. Lennarson noted

> [w]e had a somewhat frustrating visit and I wanted more information about his prior symptoms and in particular what symptoms he had prior to his lumbar surgery as I tried to explain a tethered cord could cause a variety of symptoms as well but he did not want to discuss any of that and only wanted to focus on 'getting a paper' saying whether or not he needed neck surgery. I told him that based on his neck MRI and some of his symptoms that surgery for decompression at C45, C56, C67 would be potentially helpful especially for his left arm symptoms and less certain for his neck pain.

There is no suggestion in the preceding report that Dr. Lennarson was aware of Claimant's injury history. Dr. Lennarson also did not provide a causation opinion, did not relate Claimant's conditions to the March 3, 2019 MVA, and did not specify a worsening of condition since Claimant reached MMI.

28. Claimant testified at the hearing in this matter. He explained that at the time of his March 3, 2019 MVA he was not able to see or think, and had electrical shocks through his brain. In addressing whether his claim should be reopened based on a change in condition, Claimant stated "no, no its not" (getting worse). Claimant then stated he wanted to open his claim because when he went to hearing before ALJ Kabler his treatment was not done. Claimant specifically disagreed with Dr. Ramaswamy terminating his medical care and returning him to work in 2019. He felt he had chest, blood pressure and breathing issues that had not been addressed. Claimant explained that, because Dr. Ramaswamy would not provide care, he sought treatment from personal providers at Denver Health and UCHealth. He contended his vision has worsened since his MVA. Claimant also testified he now requires oxygen, and cannot sleep without a sleep apnea machine. Claimant also commented that he requires medications and Botox injections every two months. Finally, he noted his left hand, right hand, and left foot go numb and he is completely losing balance. The preceding testimony reflects that Claimant is presumably alleging all of his current symptoms are related to his March 3, 2019 MVA and his condition has worsened.

29. Claimant has failed to establish it is more probably true than not that he should be permitted to reopen his claim based on error or mistake pursuant to §8-43-303(1), C.R.S. Initially, Claimant suffered industrial injuries on March 3, 2019 when he was involved in a MVA while working as a taxi driver for Employer. He reached MMI on November 14, 2019 with no permanent impairment. Although Claimant has not identified a specific error or mistake as a basis for reopening his claim, his July 18, 2023 hearing application and answers to interrogatories suggest that he is challenging ALJ Kabler's December 8, 2020 Findings of Fact, Conclusions of Law, and Order. ALJ Kabler ruled against Claimant on all litigated issues. He concluded that Claimant achieved MMI on November 14, 2019 with no permanent impairment and no entitlement to additional medical care for his March 3, 2019 MVA.

30. Claimant has not identified a specific mistake or error made by ALJ Kabler that would warrant reopening. Instead, he contends that every aspect of the Order was incorrect. However, ALJ Kabler's Order has repeatedly been affirmed on appeal. Notably, the ICAO affirmed ALJ Kabler's decision that Claimant reached MMI on November 14, 2019 with no impairment, and no entitlement to additional TTD, PPD, PTD or medical benefits including maintenance care. On June 30, 2022 the Colorado Court of Appeals affirmed the ICAO and the Colorado Supreme Court subsequently denied certiorari. Nevertheless, Claimant again contends that ALJ Kabler erroneously decided all issues without identifying a specific error or mistake that warrants reopening. Notably, Claimant testified that he seeks to reopen his claim because, when he went to hearing before ALJ Kabler, his treatment had not concluded. Claimant specifically disagreed with Dr. Ramaswamy terminating his medical care and returning him to work in 2019.

31. Claimant has simply failed to provide persuasive new evidence of mistake or error. Although Claimant and his personal physicians may believe ALJ Kabler was erroneous, the disagreement with ALJ Kabler's decision does not warrant reopening based upon error or mistake. All issues decided by ALJ Kabler were closed following the exhaustion of Claimant's appeals. The record reveals that Claimant has not produced new evidence of any error or mistake. He has not identified a mistake of law or fact that demonstrates a prior award or denial of benefits was incorrect. Accordingly, Claimant's

request to reopen his claim based on error or mistake is denied and dismissed.

32. Claimant has also failed to demonstrate it is more probably true than not that he should be permitted to reopen his claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Claimant has not identified a change in condition of his original compensable injury or of his physical or mental condition that is causally connected to his March 3, 2019 MVA. In his answers to interrogatories Claimant noted that he is not claiming his condition has changed or worsened since he reached MMI on November 14, 2019. Rather, he claims he never reached MMI. To the extent Claimant is alleging he sustained disability and requires additional medical care, he has failed to prove the treatment is causally related to the present claim.

33. The record demonstrates that Claimant has suffered from numerous pre-existing conditions prior to his March 3, 2019 MVA. The symptoms included severe cervical, upper extremity, shoulder, head, rib/chest, lumbar, lower extremity, balance, vision, and sleep conditions. Claimant also suffered from a somatoform disorder and psychological conditions including severe anxiety, depression, and PTSD. To the extent Claimant's low speed MVA on March 3, 2019 aggravated or exacerbated any of the preceding conditions, they were temporary, and completely resolved by November 14, 2019. Although Claimant attributes his conditions and symptoms to his March 3, 2019 MVA, he has failed to establish that any of his symptoms after November 14, 2019 were causally related to his March 3, 2019 MVA. The bulk of the evidence does not support his position. Instead, the conclusions of numerous physicians and comprehensive Order of ALJ Kabler reveal that Claimant's work-related conditions resolved by his November 14, 2019 date of MMI.

34. The record reveals significant, persuasive evidence proving Claimant's current complaints are not causally related to his MVA, and his work-related condition has not changed or worsened. On August 12, 2019 Dr. Ramaswamy commented that all of Claimant's work-related conditions had resolved. On November 6, 2019 he concluded Claimant had reached MMI for all aspects of his March 3, 2019 MVA. Furthermore, on June 3, 2020 Dr. D'Angelo determined that Claimant's only work injury on March 3, 2019 was cervical myofascial irritation. She explained Claimant had self-limited symptoms that required no further treatment, impairment, work modification or maintenance care. Moreover, Dr. Raschbacher summarized that Claimant has not sustained a worsening or change of his work-related condition since he reached MMI on November 14, 2019. Finally, ALJ Kabler notably commented that "it is highly probable and free from serious or substantial doubt that Claimant recovered from his March 3, 2019 work injury by at least August 12, 2019, and that physical symptoms and complaints that he exhibited after that date were not related to the March 3, 2019 work injury." Therefore, any symptoms Claimant experienced subsequent to August 12, 2019 were not causally related to his claim.

35. The overwhelming evidence in the record reflects that Claimant's work-related symptoms as a result of his March 3, 2019 MVA resolved by the time he reached MMI on November 14, 2019. Although Claimant contends that his condition has changed, he has failed to demonstrate that any worsening is causally related to his March 3, 2019 MVA as opposed to his pre-existing myriad of physical and psychological conditions. Thus, because none of his symptoms subsequent to November 14, 2019 are causally

related to the present claim, Claimant has failed to prove a worsening of condition that warrants reopening. Accordingly, Claimant's request to reopen his claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. At any time within six years of the date of injury, an ALJ may reopen an award on the grounds of fraud, overpayment, error or mistake, or change in condition. §8-43-303(1) C.R.S. The intent of the statute is to provide a remedy to claimants who are entitled to awards of both medical and disability benefits. *Cordova v. Indus. Claim Appeals Off.*, 55 P.3d 186 (Colo. App. 2002). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Off.,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004). An ALJ's decision to grant or deny a petition to reopen may therefore "be reversed only for fraud or clear abuse of discretion." *Wilson v. Jim Snyder Drilling*, 747 P.2d 647, 651 (Colo. 1987); *see also Heinicke* 197 P.3d at 222 ("In the absence of fraud or clear abuse of discretion, the ALJ's decision concerning reopening is binding on appeal.").

5. Reopening of a closed claim may be granted based on a mistake of fact. §8-43-303(1), C.R.S. Error or mistake refers to mistake of law or fact that demonstrates a prior award or denial of benefits was incorrect. *Renz v. Larimer Cty. School Dist.*, 924 P.2d 1177 (Colo.App. 1996). When a party seeks to reopen a closed claim based on

mistake, the ALJ must determine whether a mistake was made, and if so, whether it was the type of mistake that justifies reopening. *Travelers Insurance Co. v. Indus. Comm'n*, 646 P.2d 399, 400 (Colo.App. 1981). When determining whether a mistake justifies reopening the ALJ may consider whether the alleged mistake could have been avoided through the exercise of available remedies and due diligence, including the timely presentation of evidence. *See Klosterman v. Indus. Comm'n*, 694 P.2d 873, 876 (Colo. App. 1984). The power to reopen is permissive and is therefore committed to the ALJ's sound discretion. *Cordova v. Indus. Claim Appeals Off*., 55 P/3d 186, 189 (Colo. App. 2002)

6. Section 8-43-303(1), C.R.S., provides that a Workers' Compensation award may be reopened based on a change in condition. In seeking to reopen a claim based on a change in condition, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Off.,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Off.,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Off.,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Off.,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

7. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his claim based on error or mistake pursuant to §8-43-303(1), C.R.S. Initially, Claimant suffered industrial injuries on March 3, 2019 when he was involved in a MVA while working as a taxi driver for Employer. He reached MMI on November 14, 2019 with no permanent impairment. Although Claimant has not identified a specific error or mistake as a basis for reopening his claim, his July 18, 2023 hearing application and answers to interrogatories suggest that he is challenging ALJ Kabler's December 8, 2020 Findings of Fact, Conclusions of Law, and Order. ALJ Kabler ruled against Claimant on all litigated issues. He concluded that Claimant achieved MMI on November 14, 2019 with no permanent impairment and no entitlement to additional medical care for his March 3, 2019 MVA.

8. As found, Claimant has not identified a specific mistake or error made by ALJ Kabler that would warrant reopening. Instead, he contends that every aspect of the Order was incorrect. However, ALJ Kabler's Order has repeatedly been affirmed on appeal. Notably, the ICAO affirmed ALJ Kabler's decision that Claimant reached MMI on November 14, 2019 with no impairment, and no entitlement to additional TTD, PPD, PTD or medical benefits including maintenance care. On June 30, 2022 the Colorado Court of Appeals affirmed the ICAO and the Colorado Supreme Court subsequently denied certiorari. Nevertheless, Claimant again contends that ALJ Kabler erroneously decided all issues without identifying a specific error or mistake that warrants reopening. Notably, Claimant testified that he seeks to reopen his claim because, when he went to hearing before ALJ Kabler, his treatment had not concluded. Claimant specifically disagreed with

Dr. Ramaswamy terminating his medical care and returning him to work in 2019.

9. As found, Claimant has simply failed to provide persuasive new evidence of mistake or error. Although Claimant and his personal physicians may believe ALJ Kabler was erroneous, the disagreement with ALJ Kabler's decision does not warrant reopening based upon error or mistake. All issues decided by ALJ Kabler were closed following the exhaustion of Claimant's appeals. The record reveals that Claimant has not produced new evidence of any error or mistake. He has not identified a mistake of law or fact that demonstrates a prior award or denial of benefits was incorrect. Accordingly, Claimant's request to reopen his claim based on error or mistake is denied and dismissed.

10. As found, Claimant has also failed to demonstrate by a preponderance of the evidence that he should be permitted to reopen his claim based on a change in condition pursuant to §8-43-303(1), C.R.S. Claimant has not identified a change in condition of his original compensable injury or of his physical or mental condition that is causally connected to his March 3, 2019 MVA. In his answers to interrogatories Claimant noted that he is not claiming his condition has changed or worsened since he reached MMI on November 14, 2019. Rather, he claims he never reached MMI. To the extent Claimant is alleging he sustained disability and requires additional medical care, he has failed to prove the treatment is causally related to the present claim.

11. As found, the record demonstrates that Claimant has suffered from numerous pre-existing conditions prior to his March 3, 2019 MVA. The symptoms included severe cervical, upper extremity, shoulder, head, rib/chest, lumbar, lower extremity, balance, vision, and sleep conditions. Claimant also suffered from a somatoform disorder and psychological conditions including severe anxiety, depression, and PTSD. To the extent Claimant's low speed MVA on March 3, 2019 aggravated or exacerbated any of the preceding conditions, they were temporary, and completely resolved by November 14, 2019. Although Claimant attributes his conditions and symptoms to his March 3, 2019 MVA, he has failed to establish that any of his symptoms after November 14, 2019 were causally related to his March 3, 2019 MVA. The bulk of the evidence does not support his position. Instead, the conclusions of numerous physicians and comprehensive Order of ALJ Kabler reveal that Claimant's work-related conditions resolved by his November 14, 2019 date of MMI.

12. As found, the record reveals significant, persuasive evidence proving Claimant's current complaints are not causally related to his MVA, and his work-related condition has not changed or worsened. On August 12, 2019 Dr. Ramaswamy commented that all of Claimant's work-related conditions had resolved. On November 6, 2019 he concluded Claimant had reached MMI for all aspects of his March 3, 2019 MVA. Furthermore, on June 3, 2020 Dr. D'Angelo determined that Claimant's only work injury on March 3, 2019 was cervical myofascial irritation. She explained Claimant had self-limited symptoms that required no further treatment, impairment, work modification or maintenance care. Moreover, Dr. Raschbacher summarized that Claimant has not sustained a worsening or change of his work-related condition since he reached MMI on November 14, 2019. Finally, ALJ Kabler notably commented that "it is highly probable and free from serious or substantial doubt that Claimant recovered from his March 3, 2019 work injury by at least August 12, 2019, and that physical symptoms and complaints that he exhibited after that date were not related to the March 3, 2019 work injury." Therefore,

any symptoms Claimant experienced subsequent to August 12, 2019 were not causally related to his claim.

13. As found, the overwhelming evidence in the record reflects that Claimant's work-related symptoms as a result of his March 3, 2019 MVA resolved by the time he reached MMI on November 14, 2019. Although Claimant contends that his condition has changed, he has failed to demonstrate that any worsening is causally related to his March 3, 2019 MVA as opposed to his pre-existing myriad of physical and psychological conditions. Thus, because none of his symptoms subsequent to November 14, 2019 are causally related to the present claim, Claimant has failed to prove a worsening of condition that warrants reopening. Accordingly, Claimant's request to reopen his claim based on a change in condition is denied and dismissed.

ORDER

1. Claimant's request to reopen his March 3, 2019 claim based on error, mistake or a change in condition pursuant to §8-43-303(1), C.R.S. is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant prove by a preponderance of the evidence she suffered a whole person impairment to her right shoulder?
- If Claimant proved a whole person impairment, did Respondent overcome the DIME's 7% whole person rating by clear and convincing evidence?
- Did Claimant prove by clear and convincing evidence the DIME erred by not providing a cervical or thoracic spine rating?
- Did Claimant prove a right shoulder surgery performed by Dr. Derek Purcell was reasonably needed and causally related to the admitted injury?
- Did Claimant prove Dr. Purcell is an authorized provider?
- Did Claimant prove entitlement to TTD benefits from September 26, 2022 through November 1, 2022, and TPD benefits from November 2, 2022 through March 22, 2023?
- At the hearing, the parties discussed submission of photographs to evaluate Claimant's eligibility for a disfigurement award. No photographs were submitted, and the issue of disfigurement will be reserved for future determination.

FINDINGS OF FACT

1. Claimant works for Employer as a Police Officer. She suffered admitted injuries on May 11, 2021 when she fell while chasing a burglary suspect.

2. Claimant sought treatment at the Memorial Hospital emergency department the evening of the accident. She reported pain in her right shoulder, right knee, and left hip. She did not immediately feel any neck or upper back symptoms. Claimant was diagnosed with multiple abrasions, contusions, and acute shoulder pain.

3. Claimant saw PA-C Magan Grigg at Employer's occupational medicine clinic on May 14, 2021. She reported right shoulder pain radiating to the chest, right pectoral muscle, and right scapula. She denied neck pain. Physical examination showed tenderness to palpation at the subscapularis insertion on the right shoulder with reduced strength of multiple rotator cuff muscles. Impingement signs were negative. Ms. Grigg ordered a shoulder MRI to rule out internal derangement, and referred Claimant to PT.

4. A right shoulder MRI was completed on May 17, 2021. It showed full-thickness supraspinatus tendinopathy but no rotator cuff tear, and mild intra-articular biceps tendinopathy.

5. Claimant returned to the occupational medicine clinic on May 27, 2021 and saw PA-C Paula Homberger. Claimant's knee felt better but her shoulder was worse. She described constant 2/10 right shoulder pain, radiating to the neck and mid back. Ms. Homberger advised Claimant the MRI showed no rotator cuff tear and she should improve quickly with conservative treatment. Ms. Homberger recommended Claimant continue PT.

6. Dr. Nicholas Kurz evaluated Claimant on June 15, 2021. Her shoulder pain had improved to 1/10, but still radiated to the right neck, trapezius, and scapular area. Dr. Kurz recommended four more weeks of PT.

7. On July 15, 2021, Ms. Homberger documented Claimant's right shoulder and neck pain had worsened. She recommended additional PT. That same day, Claimant's therapist noted pain radiating to Claimant's neck and a large trigger point in the right upper trapezius.

8. On August 3, 2021, Ms. Homberger noted pain throughout the shoulder girdle region, including the right trapezius and rhomboid muscles. She referred Claimant to Dr. Chad Abercrombie for chiropractic treatment.

9. Claimant had an initial evaluation with Dr. Abercrombie on August 30, 2021. She reported pain in the right shoulder, right neck, and right upper back. The examination showed tenderness and trigger points along the right trapezius and levator scapula. Dr. Abercrombie also noted increased tone and tenderness at the anterior deltoid, coracobrachialis, pectoralis minor, and proximal bicipital tendon region. Dr. Abercrombie diagnosed a right shoulder strain, cervicothoracic strain, and scapulothoracic pain. He recommended myofascial release techniques, chiropractic manipulation, and dry needling.

10. Claimant treated with Dr. Abercrombie for several months, during which time he consistently documented proximal symptoms affecting the shoulder girdle and right upper quadrant, including the right trapezius, rhomboids, levator scapulae, and pectoralis muscles.

11. On October 20, 2021, Claimant had an orthopedic evaluation with Dr. Michael Simpson. Dr. Simpson noted "pretty significant" rotator cuff tendinitis/tendinosis per the MRI. Physical examination showed positive impingement signs, pain with supraspinatus strength testing, mildly positive Speed's test, and crepitation with dynamic labral testing. Shoulder range of motion was normal. Dr. Simpson diagnosed a right shoulder strain and impingement syndrome and administered a subacromial steroid injection.

12. Claimant followed up with Dr. Simpson on November 17, 2021. The injection had helped, but only lasted two weeks. As a result, Dr. Simpson did not think another injection was warranted. Instead, he recommended platelet rich plasma (PRP) injections.

13. Dr. Kurz re-evaluated Claimant on November 23, 2021. Claimant stated her shoulder was feeling much better after the shoulder injection. She was having no pain at rest, and only 1-2/10 when using the shoulder. The examination showed full range of motion of the shoulder and neck, with no tenderness to palpation or spasm. Dr. Kurz advised Claimant that PRP injections were no longer recommended under the MTGs, and in any event were only previously approved when used to avoid surgery. Claimant had completed treatment with Dr. Abercrombie and was doing a home exercise program. Dr. Kurz put Claimant at MMI with no impairment and released her with no restrictions and no need for maintenance care.

14. On February 24, 2022, Claimant returned to Ms. Homberger because of worsening symptoms. She stated her neck and upper back had not fully resolved when she was discharged in November 2021, and had worsened in early January. She described daily headaches and difficulty sleeping. Her shoulder pain had also gotten worse in the interim. Claimant's pain diagram endorsed pain in the right shoulder radiating to the scapulothoracic region, base of the neck, and back of the head. Ms. Homberger noted tenderness and tightness with palpation of the right trapezius, periscapular area, and occipital muscles showed. Ms. Homberger opined Claimant was no longer at MMI and recommended additional PT and chiropractic treatment. She added a diagnosis of "cervicothoracic strain, previously treated, not listed formally as a diagnosis, worsened."

15. Claimant started PT on February 28, 2022. She reported sharp pain at the base of the neck causing intermittent headaches. She was having difficulty reaching behind her back and sleeping because of shoulder, neck and scapulothoracic pain. The therapist documented tenderness and trigger points in the right trapezius, right supraspinatus, and along the right rib area.

16. Claimant resumed treatment with Dr. Abercrombie on March 1, 2022. She reported continued right-sided neck and upper back pain that had escalated over the past few months with no new injury. Palpation revealed increased muscle tone across the right upper trapezius into the levator scapula, rhomboids, latissimus dorsi and serratus anterior. Dr. Abercrombie performed dry needling to the trapezial ridge, rhomboids and levator scapula.

17. Claimant saw Dr. Kurz on March 24, 2022. Her neck and upper back were "in knots." She denied any new incident, injury, or change in activity that could be responsible for her symptoms. Dr. Kurz stated Claimant remained at MMI but ordered an updated right shoulder MRI to look for "objective worsening." He opined the cervical and upper back symptoms "were not original complaints, and with no new work-related injury, are more medically likely unrelated to her original DOI."

18. The right shoulder MRI was completed on March 27, 2022. The radiologist opined the findings were "not significantly changed" since the prior MRI.

19. Claimant next saw Dr. Kurz on July 1, 2022. Because the MRI showed no new pathology, Dr. Kurz opined Claimant remained at MMI and "no additional treatment is necessary or reasonable as causally or temporally related to her initial mechanism of

injury." He further opined that treatment for Claimant's nonwork-related cervicothoracic pain and headaches "should continue to be followed privately by her PCP, outside of the WC system."

20. Dr. Nicholas Olsen performed an IME for Respondent on August 8, 2022. Claimant described ongoing neck pain and headaches as her most bothersome symptoms at that time. She rated her shoulder pain as 1/10. Dr. Olsen inquired if Claimant had ever had neck or midback issues before. She related an episode of right trapezius pain in 2020, which resolved after a course of therapy. She said her current symptoms were "nothing like" the episode in 2020. Dr. Olsen told Claimant it was difficult to square her description of symptoms and associated limitations with her low reported pain levels. On examination, Dr. Olsen noted normal range of motion of the right shoulder and neck. Impingement signs were negative. Palpatory examination demonstrated mild tenderness over the biceps tendon and moderate tenderness in the upper trapezius. He also noted mild somatic dysfunction in the midthoracic spine with tenderness along the right side. No trigger points were identified. Dr. Olsen agreed Claimant was at MMI and no additional treatment was warranted for the right shoulder. He further opined that Claimant's cervicothoracic pain and right upper trapezius pain were not work-related. Finally, Olsen opined the situs of any functional impairment from the shoulder injury was distal to the glenohumeral joint and would not represent a whole person impairment.

21. Claimant subsequently pursued additional evaluations and treatment for the right shoulder from her PCP, who referred her to Dr. Derek Purcell, an orthopedic surgeon. She was evaluated by PA Matthew Albrecht in Dr. Purcell's office on September 6, 2022. She described persistent pain and dysfunction in the right shoulder since the work accident on May 11, 2021. She also described right-sided neck and thoracic pain. Impingement signs, O'Brien's test, Speed's test, and Yergason's test were positive. Mr. Albrecht personally reviewed the March 2022 MRI images. He agreed with the radiologist's interpretation of mild supraspinatus tendinosis but also noted moderate tendinopathy of the long head of the biceps tendon. He diagnosed shoulder impingement syndrome and referred Claimant to PT. They discussed other treatment options, including surgery.

22. Dr. Derek Purcell performed right shoulder arthroscopic surgery on September 26, 2022. He confirmed tendinopathy of the long head of the biceps tendon as noted by Mr. Albrecht, for which he performed a biceps tenodesis. He also debrided a degenerative labral tear. Finally, Dr. Purcell performed a subacromial decompression to address "extensive" subacromial bursitis.

23. Dr. Purcell restricted Claimant from work after the surgery. Because Claimant had pursued the surgery outside of her workers' compensation claim, she utilized Employer's procedures regarding nonwork-related leave.

24. Claimant was off work from September 26, 2022, through November 1, 2022, during which time she was in a sling and body wrap. On November 2, she returned to part-time "light duty," and continued in that capacity through March 22, 2023. She

received a combination of wages and short-term disability benefits while on light duty. Claimant returned to full duties at full wages on March 23, 2023.

25. Claimant underwent a Division IME with Dr. John Bissell on December 12, 2022. Dr. Bissell opined the surgery performed by Dr. Purcell was causally related to the work accident. Dr. Bissell determined Claimant was not at MMI inasmuch as she was still recovering from surgery and had not completed post-operative rehabilitation.

26. Respondent filed a General Admission of Liability (GAL) on January 9, 2023, accepting that Claimant was not at MMI. But Respondent denied liability for the surgery as "unauthorized," and denied that Claimant was entitled to any temporary disability caused by the surgery.

27. Post-surgical records from Mr. Albrecht describe Claimant generally "doing well" and making steady improvement.

28. Claimant attended a follow-up DIME with Dr. Bissell on June 6, 2023. Claimant reported ongoing pain in the right shoulder, neck, and mid back. Her shoulder pain was improving. Examination of the shoulder showed tenderness to palpation about the right parascapular region. The last treatment record available to Dr. Bissell, dated March 22, 2023, showed Claimant progressing well and working light duty, with an expected return to full duty shortly thereafter. Dr. Bissell determined Claimant was at MMI as of March 22, 2023. He assigned an 11% upper extremity rating based on 5% for the subacromial decompression and 6% for range of motion, which converts to 7% whole person. Consistent with the Division's Impairment Rating Tips, Dr. Bissell justified the 5% surgical rating because Claimant also had a labral debridement and biceps tenodesis as additional work-related conditions unaccounted for by other methods. Dr. Bissell opined Claimant had no ratable impairment to any other body part, and maintained his belief that the cervical and thoracic myofascial symptoms were pre-existing and unrelated to the industrial injury.

29. Dr. Olsen performed a second IME for Respondent on July 20, 2023. He was "surprised" Claimant had undergone surgery given the minimal 1/10 pain level described in his previous IME. Claimant clarified that her typical shoulder pain before the surgery was 1/10 but it frequently flared to 5/10 or 6/10 and interfered with activities. She reported significant benefit from the surgery. Dr. Olsen's examination showed negative impingement signs and essentially full range of motion. Dr. Olsen opined the surgery was not reasonably needed based on the minimal findings at his prior IME and lack of significant pathology shown on the MRIs. To the extent Dr. Purcell identified any reasons for surgery, Dr. Olsen did not believe they were causally related to the work accident. Dr. Olsen disagreed with Dr. Bissell's impairment rating. He did not think the 5% surgical rating was warranted under the Rating Tips, and he found normal shoulder range of motion.

30. Claimant saw Dr. Miguel Castrejon on September 12, 2023 for an IME at the request of her counsel. Claimant described intermittent pain from the base of the neck, through the shoulder, and extending below the right scapula. Claimant told Dr. Castrejon

she did not recall experiencing any neck or midback pain immediately after the accident, but started experiencing stiffness in the neck and midback within two weeks of the accident. Claimant reported "substantial benefit" from the shoulder surgery, although she still had some residual symptoms and limitations. Physical examination showed tenderness throughout the right upper quadrant, including the cervical paraspinals, trapezius, rhomboids, and right scapula. The proximal biceps tendon was also tender.

31. Dr. Castrejon agreed Claimant was at MMI with permanent impairment to the right shoulder. He assigned a 10% upper extremity rating for the right shoulder, which converts to 6% whole person.[1] Dr. Castrejon agreed with Dr. Bissell that Claimant has no ratable cervical or thoracic impairment under Table 53 of the *AMA Guides*. But Dr. Castrejon was impressed by the voluminous documentation of symptoms and treatment directed to areas proximal to the glenohumeral joint including the right paracervical muscles, trapezius, rhomboids, and scapula. He saw no evidence of any significant pre-injury neck pain, treatment, or functional limitations. As a result, Dr. Castrejon thought Claimant met the criteria set forth in the Impairment Rating Tips for a cervical range of motion rating despite the absence of a Table 53 specific disorder impairment. He calculated an 8% whole person rating based on cervical ROM deficits, which he combined with the 6% shoulder rating for an overall rating of 14% whole person.

32. Dr. Olsen testified at hearing consistent with his reports. He reiterated that the surgery was not warranted given Claimant's minimal symptoms and lack of identified pathology. He dismissed Mr. Albrecht's reading of the MRI and Dr. Purcell's intraoperative findings in favor of the radiologist's reports. He also opined the surgery did not meaningfully improve Claimant's overall surgery, despite her reports to multiple IME physicians that she appreciated substantial benefit from the procedure. He disagreed with Dr. Bissell and Dr. Castrejon that Claimant warranted a rating for the right shoulder. But to the extent that Claimant may be found to have impairment, Dr. Olsen opined it is a purely scheduled impairment that only affects Claimant's arm, and all proximal symptoms are unrelated to the work injury.

33. Dr. Bissell and Dr. Castrejon's opinions regarding Claimant's right shoulder impairment are credible and more persuasive than the contrary opinions offered by Dr. Olsen.

34. Claimant's testimony is generally credible.

35. Claimant proved by a preponderance of the evidence that she suffered functional impairment to her right shoulder not listed on the schedule.

36. Respondent failed to overcome Dr. Bissell's 7% whole person right shoulder rating by clear and convincing evidence.

---

[1] Dr. Castrejon used the same methodology as Dr. Bissell to calculate the shoulder rating but obtained slightly different ROM measurements, which accounts for the slight variance in their respective ratings.

37. Claimant failed to overcome Dr. Bissell's determination that she has no ratable impairment to the cervical or thoracic spine by clear and convincing evidence.

38. Claimant proved the September 26, 2022 right shoulder surgery performed by Dr. Purcell was reasonably needed to cure and relieve the effects of her industrial injury.

39. Claimant failed to prove Dr. Purcell is an authorized provider.

40. Claimant proved she is entitled to TTD benefits from September 26, 2022 through November 1, 2022, and TPD benefits from November 2, 2022 through March 21, 2023.

CONCLUSIONS OF LAW

A. Burdens and standards of proof

The parties have raised several interrelated issues regarding permanent impairment. The DIME provided an impairment rating for Claimant's right shoulder, which may reflect whole person or scheduled impairment. Claimant believes she suffered whole person impairment to her shoulder, whereas Respondent believes any impairment is confined to the schedule. Additionally, Claimant argues the DIME erred by failing to include a rating for the cervical spine.

As postured, the issues create split burdens of proof. Additionally, there are preliminary questions regarding which of the DIME's findings are entitled to presumptive weight, and which are evaluated based on a preponderance of the evidence. Regarding the shoulder, the initial consideration is whether it constitutes a scheduled or whole person impairment. The DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Conversely, scheduled impairment is a question of fact for the ALJ based on a preponderance of the evidence.

Whether a claimant sustained a scheduled or non-scheduled impairment is a threshold question of fact for determination by the ALJ. The heightened burden of proof that attends a DIME rating only applies if the claimant establishes by a preponderance of the evidence that the industrial injury caused functional impairment not found on the schedule. Then, and only then, does either party face a clear and convincing evidence burden to overcome the DIME's rating. *Webb v. Circuit City Stores, Inc*. W.C. No. 4-467-005 (August 16, 2002). Although the DIME's opinions may be relevant to this determination, they are not entitled to any special weight on this threshold issue. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

In light of the foregoing principles, the burdens of proof are allocated as follows: (1) Claimant must prove by a preponderance of the evidence she sustained whole person impairment to the right shoulder; (2) if Claimant has whole person impairment to her shoulder, Respondents must overcome the DIME rating by clear and convincing evidence; (3), if Claimant does not have a whole person impairment, Claimant must prove the proper shoulder rating by a preponderance of the evidence; (4) Claimant must prove

by clear and convincing evidence the DIME erred by not providing a cervical spine rating; (5) if either party overcomes the DIME by clear and convicing evidence in any respect, the proper rating is a factual question based on a preponderance of the evidence.

B. Claimant proved whole person impairment to her right shoulder

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc.*, W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ's finding of whole person impairment). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc.*, W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved she suffered a whole person impairment to her right shoulder. Claimant reported pain radiating to her neck and mid-back at the first appointment with Ms. Homberger on May 27, 2021. The record thereafter is replete with reports of symptoms affecting structures proximal to the arm, including the trapezius, rhomboids, and right scapula. These proximal symptoms have interfered with activities such as reaching overhead, reaching behind her back, sleeping, and exercising. The argument that all of Claimant's proximal symptoms and associated limitations are pre-

existing and unrelated to the work accident is unconvincing. Claimant acknowledged prior episodes of neck and trapezius pain, but credibly testified the issues resolved after a short course of therapy. As Dr. Castrejon noted, there is no documentation of neck or midback pain, treatment, or functional limitations immediately before the May 2021 work accident. To the contrary, Claimant was working full time in a physically demanding occupation as a police officer without difficulty, and there is no persuasive reason to think she otherwise would have had these symptoms absent the injury to her right shoulder.

C. Respondent failed to overcome the DIME shoulder rating

A DIME's whole person impairment rating is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing burden also applies to the DIME's determination of what impairment was caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). If the DIME is overcome "in any respect," the proper rating becomes a factual question for determination based on a preponderance of the evidence.

Respondent failed to overcome Dr. Bissell's 7% whole person right shoulder rating by clear and convincing evidence. Claimant suffered an admitted injury to her shoulder in May 2021, and remained symptomatic nearly two years later. There is no persuasive evidence connecting her ongoing shoulder symptoms to any nonwork-related cause. Claimant received extensive treatment for the shoulder, including eventual surgery. Dr. Bissell determined the surgery was reasonably needed and causally related to the work injury, as did Dr. Castrejon. Both Dr. Bissell and Dr. Castrejon assigned a 5% rating for the subacromial decompression, pursuant to the Division's Rating Tips. The remainder of Dr. Bissell's rating was appropriately based on ROM deficits he personally measured at the DIME. Although Dr. Olsen found normal shoulder ROM during his IME, Dr. Bissell expressed no concern about the validity of the measurements he obtained at the DIME. Dr. Castrejon's similar measurements lend further credence to Dr. Bissell's rating. At most, Dr. Olsen and Dr. Kurz's determinations that Claimant has no impairment are "mere differences of opinion," and do not rise to the level of clear and convincing evidence.

D. Claimant failed to overcome Dr. Bissell's rating

As found, Claimant failed to overcome Dr. Bissell's determination she has no ratable impairment to the cervical or thoracic spine. Claimant's IME agreed no thoracic spine rating is warranted, and there is no opinion in the record to the contrary. Regarding the cervical spine, no treating or evaluating Level II physician has found impairment under Table 53, which is generally a threshold requirement for a spinal rating under the *AMA Guides*. *E.g., Rojahn v. Monaco Rehabilitation*, W.C. No. 4-055-695-02 (October 5, 2017).

Dr. Castrejon acknowledged Claimant does not qualify for a Table 53 rating, but invoked the exception outlined in the Division's Rating Tips that allows an isolated cervical ROM impairment in "unusual cases" involving a "severe" shoulder injury. The language used in the Rating Tips reflects an element of discretion on the part of the rating physician, stating that a rating is "allowed" where the rater believes it can be "well justified." But there does not appear to be any scenario where such a rating is mandatory under the Tips. Claimant failed to prove by clear and convincing evidence that Dr. Bissell erred by declining to assign a cervical ROM rating without a corresponding Table 53 rating.

E. The September 26, 2022 shoulder surgery was reasonably needed to cure and relieve the effects of the admitted injury

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Claimant proved the September 26, 2022 right shoulder surgery performed by Dr. Purcell was reasonably needed and causally related to her industrial injury. Claimant credibly explained that her right shoulder was minimally painful at rest, but it repeatedly flared and interfered with her ability to engage in activities. Mr. Albrecht concluded Claimant's clinical presentation and MRI findings were sufficient to justify surgery, and Dr. Purcell obviously agreed. Dr. Bissell and Dr. Castrejon concurred the surgery was reasonably needed and related to the work accident. Intraoperatively, Dr. Purcell observed and treated pathology in the right shoulder that was not fully appreciated by the radiologists who read the MRIs. The surgery ultimately improved Claimant's symptomology and function even though it did not completely resolve the condition.

F. Dr. Purcell is not an authorized provider

Besides showing treatment is reasonably necessary, the claimant must also prove the treatment is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). "Authorization" refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Authorization is distinct from whether treatment is "reasonably needed" within the meaning of § 8-42-101(1)(a). *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995). Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the "normal progression of authorized treatment." *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Claimant failed to prove Dr. Purcell is an authorized provider. Claimant was referred to Dr. Purcell by her PCP, whom she saw after being put at MMI and released by Dr. Kurz. No authorized provider referred Claimant to her PCP or Dr. Purcell for treatment related to her right shoulder. Admittedly, Dr. Kurz advised Claimant to follow up with her personal physicians for what he considered nonwork-related *cervical and upper back complaints*. But while that might constitute a referral for treatment of the neck and upper back under *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008), it did not authorize Claimant to choose her own physician to treat the right shoulder. Dr. Kurz specifically opined Claimant's right shoulder injury was at MMI and required no additional treatment. That opinion is consistent with the statutory definition of MMI, which is reached "when no additional treatment is reasonably expected to improve the condition." Section 8-40-201(11.5). An ATP's determination of MMI does not entitle a claimant to unilaterally change physicians to pursue additional treatment at the respondents' expense. *E.g.*, Story v. Industrial Claim Appeals Office, 910 P.2d 80 (Colo. App. 1995); *Gosselova v. Vail Resorts*, W.C. No. 4-975-232-02 (December 24, 2018); *Edelen v. BCW Enterprises, LTD*., W.C. No. 4-155-609 (September 20, 1995). Because Dr. Purcell was not authorized, Respondent is not liable for the surgery, notwithstanding that it was otherwise reasonably needed.

G. Claimant proved entitlement to TTD and TPD benefits after surgery

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes them to leave work, and they miss more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). To receive TTD benefits, a claimant must establish a causal connection between a work-related injury and the subsequent wage loss. Section 8-42-103(1)(a). Once commenced, TTD benefits shall continue until one of the terminating events enumerated in § 8-42-105(3), including return to work.

A temporarily partially disabled claimant is entitled to TPD benefits calculated at two-thirds of the difference between the average weekly wage and their earnings during the period of partial disability. Section 8-42-106(1). Entitlement to TPD benefits ends when the claimant reaches MMI. Section 8-42-106(2)(a).

Claimant proved she was disabled by the September 26, 2022 surgery which proximately caused a wage loss. The ALJ credits the opinions of Dr. Purcell, Dr. Bissell, and Dr. Castrejon that the surgery was reasonably needed, and credits Dr. Bissell and Dr. Castrejon that the surgery was causally related to the work injury. The fact that the surgery was unauthorized does not preclude an award of temporary disability benefits. The issue of authorization pertains to liability for treatment, and not whether the treatment was reasonably needed to cure and relieve the effects of an injury. Despite Dr. Purcell's unauthorized status, Respondent is still liable for any disability following the treatment. *E.g., Mennonite Hospital v. Corley*, 476 P.2d 274 (Colo. App. 1970); *Cordova v. Butterball*, W.C. No. 4-755-343 (March 9, 2010).

Claimant was off work from September 26, 2022 through November 1, 2022. She returned to part-time light duty on November 2, 2022, and continued working in that capacity until she reached MMI on March 22, 2023. Therefore, she is entitled to TTD

benefits from September 26, 2022 through November 1, 2022, and TPD benefits from November 2, 2022 through March 21, 2023.

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant PPD benefits based on the DIME's 7% whole person rating for the right shoulder.

2. Respondent's request to overcome the DIME's whole person shoulder rating is denied and dismissed.

3. Claimant's request to overcome the DIME regarding spinal impairment is denied and dismissed.

4. Respondent shall pay Claimant TTD benefits from September 26, 2022 through November 1, 2022.

5. Respondent shall pay Claimant TPD benefits from November 2, 2022 through March 21, 2023.

6. Respondent shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

7. Claimant's request for payment of treatment provided by Dr. Derek Purcell, including the September 26, 2022 surgery, is denied and dismissed.

8. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-228-663-001

ISSUES

I. Whether the claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury on November 30, 2022.

II. Whether the claimant has proven, by a preponderance of the evidence, that he is entitled to medical benefits.

III. Whether the claimant has proven, by a preponderance of the evidence, that he is entitled to temporary disability benefits.

IV. What is the claimant's average weekly wage?

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. The claimant is employed as the Senior Vice President of Claim Operations for the employer and has worked for them for about three years.
2. The employer provides property insurance adjusters to insurance companies across the country during catastrophic events, such as hurricanes, floods, hailstorms, tornados; or anytime Insurance carriers do not have adequate field staff to handle their claims – which mostly involve homeowners.
3. Due the unpredictable demand for adjusters – which depends on catastrophes – the employer does not maintain a staff of adjusters waiting for deployment. Instead, the Employer relies on independent adjusters who are recruited and retained when needed. These independent adjusters, or "1099 independent contractors," or contingent workers are the bloodline of the Employer's business. As a result, the need to maintain excellent working relationships with skilled independent adjusters is critical to the overall functioning and profitability of the Employer's business. In essence, the employer must recruit independent adjusters to work for the employer, versus working for a competitor.
4. As the Senior Vice President of Claims, the claimant's position required him to oversee the claims process from the time each claim is assigned by the insurer until the claim is returned to the insurer.
5. The claimant's job description specifically provides that:

> [Claimant], along with the VPs of Claim Operations, assume the responsibility of retaining and growing the firm's existing book of business, actively developing additional client relationships, expanding the firm's trusted network of claims professionals and building a strong

> supporting operation to ensure that [Redacted, hereinafter EL] continues to deliver the highest quality service in the industry. The incumbent is expected to maintain a motivated, engaged and effective workforce across the country…

6. Thus, the claimant was tasked with the engagement, retention, and recruitment of the independent contractor adjustors, which were integral to the employer's business.
7. As credibly testified to by the claimant, all of their claims' adjusters worked as 1099 independent contractors. There is also a significant amount of competition between the multiple firms that contract with independent adjustors for catastrophic claim work. Accordingly, a large part of the claimant's role with the employer was to develop and train existing adjustors as well as retain and recruit new adjustors, for the benefit of the business because the independent adjusters are the bloodline of their business.
8. Claimant's compensation package consists of a base salary, a discretionary bonus, and a performance bonus. The bonus portion of his compensation depends on the performance of the adjusters with whom the employer contracts. Thus, the more productive the adjusters are, the more money the claimant makes, via his bonus pay. As a result, the claimant was incentivized to maintain good working relationships with the independent adjusters – especially the high performing ones - for the overall financial benefit of the company and himself.
9. [Redacted, hereinafter MG] is an independent claims adjuster who had contracted and worked with the employer. MG[Redacted] was a top producing claims adjuster. As a top producing claims adjuster, MG's[Redacted] work helped the claimant meet the employer's financial goals, which in turn had a positive impact on the employer's bottom line as well as the claimant's compensation.
10. Claimant's normal place of business was at his home office in Berthoud, Colorado. Thus, he worked remotely. However, travel was required as a part of his job.
11. Claimant's work schedule was dictated by circumstances, and he was on call 24 hours per day, 7 days per week. When traveling to an event/catastrophe, his workdays could run from morning to night and while working from his home office, his workdays could be a more traditional 9-5.
12. Claimant's co-workers and 1099 independent contractor claims adjustors live across the country and, largely, work remotely as well. Claimant had tried to use remote team-building activities during the pandemic, but that it just did not work the same as in-person team building and bonding activities.
13. Whenever a catastrophic event occurred, the claimant would take advantage of the situation and get as much face-to-face time as possible with his remote employees and 1099 independent claims adjusters. It was during those times, when everyone was displaced from their homes and traveling, that they would spend time in the evenings, eating dinner, connecting, and primarily talking about work. After these catastrophic events, the support team would also make time to come together with team dinners and other events to connect, share stories, get input, and talk shop.

14. The Vice Presidents (VPs), working beneath the claimant were afforded discretion and full authority in setting up team dinners and events and they only needed to consult the claimant if they needed a budget for the event.

15. One of the VPs that reported to the claimant, [Redacted, hereinafter NG], decided to co-host a team dinner with one of the independent adjusters, MG[Redacted]. The team dinner was scheduled for November 30, 2022, and would be held at MG's[Redacted] house. NG[Redacted] told the claimant about the team dinner approximately a month in advance – so the claimant could attend.

16. On November 30, 2022, the claimant left work at his home office in Berthoud, Colorado, and traveled to Lakewood, Colorado. Upon reaching Lakewood, the claimant checked into a hotel, the [Redacted, hereinafter FI], which was located across the street from the employer's corporate office. Claimant traveled to Lakewood so that he could spend time with his team, attend the November 30, 2022, team dinner at MG's[Redacted] house, complete year-end reviews, and attend the Employer's Christmas party on December 2, 2022, where annual bonuses would be announced.

17. From November 30, 2022, until he was finished with the Christmas party and reviews, the claimant intended to stay at the hotel in Lakewood and not return home. This was the same schedule he had the prior year when he also stayed at a hotel during year-end performance reviews, bonuses, and the Christmas party and because it allowed him to maximize his face-to-face time with his team. Thus, the claimant was required to be away from his home for an extended period to effectuate and promote the employer's business interests from November 30 through December 3, 2022.

18. Together with the claimant staying at the hotel, NG[Redacted], the VP that reports to the claimant, and NG's[Redacted] team, which included [Redacted, hereinafter CM], a Vice President, [Redacted, hereinafter AQ], [Redacted, hereinafter BR], and [Redacted, hereinafter JH] - claims managers, were also staying at the FI[Redacted] and arrived on November 30, 2022.

19. The employer has a Company Travel and Entertainment Policy that states hotels, rental cars, and ride share/taxis may all be used by the employees for business purposes and are reimbursable so long as the employee's direct supervisor approves the expense, and the expense is business related.

20. The employer covered Claimant's travel related expenses, including his hotel lodging on November 30, 2022, as they were business-related expenses. Any ride-sharing fees for travel to and from the team dinner at MG's[Redacted] house would also be covered and paid for by the employer as a business expense.

21. As found above, MG[Redacted] was one of the Employer's top revenue-producing independent adjustors. Several months prior, records show that NG[Redacted] had taken MG[Redacted] on an appreciation dinner as a top 5 billing adjuster.

22. As a top 5 billing adjustor for the employer, MG's[Redacted] continued work, as a 1099 contractor, with the employer was integral to maintaining and expanding the business. Moreover, MG's[Redacted] production and quality of work with for the employer had a direct and positive impact on NG[Redacted] and Claimant's year-end bonuses, which were based on reaching company created goals.

23. As stated by the claimant, MG[Redacted] was a very valuable resource to the Employer, stating, “MG’s[Redacted] production, from a quality and cycle/time response time is vital for, for the financial performance that helps us retain our client relations; also give the opportunity for future business…”

24. The claimant had previously spent time with MG[Redacted]. For example, the claimant and MG[Redacted] had shared time together while dealing with the aftermath of Hurricane Ian in October of that year, when they both had been dispatched to Florida.

25. NG[Redacted] had also co-hosted a team dinner at MG’s[Redacted] home the year prior (2021) before the employer’s Christmas party. The claimant explained that NG’s[Redacted] team, when they are all able to physically get-together, schedules team dinners and activities and that it was expected that, on the evening of November 30, 2021, that NG’s[Redacted] team would all attend the team dinner at MG’s[Redacted] home in Thornton, Colorado.

26. The claimant was going to the team dinner at MG’s[Redacted] home as part of his job duties as the Senior Vice President of Claim Operations. The claimant went to the team dinner to maintain his relationship with MG[Redacted] and to continue their business relationship. In other words, the purpose for the claimant attending the team dinner was business development, i.e., retention and recruiting efforts towards MG[Redacted].

27. On November 30, 2022, NG’s[Redacted] team took a rideshare, from the hotel to the team dinner at MG’s[Redacted] home. NG’s[Redacted] flight was delayed, so the claimant waited for him to arrive and rode in his rental car to MG’s[Redacted] home.

28. The cost for all transportation services (ride share and rental car) and hotel stays were reimbursed and covered by the employer as a business-related expense.

29. It was vital and critical for the business of the employer for the claimant and upper-level team members to be at the team dinner that was being co-hosted by NG[Redacted] and being held at MG’s[Redacted] house to maintain and foster the relationship with a top performing adjuster, MG[Redacted].

30. MG’s[Redacted] party was not a “holiday” or “Christmas” party for the employer and their employees. The employer’s Christmas party was scheduled for December 2, 2022. The team dinner at MG’s[Redacted] was a business dinner to further the interests of the employer.

31. The claimant, MG[Redacted], NG[Redacted], CM[Redacted], BR[Redacted], AQ[Redacted], and JH[Redacted] – all members of NG’s[Redacted] team – attended the team dinner. Additionally, [Redacted, hereinafter NB] and [Redacted, hereinafter JR], members of another team who had not all arrived yet, also joined the team dinner on November 30, 2022. Further, all employees in attendance at the team dinner were upper-level managers.

32. During the team dinner, business or “shop talk” occurred, as usual, and NG[Redacted] completed BR’s[Redacted] year-end performance review over the course of the evening. One of the objectives, during this facetime period, was to have performance/year-end reviews, in the time leading up to the Christmas party where individuals received their annual bonus.

33. During the team dinner, the claimant and MG[Redacted] shared discussions about their work experiences, stories, development of future clients, and take-aways from their work year. Thus, they conducted business.

34. During the team dinner, the claimant and MG[Redacted] drank some alcohol, which was common at a team dinner. The drinking was kept at an acceptable and professional level and rideshares, which were paid for by the employer, were important to get everyone back safely to the hotel.

35. It was getting late in the evening, and everyone had meetings the next day, so the team dinner was concluded. Rideshares were summoned. While waiting for their rideshares to arrive, the team gathered at the front of the house and in the garage. The first rideshare arrived and everyone but Claimant, NG[Redacted], NG's[Redacted] wife and BR[Redacted] left in it. While waiting for the second rideshare to arrive, MG[Redacted] asked the claimant if he wanted to go for a quick ride in his UTV/ATV - a Utility Task Vehicle or an All-Terrain Vehicle - that was parked in the garage. The evidence did not establish that there had been any discussions between the Claimant and MG[Redacted] about riding the UTV/ATV; that the claimant had an independent desire to go for a ride in the UTV/ATV; or that the claimant requested to go for a ride in it. It was just a spur of the moment request made by MG[Redacted] of the claimant.

36. Claimant felt obliged to say yes to the ride – since MG[Redacted] was a top producer – and one of the primary reasons the claimant was at the dinner was to foster the relationship with MG[Redacted]. As a result, Claimant said yes to MG's[Redacted] request.

37. Claimant's decision to say yes and take a short ride in MG's[Redacted] UTV/ATV was to further the interests of the business relationship. It was not to engage in a recreational activity for recreational purposes. It was part and parcel of attending the team dinner to maintain and foster a good working relationship with MG[Redacted] for the benefit of the Employer. In other words, it was not established that the claimant intended to engage in a separate recreational activity for his own personal benefit when he got into the UTV/ATV.

38. The claimant also stated that they were in a residential area. As a result, he thought that they would be taking a short ride around the block. At no time did he think MG[Redacted] planned to take him off roading. Moreover, at no time did he think MG[Redacted] would drive in an aggressive and careless manner. As a result, the claimant neither intended, nor agreed, to participate in a dangerous activity in which he would be going off road in a vehicle that would be driven in an aggressive and careless manner.

39. The UTV/ATV is similar to a dune buggy, with two seats, a roll cage, big tires, and half-doors. When he got in the vehicle, the claimant tried to put on the shoulder harness, but it was too small/narrow to fit over him. MG[Redacted] told the claimant he would not need to put on the harness because they were not going far.

40. MG[Redacted] proceeded down the street. But instead of staying on the neighborhood street, as the claimant assumed he would, MG[Redacted] turned onto

a walking path and drove across some railroad tracks and to a field at a middle school. Then, MG[Redacted] started to drive in circles, i.e., doing donuts or cookies. While MG[Redacted] was driving in circles, the tires caught on the frozen ground and the UTV/ATV rolled and the claimant was ejected from the vehicle.

41. The claimant was seriously injured and could not move his arms or legs. He told MG[Redacted] to call 911. The claimant was paralyzed from the neck down and taken via ambulance to North Suburban Hospital.

42. At the hospital, the claimant was diagnosed with C5-C6 fractures and fractures at the L2, L3 and L4 levels and a cervical spinal cord injury.

43. The claimant underwent emergency cervical surgery on December 1, 2022. He remained at North Suburban Hospital until December 12, 2022, when he was released to the care of Craig Hospital.

44. The claimant underwent a second cervical fusion surgery on December 23, 2022, at Swedish Hospital, which is connected to Craig Hospital. The claimant remained in-patient at Craig Hospital until February 8, 2023.

45. The claimant was severely impaired during that time but at some point, he managed to start working very part time from the hospital. He used his PTO to cover his lost time from December 1, 2023, until it was exhausted on February 5, 2023.

46. While the claimant was hospitalized at Craig Hospital, their social workers applied for SSDI benefits on his behalf. Benefits were approved in April 2023 to commence on May 9, 2023. The claimant testified that he still receives those benefits despite telling the Social Security Administration that he had returned to work.

47. The claimant also worked with [Redacted, hereinafter SA], HR representative for the Employer, to apply for short-term disability benefits until April 19, 2023, when the claimant returned to work.

48. The claimant remains employed by the Employer as the Senior Vice President of Claim Operations.

49. SA[Redacted] is the Divisional Chief, People and Culture Officer, for the Employer. She testified that she and Claimant are both senior level employees and peers. She credibly testified that she was familiar with Claimant's job duties, and they required that he go out with other employees. She stated that she was unaware of the co-sponsored team dinner at MG's[Redacted] residence until after the claimant was injured. But there is no indication that she had to authorize the team dinner.

50. SA[Redacted] also testified that she does not schedule nor normally know about team dinners/team events. She credibly testified that both NG[Redacted] and the claimant have autonomy in their positions to schedule team dinners, team building activities, and team meetings, etc. She explained that the expense for ride shares back and forth from team dinners to hotels would fall under the umbrella of approved business-related travel expenses. Thus, NG[Redacted] had the authority to plan and co-host the dinner, and the claimant had the authority to participate and attend the dinner, and both used that authority for the benefit of the employer for business purposes.

51. In 2021, the claimant's total gross pay was $296,570.03. This was comprised of a salary of $147,576.18, an annual bonus of $61,607, a discretionary bonus of $34,807, a moving bonus of $34,188.77, life insurance of $505.56, holiday pay of $5,123.36, and paid time off of $12,762.16.

52. In 2022, the claimant's total earnings were $263,879.50. This was comprised of a salary of $150,269.34, an annual bonus of $41,929, a discretionary bonus of $50,000, floating holiday pay of $657.76, life insurance of $527.24, holiday pay of $4,604.32, and paid time off of $15,891.84.

53. The claimant's 2022 bonuses were based on the performance of the claimant and the company over the entire year and then determined at the end of the year. There is a lack of credible evidence to establish that the claimant's bonuses accrued on a regular basis throughout the year and that the claimant could access and obtain a calculatable portion of his bonus at any time before the end of the year. Thus, the claimant's bonuses did not have a reasonable, present-day, cash equivalent value throughout the year. As a result, the claimant did not establish that he had access to his bonuses on a day-to-day basis or had an immediate expectation or interest in receiving the bonuses under appropriate or reasonable circumstances at any time throughout the year.

54. The claimant's testimony is found to be credible and persuasive and the ALJ has credited his testimony.

Ultimate Findings of Fact

55. The team building dinner at MG's[Redacted] home, co-sponsored by NG[Redacted], was within the guidelines of conducting the employer's business as described by the claimant, SA[Redacted], and contained in the employer's Company and Entertainment Policy. As a result, the business dinner at MG's[Redacted] house was a work event that was in furtherance of the employer's business. The team dinner was neither a recreational event nor a mere social event. Instead, the team dinner had a significant business purpose and was a business event.

56. There is a lack of credible evidence to establish that the claimant went to the team dinner for personal and social reasons – and not work reasons. The team dinner was not an independent holiday party that the claimant attended in order to just boost morale. It was a team dinner in which the primary purpose of the claimant's attendance was to further the business interests of the employer – which was to retain MG[Redacted] as an independent adjuster working for the employer.

57. Since the claimant was away from his home in Berthoud, Colorado, at the time of the team dinner, he was in travel status. Moreover, at the time of the team dinner, which was a business event, the claimant was furthering the business interests of the employer while also in travel status.

58. Because the purpose of the team dinner was to conduct business and further the interests of the employer, the team dinner was not a personal deviation from the claimant's employment obligations. The team dinner was a business obligation that furthered the interests of the employer.

59. While still at the team dinner, the claimant did not embark on a deviation from his employment when he went for a ride with MG[Redacted] in MG's[Redacted] UTV/ATV. After being asked by MG[Redacted] to go for a short ride, the claimant agreed to go for a short ride while waiting for his rideshare to arrive. The decision to accept the offer from MG[Redacted] was inextricably intertwined with the business purpose of the team dinner – which was to support the business relationship with MG[Redacted] – who was a top performing adjuster. This was a business dinner and event that the claimant attended to help ensure MG[Redacted] would continue contracting with the employer – instead of another adjusting company. Attending the event to further the interests of the employer was the claimant's job as the Vice President of Claims. In other words, the claimant was working to retain MG[Redacted] as an adjuster and/or recruit him for future work, which is one of his job duties.

60. The benefit to the employer of the claimant attending the team dinner was beyond the intangible value of team building and increased morale. Attending the team dinner to maintain the relationship with MG[Redacted] was required to further the business interests of the employer.

61. The claimant's decision to go for a ride with MG[Redacted] in his UTV/ATV was not for recreational purposes. There is a lack of credible evidence to establish that the claimant asked to go for a ride in the vehicle, that the claimant had any interest whatsoever in going for a ride in the vehicle, or that the claimant intended the ride to be recreational. Claimant merely acquiesced in MG's[Redacted] request to join him for a ride. As a result, the ride in the UTV/ATV was not a recreational activity, separate and distinct from the team dinner. Thus, the UTV/ATV was not a separate and distinct deviation from employment for recreational purposes or a distinct recreational activity.

62. The claimant's attendance at the team dinner and ride with MG[Redacted] is considered to be within the course, conduct, and scope of his job duties.

63. By going for a ride in the UTV/ATV, the claimant did not agree to engage in a dangerous activity that might be considered a deviation from his employment and sever the relationship between the team dinner and the work related nature of the dinner.

64. Due to his injury, the claimant required medical treatment and obtained medical treatment.

65. Due to his injury, the claimant missed more than three days from work. However, due to the various wages and benefits paid to the claimant after his work injury, the ALJ cannot determine whether temporary disability benefits are payable. Therefore, the issue of temporary disability benefits is reserved.

CONCLUSIONS OF LAW

Based on the above findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at

a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury on November 30, 2022.

To be compensable under the Workers' Compensation Act, an injury sustained by an employee must arise out of and in the course of the employee's employment. *See* § 8-41-301(1)(b), (c), C.R.S. 2022; *Price v. Indus. Claim Appeals Off.*, 919 P.2d 207 (Colo. 1996).

Travel Status – Recreational Activity- Deviation

A. Travel Status

An employee who is away from home on business remains under continuous workers' compensation coverage from the time of the departure until the employee returns home. *SkyWest Airlines v. Industrial Comm'n*, 487 P.3d 1267 (Colo. App. 2020); *Silver Eng'g Works, Inc. v. Simmons*, 180 Colo. 309, 505 P.2d 966 (1973). Under this rule of law, which is commonly referred to as "travel status," the risks associated with the necessities of eating, sleeping, and ministering to personal needs while away from home

are considered incidental to, and within the scope of, the traveling employee's employment. *Id*., *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). The essence of the travel status exception is that when the employer requires the Claimant to travel beyond a fixed location to perform his job duties, the risk of travel becomes the risk of the employment. *Briedenbach v. Black Diamond, Inc*., W.C. No. 4-761-479 (December 30, 2009).

In this case, the claimant lives in Berthoud Colorado, and the employer's office is in Lakewood, Colorado. As found, the claimant mainly works remotely out of his house in Berthoud. Since it was the end of the year, the claimant drove to Lakewood to spend time with his team to complete year-end reviews, attend the November 30, 2022, team dinner at MG's[Redacted] house, and attend the employer's Christmas party on December 2, 2022, where year-end bonuses would be given out to the claimant's team members.

In order to perform all these tasks, in the Metro Denver area, and with his team members, the claimant planned to drive to Lakewood on November 30, 2022, and check in at the FI[Redacted] Hotel, across the street from the Employer's office, in Lakewood, Colorado – as he did the year before – and stay until December 3, 2022, the day after the Christmas party.

On November 30, 2022, the claimant drove to Lakewood and checked in at the hotel so he could attend the team dinner that evening, perform reviews during the days following the team dinner, and then attend the employer's Christmas party. Thus, the claimant was required to be away from his home for an extended period of time to in furtherance of the employer's business. As a result, once the claimant left his home in Berthoud on November 30, 2022, he was in travel status. Thus, the ALJ finds and concludes that the claimant established by a preponderance of the evidence that he was in travel status of November 30, 2022, the day of the accident.

B. Recreational Activity

Under § 8-40-201(8), "employment" does not include "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." Section 8-40-301(1) similarly provides that the term "employee" excludes any person who, while participating in a recreational activity, is relieved of and is not performing any duties of employment.

In determining whether an event at which an employee was injured was a recreational activity, courts consider the factors first articulated in *City & County of Denver v. Lee*, 450 P.2d 352, 355 (1969). The factors consist of:

i. Whether the activity occurred during working hours;

ii. Whether the activity was on or off the employer's premises;

iii. Whether participation was required;

iv. Whether the employer initiated, organized, sponsored, or financially supported the event; and

v. Whether the employer derived benefit from the event.

See Dover Elevator Co. v. Indus. Claim Appeals Off., 961 P.2d 1141 (Colo. App. 1998) (applying *Lee* and affirming ALJ's determination that injury sustained while bowling during off-premises company party arranged by employer was compensable). In addition, other factors may be present which indicate the employer is sufficiently close to the activity to identify with it and make it incidental to employment. See *Price v. Indus. Claim Appeals Off.*, 919 P.2d 207 (Colo. 1996)

While the first two *Lee* factors are generally given greater weight, *see Price v. Indus. Claim Appeals Off., supra*, compensability may be established even where those factors suggest a recreational activity if there is a strong contrary showing upon application of the other factors. *Dover Elevator Co. v. Indus. Claim Appeals Off., supra; see White v. Indus. Claim Appeals Off.*, 8 P.3d 621 (Colo. App. 2000) (claimant's weightlifting was a recreational activity outside course and scope of his employment, even though it occurred during workday and on employer's premises, where other relevant factors supported ALJ's finding of recreational activity). *See Dynalectron Corp. v. Indus. Comm'n*, 660 P.2d 915 (Colo. App. 1982) (injuries compensable where, although they occurred following off premises dinner held after normal working hours, record showed claimant attended at implied direction of employer and employer received direct benefit from conduct of business at dinner).

i. Whether Team Dinner was a Recreational Activity

First, in this case, the team dinner did not occur during traditional working hours. Second, the activity was not on the employer's premises. Third, while attendance was not mandatory, participation and attendance at the team dinner was required for the claimant to perform the functions of his job. The claimant was Senior Vice President of Claims. In his position, the claimant was required retain adjusters—the bloodline of the employer's business. In order to retain MG[Redacted], a top performing adjuster, the claimant's presence was required at the team dinner. Fourth, the employer initiated the event, through Vice President of Claims, NG[Redacted], co-hosting the event at MG's[Redacted] home and the claimant's attendance at the event. As found, MG[Redacted] and the claimant had the authority to initiate and attend team dinners for the benefit of the employer. Fifth, the employer derived a direct benefit through the claimant's attendance at the event by promoting the business relationship between the employer and MG[Redacted]. In essence, the claimant's attendance at the team dinner is the same as a salesperson attempting to retain a current customer or obtain the business of a new customer. In this case, the claimant was at the team dinner to retain, or recruit on an ongoing basis, MG[Redacted]. Thus, the primary reason the claimant attended the team dinner was to further the business relationship with MG[Redacted] for the benefit of the employer.

Thus, the ALJ finds and concludes that the benefit to the employer is a significant factor in determining whether the team dinner was a recreational activity. In the end, the ALJ finds and concludes that the team dinner was not a recreational activity. The ALJ finds and concludes that the claimant established that his attendance at the team dinner was not a recreational activity, but a business activity to further the interests of the employer. The claimant has therefore established by a preponderance of the evidence that he was within the course and scope of his employment while at the team dinner.

ii. Whether the claimant's agreement to ride in the UTV/ATV was a deviation from his employment.

The Colorado courts have held that if the traveling employee makes a distinct departure on a personal errand or deviation, then the workers' compensation coverage will cease. *Pat's Power Tongs, Inc. v. Miller*, 172 Colo. 541, 474 P.2d 613 (1970); *Wild W. Radio v. Indus. Claim Appeals Off.*, 905 P.2d 6 (Colo. App. 1995); *Phillips Contracting v. Hirst*, 905 P.2d 9 (Colo. App. 1995). When a personal deviation is asserted, the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship. *See Phillips, supra.* Whether an injured employee was in travel status or on a personal deviation at the time of his injury is a question of fact the administrative law judge decides. Although the burden of proof is on the employer to show that the employee made a distinct departure from the scope of employment while on travel status, the burden of proof is on the claimant to show a return to the course and scope of employment. *SkyWest Airlines v. Indus. Claim Appeals Off. of Colo., 487 P.3d 1267, 1269.*

In this case, and as found, the claimant was at the team dinner and getting ready to leave when MG[Redacted] asked him whether he wanted to go for a short ride with him in his UTV/ATV. It was not established that there had been a prior discussion between the claimant and MG[Redacted], or a prior plan, to ride the UTV/ATV. Nor was it established that Claimant had an independent desire to go for a ride in the UTV/ATV or that the claimant requested to go for a ride in it. It was just a spur of the moment request made by MG[Redacted], and the claimant said yes, because he felt obligated to say yes. The claimant felt obligated to say yes because the primary reason the claimant was at the team dinner was to foster the relationship with MG[Redacted] for the benefit of the business.

As stated above, the claimant's decision to say yes and take a short ride in MG's[Redacted] UTV/ATV was to further the interests of the business relationship. It was not for the claimant to intentionally engage in a recreational activity for recreational purposes. It was part and parcel of attending the team dinner which was to maintain and foster a good working relationship with MG[Redacted] for the benefit of the employer. In other words, the claimant did not intend to engage in a separate recreational activity for his own personal benefit with MG[Redacted] when he got into the UTV/ATV. The request made by MG[Redacted], to go for a ride, was an extension of the team dinner and thereby inextricably intertwined with, or part of, the team dinner. It was not a deviation from the team dinner.

Moreover, the claimant and MG[Redacted] were in a residential area. As a result, the claimant thought that they would be taking a short ride around the block. At no time did he think MG[Redacted] would take him off roading. Moreover, at no time did he think MG[Redacted] would drive in an aggressive and careless manner. As a result, the claimant neither intended, nor agreed, to participate in a dangerous activity in which he would be going off-road in a vehicle that would be driven in an aggressive and careless manner.

Respondents contend that the facts here are similar to *Silver Eng'g Works, Inc. v. Simmons*, 505 P.2d 966 (Colo. 1973). In *Simmons*, the decedent was on travel status on behalf of his employer on a trip to Mexico. The decedent was in Mexico to assist and be trained in the operation of certain machinery. During a period when the plant was shut down for the Easter weekend, the decedent, and several other employees, drove to a remote beach to swim and fish. The decedent went swimming and met his death by drowning. The Court stated that:

> The traveling employee was capable of departing on a personal errand as any other type of employee, thereby losing the right to compensation benefits from accidents occurring during such departures. The Claimant had stepped aside from his employment and was attending to a matter of personal recreation, which was beyond that necessary to the normal ministration to needs of an employee on a business trip.

Simmons, supra.

The Court also noted that:

> Such an employee is continuous employment, day and night. This does not mean that he cannot step aside from his employment for personal reasons, just as might an ordinary employee…He might rob a bank; he might attend a dance; or he might engage in other activities equally conceivable for his own pleasure and gratification, and ordinarily, none of these acts would be beneficial to his employment." *Id*.

The ALJ does not find *Simmons* to be persuasive and finds it distinguishable from this case. In *Simmons*, the decedent went with co-workers to go swimming and fishing for personal reasons. There was no indication the decedent was pursuing a business purpose by going swimming or fishing. In this case, the claimant was at a business dinner and pursuing business with the person with whom he went with on the UTV/ATV. Thus, riding on the UTV/ATV was inextricably intertwined with the team dinner that was for business purposes.

The respondents seem to contend that any activity that results in an injury, which in isolation, could be considered a recreational activity, or deviation from employment, is not work related. For example, the respondents seem to contend that if the claimant was injured while fishing or hunting, regardless of the connection with a work-related purpose, such activity could not result in a compensable work injury. Such reasoning, however, has been rejected in numerous jurisdictions. Numerous cases have found that injuries while hunting or fishing are compensable when the activity occurs in furtherance of the employer's business.

For example, when an employee is authorized to entertain customers, the employee is considered in the course and scope of employment when injured during a hunting or fishing trip with customers. *See Bechen v. Am. Guar. & Liab. Ins.,* 298 F. Supp. 2d 806 (W.D. Wis. 2003) (employee injured during bear hunting and fishing trip with a customer deemed work related.) As the *Bechen* court aptly noted, sometimes play is work and work is play. *See Becham at* 811. *See also Lewis v. Lowe & Campbell Athletic Goods Co*., 247 S.W.2d 800 (Mo. 1952) (athletic goods salesperson killed in highway

accident while on a hunting trip with customers. The court held that the injury was compensable. The employer recommended such weekend social functions with the customers.); *Employers Mut. Liab. Ins. Co. of Wisc. v. Sanderfer*, 382 S.W.2d 144 (Tex. Ct. App. 1964) (the claimant was injured while hunting. He was trying to promote good-will for his company by associating with potential customers who were at the hunting camp. His employer had suggested and approved this trip. Compensation was awarded.); *Continental Cas. Co. v. Industrial Comm'n*, 132 N.W.2d 584 (1964) (the decedent was on a trip with another employee to acquaint the decedent with the operations of the business. They also went on a hunting trip with a customer. On the return trip, the decedent was killed in an auto accident. The court held that the hunting trip was in the nature of entertaining customers and part of the business. The claim was found compensable.)

The ALJ is cognizant that there are times when an employee will state that an activity was pursued for business purposes, but the facts and circumstances do not support such a finding. For example, if an employee goes hunting with others with whom he does business, merely to have companions, and not to entertain for business purposes, the injury is not work related. *See Aetna Cas. & Sur. Co. v. Indus. Com.*, 255 P.2d 961, 962 (Colo. 1953).

In this case, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that his injury occurred within the course and scope of employment and is compensable. It was not established that claimant was injured during a recreational activity or deviation from his employment.

II. Whether the claimant has proven, by a preponderance of the evidence, that he is entitled to medical benefits.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Off.*, 53 P.3d 1192 (Colo. App. 2002).

In this case, the claimant suffered a serious accident on November 30, 2022. There is no dispute that the accident caused the need for medical treatment. As a result, the claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment to cure and relieve him from the effects of his work injury.

III. Whether the claimant has proven, by a preponderance of the evidence, that he is entitled to temporary disability benefits.

To establish an entitlement to temporary disability benefits, the claimant must prove that the industrial injury caused a disability, that he left work as a result of the disability, that he was disabled for more than three regular workdays, and that he suffered an actual wage loss. Section 8-42-103(1)(b), C.R.S.; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The period of temporary disability is measured from the day after the employee leaves work as a result of the injury. *See Ralston Purina-Keystone v. Lowry*, 821 P.2d 910 (Colo. App. 1991).

Temporary disability benefits are designed to replace the claimant's actual lost wages during the period he is recovering from the industrial injury. *Broadmoor Hotel v. Industrial Claim Appeals Off.*, 939 P.2d 460 (Colo. App. 1996); *PDM Molding, Inc. v. Stanberg, supra; Mesa Manor v. Indus. Claim Appeals Off.*, 881 P.2d 443 (Colo. App. 1994). We agree with the ALJ that a claimant is not considered "disabled" for purposes of recovering temporary disability benefits if the claimant does not sustain a wage loss from his injury. *See Atencio v. JBQ Allen, Inc*. W.C. No. 4-350-555 (May 19, 2000); *See Matus v. David Matus* W.C. No. 4-740-062 (July 13, 2010)(claimant not entitled to temporary disability benefits where the claimant's business and financial records supported findings that the claimant did not suffer any actual wage loss) ; *Hendricks v. Keebler Co., W.C. No. 4-373-392 (June 11, 1999)* (temporary disability benefits precluded during the time the claimant performed modified duty and earned pre-injury wage.)

Here, the claimant's injury was disabling and caused him to miss more than three days from work. But the claimant testified that the employer continued to pay his wages after his work injury. The claimant also testified that he received various wage replacement benefits, such as short-term disability benefits and social security disability benefits. Moreover, the issue of offsets is unclear.

As a result, based on the current record, the ALJ cannot determine whether the claimant suffered a wage loss and is entitled to temporary disability benefits. Therefore, the ALJ will not rule on the issue of temporary disability benefits at this time but will reserve the matter for future determination.

IV. What is the claimant's average weekly wage?

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by Claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*.

However, section 8-42-102(2), C.R.S. requires the ALJ to base Claimant's AWW on his earnings at the time of the injury. In order for a particular payment to be considered "wages" it must have a "reasonable, present-day, cash equivalent value," and Claimant must have access to the benefit on a day-to-day basis, or an immediate expectation of interest in receiving the benefit under appropriate and reasonable circumstances. *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*; 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3); C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine Claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity.

Ebersbach v. United Food & Commercial Workers Local No. 7, W.C. No. 4-240-475 (ICAO, May 7; 2007).

Section 8-40-201(19)(a), C.R.S., defines wage as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of injury." Section 8-40-201(19)(b), C.R.S., provides that "wages" shall include the value of certain fringe benefits including health insurance, and the reasonable value of board, rent, housing, and lodging. However, it also states that wages, "shall not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19).

In *Meeker v. Provenant Health Partners*, 929 P.2d 26, the Colorado Court of Appeals developed a test for whether an employer-paid benefit is a wage or enumerated fringe benefit. *Meeker* held that an employer-paid benefit constitutes wages if it has a "reasonable, present-day, cash equivalent value," and the employee has access to the benefit on a "reasonable day-to-day basis," or has "an immediate expectation of interest in receiving the benefit under appropriate, reasonable circumstances." *Id*.

In *Dan Yex v. ABC Supply Company and Ace/ESIS Insurance*, W.C. No. 4-910-373 (May 16, 2014), ICAP relied on the *Meeker* case, and its progeny *Orrell v. Coors Porcelain*, WC No. 4-251-934 (May 22, 1997), and determined that an employee's bonus earned during the employer's busy season was properly excluded from the AWW. The Claimant in *Yex* had injured his back in December 2012 and asserted he received a bonus in April 2012. The ALJ found the employees were awarded bonuses if their branch showed a profit in the previous calendar year. Some years resulted in a bonus and others did not. Under *Meeker*, the ALJ reasoned that the bonus did not have a present-day cash equivalent value, Claimant did not have access to the proceeds of the bonus on a day-to-day basis and did not have an immediate expectation of receiving the bonus. Thus, the bonus was appropriately identified as a fringe benefit not included in the calculation of wages.

As found, the claimant's bonuses were paid at the end of the year based on his performance and the performance of the company. The claimant did not establish that he had access to a specific and calculatable portion of his bonus on a day-to-day basis. The claimant also did not established that he had an immediate expectation of receiving the bonuses under appropriate or reasonable circumstances, at any time of the year.

As a result, the ALJ determines that most reasonable manner in which to calculate the claimant's AWW under the circumstances is to take his annual salary for 2022 of $150,269.34 and divide it by 52 weeks. This results in an AWW of $2,889.80. [1]

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

---

[1] Whether any other payment set forth in this order or the claimant's wage records should be included in Claimant's AWW is reserved since the record was not fully developed regarding those payments. For example, the parties did not develop the record as to whether the claimant's holiday pay, PTO, or the cost of the claimant's life insurance should be included in his AWW. The only benefit, other than his salary, that was developed to some extent, was his bonus pay.

1. Claimant suffered a compensable injury on November 30, 2022.
2. Respondents shall pay for the claimant's reasonable, necessary, and related medical treatment to cure and relieve him from the effects of his work injury.
3. The issue of temporary disability benefits is reserved for future determination.
4. The Claimant's average weekly wage is $2,889.80, subject to modification for other payments not addressed in this order.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-245-164-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits for the period of April 23, 2023 to June 12, 2023.

2. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant worked as an assistant manager for Employer's pawn shop from April 13, 2022 until June 24, 2023. Claimant testified that on February 15, 2023, he went into Employer's warehouse where he tripped and fell on his left side, sustaining a rib fracture. Claimant testified he went to the UC Health emergency department where he was treated and released. Claimant returned to work that day, without restrictions. No medical records from UC Health were offered or admitted into evidence.

2. On February 16, 2023, Claimant's supervisor [Redacted, hereinafter AR], completed a First Report of Injury indicating claimant tripped and fell on his ribs, and received treatment at an emergency room on that date. A body diagram on the First Report of Injury circled only Claimant's left chest area. (Ex. A).

3. Claimant testified that approximately two months later, on the morning of April 22, 2023, he began experiencing numbness from his elbows to his fingers in both arms while at home. Claimant testified he went to the UC Health emergency department, where he underwent an MRI. Claimant further testified he underwent emergency surgery at UC Health on April 22, 2023, on his neck for a C4-5 disc injury. No medical records related to any examination, treatment or evaluation of Claimant's cervical injury were offered or admitted into evidence.

4. Claimant testified that he was off work from April 23, 2023 until returning on June 12, 2023, after recovering from his surgery.

5. Claimant attributes his need for the April 22, 2023 surgery to his work-related fall on February 15, 2023. He testified that he had no neck trauma after February 15, 2023 which would have caused his neck symptoms. Claimant also asserts that his time off from work from April 23, 2023 to June 12, 2023 was the result of his February 15, 2023 injury. In support of his contention, Claimant submitted a May 1, 2023 work excuse from Daniel Norton, PA-C, of Salud Family Health Centers, which requested that Claimant be excused from work from May 24, 2023 to June 18, 2023, due to "recent neck surgery." (Ex. 1). The Salud work-excuse form does not mention a work-related injury.

6. With the exception of the Salud work-excuse form, no medical records of any kind were offered or admitted into evidence.

7. On July 19, 2023, Claimant submitted a Worker's Claim for Compensation which alleged that, in addition to fractured ribs, he was "diagnosed with C5-6 herniated disc which doctors stated related to DOI injury." (Ex. F).

8. On August 11, 2023, Respondents filed a General Admission of Liability admitting for medical benefits only. (Ex. 2).

9. On November 7, 2023, Respondents obtained a report from orthopedic surgeon Quin-Min Chen, M.D., regarding the relatedness of Claimant's cervical surgery to his February 15, 2023 work accident. Dr. Chen was not provided medical records, other than the May 1, 2023 work excuse, and information regarding medications from April 23 to April 26, 2023. Dr. Chen indicated that it would be "highly doubtful that the claimant will require neck surgery for this particular claim, but again, I would know more if I had access to MRI reports and some additional records to detail the thought process as to why the claimant required surgery." (Ex. D)

10. At the time of his injury, Claimant earned $18.25 per hour, plus a commission on sales. Claimant testified that he earned an average of $700 per week in wages, plus $480 per week in commissions. Claimant's testimony regarding his wages earned is not supported by the wage records in evidence.

11. Claimant submitted no wage records reflecting his earnings prior to date of his injury. Claimant's wage records consist of reports of wages from June 4, 2023 to July 1, 2023, and reports of commissions earned from April 1, 2023 to June 30, 2023. Claimant's wage report (Ex. E, p. 13) shows Claimant's "year-to-date" commissions totaled $4,774.95 as of June 30, 2023. Excluding the period of April 23, 2023 through June 12, 2023 - the time Claimant did not work while recovering from surgery – and assuming Claimant had no other time off, Claimant worked a total of 17 3/7 weeks from January 1, 2023 to June 23, 2023. Based on Claimant's submitted wage records, commissions averaged $273.11 per week for the above-period.

12. Respondents submitted a document purporting to set out Claimant's earnings from November 30, 2022 to January 28, 2023. (Ex. E). Exhibit E shows Claimant received commissions and wages totaling $11,008.05 for this 13-week period, including commissions totaling $1,260.35. (Ex. E). Based on Respondents' Exhibit E, Claimant's average weekly wage was calculated at $846.77. The ALJ does not find Respondents' Exhibit E reliable. No credible evidence was admitted indicating the source of the document, or how the information was compiled. Moreover, the document lists four weeks Claimant worked in excess of 40 hours, but the "gross payment" on the document is calculated based on an hourly wage of $18.22, without the inclusion of overtime wages.

13. The ALJ finds credible Claimant's testimony that he earned $700 per week in wages prior to his injury. Based on the available evidence, the ALJ finds that Claimant earned $273.11 per week in commissions at the time of this injury. Claimant's average weekly wage at the time of injury was $973.11.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Temporary Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD

benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Claimant has failed to establish an entitlement to temporary total disability benefits related to his cervical surgery on April 22, 2023. Claimant was off work from April 23, 2023 to June 12, 2023 to recover from cervical surgery. Claimant has failed to establish that he sustained a cervical injury or that the need for surgery was related to his February 15, 2023 work-injury. Because no medical records were offered or admitted into evidence, the ALJ is unable to determine the nature of Claimant’s cervical injury, or the surgery performed. The lack of medical documentation prevents the ALJ from determining whether Claimant’s treating physicians determined that Claimant’s need for surgery was the result of an injury that occurred in the course of his employment, or due to a condition unrelated to his February 15, 2023 rib injury. Although a compensability determination does not require medical evidence, Claimant offered no cogent or credible explanation as to how his February injury caused a cervical injury that did not manifest until April 22, 2023. The mere fact that Claimant’s neck symptoms began two months after his work injury is insufficient to establish a causal relationship between the two events. Because Claimant has failed to establish that the need for cervical surgery was related to his work injury, he has failed to meet his burden of proving entitlement to temporary total disability benefits for that his loss of earnings from April 23, 2023 to June 12, 2023.

Average Weekly Wage

Section 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's average weekly wage (AWW) based on the earnings at the time of injury as measured by the Claimant’s monthly, weekly, daily, hourly, or other earnings. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called “discretionary exception”. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra; *Avalanche Indus. v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where the Claimant’s AWW at the time of injury is not a fair approximation of Claimant’s later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*.

For the reasons set forth in Findings of Fact 10-13, the ALJ concludes that a fair approximation of Claimant's average weekly wage as of February 15, 2023 was $973.11.

ORDER

It is therefore ordered that:

1. Claimant request for temporary total disability benefits is denied and dismissed.

2. Claimant's average weekly wage as of February 15, 2023 was $973.11.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 26, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a low back and cervical spine injury in the course and scope of his employment on January 31, 2023.

IF CLAIMANT SUSTAINED A WORK RELATED INJURY, THEN:

II. Whether Claimant proved by a preponderance of the evidence that Claimant was entitled to authorized, reasonably necessary medical benefits that were causally related to the January 31, 2023 work injury.

III. Whether Claimant proved by a preponderance of the evidence that selection of a physician passed to Claimant, who selected Bradley R. Hakim, D.O. at Spine One, Spine & Sport Medical Center.

IV. Whether Claimant proved by a preponderance of the evidence that the cervical surgeries performed by Michael Rauzzino, M.D. on May 25 and 26, 2023 were reasonable, necessary, and related to the January 31, 2023 work injury.

V. Whether Claimant proved by a preponderance of the evidence what his average weekly wage ("AWW") was at the time of the work injury.

VI. Whether Claimant proved by a preponderance of the evidence entitlement to temporary partial disability ("TPD") benefits from February 9, 2023 ongoing until terminated by law.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on March 31, 2023 on the issues of compensability, medical benefits, authorized provider, AWW, and TTD/TPD benefits from February 9, 2023 ongoing. Respondents filed a Response to "Claimant's March 31, 2023 Application for Hearing" on May 1, 2023. No additional issues were listed.

Claimant testified on his own behalf in this matter. Respondents tendered the deposition testimonies of N. Neil Brown, M.D. and Michael Rauzzino, M.D., under Exhibits I and J, respectively.

Respondents indicated that Employer's witness and Claimant's supervisor, who was under subpoena, was unavailable to testify due to a family emergency, and this ALJ authorized the parties to take a post hearing deposition of the witness, which later took place on December 1, 2023. The parties submitted position statements on December 15, 2023.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 60 years old at the time of hearing. Claimant was a service manager for Employer since May 25, 2022, having been hired on November 21, 2019 in a different position. As a service manager, Claimant was required to meet with customers, write up proposals, occasionally move parts and return parts that were ordered, but not needed, for Employer's business of repairing cars. Claimant would generally work a 44 hour week, and in addition to hourly pay of approximately $26.23, was provided with "spiffs" or additional compensation, which were monetary compensation when certain thresholds were reached.

2. Claimant had an extensive pre-injury history of medical treatment to his cervical and lumbar spine. Claimant credibly testified that he had a previous neck surgery at C6-C7 in 2005, and at C5-C7 in 2015. Claimant testified that he had a right-sided lumbar treatment at L4-S1 in 2018.

3. On May 17, 2018 Claimant reported to Lydia Prusinowski, PA-C at the Medical Center of Aurora emergency room (ER), that he had been reaching for a coffee pot and had an acute flare of low back pain. The next records is from September 5, 2021 when Claimant presented to the same ER after he was walking down the stairs and missed the last couple steps, falling and striking his head on a concrete wall, reporting neck pain with no acute findings and a concussion diagnosis, and a right ankle pain with soft tissue swelling and an avulsion fracture of the right ankle. He had full range of motion of the neck but there was no mention of symptoms of the lumbar spine.

4. Claimant was attended by Dr. Bradley Duhon, a neurosurgeon at Front Range Spine, on October 20, 2021 primarily for his lumbar radicular symptoms. Claimant reported bilateral lower extremity radicular pain in a similar distribution in both legs, primarily down the lateral aspect of the thigh, which occasionally traveled down the anterior/posterior aspect of the thigh as well. Claimant had diminished sensation to light touch in the lateral aspect of the left calf and left thigh. Dr. Duhon personally reviewed the MRI of the lumbar spine, which showed surgical decompression and laminotomy defect with a slight central disc protrusion but otherwise he stated that they showed "absolutely no ongoing stenosis at the L4-S1 levels." He ordered a new MRI though and an EMG. There was no mention of the cervical spine during this visit.

5. Claimant had an MRI of the cervical spine performed on March 18, 2020 which noted that showed no herniation or foraminal stenosis of C2-C4 and C7-T1. It showed a tiny osteophyte complex with mild foraminal stenosis with unchanged degenerative disc at C4-5. It showed the spinal fusion at the C5-7 levels with bilateral facet arthrosis which was unchanged. Dr. Robert Leibold specifically noted no changes since March 14, 2019. An MRI of the lumbar spine was performed on November 4, 2021 that showed multiple Schmorl's nodes, small protrusions from T11-12 to L5-S1, mild left lateral recess narrowing at L2-3 and no recurrent protrusions or central canal narrowing at L4-5 or L5-S1. Another MRI was performed on November 22, 2021 which noted a broad based protrusion at the C3-4 and C4-5 levels otherwise no significant issues other than multilevel facet joint arthritis.

6. Although the medical records have many diagnostic tests performed after Claimant's cervical surgery in 2015 and lumbar surgery in 2018, no treatment records were produced after 2018 and prior to Claimant's fall on January 31, 2023 other than the September 5, 2021 fall where Claimant hit his head and the evaluation on October 2021 for the lumbar spine.

7. Claimant was seen on September 9, 2022 at the Belmar emergency Department after he fell against a wall, hitting his head. They took a CT of the head and cervical spine, which showed no acute lesion, and the ACDF[1] C5-C7 without complete osseous fusion across the disc spaces or pseudarthrosis.

8. Claimant credibly testified that he had no physical limitations imposed upon him following this date and was able to carry out his job without difficulties, despite having the occasional headache, neck ache or back ache, which he was able to handle.

9. Claimant credibly testified that on January 31, 2023, he parked in a handicapped spot because the other spots in Employer's parking lot and the [Redacted, hereinafter CA] parking lot adjacent to Employer's premises were all full, and Claimant had a valid handicapped tag from a prior disability. While exiting his vehicle, Claimant slipped on ice, falling, hitting his head, and landing on his low back. A customer approached him, Claimant was able to pick himself up off the ground and entered the building.

10. Claimant immediately reported his injury to his manager, who was his supervisor (hereinafter Supervisor). Claimant was hunched over, holding his right arm and explained what had happened including that he had a large bump on his head and asked her to look at it, which she did not. Claimant was dazed and a little light headed. She pulled out a bottle of roll-on cream and instructed him to put some cream on the areas of pain and return to work. Supervisor confirmed most of this testimony.

11. Claimant was not provided with a list of medical providers when he reported his injury. As his condition worsened, he chose to treat at Spine One, having seen a commercial on television. Supervisor confirmed his testimony. Claimant testified that he had never treated with Spine One prior to the accident on January 31, 2023.

12. Supervisor confirmed that she did not become aware of the procedure to provide a list of four medical providers until another employee was injured and obtained them from [Redacted, hereinafter MR]. She confirmed that Claimant reported the injury and accident to her on the day that it happened but that she did not report the injury to MR[Redacted] until February 14 or February 15, 2023.

13. On February 9, 2023, Claimant reported to Spine One, Spine & Sport Medical Center where he was evaluated by Bradley R. Hakim, D.O., complaining of neck pain following "1/31/2023 slipped on ice walking in to work." Claimant was complaining of stabbing, aching, burning, tingling, numbness. Dr. Hakim took a history of present illness:

> The patient is a 59-year-old male with PMHx C5-7 ACDF, L4-S1 decompressive surgery who presents to the clinic today with neck, right upper extremity, mid back,

[1] ACDF refers to an anterior cervical discectomy and fusion.

low back and bilateral lower extremity pain which began after a slip and fall on 1/31/2023. The patient slipped on ice while walking work.

Neck and right upper extremity pain: The patient describes his pain as 7-10 out of 10 in severity. 85% of the pain is in the neck and 50% and is his right upper extremity. He describes aching to sharp pain in the neck, burning pain with paresthesias in the upper extremity. He does experience subjective extremity weakness on the right. His pain radiates in roughly a C6-8 distribution. Right rotation particularly worsens his symptoms. His sleep is affected. Valsalva is positive. He denies bowel bladder changes. He has a history of C5-7 ACDF in 2015, he did have C6-7 ACDF in 2011 prior to that which was extended. He has not recently tried physical therapy or chiropractic care and his *pain was controlled before the slip and fall*. He does use Advil and CBD cream.

Mid back pain: The patient describes his mid back pain is about 4 out of 10 in severity. This is beneath the scapula roughly around T9. He denies any anterior radiating pain here

Low back and bilateral lower extremity pain: The patient describes his low back pain as 4-6 out of 10 in severity**.** This is in the low back and extends on the left lower extremity in roughly an L5 distribution, and on the right side to the groin. His pain is constant, aching to sharp in quality. There is no position of relief. His sleep is affected. Valsalva is positive. He does have a history of L4-S1 decompressive surgery in 2018. (*Emphasis added.*)

Dr. Hakim provided Claimant a note stating Claimant was to be off work for the following two weeks and "beginning today and ending on 2/23/23." He diagnosed cervical radiculitis, thoracic spondylosis without myelopathy and lumbar radiculitis. He noted that Claimant's pain and symptoms significantly worsened and he began to have radicular type pain after the slip and fall on ice on January 31, 2023. He ordered x-rays, diagnostic imaging, and medications as medically necessary and related to the work injury.

14. Claimant provided the release from work from Spine One to Supervisor after his February 9, 2023 visit. Claimant was not provided a doctor's list from Respondent Employer.

15. On February 14, 2023 there was a MR[Redacted] Triage Incident Report. The initial contact stated Claimant was not present during the call. Supervisor alleged that about 15 days prior to the call Claimant was getting out of his truck, when he slipped on ice and fell. Claimant sought treatment at his primary care doctor and was restricted from work until February 23, 2023. Claimant then called in to complete the report, reporting he had hit his head on the ground and needed further treatment. Claimant reported he had worsening tingling in the lower back, neck, fingers and toes. The nurse advised Claimant to contact the claim adjuster about his follow up care needs.

16. The follow up MR[Redacted] report stated that Claimant was present when the call was made. It reported that Employer was notified of the January 31, 2023 incident on the day of the accident. It specified that Claimant injured his bilateral neck, that there was a referral to a provider that was not in the Employer's designated network. It specifically noted "EE states he prefers to seek treatment with the initial treating provider," and that Claimant would advise them of the physician utilized. No provider is listed on the form.

17. Respondent Employer filed a "First Report of Injury or Illness" on February 15, 2023, indicating that Claimant had notified Employer on January 31, 2023 of Claimant's multiple body injuries from falling after getting out of his truck. It stated that:

> EE not present at time of call. *Supr alleges about 15 days ago EE was getting out of his truck,* not clocked in when EE slipped on ice and fell. *EE sought treatment at his primary care doctor at Spine Doctor* 8500 Pine One 80124, 303-367-2225[2] and EE is restricted from work until 2/23/23. Supr stated that EE had previous injuries to his head. Complete demographic info unavailable at time of call. Caller agrees to have EE call MR[Redacted] Injury Triage for completion of report. Fall or Slip Injury Fall/Slip on Ice or Snow (*Emphasis added.*)

Supervisor completed the FROI noting Claimant was being seen by Spine Doctor in Lone Tree and this ALJ infers that it was "Spine One."

18. On February 16, 2023, Claimant was evaluated by William E. Ballas, PA-C at Spine One. On exam he observed, tenderness to palpation (TTP) of the cervical spine facet joints, increased with facet loading, positive Spurling's, normal strength, an absent deep tendon reflex at the biceps and triceps bilaterally. He was TTP over the thoracic facet joints, especially over the T6-10. Claimant was TTP over the lumbar facet joints, had increased pain with lumbar flexion, EHL,[3] positive straight leg test on the left greater than the right. PA Ballas noted that Claimant had undergone imaging of his cervical spine on February 14, 2023, which Dr. Malisa Lester of Park Meadows Imaging, interpreted as follows:

> C2-3*: Mild disc bulge with foraminal extension, eccentric to the left*. Mild left uncovertebral arthrosis with moderate left and minimal right facet arthrosis. Moderate to severe left foraminal stenosis *with encroachment of the let C3 nerve root*. No significant central or right foraminal stenosis.
>
> C3-4*: Mild to moderate disc bulge with foraminal extension***,** eccentric to the right. Mild to moderate (right greater than left) uncovertebral arthrosis with moderate left facet arthrosis as well as a small right facet joint effusion. Right-sided extra-spinal synovial cyst along the posterior facet joint. Mild ligamentous hypertrophy. Flattening of the ventral thecal sac, without significant central stenosis. Moderate to severe (right greater than left) biforaminal stenosis *with encroachment of the bilateral C4 nerve roots***.**
>
> C4-5: *Mild to moderate disc bulge with foraminal extension, eccentric to the left.* Mild (left greater than right) uncovertebral arthrosis with mild to moderate (left slightly greater than right) bilateral facet arthrosis and trace left facet joint effusion. Mild ligamentous hypertrophy. Flattening of the ventral thecal sac without significant central stenosis. Moderate left and mild to moderate right foraminal stenosis *with encroachment of the bilateral C5 nerve roots* (left greater than right). (*Emphasis Added*.)

PA Ballas' impressions included post-surgical changes, moderate to severe C2-3 and C3-4 biforaminal stenosis with encroachment of the C3 and C4 nerve root, advanced facet

---

[2] Spine One's correct address was Spine One, 8500 Park Meadows Drive, Suite 200, Lone Tree, CO 80124; (P) 303-367-2225.

[3] EHL may refer to the Extensor Hallucis Longus muscle, which typically indicates pain radiating into the first metatarsal and great toe.

arthrosis, as well as moderate left and mild right foraminal stenosis of the C4-5 with bilateral encroachment of the C5 nerve root. He continued to assess cervical and lumbar radiculopathy and thoracic spondylosis. He ordered an epidural steroid injection of the cervical spine, and thoracic spine as well as medial branch block for the lumbar spine. PA Ballas provided a work restrictions of no lifting, pushing, pulling, twisting, bending, carrying, or climbing with any weight over 10 lbs.

19. Claimant was evaluated at the emergency room on February 22, 2023 by Dr. Kimberly Moreland with concerns of numbness and tingling in his face. A head and neck CT revealed no evidence of vascular dissection, thrombosis, aneurysm, intracranial hemorrhage, intracranial mass lesion and no other acute findings on exam.

20. On February 23, 2023 PA Ballas reported that Claimant had a prior neck surgery and some degenerative changes but he was doing well until the January 31, 2023 fall, causing some disc protrusions, pain and symptoms. On February 27, 2023 he recommended Claimant continue to be off work through mid-March as Claimant's pain continued to be high and stroke had been ruled out from a visit to the emergency room and exam continued to be consistent with prior evaluations. PA Ballas also referred Claimant for bilateral cervical MBB for diagnostic facet mediated pain and to be evaluated by a Neuro/Spine surgeon.

21. On February 24, 2023, Claimant filed with the State of Colorado a Worker's Claim for Compensation alleging injuries to his "head, neck, middle and lower back affecting arms and legs." Claimant wrote that he had "parked in handicap (have plates) got out of my truck, slipped on ice, falling, hitting my head and landing on my back." He noted that he had multiple bulges in his neck compressing the nerves. Claimant indicated he reported the injuries to Supervisor on January 31, 2023. He provided the name of his physician at Spine One as Dr. Hakim.

22. On March 14, 2023 Respondents filed a Notice of Contest for further investigation of preexisting injury, and review of prior medical records.[4]

23. PA Ballas issued another work restriction report on March 14, 2023 keeping Claimant off work until after his upcoming procedure is done and he is reevaluated. On March 20, 2023 he referred Claimant to neurosurgery and continued off work.

24. Claimant underwent the CMBB with Dr. Hakim on March 17, 2023 with directions to complete a pain log. PA Ballas referred Claimant to Dr. Michael Rauzzino, a neurosurgeon for evaluation on March 20, 2023, noting Claimant had no improvement with the C7-T1 ESI but had improvement from the CMBB at the C2, C3, C4, C7 and C8 levels.

25. Claimant was evaluated by Dr. Rauzzino, the neurosurgeon, and Stephen Ladd, PA-C, on March 28, 2023.[5] He stated that:

---

[4] A second Notice of Contests was filed on June 7, 2023 still for investigation of preexisting conditions.

[5] The March 28, 2023 report states that the "rendering provider" was Dr. Rauzzino but the report was authored by PA Ladd. Dr. Rauzzino indicated that he examined Claimant with his PA and the PA wrote the report. This ALJ makes the logical choice to conclude that both providers saw Claimant and that PA Ladd completed the final report.

> It was not until January 2023, when he slipped and fell at work on some ice, I believe, and hit his head, and that he developed increased neck pain with shooting pain down the right arm and some numbness and tingling in his hand, especially with range of motion. He rates the pain around 6/10 to 7/10. It is aggravated by such things as sleeping, lying down, coughing, sneezing, or significant range of motion of his spine. He has had a hard time at work due to this injury and pain. He ultimately went to SpineOne and is getting treatment in the form of an epidural steroid injection, which did not provide any significant relief. In March, he underwent medial branch blocks in the cervical spine with about 85% to 90% relief over a day or so before wearing off. He has not had an ablation rhizotomy as of yet, only medial branch blocks.

PA Ladd reviewed x-ray and MRI of the cervical spine and noted they showed advanced facet arthrosis throughout his upper cervical spine with worsening at C3-C4 with edema within the facet joint and some posterior facet cysts and a possible cleft in the implant at the C5-6 when compared to the C6-7 level. He ordered an additional CT to review the fusion stability and noted that Claimant might benefit from cervical injections.

26. Dr. Rauzzino ordered a CT of the cervical spine, which took place at Park Meadows Imaging on March 30, 2023, which Dr. Lester found unchanged from the MRI of February 14, 2023.

27. On April 17, 2023 Claimant was "quite miserable" and not getting any better with a pain at 7/10 to 8/10 which is dull, stabbing, aching, burning and throbbing in nature, with symptoms radiating to his arms and hands. Following multiple considerations regarding Claimant's options, Dr. Rauzzino recommended an ACDF at the C3-4 and C4-5 levels to take place at Skyridge Medical Center on May 25, 2023. This was documented by Derrick Winckler, PA-C.

28. Claimant had an independent medical evaluation by N. Neil Brown, M.D. at Respondents' request, who issued a report on May 4, 2023. He took a history consistent with Claimant's testimony at hearing including that "he had a large bump on his head and he had pain in his neck and shoulders, into the right arm, minimal into the left arm, his midback, low back, and bilateral legs." Dr. Brown noted Claimant had reported the injuries to his manager and was given ointment but not sent to a provider, so he chose one. On exam he noted an unremarkable neurologic exam except for decreased light sensation in his left lateral thigh. Claimant had difficulty standing up from a sitting position, decreased cervical lordosis, and tenderness in the paraspinal muscles, trapezius muscles and mild spasms. He had painful range of motion, with extension worse than flexion, pins and needles sensation with 30 degrees of flexion of the neck. In the low back Claimant was TTP in the midline. He reviewed the medical records including imaging. He concluded that "aside from the cervicogenic headaches, the malfusion of the previously operated levels at C5-6 and C6-7, the cervical degenerative disc disease and cervical spondylosis are preexisting." He also opined that "[T]his gentleman has had an aggravation of his pre-existing cervical and lumbar degenerative processes," but that the proposed surgery at the C3-4 and C4-5 levels is not medically necessary.

29. On July 1, 2023 Dr. Rauzzino wrote a response to Dr. Brown's report and specifically contested Dr. Brown's positions, noting that:

I have had the opportunity to treat [Claimant] as a patient in our neurosurgery clinic. I am asked to discuss the causality of his need for surgery related to the injury sustained on 01/31/23. I have reviewed imaging and have had the opportunity to review the independent medical evaluation provided by Dr. N. Neil Brown dated 05/04/23.

Dr. Brown noted that he did not have my records available to him to incorporate into his evaluation. This limits the accuracy and effectiveness of his report to a significant degree.

* * *

Dr. Brown is in fact correct about a number of points. He is correct in stating that [Claimant] had significant preexisting cervical degenerative disc disease that in itself was not caused by the accident and existed at the time of the accident. He is also correct in that the patient likely had a pseudoarthrosis at C5-C7 at the time of the accident. Most importantly correct that [Claimant] sustained an injury to the cervical spine and that [Claimant]'s cervical spine conditioned (sic.) had been aggravated by the fall. It is the aggravation of [Claimant]'s pre-existing condition that led for the need for new treatment and eventually surgery.

I disagree with his opinion on the need for the proposed surgery at C3-C4 and C4-C5. Dr. Brown does not provide any information to indicate that [Claimant] was being actively treated for severe neck pain in the period immediately prior to his fall. [Claimant]'s [sic.] was then *asymptomatic* from a treatment standpoint prior to the fall.

* * *

I believe [Claimant]'s case to be relatively straightforward.

[Claimant] has had previous surgery which caused advanced preexisting degeneration at the levels above that surgery.

He was more prone than is the average person to sustain injury in a fall because of his previous surgery.

[Claimant] was not being actively treated for severe neck pain in the period immediately prior to his fall.

The fall is an appropriate mechanism to produce injury to the cervical spine and his preexisting degenerative arthritis was aggravated significantly to the point that he could not be treated non-surgically and required surgical treatment of the symptomatic degenerated discs and facets at C3-C4 and C4-C5 with an anterior/posterior fusion.

* * *

[Claimant] had a fall, his neck became symptomatic, he failed conservative therapy, and he underwent surgery which was an appropriate treatment. At the time of surgery, I had to consider that in addition to the injured discs at C3-C4 and C4-C5, he may have aggravated preexisting pseudarthrosis at C5-C6 and C6-C7; this was also treated at the time of surgery.

30. Respondents took the deposition of IME physician, Dr. Brown on July 7, 2023, a board certified neurosurgeon that has been a Level II accredited physician for the past three years. Dr. Brown agreed that it would be helpful if there were clinical

examinations to document what symptoms Claimant was having, rather than just radiological studies prior to the date of the injury. He noted that the right sided facet joint effusion was not a part of the preexisting condition but could not state whether it was caused by the incident of January 31, 2022. He also enquired regarding pre-injury symptoms and none were documented immediately before the accident other than what he had had years before. Claimant's findings on exam relied on the subjective complaints of the patient during the exam and the comparison to prior records, and tenderness of the facets was a really deep muscle palpation and could be related to the fall.

31. Dr. Brown agreed that the reason to operate was symptoms, and that many people had failed fusions, but did not have symptoms. A neurosurgeon would not operate based on diagnostics alone. It was Dr. Brown's opinion that the restrictions assigned on February 9, 2023 by Bradley R. Hakim, D.O. were appropriate for the symptoms Claimant was complaining of following his injury, and that Claimant had no restrictions prior to February 9, 2023. Dr. Brown also agreed that the restrictions assigned on February 16, 2023 were appropriate. However, Dr. Brown was unable to say "greater than 50%" that the symptoms Claimant was complaining of on February 9, 2023 were related to his fall on January 31, 2023. He questioned whether there was, in fact, an incident, since he did not have anything from employer reporting the incident.

32. Dr. Brown was of the opinion that surgery at C5-C6, C6-C7 was reasonable and necessary, but he was unwilling to give an opinion on the relatedness of that surgery. Further, he was unwilling to give an opinion as to whether the surgery at C3-C4, C4-C5 was reasonable because he stated it was uncommon for Canadian neurosurgeons like himself to proceed with surgery without radicular symptoms, just neck pain, unlike Colorado neurosurgeons that are more aggressive in their treatment plans. Lastly, he questioned why the radiographs in 2021 and 2022 were ordered without having corresponding physician clinical notes. Despite this, he also agreed with Dr. Rauzzino that Claimant was more prone than the average person to sustain an injury in a fall because of his previous surgery and pseudarthrosis because there was stress concentration at the level immediately above and the level immediately below his prior fusion, which were more susceptible to injuries.

33. On August 14, 2023 Dr. Rauzzino kept Claimant under restrictions due to his neck surgery.

34. On September 25, 2023 Respondents took the deposition of Dr. Rauzzino, Claimant's treating provider, a neurosurgeon who performed Claimant's cervical spine surgery and had been Level II accredited for approximately 15 years. Dr. Rauzzino continued to opine, at his deposition, that Claimant had not received treatment for his neck before Claimant's fall, specifically noting as follows:

> Q. You've not been provided with any treatment records, though, relating for treatment on the neck before my client's fall, have you?
>
> A. No. In fact, when he saw Dr. Duhon in 2021 after the fall, Dr. Duhon would have been in a position to discuss cervical symptoms with him. But in that office visit he only discussed with him leg pain. If [Redacted, hereinafter RS] had, you know, significant neck pain that he's sitting – he had the opportunity to visit with a neurosurgeon, who is a doctor who treats

neck and back pain, and yet on that visit there was no mention made of neck pain, there was no request for treatment, there was no request for imaging or anything like that.

So my guess is – or not my guess – my impression of looking at this case is that RS[Redacted] did have some neck pain, and that's not surprising after a two-level fusion and after having some arthritic changes above it.

It's my opinion as a Level II provider that after the fall he developed new, worsening symptoms as a result of the fall that he didn't have prior, and that's what necessitated the additional treatment. And from a causation standpoint, that would be the causality, that were it not for the fall, he wouldn't have the abrupt change in the symptoms because he had the opportunity to seek injections and all those things in the period prior to all of this, but there is no record of him seeing a doctor at SpineOne for other symptoms in 2021, 2022, it was only immediately after he had this new injury that he sought treatment in the form of these injections and required additional treatment and then surgery.

Q. It appears then you have not changed the opinions you set forth in your letter of July 1st, 2023, based on the questioning today?

A. No, sir.

Q. And finally, Doctor, in light of the fact that you're not going to be there at hearing but RS[Redacted] is going to testify that the pain complaints following his fall have now gone away following the surgery you performed, does that anecdotal information support the decision you made to recommend surgery and proceed with the surgeries you performed?

A. Yes.

35. As found, Dr. Rauzzino's opinion is found more credible and persuasive than the contrary opinion of Dr. Brown. As found the diagnostic testing performed following the January 31, 2023 work related accident were significantly different than those performed prior to this date.

36. As found, Claimant's testimony is in direct contradiction to Dr. Brown's findings that the pain was preexisting. There were no medical treatment notes to support that Claimant was receiving active treatment immediately before January 31, 2023, for the lumbar spine or cervical spine, other than the diagnostic testing.

37. As found, Dr. Brown's opinion that Claimant did not suffer an injury, and if he did, that any accident did not result in the need for surgery at C3-C4, C4-C5 is not persuasive, is found not to be reasonable based on all the evidence.

38. As found, following Claimant's February 9, 2023 evaluation, he was assigned a restriction of "be off work for the next 2 weeks beginning today and ending on 2/23/23," which Claimant provided to his supervisor. Supervisor testified she did not ask Claimant if the restrictions were due to his January 31, 2023 injury. As found,

Respondents did not provide Claimant work within his restrictions at any time subsequent to this date until Claimant returned to work for employer.

39. As found, Claimant credibly testified after providing the document to Supervisor, he was not permitted to work, and requested TPD benefits starting on February 9, 2023, as his employer continued to pay him some funds even though he was not working.

40. As found, Claimant's AWW was $2,377.13, based upon his year-to-date earnings the year immediately prior to his injury. Claimant credibly testified that in 2022 he was on a leave of absence for an unrelated concussion injury and did not commence work until May 25, 2022. Claimant provided a W-2 reflecting that he had earned $75,051.37, and that between May 25, 2022 and December 31, 2022, a period of 221 days, his daily rate was $339.59, which results in an AWW of $2,377.13. Respondents maintained that Claimant's hourly pay was $26.23, and did not dispute that he was required to work 44 hours a week, but challenged Claimant's entitlement to include other compensation in the AWW calculation because the other compensation was not guaranteed. However, Respondents provided pay records after February 9, 2023 through June 2023, which reflected that Claimant continued to receive his other compensation on a monthly basis throughout the entire time following his January 31, 2023 injury, even though he was not working. Therefore, this ALJ concluded that Claimant was entitled to the additional compensation despite not working and the fair calculation of Claimant's AWW should include all of Claimant's social security wages.

41. Because Claimant continued to receive other compensation, although he was not working, Claimant was not entitled to TTD benefits, but rather TPD for any week beginning as of the week of February 9, 2023 when he did not earn his AWW of $2,377.13.

42. After he was taken off of work, Claimant was awarded social security benefits in the amount of $2,138.00 per month from approximately February 9, 2023 through approximately August 2023.[6] He was also initially awarded short-term disability benefits at the rate of $327.00 per week, of which some of it was paid back to Employer from Claimant's earnings upon his return to work. However, the exact amount was not clear.[7]

43. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

[6] There is some uncertainty of whether this was a full seven months. Claimant should provide the documentation of each payment received to Respondents.

[7] If Employer took back approximately $2,574.00 yet Claimant received $327.00 per week for the short-term disability for the full multiple weeks this could very well have exceeded the amount reimbursed and Respondents should get credit for any overpayments, or vice versa.

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals* Office, 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO,* 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove that an injury directly and proximally caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

A preexisting condition does not preclude a claim for compensation and an injury is compensable if an industrial injury aggravates, accelerates, or combines with the preexisting condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a preexisting condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1959); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the preexisting condition. *Finn v. Industrial* Commission, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the preexisting condition. *Faulkner v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office*, *supra*; *Allee v. Contractors, Inc.,* 783 P.2d 273 (Colo. 1989); *Eastman Kodak Co. v. Industrial Commission*, 725 P.2d 85 (Colo. App. 1986), overruled on other grounds, *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *Montgomery v. HSS, Inc.*, W.C. No. 4-989-682-01 (August 17, 2016). Compensable medical treatment includes medical evaluations, diagnostic evaluations and medical care.

Causation may be established entirely through circumstantial evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). Medical evidence is neither required nor determinative of causation. A claimant's testimony, if credited, may alone constitute substantial evidence to support an ALJ's determination concerning the cause of the claimant's condition. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997);

Apache Corp. v. Industrial Commission, 717 P.2d 1000 (Colo. App. 1986); *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983).

As found, Claimant has credibly and persuasively shown that he slipped and fell on January 31, 2023 while exiting his vehicle at work. He has further shown by a preponderance of the evidence that it is more likely than not that he suffered injuries arising out of and in the course of his employment while exiting his vehicle on the Employer's premises. As found, Claimant's accident directly and proximately caused the injuries to his cervical and lumbar spine which included substantial aggravation of his preexisting condition. Dr. Rauzzino's opinions are persuasive and support the claim that it is more likely than not that Claimant had an aggravation of the underlying degenerative condition of his cervical spine requiring surgical repair. Dr. Hazim's opinions are persuasive that Claimant aggravated his lumbar spine and required further therapy and other treatments, including injections in order to bring him back to baseline.

As found, on February 9, 2023, Dr. Hakim noted neck and low back pain from a slip on ice at work. Dr. Hakim placed Claimant on work restrictions and ordered MRIs. As further found, following the incident and accident of January 31, 2023, PA Ballas noted on February 16, 2023 that Claimant had disc bulges at C3-C4 and C4-C5. As found, Dr. Hakim and PA Ballas credibly and persuasively documented Claimant's increase in physical findings. As found, Claimant credibly and persuasively testified to this increasing symptom of pain in his lumbar spine and limitations in range of motion in his cervical spine triggered by the January 31, 2023 accident and consequently triggered the Claimant's need for medical treatment. As found, Claimant's need for treatment and disability (as Claimant was placed on temporary work restrictions) were the proximate result of the January 31, 2023 work related injury and were not just the natural consequence of the preexisting condition. As concluded, had the injury not occurred Claimant would have likely continued to work without restrictions, Claimant would have likely continued to maintain his symptoms under control without requiring further care. As further concluded, but for the accident of January 31, 2023, Claimant would not have required the treatment currently being recommended. As found, Dr. Rauzzino's opinions are persuasive and support the claim that it is more likely than not that Claimant had an aggravation of the underlying degenerative condition of his cervical spine requiring surgical repair. As found, Dr. Hazim's opinions are persuasive that Claimant aggravated his lumbar spine and required further therapy and other treatments in order to bring him back to baseline. These opinions are more credible and persuasive as well as more convincing than the contrary opinions of Dr. Brown. As found and concluded, Claimant has shown by a preponderance of the evidence that it is more likely than not that Claimant suffered a compensable aggravation of his preexisting condition to his lumbar and cervical spine when he exited his vehicle and slipped on the ice on January 31, 2023.

B. Authorized, Reasonably, Necessary and Related Medical Benefits

Respondents are liable for authorized medical treatment which is reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101(a), C.R.S. (2023); *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including

medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course and scope of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Clam Appeals Office*, *supra at* 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability, but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.*, 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co*., *supra* at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, *supra*.

The Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101 (1)(a), C.R.S.; *Colorado Comp. Ins. Auth. V. Nofio*, *supra* at 716 (Colo. 1994). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for medical treatment. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents provide injured workers with a list of at least four designated treatment providers. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2 additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381, 383 (Colo. App. 2006). Furthermore, W.C.R.P. 8-3(A) specifies that "[w]hen emergency care is no longer required the provisions of section 8-2 of this rule apply."

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office*, *supra*; *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom an ATP refers the claimant in the normal progression of authorized treatment or chain of referral. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v.*

Dunagan, *supra*. Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office*, 197 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 6-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Jewett v. Air Methods Corporation*, WC 5-073-549-001 (ICAO, Mar. 2, 2020).

As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonably necessary and causally related medical benefits for his work related injuries caused by the fall of January 31, 2023, including care for his low back and cervical spine. Supervisor testified that she had notice of the injury on January 31, 2023 when Claimant reported the injury to her and Supervisor later documented that notification on the FROI. Supervisor was Employer's representative and was deemed to know how to supervise the employees that reported to her. There is no record that Respondents provided Claimant a designated provider list within the seven days as required by law. In fact, Supervisor testified that she was not aware of the requirement to provide the four provider list until a little before her testimony, after another employee was injured. Therefore, selection of an authorized treating provided passed to Claimant and Claimant selected Dr. Hakim and Spine One. Claimant was evaluated by Dr. Hakim for acute neck and low back pain on February 9, 2022, and Claimant provided the note from that evaluation to Employer, but Claimant was still not provided with a list of four providers. Claimant then followed up with Spine One on February 15, 2023. Further, Claimant's care from Dr. Rauzzino at Front Range Spine was within the chain of referral, as PA Ballas, Dr. Hakim's PA, and was reasonable, necessary medical care related to the January 31, 2023 work injury. Claimant was never provided an appointment with a designated provider.

Claimant is credible and persuasive in his testimony that Supervisor advised Claimant to continue to treat at Spine One. As found, Supervisor, in effect, advised Claimant to pursue care with his primary care provider ("PCP") at Spine One, which was, in effect, a referral to his PCP. Claimant's Application for Hearing specifically notified Respondents of Respondents' refusal to treat. No other persuasive evidence that Respondents responded to the notice was within the records or evidence provided at hearing. Claimant identified Spine One to be the provider. As further found, the refusal to treat and Respondents' failure to identify a provider that was willing to treat Claimant caused the right of selection to pass to Claimant and Claimant designated Spine One, who is now Claimant's treating provider, together with the providers within the chain of referral including Front Range Spine, Sky Ridge Medical Center and Park Meadows Imaging.

As found, Claimant has proven by a preponderance of the evidence that he was entitled to receive reasonably necessary and causally related medical benefits for his work related injuries caused by the fall of January 31, 2023, including care for his low back and cervical spine. Respondents noted that they had notice of the injury on January 31, 2023 listing the date of their notice on the FROI.

Respondents argued that Claimant's need for surgery, as supported by Dr. Brown's opinion, was from his preexisting conditions, despite the accident of January 31,

2023 (if there was an accident) because it was inevitable due to the arthritic and degenerative process caused by the prior injuries and surgeries, not because of any aggravation caused by any fall. Dr. Brown's opinions are not found persuasive. As explained by Dr. Rauzzino, Claimant's need for surgery was caused by traumatic forces on the preexisting condition. The degenerative spine alone did not cause the need for a cervical fusion. The exponential increase in symptoms is what caused the need for surgery. And this is well supported by Claimant's testimony that while he had some pain and discomfort prior to the January 31, 2023 accident, those symptoms were controlled by some medications, but Claimant was able to carry out his job, which occasionally required him to lift and carry heavy items. As found, following the work injury of January 31, 2023, the pain was not tolerable, the symptoms were frequent and Claimant's range of motion in the cervical spine was limited. All these new symptoms and serious pain were the cause for the need for cervical fusions at C3-C4 and C4-C5 recommended and performed by Dr. Rauzzino on May 25, and 26, 2023. All of these new symptoms aggravated the underlying preexisting condition, and proximally cause the compensable work related injury of January 31, 2023. As found, Claimant has shown by a preponderance of the evidence that it was more likely than not that the cervical fusions were reasonably needed and related to the January 31, 2023 work related injury.

D. Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine Claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 2007).

Claimant credibly testified that in 2022 he was on a leave of absence for an unrelated concussion injury and did not commence work until May 25, 2022. Claimant provided a W-2 reflecting that he had earned $75,051.37, for earnings between May 25, 2022 and December 31, 2022. This was a period of 221 days, providing a daily rate of $339.59, which resulted in an AWW of $2,377.13.

Respondents maintained that Claimant's hourly pay was $26.23, and did not dispute that he was required to work 44 hours a week, but challenged Claimant's entitlement to other compensation. It was Respondents' position that Claimant's

entitlement to other compensation was not guaranteed. However, Respondents provided pay records after February 9, 2023 through June 2023, which reflected that Claimant continued to receive his other compensation on a monthly basis throughout the entire time following his January 31, 2023 injury, even though he was not working. Therefore, this ALJ concludes that Claimant was entitled to the additional compensation despite not working and the fair calculation of Claimant's AWW should include all of Claimant's social security wages. The fair calculation of Claimant's AWW was $2,377.13 based upon his year-to-date earnings the year immediately prior to his injury.

C. Temporary Disability Benefits

To prove entitlement to temporary disability benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-103(1)(a); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain indemnity benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric,* 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office,* P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic, supra*.

To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Thus, if the injury in part contributes to the wage loss, TPD benefits must continue until one of the elements of Sec. 8-42-106(2), C.R.S, is satisfied. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). Section 8-42-106(2)(a), *supra*, provides that TPD benefits cease when the employee reaches maximum medical improvement.

Following Claimant's February 9, 2023 evaluation, he was assigned work restriction be off work for the next 2 weeks, which Claimant provided to his supervisor. Supervisor testified she did not ask Claimant if the restrictions were due to his January 31, 2023 injury. As found, Respondents did not provide Claimant work within his restrictions at any time subsequent to this date until Claimant returned to work for employer months later. Further, as found, Claimant credibly testified after providing the document to Supervisor, he was not permitted to work, and he requested TPD benefits starting on February 9, 2023 and ongoing. Because Claimant continued to receive other compensation, although he was not working after February 9, 2023, when looking at his wage records, Claimant was not entitled to temporary total disability (TTD) benefits, but

rather TPD based upon any week after February 9, 2023 when he did not earn his AWW of $2,377.13.

After he was taken off of work, Claimant was, awarded short term disability benefits for a period of time though the parties did not provide paperwork showing exact payments. The payments were partially credited back to Employer in the amount of $2,574.00 from Claimant's earnings upon his return to work. However, the exact amount Claimant received was not clear. Claimant was also awarded social security benefits in the amount of $2,138.00 per month from February 9, 2023 until he returned to work, though this again is not clear. Therefore, Claimant proved by a preponderance of the evidence that he was entitled to temporary partial disability benefit beginning February 9, 2023 when his authorized medical provider gave him a work restriction note, which Claimant provided to his Supervisor.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a work related injury to his low back and cervical spine in the course and scope of his employment on January 31, 2023.

2. Respondents shall pay for all authorized reasonably necessary and related medical benefits including the cervical fusions performed by Dr. Rauzzino on May 25, and May 26, 2023, as well as all providers from Spine One as well as all providers within the chain of referral, including Front Range Spine, Sky Ridge Medical Center, Park Meadows Imaging and any other the facility where Claimant was treated within the chain of referral. All payments to providers shall be in accordance with the Colorado Medical Fee Schedule.

3. If Medicare or Medicaid have paid any portion of the medical benefits, Respondents shall reimburse them in accordance with Section 8-42-101(6)(a), C.R.S. Further, if Claimant has paid any funds out of pocket, Respondents shall reimburse Claimant the full amount paid by Claimant, even if more than is required by the fee schedule pursuant to Sec. 8-42-101(6)(b), C.R.S.

4. Claimant's average weekly wage is $2,377.13.

5. Within ten days of this order, the parties shall exchange information regarding the payments of social security benefits and short term disability benefits as well as any credits taken by Employer.

6. Respondents shall pay temporary partial disability benefits from February 9, 2023 and ongoing, until terminated by law, subject to applicable offsets and credits following calculations after the above exchange of information.

7. Claimant has established that some of his short term disability benefits were returned to Employer by withholding Claimant's wages. Respondents shall consider these and any other returned wages in the calculation of benefits. The parties shall calculate the exact amount of indemnity benefits owed considering all offsets and credits.

8. Respondents shall pay Claimant statutory interest in the amount of eight percent (8%) per annum due to Claimant and not paid when due.

9. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts** or email the Petition to Review to oac-ptr@state.co.us. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove he sustained a compensable injury?
- Is Claimant entitled to medical benefits?
- Did Claimant prove he is entitled to temporary disability benefits?
- What is Claimant's Average Weekly Wage?

FINDINGS OF FACT

1. Claimant was employed as a production truck driver for [Redacted, hereinafter TM]. He worked there for approximately 5 years. He would work 12 hour shifts, four on, four off, rotating schedule. His job consisted of hauling coal from a conveyor belt located in a tight area where he filled a front end loader with the coal and then maneuvered the vehicle in a tight area and deposited the coal at the other end of the pit. Claimant estimated that it would take 3 maneuvers to exit the area where he picked up the coal. Claimant alleges that he sustained a repetitive work injury on June 6, 2022 as the result of operating the coal truck and front end loader.

2. Claimant testified that prior to the coal front end loader, he was on the dirt crew with newer trucks. It was not until after he started driving the coal front end loader that he began having pain in both shoulders.

3. The coal front end loader uses joy stick controls to maneuver the truck around. The joystick on the left moves the vehicle forward and reverse. The two joysticks on his right lifted and tilted the bucket. He also testified that he experienced a rough ride since the vehicle bounced quite a bit as he drove over rough terrain. As he bounced in the vehicle, it would jar both of his shoulders. Claimant would also operate a coal truck and sometimes a bull dozer. The coal truck was a smaller haul truck and they were old trucks. They had an automatic transmission shifter. They were harder to drive that the dirt trucks. A lot of times the power steering wouldn't work. He would have to crank the steering wheel and that would cause his pain in both his shoulders.

4. Sara Nowotny, a vocational evaluator, performed a job demands analysis for the Claimant's job duties on February 21, 2023. This included observing other employees performing the job duties that Claimant did when he had the onset of shoulder pain. She issued a report dated February 24, 2023. In her report, she found that Claimant's job duties did not have risk factors present for the claimant's shoulder diagnoses including vibrations, awkward positions, repetitive activities or forceful and repetitive activities.

5. Claimant continued to work full duty as scheduled on and after June 6, 2023 until August 24, 2023, when he reported the claim to his employer.

MEDICAL EVIDENCE

6. On the day he reported his claimed injury, Claimant sought treatment at Memorial Regional Health Clinic in Craig, Colorado. Physician's assistant Jordan Fisher obtained the following history "[Redacted, hereinafter JT] is a 62 yr male presenting for evaluation of bilateral shoulder pain. The patient is the primary historian. This is a workman's compensation visit. Patient states symptoms started in June. This did not start with a particular incident or injury. Patient works at TM[Redacted] and states he operatives (sic) heavy equipment. He is concerned that repeated movements at work have caused his shoulder pain. States pain is predominantly in the deltoid areas. It is worse in the right shoulder than the left. It has been particularly bad the past couple of days after patient has been driving large trucks where he has to pull very hard on the steering wheel. Also reports he was using a joystick a few weeks ago and this made the pain worse as well". Additionally, the chart indicated that Claimant will be referred to orthopedics for further evaluation.

7. Claimant returned to Memorial Regional Health Clinic on September 1, 2022, and saw Aaron Stewart, D.O. that day. Claimant told Dr. Stewart his bilateral shoulder pain, right worse than left, continued and had worsened over the past month. Dr. Stewart wrote, "The pain is located on his lateral shoulder and is made worse with movement of his arm. He works as a heavy machinery operator and using the joysticks and controllers on the machines has been steadily worsening the pain. He denies radiation of pain, numbness, tingling, or muscle weakness." Claimant's physical exam was interpreted to show, "Decreased RUE AROM in overhead movement. TTP overlying deltoid area, normal muscle strength in flexion, extension, internal/external rotation, pain elicited on R empty can test. TTP overlying L deltoid region." Dr. Stewart did not discuss claimant's job tasks, identify repetitive job activities, obtain a job description, discuss the repetitive injury sections of the Workers' Compensation Treatment Guidelines, or perform a causation analysis. However, he wrote, "Work related pain of b/l shoulders, R worse than left." He thought claimant's December 2021 right biceps tendon tear, "[S]eems unrelated to the pain he is currently having." He thought Claimant had a likely "overuse injury." He referred Claimant to physical therapy, and stated claimant was unable to work from August 24 until October 7, 2022.

8. Claimant began physical therapy on September 19, 2022.

9. Claimant began treatment with Steamboat Orthopedics and Spine on October 26, 2022. He was referred there by Dr. Stewart. An MRI of the right shoulder was performed at the facility on that day. The MRI report showed Moderate right supraspinatus tendinosis with a mostly high-grade articular surface tear of the tendon anteriorly at the insertion with a small superimposed full-thickness component of supraspinatus tendon tear seen on a single image; Mild subscapularis tendinosis; Marked long head biceps tendinosis; Mild AC joint osteoarthritis; and Non-arthrogram findings suspicious for nondisplaced tears in the posterior labrum at the 9:00 position and the superior labrum

just anterior to the biceps anchor.

10. Claimant discussed the MRI that was taken with P.A. Fleming. He performed a cortisone injection to his right shoulder. He also discussed potential surgery to the right shoulder, but noted that any potential surgery would have to occur after he lowered his A1c level, which was at a 9.

11. Dr. Sauerbrey saw claimant on December 13, 2022. Dr. Sauerbrey wrote, "He hurt himself about 6 months ago. He is a coal miner. That history is outlined in the chart. The right shoulder is really the one that it all started with. When he injured his right shoulder, he was having to use his left shoulder more and that became symptomatic." Dr. Sauerbrey saw claimant's biceps tendon rupture in his examination, and said he understood it happened, "[B]ack in January. That was not worked up." He reviewed claimant's right shoulder MRI, and thought the images showed, "There is a high-grade articular surface tear of the supraspinatus tendon with some full-thickness component seen anteriorly. There is tendinosis of the subscapularis. The biceps tendon is obviously ruptured with a remnant tendon there and there is AC joint arthritis." Dr. Sauerbrey also did not perform a causation analysis or assess claimant's shoulder based on the Colorado Workers' Compensation Medical Treatment Guidelines. Dr. Sauerbrey made assumptions about the specifics of claimant's job duties, hours, activities, repetitive activities, whether the shoulders were involved in any repetitive work activities, or how claimant performed his job duties.

12. Dr. Raschbacher testified that he performed an IME on April 27, 2023. He evaluated the Claimant in person and took a history from the Claimant. He also reviewed the medical records provided and specifically reviewed the job demands analysis prepared by Sara Nowotny.

13. After review of the medical records, Claimant's history and Ms. Nowotny's report, Dr. Raschbacher provided a causation analysis. He states, in response to a query from Respondent's counsel "The physical activities described by JT[Redacted] and those activities in the job description are not medically likely to be sufficient to cause anatomic or physiologic injury to the right shoulder or the left shoulder. He had preexisting degenerative disease at both shoulders, clearly not caused by any particular physical activity. He did not have risk factors delineated in the job description or in his own description that would or likely would cause injury to either the left shoulder or the right shoulder, by the rotator cuff or other types of injury. There is simply not a mechanism of injury that would likely cause anatomic injury or disruption, particularly to both shoulders".

CONCLUSIONS OF LAW

A. Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical

benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In assessing credibility in this case, I have considered the testimony of the Claimant and the testimony of the other witness presented by both parties.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

B. Compensability

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant has failed to sustain his burden of proof that his shoulder symptoms are causally related to his work duties with the employer. I have considered Dr. Sauerbrey's opinions as to the causal relationship of the Claimant's shoulders to Claimant's work. However, Dr. Sauerbrey's conclusory opinions are not based on a critical analysis of the facts or Claimant's job duties. I conclude that the job demand analysis performed by Sara Nowotny is credible and persuasive in describing the job duties of Claimant with respect to his work on the coal crew. The analysis does not identify any significant risk factors that would account for the Claimant's shoulder complaints. I also conclude that testimony and written opinions of Dr. Raschbacher are credible and persuasive that the physical activities performed by Claimant would not have been sufficient to cause anatomic or physiologic injury to either shoulder. These opinions as to causation are persuasive since they are based on a consideration of the job demand analysis performed by Sara

Nowotny, as well as the history given Claimant and the available medical records, taken as a whole.

ORDER

It is therefore ordered that:

1. Claimant's claim for compensation and benefits is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: December 27, 2023

/s/ Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-210-684-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury arising out of the course of his employment with Employer on May 19, 2022.

2. Whether Claimant established by a preponderance of the evidence entitlement to reasonable and necessary medical benefits to cure or relieve the effects of an industrial injury, including surgery recommended by Jeffrey Oster, DPM.

STIPULATIONS

1. The parties stipulated that Claimant's average weekly wage is $2,150.00.

FINDINGS OF FACT

1. Claimant has worked for Employer for nearly twenty-four years as an substation journeyman electrician. Claimant's job requires him to maintain electrical service for customers in the Alamosa, Colorado area. Claimant's job duties included responding to electrical service calls, walking, standing, climbing, and driving. Claimant credibly testified that worked 10-12 hours per day, four days per week, with frequent overtime, and that he spent approximately 80 percent of his working hours on his feet. To perform his job duties, including climbing utility poles, Claimant wore lineman's boots, which Claimant described as tight, lace up boots.

2. Claimant testified that on May 19, 2022, he was working for Employer and needed to go to the Employer's service center for training. He parked his truck in the service center parking lot, and exited his truck. After taking a couple of steps, he noticed a sharp pain in his left ankle that he had never experienced before. Claimant testified that the pain was located at the back of his ankle, where the bottom of the Achilles tendon connects to the heel. He testified that his ankle was bruised, swollen, and tender, with a large bump on his heel. Claimant credibly testified that he had no prior issues with his left ankle or heel, and had not had pain in his heel or ankle prior to May 18, 2022.

3. Claimant testified that when the pain did not go away, he notified his supervisor, [Redacted, hereinafter JI], and was advised to contact the company nurse and safety hotline. Claimant contacted the company nurse, and was ultimately given the option to see several different providers. Claimant elected to go to the SLV health Occupational Medicine Clinic.

4. On May 26, 2022, Claimant saw Tasha Alexis, M.D., at the SLV Health Occupational Medicine clinic in Alamosa. Claimant reported he was walking across a

parking lot and started to feel pain in his left ankle. Claimant denied falling, tripping, or rolling his ankle. On examination, Claimant's posterior ankle was tender to palpation, with bruising and redness. Dr. Alexis diagnosed Claimant with an strain of the left Achilles tendon, and referred him to podiatrist Jeffrey Oster, DPM. (Ex. B).

5. Claimant saw Dr. Oster on June 20, 2022. Dr. Oster's examination revealed pain in the posterior lateral aspect of the left heel consistent with Haglund's deformity, and mild hypertrophy over the posterior left heel compared to the right. Dr. Oster considered differential diagnoses of insertional Achilles tendinitis versus Haglund's deformity (a bony growth on the heel bone), and recommended a trial heel lift to help determine the more likely diagnosis. (Ex. 6).

6. Claimant returned to Dr. Oster on July 12, 2022 after using the heel lift for approximately three weeks. Dr. Oster noted the heel lift helped establish that Claimant's symptoms were specific to insertional Achilles tendinitis, and not simple Haglund's deformity. He discussed a surgical procedure to correct his condition, including removal of the Achilles tendon, and resection of the posterior left heel with reattachment. (Ex. 6).

7. At his August 2, 2022, visit with Dr. Oster, Claimant discussed his desire to pursue a partial resection of the heel and transposition of the Achilles tendon, recommended by Dr. Oester. Dr. Oster reiterated that Claimant's condition was specific to insertional Achilles tendonitis. He noted that "[Claimant] correlates with overuse syndrome of the left heel associated with working greater than 20 years on his feet as a lineman." (Ex. 6).

8. On August 22, 2022, Respondents filed a Notice of Contest regarding Claimant's claim, indicating the claim was contested for further investigation. (Ex. G).

9. Claimant returned to Dr. Alexis several times over the following months. Dr. Alexis opined that Claimant's injury was due to prolonged standing and walking while performing his job duties. Claimant reported his condition was progressively worsening, and was aggravated by work activities. (Ex. 5).

10. On December 23, 2022, Claimant filed a second Worker's Claim for Compensation related to the May 19, 2022 incident. In this report, the May 19, 2022 incident was described as follows: "I twisted my foot/ankle while jumping out of my F350 work truck. I felt immediate pain upon landing on the ground." (Ex. 2). The incident description contained in the December 23, 2022 claim form is inconsistent with Claimant's testimony and Claimant's medical records.

11. On March 7, 2023, Dr. Oster responded to correspondent from Respondents regarding the cause of Claimant's condition. In response to the question "is [Claimant's] work incident of 5/19/22 the proximate cause of his current condition?" Dr. Oster checked "NO" and wrote "This is a problem with insidious onset and cannot be specifically relational to one incident." In response to the question "Is [Claimant's] condition as described above, with medical certainty, directly related to his employment?" Dr. Oster checked "No" and wrote "This condition would have occurred regardless of employment type." (Ex. 6).

12. On April 26, 2023, Claimant had an MRI of the left ankle, which showed partial-thickness tearing and tendinosis at the insertion of the Achilles tendon; a cyst-like change at the Haglund's deformity; and other non-symptomatic conditions.[1] (Ex. E).

13. On May 31, 2023, Dr. Alexis documented that she was "closing this claim" and that Claimant was placed at maximum medical improvement (MMI). However, Dr. Alexis also noted that Claimant was not at MMI and that he had not had any meaningful intervention for his left ankle/foot condition. The ALJ infers that Dr. Alexis' MMI determination was not based on Claimant reaching a point of MMI from a medical perspective. (Ex. 5).

14. On October 2, 2023, Claimant underwent an independent medical examination (IME) with Barry Ogin, M.D., at Respondent's request. Dr. Ogin testified at hearing, and was admitted as an expert in physical medicine and rehabilitation, and occupational medicine. Based on his review of medical records and examination of Claimant, Dr. Ogin opined that had a congenital Haglund's deformity, retrocalcaneal bursitis, and Achilles tendinopathy, with MRI evidence of partial-thickness tearing and moderate to severe tendinosis at the distal Achilles insertion. Dr. Ogin opined that Claimant's left foot and ankle condition was not work-related, that the condition occurred insidiously. He testified that wearing tight work boots, walking, and standing can cause symptoms in the Achilles area, because the Achilles tendon runs over the Haglund's deformity. However, these activities would not have caused Haglund's deformity itself.

15. Dr. Ogin agreed that the surgery recommended by Dr. Oster is reasonable and necessary, but does not believe Claimant's condition is causally related to his employment, and would have occurred regardless of employment. Dr. Ogin opined that Claimant did not sustain a specific traumatic injury to his Achilles, and that while walking across a parking lot, Claimant's underlying intrinsic heel pathology became symptomatic. He further noted that after the initial onset of pain, Claimant continued to report pain in the posterior heel, which became significant after a full day of work, and upon standing in the morning. He noted this was consistent with Achilles tendinopathy.

16. Dr. Ogin opined that the development of Claimant's condition was not due to occupational activities because "simply walking and getting out of a truck would be considered an activity of daily living." Dr. Ogin's opinion regarding the legal compensability of Claimant's claim, rather than medical causation, is not within his expertise, and is of no evidentiary value.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

[1] Respondents' expert, Dr. Ogin credibly testified that the remaining findings on the MRI did not contribute to Claimant's current condition.

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability

or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. "To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is a sufficient basis for an award of medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident." In re Claim of Frank O'Neil Cambria, 050719 WC No. 5-066-531-002 (ICAO May 7, 2019). Compensability of aggravation cases turns on whether work activities made the preexisting condition worse in some manner or simply demonstrated the natural progression of the preexisting condition. *Bryant v. Mesa Cty. Valley Sch. Dist. #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dept. Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established by a preponderance of the evidence that he sustained a compensable injury arising out of the course of his employment with Employer. Specifically, the conditions of Claimant's employment, including walking in lineman's boots, combined with Claimant's pre-existing Haglund's deformity to aggravate his Achilles tendon, resulting in insertional tendonitis that manifested on May 19, 2022, while walking to the service center for training. Claimant had a pre-existing, asymptomatic Haglund's deformity in his left heel. Dr. Ogin testified that wearing tight boots, walking, and standing can cause Achilles symptoms in the heel due to the presence of a Haglund's deformity. Claimant's symptoms did not merely "occur" at work, they were caused by his work activity. At the time of his injury, Claimant was in the course of his employment with Employer, and was walking from his truck to the service center for training. Getting from his vehicle to the service center for training is sufficiently related to Claimant's work-related functions to be considered part of his service to Employer. The ALJ does not find credible Dr. Ogin's testimony or Dr. Oster's opinion that Claimant would have developed the same condition regardless of his employment.

Claimant credibly testified that before May 19, 2022, he had no pain or medical issues with his left ankle/heel area, and no credible evidence was admitted suggesting otherwise. Claimant's testimony that his ankle was bruised, swollen, and tender after the May 19, 2022 incident is confirmed by Dr. Alexis' objective findings during her May 26,

2022 examination. The presence of swelling, bruising, and tenderness is indicative of an injury to Claimant's heel or ankle. Based on these symptoms, Claimant sought and received medical treatment, which he would not have received but for his employment.

MEDICAL TREATMENT

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has established a compensable injury, Claimant has also established an entitlement to authorized medical treatment that his reasonable and necessary to cure or relieve the effects of his injury. Based on Dr. Oster's surgical recommendation, and Dr. Ogin agreement that such treatment is reasonable and necessary, Claimant's request for authorization of surgery is granted.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to his left heel (insertional tendonitis of the Achilles tendon) arising out of the course of his employment on May 19, 2022.

2. Respondents shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

3. Claimant's request for authorization of the surgery recommended by Dr. Oster is granted.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 27, 2023

_____

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-206-617-003

STIPULATIONS

1. Claimant is not at Maximum Medical Improvement for her left knee injury.

2. Dr. Simpson, an ATP, has recommended a second series of PRP (Platelet Rich Plasma) injections which has been denied based on an opinion of physician advisor, Dr. Hewitt.

3. Dr. Simpson has requested a repeat series of physical therapy, but [Redacted, hereinafter PL] has denied that medical care based on a report from its physician advisor, Dr. Hewitt.

4. After appeal by Dr. Simpson's office, PL[Redacted] again denied authorization for repeat PRP injections based on Dr. Ciccone's record review as well as Dr. Hewitt's report.

5. PL[Redacted] denied Dr. Simpson's request for prior authorization of additional physical therapy sessions based on the opinions of Drs. Ciccone and Hewitt.

ISSUES

- Did Claimant prove by a preponderance of the evidence that a PRP knee injection was causally related to her admitted February 8, 2022 industrial accident?

- If Claimant proved the requisite causal nexus, was the treatment reasonably necessary?

- Whether the physical therapy prescribed by Dr. Simpson is reasonable, necessary and related?

FINDINGS OF FACT

1. Claimant worked for Employer as an LPN (Licensed Practical Nurse) on February 8, 2022. On that date, she was in an exam room preparing the room for the next patient. As she was doing that, her shoe caught the bottom of a wheelchair scale. She fell forward to the floor, striking her left knee and scraping her right shoulder. She felt pain in her left knee and right shoulder. She reported the injury to her employer on the same day. The claim was admitted.

2. Claimant sought treatment with Concentra in Colorado Springs. She was seen by Dr. George Johnson on February 10, 2022. In her history, she described her fall and injuring her left knee and right shoulder. Claimant also gave a history of bilateral arthritis in both knees and that she received injections as needed. The last injection prior to this initial visit was 1 year prior. Claimant also indicated that she took meloxicam 15 mg. one time per day for pain. In his examination of the Claimant, Dr. Johnson noted that she was tender around the left knee and right shoulder and had bruising on her right shoulder. His diagnoses were contusion of her left knee and sprain of her right shoulder. He also wrote, "This appears to be a fairly minor injury". Dr. Johnson provided restrictions of no lifting greater than 5 pounds, pushing and pulling up to 10 pounds and up to 1 hour of walking or standing.

3. When she returned to work, she was doing sedentary work using the telephone. When she did the sedentary work, the pain lessened since she was not on her feet 8 hours per day. During this time, she was also receiving physical therapy which helped with pain and swelling.

4. With respect to the meloxicam, Claimant testified that Dr. Johnson prescribed this medication. This is contrary to Dr. Johnson's note on the following visit on February 11, 2022 that Mobic (meloxicam) was prescribed by Claimant's PCM[1]. Based on this information, I find that the need for meloxicam was related to Claimant's preexisting arthritis.

5. The Claimant did have previous radiologic evidence of arthritis in the left knee, but did not have treatment or symptoms in the left knee. Claimant testified that it did not affect her ability to work for her previous employer, Kaiser Permanente. She did not have any treatment for her left knee prior to this work injury. Claimant did have treatment for her right knee prior to this incident, including injections to the right knee.

6. On March 11, 2022, Claimant requested that she be allowed to return to work full duty to see if she had improved enough to work her regular duty job and that the claim be closed. However, she testified that she was not able to do her full duty without pain. So, she sought treatment with P.A. Sheunk via telemedicine on May 5, 2022. She was again prescribed physical therapy. Claimant was also given restrictions of 5 pounds lifting, 10 pounds pushing and pulling and alternating sitting and standing/walking every 15 minutes. P.A. Sheunk ordered an MRI of Claimant's knee.

7. Claimant saw Dr. Peterson on May 27, 2022. He restricted Claimant from working on that date. Claimant has not worked since then. Dr. Peterson recommended an MRI of the knee.

8. Claimant began treating with Dr. Simpson on May 16, 2022. Claimant was referred to him by P.A. Gottus at Concentra. Dr. Simpson recommended a steroid injection at this visit.

---

[1] Presumably, the abbreviation "PCM" refers to patient care management in this context.

9. Claimant testified that she had three PRP (Platelet Rich Plasma) injections that reduced the pain from an 8 out of 10 to 3 out of 10. The interval between the shots were months apart instead of 2 weeks apart. Even though the shots were not properly/timely administered, Claimant said they did help. Based on this, Dr. Simpson recommended another series of 3 PRP injections to be done weeks apart instead of months apart as previously done for the initial series. Dr. Simpson also recommended physical therapy (PT). Claimant testified that the prior PT improved her symptoms.

10. Claimant prefers the PRP injections in order to avoid a 6th surgery in the span of around 15 months. She would also like to prolong the need for a total knee replacement, which has been recommended.

11. Claimant was seen by Dr. Failinger for an IME on July 13, 2023 at the request of Respondents. Dr. Failinger issued an initial report on July 13, 2023 and an addendum on August 6, 2023.

12. The Claimant disputed some on the statements that Dr. Failinger included in his report. Specifically, he recited a statement attributed to Dr. Ciccone that Claimant admitted to having symptomatic arthritis in the left knee that required injections. The Claimant specifically denied this statement from Dr. Ciccone. She also denied some of Dr. Failinger's direct statements including a statement that Claimant had pain in the left knee over the years.

13. It is Dr. Failinger's opinion that the need for PRP injections and physical therapy is due to the Claimant's preexisting osteoarthritis and not due to the incident on February 8, 2022. Exhibit A, pp. 34 – 35.

14. Although Claimant initially denied any treatment or symptoms in her left knee, the Kaiser Permanente records do indicate that she was seen on September 22, 2017 for various conditions including left knee pain. Exhibit H, p. 300. Claimant continued to deny pain in left knee despite the medical evidence to the contrary. Additionally, Kaiser documented pain in left knee requiring a cane due to overcompensating for right knee pain. Exhibit H, p. 309.

15. Another inconsistency between the medical records and Claimant's testimony is with respect to Dr. Johnson's initial encounter with the Claimant. He states in his report that "She has a past medical history of bilateral arthritis in both knees. She gets injections in her knees when needed. The last was 1 year ago. She take meloxicam 15 mg 1 time per day for pain". Exhibit D, p. 46.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v.*

City of Aurora, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a).

The existence of a preexisting condition does not disqualify a claim for compensation if an industrial accident aggravates, accelerates, or combines with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

After reviewing the evidence presented, the ALJ concludes need for PRP injections and physical therapy is not causally related to the work injury and is due to Claimant's preexisting arthritis in the left knee. Having determined that Claimant did not prove the requisite causal nexus, the question of reasonableness and necessity is moot. With respect to the inconsistencies between the medical records from Kaiser and Dr. Johnson and the testimony of the Claimant, I credit the medical records as accurate over the testimony of the Claimant to the contrary.

ORDER

It is therefore ordered that:

1. Claimant's claim for medical benefits for PRP and physical therapy is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 2, 2023

Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant was an "employee" of Respondent within the meaning of § 8-40-202(a)(2), C.R.S., on August 13, 2022.

2. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of employment with Respondent on August 13, 2022.

3. If compensable, whether Claimant established by a preponderance of the evidence entitlement to reasonable and necessary medical benefits causally related to a work-related injury.

4. Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability (TTD) benefits due to a work-related injury from August 13, 2022 until terminated pursuant to statute, rule, or further order. .

5. Determination of Claimant's average weekly wage (AWW).

6. If Claimant proves a compensable injury, whether Claimant established by a preponderance of the evidence the penalties should be imposed pursuant to 7 CCR 1101-3, Rule 3-6, for Respondent's alleged failure obtain and maintain workers' compensation insurance.

7. Whether Claimant has established by a preponderance of the evidence that penalties should be imposed against Respondent for alleged violation of § 8-72-114, C.R.S.

FINDINGS OF FACT

1. Claimant is a 71-year-old woman who has been a dog groomer for more than thirty years. Respondent operates a dog grooming business (the "[Redacted, hereinafter DS]"). In June 2022, Claimant approached [Redacted, hereinafter PB] – Respondent's owner – about working at the DS[Redacted] to supplement her income. On or about June 25, 2022, Claimant and PB[Redacted] agreed Claimant would work at the DS[Redacted] on days Claimant was available, and that Claimant would only groom small dogs. Claimant began working at the DS[Redacted] on August 4, 2022. At the time, Claimant was also working for a different dog grooming business but stopped that position at the beginning of August 2022. Neither party presented evidence that they executed a written contract or other written document setting forth the terms of Claimant's employment status.

2. On August 13, 2022, Claimant was grooming a dog at an adjustable-height grooming table, using a foot pedal that raised and lowered the table. Claimant was sitting on a stool with her knees and feet under the table. While lowering the grooming table,

Claimant's foot became stuck, and the tabletop lowered onto the top of her right knee, trapping it. As a result, Claimant sustained injuries to her knee and right ankle. With the assistance of the other groomers at the DS[Redacted], Claimant freed herself from the table, and rolled off the stool to the floor, landing on her left side. In the process, Claimant sustained a laceration to her left elbow.

3. Respondent was aware of Claimant's injury when it occurred. Respondent did not initiate a workers' compensation claim, and did not provide Claimant with a list of designated providers as required by § 8-43-404 (5)(a)(I)(A), C.R.S. Because Respondent did not provide the required list of designated providers, the right of selection of authorized treating provider (ATP), passed to Claimant.

4. On August 13, 2022, Claimant saw Elizabeth Rosenberg, M.D., at Care Now Urgent Care for an injury to her right knee, right quadriceps muscle, and laceration of her left elbow. Claimant reported the incident as it occurred, including reporting falling to her left side to extricate herself from the table. Claimant reported no other injured body parts. Dr. Rosenberg diagnosed Claimant with a right knee sprain. She noted Claimant had undergone knee replacement surgery in August 2021, and referred Claimant to Robert Thomas, M.D., at Panorama Orthopedics for further evaluation. Dr. Rosenberg recommended a temporary work restriction, limiting Claimant to "primarily seated work." (Ex. 9). Claimant, by her actions, selected Care Now and Dr. Rosenberg as her ATP.

5. On August 22, 2022, Claimant returned to Care Now, and saw Ramon Fernandez-Valle, M.D. Claimant reported her right ankle was also injured, after being forced into dorsiflexion by the grooming table. Dr. Fernandez-Valle noted swelling and slight bruising of the right ankle, and added a diagnosis of right ankle sprain. Dr. Fernandez-Valle indicated Claimant was able to ambulate without the need for a cane, and continued Claimant's temporary work restriction of "primarily seated work" until September 6, 2022. (Ex. 10).

6. On August 24, 2022, Claimant saw Robert Thomas, M.D., at Panorama Orthopedics. Dr. Thomas performed Claimant's total right knee replacement in August 2021. Claimant reported the injury to her right knee and left elbow. Dr. Thomas noted swelling and ecchymosis of the right knee, and the contusion to Claimant's left elbow. Claimant's right knee range of motion was 0-100 degrees. He indicated Claimant sustained no structural damage to the right knee or surrounding structures. He recommended "activities as tolerated" and low-impact exercises, but did not recommend work restrictions. (Ex. 14). By virtue of Dr. Rosenberg's referral, Dr. Thomas was also an ATP.

7. Claimant's next documented medical examination was on January 25, 2023, when she returned to Dr. Thomas. Claimant reported her right knee pain was unchanged, and described it as occurring intermittently, rating a 4/10 in severity, and exacerbated by standing and stretching. Claimant also reported pain while walking. On examination, Dr. Thomas noted an indentation in Claimant's right knee, a "divot in the soft tissue;" tenderness over the joint adjacent to the patella and quadriceps tendon, and a mildly antalgic gait. Claimant's right knee range of motion was noted to be 1-130 degrees. Dr.

Thomas opined Claimant's right knee indentation was likely permanent, and would likely remain painful, but would not cause a true functional deficit. He placed Claimant at maximum medical improvement (MMI), and encouraged Claimant to maintain leg strength. (Ex. 14).

8. On February 3, 2023, Claimant saw Celia Elias, M.D., for an annual wellness examination, at Optima Medical, in Tucson Arizona. Claimant reported her right knee injury. Claimant also reported, for the first time, experiencing left hip and lower back pain. On examination, Dr. Elias noted Claimant's spine was non-tender, and that she had normal range of motion and strength of the upper and lower extremities, with no joint enlargement or tenderness. She noted a large 3-4 cm linear area of indentation on Claimant's right knee, above the patella, with no swelling and good range of motion. Dr. Elias ordered x-rays of Claimant's left hip and lumbar spine, and prescribed ciprofloxacin (an antibiotic) for lower back pain. (Ex. 12). No credible evidence was admitted indicating Claimant's ATPs referred Claimant to Dr. Elias for treatment of her work-related injuries.

9. Claimant underwent a left hip x-ray as ordered by Dr. Elias on February 17, 2023. The x-ray did not show fractures or dislocations, and demonstrated the hip joint spaces were well-preserved. (Ex. 16).

10. On April 27, 2023, Claimant apparently saw Stephen L. Curtin, M.D., at Tucson Orthopaedic Institute. No narrative medical records from this date were offered or admitted into evidence. The exhibits submitted by Claimant indicate a lumbar MRI was ordered for a suspected diagnosis of lumbar radiculopathy. Although two images which appear to be from an MRI were included in Claimant's Exhibit 18, no radiologist report or other interpretation of the images was offered or admitted into evidence. Claimant was apparently then referred for physical therapy for a diagnosis of lumbar spondylosis without myelopathy or radiculopathy. (Ex. 18). No credible evidence was admitted indicating Claimant's ATPs referred her to Dr. Curtin for treatment of her work-related injuries.

11. The record contains no credible evidence that Claimant's complaints of lower back pain or left hip pain, or any treatment or evaluation for those conditions, are causally related to her August 13, 2022 injuries.

12. The treatment Claimant received from ATPs at Care Now Urgent Care and Panorama Orthopedics was reasonable and necessary to cure or relieve the effects of her industrial injury.

13. The treatment Claimant received from Dr. Elias and Dr. Curtain was not authorized, and was not reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

14. As the result of her injuries, Claimant incurred the following medical expenses for treatment that was authorized, reasonable, and necessary to cure or relieve the effects of her industrial injury:

Provider	Date of Treatment	Expenses	Exhibit
Care Now Urgent Care	8/13/22	$456.00	Ex. 11
Care Now Urgent Care	8/22/22	$336.00	Ex. 11
Panorama Orthopedics	8/24/22	$204.00	Ex. 15
Panorama Orthopedics	1/25/23	$204.00	Ex. 15
TOTAL		**$1,200.00**	

Claimant's Employment Status and Wages

15. Claimant worked a total of eight days for Respondent from August 4, 2022 to August 20, 2022. During this time, Claimant performed dog grooming services for Respondent's clients, who were booked and scheduled through Respondent. On the days Claimant was scheduled to work, Respondent required her to be at the dog spa at 9:00 a.m., and to provide services for the times scheduled by Respondent.

16. Respondent employed three people, including PB[Redacted] and two dog groomers (other than Claimant). Respondent considered Claimant an independent contractor. Respondent paid the employed groomers 50% of the amount charged for services, plus tips, and provided the grooming tools necessary to perform their duties. Claimant was paid 55% of the of the amount charged by Respondent for services she performed, plus tips. Respondent provided some equipment necessary for Claimant to work as a dog groomer, including a grooming table, tubs for bathing, towels, shampoo, and blow dryers. Claimant supplied her own grooming tools, including combs, clippers, and blades.

17. Claimant received two paychecks from Respondent. On August 18, 2022, Respondent paid Claimant $376.75 for work performed from August 4 to August 6, 2022. On September 1, 2022, Respondent paid Claimant $665.75 for the period of August 11, 2022 through August 20, 2022. The September 1, 2022 paycheck included tips Claimant received totaling $181.75, and was paid through Respondent's payroll system. (Ex. 20). In total, Claimant received gross wages and tips of $1,042.50 during her 17 days of working for Respondent. Claimant's average weekly wage (AWW) during this time was $429.24 per week (*i.e.*, $1,042.50 ÷ 17 days = $61.32 per day x 7 days = $429.24 per week).

Claimant's Return to Work

18. Claimant worked two days for Respondent the week after her injuries, but did not return after August 20, 2022. Claimant testified she could not continue working due to her pain, and that she remains unable to work.

19. After the August 13, 2022 incident, Claimant consulted with an attorney regarding a possible lawsuit against the table manufacturer. Thereafter, on advice of her attorney, Claimant elected not to return to work for Respondent. PB[Redacted] credibly testified that Claimant told her she was advised not to return to work by her attorney. Claimant testified she did not return to work based on the advice of her physicians and her attorney. However, the admitted medical records demonstrate that Claimant's treating providers provided work restrictions limiting her to "primarily seated work," but did not impose a total work restriction. It was unclear from Claimant's testimony whether she believes she is currently unable to work due to her work-related knee, ankle, and elbow injuries, or whether her inability to return is due to her non-work-related lower back and hip complaints. Notwithstanding, Claimant's testimony that she was and is unable to work as a dog groomer is not credible.

20. No credible evidence was admitted indicating Claimant's treating health care providers have expressed the opinion that Claimant is unable to work as a result of the injuries she sustained on August 13, 2022.

21. At the time of Claimant's injury, Respondent did not have workers' compensation insurance. PB[Redacted] testified that Respondent has since obtained workers' compensation insurance, but did not know if Claimant's claim was covered under that insurance. No insurer entered an appearance, and none of Claimant's medical expenses have been paid by either Respondent or a workers' compensation insurance carrier. The ALJ finds that Respondent did not have the required workers' compensation insurance for coverage of Claimant's injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant must prove entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the ALJ's exclusive domain. *Univ. Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Employee vs. Independent Contractor Status

Pursuant to § 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession or business related to the service performed." Claimant has established by a preponderance of the evidence that she provided services to Respondent and was paid for her services. Thus, Claimant is a presumptive employee under § 8-40-202 (2)(a), C.R.S.

A putative employer may establish a presumed employee is an independent contractor by proving the presence of some or all of the nine criteria enumerated in § 8-40-202(2)(b)(II), C.R.S., to prove independence. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). These nine criteria are that the putative employer must not:

> (A) Require the individual to work exclusively for the person for whom services are performed; except that the individual may choose to work exclusively for such person for a finite period of time specified in the document;
>
> (B) Establish a quality standard for the individual; except that the person may provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed;
>
> (C) Pay a salary or at an hourly rate instead of at a fixed or contract rate;
>
> (D) Terminate the work of the service provider during the contract period unless such service provider violates the terms of the contract or fails to produce a result that meets the specifications of the contract;
>
> (E) Provide more than minimal training for the individual;
>
> (F) Provide tools or benefits to the individual; except that materials and equipment may be supplied;

(G) Dictate the time of performance; except that a completion schedule and a range of negotiated and mutually agreeable work hours may be established;

(H) Pay the service provider personally instead of making checks payable to the trade or business name of such service provider; and

(I) Combine the business operations of the person for whom service is provided in any way with the business operations of the service provider instead of maintaining all such operations separately and distinctly.

§ 8-40-202(2)(b)(II), C.R.S.

If the parties have executed a written document that demonstrates by a preponderance of the evidence the existence of these factors, the document creates a rebuttable presumption of an independent contractor relationship between the parties. § 8-40-202 (2)(b)(III) and (IV), C.R.S. Neither party presented evidence that the parties executed such written document.

Because the evidence establishes Claimant was performing services for pay, and there is no written document establishing Claimant's independent contractor status, the burden of proof rests upon Respondent to rebut the presumption that Claimant was an employee. *Baker v.* BV *Properties, LLC,* W.C. No. 4-618-214 (ICAO, Aug. 25, 2006). The question of whether respondent has overcome the presumption is one of fact for the ALJ. *Nelson v. Indus. Claim Appeals Office, supra; Indus. Claim Appeals Office v. Softrock Geological Servs., Inc*., 325 P.3d 560 (Colo. 2015)

The statute creates a "balancing test," but does not establish a precise number or combination of factors that must be established to rebut the presumption of employment. *Allen v. America's Best Carpet Cleaning Serv.*, W.C. No. 4-776-542 (ICAO Dec. 1, 2009). C.R.S. *Donahue v. Danley Investigations*, W.C. No. 4-698-600 (ICAO Feb. 5, 2008). The ALJ must determine "as a matter of fact whether or not particular factors are present, and ultimately, whether the claimant is an employee or independent contractor based on the totality of the evidence concerning the statutory factors." *Allen, supra*.

Respondent has failed to prove by a preponderance of the evidence that Claimant was not an "employee" within the meaning of the Colorado Workers' Compensation Act. Respondent did not establish that the parties maintained separate and distinct business operations. Instead, Claimant's services were incorporated into Respondent's business operations in several respects. Claimant provided grooming services for Respondent's clients, and was assigned clients by Respondent. Respondent dictated the time of performance, by requiring Claimant on the days she worked to be at the DS[Redacted] at 9:00 a.m., and working at the time clients were scheduled by Respondent. Respondent provided some tools, and supplies, such as blow dryers, towels, and shampoo. Respondent paid Claimant in the same manner as her other employees, although at a higher percentage of revenues generated. Respondent also paid Claimant personally,

and at least once through Respondent's payroll system. Finally, no credible evidence was admitted indicating that Respondent could only terminate Claimant for violating the terms of a contract, or failed to meet results specified in a contract.

Several factors weigh in favor of independent contractor status, such as Claimant's long history as a professional dog groomer, providing her own grooming tools, requiring no training or supervision in dog grooming. These factors, however, are more indicative of Claimant's experience in the field than her employment status. The ALJ finds these factors outweighed by the other factors discussed above. Based on the totality of the evidence, the ALJ concludes that Claimant was an "employee" and not an independent contractor.

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. § 8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, WC 4-898-391-01, (ICAO Aug. 25, 2014).

Claimant has established by the preponderance of the evidence that she sustained compensable injuries to her right knee, right ankle, and left elbow arising out of the course of her employment with Respondent, while grooming a dog. Respondent admitted the August 13, 2022 incident occurred, and that Claimant sustained some injury. Claimant immediately sought treatment for her knee and elbow, and had objective evidence of injury to her right ankle at her August 22, 2022 visit at Care Now.

Claimant has failed to establish by a preponderance of the evidence that she sustained compensable injuries to her lower back or left hip arising out of the course of her employment with Respondent. Claimant did not report injuries to her hip or lower back in her four visits with her ATPs. The first documented complaints of lower back and hip pain were to Claimant's primary care doctor, Dr. Elias, on February 3, 2023, nearly six months after her initial injuries. Notwithstanding the delay in reporting symptoms, none of Claimant's treating providers have credibly opined that Claimant's hip and lower back conditions are causally-related to the August 13, 2022 incident.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits to cure or relieve the effects of her industrial injury. Specifically, Claimant is entitled to medical benefits directed toward her right knee, right ankle, and left elbow injuries. Respondent is responsible for and shall pay general medical benefits that are reasonable and necessary to cure or relieve the effects of Claimant's August 13, 2022 industrial injuries to her right knee, right ankle, and left elbow. Because Claimant has been placed at MMI, these expenses are limited to the authorized, reasonable, and necessary treatment rendered to date.

Claimant's Medical Expenses to Date

Claimant's post-MMI treatment is not compensable because the treatment was not "authorized." Compensable medical treatment must be reasonable, necessary, and provided by an "authorized" treating physician. "Authorization" is a physician's legal status to treat an industrial injury at the respondents' expense. *Bunch v. Indus. Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Popke v. Indus. Claim Appeals Office,* 944 P2d. 677 (Colo. App. 1997).

The Act requires respondents to provide injured workers with a list of at least four designated treatment providers. § 8-43-404(5)(a)(I)(A), C.R.S. WCRP 8-2 (A)(2) clarifies that the designated provider list must be provided within seven (7) business days after the employer has notice of the injury. If the employer does not timely designate an ATP, the right of selection passes to the claimant. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987), *see also* W.C.R.P. 8-2 (E). An employer is notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Indus. Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

Once an ATP is established, a claimant may not seek treatment from other physicians without obtaining permission from respondents or an ALJ, unless the new physician is in the chain of referral from an ATP. If a claimant does change physicians, respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999)

Respondent had knowledge of Claimant's injury on August 13, 2022, and did not provide a designated provider list. Consequently, the right of selection passed to Claimant. Claimant pursued treatment from Dr. Rosenberg and Care Now Urgent Care.

Therefore, Dr. Rosenberg was Claimant's ATP. Dr. Thomas was also an ATP by virtue of Dr. Rosenberg's referral. Claimant's treatment at Care Now on August 13, 2022, and August 22, 2022, and from Dr. Thomas on August 24, 2022 and January 25, 2023 was "authorized" under the Act. The care was also reasonable and necessary to cure or relieve the effects of her industrial injury.

No credible evidence was admitted showing that Dr. Rosenberg or Dr. Thomas referred Claimant to Dr. Elias or Dr. Curtin, or recommended additional medical care or diagnostic studies after Claimant reached MMI on January 25, 2023. There is no evidence that Claimant sought or obtained permission to change ATP, or to designate Dr. Elias or Dr. Curtin authorized as an ATP. Consequently, any care Claimant received after January 25, 2023, was not "authorized," or compensable.

Respondent shall pay for medical treatment Claimant received from Care Now on August 13, 2022, and August 22, 2022, and from Panorama Orthopedics on August 24, 2022 and January 25, 2023.

Temporary Total Disability

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103 (1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

The Workers' Compensation Act prohibits a claimant from receiving temporary disability benefits if the claimant is responsible for termination of the employment relationship. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, (Colo. App. 2008); §§ 8-42-103(1)(g), 8-42-105(4)(a), C.R.S. The termination statutes provide that where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006).

"Under the termination statutes, sections 8-42-103(1)(g) and 8-42-105(4), an employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from

employment." Gilmore, 187 P.3d at 1132. "Generally, the question of whether the claimant acted volitionally, and therefore is 'responsible' for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances." *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987); *Windom v. Lawrence Construction Co.*, W.C. No. 4-487-966 (November 1, 2002). *In re Olaes*, WC. No. 4-782-977 (ICAP, April 12, 2011). Implicit in the termination statutes is a requirement that Respondents prove Claimant committed an "act" which formed the basis for his termination. Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Claimant has failed to establish by a preponderance of the evidence an entitlement to TTD benefits. Claimant returned to work for Employer for one week after the August 13, 2022 injuries, and did not return after August 20, 2022. No evidence was presented that Respondent terminated Claimant. Claimant testified she did not return based on the recommendations of her physicians, and because she could not physically perform the job. However, that testimony is not credible, and Claimant offered no cogent explanation as to why she could not perform her job as a dog groomer due to her knee, ankle, or elbow. The medical evidence indicates that none of Claimant's treating physicians placed work restrictions upon her that would prevent her from performing her work as a dog groomer. The only restriction was that Claimant should work from a seated position. Claimant offered no evidence that she Claimant has failed to establish that she sustained a disability which prevented her from performing or returning to her employment as a dog groomer after August 20, 2022.

The ALJ also finds that Claimant voluntarily terminated her employment on August 20, 2022 for reasons other than the physical limitations placed upon her by the work-related injury. Specifically, Claimant did not return to work based on the advice of her attorneys because she intended to pursue a civil suit against the manufacturer of the dog grooming table. Claimant was, therefore, responsible for her own termination, and the resulting loss in income after August 20, 2022.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's average weekly wage (AWW) based on a claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the default method for calculating AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., establishes the so-called "discretionary exception," which affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Benchmark*/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., *supra*; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007).

As found, Claimant's average weekly wage at the time of injury was $429.24.

Penalties

Failure to Maintain Insurance

Claimant seeks penalties for Respondents' failure to maintain workers' compensation insurance but has not specified the statute for those penalties. The references in Claimant's Application for Hearing and Position Statement to "7 CCR 1101-3-6," are presumed to refer to 7 CCR 1101-3, Rule 3-6. WCRP Rule 3-6 provides guidance to Director of the Division of Workers' Compensation (DOWC) on imposing fines after determining an employer failed to obtain or maintain workers' compensation insurance under § 8-43-409, C.R.S. While this section allows the Director to impose fines, it does not grant a claimant the right to assert a penalty claim.

Section 8-43-409 (1) outlines the Director's role in investigating and notifying employers about their default in insurance obligations, and it authorizes the Director to set the issue for a hearing according to established procedures. Under the statute, "it is the role of the director to conduct a preliminary investigation and determine whether the matter should be set for a hearing before an ALJ on the issue of whether to impose a fine for an employer's failure to maintain workers' compensation insurance." *Gant v. Etcetera*, W.C. No. 4-586-030 (ICAO Sep. 17, 2004). It is the Directors' prerogative to decide if a hearing is "necessary." Therefore, the actions authorized by § 8-43-409 (1), are for the Director, and not an ALJ at the request of a claimant. *Id.*

Furthermore, fines imposed under § 8-43-409 (or 7 CCR 1101-3, Rule 3-6) "are not intended as a remedy to injured claimants whose employer is uninsured." *Gant, supra*. Instead, fines collected by the Director are go to the state treasurer, who credits the "total amount of the fine to the Colorado uninsured employer fund…." § 8-43-409 (7), C.R.S. Because neither 7-CCR 1101-3, Rule 3-6, nor § 8-43-409, C.R.S., authorize a claimant to seek penalties for a respondent's failure to maintain workers' compensation insurance, Claimant's request for penalties is denied.

Alleged Violation of § 8-72-114, C.R.S.

Claimant has not shown a basis for imposing of penalties for an alleged violation of § 8-72-114, C.R.S. The "penalty" Claimant asserts does not arise under the Workers' Compensation Act, and may not be imposed by ALJ or the DOWC.

ALJs are limited to the "jurisdiction, powers, duties, and authority" provided by the Workers' Compensation Act. *Lewis v. Scientific Supply Co., Inc.*, 897 P.2d 905, 908 (Colo. App. 1995). The Act confines that authority to issues arising under articles 40 to 47 of title 8. § 8-43-207 (1), C.R.S. Section 8-43-304 (1), C.R.S., authorizes penalties in cases involving violations of articles 40 to 47 of title 8; failure to perform lawfully imposed duties within the time prescribed the director[1], and failure to obey lawful orders, judgments, or decrees. Because an ALJ lacks authority to create a "penalty" where none exists, penalties not enumerated in the Act may not be imposed. *See Baker v. Weld County School Dist.*, W.C. No. 4-993-326-004 (ICAO April 20, 2021).

[1] The "director" is the director of the DOWC. See § 8-40-201 (5), C.R.S.

Claimant does not seek a penalty under the Workers' Compensation Act. Instead, Claimant alleges Respondent "willfully misclassified [Claimant's] arrangement, pursuant to C.R.S. § 8-72-114." Section 8-72-114 falls under the Colorado Employment Security Act,[2] which is administered by the Colorado Division of Unemployment Insurance ("DOUI") and its Director. § 8-71-102, C.R.S.

Section 8-72-114 allows the DOUI Director[3] to investigate misclassification complaints and impose fines for willful misclassification of employees in the context of unemployment insurance. § 8-72-114 (3)(e)(III)(a), C.R.S. The statute does not confer authority on the DOWC or its Director in any respect. It also does not permit a workers' compensation claimant to recover penalties for its alleged violation. Claimant has cited no authority otherwise. Because the requested "penalty" is not within articles 40 to 47 of title 8, the ALJ may not impose it.

Claimant's request to refer the matter "to the Director of Workers' Compensation for further review or [to] obtain permission from the Director to allow the [ALJ] to enforce this matter pursuant to § 8-72-114(IV)(c)(9)[4]," is unfounded. The ALJ presumes Claimant seeks this remedy under § 8-72-114 (9)(a), which states: "Subject to the approval of the executive director, the director may enter into an interagency agreement with the department of law for assistance in enforcing this section." The "director" referenced is the DOUI Director, not the DOWC Director. The statute does not empower the DOWC or Director to provide such permission. Moreover, the Office of Administrative Courts is not part of the department of law. The statute does not provide Claimant a remedy.

Claimant's request for "penalties" for an alleged violation of § 8-72-114, C.R.S. under the Colorado Employment Security Act is denied.

ORDER

It is therefore ordered that:

1. Claimant was an "employee" of Respondent within the meaning of the Colorado Workers' Compensation Act on August 13 2022.

2. Claimant sustained compensable injuries to her right knee, right ankle, and left elbow arising out of the course of her employment with Respondent on August 13, 2022.

3. Respondent shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant's industrial injuries to her right knee, right ankle, and left elbow.

---

[2] § 8-70-101, C.R.S.

[3] The "division" and "director" referenced in § 8-72-114 are the Division of Unemployment Insurance, § 8-70-103 (8), C.R.S.; and its director, § 8-72-114 (2)(c), C.R.S.

[4] Section 8-72-114(IV)(c)(9), C.R.S., does not exist.

4. Respondent shall pay for the medical treatment Claimant received from Care Now Urgent Care on August 13, 2022 and August 22, 2022, and for treatment Claimant received from Panorama Orthopedics on August 24, 2022, and January 24, 2023.

5. Claimant's request for temporary disability benefits is denied.

6. Claimant's average weekly wage at the time of her injury was $429.24.

7. Claimant's request for penalties under 7 CCR 1101-3, Rule 3-6, for failure to maintain workers' compensation insurance is denied.

8. Claimant's request for penalties for alleged non-compliance with § 8-72-114, C.R.S., is denied.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-173-570-001

ISSUES

I. Whether Respondent has proven by clear and convincing evidence that the Division Independent Medical Examination (DIME) physician, Dr. Hugh Macaulay, was incorrect in his opinion regarding causation, maximum medical improvement (MMI) and permanent impairment.

II. If Respondent overcame the DIME physician's opinion with regard to MMI, what is the MMI date?

III. If Respondent overcame the DIME physician's opinion with regard to permanent impairment, what is the permanent partial disability benefit?

IV. Whether Claimant has shown by a preponderance of the evidence she is entitled to medical benefits reasonably necessary and related to the injury of March 24, 2021.

V. Whether Claimant has shown by a preponderance of the evidence that she is entitled to reimbursement of out of pocket medical expenses.

VI. Whether Claimant has shown by a preponderance of the evidence that she is entitled to interest of eight percent (8%) for benefits which were not paid when due, pursuant to Sec. 8-43-410(2), C.R.S. in accordance with D.O.W.C. Rule 12.

PROCEDURAL HISTORY

Respondent filed a Final Admission of Liability (FAL) on August 18, 2022 pursuant to Dr. O'Toole's report of August 9, 2022, which provided a 0% impairment and admitted to reasonably necessary and related maintenance medical benefits. The parties disclosed that Claimant objected to the FAL and applied for a DIME. Dr. Macaulay was selected to perform the DIME.

Respondents filed an Application for Hearing on March 21, 2023 on issues which included overcoming the DIME physician's MMI and impairment determinations.

Claimant filed a Response to Application for Hearing on issues that included upholding the DIME physician's opinions, medical benefits, permanent partial disability benefits, out of pocket expenses and interest on benefits which were not paid when due.

Claimant requested this ALJ take judicial notice of the Rules of Evidence, specifically W.C.R.P. Rule 12; the Medical Treatment Guidelines for Traumatic Brain Injury, W.C.R.P. Rule 17, Exhibit 2A; and the *AMA Guides to the Evaluation of Permanent Impairment*, Third Edition (*Revised*), Chapter 3, Table 53.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally

1. Claimant was 35 years old at the time of the hearing and reported she had worked as a Social Caseworker II for Employer since 2016. She would travel to and from clients' homes, complete reports, enter data into their system and prepare letters for the court, among other things.

2. On March 24, 2021, towards the end of the day, Claimant was coming to a stop when she was rear-ended in a motor vehicle accident (MVA) in the course and scope of her employment with Employer. This was not contested. The police was called to the scene of the accident in Fort Collins, off of Prospect and Riverside, and the parties exchanged insurance information.

3. While still at the scene of the accident, Claimant called her supervisor to report the accident. Claimant also called the client, she was in-route to, to cancel the appointment. Claimant took pictures of the vehicle to document the damage. Claimant was driving a Toyota Rav 4 and was hit by a Chevrolet Trailblazer. Claimant then proceeded to her mother's house in Greeley, CO, where her child was being cared for. At the time of the accident Claimant had been living with her partner in Windsor, Colorado.

4. Claimant reported that she went to the emergency room that evening, after the accident, because she had developed a headache and felt her speech was becoming slurred. She felt her processing was beginning to slow down, her neck was hurting and parts of her back were also hurting. She was also having visual disturbances though not quite double vision or blurred vision. She also reported having light sensitivity. She did not believe she had any loss of consciousness and the airbags did not deploy during the accident.

B. Prior Work Injury

5. The Division of Workers' Compensation file shows Claimant was injured on July 31, 2012. It listed the lumbar spine and sacral as body parts injured.

6. Claimant was placed at MMI as of February 14, 2013 by Dr. Gregory Reichhardt of Rehabilitation Associates of Colorado. He noted Claimant continued to have some low back pain on the right side and was taking medication (Tramadol). Her knee pain had resolved. Dr. Reichhardt provided a diagnosis of low back pain caused by bending over and picking up a basket with an MRI demonstrating a mild L4-5 disc bulge without nerve root impingement and mild right foraminal encroachment. He recommended maintenance medical benefits including follow ups, laboratory tests and medication, which she was taking one tablet up to three times a week.

7. A Final Admission of Liability was filed on April 2, 2013 for 8% whole person impairment paying an amount of $13,176.03 at $239.40 per week for 55 weeks.

8. On February 16, 2015 Dr. Reichhardt noted that Claimant may require greater than the two years of maintenance care previously anticipated.

9. On May 23, 2017 Claimant was seen at the UCHealth Internal Medicine Clinic for back pain and a request for physical therapy.

10. On April 4, 2018 PAC Kathryn Milizio last review Claimant's problem list, which included "back pain, thoracic (midback) -- chronic issue, and the UCHealth ER staff included it in their March 24, 2021 report. They also included, under "Past Medical History," that Claimant had a history of back pain.

11. On January 27, 2019 Claimant had an incident where she had neck pain and a tingling sensation on her right cheek. Claimant was cleared and was advised to see her primary provider. The head and neck CT were negative.

12. No other records were provided in the interim between the last 2019 visit and Claimant's MVA.

C. Medical Records

13. Claimant proceeded to the emergency room (ER) at UCHealth in Greeley, CO on March 24, 2021 where the ER staff documented she complained of headaches, neck pain and low back pain, though her exam was within normal limits, including range of motion. She provided a history of rolling to a stop at approximately 10 miles per hour when she was rear-ended by another vehicle travelling approximately 30 miles per hour. She reported development of diffuse head pain following the MVA as well as neck pain especially to the right lateral aspect of her neck. She also reported feeling nausea right after the crash. Claimant was injected with Norflex, a muscle relaxant, and Ketorolac (Toradol), an inti-inflammatory drug and released.

14. On March 30, 2021 Claimant was seen at ESP, where she reported an MVA consistent with prior history recorded. She was complaining of pain in her head, neck, back and right side of her rib cage. They also noted sensitivity to light, muscle spasms, fatigue, stiffness and tightness, mood changes, insomnia and irritability. At that time, she believed that she had been diagnosed with a concussion and whiplash in the ER but had no structural injuries. She was also complaining of problems sleeping, difficulty with screen time for extended periods, and getting comfortable, with a pain of 5/10 to 8/10. She noted numbness in both hands, around the little finger on the right and around the thumb on the left. She reported pain that was deep, shooting, constant, and sharp with stabbing, throbbing, weakness and numbness. Things that made her pain worse included light, movement, lifting, twisting, sitting, standing, time on screens, and driving. She was provided with myofascial release to the head, neck, shoulders, and back by Kim Schemahorn, LMT.

15. On April 8, 2021 Claimant was evaluated by Dr. Kevin O'Toole of UCHealth Harmony. Dr. O'Toole took a history consistent with Claimant's testimony. She reported symptoms of low back soreness and tightness and developed a headache, upset stomach and tightness in the neck approximately 30 minutes following the accident. She did not want to move a lot, she described muscle spasms and tingling. Claimant reported she continued working though was taking rest breaks as needed and was limiting her screen time. At the time of the exam, she was complaining of light sensitivity, stabbing headache pain behind her eyes, neck stiffness, fatigue, losing track of time, back spasm, swollen limbs, could not feel her ring and small finger, sore shoulder blades, right rib cage soreness, poor sleep, and slow processing. She reported that she normally had an excellent memory and was very quick. She denied having prior work restrictions. She

reported recreational activities of playing softball, dancing, fishing, camping, hiking, and enjoying family and friends.

16. During the visit at UCHealth Harmony, she requested that the lights be turned off in the exam room. On exam, Dr. O'Toole noted that Claimant had some aversion to the light of the otoscope as well as had jerky movements during eye exam. He noted allodynia over the cervical spine musculature and right supraclavicular space, and loss of range of motion. Otherwise she had a normal neurologic exam including a normal Romberg test, though she was withdrawn by the end of the visit. Dr. O'Toole assessed neck pain, headaches above the eye region, photophobia of both eyes, acute bilateral thoracic, low back and rib pain, right hand paresthesia and vestibular equilibrium. He referred claimant for medical massage, biofeedback, and vestibular therapies, as well as for a neuropsychological evaluation with Dr. Gregory Thwaites. He provided work restrictions and medications and commented that Claimant's subjective complaints were greater than expected from a low velocity MVA. He was concerned about symptom magnification and questioned the consistency of the subjective complaints. He specifically noted that "her response to the change in treating provider is a significant red flag for delayed recovery" and that the work relatedness of the injuries were only "tentatively and weakly supported."

17. Claimant was treated by Michelle Hykes, RMT, of Medical Massage of the Rockies, who documented Claimant had a concussion, was sensitive to light, memory loss, headaches, timeless, thought processing, whiplash, cervical pain, mid-back pain, stabbing pain, and pain in her rib region. She noted Claimant had spasms in her lumbar spine, and swelling in her extremities. She recommended further massage treatment.

18. On May 11, 2021, the claimant was seen by neuropsychologist Gregory Thwaites, Ph.D. Claimant reported disequilibrium when standing, which she stated she reported to the ER physician. She reported that she walked very "specifically and deliberately" because her gait was "very off." She described that she experienced light sensitivity and dysarthric speech, both of which began before or upon arrival to the ER, and blurred vision, since the evening of the accident.

19. Dr. Thwaites noted that overall neuropsychological testing at 21 one days was unremarkable other than subtle difficulties with speed processing. Dr. Thwaites opined Claimant would benefit from seeing a clinical psychologist with experience in delayed recovery and who had experience in psychological factors contributing to a medical condition. He noted that "This would assist with differential psychological diagnosis, apportionment, and treatment planning." He stated that diagnosis and treatment of headache and pain complaints were outside his area of expertise and he would defer to the medical team regarding the headache complaints. He did recommend a sleep study and labs outside of the workers compensation system.

20. Dr. Thwaites determined that the claimant did not sustain a concussion in the motor vehicle accident. He certified that he spent one (1) hour reviewing the records and dictating his nine (9) page report.

21. On June 16, 2021 Dr. O'Toole recommended continued medical massage for additional visits.

22. Claimant treated with a chiropractor at Colorado Chiropractic and Sports Injury Specialists beginning June 30, 2021. Dr. Scott Parker diagnosed cervicothoracic and lumbar strain and pain complaints. He treated her with manual traction, soft tissue mobilization, neuromuscular reeducation, and kinesiologic joint mobilization at least through July 2021. He advised to apply ice, take Epson salt baths, be involved in functional activities and home self-management techniques, and recommended further chiropractic care.

23. On July 21, 2021 Claimant was evaluated by Lynn Parry, M.D., a neurologist, at Claimant's request. She recounted the mechanism of injury consistent with Claimant's testimony. On her physical examination she noted findings that were "consistent with a skew deviation[1] or ocular nerve paresis." She also found issues with paracervical musculature, lumbar spine musculature and right sacroiliac joint. She felt that the findings were consistent with a mild traumatic brain injury or vestibular concussion. She noted that Claimant had both cervical and low back strains as well as headaches that had a postconcussive and cervicogenic components.

24. Dr. Parry diagnosed probable brainstem concussion with residual oculomotor and vestibular pathway dysfunction, cervical strain, post-concussive headaches, cervicogenic headaches and low back strain. She recommended radiographs of the cervical and lumbar spines and a brain MRI, an ENT evaluation, neuroptometric evaluation, physical therapy and holding further neuropsychometric evaluation until all of the issues had been addressed. She noted that neuropsychiatric evaluations were not helpful early in recovery from any type of TBI unless there were specific areas of dysfunction that were better identified of specific deficit. Overall function could not be reliably assessed because of recurring injuries.

25. Jason R. Meyer, M.D., of Eye Center of Norther Colorado, documented Claimant was having double vision and light sensitivity, in addition to dizziness, headaches, blurred vision, with possible post-concussion related to the March 24, 2021 accident. Following the eye exam, he recommended Claimant be seen by Dr. Arnold regarding the double vision and possible phoria.[2]

26. Claimant had an audiology evaluation by Rachel White, Au.D. of All About Hearing on August 17, 2021 and was tested with a videonystagmography. She found Claimant had VOR Dysfunction,[3] diagnosed dizziness and giddiness as well as unspecified disorder of vestibular function of the right ear and recommended vestibular therapy.

27. Claimant was evaluated by Blake J. Hyde, M.D. of Alpine Ear, Nose Y Throat and issued a report on August 21, 2021. Dr. Hyde noted that Claimant presented for lingering overt dizziness/vertigo sensation with certain head movements suspicious for BPPV which was not active on exam that day, possibly recently treated as well as generalized imbalance and "on a boat" sensation. He recommended VNG and VEMP test

---

[1] This ALJ infers that a skew deviation is a neurological condition characterized by a vertical misalignment of the eyes.

[2] This ALJ understands that "phoria" is a type of eye misalignment or latent deviation of the eyes while the eyes are open and can be caused by mTBI.

[3] Vestibulo-Ocular Reflex Dysfunction.

to clarify peripheral versus central but strongly suspicious for central etiology with her residual symptoms and characteristics.

28. Claimant returned for VEMP[4] testing on September 16, 2021 with Cheryl Hadlock, Au.D., and she found that Claimant had left ear reduced function of the vestibular nerve.

29. On September 22, 2021 Dr. Hyde determined that Claimant had developed dizziness following the MVA, which persisted, consistent with left weakness isolating to the saccule which leads to the type of symptoms she was experiencing like rocking on a boat.

30. Claimant returned to Dr. O'Toole who continued to assess headaches, neck pain, thoracic back pain, vestibular disequilibrium, diplopia (double vision) and alternating exotropia.[5]

31. Claimant proceeded with therapy with Hannah Lamitie, M.S., P.T. of Alpine from September 27, 2021, including balance stability.

32. On November 3, 2021 Dr. O'Toole noted that Claimant continued to take a rest break at least once per day. She continued physical therapy, continue massage therapy and vestibular therapy.

33. Claimant had a CT on November 4, 2021 and read by Dr. Nathan Kim, which showed normal temporal bones.

34. Patrick D. Arnold, M.D. of Eye Center of Norther Colorado noted on November 24, 2021, that Claimant continued to complain of blurry vision, both for near and far vision. His impression was alternating exotropia and convergence insufficiency in both eyes secondary to concussion. He recommended continued orthoptics therapy.

35. On December 1, 2021 Dr. O'Toole was recommending continued massage therapy and would request authorization for additional visits. He continued to diagnose headaches above the eye region, neck, thoracic and lumbar pain, and vestibular disequilibrium.

36. J. Raschbacher, M.D. issued a Rule 16 medical record review report on December 7, 2021. He opined that Claimant did not have any diagnosis related to the MVA and did not require further massage treatment under the work related claim.

37. On February 4, 2022 Dr. O'Toole noted that Claimant was diagnosed with headaches and convergence insufficiency and should continue with computer orthoptics treatment. The following visit on March 29, 2022 he noted that Claimant reported she still had some headaches associated with neck pain and tightness. He noted that she had done well with the central vision tasks but was having difficulty with peripheral vision tasks. He assessed improved headaches above the eye region, improved neck pain and stiffness as well as improving convergence insufficiency. He ordered her to take rest breaks as needed, perform light aerobic exercises daily, and continue with orthoptics with Dr. Arnold.

---

[4] Vestibular-evoked myogenic potential testing

[5] This ALJ infers that alternating exotropia is a misalignment of the eyes.

38. Claimant was evaluated by Dr. Arnold on August 2, 2022. He diagnosed her with convergence insufficiency secondary to concussion. He stated that Claimant had improved but had been unable to complete her computer orthoptics. He stated she could discontinue them and restart computer orthoptics if she was having more trouble in the future.

39. On August 9, 2022, Dr. O'Toole placed Claimant at MMI with no impairment and ordered maintenance medical benefits. This exam was done via video over a 15-minute period, with no range of motion (ROM) testing. It also included time to write the actual report.

40. On November 28, 2022 Dr. Hugh Macaulay performed a Division Independent Medical Examination (DIME) of Claimant for consideration of Claimant's complaints, with chief symptoms from the MVA of cervical thoracic and lumbar pain, and vertigo. Dr. Macaulay reviewed the medical records and took a history consistent with Claimant's testimony.

41. Dr. Macaulay documented that Claimant complained of problems thinking, including memory, scattered thinking, and tracking; change in behavior, including a short fuse, lessened focus, sleep difficulties and exhaustion; neck and upper back pain, lower back pain and headaches. She noted that she had extremity numbness and tingling, which resolved with treatment. Dr. Macaulay documented that Claimant had frequent problems with dizziness, slurred speech and memory loss, some degree of motion sickness or vertigo, discomfort in her shoulders and occasional discomfort in her arms, elbows and wrists, in the lower extremities as well extending from the hips to the feet. Claimant reported that she had improvement from the time of her injury but continued to have multiple difficulties.

42. She benefited from physical therapy, massage therapy and chiropractic care, which was ultimately discontinued due to Claimant's lack of noticeable progress. She also benefited from medications and muscle relaxants, ice and heat, which she continues to use, vision therapy, vestibular therapy and a TENS unit.

43. Dr. Macaulay commented that Claimant felt her ATP, Dr. O'Toole, was very perfunctory in his follow up evaluations and dismissive of her complaints, just checking boxes.

44. On exam, Dr. Macaulay noted that Claimant had a somewhat slow gait, but appeared normal, with decreased sensation over the left lateral thigh compatible with meralgia paresthetica, mild paracervical tenderness with functional range of motion, mild parathoracic muscular tenderness, functional lumbar range of motion, mild paralumbar tenderness and an unremarkable Faber's test.

45. Claimant informed Dr. Macaulay that she had moved in with her mother because she could not do all the cooking and cleaning, and pay all her bills. She explained that her co-workers have had to help her, whereas before she was able to do things alone. She noted tightness, achiness, and shooting pains in her lumbar, thoracic, and cervical spine regions. She reported a "dead feeling" in her left thigh for the previous couple months.

46. He specifically cited to the MTGs, Section D.8 which states that "If a patient has persistent symptoms or complaints at 60 days and the initial portion of this guideline has been completed, it is suggested that a referral be made to a neurologist or physiatrist with extensive experience in mTBI treatment."

47. Dr. Macaulay found Claimant "not at MMI," indicating that she needed additional diagnostic evaluations and treatment for her work-related injuries. He recommended a psychological evaluation and impairment rating, a neuropsychological evaluation, and MRI of her brain, a CT of her temporal bone, a neurological consultation for determination of mTBI, an ENT follow-up for determination of etiology of vertigo, an ophthalmology follow-up for her convergence dysfunction and impairment rating, x-rays of the cervical, thoracic, and lumbar spine, and an MRI of those areas if clinically indicated.

48. Bruce Morgenstern, M.D., a neurologist, performed a record review on March 23, 2023 at Respondent's request. He described a concussion as follows:

> A concussion is a subset of mild traumatic brain injury resulting from biomechanically induced physiologic disruption of brain function. Concussion is characterized by the fifth immediate and typically transient onset of cognitive and memory symptoms such as alteration in mental state, confusion, disorientation, or post-traumatic antegrade or retrograde amnesia, typically lasting less than twenty-four hours. Concussion may or may not involve loss of consciousness, and Intracranial imaging and the neurological exam are typically normal.

49. Dr. Morganstern opined that Claimant did not meet the criteria of a concussion. He further stated that it was based on the lack of findings or documentation in the initial presentation at UCHealth and then at the appointment with Dr. O'Toole of April 8, 2021 that described a patient that continued to work, though complained of head pain, neck stiffness fatigue, back spasms, sore shoulder blade, right rib cage soreness and insomnia and slowed mental processing. He attributed Claimant's symptoms to long COVID sequelae sustained some four months or so before the MVA, which is not documented in any of the medical records submitted to this ALJ other than referenced based on information provided by Claimant to other providers.[6] He stated that there was no documentation to support the diagnosis of concussion and disagreed with Dr. Parry's diagnosis. He also opined that Claimant's headaches post-MVA were disproportionate to her initial trauma, and that the whiplash neck pain sustained in the MVA should have resolved within six months.

50. William Boyd, Ph.D. performed a neuropsychological evaluation at Respondent's request, on April 13, 2023, and issued a supplemental report on July 20, 2023. Claimant reported a diffuse pattern of cognitive difficulties including memory problems, difficulties with attention and concentration, and possible confusion. She complained about memory problems, had low tolerance for frustration, did not cope well with stress, and experienced difficulties in attention and/or concentration on her MMPI-3[7]

---

[6] This ALJ only found that COVID symptoms were reported to Dr. Thwaites and Dr. Morganstern extrapolated from there.

[7] The MMPI-3 stand for Minnesota Multiphasic Personality Inventory-3. This ALJ infers that it is a tool used by neuropsychologists to assess psychological aspects of a patient's individual personalities and psychopathology.

protocol testing. There were no indications of emotional-internalizing dysfunction, disordered thinking, and maladaptive externalizing. He ultimately opined, based on all testing, that Claimant did not suffer from a concussion based on the lack of medical records documentation, the fact that Claimant did not hit her head and there was no loss of consciousness. He further stated that, even if there were neurocognitive problems that they had resolved by the time Claimant underwent the neuropsychological testing.

51. On May 31, 2023 Dr. Kathleen D'Angelo of Advanced Medical and Forensic Consultants was retained by Respondents to conduct an Independent Medical Evaluation and examination. She provided a lengthy medical records review and provided critique of Claimant's reports of symptoms as well as some commentary regarding discrepancies in the records. For example, she stated that there were contradictions regarding gait discrepancies, noting that "while significant peripheral vertigo may cause gait imbalance, neither Dr. O'Toole's 4/8/21 evaluation nor Dr. Thwaites initial evaluation describe she complaining of significant ongoing vertigo during their evaluations." However, Dr. O'Toole specifically diagnosed vestibular disequilibrium, which this ALJ infers that Claimant was having vestibular problems that caused balance issues. She opined that Claimant was at MMI on August 9, 2022 and only suffered from cervical and thoracic myofascial irritation in the MVA of March 24, 2021, suffered no impairment and that any other conditions, such as the "alleged" post concussive complaints, were not related. Dr. D'Angelo is simply not persuasive in her opinions and the parties likely did not think so either since they did not cite to any portion of her 85 page report in their position statements filed following the hearing.

52. Claimant was evaluated at Claimant's request by Dr. Sander Orent on June 8, 2023. Dr. Orent reviewed the medical records, took a history consistent with Claimant's testimony, and performed a virtual examination of Claimant.[8] He stated that following the accident, Claimant drove to Greeley and her headache became severe. Her family noticed slurred speech so took her to the emergency room, where they gave her medications and patches and released her. He noted that Claimant's symptoms became progressively worse within the next day or so. Claimant reported she felt dismissed by Dr. O'Toole, once Respondents' third party administrator finally contacted her and requested she attend the workers' compensation provider.

53. Claimant reported to Dr. Orent that, despite what the testing performed by Dr. Thwaites showed, she felt a diminution in function, having headaches, visual disturbances with photophobia and diplopia and very fatigued. He documented that, when a headache came on, she had to go into a dark room and take medication and try to sleep. She treated them prophylactically by taking breaks, stretching, and sometimes used caffeine.

54. She continued to have neck pain that would radiate to the 4th and 5th fingers of both hands and paid for massage on her own as it provided some relief. She had ongoing pain between her shoulder blades that has never been evaluated, even with x-rays. She continued to have low back pain accompanied by left lateral thigh numbness,

[8] Dr. Orent's exam was virtual because his wife has just undergone a kidney transplant and was immunocompromised.

and worsened with sitting, standing, and bending. She also complained of sleep difficulties which were much better.

55. Claimant reported to Dr. Orent that, due to the MVA she lost a 10 year relationship because of changes in her personality, and had to rely on her mother for chores, such as cooking and cleaning, because she had trouble both functionally and cognitively. She had been returning to some of her normal activities such as softball, though she took several seasons off. There are multiple other recreational activities that she had to abandon or modify due to her symptoms.

56. He opined that Claimant had serious sequelae of her accident "all of which have been inadequately managed." He felt that she still had an inadequately assessed diagnosis with regard to her closed head injury, that she had ongoing headaches which were posttraumatic migraines and that she had ongoing problems in the cervical, thoracic and lumbar spine, all of which needed to be further addressed. This opinion directly contradicted Respondents' IMEs but were in line with that of the DIME, Dr. Macaulay, and Dr. Parry.

57. Dr. Boyd issued a supplemental records review report on July 20, 2023 but did not change his opinions.

58. Finally, Dr. Parry issued a supplemental record review report on August 10, 2023 commenting that what was clear from her evaluation of [Claimant] that she had suffered an acceleration/deceleration injury and she had findings consistent with whiplash. Dr. Parry also stated as follows:

> … presented to me, shortly after her accident, to Dr. Macaulay, the DIME examiner, and to Dr. Orent as a believable patient with ongoing problems directly related to her automobile accident. The mechanics of the automobile accident were straightforward and reported initially. The patient reported to her different providers that she completely braced herself which even at a low speed would mean that the amount of acceleration and deceleration movement would be applied only to the cervical spine since she braced her body to the extent that she could against the seat with her arms and her right leg. The oblique restraint of the seatbelts, and she was restrained would also account for more torsional component as well to the thoracic and lumbar area as demonstrated by her dominant right shoulder girdle problems when I saw her. The mechanics of the injury and the subsequent complaints are all entirely consistent with a whiplash/mild traumatic brain injury particularly in terms of the headache, of the vestibular and visual tracking abnormalities and the problems with focusing. [Claimant] is a high level functioning woman who has continued to work full time at her job.

59. Dr. Parry opined that Respondent's IME opinions were in error because they relied primarily on the paucity of documentation in the ER records. She stated that the ER, under EMTALA,[9] is obliged to assess patients for acute injuries and determine whether they are acute enough to be admitted. She stated that the ER is not equipped to do a detailed subtle neurologic exam for cognitive deficit, and that if the patient can answer questions, move all four extremities, have a normal Glasgow Coma Scale test,

[9] This ALJ infers that EMTALA stands for Emergency Medical Treatment and Labor Act.

and does not have hyperreflexia they are essentially cleared, but the assessment is NOT a cognitive assessment or an assessment to establish a plan of treatment. Dr. Parry further opined that the ER does not excel, in her experience as a neurologist, in assessing mTBIs. She stated that those who relied on this assessment, did a disservice to Claimant who continued to have visual disturbances, dizziness, and cognitive fluctuations.

60. What is particularly credible and persuasive is Dr. Parry's opinion that Claimant experienced explicit biased based on dismissal of her complaints and inability to take into account her individual presentation of symptoms in the context of her cultural background. As an example, she identified Claimant's "complaint that she had a feeling that she was in a boat appears to have been understood only by Dr. Hyde as a recognizable vestibular abnormality."

61. Dr. Parry further stated that Claimant did not recall everything at impact but remembered hearing a thud but not all the details of movement. She opined that Claimant's ability to perform automatic tasks does not mean that she was mentally completely alert at the time of the accident and the emergency room evaluation did no testing that was documented in terms of memory, concentration or attention other than a Glascow Coma Scale and noting that she did not "lose consciousness."

62. She opined that Claimant's subsequent development of headaches, which have been persistent, and clearly different from her COVID infection, are consistent with both postconcussive migraine as well as a component of cervicogenic headache. She opined that Claimant's vestibular abnormalities, which occurred only after her automobile accident were "pathognomonic for the type of problems following a mild TBI and in and of themselves are consistent with her having sustained a mild head injury."

63. Dr. Parry stated that the sequelae of head injury, including headaches, sleep disorder, sleep apnea, vestibular and visual tracking problems can all occur with normal neuropsychometric testing. She stated that "[P]atients with mild cognitive difficulties after head injury particularly with a high level of education can test within normal limits." She commented that "[I]n fact Dr. Thwaits' (sic.) early evaluation showed some deficits which were cleared by the time Dr. Boyd saw her and did not rule out the need for some brief cognitive skill training."

64. Dr. Parry ultimately agreed with Dr. Macaulay and Dr. Orent that Claimant was not at MMI and required further treatment, including assessment, diagnostic, vestibular and visual tracking therapy.

D. Employer records

65. On March 26, 2021 Claimant completed paperwork, including an Exposure Report, which stated that the accident had occurred at approximately 4:10 p.m. on March 24, 2021 noting that

> I was driving my car to a home visit scheduled with a family when I was rear ended by another vehicle. The other driver reported that he was following too closely and had looked away for a second and couldn't stop in time. I called 911, my clients, and my supervisor to report the accident.

Claimant described the accident as an "automobile accident concussion and whiplash with pain in the lower back ribs shoulders and head" and reported she had a "tightness throughout my lower back, right side of ribs, along shoulder blades into the neck, plus a concussion causing light…"[10] Claimant was provided with a Designated Medical Provider List (DPL) at that time listing UCHealth, WorkWell and Banner Occupational Health.

66. The Employment Performance Evaluation form dated April 13, 2022 addressed various components of Claimant's work. Claimant's supervisor stated that Claimant had improved this year[11] on timely documentation, had taken the time to meet with other caseworkers regarding organization ideas and ways to keep track of her assignments, that her timeliness and organization had improved, noting that timeliness of court letters, documentation and case closure had been a struggle for Claimant,

E. Claimant's testimony

67. Claimant scheduled appointments with ESP Sports Medicine in Lafayette, on her own, as well as scheduling with Dr. O'Toole, the workers' compensation designated provider at UCHealth. She identified ESP after speaking with a coworker who had gone there before. She went to ESP on March 30, 2021 for a massage. She did not recall if they discussed a concussion but agreed that the records documented it that way, in addition to light sensitivity. She also reported she had blurred and double vision, slurred speech, urinary urgency, dizziness, altered gait, swollen limbs, though not all of these were documented in the March 30, 2021 report.

68. She later saw Dr. Kevin O'Toole, pursuant to Employer's request, on April 8, 2021. She agreed she reported complaints of light sensitivity, fatigue, loosing track of time, back spasms, swollen limbs. She stated that she did not have these complaints prior to the March 24, 2021 work injury.

69. She did agree that she had a work related injury to her back on July 31, 2012, for which she complained of gait problems, sitting and standing, radiating pain to the right buttock, and down to the right foot and was eventually placed at maximum medical improvement by Dr. Reichhardt on February 14, 2013 and given a rating. At that time, she was given work restrictions of limited lifting, pushing, pulling and carrying of 40 lbs. occasionally and 20 lbs. frequently as well as limited bending and twisting.

70. Claimant reported that she continued to have difficulties performing her full time job, especially with time management, fatigue, paperwork, screen work, driving for extended periods, as she has to take breaks with ongoing breaks throughout the day for both mental and physical stretching. She continued to do a lot of management within her day to maintain her pain level. She meets with her supervisor twice a month since her accident. She also meets with a colleague to help her prioritize and manage day to day tasks and to make sure she keeps on top of all her assigned work.

---

[10] It is clear that the sentence was not finished due to lack of space or that Employer did not include the missing page from this report.

[11] It is presumed that this is for activities that took place after April 2021, through April 2022.

71. Due to the ongoing pain, headaches and fatigue, she sometimes sleeps during the day or takes naps, so she works into the evening hours or weekends to meet her 40 hour requirement. She has had to do this to keep her full time job. Everything now just takes her longer since the work injury. If she is fatigued during the day, she has problems with her eyes and has to rest them. She has light sensitivity during "bad head days." She has had to employ multiple tools to keep her head pain from spiking such as taking breaks, reducing screen time, or taking a nap when she feels a headache coming on, all of which help control her headaches, and vision symptoms.

72. After the MVA Claimant broke up with her partner and moved in with her mother because she had difficulty with time management. She was unable to keep her work life and personal life activities going in a normal manner, so her personal life suffered as she had to focus primarily on mandatory tasks. She continues to suffer from her injuries. She has to set multiple alarms throughout the day to keep herself on task and not let time lapse. She continues to struggle with word finding, or word recollection as well as memory. She used to be able to write her reports for the day from memory and now has to take notes. She meets regularly with her co-worker to help her stay on top of deadlines and prioritize. Because of fatigue, she has to take multiple breaks during the day and manage her symptoms so they do not flare up and overload herself. She used to be able to work without problems. She continues to have occasional headaches, back pain, neck pain and she manages them as best she can with stretching and exercise.

73. Claimant is now wearing prism glasses due to her eye movement disorder. She had never worn glasses before her work injury. The workers' compensation provider had advised her that Respondent may not cover the prism glasses, so she declined to purchase them from Dr. Arnold's office because of the high cost. She never declined to have prism glasses, she just had to go to a different location to obtain them because of her out of pocket costs. She generally wears the glasses during the day, when she is not outside in the sun. She requires sunglasses in the sun. She especially needs them when she is fatigued.

74. She has difficulty with slurred speech on "bad-brain days," when she has difficulties. She experiences dizziness, for example, when she gets off elevators, when she is a passenger in a car, when her eyes are doing weird movement. It is a dizziness/motion sickness issue. She does her therapy to alleviate the feeling.

75. She was not aware that she could return to Dr. O'Toole for treatment since her release. She has obtained psychological treatment, which she pays for.

76. Claimant testified that this accident has had a significant impact on her life and continues to do so but she would like to have the recommended diagnostic testing and medical care in order to get better.

F. Testimony of Supervisor

77. Claimant's supervisor (Supervisor) testified at hearing. She stated that she had started as Claimant's supervisor since May 2020, supervising a team of five case workers and supporting them in assessments and ongoing case load, though she had known Claimant since she started in 2016. She has regular communication with Claimant at least every other day either by text, phone calls, and emails or in person. She directly

oversees Claimant's work. Supervisor reported that Claimant consistently meets expectations, is great at engaging with her families, meets with them, both parents and children when required, and did overall excellent work engaging and communicating with them. Over time, documentation, paperwork and computer work had been fluctuating, including documenting visits, writing letters or updates to the court, documenting in the system, making referrals, though she did not have a big drop off after the March 2021 accident.

78. Supervisor did not recall how often she saw Claimant in the 2020-2022 period in person or by video but likely around twice a month. She did not recall seeing Claimant wearing sun glasses inside when they had team meetings at a restaurant or other venue. She did state that Claimant has played softball since she has known Claimant.

79. Supervisor explained that they did not make formal accommodations for Claimant through Human Services but had informally discussed and approved Claimant taking breaks when needed and getting her work arranged around her symptoms and need for breaks, so long as she was keeping up with the work. They had also discussed time management issues between face-to-face work and the documentation piece of the work. Supervisor reported that Claimant's timeliness had improved over the last year but she could not establish if there was a connection to the injury or not. She has set up for Claimant to meet twice a month with coworkers, "just to get things on track and keep things on track."

80. Claimant is accountable and is able to work through a problem to fix it where needed or ask for help when needed. Supervisor has received a complaint against Claimant recently, which is the only complaint she has received while in her supervisory position. Supervisor emphasized that Claimant had a strong work ethic and worked really hard with her assigned families. Supervisor stated that she trusts Claimant, and opined that Claimant was honest and had integrity.

81. Due to work performance issues, Supervisor offered to take on some of the more tedious computer tasks like data entry. She stated that the work involved a lot of paperwork, a lot of documentation, meeting with families of different cultures, backgrounds, and often angry people, which was taxing, though there were ebbs and flows to the work. She stated that it was emotional work, emotionally taxing and stressful work.

G. Testimony of Dr. William Boyd

82. Dr. Boyd testified as a board certified neuropsychologist on behalf of Respondents, who was retired by the date of the hearing. While practicing he specialized in mild traumatic brain injury, concussions, post-concussive syndrome and evidenced based approach to neuropsychology. He would typically see patients after they had had extensive evaluations and treatment. He would evaluate for neurocognitive issues and make recommendations for medical treatment, vision and vestibular therapies, and any needed rehabilitation. He would treat with cognitive behavioral therapy and provide psychological strategies to help patients get beyond any symptoms of post-concussion syndrome.

83. Dr. Boyd stated that he was asked to perform the April 14, 2023 evaluation by Respondents. Dr. Boyd reviewed the records, including the negative temple bone scan, did not find evidence of retrograde amnesia, anterograde amnesia, loss of consciousness, or any trauma to the head. He noted that Claimant was able to return to function and that there was no particular head trauma. He administered multiple tests which showed Claimant was not suffering any measurable lingering brain dysfunction and had no neuropsychological impairments when compared to the general population. However, he did find that she had short term memory impairment and made a mathematical arithmetic error. His impression was that Claimant most likely did not suffer a concussion in the motor vehicle accident. He agreed that when Dr. Thwaites tested Claimant, Claimant had slowed processing speed and only an average IQ score. He agreed that Claimant had performed better with his tests than the prior tests overall. He generally liked to wait to perform neuropsychological testing until about six months to a year following the incident to determine any permanency or impairments.

84. Dr. Boyd agreed he did not have the ER report when he issued his initial report but that he did not require them because he was only testing neurocognitive impairment at the time of his testing. He did not note the vision problems Claimant had other than through review of the medical records and was not aware of whether they were related to the MVA. Dr. Boyd believed that post-concussive syndrome was not an mTBI diagnosis. He failed to note that the records showed Claimant had frequent headaches, and sleep disturbances. He agreed that whiplash can cause TBIs.

85. He also agreed that he did not have Dr. Parry's report nor the DIME report but that having the neurologists report would have been important in assessing for a brain injury. Nevertheless, Dr. Boyd did not change his opinion that Claimant did not suffer from any neurocognitive impairments, and early testing was not good for determining persisting or permanent impairments.

86. Dr. Boyd noted that on the ER report visit, which was approximately three hours after the accident, there were no symptoms reported that were concerning but if there was only a mild concussion, there might not have been any outward symptoms. He did agree that Claimant's complaints on arrival were for whiplash, back pain, headache, right rib cage and neck pain.

H. Testimony of Dr. Kevin O'Toole

87. Dr. O'Toole testified as a board certified occupational medicine physician, which he had been practicing full time since 2006 seeing anywhere from 12 to 20 patients in a day. He reviewed the past records including the ER visit notes prior to seeing Claimant initially and there was no concern for concussion or cognitive problems noted. He listed the presence of symptom magnification based on the ER records and his unremarkable examination.

88. Dr. O'Toole stated that, in cases of mTBI, he would expect worse symptoms with early onset and then gradual improvement, though in this case there were symptoms expressed later, including severe concussion. He noted that at no time did he think Claimant was faking her symptoms but was put in a difficult position by other medical professionals who had misdiagnosed issues, causing Claimant other symptoms,

including anxiety about the effects of the trauma. He did not record any symptoms of slurred speech, dizziness, or altered gait at the initial visit, though he remarked that on the following visit, Claimant complained that he had not documented all her symptoms.

89. He noted that patients frequently forget to report prior injuries, especially if they are focused on the current symptomology they believe related to the most recent in time event, whether or not they can be attributable to that event.

90. Dr. O'Toole stated that he referred Claimant to Dr. Thwaites because of complaints that were not supported by the clinical exam and Claimant's apprehension of having to treat with a new provider.

91. He noted that the next visit with him was not until June 16, 2021, and that is when Claimant complained to Dr. O'Toole that he had not documented the slurred speech and memory lapses.

92. Dr. O'Toole did place a referral for an ENT evaluation based on Dr. Parry's recommendation. By February 4, 2022 Claimant was ninety percent better, managing her pain and symptoms with stretching and breaks, performing vestibular therapy exercises, wearing the prism prescription glasses.

93. By the time he placed Claimant at MMI on August 9, 2022, Claimant continued to have the occasional headache, had being going through vision treatment and computer orthoptics training including jumpduction, the final phase of the computer work with which she continued to have difficulty and which was being discussed with Dr. Arnold, so he left her medical benefits open for maintenance.

94. Dr. O'Toole reviewed the DIME exam by Dr. Macaulay but stated that Dr. Macaulay's findings of muscular tenderness were not significant and he did not believe that they would qualify Claimant for an impairment rating.

95. He noted that his own later exams were not comprehensive and only noted normal range of motion (not measured), some pinpoint complaints with chin to chest flexion and no palpatory exams. He also remarked that he considered Dr. Thwaites' recommendation for Claimant to see a psychologist outside of the workers' compensation system and that he did not consider she had any depression related to the MVA.

96. He stated that there may be some merit to having Claimant referred for a psychological evaluation in accordance with the DIME physician's recommendation, though he believed some of the psychosocial factors may be related to litigation compensation.

97. Dr. O'Toole disagreed that Dr. Macaulay's recommendations were appropriate, with the exception of an ENT/ophthalmology follow up with Dr. Arnold to assess the prism glasses and to determine if an impairment was appropriate as well as, potentially, a psychological evaluation.

98. Lastly, Dr. O'Toole believed that the *AMA Guides*, Third Edition (*Revised*) were antiquated and that there was "newer guidance with regard – how to determine impairment. And – and the intent is – is not to assign unnecessary impairment for pain if there is not clinical evidence of a – of a functional problem," and he did not believe Claimant had a functional problem because she had return to full time employment. He

opined that, even if he used an inclinometer, it may not have been helpful because he did not know what Claimant's pre-motor vehicle measurements were for Claimant. As found, Dr. O'Toole simply did not believe it was necessary to follow the *Third Edition*, though he could see why other providers would perform the range of motion testing and provide a rating, but he disagreed with them. Dr. O'Toole was not persuasive in this matter despite his assertions that he followed Colorado requirements.

I. Testimony of Dr. Sander Orent

99. Dr. Sander Orent testified on behalf of Claimant as an expert in occupational and environmental medicine, internal medicine and toxicology as well as a Level II accredited physician and expert in the Medical Treatment Guidelines and *AMA Guides*, Third Edition (*Revised*).

100. He noted that he reviewed the extensive records in this case before anything else, which is his normal procedure when conducting an IME, and it helps him understand the claim better. He took a history from Claimant, including her symptoms, occupational history, recreational history, history of treatment and response to treatments. He specifically noted he had become an expert with COVID issues in the workers' compensation system in the last few years. He disagreed with the Respondent IMEs and Dr. Thwaites in this matter regarding COVID having any lingering effects as Claimant may have had COVID in November 2020 but that it resolved in six (6) weeks. He stated that any mention of a history of COVID in Claimant's case was a "red herring" as there was no medical documentation that Claimant ever sought treatment for COVID or had lingering effects of COVID.

101. Dr. Orent disagreed with the interpretations of the neuropsychological testing as there were internal contradictions and agreed with Dr. Macaulay that Claimant required a completely independent neuropsychological evaluation.

102. Dr. Orent agreed with Dr. Parry's recommendation with regard to further diagnostic testing and treatment recommendations, her finding of intermittent nystagmus which required the prism glasses to correct, as Claimant was at the end stage of the cranial nerve trauma that caused diplopia and visual problems.

103. He also agreed with the DIME physician, Dr. Macaulay's recommendations for further evaluation and treatment and that Claimant was not at MMI until the recommended diagnostic testing and treatment took place to relieve Claimant from the effects of the injury.

104. He explained that the episode for which she was seen at UCHealth in 2019 for neck pain was actually torticollis, an acute spasm of the neck muscles that obviously resolved.

J. Mild Traumatic Brain Injury Medical Treatment Guidelines (mTBI MTGs)

105. The MTGs state that "any alteration of mental status at the time of the injury, for example, feeling dazed, disorientated or confused, within 72 hours of the accident may be signs of a traumatically induced physiological disruption of brain function, indicating an mTBI.

106. They further indicate that a risk factor for ongoing symptoms following an mTBI is a very demanding or stressful vocation or job, preinjury issues with general health or psychological wellbeing as well as a history of preinjury migraines or recurrent headaches.

107. Common mTBI symptoms include headaches, sleep disturbances, dizziness, nausea, visual disturbances, photophobia, attention and memory problems, difficulty multi-tasking, increased distractibility, losing focus, feeling foggy, and fatigue.

108. The MTGs note that post-concussive syndrome was an accepted diagnosis that is generally determined by a number of symptoms present after an mTBI and how long they persist, though the symptoms of PCS are commonly present in those without mTBIs.

K. Conclusory Findings

109. This ALJ infers from Employer's Injury Exposure Report that the incomplete statement of "plus a concussion causing light…" would be that Claimant had "light sensitivity." Two days following the accident Claimant was describing a condition that included a concussion and problems with light sensitivity. Claimant believed that she had a concussion despite the lack of documentation in the emergency room records.

110. As found, Claimant is not at MMI as determined by Dr. Macaulay, the DIME physician. As found, Claimant suffered a mild traumatic injury, which caused concussion and nerve damage which resulted in vision and vestibular injuries to Claimant, in addition to injuries to her cervical spine, thoracic spine, an aggravation of the lumbar spine and aggravation of her preexisting depression. As found, Claimant is credible and persuasive. She continues to suffer from the effects of the mTBI, including headaches, vision and vestibular issues with occasional difficulties focusing, time management and depression, all of which should be accurately evaluated and treated within the confines of this March 24, 2021 work related injury.

111. As found, Dr. Parry, Dr. Orent Dr. Arnold, Dr. Hyde, Dr. Hadlock, Dr. White, Dr. Mayer and the DIME physician, Dr. Macaulay, are very credible and persuasive in their opinions over the opinions of Dr. Thwaites, Dr. Boyd, Dr. Morgenstern, and Dr. O'Toole. Dr. D'Angelo is found not credible. And while Dr. Thwaites, Dr. Boyd, Dr. Morgenstern, and Dr. O'Toole have portions of their reports and testimony that are credible, they were not persuasive in their opinions regarding causation, evaluations, diagnosis and treatment of Claimant regarding this claim.

112. As found, the providers should not have only relied on the incomplete evaluation performed at the emergency room. Dr. Parry was persuasive and credible in her explanation of the procedures of the ER, where they are focusing on those issues that might be cause for admission of the particular patient they are evaluating. Here, Claimant had very subtle issues to identify, which were clearly not detected by the ER staff, including the dizziness, vision issues, light sensitivity, cognitive issues, and other issues better identified and described by Claimant, such as slurred speech, blurred vision, ongoing headaches, slowed processing speed. These are frequently issues that might not be readily noticeable by someone other than immediate family, friends or Claimant, or individuals that know Claimant really well. Even Claimant's supervisor noted that

Claimant needed assistance in time management and was meeting with Claimant frequently. Further, she agreed that Claimant was meeting bi-weekly with a co-worker to help her with time management and prioritizing tasks that had to be completed. As found, Claimant had to change the manner in which she worked, including taking breaks away from her computer screen in order to manager her symptoms caused by the mTBI.

113. As found, the opinions of Dr. Thwaites, Dr. Boyd, Dr. Morgenstern, and Dr. O'Toole do not rise to the level of clear and convincing to overcome the DIME physician's opinions with regard to maximum medical improvement or impairment. Their opinions are simply differences of opinion and any opinions they have given stating that the DIME physician was in error are not credible or persuasive.

114. As found, a determination of impairment is premature, as Claimant is not at MMI. Claimant is entitled to a full scope of evaluations as recommended by Dr. Macaulay to determine the exact sequelae of the mTBI and likely impairment.

115. As found Claimant has shown by a preponderance of the evidence she is entitled to medical benefits that are reasonably necessary and related to the injury of March 24, 2021. This treatment included the prism glasses recommended by Dr. Arnold and the massage therapy as recommended by Dr. O'Toole, despite the contrary opinion of Dr. Raschbacher that it was not reasonably necessary and related to the injury.

116. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they

seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *Bodensieck v. ICAO,* 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO,* 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming the DIME physician's opinions

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S.

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Sec. 8-42-107(8)(b)(III), C.R.S. The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. ICAO*, 961 P.2d 590 (Colo. App. 1998). Clear and convincing evidence means evidence which is stronger than a mere preponderance. It is evidence that is highly probable and free from serious or substantial doubt. *Metro Moving Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. ICAO,* 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. E.g., *Gutierrez v. Startek USA, Inc.,* W.C. No. 4-842-550-01, *ICAO,* (March 18, 2016); *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523- 097, ICAO, (July 19, 2004); *Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000). Further, a finding

of MMI inherently involves issues of diagnosis because the physician must determine what medical conditions exist and which are causally related to the industrial injury. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). Because the determination of causation is an inherent part of the diagnostic process, the DIME physician's finding that a condition is or is not related to the industrial injury must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office, supra.*

If the DIME physician offers ambiguous or conflicting opinions concerning MMI it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician's true opinion regarding MMI. Section 8-42-107(8)(b), C.R.S.; see *Fera v. Resources One, LLC, D/B/A Terra Firma,* W. C. No. 4-589-175, ICAO, (May 25, 2005) [aff'd, *Resources One, LLC v. Industrial Claim Appeals Office* 148 P.3d 287 (Colo. App. 2006)]; *Leprino Foods Co. v. ICAO*, *134 P.3d 475 (Colo. App. 2005); In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

The party challenging the DIME bears the burden of proof to overcome by clear and convincing evidence the DIME physician's finding that MMI had not been attained. See also *Viloch v. Opus Northwest, LLC*, W. C. No. 4-514-339, ICAO, (June 17, 2005); *Gurule v. Western Forge*, W. C. No. 4-351-883, ICAO, (December 26, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. ICAO, supra*. Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med v. ICAO, supra.*

Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

In the case at bench, Respondents had the burden of proof to overcome, by clear and convincing evidence, the opinions of Dr. Macaulay, the DIME physician regarding causation, MMI, and impairment. Respondents relied on the opinions of Dr. O'Toole, Dr. Raschbacher, Dr. Boyd, Dr. D'Angelo and Dr. Thwaites as well as other medical reports, to support their contentions. However, these physician's opinions regarding diagnosis and causation of injuries, as well as MMI and impairment, were simply a difference of

opinions and were either not credible or not persuasive. The opinions of Dr. Macaulay, Dr. Parry and Dr. Orent were credible and persuasive that Claimant had not reached MMI as she required further work-up and treatment to address her conditions related to the injuries she sustained in the March 24, 2021 MVA. This included neurological evaluations, psychological treatment, visual therapy and vestibular evaluations. Under the Impairment Rating Tips, Desk Aid 11, DIME Panel Physician Notes, Section 6., it states that "[i]f there is a reasonable possibility that the results of a diagnostic test will change the patient's MMI status, then in most instances, the patient will not be at MMI." They also state at Section 5, that a "recommendation for therapies that present a reasonable prospect for improving physical function may be viewed as evidence that the claimant's condition is not stable." Here it is clear that, while Claimant is an extremely strong individual that has kept working full time despite her limitations, treatment will likely improve her condition regarding her difficulties in focusing, processing information, management of her symptoms, visual disturbances, vestibular and psychological impacts the March 24, 2021 work injury have had on Claimant.

Respondents also rely on discrepancies in the record regarding what Claimant reported and the timeline of those issues. This was not persuasive. As explained by Dr. O'Toole, when injured workers are being seen for the first time, that is the time when they are asked about their prior history, and it is common for them to forget prior injuries because they are not present on their mind or are focusing on the injury itself. Dr. O'Toole also stated he reviewed the ER records and those documented Claimant's past history of back pain. In fact, if Dr. O'Toole had access to Claimant UCHealth records, he would have seen her past history of chronic low back pain. While Claimant had a prior workers' compensation injury in 2012, she clearly aggravated that condition during the MVA. She had been working full time without limitation or restrictions and pursuing all of her hobbies without difficulties for some time. The last report in evidence, prior to the March 24, 2021 accident, was a 2019 torticollis (stiff neck) condition, which resolved. The last mention of low back problems was in 2017, four years prior to the MVA.

The argument that Claimant's symptoms are a residual of Claimant's "long COVID" is not credible or persuasive. Dr. Parry and Dr. Orent credibly and persuasively explained that, if she had COVID, which was not documented in any medical records, her symptoms were likely resolved within six weeks. This ALJ was persuaded by Dr. Orent that the opinion of the providers that indicated Claimant's symptoms were caused by COVID which occurred the prior November 2020, a full four months before the MVA, was speculative and did not cause Claimant's ongoing symptoms.

Respondents' argument that Dr. Macaulay was basing his opinions only on Claimant's subjective complaints is incorrect. Dr. Macaulay reviewed the records, including Dr. Parry's report explaining that the neuropsychological evaluation performed by Dr. Thwaites on April 14, 2021, a mere 21 days after the motor vehicle accident of March 24, 2021, was premature and likely invalid. He was persuaded by Dr. Parry's analysis of what happened including her findings of neurologic problems such as a skew of her eye, which was later confirmed by Dr. Arnold, for which he prescribed the prism glasses. Further, Dr. Macaulay reviewed all of Dr. O'Toole's, Dr. Thwaites', the UCHealth ER's and other available records to reach his determination, citing to them and the reason he opined that further testing and evaluations were necessary. While Dr. O'Toole was

credible, he simply had a different opinion regarding Claimant's medical needs and conditions related to the MVA. This did not stop him from making multiple referrals including for physical therapy, massage therapy, biofeedback, chiropractic care, vestibular therapy, vision evaluation and therapy, all of which addressed Claimant's physical conditions related to the MVA and the results of the mTBI. And, he opined that the treatment he provided Claimant was reasonably necessary and related to the March 24, 2021 injury. At his first evaluation he provided an assessment that Claimant had neck pain, headache above the eye region, photophobia, thoracic and lumbar pain, rib pain and vestibular disequilibrium. At his last evaluation of Claimant, he provided the diagnosis that Claimant had convergence insufficiency and neck pain. His opinions regarding whether or not Claimant suffered from an mTBI or concussion related to the March 24, 2021 was not persuasive, and, certainly, did not rise to the level of proving by clear and convincing evidence that Dr. Macaulay's opinion, as the DIME physician, was overcome. This is especially so since Dr. O'Toole was the one to make the referrals for treatment for her neck, mid and low back as well as for the vestibular disorder and vision problems.

Lastly, the argument that Dr. Macaulay erred in assigning an impairment rating is also not persuasive. The point of Dr. Macaulay recommending further evaluations and treatment is to provide the care Claimant needs to reach MMI and then be appropriately rated under the *AMA Guides*. Level II providers are asked to provide provisional impairments. Desk-Aid 11, DIME Panel Physician Notes, Sec. 4 specifically states "*If the party requesting the DIME has asked that impairment be addressed, and if you find the patient* ***not at MMI*** *for that work-related injury, you should nevertheless provide a rating for that injury*." Dr. Macaulay found that Claimant had loss of range of motion of the spine, which is an objective findings, in and of itself, as well as spine tenderness. Further, he documented that Claimant continued to have pain in her spine. The records document ongoing symptoms of the cervical, thoracic and lumbar spine since her injury of March 24, 2021. This is substantial evidence to justify a finding that Claimant is entitled to a Table 53IIB rating under the *AMA Guides* as Claimant had a medically documented injury and a minimum of six months of documented pain and rigidity. Dr. Macaulay properly identified the injuries he found causally related to the motor vehicle accident of March 24, 2021 and which he proceeded to rate based on the information he had available.

As found and concluded, the Claimant suffered an mTBI that resulted in vestibular, visual and psychological problems, as well as physical injuries to her head (headaches), neck, mid and low back. As found and concluded, Respondents have failed to show by clear and convincing evidence that Dr. Macaulay's opinions have been overcome. Moreover, his opinions are supported by the credible and persuasive opinions of both Dr. Orent and Dr. Parry who assessed the Claimant's conditions and the effect they had on her related to the March 24, 2021 work related injuries, and provided similar recommendations than Dr. Macaulay.

Since Claimant is not at MMI, the issue of permanent partial impairment and interest, related to benefits owed and not paid when due, are premature and will not be addressed by this order.

C. Medical Benefits

Employer is liable for medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Claimant must establish the causal connection between the compensable event and the need for medical care with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

As previously found, Claimant suffered an mTBI that resulted in vestibular, visual and psychological problems, as well as physical injuries to her head (headaches), neck, mid and low back. Dr. O'Toole prescribed additional massage therapy, which was later denied when Dr. Raschbacher issued a Rule 16 opinion that it was not reasonably necessary and related to the injury. As found, such treatment was and is reasonably necessary and related to the March 24, 2021 work injury as it was addressing the headaches caused by the mTBI as well as neck pain. Claimant stated that she had been paying for her own massage therapy and that she wished to continue receiving medical care for her work related medical conditions. The massage therapy was helping Claimant manage her chronic pain and to continue working full time. This is functional gain. Claimant has shown she is entitled to medical benefits that are reasonably necessary and related. As found, the treatment prescribed by Dr. O'Toole was reasonably necessary and related to the March 24, 2021 work injury. Claimant should be reimbursed for the costs of her massage therapy.

Dr. Arnold prescribed prism glasses. Dr. Arnold's office advised Claimant that Respondent would likely not pay for the prism glasses, therefore, she resorted to find a most cost effective provider and purchased them due to ongoing need and visual problems. The prism glasses were reasonably necessary to address Claimant's vision problems brought about by the mTBI by cause the March 24, 2021 MVA. Claimant has shown by a preponderance of the evidence that she is entitled to reimbursement for the cost of the prism glasses.

The panel in *Deane v. Regis Corp*., W.C. No. 4-664-891, I.C.A.O. (August 7, 2023) determined that an ALJ was unable to direct a medical professional to administer a particular treatment the professional did not believe was appropriate because it was not a matter arising under articles 40 to 47 of title 8 for which the ALJ is provided authority by Sec. 8-43-201(1), C.R.S. and Sec. 8-43-503(3), C.R.S. (employers, insurer. claimant or their representative shall not dictate to any physician the type or duration of treatment...). The panel emphasized that, should a party dispute the reasonableness and necessity of a recommended medical care, they remained free to file an application for hearing pursuant to Sec. 8-43-207, C.R.S., *Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997),* or to possibly request a utilization review under Sec. 8-43-501(2),

C.R.S. See *Deane v. Regis Corp., supra*; *Torres v. City & County of Denver*, W.C. No. 4-937-329-03, I.C.A.O. (May 15, 2018) and *Short v. Property Management of Telluride*, W.C. No. 3-100-726, I.C.A.O. (May 4, 1995).

W.C.R.P. Rule 11-7(A), CCRC states in pertinent part as follows:

> If a DIME physician determines that a claimant has not reached MMI and recommends additional treatment, a follow-up DIME examination shall be scheduled with the same DIME physician, unless the physician is unavailable or declines to perform the examination. Either party may file the Follow-Up DIME form *after the claimant completes all additional recommended treatment. (Emphasis added).*

With regard to medical benefits specifically recommended by Dr. Macaulay, this ALJ has no jurisdiction to dictate what care Claimant's treating providers are to provide, only that Dr. Macaulay was correct in his determination that Claimant was not at MMI and requires further medical care to assess her work related injuries and provide the care she requires to reach MMI. However, the rules also indicates that a follow-up DIME cannot take place until "after the claimant completes all additional recommended treatment" recommended by the DIME physician. It is found that the treatment recommended by Dr. Macaulay is reasonably necessary and related to Claimant's March 24, 2021 work injury. Claimant has proven by a preponderance of the evidence that she is entitled to reasonably necessary medical care related to the March 24, 2021 work related injuries but it is up to the authorized providers to prescribe the recommended treatment.

ORDER

IT IS THEREFORE ORDERED:

1. Respondent failed to prove by clear and convincing evidence that the DIME physician was incorrect. Claimant is not at maximum medical improvement and requires further diagnostic and medical care related to the compensable injuries to her head, cervical, thoracic and lumbar spine as well as for her vision and vestibular conditions related to the mTBI.

2. Claimant is not at MMI as determined by the DIME physician, Dr. Hugh Macaulay.

3. Respondent shall pay for reasonably necessary and medical care related to the March 24, 2021 work injury, in accordance with the Colorado Fee Schedule, to cure and relieve her of the compensable injury.

4. Respondent shall reimburse Claimant for the costs of the massage therapy and prism glasses which were reasonably necessary and related to the March 24, 2021 work related injuries.

5. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's

order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she is entitled to a closed period of Temporary Total Disability (TTD) benefits extending from March 4, 2022 through April 24, 2023.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a package delivery driver for Employer. (Tr., p. 14, ll. 11-19). She suffered an admitted injury to her left ankle on October 7, 2021, while delivering packages for Employer. According to Claimant, she had delivered a package to a customer's house and was walking down a steep flight of steps when she rolled her ankle "kind of fell over". (Tr., p. 15, ll. 7-13).

2. Claimant has a prior history of injury to her left ankle on March 27, 2021, while working for [Redacted, hereinafter US] in Las Vegas, Nevada. (RHE E, p. 28; Tr. p. 29, ll. 16-24).

3. Claimant was ultimately referred to and began treating her October 7, 2021 work-related ankle injury at Concentra Medical Centers on December 1, 2021. (RHE E, p. 28). During her December 1, 2021 appointment at Concentra, Nurse Practitioner (NP) Valerie Joyce documented the following history regarding Claimant's prior left ankle injury, the mechanism of injury (MOI) on October 7, 2021 injury and Claimant's referral to Concentra:

> MOI – walking back to her truck and coming down a customer's stairs, stepped down on the stairs and rolled her left ankle, she saw her PCP when it was injured, now instructed to be seen by work comp to take over care, hx of injuring left ankle in July 2021 when living in Vegas and was seen by a work company – completed PT, since DOI she has been working a light route to help keep the pain controlled, its most painful when she has to get in and out of the company truck, wearing left ankle brace, elevates and uses ice as much as possible.

4. Following her initial evaluation of Claimant on December 1, 2021, NP Joyce started Claimant on Naproxen, referred her to physical therapy (PT) and ordered x-rays. (RHE E, pp. 29-30). Claimant was instructed to wear an ankle brace, ice as needed and perform home exercise. *Id.* at p. 30. The report from this date of visit also indicates that the "Supervising physician reviewed the chart and concurs with the final

disposition". *Id.* at p. 31. The supervising physician on this date of visit was identified as George P. Johnson. *Id*. Dr. Johnson amended NP Joyce's report on 5:24 p.m. to reflect the imposition of work restrictions to include no lifting or carrying greater than 15 pounds, pushing/pulling 20 pounds, no standing/walking greater than 30 mins./hour, no kneeling or squatting, no use of ladders, minimal use of stairs and no driving of company vehicles. *Id.* Claimant was returned to modified duty with these restrictions until her next appointment scheduled for December 3, 2021. *Id.*

5. Although there is no persuasive evidence that she personally evaluated Claimant on December 1, 2021, Dr. Trina Bogart completed a WC 164 form outlining the information contained in NP Joyce and Dr. Johnson's narrative report from December 1, 2021. (RHE E, p. 27).

6. Following the imposition of work restrictions on December 1, 2021, temporary disability benefits were paid pursuant to an Amended General Admission of Liability filed February 2, 2022. (CHE 1, p. 1).

7. Claimant proceeded through conservative care as directed by NP Joyce under the direction of Dr. Johnson, who would review and amend the record to reflect any changes in Claimant's activity status. (RHE E, pp. 37-42).

8. Claimant was evaluated during a follow-up visit by Dr. Kristina Robinson on December 16, 2021. (RHE E, pp. 43-48). Claimant described worsening pain during this visit. *Id.* at p. 43. Accordingly, Dr. Robinson ordered an MRI of the ankle without contrast. *Id.* at p. 46.

9. Dr. Morgan Meury evaluated Claimant on January 18, 2022. He noted that Claimant had contracted COVID, which delayed her follow-ups and further left ankle injury work-up. (RHE E, p. 52). By this appointment date, Claimant still had not had the requested left ankle MRI. *Id.* It was also noted that Claimant was continuing her work in PT and that she had been working modified duty prior to her bout of COVID and that her employer was "under the impression" that she was cleared for full duty, which she reportedly did not feel ready for." *Id*. at p. 53. Dr. Johnson opined that Claimant could return to modified duty work with the same restrictions he had imposed on December 1, 2021; however, the evidence presented supports a finding that Claimant's employer elected not to accommodate her restrictions as Insurer began paying temporary total disability benefits on January 19, 2022. (CHE 1, p. 1).

10. Authorization to proceed with the left ankle MRI was denied. (RHE E, p. 60. However, NP Joyce reordered the study on February 15, 2022, because Claimant was "not progressing in improvement per PT sessions. *Id.* (See also, RHE E, p. 68).

11. Claimant underwent an MRI of the left ankle as requested on February 25, 2022, at Colorado Springs Imaging. The study revealed evidence of "[p]rior lateral ankle sprain with scarring/thickening of the ATFL (anterior talofibular ligament) and CFL" (calcaneofibular ligament) but no full thickness tearing. (RHE G, pp. 121-122).

12. Claimant returned to Concentra on March 4, 2022, where she was once again evaluated by NP Joyce. (RHE E, pp. 71-74). NP Joyce opined that Claimant was "at functional goal" and "ready for discharge". *Id.* at p. 73. NP Joyce placed Claimant at maximum medical improvement (MMI) without impairment and returned her to full work without restriction or maintenance care. *Id.* Claimant expressed her concern about returning to full duty work. *Id*.

13. Dr. Bogart then completed a WC 164 form placing Claimant at MMI without impairment or maintenance care as referenced in NP Joyce's March 4, 2022 narrative report. (RHE E, p. 70). The WC 164 form completed by Dr. Bogart indicates that Claimant was able to return to full unrestricted work on March 4, 2022. *Id.* Based upon the evidence presented, the ALJ finds no convincing support a conclusion that Dr. Bogart actually saw Claimant before completing the March 4, 2022 WC 164 form. Indeed, there is no indication that NP Joyce shared her report with Dr. Bogart as she had with Dr. Johnson or that Dr. Bogart amended or signed off on NP Joyce's report. (RHE E, pp. 71-74).

14. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Bogart's opinions regarding MMI and impairment on March 18, 2022. (CHE 1, p. 2). The admission terminated Claimant's TTD benefits as of March 3, 2022. *Id.*

15. Claimant objected to the FAL and would subsequently undergo a Division Independent Medical Examination (DIME) with Dr. Lloyd Thurston on January 24, 2023. (CHE 2, pp. 7-13). In the interim, Claimant, who was reportedly still experiencing pain and instability, sought treatment with her primary care physician ("PCP") who referred her to Dr. John Shank for an orthopedic evaluation.

16. Dr. Shank evaluated Claimant on April 7, 2022 during which he documented the following history:

> [Claimant] worked for US[Redacted] and reports that approximately a year ago; when she was in Las Vegas, she had an inversion injury. She had lateral sided ankle pain, bruising and swelling after the injury. She was treated with a brace and physical therapy. She improved somewhat after the injury but continued to have instability symptoms. She reports that again at work at US[Redacted] in Colorado in November she had another inversion injury.

(CHE 2, p. 16).

17. Dr. Shank reviewed Claimant's MRI noting that it demonstrated "chronic tearing about the region of the ATFL and calcaneofibular ligament. (CHE 2, p. 16). Because she had not improved with conservative care, Dr. Shank raised the option of proceeding with a "left ankle arthroscopic synovectomy debridement and possible microfracture with a modified Brostrom Gould repair with an internal brace. *Id*. at p. 17. Claimant expressed a desire to proceed with surgery. Accordingly, she was taken to the operating room on April 13, 2022 where Dr. Shank performed the aforementioned

procedures. *Id.* at p. 18-20. Dr. Shank noted as part of his postoperative plan that Claimant placed on non-weightbearing status and instructed to return for a follow-up appointment in two weeks.

18. During a follow-up appointment on April 28, 2022, Dr. Shank noted that Claimant was to begin weightbearing. (CHE 2, p. 21). Nevertheless, he added that Claimant would "likely not be able to return to her normal job for 3 to 12 months depending on the progress with her recovery". *Id*.

19. US[Redacted] was unable to accommodate Claimant in her regular position post-surgically; however, they accommodated her in a temporary position. Because US[Redacted] only accommodates employees in transitional duty for up to 30 days, which had been exhausted between the date of Claimant's injury and Dr. Bogart placing her at MMI on March 4, 2022, Claimant applied for and was ultimately awarded short-term disability benefits. (Tr., p. 17, ll. 12-25, pp. 18-19, ll. 1-11). Claimant was paid short-term disability benefits by US[Redacted] from April 20, 2022, through October 18, 2022 totaling $12,005.76. (CHE-3).

20. Claimant continued to treat with Dr. Shank through April 25, 2023, when he indicated that she was doing "very well" one year after her left ankle injury. He added that Claimant could return to full duty work. (CHE 2, p. 30). The ALJ interprets Dr. Shank's April 25, 2023 note to constitute Claimant's release to full duty work.

21. As noted above, Dr. Thurston performed a DIME on January 24, 2023. Following his examination, Dr. Thurston prepared a written report outlining his findings/opinions. (CHE 2, pp. 7-13). In his January 27, 2023 report, Dr. Thurston opined that Claimant was erroneously placed at MMI. *Id.* Based upon his discussion with Claimant and review of the available medical records, Dr. Thurston felt it was clear that Claimant was not recovering consistently with the MRI interpretation. *Id*. Accordingly, he opined that she "acted appropriately in seeking additional orthopedic care for her injured left ankle". *Id*. at p. 9. Noting that Dr. Shank planned to release Claimant to full duty work at an upcoming follow-up appointment in April 2023, one year after her surgery, Dr. Thurston concluded that Claimant was not at MMI on March 4, 2023 as found by Dr. Bogart. *Id.* at p. 10.

22. A follow up DIME with Dr. Thurston was never scheduled. Rather, Counsel for Respondents advised the ALJ that an amended GAL was filed in lieu of scheduling a follow up DIME. Counsel also informed the ALJ that Respondents were no longer pursuing the issue of overcoming the DIME with regard to Dr. Thurston's MMI determination. (Tr., p. 4, ll. 22-25; p. 5, ll. 1).

23. Dr. Bogart testified as a board certified emergency medicine physician. (Tr., p. 38, ll. 3-4). Between Claimant's date of injury (October 7, 2021) and March 4, 2022, Dr. Bogart worked for Concentra as the Director of Medical Operations in Colorado. *Id*. at p. 38, ll. 15-16.

24. Dr. Bogart testified that although her name was placed on the March 4, 2022 WC 164 form, she never actually saw Claimant or reviewed/cosigned any of Claimant's Concentra related documentation.[1] (Tr., p. 39, ll. 3-13). Accordingly, she testified that she was not an authorized treating physician for Claimant.[2] *Id.*

25. Dr. Bogart testified that she did review the DIME report of Dr. Thurston, including the DIME packet sent to Dr. Thurston. (Tr., p. 41, ll. 4-16).

26. Dr. Bogart testified that after review of the records, including the PT notes, that she should not have placed Claimant at MMI on March 4, 2022. (Tr., p. 42, ll. 1-10). Indeed, Dr. Bogart testified that in retrospect Claimant's case was "prematurely closed" which should not have happened because Claimant still had persistent deficits in range of motion, strength and her gait. *Id*. at ll. 13-20. Instead of placing Claimant at MMI, Dr. Bogart testified that the "next best steps should have been a referral to an orthopedic surgeon for evaluation". *Id*. at ll. 20-23. Accordingly, Dr. Bogart testified that the referral to Dr. Shank was an appropriate course of treatment, and Claimant should have continued restrictions after March 4, 2022. (Tr., p. 42, ll. 24-25- p. 43, ll. 1-2).

27. Dr. Bogart testified the restrictions of lifting and carrying up to 15 pounds; pushing and pulling 20 pounds, no standing or walking more than 30 minutes per hour; no kneeling or squatting; no ladders; minimal stairs; and no driving were never advanced or changed over Claimant's five month treatment course, but because she never examined Claimant she couldn't really opine on what they should have been. (Tr., p. 43, ll. 10-23). Nonetheless, she felt these restrictions were "appropriate based on what physical therapy was showing with her range of motion and her gait and her difficulties with, you know, her daily activities." Id. at p. 43, ll. 22-25- p. 44, ll. 1-2.

28. During cross-examination, Dr. Bogart testified that while NP Joyce may have examined Claimant and believed that she could return to full duty work, she (Dr. Bogart) disagreed with that clinical decision-making.

29. Based upon the evidence presented, the ALJ finds that Dr. Bogart is not an attending physician who treated Claimant during her appointments at Concentra. Claimant's contrary testimony is unpersuasive and probably inaccurate.

30. The ALJ credits Dr. Bogart's testimony to find that Claimant was erroneously placed at MMI and wrongly released to regular employment on March 4, 2022. The ALJ furthers credits Dr. Bogart's testimony to find that Claimant's

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

---

1 Claimant disputes Dr. Bogart's testimony that she never evaluated her. (Tr., p. 48, ll. 7-17).

2 Dr. Bogart reiterated her contention that she was not an ATP because she did not treat Claimant and had "no visibility to this particular case". (Tr., p. 46, ll. 19-23).

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. *C.R.S. § 8-40-102(1).*

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 57 P.2d 1205 (1936). The weight and credibility assigned to expert testimony is also a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

Claimant's Entitlement to Temporary Total Disability

D. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). A claimant must establish a causal connection between the industrial injury and the subsequent wage loss in order to be entitled to TTD benefits. Section 8-42-103, C.R.S.; *Liberty Heights at Northgate v. Industrial Claim Appeals Office,* 30 P. 3d 872 (Colo. App. 2001).

E. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions, which impair the Claimant's ability effectively, and properly to perform his/her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits terminate upon a written release to full, i.e. regular duty work by the attending physician. C.R.S. § 8-42-105(3)(c).

F. Whether or not a physician is the attending physician is a question of fact for the ALJ. *Popke v. ICAO*, 944 P.2d 677, 681 (Colo. App. 1997). "… [T]he ALJ might consider the identity of the initial treating physicians, the length of time the claimant treated with a particular physician, and whether a release to regular employment was approved by the initial treating physician." *In the Matter of the Claim of: Carrie Bitz v. Boulder Valley School District*, W.C. No. 5-067-944-003 (Colo. Ind. Cl. App. Off. 2022)(referring to *Popke*, 944 P.2d at 680). "These criteria were not meant to be exclusive." *Id.* (citing *Herb v. Mariner Post Acute Network*, W.C. No. 4-496-527 (Colo. Ind. Cl. App. Off. 2003)). Nonetheless, an ALJ may not disregard an attending physician's opinion of the claimant's ability to perform his/her regular employment unless there are conflicting medical opinions from multiple attending physicians or a single physician's reports are subject to conflicting inferences. *Burns v. Robinson Dairy, Inc*., 911 P.2d 661 (Colo.App.1995); *Bestway Concrete v. Industrial Claim Appeals Office,* 984 P.2d. 680 (Colo. App. 1999); *Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997).

G. In concluding that Claimant has proven that she is entitled to additional TTD benefits from March 4, 2022 through April 25, 2023, the ALJ finds the case of *Thim Keo Ly v. Imperial Headwear, Inc. and Liberty Mutual Insurance Company*, W.C. No. 4-375-030 (2000) instructive. In *Keo Ly*, a Panel from the Industrial Claims Appeals Office (Panel) affirmed the conclusions of a hearing ALJ that Ms. Ly was not at MMI and respondents were liable for retroactive TTD benefits. Based upon a reading of the *Keo Ly* decision and considering the evidence in the instant matter, the undersigned ALJ concludes that the issues presented in *Keo Ly* and the present case are analogous to one another.

H. In *Keo Ly* the Panel found that the claimant was injured on January 9, 1998 and referred to Dr. Brodie for treatment. In reports dated January 26th, 28th and 30th, 1998, Dr. Brodie restricted claimant to modified employment. Dr. Brodie also recommended physical therapy. The claimant initiated physical therapy but missed several appointments. Accordingly, on February 18, 1998, Dr. Brodie issued a report, which placed claimant at MMI, without permanent impairment. The report also released claimant to return to regular employment and discharged her from further treatment. The parties subsequently agreed to a binding independent medical examination (IME) by Dr. Pham on the issue of MMI. Dr. Pham determined the claimant required additional treatment. Consequently, Dr. Pham opined that the claimant was not at MMI. *Id.* As in the present case, Ms. Ly requested reinstatement of retroactive TTD benefits. The respondents refused to reinstate retroactive benefits and argued that her TTD benefits properly terminated when the ATP (Dr. Brodie) released her to regular employment. The ALJ found the February 18, 1998 report by Dr. Brodie did not accurately reflect claimant's ability to perform her regular employment. Therefore, the ALJ granted claimant's request for the reinstatement of retroactive TTD benefits.

I. On appeal, the Panel also determined that the ALJ had found Dr. Brodie's medical reports inconsistent and subject to conflicting inferences. Noting that the ALJ had resolved these conflicts against the respondents, the Panel affirmed the ALJs

finding that Dr. Brodie's February 18 report did not reflect a determination that the claimant was medically capable of performing her regular employment. Consequently, the Panel affirmed the ALJs award of additional temporary disability benefits. *Id.* As in the present case, the respondents' in *Keo Ly* argued that Ms. Ly's attending physician had returned her to regular employment. The respondents in the *Keo Ly* case therefore asserted the DIME's opinion on MMI was "immaterial". *Id.* Nonetheless, the ALJ found an "internal conflict" between "Dr. Brodie's January 1998 medical reports…and the February 18, 1999, release to regular employment." Because the conflicting inferences contained in Dr. Brodie's reports were resolved by the ALJ and the ALJ's resolution of the conflict had support in the record, the Panel noted that it would "not be disturbed on review".

J. In the present case, there are significant inconsistencies/conflicts regarding Claimant's release to return to work regular duty on March 4, 2022. They include:

- Dr. Thurston's opinion that Claimant was not at MMI on March 4, 2022 and required additional treatment. In fact, he stated it was appropriate for Claimant to seek treatment, as quickly as possible, by her PCP since her workers' compensation claim was closed. He also opined she should have seen Dr. Shank and the surgery was work-related. Respondents are not challenging the DIME opinion.
- Dr. Shank's opinion that Claimant's surgery was work-related and required restrictions that were unable to be accommodated by US[Redacted]. Consequently, she received short-term disability benefits from US[Redacted].
- Dr. Bogart's conflicting medical opinions regarding MMI, Claimant's ability to return to regular duty employment and Claimant's need for additional treatment.
- Employer's understanding that Claimant was unable to work full duty as accommodated by transitional work tasks.

K. While it is true that Claimant testified that she recalled being seen by Dr. Bogart, the more persuasive evidence supports a conclusion that this recollection is mistaken. Indeed, there is no convincing record evidence that Dr. Bogart saw Claimant or co-signed any of NP Joyce's notes. Based upon the evidence presented, the ALJ is not convinced that Dr. Bogart qualifies as Claimant's attending physician. Even if Dr. Bogart is considered Claimant's attending physician, she testified in conflict of her March 4, 2022 WC 164 form, noting that while NP Joyce released Claimant to full duty as of March 4, 2022, she did not co-sign that note and further disagreed with such clinical decision making on the part of NP Joyce.

L. As presented, the evidence persuades the ALJ that Claimant has proven that she is entitled to further TTD benefits beginning March 4, 2022 and continuing through April 24, 2023, given that Dr. Shank placed her at MMI on April 25, 2023. Nonetheless, Claimant conceded that Respondents are entitled to a short-term disability

offset due to Claimant's receipt of short-term disability after March 4, 2022. Claimant's Exhibit 3 shows that Claimant received $12,005.76 in short-term disability payments from April 20, 2022 through October 18, 2022. Respondents are entitled to credit the amount of short-term disability benefits paid against TTD benefits owed.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence she is entitled to additional TTD benefits beginning March 4, 2022 and continuing through April 24, 2023. Such TTD benefits will terminate on April 25, 2023, the date of MMI per Dr. Shank.

2. Respondents shall be entitled to credit the amount of short-term disability benefits paid between April 209, 2022 and October 18, 2022 against TTD benefits owed.

3. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Any issues not determined herein, or otherwise closed by operation of law, are reserved for future determination.

DATED: November 3, 2023

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the

following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-202-333-001

ISSUES

The issues set for determination included:

- Did Claimant prove by a preponderance of the evidence that he sustained a compensable work injury on April 1, 2022?

- If Claimant suffered a compensable injury, are Respondents required to pay for medical benefits to cure and relieve the effects of the injury sustained on April 1, 2022?

PROCEDURAL STATUS

A Summary Order was issued by the ALJ on September 25, 2023 and served on September 27, 2023. On October 11, 2023, Respondents requested a full Order. Neither Claimant nor Respondents filed Amended Proposed Findings of Fact, Conclusions of Law and Order. This Order follows.

FINDINGS OF FACT

1. Claimant was hired on about December 14, 2021 and worked as a security guard for Employer.

2. He testified that he monitored the hallways, reported on incidents and called the police when necessary. Claimant said he worked 32 hours per week.

3. The medical records admitted at hearing showed Claimant treated for migraine headaches and an impinged disk on February 20, 2021 and July 29, 2021. No respiratory issues were noted in those evaluations, although he was congested at the latter appointment. Claimant testified that he had not experienced cardiovascular problems prior to 2022.

4. On September 16, 2021, Claimant was treated for migraines and a sinus infection. He underwent a CT of the maxillofacial sinuses and the films were read by David Dungan, M.D. Dr. Dungan's impression was: filling of the right, ostiomeatal complex and front recess with near complete filling of the right maxillary and anterior ethmoid sinuses. No adjacent intraorbital or facial swelling or fluid collection was present that would suggest transosseous spread of infection. Claimant was also evaluated by John Winkler, M.D that day, who diagnosed a sinus infection.

5. Claimant testified he has been a smoker, but never suffered from shortness of breath prior to the April 2022 incident. The medical records that predated the injury did not reference treatment for chronic shortness of breath.

6. On April 1, 2022, Claimant was working his shift, and went to the office after walking through the property. Claimant testified that he walked by a coworker ([Redacted, hereinafter ML]), who sprayed two bottles of cleaner and the fan in the room blew it directly into his face. Claimant said he immediately felt that his eyes were irritated and went to the bathroom to try to rinse them with water. Claimant testified he also felt his lungs tighten up.

7. Claimant prepared a written description of the incident titled ”incident report” on April 2, 2022. He placed the time of the incident at approximately 2300 hours.

8. The ALJ reviewed the video of the incident on the day in question. The video depicted Claimant and his coworker in the office and showed the coworker spraying bottles into the air. The ALJ found that the video corroborated Claimant‘s version of the events that evening.

9. There was no evidence in the record that Claimant was referred to an Authorized Treating Physician after the incident on April 1, 2022.

10. [Redacted, hereinafter RS] testified as a representative of Respondent-Employer. She works for a [Redacted, hereinafter GY] as the regional manager for Colorado and Wyoming, which is the new owner. RS[Redacted] previously worked at [Redacted, hereinafter MS] starting in 2015. In that capacity, she checks on the properties, review safety, and training.

11. RS[Redacted] testified that she did not know whether ML[Redacted] (Claimant’s coworker) was trained about the location of the MSDS sheets and proper use of those chemicals. RS[Redacted] stated one chemical was used to clean and the other was to make things smell good. She did not believe anyone had mixed Clorox in with cleaning chemicals, as the head housekeeper or laundry person fills up the chemical bottles.

12. RS[Redacted] testified that the laundry person has been there for 6 to 7 years and the head housekeeper had been there for some time. There is a machine in the laundry area that fills up the cleaning bottles. She was not aware of any incident in which Clorox or bleach was mixed into the cleaning materials.

13. Claimant was treated at the Medical Center of Aurora April 1, 2022 (with initial testing started at 23:48 p.m.) and the medical records noted that instructions for eye irrigation were given. Claimant was evaluated by Gilbert Pineda. M.D., who noted the chemical agents appeared to be a noncontrasted disinfectant and a static air freshener. Claimant symptoms of shortness of breath and dyspnea. Claimant also

reported a migraine headache after his arrival. Dr. Pineda reviewed the X-rays taken at that time, which showed no radiographic evidence for acute cardiopulmonary disease. Fluoresecein Sodium eye drops were used at the Emergency Department as a diagnostic agent and Proparacaine HCL was administered when Claimant was discharged.

14. Dr. Pineda's clinical impression was: chemical exposure of the eye, with a secondary diagnosis of exposure to chemical inhalation, inhalation of a cleaning agent, and a migraine headache. Dr. Pineda prescribed Albuterol. Claimant was discharged, with the last documented test at 04:56 a.m. Claimant was advised to make an appointment for follow-up care. The ALJ concluded that Claimant required this treatment because of the chemical exposure at work.

15. On April 9, 2022, Claimant was evaluated by Shawn Zemlicka, P.A. at Kaiser Permanente (Urgent Care) for shortness of breath, as well as fatigue since the incident. PA Zemlicka opined that Claimant's symptoms could be the result of exposure to hazardous chemicals. Claimant was prescribed Ventolin for his symptoms.

16. Claimant was evaluated by Shannon Lee, M.D. at Kaiser on April 11, 2022. Dr. Lee's diagnoses were: shortness of breath; exposure to potentially hazardous chemicals. Dr. Lee noted that the pulmonary examination was unremarkable and ordered spirometry, which was competed on April 13, 2022. Dr. Lee also prescribed Prednisone. The ALJ concluded that Claimant was evaluated and prescribed medication because of the chemical exposure at work.

17. Claimant his burden of proof and established by a preponderance of the evidence that he was injured as a result of the chemical exposure on April 1, 2022.

18. On April 13, 2022, Dr. Lee noted the spirometry testing showed an obstructive pattern consistent with asthma and referred Claimant for a pulmonology consult. Dr. Lee ordered pulmonary function testing on April 25, 2022.

19. Claimant was evaluated by Suzanne Fishman, M.D. on April 26, 2022, whose diagnosis was: reactive airway disease-unspecified. He was evaluated by Andrew Port, M.D on May 3, 2022, who ordered a nebulizer for use at home. At a follow-up telemedicine appointment on June 9, 2022 with Ozioma Gab-Ojukwu, M.D. Claimant noted he was still experiencing shortness of breath and treating with a pulmonologist. The ALJ credited the opinions of the Kaiser physicians that the shortness of breath and other symptoms were caused by the workplace exposure on April 1, 2022 and that Claimant required testing/treatment.

20. Claimant met his burden of proof and established he required medical treatment because of his work injury.

21. An Employer‘s First Report of Injury ("E-1") was prepared under about April 14, 2022 by [Redacted, hereinafter CK]. The E-1 stated a coworker, sprayed clinic

chemicals in employee‘s face and the employee suffered chemical burns to eyes, face, and lungs.

22. A Notice of Contest was filed on behalf of Respondents and further investigation was listed as the reason the claim was contested/denied. Respondents’ cover sheet for the exhibits specified that this pleading was served on May 6, 2022, although the Court‘s copy did not have a completed certificate of mailing.

23. Claimant was taken off work from May 6 through May 20, 2022 (Exhibit K, p. 96.) There was no evidence that any of the physician who treated Claimant took him off work or issued restrictions after May 20, 2022.

24. The ALJ found that the time Claimant missed from work was caused by the work injury.

25. There was no indication in the medical records admitted as hearing that Claimant received additional medical treatment after June 2022.

26. Dr. Lesnak performed an independent medical examination at the request of Respondents on July 22, 2022. Claimant reported he had difficulty breathing and shortness of breath at nighttime, as well as constant fatigue. Dr. Lesnak stated the physical examination of Claimant was within normal limits and he did not find any abnormalities with Claimant’s breathing.

27. Dr. Lesnak opined that Claimant had no reproducible objective findings on examination. He stated Claimant’s pulmonary and cardiac examination did not reveal any abnormalities. Dr. Lesnak said that although there may have been an incident on April 1, 2022, there was no medical evidence to support that Claimant had any medical diagnoses or evidence of any type of injuries that would pertain to the occupational incident.

28. Dr. Lesnak also said that there were appear to be significant psychosocial/psychological issues pertaining to Claimant that may be responsible for his current symptoms. Dr. Lesnak stated Claimant‘s prognosis was excellent, even though he had a myriad of subjective complaints. Dr. Lesnak opined that because there was no evidence Claimant sustained injuries, his status with regard to MMI was not applicable. He did not believe Claimant required additional medical treatment. The ALJ credited this opinion regarding the need for additional treatment, as there was no evidence in the record that Claimant received additional medical treatment after June 2022.

29. Dr. Lesnak testified as an expert witness, and his testimony was consistent with the findings at the time of the IME. Dr. Lesnak testified that he did not question that there was a reported incident on April 1, 2022, but did not have any medical evidence to support Claimant suffered injuries as a result of the incident. (Lesnak Dep. Tr. p. 13:3-6). Dr. Lesnak stated that he thought the emergency room

physician prescribed Claimant Albuterol based on his subjective complaints and not reproducible objective findings. (Lesnak Dep. Tr. p. 16:4-14).[1] He also said Claimant's prescription was continued and a nebulizer was also prescribed based purely on his subjective complaints and not on objective findings by physicians at Kaiser. (Lesnak Dep. Tr. p. 17:25-18:11).

30. Dr. Lesnak opined that Claimant reached MMI as of July 22, 2022 when there were no reproducible findings on exam. (Lesnak Dep. Tr. p. 13:19-14:1). He did not believe there was any basis for an impairment rating, as there were no objective findings or test results upon which to base an impairment. (Lesnak Dep. Tr. p. 14:2-10). The ALJ credited the opinions of the treating physicians over those offered by Dr. Lesnak.

31. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). The ALJ must make specific findings only as to the evidence found persuasive and determinative. An ALJ "operates under no obligation to address either every issue raised or evidence which he or she considers to be unpersuasive". *Sanchez v. Indus. Claim Appeals Office of Colo.*, 411 P.3d 245, 259 (Colo. App. 2017), citing *Magnetic Engineering Inc. v. Indus. Claim Appeals Office*, *supra*, 5 P.3d at 389.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57

[1] Dr. Lesnak admitted he was not an emergency room physician and did not have that certification. He was testifying from his experience approximately 30 years ago.

P.2d 1205 (1936); CJI, Civil 3:16 (2005). The issue of compensability turned on the credibility of the witnesses.

Compensability

In the case at bar, Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S. (2020). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As a starting point, the evidence first established Claimant was working on April 1, 2022. In this regard, Respondents did not dispute that an incident occurred that day; namely that Claimant was sprayed with chemicals by a coworker. (Findings of Fact 6-8). As found, the incident in question was corroborated by video taken that evening. *Id.* The ALJ concluded Claimant suffered a compensable injury when he was sprayed with an identified chemicals on April 1, 2022. (Finding of Fact 17). As found the chemical exposure required Claimant to seek medical treatment, which he received both at Kaiser Permanente and Aurora Medical Center. (Findings of Fact 13-16).

Second, the ALJ determined the chemical exposure required medical treatment with treating physicians prescribing medications, including eye drops and prednisone. Thus, Claimant established by a preponderance of the evidence that it was more likely than not that he was injured as a result of the chemical exposure on April 1, 2022. This was based upon the reports of the physicians treating Claimant. These documented both symptoms and treatment by the physicians. The ALJ credited the opinions of these physicians that the shortness of breath and other symptoms were caused by the workplace exposure on April 1, 2022. The ALJ also credited the opinions of the treating physicians that Claimant required testing and treatment after the incident. (Findings of Fact 17-19). Under these facts, the ALJ concluded there was a requisite causal connection between the incident of April 1, 20022 and Claimant's symptoms/need for treatment. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

In coming to this conclusion, the ALJ considered Respondents' argument that while the incident occurred, it did not cause an injury. Respondents averred the physicians treated Claimant for his subjective complaints alone and there was no evidence of objective findings or need for treatment. Respondents cited Dr. Lesnak's report and testimony in support of their argument. As found, the incident of April 1,

2022 required Claimant to seek treatment and he required evaluations/treatment for a period of at least two months after the incident. Therefore, the ALJ concluded Claimant met his burden of proof in the case at bench.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S.; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether the Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In the case at bar, the ALJ concluded Claimant met his burden of proof to show that his required medical treatment as result of the work injury. (Finding of Fact 20). Respondents are therefore liable to pay for treatment to cure and relieve the effects of the injury. This includes the treatment at Medical Center of Aurora and Dr. Pineda and Kaiser Permanente as well as referrals from those providers.

ORDER

It is therefore ordered:

1. Claimant is entitled to benefits under the Colorado Workers' Compensation Act, as he suffered a compensable injury on April 1, 2022.

2. Respondents shall pay for Claimant's medical treatment at Medical Center of Aurora and Dr. Pineda and Kaiser Permanente as well as referrals from the providers, pursuant to the Colorado Worker's Compensation Medical Fee Schedule.

3. All other issues are reserved for later determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may

access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-228-291-001

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable occupational disease arising out of and in the course of his employment with Employer?

- If Claimant has proven a compensable occupational disease, whether Claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve the Claimant from the effects of the occupational disease?

- If Claimant has proven a compensable occupational disease, whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits for the period of January 15, 2023 through March 23, 2023?

FINDINGS OF FACT

1. Claimant was employed by Employer as a painter. Claimant is 42 years old and has worked for Employer off and on since he was a teenager. Employer is a painting company that is owned and operated by Claimant's brother. Claimant testified that his work with Employer included residential painting with some commercial property painting.

2. Claimant testified that his job duties for Employer included using sprayers and brushes to apply paints, primers, lacquers, lacquer thinners, muriatic acid, sealants, epoxy, stains and paint removers. Claimant testified he worked with sprayers approximately 50% of the time compared to brushes. Claimant testified he worked outdoor 40-50% of the time and exterior work was performed in the Summer. Claimant testified he worked 38-50 hours per week and more than one-half of that time was spent working with chemicals.

3. Documentation entered into evidence at hearing along with testimony from Claimant and Employer establish that Claimant worked for Employer for short periods in 2016 and 2017, from April 2018 through August 2020 and from March 2021 through January 2023. Claimant testified he went to work for a property company and performed mold mitigation beginning in 2019. Claimant testified he wore full body protection when performing mold mitigation. Claimant testified he left that job because he was asked to do things he was not comfortable with.

4. With regard to Claimant's work for Employer, Claimant testified that Employer failed to provide Claimant or other employees with protective gear. Claimant

testified he would have to purchase his own masks and respiratory cartridges on their own, although the owner, CK[Redacted], occasionally would purchase masks and respirator cartridges for Employees. Claimant testified that when he asked Employer to provide additional protective gear, he was told by Employer that Employer was "losing money" and Claimant needed to "man up" and "get the job done".

5. CK[Redacted] testified at hearing in this matter. [Redacted, hereinafter CK] testified that he employs four people currently and has employed up to eleven employees. CK[Redacted] testified that his policy was to have his employees wear respirators 100% of the time that the employees are exposed to chemicals. CK[Redacted] testified that employees were allowed to get respirator cartridges at the [Redacted, hereinafter SW] store and put the cost of the respirators on Employer's account with SW[Redacted].

6. With regard to this conflict in the testimony as to whether Claimant was provided with personal protection equipment by Employer or needed to pay for his equipment himself, the ALJ credits the testimony of Employer over Claimant.

7. Claimant testified that he began having issues with his lungs dating back to 2018. Claimant reported in his medical records that he had started smoking at age 16. Claimant testified at hearing that he may have started smoking earlier than age 16. Claimant testified he smoked a pack of cigarettes every 2-3 days until age 38. Claimant testified he had a history of marijuana use that lasted from age 21 to age 34. Claimant testified he began using meth after his mother passed away and used meth for 6-7 years. Claimant testified he would occasionally smoke meth, but the main way he would consume meth was by snorting or eating meth. Claimant testified he didn't smoke cigarettes very often when smoking meth.

8. Claimant testified that in 2021 he experienced tightness in his lungs, shortness of breath, coughing, and burning in his lungs. Claimant testified he would experience these symptoms right away when working with muriatic acid. Claimant testified he went to the Pagosa Springs Medical Center when he experienced these symptoms.

9. Claimant's medical records document that Claimant sought medical treatment with Dr. Orndorff at Mercy Medical Center in Durango in May 2016 for a cough. Claimant underwent a chest x-ray that showed no chest abnormality. Claimant was evaluated by Dr. Washburn in May 2018. Claimant underwent a computed tomography ("CT") scan of his lungs that showed bilateral pulmonary nodules measuring up to 7 mm. Spirometry tests per1ormed on June 25, 2018 were noted to be normal. It was recommended that Claimant return for follow up CT scan in 12 months. Claimant reported he was able to per1orm his job painting without any difficulties. Claimant reported he only recently started using respiratory protection while at work.

10. Claimant underwent an x-ray of the chest on January 16, 2020. The x-ray showed no radiographic evidence for acute cardiopulmonary disease. Claimant underwent a CT scan of the chest and sinuses on January 23; 2020. The CT scan showed right lower pulmonary nodules that were unchanged since the May 4, 2018 CT

scan. The CT scan of the sinuses showed mild polypoid opacification posterior ethmoid air cells and inferior maxillary sinuses.

11. Claimant returned to Mercy Medical Center on July 22, 2022 with complaints of a cough and shortness of breath as well as some back pain. Claimant reported he did not smoke and worked around chemicals, but does use a respirator. Claimant complained of some pain and numbness down his right leg in addition to the back pain. Claimant was referred for a magnetic resonance image ("MRI") of the low back and x-rays of the chest. Claimant was prescribed medications for his back pain.

12. Claimant returned to Pagosa Springs Medical Center on August 8, 2022 with complaints of marked fatigue having trouble getting through a workday, visual blurring off and on throughout the day helped somewhat by glasses, trouble with concentration and memory, weakness in the extremities to where he has to stop and rest along with complaints of numbness and tingling distally in the extremities and intermittent muscle spasm. Claimant reported he had worked as a painter for over 25 years and therefore has had a lot of exposure to paint, solvents, and other products that are involved in his profession. Claimant reported that several years ago, "they all started wearing respirators." Claimant reported he had a history of some lung "nodules". Dr. Bentley, the examining physician, noted that his "first bet" is that due to Claimant's marked ongoing anxiety and perhaps for other stressors, that we are dealing with a somatization disorder. Dr. Bentley explained that this meant that by producing too much adrenaline type chemical influence in his system, it interteres with other daily important functions and that treating the anxiety and stress could *very* much help his physical symptoms. Dr. Bentley also noted that another possibility would be that of gradual or significant toxic exposure over the years. Dr. Bentley noted he was not exactly sure how to tie in his complaints of the lung problem, but recommended Claimant undergo a toxicology consultation.

13. The ALJ notes that Claimant's report to Dr. Bentley on this visit that "they all started wearing respirators" several years ago is consistent with Employer's testimony at hearing that the respirators were provided by Employer for the employees. The ALJ notes that if Claimant were providing his own personal protection equipment, he likely would not have referred to the use of the equipment in the plural sense of "they all started wearing" . The ALJ takes this into consideration when considering the credibility of the conflicting testimony between Claimant and Employer.

14. Claimant returned to Pagosa Springs Medical Center on September 7, 2022 with multiple concerns, including low back pain with bilateral leg weakness and numbness intermittently. Claimant reported he had a spinal fusion about 9 years ago and "it has progressively gotten worse". Claimant reported he was having trouble working because of the pain. Claimant also reported still having right knee pain and noted he had knee surgery with Dr. Webb not long ago. Claimant also requested a referral to pulmonology at National Jewish. Claimant reported he had "reactive airway for his lungs" and felt it was related to chemical exposure at work as a painter. The Medical Center noted that Claimant had some lung nodules that were followed with

repeat CT scans that did not change, but Claimant was still very nervous that there was something wrong with the nodules.

15. Claimant was initially evaluated at National Jewish Health Center on December 1, 2022 at which time he underwent spirometry testing by Mr. Townsley. Claimant was examined by Dr. Pacheco with National Jewish Health Center on December 2, 2022. Dr. Pacheco noted in her report that Claimant had symptoms over the past 7-8 years that have gradually gotten worse in severity. Claimant reported that he gasps for air when moving ladders at work and often needs to stop to catch his breath. Claimant reported he gets short of breath with bending over to pain baseboards, while walking on level ground, and occasionally at rest. Claimant reported that stopping to perform deep breathing exercises seems to help his dyspnea after 10- 20 minutes. Claimant reported a feeling of chest tightness with dyspnea, and on rare occasion, develops sharp, non-radiating, substernal chest pain that self resolves after a few minutes. Claimant reported to Dr. Pacheco that he notes a significant difference when spraying paints and lacquer products. In particular, Claimant noted the greatest amount of chest burning when spraying lacquer with a spray gun. Dr. Pacheco noted that Claimant's primary care provider had started him on a Flovent inhaler for maintenance and albuterol inhaler as needed. Claimant reported not noticing any improvement with his symptoms from using the albuterol once daily and the Flovent 1-2 times per week. Claimant reported a history to Dr. Pacheco of smoking 2-4 cigarettes per day currently.

16. Dr. Pacheco ordered various testing to be performed, and following the testing, diagnosed Claimant with "asthma with positive methacholine challenge testing (PC20 FEV1 <0.0625 mg/ml). Dr. Pacheco noted Claimant had occupational exposures during 25 years as a painter including aerosolized lacquer with added catalysts, urethane and acrylic latex paint, paint primers, painVlacquer thinners, two-part industrial epoxies and spray foam insulations. Dr. Pacheco noted Claimant had other occupational exposures include mold for one year in 2019 working for a mold mitigation company. Dr. Pacheco noted that Claiimant would pick up the lacquer from SW[Redacted] where a store worker adds a catalyst prior to purchase, and Claimant would load the lacquer into a spray gun machine and spray it onto wood surfaces. Claimant reported he used to apply 55 gallons of lacquer in a single day.

17. Dr. Pacheco noted that the pulmonary function tests were normal, but methacholine challenge was strongly positive (PC20 FEV1 < 0.0625 mg.ml) indicting a diagnosis of asthma. Dr. Pacheco noted that she was concerned for work-related asthma from his workplace exposures, especially the lacquers, urethane paints, and primers. Dr. Pacheco ultimately diagnosed Claimant with asthma with positive methacholine challenge most likely work-related from Claimant's occupational exposures. Dr. Pacheco requested Claimant perform Peak Expiratory Flow Response ("PEFR") measurements of his breathing four times daily at work and away from work to compare Claimant's breathing ability in both places.

18. Claimant returned to Dr. Pacheco on December 16, 2022. Dr. Pacheco reviewed Claimant's PEFR data and noted that Claimant's breathing ability decreased

at work compared to at home. Dr. Pacheco noted that Claimant's PERF demonstrated a 20% or more decline in his measurements while at work compared to at home. Dr. Pacheco opined that Claimant was suffering from asthma that was caused by his work related exposures to various products at work.

19. Claimant testified that after he was advised by Dr. Pacheco that his asthma was work related, he decided to file a Workers' Claim tor Compensation. Claimant testified he initially asked his brother to file the claim for him, but when Employer failed to file the claim, he filed the Workers' Claim for Compensation. The Workers' Claim for Compensation was filed on January 24, 2023.

20. CK[Redacted] testified at hearing that when his brother advised him that he had a work injury, CK[Redacted] initially believed he was referring to a back injury. CK[Redacted] testified that after his brother filed the Workers' Claim for Compensation, he asked Insurer to look into whether the claim was valid. A Notice of Contest was filed on February 7, 2023.

21. Claimant returned to Pagosa Springs Medical Center on February 7, 2023 and was evaluated by Physician's Assistant ("PA-C") Mashburn. PA-C Mashburn noted that Claimant had been diagnosed with work-related asthma by National Jewish Health. Ms. Mashburn noted that National Jewish had provided Claimant with a note to avoid all pain and paint product exposure while working, but his employer did not have any desk jobs for him so he had been unable to work. PA-C Mashburn noted she was referring Claimant to a Level II accredited physician for his workers compensation case.

22. Claimant returned to Dr. Pacheco on February 10, 2023 and reported that he had some improvement in his symptoms and had not returned to work. Dr. Pacheco noted that Claimant's PEFR data showed values between 400-500 Uminute, though they tend to vary by no more than 40ml across a single day. Dr. Pacheco continued to provide a diagnosis of work-related asthma. Dr. Pacheco noted that the chest CT scan showed subtle centrilobular nodules that suggest a diagnosis of respiratory bronchiolitis from cigarette use, but noted this diagnosis would not cause a positive methacholine challenge or acute peak expiratory flow decline while at work.

23. Respondents obtain an independent medical examination ("IME") with Dr. Jeffrey Schwartz on April 19, 2023. Dr. Schwartz reviewed Claimant's medical records, obtained a medical history and performed a physical examination, which included spirometry testing, as part of his IME. Dr. Schwartz also requested a complete copy of the data from National Jewish Health with regard to the methocholine challenge test.

24. Dr. Schwartz issued a report dated June 5, 2023 that noted issues with regard to the methacholine challenge testing results, which included that the methacholine challenge test showed the volume-time curves for each of Claimant's FVC efforts during the test. Dr. Schwartz noted that the two lower curves represented Claimant's reported FVC maneuvers performed after Claimant inhaled methacholine. Dr. Schwartz noted that it was noteworthy that Claimant's two volume-time curves for his post-methacholine tests showed obvious differences which should not occur if

Claimant's efforts are reproducible under ATS standards. Dr. Schwartz reported that the numerical data for Claimant's post-methacholine spirometries showed Claimant preformed three FVC maneuvers in the minute after his methacholine dose but Claimant's report showed his best effort, based on his FVC and FEV1 at 12:21:55, did not have the accompanying flow-volume curve required per ATS quality confirmation. Dr. Schwartz opined that based on the two post-methacholine FEV1s with accompanying flow-volume curves which showed a difference of 210 ml, Claimant's "positive test" was not acceptable because it failed the reproducibility criterion, and, therefore, there was no evidence Claimant's low post-methacholine spirometry values represented maximal expiratory efforts. Dr. Schwartz hypothesized that Claimant's failure to perform reproducible spirometry after he inhaled methacholine was not a result of possible asthma, but likely represented Claimant's malingering, as Claimant was able to perform reproducible expiratory efforts before and after his immediate post- methacholine testing. Dr. Schwartz further noted that Claimant's post-methacholine spirometry did not show the airflow obstruction expected with Claimant's significant fall in FEV1, a finding that would be typical of poor inspiratory or expiratory efforts that lead to a reduced FEV1 but a normal FEV1/FVC.

25. Dr. Schwartz testified consistent with his IME report at his deposition in this matter. Following Dr. Schwartz' testimony in this matter, Claimant presented the rebuttal testimony of Dr. Pacheco. Dr. Pacheco testified that the methacholine challenge test is the gold standard test for asthma. Dr. Pacheco testified that she did not agree that the methacholine challenge test results were not acceptable. However, Dr. Pacheco noted that the test results were interpreted by a pulmonologist, and Dr. Pacheco relied on the pulmonologists judgment that the test was acceptable.

26. Dr. Pacheco took issue with Dr. Schwartz' conclusion that the test results of the methacholine challenge test were influenced by Claimant's effort during the test and noted that Claimant would not know which test he was not to perform well at during the administration of the test. Dr. Pacheco testified on cross-examination that she relied on interpretation of data that had been performed by other people in her office, including the technician performing the test and the pulmonologist.

27. Dr. Schwartz testified on sur-rebuttal and reiterated his testimony that the methacholine challenge test did not meet the ATS testing standards. Dr. Schwartz noted that it appeared that Dr. Pacheco was given improper information as to whether the Claimant met the ATS standards in the methacholine challenge test. Dr. Schwartz testified that it appeared that Claimant's one positive test for asthma was based on improper testing, as all of Claimant's other testing was normal.

28. The ALJ credits the testimony of Dr. Schwartz and finds that the methacholine challenge test resulted in findings that did not meet the ATS testing standards. The ALJ notes that the testimony of Dr. Pacheco does not establish that the findings of the methacholine challenge test should be relied upon in light of the failure to meet the ATS testing standards. The ALJ therefore credits the testimony of Dr. Schwartz over the conflicting testimony of Dr. Pacheco and finds that Claimant has

failed to establish that it is more probable than not that Claimant is suffering from work related asthma.

29. Based on the finding that Claimant has failed to establish that he is suffering from work related asthma, the ALJ need not address the issue of whether the condition is related to Claimant's employment with Employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S.

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8- 43-201, C.R.S., 2022. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff,* 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational

disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin* & *Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992).

6. As found, the ALJ credits the testimony and opinions expressed by Dr. Schwartz over the conflicting testimony and opinions by Dr. Pacheco and finds that Claimant has failed to establish by a preponderance of the evidence that he contracted work related asthma as a result of an occupation disease Claimant sustained at work with Employer. As found, the testimony and opinion of Dr. Schwartz that the methacholine challenge test findings were based off of test results that did not meet ATS standards is found to be credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits for an occupational disease related to his work with Employer is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 27, OACRP. You may access a petition to review form at: http://www.colorado.gov/dp/oac/forms-WC.htm. In **addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac:9it@state.co.us.**

DATED: November 6,, 2023

Keith E. Mottram
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-221-180-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with employer on or about March 5, 2022.

2. If compensable, whether Claimant established by a preponderance of the evidence entitlement to temporary disability benefits.

3. If compensable, whether Claimant established by a preponderance of the evidence that right shoulder decompression surgery is reasonable and necessary to cure or relieve the effects of an industrial injury.

4. If compensable, determination of Claimant's authorized treating physician.

5. If compensable, determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 67-year-old woman who worked for Employer as a warehouse worker, beginning in September 2020. (Ex. 3). Claimant previously worked for Employer in Nashville, Tennessee in 2018 and 2019. Claimant's job required her to prepare products for delivery by drivers by selecting products from the warehouse, placing them into a "tote," and taking the loaded totes to a station for delivery drivers. Claimant testified that on March 5, 2022, she was retrieving a tote from an overhead shelf when she felt a "pull" and pain in her right shoulder.

2. Claimant testified she reported the incident to her "lead" who instructed her to take ibuprofen and ice her shoulder. Claimant testified the lead did not ask Claimant to complete paperwork, and did not provide her a list of places to obtain medical treatment. Claimant did not work the following day due to her shoulder pain, and was not scheduled to work the next three days. She returned to work on Thursday, March 10, 2022, and continued to work after returning. Claimant's time records from this period show Claimant worked approximately 24 minutes on Sunday, March 6, 2022, and took voluntary time off the remainder of the day. Claimant returned to work on Thursday, March 10, 2023, and worked approximately four hours. (Ex. 9). Claimant continued to work after March 10, 2022, but did not work full shifts.

3. She testified that by the first week of April 2022, she continued to have pain and sought treatment at Peak Vista on April 4, 2022. At that visit, Claimant saw Iana Shamah, PA-C, and reported upper back, shoulder, and hand pain. Claimant did not report a specific injury causing her shoulder pain, and reported an onset of one month earlier, the record states "Context: no injury," and no mechanism of injury was discussed. Claimant's symptoms were aggravated by lifting and movement, and diagnosed her with a right

shoulder sprain. Although Ms. Shamah documented an assessment of "generalized body aches," Claimant's examination was focused on her right shoulder, and demonstrated limited strength and motion in the right shoulder, with tenderness to palpation and pain on motion. Examination of Claimant's left shoulder, spine, neck, and hands was normal. A right shoulder x-ray showed mild arthritis in the glenohumeral and acromioclavicular joints. Claimant was instructed to take ibuprofen and Tylenol for discomfort, and to return if her symptoms did not improve. Claimant declined a physical therapy referral. No work restrictions were imposed. (Ex. C).

4. Claimant returned to Peak Vista on April 26, 2022, reporting that her right shoulder pain was constant and worsening. She reported an onset two months earlier, with aching, and sharp pain. The record again documents "no injury." Ms. Shamah recommended an MRI of the right shoulder and referred Claimant for an orthopedic evaluation. (Ex. C).

5. The right shoulder MRI performed on May 31, 2022, was interpreted as showing age-related rotator cuff tendinosis, partial-thickness tearing of the proximal supraspinatus, intrasubstance tearing within the distal tendon; and osteoarthritic changes in the glenohumeral joint with small effusion, biceps tendinitis. (Ex. E).

6. Claimant returned to Peak Vista on June 3, 2022, reporting continued right shoulder pain. Claimant had begun physical therapy and noted that it helped . (Ex. E).

7. On June 7, 2022, Claimant saw Richard Stockelman, M.D., at Colorado Springs Orthopaedic Group, reporting reported right shoulder pain in the superior aspect that began insidiously and was worse with reaching and use of the right arm. Claimant had been in physical therapy for 6 weeks and noted that treatment to date had not resolved her pain. Dr. Stockelman reviewed Claimant's MRI and diagnosed Claimant with right shoulder pain, subacromial bursitis, rotator cuff tendonitis, and acromioclavicular joint degeneration. Dr. Stockelman performed a right shoulder subacromial steroid injection, and recommended Claimant return in three weeks. (Ex. 6).

8. On June 29, 2022, Claimant returned to Dr. Stockelman reporting three-days relief from the subacromial injection, but no lasting benefit. Dr. Stockelman prescribed an oral steroid and scheduled a follow up in three weeks. (Ex. 6)

9. On July 20, 2022, Claimant saw Dr. Stockelman and again reported no change in her symptoms. She indicated she would pursue a workers' compensation claim, because "she knows she is better when she is not going to work and doing all the lifting required in her job." Dr. Stockelman recommended proceeding with an arthroscopic subacromial decompression, but delayed performing the procedure until Claimant determined whether to pursue the treatment through workers' compensation or private insurance. (Ex. 6).

10. On August 5, 2022, Dr. Stockelman assigned Claimant work restrictions, and indicated her right shoulder condition was "thought to be secondary to overuse." The work restrictions included no lifting greater than five pounds overhead, no repetitive lifting or motions overhead, and a weight restriction of 10 pounds. He indicated the restrictions would remain in effect until October 1, 2022. (Ex. 6)

11. Claimant returned to Dr. Stockelman on October 3, 2022, requesting authorization to be off work for an additional two months, which the doctor provided. Claimant indicated she was considering surgery and pursuing a workers' compensation claim. Dr. Stockelman's impression was subacromial bursitis of the right shoulder. (Ex. 6). ON October 26, 2022, Dr. Stockelman completed a work restriction form for Employer indicating there were no accommodations that would permit Claimant to return to work until December 1, 2022. (Ex. 6).

12. On October 5, 2022, Claimant was seen at Peak Vista, and reported that she was trying to open a workers' compensation case. (Ex. D).

13. On November 15, 2022, Claimant saw Daniel Peterson, M.D., at Concentra. Claimant reported, for the first time, that the initial injury occurred at work while lifting boxes. Claimant reported that Employer did not offer medical care, so she saw her primary care provider at Peak Vista. On examination, Dr. Peterson noted tenderness in the acromioclavicular and glenohumeral joints, with limited range of motion in all planes. Claimant also had positive rotator cuff tests including painful arc, Hawkin's, Neer, and empty can tests, and positive biceps tests. He diagnosed Claimant with a traumatic incomplete tear of the right rotator cuff, a sprain of the right acromioclavicular ligament, and right shoulder arthritis. Dr. Peterson referred Claimant to Dr. Stockelman for evaluation and treatment as a workers' compensation case. Dr. Peterson noted claimant "clearly has pre-existing arthritis in her [right] shoulder but worked without difficulty for 17 months doing heavy lifting without any problem until March of 2022 when she started having marked [right] shoulder pain. Based on her [history] and her MRI she clearly has an exacerbation of a pre-existing condition to the point where she will need surgery for her right shoulder to return her to her prior function. I will refer her to Dr. Stockelman under WC to proceed with surgical repair." (Ex. 7).

14. Claimant saw Dr. Stockelman again on November 18, 2022, for a pre-surgical visit. On November 22, 2022, Dr. Stockelman requested authorization from Insurer to perform the recommended surgery. (Ex. D).

15. Claimant saw Dr. Peterson again on December 2, 2022, he noted that he did not believe Claimant was safe to return to work. On January 3, 2022, he opined that Claimant was approximately 25% of the way toward meeting the physical requirements of her job. (Ex. 7).

16. On January 31, 2023, Respondents filed a Notice of Contest, indicating that Claimant's injury was not work-related. (Ex. 4)

17. On February 22, 2023, Claimant filed a Workers' Claim for Compensation, alleging that she "was working on March 5, 2022, performing daily picking, stowing, and staging duties. I reached up over my head to pull a tote from the shelf and experienced a tightness in my muscle of right arm." Claimant indicated that she reported the incident to "[Redacted, hereinafter BE] also [Redacted, hereinafter JN]." (Ex. 3)

18. Claimant returned to Peak Vista on April 19, 2023, reporting continued right shoulder pain, and that she had not returned to work. Claimant reported her pain had improved, but she still could not lift, and her range of motion was poor. (Ex. 5).

19. Claimant has not had the surgery recommended by Dr. Stockelman and Dr. Peterson.

20. On July 11, 2023, Timothy O'Brien, M.D., performed a record review at Respondents' request. Dr. O'Brien was admitted as an expert in orthopedic surgery, and testified through deposition. Dr. O'Brien opined that Claimant did not sustain a work-related injury to her shoulder. He further opined that Claimant's MRI shows only age-related conditions, and no sign of an acute injury. He opined that the shoulder surgery recommended by Dr. Stockelman is reasonable, although he believes it is not work-related and unlikely to completely relieve Claimant's symptoms. Dr. O'Brien's opinions regarding causation of Claimant's injury are not persuasive.

21. Claimant testified that she has not had any right shoulder symptoms or treatment in the five years before March 5, 2022, and was able to perform her job duties. Claimant testified that after March 5, 2022, she continued to perform her job, but her shoulder condition continued to worsen, so she worked reduced hours. Claimant's wage records indicate that she averaged approximately 42.5 hours per week in the 14 weeks before March 5, 2022, and approximately 30.5 hours per week in the 14 weeks after March 5, 2022. Claimant testified that in June 2022, she made an accommodation request and Employer placed her on a leave of absence. (No document evidencing the accommodation request was admitted into evidence).

22. On June 18, 2022, Claimant was placed on a leave of absence until October 2022. Claimant testified that Employer required her to take a leave of absence because they could not accommodate her work restrictions. Claimant attempted to return to work pm October 2, 2022, and was paid for 6.68 hours, according to her wage records. (Ex. 9). Claimant has not returned to work for Employer since October 2022.

23. Claimant testified that she reported to providers at Peak Vista and Dr. Stockelman, that she first experienced shoulder pain when lifting a tote off a shelf while working for Employer.

24. In position statements, Claimant and Respondent agree that Claimant's average weekly wage was $851.18. After reviewing Claimant's wage records, the ALJ finds this to be a fair approximation of Claimant's AWW.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The claimant must prove his injury arose out of the course and scope of her employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, *supra*. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co, supra*; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury “has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee’s service to the employer in connection with the contract of employment.” *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm’n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int’l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No.4-894-311-03, (ICAO Apr. 9, 2014). All results flowing proximately and naturally from an industrial injury are compensable. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her right shoulder arising out of the course of her employment with Employer. The ALJ finds credible Claimant’s testimony that she sustained an injury to her right shoulder on March 5, 2022, while working for Employer. When Claimant saw her Peak Vista on April 4, 2022, she reported an onset of her symptoms one-month earlier, which corresponds to her testimony. Moreover, Claimant's wage records correspond to her testimony that she took time off work the following day, and that she had difficulty working her full shifts after March 5, 2022.

Although, the several physicians documented “no injury” or an “insidious onset’ of her symptoms, this does not rule out a work-related injury. While the evidence is contradictory on whether the symptoms Claimant experienced on March 5, 2022 were caused by an acute injury, or the manifestation of an injury resulting from overuse, the evidence does establish an onset of symptoms arising out of the course of Claimant’s employment with Employer. That Claimant may have described different mechanisms of injury is not dispositive. Claimant is not required “to understand the exact mechanism of the injury to prove a compensable injury, nor is [a claimant] required to explain in the medical, physiological, or anatomical terms of an expert the way in which the accident resulted in the symptoms.” *In Re Montoya*, W.C. No. 4-633-835 (ICAO, April 26, 2006).

The ALJ finds credible the opinion of Dr. Peterson that Claimant aggravated a pre-existing condition in the course of her employment. Claimant credibly testified she had no right shoulder symptoms or treatment in the five years before March 5, 2022, and no credible evidence was admitted contradicting that testimony. Claimant had also performed her warehouse job for Employer for approximately three years in Colorado, and also from 2018 to 2019 for one of Employer’s facilities in Nashville, Tennessee. It is unlikely Claimant could have worked in her position with a shoulder injury.

Authorized Treating Physician

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Rule 8-2 (A)(2) clarifies that, "[a] copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury." The term "business days" refers to any day other than a Saturday, Sunday, or legal holiday. W.C.R.P. 1-2 (C).

An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Indus. Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006). If upon notice of the injury the employer does not timely designate an ATP, the right of selection passes to the claimant. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987), *see also* W.C.R.P. 8-2 (E) ("If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing.")

Claimant's authorized treating physician is Dr. Peterson at Concentra. Claimant has failed to establish that Employer was aware of her work-related injury until sometime in October 2022. The record contains insufficient credible evidence to determine the date Employer became aware Claimant sustained a work-related injury. The ALJ does not find credible Claimant's testimony that she reported her work injury to Employer on March 5, 2022. Moreover, had Claimant reported a work-related injury, the ALJ finds it unlikely Employer would have required to take a non-workers' compensation leave of absence in June 2022.

The first credible evidence in the record that Claimant was considering pursuing a workers' compensation claim was July 20, 2022, when she informed Dr. Stockelman she intended to pursue a claim However, October 3, 2022, was the first time Claimant indicated she was actively pursuing a workers' compensation claim. Her previous reports to physicians were prospective statements of intent, but no indication she was actively pursuing a claim. A report in October 2022 is also consistent with Claimant first seeing Dr. Peterson at Concentra on November 15, 2022, and beginning treatment with him as her ATP. Dr. Stockelman became an ATP by virtue of Dr. Peterson's November 15, 2022 referral, and was an ATP after that referral, but not before. The treatment and evaluations Claimant received from Peak Vista were not provided by an ATP.

Specific Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and

is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Stockelman is reasonable, necessary and causally related to her industrial injury. The ALJ finds persuasive Dr. Peterson's opinion that Claimant requires surgery to address an aggravation or exacerbation of her pre-existing osteoarthritis. Dr. O'Brien agreed that the surgery was reasonable, but did not believe it was related to her injury. Having found the Claimant's injury compensable, and accepting that the surgery is intended to address the aggravation of her pre-existing conditions, the ALJ concludes that, more likely than not, the surgery recommended by Dr. Stockelman is compensable medical treatment.

Temporary Disability Benefits

To prove entitlement to temporary disability benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Temporary disability benefits continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.; See also § 8-42-106 (1)(b), C.R.S. (for temporary partial disability benefits) The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) *citing Ricks v. Indus. Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

Claimant has established an entitlement to temporary disability benefits beginning March 6, 2022. The evidence demonstrates that Claimant was medically incapacitated due to her work-related injury, and sustained a loss of earning capacity for more than three work shifts. Claimant's wage records demonstrate that Claimant worked 2.97 hours the week following her injury. She was then able to return to work at a slightly diminished capacity for approximately 14 weeks, until she was placed on a leave of absence on June 18, 2022. No credible evidence was admitted indicating that the criteria for termination of temporary disability benefits has been satisfied. Respondents shall pay Claimant

temporary disability benefits from March 6, 2022 until terminated by statute, or order, subject to applicable offsets. Per agreement of the parties, what, if any, offsets are to be applied to Claimant's temporary disability benefits is reserved for future determination.

Per the request of the parties, the issue of offsets is reserved.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's average weekly wage (AWW) based on a claimant's monthly, weekly, daily, hourly, or other earnings. The overall objective in calculating the AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., *supra*; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007).

As found, the parties agree Claimant's AWW at the time of injury was $851.18. The ALJ has reviewed Claimant's wage records contained in Exhibits 9 and F, and finds that $851.18 is a fair approximation of Claimant's AWW at the time of injury.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to her right shoulder arising out of the course of her employment on or about March 5, 2022.

2. Claimant's authorized treating physician is Daniel Peterson, M.D. Richard Stockelman, M.D., became an authorized treating physician on November 15, 2022, by virtue of Dr. Peterson's referral.

3. Claimant's request for authorization of the surgery recommended by Dr. Stockelman is granted.

4. Claimant is entitled to temporary disability benefits from March 5, 2022, until terminated by statute or further order, subject to applicable offsets. The determination of amount and applicable offsets is reserved for future determination.

5. Claimant's average weekly wage is $851.18.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he sustained a compensable injury to his back in the course and scope of his employment on March 15, 2023?

2. If Claimant proved he suffered a compensable injury, did Claimant prove by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical benefits?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 62 year-old male who worked as a cashier for Employer. On Wednesday, March 15, 2023, Claimant was assisting an elderly customer who was refilling a five-gallon water bottle. Claimant credibly testified that he bent over to lift the water bottle to put it in her shopping cart. When he did this, he immediately felt a pop in his back. Claimant's supervisor, [Redacted, hereinafter RN], was next to him and saw the event. Claimant credibly testified that RN[Redacted] asked if Claimant needed a break. Claimant took a brief break and went to the bathroom. Shortly thereafter, he returned and completed his shift. (Tr. 11:16-25).

2. Claimant worked part-time for Employer. Claimant was not scheduled to work Thursday, March 16, 2023 or Saturday, March 18, 2023. Claimant continued to experience back pain, so he "called in" to work on Friday, March 17, 2023, and Sunday, March 19, 2023. (Tr. 12:6-13). Claimant credibly testified that he experienced immediate pain in his lower back, and later the evening of March 15, 2023, he began experiencing left leg symptoms. (Tr. 16:1-11).

3. Claimant testified that from March 15, 2023 to March 19, 2023 he tried home remedies for his back pain. He tried a heating pad, ice, over-the-counter medications like ibuprofen, Tylenol and patches, but these did not relieve his symptoms. (Tr. 12:14-19).

4. On Sunday, March 19, 2023, Claimant went to the Emergency Room at St. Anthony North Health Campus. He complained of left-sided low back pain and left leg pain that he had been experiencing since Wednesday, March 15, 2023. According to the medical records, Claimant reported that while at work, he lifted a large bottle of water, and developed left low back pain that radiated into his left leg. He described the pain as aching, sharp and throbbing. (Ex. 6 p. 10). In the same medical record, there is an ED Triage Note from Monica L. Monnin, describing Claimant as reporting that he "[c]ould have lifted something wrong at work, unsure what caused the pain which started

Wednesday." (Ex. 6, p.12). Claimant credibly testified that he consistently reported his mechanism of injury as lifting a five-gallon water bottle at work. (Tr. 25:4-9). The ALJ credits Claimant's testimony and does not find the triage note to be persuasive.

5. Maris Drazek, PA-C treated Claimant in the emergency room. She ordered lumbar spine x-rays and read them as showing Claimant having scoliosis and degenerative changes. Ms. Drazek diagnosed Claimant with acute left-sided low back pain with left-sided sciatica. She prescribed Claimant Robaxin, Gabapentin, and lidocaine patches, and advised Claimant to follow up with his PCP. She gave Claimant a note that he may return to work on March 23, 2023. (Ex. 6 pp. 9-10). Claimant credibly testified that he took this one-page note to his Employer on Monday, March 20, 2023. (Tr. 12:25-13:6 and 24:4-9). This testimony was uncontroverted.

6. Claimant credibly testified that while he was off of work, he called several chiropractors to try to get an appointment, and he called his primary physician to try to get an appointment. (Tr. 13: 7-11).

7. Claimant was able to schedule a chiropractic appointment with Kyle Zachgo, D.C, on March 20, 2023. Dr. Zachgo noted in the record that Claimant "comes in today with low back pain that started last week when he was lifting a bucket at work. He didn't feel pain initially but throughout the next few days he started noticing significant pain. He went to St. Anthony's yesterday to get looked at, they diagnosed [him] with sciatica and referred him to me. They gave him medication that did not help." (Ex. 8). As found, Claimant credibly testified that he consistently reported his mechanism of injury as lifting a five-gallon water bottle at work. (Tr. 24:21-25:9). The ALJ credits Claimant's testimony and does not find the reference to lifting a bucket at work to be persuasive.

8. At Claimant's March 20, 2023 chiropractic appointment, Dr. Zachgo performed dry needling, but noted Claimant did not respond well to care. (Ex. 8). This is consistent with Claimant's testimony that the dry needling did not relieve his symptoms. (Tr. 13:23-25).

9. Claimant returned to Dr. Zachgo on March 24, 2023 for a follow-up appointment, and reported having no improvement in his symptoms. Claimant testified he was unable to undergo manual manipulation because he was too sore and swollen. (Tr. 13:12-16). This is consistent with Dr. Zachgo's records that he performed no treatment, and suggested Claimant go to his primary care provider to get an MRI and possible injection to relieve his symptoms. (Ex. 8).

10. On April 10, 2023, Claimant went to the emergency room with chief complaints of urinary retention and flank pain. According to the medical record, Claimant was getting up seven times a night to urinate, and experienced pain with urination that radiated through his perineum to his back. At the emergency room, Claimant gave a urine sample without any difficulty. No emergent causes for his symptoms were identified. His urine test was normal and there was no evidence of infections or kidney stones. Claimant was given a urology referral, and he was advised to follow up with his primary care physician. (Ex. 6 pp. 15-21).

11. Claimant saw his primary care physician, Taylor Hart, M.D. on April 13, 2023, with a chief complaint of acute left-sided low back pain with left-sided sciatica. Dr. Hart was concerned about disc protrusion/herniation and nerve compression. Claimant also reported difficulty urinating over the past few weeks. Dr. Hart noted Claimant's recent low back pain, and Claimant's strong family history of prostate cancer. He did not have concern for acute cauda equine syndrome, but wanted Claimant to have a lumbar MRI. (Ex. 9).

12. On March 22, 2023, Claimant completed an "Employee Incident Questionable Claim Form." On the form, Claimant wrote he "was assisting a customer with P.O.S. I lifted a 5 gal water bottle to put in the cart." He listed the date of injury as March 15, 2022. The document was to be completed by store management, but it was completed by Claimant. (Ex. 14 p. 107).

13. Claimant's supervisor, RN[Redacted] , completed an Associate Incident Report Packet on March 22, 2023. [Redacted, hereinafter KS] signed the form on April 20, 2023 and wrote the following "updated/notified." (Ex. 14 p. 103). No evidence was offered to explain why KS[Redacted] signed the form on April 20, 2023, indicating that is when she was notified.

14. Claimant completed an "Associate Work Related Injury/Illness Report" on April 20, 2023. He noted an injury date of March 15, 2023, and stated "I was assisting a[n] elderly woman with a[n] [Redacted, hereinafter EO] 5 gallon exchange. I kneed [sic] down, pulled out the full water bottle and set in on the ground in front of the EO[Redacted] water station. The customer brought her cart closer and then I lifted it to her cart." There was no evidence offered as to why this form was not completed earlier. (Ex. 14 p. 108).

15. Employer's First Report of Injury was completed on April 20, 2023. According to the Report, Claimant injured his lower back on March 15, 2023 when he was lifting a water bottle for a customer, and he notified Employer of the injury to his lower back on March 20, 2023. (Ex. 2). The ALJ finds that Claimant notified Employer of his back injury on or about March 20, 2023.

16. Claimant went to Concentra on May 16, 2023, and was evaluated by ATP, Michelle Viola-Lewis, M.D. There is no objective evidence in the record as to why Claimant was not sent to Concentra before this date. Claimant explained to Dr. Viola-Lewis that on March 15, 2023, he was helping a customer with a five-gallon water bottle when he injured the left side of his lower back. Dr. Viola-Lewis recorded that he went to the emergency room initially because the pain kept him from sleeping. He also developed urinary retention and was referred to a urologist. She further noted that his May 15, 2023 MRI showed significant bulging of the L4 disc with impingement of the nerve root as well as degenerative changes in the L4-L5 area. Dr. Viola-Lewis referred Claimant to an orthopedic spine specialist and to physical therapy. She gave Claimant restrictions of being allowed to sit as needed, and no lifting, pushing, pulling or tugging greater than 10 pounds. On the WC164 Form, she noted Claimant's work-related medical diagnoses as: L4-L5 disc bulge, injury of sciatica nerve, and neurogenic bladder. (Ex. 10).

17. On May 18, 2023, Claimant had an MRI of his spine. The MRI showed a large extruded disc at L4-5 with severe stenosis in the left-sided neural foramen. This was also pushing on the cauda equine. The MRI also indicated degenerative disc disease. (Ex. 12).

18. ATP, Stephen Pehler, an orthopedic spine specialist, evaluated Claimant on May 18 and 29, 2023. Dr. Pehler noted that since the March 15, 2023 work-related injury, Claimant experienced increasing back pain with buttock and left greater than right lower extremity pain, and Claimant was having urinary retention and difficulty with voiding. Dr. Pehler concluded Claimant had evolving symptoms of cauda equine syndrome from a large disc herniation, spinal stenosis and a spondylolisthesis. He believed Claimant's condition was severe and approaching a critical nature. Dr. Pehler opined that proceeding with conservative care was contraindicated. He and Claimant discussed moving forward with decompression fusion with interbody placement at the L4-5 level. Dr. Pehler also made sure Claimant was aware that if his symptoms of cauda equine syndrome evolved, he would need emergent surgery. (Ex. 11).

19. Claimant returned to Concentra on May 26, 2023 for a follow-up appointment. Nathan Adams, P.A. noted in the medical record that Claimant saw Dr. Pehler who recommended surgery, and felt physical therapy would not be helpful. (Ex. 10).

20. On June 12, 2023, Respondent filed a Notice of Contest asserting Claimant's injury was not work-related. (Ex. L)

21. Claimant saw Qing-Min Chen, M.D., an Orthopedic Surgeon, for an Independent Medical Examination on July 1, 2023. Dr. Chen evaluated Claimant and conducted a records review. Claimant denied any prior symptoms or issues with his back. (Ex. A).

22. Dr. Chen opined that based on the May 13, 2023 MRI, Claimant had bone marrow edema at L4-5 endplates suggestive of chronically degenerated discs. According to Dr. Chen this "suggests the claimant already had a compromised disc and a compromised annulus." He further opines "the mechanism of injury could have caused this particular issue in an otherwise compromised disc. In a normal healthy spine, this would not have occurred." (Ex. A).

23. Dr. Chen ultimately opined that the surgery recommended by Dr. Pehler is reasonable and necessary, but is not related to the claim. In Dr. Chen's opinion, '[t]his is just a natural progression of claimant's underlying disease. Disc herniations in this setting are kind of like a pimple that is waiting to be popped. This disc was already ready to go, and again the body should be able to lift a 5-gallon jug of water without any compromise. This was only a matter [of] time regardless of whether or not the claimant was picking up a jug of water, whether he was bending over to put on his socks, whether or not he coughs and herniates the disc. Any of those things could have occurred given how compromised his back was at that time." (Ex. A).

24. Both Dr. Pehler and Dr. Chen credibly opined that the recommended spinal surgery is reasonable and necessary. (Ex. 11 and Ex. A).

25. Claimant credibly testified he had no prior back issues or treatment for his back prior to the incident on March 15, 2023. (Tr.17:14-22). This testimony was uncontroverted. The ALJ finds that Claimant did not have back issues nor did he have any treatment for his back prior to March 15, 2023.

26. The ALJ finds Dr. Chen's opinion regarding relatedness to be credible, but not persuasive. As found, Claimant did not have any back issues prior to lifting the five-gallon water bottle for a customer on March 15, 2023. And as Dr. Chen stated, this mechanism of injury could have caused a disc herniation in a compromised disc, and Claimant had degenerative discs.

27. Claimant testified he was scheduled to have surgery on August 15, 2023. Claimant scheduled surgery, even though it had not been authorized, because he was fearful of his symptoms becoming permanent. (Tr. 17:1-9).

28. Based on the totality of the evidence, the ALJ finds that Claimant proved by a preponderance of the evidence that he suffered a compensable injury on March 15, 2023. The ALJ further finds that the surgery recommended by Dr. Pehler is reasonable, necessary and related to Claimant's March 15, 2023 workplace injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ.

Cordova v. Indus. Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. § 8-41-301(1)(b), C.R.S. (2006); *see Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley Sch. District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

The mere occurrence of symptoms at work, however, does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dep't Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the

requisite causal connection is one of fact for determination by the ALJ. *Boulder*, 706 at 791; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant was asymptomatic prior to the March 15, 2023 work-injury. Even if Claimant was susceptible to disc herniation as Dr. Chen posits, it was the March 15, 2023 work-related lifting event that caused Claimant to become symptomatic and led to the need for a spinal decompression surgery. Claimant's back was aggravated by his work-related injury and his need for treatment accelerated by the same.

Medical Benefits

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs Sch. Dist. #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, WC 4-517-537 (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* WC 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997).

If an injury is found to be causally related to an industrial accident, respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the industrial injury. § 8-42-101, C.R.S.; *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Put another way, the right to medical benefits "arises only when an injured employee initially establishes, by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment." *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). The ALJ's factual determinations must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Delta Drywall v. Indus. Claims Appeals Office*, 868 P.2d 1155 (Colo. App. 1993).

The totality of evidence and testimony proves Claimant sustained a compensable injury in the course and scope of his employment on March 15, 2023. Respondents are liable for all medical treatment that is reasonable, necessary, and related to relieve Claimant of the effects of the March 15, 2023 lumbar injury, including but not limited to the surgery recommended by Dr. Pehler.

ORDER

It is therefore ordered that:

1. Claimant sustained a work-related injury to his back on March 15, 2023.

2. Respondents are responsible for all medical treatment needed to relieve the effects of the industrial injury to Claimant's back, including, but not limited to, the surgery recommended and performed by Dr. Pehler.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

- Did Claimant prove by a preponderance of the evidence she is permanently and totally disabled?

- The parties stipulated that Respondents are entitled to a statutory offset for Social Security Disability Insurance (SSDI) benefits if Claimant is awarded PTD benefits.

FINDINGS OF FACT

1. Claimant worked for Employer as an Animal Control Officer. The job entailed responding to situations involving various wild and domesticated animals, including game animals. The job was physically demanding and required lifting and carrying more than 50 pounds.

2. Claimant suffered admitted injuries on September 21, 2016, while removing the carcasses of two dead pigs from Highway 115. Claimant developed pain in her left hip, left buttock, and low back after struggling to load the carcasses into her vehicle.

3. Claimant initially thought she had "pulled a muscle," but the pain persisted and worsened over the next few days.

4. Employer referred Claimant to CCOM for authorized treatment. At the initial evaluation, Claimant reported pain in her low back and left hip, radiating pain down her left leg, with numbness in her left foot. She was diagnosed with left hip and lumbar strains and referred for MRIs. She was also taken off work.

5. The left hip MRI was unremarkable. The lumbar MRI showed multiple disc bulges and a central disc herniation at L4-5, but no stenosis or nerve compression to account for the lower extremity radicular symptoms.

6. Claimant was evaluated by Dr. Michael Sparr on October 20, 2016. She reported aching pain in the left buttock and low back, stabbing pain in the buttock and left leg, and numbness and tingling in the lateral left leg and left foot. Her 4th and 5th left toes were numb. Her leg pain increased with ambulation. Dr. Sparr observed she walked with a steppage gait due to apparent foot drop. She was exquisitely tender over the left L5-S1 facet and left SI joint, and deep palpation reproduced radiating symptoms in the left leg and foot. Dr. Sparr appreciated mild atrophy of the left anterior and posterior leg. Left leg strength was "profoundly abnormal," with 3-/5 and 4-/5 strength in multiple muscles. Dr. Sparr opined Claimant suffered a severe left sacroiliac strain that caused a traction injury to the left sciatic nerve resulting in profound left foot weakness. He recommended an EMG, a piriformis injection, and a left SI joint injection. He prescribed Gralise (a name brand formulation of gabapentin) for neuropathic pain.

7. The EMG testing was completed on November 16, 2016. It showed sciatic neuropathy, without evidence of lumbar radiculopathy. Dr. Sparr noted Claimant could not increase her dose of Gralise above 600mg because it was too sedating.

8. Claimant had a left SI joint injection and lumbar ESIs in November and December 2016. The injections provided temporary relief but no sustained benefit.

9. On January 3, 2017, Dr. Sparr noted Claimant's gait had improved slightly with the use of an AFO. Her lower extremity strength was still "profoundly" abnormal but somewhat improved from previous evaluations. She found active release treatment and acupuncture to be beneficial. Claimant asked if she could go back to work on limited duty. Dr. Sparr released Claimant to sedentary activities with no lifting over 10-15 pounds.

10. Claimant followed up with CCOM on January 17, 2017. CCOM released Claimant to modified duty with no lifting over 15 pounds, no crawling or squatting, minimal stairs, and the opportunity to alternate walking, standing, and sitting every 30 minutes as needed.

11. Employer could not accommodate Claimant's restrictions and she was terminated.

12. In March 2017, Dr. Sparr documented Claimant had been able to increase the Gralise to 1200 mg at night before bed, which was helpful. However, she continued to have severe numbness and stabbing pain in her lower leg and left foot. Her gait remained abnormal, although not as awkward as noted previously. Lower extremity strength testing also showed some improvement.

13. Dr. Centi took over as Claimant's primary ATP on May 16, 2017. The foot drop was slowly improving, and Claimant was walking slightly better. Dr. Centi amended Claimant's restrictions to no lifting and carrying more than 10 pounds, no kneeling or squatting, and minimal stairs. He did not indicate why he removed the restriction about changing positions as needed.

14. In June 2017, Dr. Sparr documented some improvement in Claimant's foot and ankle strength, although she was still reporting severe nerve pain in her lateral thigh and leg and deep aching in her low back and buttock. She had decreased the Gralise because the 1200 mg dosage was "causing her to feel stupid." Physical examination still showed significant lower extremity weakness and difficulty lifting her toes.

15. On August 8, 2017, Dr. Sparr advised Claimant to wear the AFO brace at all times when outside her home.

16. On September 18, 2017, Dr. Centi further liberalized Claimant's work restrictions to allow lifting and carrying up to 15 pounds, and minimal squatting or kneeling. Those formal restrictions were subsequently carried forward through the remainder of the claim, with no additional discussion or analysis.

17. Claimant continued to receive massage therapy, chiropractic treatment, injections, and medication management through 2018, with limited benefit beyond temporary symptom relief.

18. Dr. Nicholas Olsen performed an IME for Respondents on December 19, 2018. Claimant reported ongoing symptoms and functional limitations, with minimal improvement since the date of injury. She walked with an antalgic gait and objectively demonstrated significant weakness in her left ankle dorsiflexors. Dr. Olsen observed atrophy of the anterior tibialis. Strength was significantly diminished in the left ankle dorsiflexors and EHL. Sensation was decreased in the L4, L5, and S1 dermatomes. Dr. Olsen opined Claimant's symptoms were likely related to a subluxing proximal tibiofibular joint and peroneal neuropathy. He recommended a left knee MRI with particular attention paid to the proximal tibiofibular joint and a repeat MRI of the pelvis. He thought Claimant would probably require surgery to address the proximal tibiofibular joint instability. Given the long duration of her problems, he expected she would continue to need an AFO indefinitely.

19. Claimant had a left knee MRI on February 18, 2019. It showed a bone bruise in the femoral condyle, consistent with proximal tibiofibular instability. Dr. Olsen recommended evaluation by an orthopedic surgeon.

20. Dr. Derek Purcell performed a left knee open peroneal nerve release surgery on July 22, 2019.

21. Claimant saw Dr. Olson at CCOM on August 1, 2019, and reported some improvement in her left foot function and return of sensation in her shin area after surgery.

22. On April 15, 2020, Dr. Sparr documented that Claimant appreciated "some mild benefit" from the surgery, but still had a complete foot drop on the left. She had received a custom AFO, but it did not fit with any of her shoes, and necessary modifications had been delayed by COVID restrictions. She was using a functional electrical stimulator almost constantly and found it helpful. Claimant had ongoing burning pain in the buttock radiating to the thigh, and asked about an ablation procedure. Dr. Sparr ordered a lateral branch block of the left SI joint and would consider rhizotomy depending on her response.

23. The SI joint injection was performed on May 13, 2020. At a follow up appointment with Dr. Sparr on June 4, Claimant reported a significant decrease in her pain for several hours after the injection. Dr. Sparr considered this an excellent diagnostic response to the block, and recommended SI joint rhizotomy.

24. Claimant had the rhizotomy on July 1, 2020. It initially helped with the buttock and SI joint-related pain, but she subsequently worsened. Dr. Sparr provided additional trigger point injections.

25. On August 5, 2020, Claimant asked for a second opinion because she had not made sustained progress with the treatments offered by Dr. Sparr. Dr. Centi referred her to Dr. Scott Primack.

26. Claimant saw Dr. Primack on August 9, 2020. She described pain in her low back, left buttock, and left leg, with numbness and tingling in the left leg and foot. These symptoms caused difficulty with prolonged standing, walking, and sitting. On examination, Dr. Primack noted strength deficits in the dorsiflexors and plantar flexors, and atrophy of the left leg musculature. Sensation was reduced over the dorsal surface of the left toot. Dr. Primack ordered a left knee MRI neurogram to evaluate the common fibular nerve and the tibial nerve.

27. The MRI was completed on December 11, 2020. It showed increased signal in the tibial nerve, which Dr. Primack opined was the source of Claimant's foot drop. At a follow up appointment on January 4, 2021, Dr. Primack told Claimant her treatment options were (1) medication management with drugs such as Lyrica, (2) a left tibial nerve hydrodissection, (3) neuromodulation with a peripheral nerve stimulator or spinal cord stimulator, or (4) surgery. He referred Claimant to Dr. Tanya Oswald for a surgical evaluation.

28. A repeat EMG on April 19, 2021 showed left sciatic neuropathy affecting the common fibular and tibial nerves.

29. Claimant was evaluated by Dr. Oswald regarding surgical options on July 12, 2021. Dr. Oswald was not enthusiastic about nerve release surgery, as this would not guarantee resolution of her pain. Nor would it likely improve the foot drop given the length of time the nerves had been compressed. According to Dr. Oswald, Claimant's primary options were ankle fusion, tendon transfer, or replacing her AFO splint. Claimant preferred to try a new AFO.

30. Claimant had a second IME with Dr. Olsen on November 11, 2021. Claimant indicated she had no significant benefit from the surgery by Dr. Purcell or rhizotomy. She reported "pain in her buttock and lies on a heating pad." She also described pain-related fatigue, frequent swelling in her left leg at the end of the day, and difficulty with balance because of the leg weakness. Dr. Olsen again documented objective sensory and motor deficits in the left foot. Claimant was not interested in repeating the rhizotomy, pursuing a spinal cord stimulator, or any surgical procedure mentioned by Dr. Oswald. Claimant was at MMI as of January 4, 2021, and. He assigned a 38% lower extremity rating based on range of motion deficits and sensory loss.

31. Claimant saw Dr. Timothy Sandell on January 25, 2022, to discuss pain management options. She described constant burning and stabbing pain radiating down her left leg, weakness in the leg, and a left foot drop. Her pain was aggravated by cold weather and prolonged sitting. Dr. Sandell opined a significant portion of Claimant's pain was neuropathic in nature. Because Lyrica and Gralise had caused Claimant to experience "confusion," Dr. Sandell recommended Topamax. He also prescribed Norco, Celebrex, and nortriptyline.

32. Claimant developed severe constitutional symptoms in February 2022, and was diagnosed with Stage IV colorectal cancer. She was started on chemotherapy.

33. On July 13, 2022, Dr. Kathryn Murray at Concentra assumed the role of primary ATP. Claimant reported ongoing severe left lower extremity symptoms, which made it "hard to walk and stand." She had a 24-month DIME scheduled for the following month. Examination showed sensory and strength deficits in the left leg and foot, trigger points in the lumbar spine, and a gait disturbance. Dr. Murray intended to await the DIME report before determining what, if any, additional treatment Claimant would be provided. Dr. Murray maintained the same work restrictions that had been placed by Dr. Centi in September 2017.

34. Dr. William Watson performed the 24-month DIME on August 9, 2022. Claimant reported ongoing low back and left buttock pain radiating down the left leg. Claimant appeared uncomfortable during the examination. Dr. Watson noted paraspinal muscle spasm in the lumbar spine and tenderness in the left buttock. Lumbar range of motion was limited in all directions. Sensation was markedly decreased in the L4, L5, and S1 distribution on the left. There was profound grade 0/5 weakness of the ankle dorsiflexors and toe extensors. She had no eversion. Dr. Watson opined no additional treatment was likely to materially change her condition, and agreed Claimant was at MMI as of her evaluation with Dr. Olsen on November 11, 2021. Dr. Watson assigned a 24% whole person rating, including 10% for the lumbar spine and 15% whole person for impairment of the common peroneal nerve.[1] He thought a lumbar spine rating was warranted "because she has complained and been treated for this since the initial injury." Regarding work restrictions, Dr. Watson opined, "Currently, she can only do sedentary-type work. Another complicating factor is that she is being treated currently with chemotherapy for stage IV colorectal cancer."

35. Insurer filed a Final Admission of Liability (FAL) on September 2, 2022, admitting for Dr. Watson's DIME rating. No PPD benefits were owed, because Claimant had been paid TTD benefits greater than the applicable benefit "cap". The FAL claimed an overpayment of TTD benefits paid after the date of MMI and reserved the right to recover the overpayment from future indemnity benefits.

36. Claimant timely objected to the FAL and requested a hearing on permanent total disability (PTD) benefits.

37. Dr. Olsen performed a third IME on October 13, 2022. Claimant stated her symptoms remained the same since the previous IME in November 2021. Aggravating factors included sitting, standing, laying down, and lifting. Claimant had decreased appetite because of the cancer and had lost 15 pounds. She reported excessive fatigue due to the cancer, but stated "her leg pain exhausts her" as well. The leg pain was interfering with her sleep and causing her to awaken repeatedly during the night when rolling over in bed. She was suffering from depression, which she attributed to both the cancer and her leg symptoms. Dr. Olsen stated Claimant's symptoms were "similar, if not identical, to the previous IME" in November 2021. Dr. Olsen reviewed Dr. Watson's DIME report and agreed it was reasonable to include a rating for the lumbar spine. Dr. Olsen

[1] Dr. Watson calculated 38% lower extremity for the peroneal nerve—the same rating as provided by Dr. Olsen. This converts to 15% whole person.

tested Claimant's lumbar range of motion and obtained measurements that were "very similar" to the numbers Dr. Watson referenced in his report.

38. Regarding work restrictions, Dr. Olsen noted the work restrictions from Claimant's ATPs had remained unchanged for several years. Specifically, Claimant was restricted to lifting and carrying no more than 15 pounds, no crawling or climbing, and minimal squatting or kneeling. Dr. Olsen opined those restrictions were appropriate for the work injury. He also noted she now has unspecified "additional" restrictions due to the diagnosis of metastatic colorectal cancer.

39. Dr. Olsen provided a supplemental report dated November 10, 2022, to clarify his opinion about Claimant's work capacity. He thought the the longstanding restrictions from CCOM and Concentra were appropriate as pertains to the work injury. However, he opened Claimant could not work in any capacity at the time of his IME because of the cancer.

40. In his deposition, Dr. Olsen testified that Claimant's presentation changed significantly between the November 11, 2021 IME and the October 13, 2022 evaluation. Specifically, he testified she exhibited fatigue, generalized malaise, muscle wasting, and generally "appeared quite ill when compared from one exam to the other." He opined these changes were related to the cancer. Dr. Olsen affirmed his opinion that Claimant's medical condition attributable to the work injury does not support any limitations on sitting, standing, and walking.

41. Claimant was approved for Social Security Disability Insurance benefits in January 2023. The SSA Notice of Award lists the disability onset date as January 30, 2022, which the ALJ infers coincides with the cancer diagnosis. After satisfying the 5-month wait period, Claimant was entitled to SSDI benefits commencing July 1, 2022. The parties stipulated that Respondents are entitled to a statutory offset for SSDI benefits if Claimant is awarded PTD benefits.

42. Robert Van Iderstine performed a vocational evaluation at the request of Claimant's counsel on October 22, 2022. Claimant described ongoing severe low back and leg symptoms that significantly limited her ability to perform routine activities. She said she can stand and walk approximately 20 minutes before needing to rest. She also reported difficulty with prolonged sitting despite constantly shifting her weight to manage discomfort. She maintains a restrictive lifestyle because of her symptoms. Although they briefly discussed Claimant's cancer diagnosis, Mr. Van Iderstine noted the primary focus of the evaluation was Claimant's medical condition and functional limitations related to the work injury.

43. Katie Montoya performed a vocational evaluation for Respondents on December 21, 2022. She initially tried to do a Zoom meeting but had to switch to a telephone interview because of poor connectivity on Claimant's end. Claimant described symptoms and functional limitations consistent with what she previously told Mr. Van Iderstine. Claimant reported significant pain in her low back, left leg and left foot from the work injury. She noted difficulty with prolonged sitting, standing, and walking. She needs

to be cautious to avoid tripping and falling. She occasionally uses a cane but often feels the cane is more of a hazard for her. Claimant referred to herself as a “couch mommy” or “bed mommy.” She spends much of her day trying to find a comfortable position. When asked about limitations related to the cancer, Claimant described frequent nausea and vomiting.

44. Regarding her educational and vocational history, Claimant is a high school graduate with one year of college courses but no college degree. She subsequently received an EMT certificate from [Redacted, hereinafter PP] and worked as an EMT for approximately 10 years. She left the job in 2012 or 2013 because it was too difficult to manage the long shifts while caring for her small children. She subsequently worked as an Emergency Room Technician for [Redacted, hereinafter MH], for approximately one year. She next worked as a 911 Dispatcher, initially for the [Redacted, hereinafter FD], later transitioning to the [Redacted, hereinafter FS] who assumed the 911 responsibilities. The job required 12-hour shifts and long periods of static sitting with minimal breaks. She performed the dispatch job for 2 years before taking the job as an Animal Control Officer in 2015.

45. Ms. Montoya and Mr. Van Iderstine used a similar process of evaluating Claimant’s ability to work, but their analyses diverged in a handful of important respects. First, Ms. Montoya identified Claimant’s commutable labor market as Canon City, Florence, and Pueblo West. Mr. Van Iderstine agreed that Canon City and Florence were suitable, but excluded Pueblo West because he did not believe Claimant told tolerate commuting that far.

46. Ms. Montoya and Mr. Van Iderstine’s analyses diverged more significantly when considering Claimant’s residual functional capacity. Ms. Montoya relied principally on the medical restrictions from CCOM/Concentra and Dr. Olsen. By contrast, Mr. Van Iderstine also incorporated Claimant’s self-reported limitations, including difficulty with prolonged sitting, standing, and walking and the need to change positions frequently.

47. Both vocational experts agreed that Claimant cannot return to any of her past work. But Ms. Montoya concluded that Claimant can transfer her acquired skills to jobs in medical-related fields such as patient representative and general medical office. She also identified the unskilled occupations of cashier and customer service as consistent with the restrictions from CCOM/Concentra and Dr. Olsen. Notably, Ms. Montoya stated she did not identify any work-from-home options because of the poor internet and phone service at Claimant’s relatively rural property.

48. Mr. Van Iderstine opined Claimant cannot perform any work within her commutable labor market. Although Claimant has previously worked in skilled and semi-skilled occupations, he opined her skills are not transferable to any occupations within her residual functional capacity. Additionally, Mr. Van Iderstine opined that light level jobs such as cashier are inappropriate for Claimant because of the amount of standing and walking required. Considering Claimant’s need for frequent position changes, Mr. Van Iderstine opined she is realistically limited to sedentary occupations that allow the worker to change from sitting to standing as needed. He also noted she will likely require extra

breaks during a work shift, perhaps as often as every 30 minutes. As a result, even if Claimant were hired for a position, it is unlikely she could sustain the job.

49. In her hearing testimony, Claimant described constant "gnawing" and "burning" nerve pain, which causes her to change positions frequently. The nerve pain substantially impairs her sleep. Years of disrupted sleep since the injury have resulted in significant generalized fatigue. Claimant needs to lie down and rest intermittently during the day. She described difficulty concentrating because of pain and the effects of medications. Claimant only drives short distances because of her pain and the need to change positions frequently. Claimant does not believe she can tolerate even a part-time job requiring significant standing, such as a cashier position. Furthermore, any job she could do would also need to accommodate her need to change positions and use ice packs to relieve back and leg pain. Additionally, she does not believe she can reliably work on consecutive days, as even family outings and basic activities cause flares that can last for a day or more. Claimant testified that the above-described limitations are caused by her low back and leg issues that were present before she was diagnosed with cancer.

50. Claimant's testimony regarding her injury-related symptoms and associated functional limitations is generally credible.

51. Dr. Olsen's opinion that Claimant has no injury-related limitations on standing and walking is not persuasive. Claimant has consistently reported severe symptoms affecting her left leg and foot, including pain and numbness. Multiple providers have objectively documented "profound" motor deficits that significantly interfere with her gait and station, despite regular use of an AFO and external nerve stimulator. In light of these long-standing lower extremity issues, it is unrealistic to conclude that Claimant can tolerate unlimited standing and walking in a competitive work setting. Additionally, Claimant has consistently and credibly reported difficulty maintaining a static posture, including sitting for long periods of time. These limitations must also be factored into the residual functional capacity determination.

52. At most, Claimant is capable of sedentary-level work that allows her to change positions from sitting to standing and walking at her discretion to manage low back and leg symptoms. Claimant will also probably need extra breaks during a work shift because of her low back and leg problems. She is limited to unskilled work due to her lack of transferrable skills coupled with documented "confusion" and "brain fog."

53. The likelihood that Claimant can obtain and sustain employment within her limited residual functional capacity is severely reduced by her relatively small commutable labor market and the inability to consider work-from-home options.

54. Mr. Van Iderstine's opinions are credible and more persuasive than the contrary opinions offered by Ms. Montoya. Mr. Van Iderstine's analysis better accounts for Claimant's non-exertional limitations including the need for frequent postural changes and extra breaks and lack of transferrable skills. Mr. Van Iderstine persuasively opined

there are no jobs consistent with Claimant's residual functional capacity in her commutable labor market.

55. Claimant proved by a preponderance of the evidence that she cannot earn any wages in the same or other employment.

CONCLUSIONS OF LAW

A claimant is considered permanently and totally disabled if they cannot "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means wages in excess of zero. *McKinney v. Industrial Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995).

In determining whether the claimant can earn wages, the ALJ may consider a wide variety of "human factors." *Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1988). These factors include the claimant's physical condition, mental abilities, age, employment history, education, training, and the "availability of work" the claimant can perform within her commutable labor market. *Id*. Another human factor is the claimant's ability to obtain and maintain employment within their limitations. *See Professional Fire Protection, Inc. v. Long*, 867 P.2d 175 (Colo. App. 1993). The ability to earn wages inherently includes consideration of whether the claimant can get hired and sustain employment. *See e.g., Case v. The Earthgrains Co*., W.C. No. 4-541-544 (September 6, 2006); *Cotton v. Econo Lube N. Tune*, W.C. No. 4-220-395 (January 16, 1997). If the evidence shows the claimant cannot "sustain" employment, the ALJ can find they cannot earn wages. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866, 868 (Colo. App. 2001). Although the industrial injury need not be the sole cause of a claimant's inability to earn wages, it must be a "significant causative factor" in the disability. *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). This means the claimant must prove a "direct causal relationship" between the work injury and the disability. *Id*. Under this test, the ALJ must determine whether the residual impairment caused by the injury is sufficient to render the claimant totally disabled without regard to the effects of subsequent intervening events or preexisting conditions. *E.g., Wallace v. Current USA, Inc*., W.C. No. 4-886-464 (December 24, 2014).

As found, Claimant proved she cannot earn any wages in the same or other employment. Claimant's testimony regarding her injury-related symptoms and associated limitations is credible. The argument that Claimant can perform light-level work with no limitations on standing and walking is not persuasive. Her difficulties with standing, walking, and prolonged sitting were documented by multiple providers before she was diagnosed with cancer. At most, Claimant is capable of unskilled sedentary-level work with the freedom to change positions at her discretion to manage low back and leg symptoms. Claimant will also need extra breaks during a work shift because of her low back and leg problems. These limitations are caused by the effects of the work injury. Claimant's ability to obtain and sustain employment is further limited by her relatively small commutable labor market and the inability to consider work-from-home options. Dr. Van Iderstine's vocational opinions are credible and more persuasive than the contrary opinions offered by Ms. Montoya. While Claimant undoubtedly has additional limitations

attributable to the diagnosis of and treatment for cancer, the persuasive evidence shows she is totally disabled irrespective of the cancer.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant permanent total disability benefits, based on the admitted average weekly wage, commencing November 11, 2021.

2. Insurer may take a statutory offset based on Claimant's award of Social Security Disability Insurance benefits.

3. Insurer may take credit for any TTD benefits paid on or after November 11, 2021.

4. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: November 8, 2023

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained a work related injury or occupational disease to her left shoulder on or about October 14, 2022 or October 15, 2022.

IF THE CLAIM IS DEEMED COMPENSABLE:

II. Whether Claimant has proven by a preponderance of the evidence that she was attended by an authorized treating physician and whether she was entitled to reasonably necessary and related medical care for the compensable work related injury.

III. Whether Claimant has proven by a preponderance of the evidence what her average weekly wage was.

IV. Whether Claimant has proven by a preponderance of the evidence that she was entitled to temporary total disability benefits from March 2, 2023 until terminated by law.

STIPULATIONS OF THE PARTIES AND PROCEDURAL MATTERS

The parties stipulated that the only body part in question was the left shoulder injury and did not involve a cervical spine injury, only shoulder symptoms that radiated into the neck and have now resolved following surgery.

Further, if the claim was found compensable and Claimant is entitled to temporary disability benefits, the parties stipulated to benefits from March 2, 2023, when the surgery took place, through May 17, 2023, after which Claimant returned to work full time.

Lastly, this ALJ takes administrative notice of the Workers' Compensation Rules of Procedure including the Medical Treatment Guidelines as they are used by multiple providers in this matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of facts:

A. Generally

1. Claimant worked for Employer for approximately 9 years, since 2014. At the time of the hearing she was 54 years old and measured five foot three inches in height. She worked as a bus driver going from county to county, shuttling skiers in the winter and workers year round.

2. On October 14, 2022 Claimant took over an older bus, [Redacted, hereinafter BN], from another worker and she noticed that the emergency brake was very

difficult to engage and disengage. It would snap so hard that it would hit her hand causing numbness in her fingers. That evening she felt pain going into her neck, with stiffness and soreness in her arm and in her shoulder. She did not recall a specific moment in time where she felt a sharp pain, other than the dull pain in her shoulder and neck.

3. On October 15, 2022, the second night, she noted she had the same bus, BN[Redacted], with the hard brakes. It was extremely hard to engage the brake. She had to pull it up with her shoulder at an awkward angle. She had to exert a lot of pressure to pull it up and push it down, while operating the older bus. After still having the pain and stiffness from the night before, she engaged the brake and fell extreme pain in the shoulder. After that, it caused a lot of pain to operate the destination signs. At one break she took some Tylenol and massaged her shoulder, to see if the pain would subside some. She was able to finish her routes, but she could not change the destination sign and had to use both hands to deploy and disengage the emergency brakes. She just did the minimum, not even operating the heater, because the pain was so intense. She did not hear any specific snap or pop as there was always a lot of noise on the bus and she had to be concentrating very hard on driving the big bus, making sure that the bus and passengers were safe.

4. She generally operated a 40 foot bus or a 35 foot bus. The steering wheel was 14 inches, which was approximately 2 ½ inches wider than a normal steering wheel but it seemed so much larger to Claimant. It was not easy to rotate, especially with windy roads or when there were bumps on the road. Some areas required harsh turns, like going into the bus barn, Claimant would be required to really crack the wheel. She would drive to one county and then pick up a different bus. She would normally start at 12:30 p.m. and got back home around 12:30 a.m., with several breaks, while getting into the office, changing buses and for lunch. She worked four days a week. She was required to pull the emergency brake at each stop. In a typical two and one half hour route, she would typically pull the brakes and release the lever approximately 18 times each in addition to making all the other maneuvers of driving the bus.

5. To operate the emergency brake in one of the buses, Claimant would have to extend her left arm downward and forward, inverting her arm with the palm up and pulling on the lever between her index and middle finger, pressing with her thumb on top of the lever, almost reaching the area of her knee.

6. In another bus, she would have to raise her shoulder to operate the emergency brake that was on the left side console at the approximate level of her waist, and three inches above her thigh level, pulling on the lever and pushing on the lever to operate it. While she drove with both hands on the wheel for the most part, Claimant indicated that almost everything was operated with the left hand.

7. At a typical stop, she would pull the emergency brake, flip the hazard lights on, put the vehicle in neutral and open the doors. She would also have to operate the destination sign, which was found above her head on the left hand side. The only thing, other than steering, that she operated with her right hand was the intercom. She would have to turn her neck to look out the various mirrors to make sure that no one was coming when she was turning, looking all the way down the 40 foot bus to make sure there were no cars before getting on the interstate or merging into traffic. She had to move around

in her seat a lot to make sure she could see around the panels of the bus for oncoming traffic, especially going into the roundabouts. She had to use her whole body to drive the bus and it was difficult and exhausting work.

B. Medical Records

8. On October 24, 2022 Claimant was examined by PA Zachary Feldman of CCOM Frisco with a chief complaint of left shoulder injury with radiating pain going into the neck. She provided a history generally consistent with her testimony noting significant soreness after having driven a bus with a particularly hard to operate brake. On exam he noted a very positive Hawkins test for impingement. Her range of motion was good though she had pain with lowering her arm. He diagnosed impingement syndrome of the left shoulder, and muscle, fascia and tendon strain of the neck. He prescribed a Medrol Dosepak, recommended ice, heat, Epsom salt soaks, BenGay rubs, and ordered physical therapy at Panorama Physical Therapy. Dr. Braden Reiter provided work restrictions of no lifting, repetitive lifting, pushing, pulling, carrying greater than 5 lbs. with the left upper extremity and no commercial driving, limiting her to administrative or desk work. On November 3, 2022 Claimant continued to have a positive Hawkins (impingement) test. P.T. had not started yet. PA Feldman referred her to P.T. again and continued her modified duty.

9. [Redacted, hereinafter SN] issued a Physical Demands Analysis and Risk Factor Assessment on November 7, 2022, which was conducted on November 1, 2022. Claimant was interviewed by telephone and one of Claimant's co-workers was observed performing the duties.[1] The report was issued based on a sampling of a 2 lbs. pinch force and a 10 lbs. hand force three times or more per minute and work that required shoulder movement at the rate of 15-36 repetitions per minute and no 2 second pauses for 80% of the work cycle. SN[Redacted] concluded that there were no risk factors associated with Claimant's work based on the Division's Medical Treatment Guidelines for cumulative disorders.

10. PA Feldman followed up with Claimant on November 10, 2022. He stated he reviewed the ergonomic evaluation performed. Claimant explained the motions she made including that she exerted 20 pounds of pressure to engage the emergency brake. On exam Claimant had good range of motion of the shoulder and neck but continued to have a positive Hawkins test.

11. Claimant started PT at Panorama PT on November 14, 2022, which included PT evaluation, therapeutic exercises and activities, manual therapy and neuromuscular reeducation. It continued through December 23, 2022.

12. Respondents sent Dr. Braden Reiter a letter on November 23, 2022 enquiring whether he agreed with the Job Assessment completed by [Redacted, hereinafter GX] on November 1, 2022. He disagreed that there were no risk factors. He stated that he disagreed because Claimant performed multiple motions done in an

[1] The other workers' physical measurements and characteristics were not detailed in the report or likened to Claimant's 5'3" height and BMI.

awkward position with her arm externally rotated and adducted to pull the brake handle.[2] He opined that this was enough to cause the injury described by Claimant.

13. By November 28, 2022 Claimant's neck pain was essentially resolved but Claimant continued to have a positive Hawkins showing impingement.

14. On December 15, 2022 Claimant continued to improve with physical therapy, but Dr. Reiter noted she continued to have symptoms of impingement with an empty can tests and positive impingement test but a negative Spurling's.[3] Dr. Reiter referred Claimant for an MRI of the left shoulder and continued her work restrictions.

15. The MRI took place at St. Anthony Summit Medical Center on December 26, 2022. Dr. Saidmunib Sana noted that there was severe tendinosis of the intra-articular long head biceps tendon, moderate subscapularis tendinosis with a tiny low grade intrasubstance footprint tear, severe tendinosis of the anterior third fibers of the supraspinatus tendon, full-thickness tearing of the middle third fibers of the supraspinatus tendon, a moderate infraspinatus tendinosis with some low grade partial thickness tear and mild AC joint arthritis.

16. The December 26, 2022 St. Anthony Summit Medical records showed Respondent Insurer as having provided verbal authorization for the MRI.

17. On January 3, 2023 PA Feldman noted that Claimant was handling administrative work well, but continued to have a positive empty can test and impingement signs though a negative drop arm test. Dr. Reiter continued Claimant's work restrictions and advised she follow up with the orthopedist.

18. Claimant was evaluated by Aaron K. Black, M.D. on January 4, 2023 at Panorama Summit Orthopedics. He reviewed the imaging which showed a full thickness supraspinatus tendon tear with a 1 cm retraction. He took a history which included her prior injury treated by Dr. Benedetti and which resolved with physical therapy. He noted a history of injury consistent with Claimant's testimony though included that Claimant believed she exerted greater than 20 lbs. of force while using the emergency brake. He noted that she had a positive empty can tests, weakness with external rotation at the side but had good strength with belly press and internal rotation at the side. He noted that PT had been of benefit but had not resolved her pain.

19. Dr. Black diagnosed strain of the tendon of left rotator cuff, left rotator cuff tear, biceps tendonitis, and bicipital tendinitis of the left shoulder. He recommended Claimant continue working administrative or desk work, and no lifting or carrying greater than 10 lbs. Dr. Black considered conservative care had failed and since her exam and imaging were consistent with a rotator cuff tear, that moving forward with left arthroscopic rotator cuff repair, biceps tenodesis and PRP augmentation were indicated. A referral and authorization for surgery was issued the same day.

---

[2] This ALJ infers that if Claimant had to adduct to pull the brake lever, she would have to abduct to push the lever, with adduction meaning towards the body center and abduct meaning away from the body center.

[3] This ALJ notes that a Spurling's test is a cervical compression test to assess the presence of cervical nerve compression.

20. Upon Respondents' request, Dr. William Ciccone II issued a medical records review dated January 9, 2023. Following his review of the records, he stated that he did not believe Claimant had suffered a work-related injury to the left shoulder as the physical demands analysis showed no primary or secondary risk factors for overuse and no mechanism of injury was described that would cause the rotator cuff tear. He also stated that he was in agreement with the orthopedic plan of care but not as related to any work event and the authorization for surgery should be denied.

21. On January 10, 2023 Respondents sent Dr. Black a denial of the request for prior authorization based on Dr. Ciccone's record review.

22. Claimant returned to see PA Feldman on February 2, 2023. They discussed the surgery denial and the hopes of an appeal. She continued to have a positive empty can test and impingement signs. PA Feldman stated that he felt that her reported injury was not an exacerbation of her prior old injury but was having pain related to her activities as a bus drive, specifically engaging and disengaging the emergency brake. Dr. Reiter extended her anticipated MMI date and requested she follow up with the orthopedic specialist.

23. Dr. Black issued a letter on February 6, 2023 concerning the denial of Claimant's workers' compensation claim. He stated in part:

> She has a chronic rotator cuff injury, this could certainly be multifactorial. Clearly she had an increase in symptoms that occurred with her workplace activities. Whether or not she had a preexisting injury is immaterial as she was likely hired with this and cleared for her job requirements after which she went from asymptomatic to symptomatic during workplace activity. As such, this certainly appears to be related to her job.

24. A bill for $1,222.57 was issued by Centura on March 13, 2023 for the December 26, 2022 MRI. Further, Insurer confirmed having received the billing statement on March 20, 2023.

25. Claimant was evaluated by Dr. Nicholas K. Olsen on June 1, 2023 via telephone at Respondents' request. Dr. Olsen took a history consistent with Claimant's testimony, including Claimant's bus routes and how hard the emergency brakes were to operate on some buses. He documented that Claimant had no issues before October 14, 2022. Upon finishing her route, she felt her arm was weak and when she finished her shift she had pain in her neck. The following morning she had pain in her shoulder and rubbed on BenGay on her neck and shoulder. She went to work but when she went to push down on the brake, she felt a lot of pain in her neck and in the front of her shoulder. Despite her symptoms, she finished her route.

26. Dr. Olsen stated that the activity Claimant describes as aggravating her complaints was performed with her hand and arm at 90 degrees bent at the elbow while applying force to operate the brake. Claimant reported to him that "[W]hen I went to push down on the brake, I felt so much pain in my neck and in the front of my shoulder."

27. He opined, within a reasonable degree of medical probability, that the activity described by Claimant did not result in the rotator cuff tear identified on her December 26, 2022 MRI. In reviewing the GX[Redacted] physical demands analysis and

risk factor assessment as well as the description of her responsibilities as a bus driver, none of these activities were highly repetitive or performed at a frequency to result in a rotator cuff injury. He also opined that she did not detail any activities that put her arm in an extended position for impingement where the arm is lifting above shoulder height on a repetitive basis. Lastly, he stated that it was minimally probable that Claimant injured her shoulder in 2020 when she felt an electric lightening-like feeling in her left shoulder with overhead lifting, while opening up an emergency overhead access on a bus.

C. Prior Injury Records

28. Nurse Colleen Ihnken, at Summit Community Care Clinic, issued a report on July 29, 2020, noting Claimant had intermittent left shoulder pain aggravated by overuse at work. Claimant had returned after PT, chiropractic, and dry needling without resolution. She noted that her ROM was intact, so concern for rotator cuff tear was low, though remarked that she could have a strain. She stated that she had been reaching up and had sudden onset of sharp pain and tingling. Nurse Ihnken assessed that Claimant had an aggravation due to overuse at work and referred her to orthopedics anticipating she would probably be given a steroid injection.

29. Claimant was attended at Panorama Summit Orthopedics by Dr. Gary Benedetti on July 30, 2020 for tendonitis of the left shoulder. On exam, Claimant had no muscle atrophy, excellent shoulder range of motion without stiffness, a negative drop arm, though she did have a positive impingement sign, she had a negative push-off and normal gross motor function. X-rays showed only some subtle changes in her AC joint but no other significant bony or soft tissue abnormalities. He issued a referral for the physical therapist to provide her with a Thera-Band program. Claimant was to return in three months to consider a subacromial injections, if she had not improved. This ALJ did not find any other evidence of treatment between July 2020 and October 2022.

D. Employer Records

30. Employer's job description detailed physically demands including work for long periods of sitting/driving, repetitive motions, occasional heavy lifting (up to 40 pounds), ability to climb in & out of buses and other Employer vehicles, walking, seeing, stooping, standing, bending, kneeling, grasping, carrying, driving, and listening/observing with a high degree of public contact. It required Claimant to do pre-trips, pre-relief and post trip inspections, reporting to scheduled trips and stations on time, announcing stops, helping passengers on and off the bus if needed, and maintaining an up to date DOT physical.

31. The Workers' Claim for Compensation is written in the third person and seems to have been completed by Claimant's supervisor, though it is not dated. It reported that "[A]s a bus driver, one of the buses *she* drives has a brake that is incredibly hard to engage. Was engaging and felt sharp pain in her shoulder." (*Emphasis added*).

It noted a torn rotator cuff, and neck soreness. It listed an average weekly wage of $1,230.20 and identified Dr. Black as a treating provider.[4]

32. Employer's First Report of Injury of October 21, 2022 indicated that Claimant was injured on October 15, 2022 and Employer was notified on October 19, 2022. It showed that Claimant's average weekly wage was $1,095.60 and she was injured while in a bus by pushing and disengaging the emergency brake repeatedly during her shift.

33. From the detailed check history issued by Employer, Claimant was earning $1,202.35 per week in the 32 weeks from pay period ending (PPE) April 8, 2022 through PPE October 21, 2022, as Claimant earned a total of $38,475.46.[5]

34. As this did not include the winter time month check stubs for the height of the ski season, this ALJ calculated the AWW based on the year to date earnings for 2022. Claimant's year to date earnings showed as $63,118.79 for pay period ending December 26, 2022, with a check date of December 30, 2022. This ALJ presumes that this is for the full 52 weeks that would have been shown on her W-2. It provided an AWW of $1,213.82, which is not significantly different from the 32 week period of wages provided by employer and would include post injury earnings, which should not be considered.

35. As found, the fair computation of Claimant's AWW was $1,202.35 based on the first calculation.

E. Medical Treatment Guidelines

36. The Cumulative Trauma Conditions Medical Treatment Guidelines, W.C.R.P. Rule 17, Exhibit 5, addresses cumulative trauma exposure of upper extremity conditions. Under Using Risk Factors for Medical Causation Assessment of CTC, Sec. D.3.a and b, it states that "[U]sing the history, physical examination and supporting studies, a medical diagnosis must be established" by referring to Section F and Section G of the CTC MTGs.

37. Sections F and G refer to diagnosis referring to digit, hand and wrist osteoarthritis, De Quervain's disease, epicondylitis, extensor tendon disorders of the digits or writs, flexor tendon disorders, TFCC, trigger digits, carpal tunnel syndrome, cubital tunnel syndrome, guyon canal syndrome, posterior interosseous nerve entrapment (elbow or forearm), pronator syndrome, and radial tunnel syndrome. None of these conditions involve the shoulder other than tangentially.

38. It further states that "[T]he medical causation assessment for cumulative trauma conditions is not a substitute for a legal determination of causation/compensability by an Administrative Law Judge. Legal causation is based on the totality of medical and non-medical evidence, …"

---

[4] This ALJ infers that this report was issued after Claimant started seeing Dr. Black and had already had a diagnosis of a torn rotator cuff.

[5] The Check History shows the earnings as a "NET." However, when adding all the deductions and earnings (DDNET), it shows that the amount under NET is actually the gross wages.

39. The Shoulder Injury Medical Treatment Guidelines, W.C.R.P. Rule 17, Exhibit 4, Sec. C.2 addresses principles of causation of occupational shoulder diagnosis stating that work-related conditions of the shoulder may occur from the following:

> • a specific incident or injury,
>
> • aggravation of a previous symptomatic condition, or
>
> • a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment.
>
> …
>
> Cumulative work-related causation for shoulder disorders is difficult to quantify given
>
> > 1) the variable techniques used to measure work exposures and the paucity of studies which have measured exposures,
> >
> > 2) the lack of verified clinical exams and
> >
> > 3) the lack of prospective studies.

40. As found, the third option in Exh. 4, Sec. C.2, addresses occupational exposures, in other words, occupational diseases or cumulative trauma exposures to the shoulder. This ALJ infers from this that Exhibit 4 applies to shoulder conditions and not Exhibit 5.

41. The same section C.2 also stated that a cross-sectional study provided some evidence that "upper arm elevation above 90° increases the odds of shoulder pain with disability, … and supraspinatus tendinitis, with a greater than fourfold increase when the upper arm is elevated at that level for more than 6% of working time (about 30 minutes per day)."

42. It further stated that "[G]iven the lack of multiple high quality studies it is necessary to consider each case individually when dealing with the likelihood of cumulative trauma contributing to or causing shoulder pathology."

F. Claimant's Testimony

43. Claimant stated that she liked to go on walks to the lake and some hiking on the Colorado Trail but nothing that would involve her upper extremities like her co-workers that skied and climbed. At home she would take care of her children, her home and her pets but tried to avoid doing much as she came home exhausted from driving and would have to take the time to rest a lot.

44. Claimant had a prior injury in 2020, when she was closing an emergency hatch on the roof of a bus and injured her left shoulder. Claimant asserted she was treated by Dr. Benedetti with physical therapy and Claimant's symptoms resolved. Claimant was able to return to her regular work as a bus driver.

45. Claimant stated that it was sometimes normal to have a stiff neck or shoulder or back following a 10 hour bus route as she would be in her seat the whole time operating the controls, where the seat was bouncing, while she was holding onto the steering wheel, feeling the vibration of the tires and every single bump in the road. When

there was a pothole, it was twice as bad, causing the impact to go from the steering wheel, up her arms and into her shoulders.

46. Claimant explained that the pain she experienced after the October 15, 2022 incident was very different from the symptoms she had had when she was treated by Dr. Benedetti, because that was only soreness compared to the pain she experienced after this injury. This time she had difficulty lifting her arm and had excruciating pain. She rested for a couple of days but it did not get better. She attended a company barbeque, tried to lift a can of soda and dropped it because the pain was so bad.

47. That same day of the BBQ she completed the workers' compensation paperwork. She turned it in to her supervisor the next day and asked her boss if she could see a doctor. Her supervisor made the appointment for her for the following Monday with CCOM. In the interim she took a lot of Tylenol and Advil.

48. Claimant had not had any kind of problems with her neck or shoulder other than the work related incident of 2020.

49. Claimant presented to CCOM on October 24, 2022 and saw PA Feldman.

50. She had surgery on March 2, 2022 to repair her left shoulder rotator cuff. Since then, on May 18, 2023 she started a new position with Employer as a dispatcher and she no longer drove buses or interact with the public. Though she continued to work with the same people as she did before, while she was driving.

51. She noted that she was not available for the job assessment performed by SN[Redacted] but another dispatcher, who had also been a bus driver before she became a dispatcher, was the one to do it.

G. Dr. Olsen Testimony

52. Dr. Nicholas K. Olsen testified as a board certified physical medicine and rehabilitation expert as well as a physician generally. His practice involved treating patients, conducting independent medical evaluations, performing electrodiagnostic examinations, and doing interventional spine care. He conducted an IME on Respondents' behalf and prepared a report dated June 1, 2023, which contained his findings and conclusions. He reviewed the medical records and interviewed Claimant by phone, not in person. He was asked to determine whether Claimant had an acute injury to her left shoulder and whether the work activities of a bus driver resulted in an occupational disease to her left shoulder.

53. Dr. Olsen noted that Claimant had a full thickness rotator cuff tear and underwent surgical repair. He stated that when the rotator cuff was repeatedly placed in a position of impingement by lifting high overhead, and left there repeatedly, or if there was a lot of force, a patient could experience a rotator cuff tear due to stress on the rotator cuff and resultant breakdown of the rotator cuff causing the full-thickness tear. Having the arm at the shoulder level can decrease the blood supply and place tension across the rotator cuff. It is a critical zone that as individuals age, have less blood supply. The critical zone is an area that demands blood supply.

54. Dr. Olsen opined that the muscle groups used by Claimant to engage and disengage the brake did not involve the shoulder in any form and that the rotator cuff tears seen on the December 26, 2022 MRI were not caused by her work activities as a driver.

55. He testified to the risk factors associated with shoulder occupational diseases as well, identifying the Medical Treatment Guidelines for cumulative trauma disorders, that address risk factors for the hands, wrist and forearms, which he opined also applied to the shoulder. He addressed several steps, including diagnosis, history of work activities, identifying activities with necessary force, frequency and duration to cause body party injuries as well as adequate rest and recovery periods between stresses to that body part. He opined that there was insufficient force used to affect the shoulder that would contribute to an occupational disease to the shoulder and to cause a rotator cuff tear. He stated that the rest time between each activity was sufficient recovery time and that none of her activities were sufficiently repetitive to result in a rotator cuff tear. He opined that Claimant's rotator cuff tear was simply a sign of aging due to the decrease in blood supply and the course of time.

H. Conclusive Findings

56. As found, Claimant was operating a bus with a very hard emergency brake that was located on the left side panel, approximately three inches above her thigh at approximately her waist level. The operation panel was an undetermined amount of space away from her but no less than 6 inches away. Claimant is 5'3" in height. The picture at Respondents' Exhibit D, bate 55 showed an individual who is not Claimant, and is of an indeterminate height.

57. As found, this ALJ observed Claimant's demonstrative postures at hearing, used while operating the emergency brake on BN[Redacted]. This ALJ observed how she was lifting her arm to the side, at approximately waist level, in an awkward position with her arm externally rotated and abducted to pull the brake lever and adducted to push the lever. The shoulder was shrugged up, and the upper arm was at or above 90 degrees at the shoulder.

58. As found, Claimant credibly testified that she was operating the stiff emergency brake on October 15, 2022 when she felt an extreme pain in her shoulder. She was then unable to change the overhead location signs and had to brake using both her hands in order to operate the emergency brake. As found, this was the time Claimant injured her rotator cuff causing the need for treatment, including surgical repair of the rotator cuff.

59. As found Claimant has shown by a preponderance of the evidence that she sustained a specific injury on October 15, 2022 while operating the emergency brake, tearing her rotator cuff in the course and scope of her employment. As found, Claimant had a prior impingement syndrome that contributed to an underlying pathology that was asymptomatic at the time of the current work related injury but was aggravated, causing the current disability and need for medical care. Further, due to her age and body habitus, Claimant likely had a weakened rotator cuff due to decreased blood supply to this critical area.

60. As found Dr. Reiter and Dr. Black are more credible and persuasive than the contrary opinions of Dr. Olsen and Dr. Ciccone. Dr. Reiter credibly stated that Claimant sustained an occupational injury with exerting up to 20 lbs. of force by externally rotating and adducting her shoulder to engage the brake of the bus in an awkward position. Further, Dr. Black opined that the rotator cuff tear was an occupational injury as claimant was asymptomatic before the event and symptomatic following the event of engaging the emergency brake.

61. While Dr. Olsen described that the muscle group Claimant would be using to operate the brake, was the hand, wrist and forearm, this ALJ viewed Claimant's motions and considered her description on video that she was having to use her arm by putting her elbow directly back and to the side, with her upper arm directly out and her shoulder lifted, and making a pulling and pushing motion at the side of her. The motion described by Dr. Olsen was not the one for BN[Redacted] when Claimant was injured.

62. What external rotation means to this ALJ is that the infraspinatus muscle rotates the humerus in the outward position together with the posterior deltoid and teres minor that assist in external rotation of the arm, but if the individual engages the trapezius and rhomboid muscle that can affect the muscles going into the neck. While there can be external rotation at higher degree levels such as 45 or 90 degrees or higher, this does not mean that external rotation cannot be achieved with the arm close to the body. But if Claimant was having difficulty with the brake, this ALJ concludes that she was putting pressure on her shoulder to externally rotate and, because she likely had a weakened shoulder cuff, she tore the rotator cuff when she engaged the stiff brake, causing an aggravation to preexisting weakness and a full rotator cuff tear, which required surgical repair.

63. As found, the Job Assessment by SN[Redacted] considered the risk factors of cumulative traumas for the elbow, forearm, wrist, hand and digits, not the shoulder, in the second risk factor assessment, and did not apply to this case. Further, she failed to assess the operation on BN[Redacted] or measure the specific force used to operate the emergency brake, as well as failed to consider Claimant's specific physical characteristics and underlying weakness in the left shoulder when reaching her conclusions.

64. Even if Claimant had not sustained a specific incident, the movements Claimant made to operate the hard emergency brake on BN[Redacted] was sufficient to cause an occupational disease.

65. As found, Claimant reported her injury and was referred to CCOM for medical treatment and was seen by PA Feldman and Dr. Reiter, who referred Claimant to her surgeon, Dr. Black. These physicians are within the chain of referral and are authorized.

66. As found, Claimant sustained a work related injury that required medical care, including evaluations, physical therapy, diagnostic tests and surgical repair. The medical care was reasonably necessary and related to the October 15, 2022 work injury.

67. As found, Claimant's average weekly wage was $1,202.35.

68. As found, Claimant had surgery performed by Dr. Black, an authorized treating provider, on March 2, 2023 to repair the rotator cuff tears. Claimant returned to

work on May 18, 2023. Claimant has shown she is entitled to temporary total disability benefits from March 2, 2023 through May 17, 2023.

69. Testimony and evidence inconsistent with the above findings is not credible and/or not persuasive, and/or not relevant.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley,* 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO,* 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO,* 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the

conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

Two theories of the case were advanced by Claimant. A specific injury which happened on October 14, 2022 or October 15, 2022; or that Claimant suffered an occupational disease.

The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S.as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, performing service arising out of and in the course of the employee's employment." Sec. 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The claimant must prove her injury arose out of the course and scope of her employment by a preponderance of the evidence. Sec. 8-41-301(1)(b) & (c), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

"Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co., supra.* An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. See *Triad Painting Co, supra*; *Hubbard v. City Market*, W.C. No. 4-934-689-01, ICAO (Nov. 21, 2014). The "arising out of" element is narrower and requires Claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez,* 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment.

A claimant is required to prove by a preponderance of the evidence that an alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff,* 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.*

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO Apr. 9, 2014).

A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015). Moreover, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Finn v. Indus. Comm'n*, 437 P.2d 542 (Colo. 1968); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017); *Sanchez v. Honnen Equip. Co*., W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce the need for medical treatment or disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

The Medical Treatment Guidelines (MTGs), contained in Workers' Compensation Rule of Procedure 17, 7 CCR 1101-3, provide that health care providers shall use the Guidelines adopted by the Director of the Division of Workers' Compensation. Sec. 8-42-101(3)(b), C.R.S. In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003), the Colorado Court of Appeals noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. The Guidelines are regarded as accepted professional standards for care under the Workers'

Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the Guidelines in making determinations. *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005). The ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (Jan. 25, 2011). The Guidelines, however, do not constitute evidentiary rules, and an expert's compliance with them does not dictate whether the expert's opinions are admissible, or whether they may constitute substantial evidence supporting a fact finder's determinations. Rather, compliance with the Guidelines may affect the weight given by the ALJ to any particular medical opinion. *Cahill v. Patty Jewett Golf Course*, W.C. No. 4-729-518 (February 23, 2009); *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (April 27, 2009; *In re Claim of Foust*, 102120 W.C. No. 5-113-596, I.C.A.O. (October 21, 2020). However, the Guidelines are not definitive and the ALJ need not utilize the medical treatment guidelines as the sole basis for determinations of benefits. Sec. 8-43-201(3), C.R.S. See also *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (April 27, 2009); *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150, I.C.A.O. (May 5, 2006), affirmed *Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (NSOP); *In re Claim of Reyes*, W.C. No. 4-968-907-04, I.C.A.O. (December 4, 2017)

Claimant has established that it was more likely than not that she sustained a compensable injury arising from the course and scope of her employment with Employer on October 15, 2022 when she was operating BN[Redacted], which had a hard to manage emergency brake. She pulled on the brake lever and felt pain in her neck and shoulder. The lever was at her side, approximately three inches above her thigh level and at least six inches away from her body and she had to use her upper arm extended at or above shoulder level, externally rotating her arm, while her shoulder was shrugging, when her rotator cuff tore. Claimant was credible in her description that she felt pain while operating the emergency brake and that she had not had symptoms like these before the October 15, 2022 shoulder injury. Further, Claimant's description was consistent and supported by this ALJ's observation of the Claimant's demonstration of the motions she used to operate the emergency brake. Claimant did have an underlying asymptomatic impingement syndrome which was aggravated at the time of the October 15, 2022 incident. While Claimant's initial symptoms included neck pain, this was determined to be caused by the overcompensation related to use of the trapezius and adjunct muscles of the cervical spine, as Claimant was unable to properly utilize her shoulder and arm. Claimant did not sustain a neck injury and any symptoms of neck pain resolved with physical therapy and the subsequent rotator cuff surgery. Dr. Reiter was persuasive and credible in his opinion that the Claimant's awkward movement in having to use the emergency brake, caused the rotator cuff tear. He explained that Claimant performed multiple motions done in an awkward position with her arm externally rotated and adducted to pull the brake handle, which were sufficient to cause the injury to Claimant's rotator cuff. Further, Dr. Black was also credible and persuasive that Claimant sustained a work related injury in the performance of her job as a driver.

While Dr. Ciccone and Dr. Olsen may have been credible in certain regards, they were not persuasive. Both Dr. Ciccone and Dr. Olsen relied on SN's[Redacted] job assessment without making a sufficient analysis of Claimant's circumstances and underlying asymptomatic preexisting weakness, failing to take into consideration all

factors affecting Claimant, such as how many years she had been working the job without significant problems and the force necessary to actually operate the emergency brake on BN[Redacted], as opposed to other buses and did not have the benefit of having a demonstration by Claimant of the movements required to operate the emergency brakes on BN[Redacted]. Nothing in SN's[Redacted] analysis indicates that she considered the hard to handle emergency brake or discussed that the test was performed on that same vehicle, considered Claimant's height, or other factors, such as age, gender, BMI, which are necessary to make a full determination. In fact, SN[Redacted] stated that Claimant never exerted forces of greater than 5 lbs., yet the medical records document that she exerted approximately 20 lbs. of force while externally rotating her extended upper arm. Further, Employer's records credibly showed that Claimant, as a bus driver, had to occasionally assist individuals onto and off the bus, perform repetitive motions, and occasional lifting up to 40 pounds. While she noted that Claimant occasionally used her upper extremities to push/pull, while "setting/releasing emergency brake," she did not assess the pounds of force needed to do so. She also stated that Claimant used both left and right hand to operate the brake. She predominately used the cumulative trauma MTGs to assess the risks of exposure. SN's[Redacted] evaluation is found not persuasive. Further, neither Dr. Olsen nor Dr. Ciccone examined Claimant or discussed in sufficient detail the multiple other factors that might have had an impact on the Claimant's weakened rotator cuff that made her susceptible to this work injury. What was credible in Dr. Olsen's testimony was that the shoulder was a critical zone, and that age and overhead use decreased the blood supply to the critical zone, causing weakness of the shoulder tissue. PA Feldman, Dr. Reiter and Claimant's surgeon, Dr. Black all credibly and persuasively opined that Claimant's shoulder injury was caused by Claimant's work related activities, over the contrary opinions of Dr. Olsen and Dr. Ciccone in this matter. Further, Claimant was persuasive and credible. Claimant has proven by a preponderance of the evidence that she sustained a compensable work related injury on October 15, 2022.

While there is evidence that Claimant may have sustained an occupational disease, instead of a specific incident, this ALJ finds to the contrary. Here, there was a specific time, place and cause of Claimant's injury. Claimant was operating the emergency brake while driving a particular bus in the course of her work for employer, and the operation of the hard emergency brake caused her left shoulder injury on October 15, 2022. This ALJ finds that whether Claimant correctly perceived the extent of the shoulder injury at the time that it happened was not significantly germane to the issue of compensability.

C. Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals*

Office, 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colo. Springs School Dist.*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

"Authorization" refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8–43–404(5), C.R.S.2011, gives employers or insurers the right to choose treating physicians in the first instance. The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury, *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006), and if medical services are not timely tendered by the employer or insurer, the right of selection passes to the employee, *Andrade v. Indus. Claim Appeals Office*, 121 P.3d 328, 330 (Colo.App.2005). Further, a claimant "may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion." *Greager v. Industrial Commission*, 701 P.2d 168, 170 (Colo. App. 1985); see also, *Brickell v. Business Machines, Inc.,* 817 P.2d 536. Lastly, an insurer may, by their conduct, waive the right to object that the medical provider was not an authorized provider. *Wielgosz v. Denver Post Corporation*, W. C. No. 4-285-153, (ICAP, December 3, 1998).

Claimant reported her injury to her supervisor and, after the paperwork was completed, Employer scheduled her to see a provider at CCOM. Claimant was attended by Dr. Reiter and PA Feldman at CCOM. Dr. Reiter referred Claimant for an MRI and to Dr. Black. Claimant proceeded with care in accordance with that prescribed by her authorized providers, including surgical repair of her rotator cuff tears, physical therapy, massage therapy and medications as well as the MRI ordered by Dr. Reiter. All this care was authorized, reasonably necessary and related to the October 15, 2022 work related injury to her left shoulder.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. Campbell v. IBM Corporation, supra. Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. Coates, Reid & Waldron v. Vigil, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. Ebersbach v. United Food & Commercial Workers Local No. 7, W.C. No. 4-240-475 (ICAO, May 7, 2007).

From the detailed check history issued by Employer, Claimant earned a total of $38,475.46 the 32 weeks from pay period ending (PPE) April 8, 2022 through PPE October 21, 2022. This ALJ considered other computational alternatives to calculate the average weekly wage and rejected them. The Claimant's fair approximation of her wage

loss and diminished earning capacity was based these earnings. Claimant's average weekly wage was $1,202.35 for her October 15, 2022 work related injury.

E. Temporary disability benefits

To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra.* There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

Claimant had surgery under Dr. Black, an authorized treating physician, on March 2, 2023 for her left shoulder rotator cuff tears related to the October 15, 2022 work related injury. Claimant was credible when she testified that she was unable to return to work until May 18, 2023. Claimant has shown that she is entitled to temporary total disability benefits from March 2, 2023 through May 17, 2023. Further, Claimant is entitled to statutory interest of eight percent (8%) on all benefits not paid when due. Benefits are calculated as follows:

Name:	DeAnn Quintana
Bi-Weekly benefit amount that should have been paid:	1603.14
Bi-weekly amount that has been paid:	0
Beginning date of unpaid benefits:	03/02/2023
Ending date of unpaid benefits:	05/18/2023 **5/18/2023**
Date benefits were or will be paid:	11/09/2023 **11/9/2023 11/9/2023**
Annual Interest rate:	8
Number of days benefits are due:	78.00
Number of days benefit not paid when due:	175
Total bi-weekly benefits accrued through 5/18/2023	$8,931.78
Total interest accrued through 5/18/2023	$414.03
Total benefits and interest accrued	$9,345.81
Daily interest after 11/9/2023	$2.05

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a compensable work related injury to her left shoulder on October 15, 2022.

2. Respondents shall pay for all authorized, reasonably necessary and related medical care for her left shoulder injury, including CCOM, Dr. Black, and the Summit Group of providers, pursuant to the Colorado Fee Schedule.

3. Claimant's average weekly wage is $1,202.35 and her TTD rate is $801.57.

4. Respondents shall pay TTD benefits from March 2, 2023 through May 17, 2023 in the amount of $8,931.78 plus interest of $414.03, for a total of $9,345.81 in indemnity and interest benefits. Respondents shall pay interests through the day that benefits are issued to Claimant.

5. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts** or email the Petition to Review to oac-ptr@state.co.us. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 9th day of November, 2023.

By: _____

Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-203-210-002

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffered a compensable industrial injury to his leg/thigh area during the course and scope of his employment with Employer on April 4, 2022.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. On February 1, 2022 Claimant began working for Employer as a Receiver. Claimant asserts that he sustained an industrial leg/thigh injury on April 5, 2022 when he tripped on uneven concrete in the recycling area of Employer's facility. However, the record reveals he did not work on April 5, 2022. Claimant subsequently amended the alleged date of injury to April 4, 2022.

2. Upon receiving notice of the alleged injury, Employer initiated its standard accident investigation protocol and prepared a written report authored by Safety Coordinator [Redacted, hereinafter ES]. The investigation involved reviewing camera footage of the premises on the days in question, examining timecards, conducting employee interviews and obtaining co-worker statements.

3. The Accident Investigation Report determined that camera footage "does not support the alleged incident." Importantly, Claimant arrived at work limping on April 4, 2022. Specifically, the Accident report noted "Camera footage shows the EE exciting the passenger side of a white vehicle and limping into work at 12:12pm on 4/4/22." The report documented that from 12:14pm to 3:07pm Claimant "can be seen limping in the recycling area while cutting wires, sweeping, moving bins about, attending the daily safety meeting, and sorting bins." Moreover, the report concludes that Claimant "cannot be seen tripping and falling at any point in time during the partial shift he worked on 4/4/22." Finally, the Accident report noted that, when "management saw that [Claimant] was limping and spoke to him about it in the office, the EE is said to have told management that he hit [h]is leg on a table at home and he was not injured at work."

4. The record includes a medical report from Swedish Medical Center dated March 31, 2022 or five days before the alleged work incident. The document specifies that Claimant presented "with pain to his left thigh after hitting it on the table."

5. ES[Redacted] testified at the hearing in this matter. He explained the following:

a. He reviewed video footage on both April 4, 2022 and April 5, 2022;

b. He prepared the Employer Accident Investigation Report;

c. It is standard protocol at Employer to review video, conduct interviews, and take employee statements when someone alleges an industrial accident at work;

d. Employer has cameras all over the premises that run 24/7 including in the receiving area where Claimant contends he was injured on April 4, 2022;

e. The video does not reflect that Claimant tripped or fell as alleged on April 4, 2022. Rather, the video recorded Claimant coming into work already limping on April 4, 2022 before his shift ever began;

f. The reason Claimant was taken to the office was because co-workers saw him limping when he came to work on April 4, 2022. Employer then provided a fit for duty form for Claimant to complete. If he claimed at the time he sustained an injury at work, he would have filled out the proper Workers' Compensation paperwork based on company policy;

g. Employees for Employer are not discouraged from reporting injuries when they occur at work, but rather are encouraged to report them no matter how small.

6. The record also reveals a number of witness statements regarding the incident. Store Manager [Redacted, hereinafter KW] commented that she noticed Claimant was limping at work on April 4, 2022. She asked Claimant what had happened and he responded that he struck his leg on a table at home. Claimant denied that he injured his leg at work. Similarly, supervisor [Redacted, hereinafter DA] asked Claimant whether he had injured his leg at work on April 4, 2021. Claimant answered that he did not injure his leg at work but pulled a muscle at home.

7. Claimant did not appear for the hearing July 11, 2023 hearing in this matter. Claimant received the opportunity to have his deposition taken, but elected not to proceed. Claimant therefore offered no testimony at hearing, deposition, or otherwise.

8. Claimant has failed to establish it is more probably true than not that he suffered a compensable industrial injury to his leg/thigh area during the course and scope of his employment with Employer on April 4, 2022. The totality of the evidence reflects that Claimant did not sustain a work injury during the course and scope of his employment with Employer. ES[Redacted] conducted an investigation by reviewing camera footage of the premises on the days in question, examining timecards, conducting employee interviews and obtaining co-worker statements. The surveillance video as documented in the Accident Investigation Report

reveals that Claimant was limping when he arrived at Employer's facility on April 4, 2022. The video also demonstrates that Claimant did not trip and fall at any time during his work shift on April 4, 2022.

9. ES'[Redacted] credible testimony is consistent with the Accident Investigation Report and video footage that Claimant arrived at work on April 4, 2022 already limping and did not trip or fall while performing his job duties. Furthermore, statements from co-workers establish that Claimant injured his leg at home and not while working for Employer. Importantly, a March 31, 2022 report from Swedish Medical Center specifies that Claimant presented "with pain to his left thigh after hitting it on the table." Therefore, the premises video, testimony of ES[Redacted], statements of co-workers and Accident Investigation Report demonstrate that Claimant did not sustain an industrial injury while working for Employer. Rather, the evidence strongly suggests that Claimant injured himself prior to April 4, 2022 outside of work. Accordingly, Claimant has failed to demonstrate that his work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. His claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally

one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician may provide diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms, there is no mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable industrial injury to his leg/thigh area during the course and scope of his employment with Employer on April 4, 2022. The totality of the evidence reflects that Claimant did not sustain a work injury during the course and scope of his employment with Employer. ES[Redacted] conducted an investigation by reviewing camera footage of the premises on the days in question, examining timecards, conducting employee interviews and obtaining co-worker statements. The surveillance video as documented in the Accident Investigation Report reveals that Claimant was limping when he arrived at Employer's facility

on April 4, 2022. The video also demonstrates that Claimant did not trip and fall at any time during his work shift on April 4, 2022.

9. As found, ES'[Redacted] credible testimony is consistent with the Accident Investigation Report and video footage that Claimant arrived at work on April 4, 2022 already limping and did not trip or fall while performing his job duties. Furthermore, statements from co-workers establish that Claimant injured his leg at home and not while working for Employer. Importantly, a March 31, 2022 report from Swedish Medical Center specifies that Claimant presented "with pain to his left thigh after hitting it on the table." Therefore, the premises video, testimony of ES[Redacted], statements of co-workers and Accident Investigation Report demonstrate that Claimant did not sustain an industrial injury while working for Employer. Rather, the evidence strongly suggests that Claimant injured himself prior to April 4, 2022 outside of work. Accordingly, Claimant has failed to demonstrate that his work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. His claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 9, 2023.

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts

1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $2,337.14.

2. The issue of Temporary Total Disability (TTD) benefits for the period August 22, 2021 through October 4, 2021 has been resolved. Claimant also withdrew the issue of reinstatement of vacation hours, sick time, and PTO.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to recover Temporary Partial Disability (TPD) benefits for the period October 5, 2021 through August 20, 2023 except for the weeks of December 6, 2021, January 13, 2022, July 11, 2022 and October 20, 2022.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304(1), C.R.S. for Respondents' violation of WCRP 5-5(B) by filing a medical-only General Admission of Liability (GAL) on March 29, 2022.

FINDINGS OF FACT

1. Claimant works as a Truck Driver for Employer. On August 21, 2021 Claimant sustained a work-related injury to his lower back after lifting boxes and bags.

2. Claimant testified that Employer did not direct him to a physician for treatment after he reported the injury. He thus visited personal physician Frances C. Hindt, M.D. at Kaiser Permanente. Dr. Hindt originally took him off work until October 5, 2021 for severe pain when walking, standing, and resting.

3. Claimant returned to Dr. Hindt for an examination on September 27, 2021. She noted Claimant's lumbar MRI revealed multilevel degenerative disc disease and facet osteoarthropathy. Dr. Hindt diagnosed Claimant with spinal stenosis of the lumbar spine with neurogenic claudication. She permitted Claimant to return to work, but expressed the following concerns, "I do think it is okay for him to return to work now cautiously. If he does have more pain upon return to work I want him to stop and take a step back." Dr. Hindt commented that Claimant's work consists of heavy lifting in a dock and he has been unable to perform his job since August.

4. Subsequent visits to Kaiser reveal that Claimant continued to suffer from aggravating factors including bending, lifting, sitting, driving, transitioning positions,

walking, and standing. Claimant underwent physical therapy and received injections for his lower back condition.

5. On January 11, 2022 Claimant underwent an Independent Medical Examination (IME) with John Burris, M.D. After conducting a physical examination, Dr. Burris concluded Claimant likely sustained a minor soft tissue strain of the lumbosacral spine on August 21, 2021.

6. At the time of the initial evaluation, Dr. Burris did not have Claimant's medical records. He subsequently performed a medical records review on March 11, 2022 and issued an addendum report. Dr. Burris determined the medical records supported his opinions as expressed in his original IME report. After reviewing a lumbar MRI, Dr. Burris explained that Claimant only suffered from multilevel degenerative changes.

7. Dr. Burris also testified at the hearing in this matter. He commented that there were no positive objective findings during his physical examination, Claimant told him he had returned to unrestricted duty, and there were no formal restrictions assigned by Claimant's providers. Dr. Burris thus concluded Claimant could return to regular duty employment. Nevertheless, Dr. Burris acknowledged that Claimant's Kaiser physicians advised him to "watch what he lifts, and he is able to self-monitor his activities at work to avoid heavy lifting." Dr. Burris also agreed that Claimant reported he was following the advice of his Kaiser physicians to watch what he lifts. Moreover, Claimant told Dr. Burris that "this event had made him realize that he cannot continue to engage in such a physically demanding job." Finally, Dr. Burris was not aware of any medical records that Claimant had symptoms, restrictions, or limitations in his activities before he was injured on August 21, 2021.

8. Since the injury of August 21, 2021 Claimant has been performing his job differently and "being cautious." Claimant noted he cannot lift like he used to, and has to monitor his lifting activities. He uses the forklift more often and obtains help from coworkers for lifting heavy materials. Claimant remarked that he is only able to walk or stand for a certain amount of time before his back becomes tight and he must sit down. Moreover, Claimant commented the back injury limits bending and stooping because he has to spread his legs to pick up items from the ground to relieve the pressure on his back. He summarized the injury has, "really inhibited me from doing my work at 100 percent."

9. Claimant seeks TPD benefits of $30,900.44 as documented in modified Exhibit 9 for the period October 5, 2021 through August 20, 2023 because his earnings have been lower than his AWW of $2,337.14. When Claimant returned to work for the period October 5, 2021 through August 20, 2023, he did not receive the full hours he had been working prior to his lower back injury. As Claimant specified "I was getting same rate of wage, but I wasn't getting the full overtime hours that would have changed that rate." Claimant explained that he does not have control over how many overtime hours he receives. He remarked that, in some instances, he is required to take the overtime. However, he sometimes has the choice of whether or not to accept overtime. Notably, Claimant has

not refused overtime hours after his return to work because of his back injury, and "absolutely" takes the hours if offered. Claimant remarked he was unaware whether the overtime hours have changed because his work duties moved to a different job site.

10. The differences between Claimant's AWW and weekly earnings are documented in Claimant's modified Exhibit 9. Moreover, Claimant's Exhibit 7 outlines the per week calculation of TPD benefits during the relevant period. Claimant's Exhibit 8 provides the supporting pay stubs. Claimant acknowledged that he is not entitled to receive benefits for the weeks of December 6, 2021, January 13, 2022, July 11, 2022 and October 20, 2022. Specifically, Claimant withdrew any claim for TPD benefits for the weeks of January 13, 2022 and October 20, 2022 even though he only missed one day in each of those weeks for an unrelated issue, *i.e.,* a CDL exam or a shoulder exam. He also withdrew any request for TPD benefits during the weeks that he either was out with Covid-19 or suspected Covid-19, *i.e.* December 6, 2021 and July 11, 2022.

11. In Insurer's claim notes, Claims Adjuster [Redacted, hereinafter LM] remarked on November 4, 2021 that Claimant's claim was "medical only" for a lower back injury. However, on the following day the claims notes reflect that there was a "Type Change From 'Medical Only' To 'Indemnity.'" The claim was then labeled a "NEW IND CLAIM," and the adjuster changed from LM[Redacted] to [Redacted, hereinafter BS]. [Redacted, hereinafter SK] Claimant Management Adjuster [Redacted, hereinafter EY] testified that "NEW IND CLAIM" means "new indemnity claim."

12. On March 28, 2022 BS[Redacted] wrote in the claim notes that "we recommend admitting to the claim and filing a GAL. Claimant was out of work for a matter of weeks but has since returned. Therefore, temporary indemnity exposure is minimal."

13. Respondents finally filed a General Admission of Liability (GAL) on March 29, 2022 that was for medical benefits only. The document noted "[t]emporary and permanent benefits are denied until such time it is deemed otherwise in accordance with Rule 5-5(B). If temporary and/or permanent indemnity benefits are sustained, an amended admission will be issued." In an email on the same day between Respondents' former attorney and Claimant's former attorney, Respondents' counsel wrote,

> Attached is a GA filed today. It is medical only, and we will amend for indemnity. I had originally recommended a medical only GA based on our emails last week, and this was filed earlier today prior to yours and my conversation. It will be amended to account for the temporary indemnity period, however at this time the claim rep does not have the wage information from the employer to assess the TTD period/AWW. We are working to get that asap but wanted to at least get a medical only GA filed. In light of this, will Claimant withdraw the app for hearing?

14. On March 28, 2023 Claimant filed an Application for Hearing (AFH) seeking AWW, TPD, TTD and penalties. On April 12, 2023 Respondents filed a Response to the AFH asserting that Claimant was not owed any TPD or TTD benefits.

15. Despite the March 29, 2022 correspondence between counsel and Claimant's March 28, 2023 AFH, Respondents did not file an amended GAL that admitted for indemnity benefits or an AWW until July 19, 2023. While Respondents acknowledged TTD benefits from August 22, 2021 through October 4, 2021, they also terminated all temporary benefits as of October 4, 2021 due to an alleged return to full wages/full hours of work.

16. EY[Redacted] testified she began working on Claimant's file on March 1, 2023 after she took over the matter from BS[Redacted]. She commented that, as a seasoned adjuster for SK[Redacted], she is familiar with both the statute and the rules. EY[Redacted] agreed that, if an injured worker misses more than three working shifts because of an admitted work injury, the injury is an indemnity or lost-time claim. Furthermore, if an adjuster is aware that an injured worker has missed more than three working shifts, then a GAL should not be filed as a medical-only admission. EY[Redacted] noted that it would be standard procedure for a new claims adjuster to be assigned when there has been a switch from a medical-only claim to an indemnity claim.

17. Claimant has demonstrated it is more probably true than not that he is entitled to recover TPD benefits for the period October 5, 2021 through August 20, 2023 except for the weeks of December 6, 2021, January 13, 2022, July 11, 2022 and October 20, 2022. Initially, on August 21, 2021 Claimant sustained a work-related injury to his lower back after lifting boxes and bags. Because Employer did not direct him to a medical provider, he sought treatment with personal physician Dr. Hindt at Kaiser. By September 27, 2021 Dr. Hindt permitted Claimant to return to work, but expressed concerns due to Claimant's heavy lifting, and encouraged him to exercise caution. She noted "[i]f he does have more pain upon return to work I want him to stop and take a step back." Subsequent visits to Kaiser reveal that Claimant continued to suffer from aggravating factors including bending, lifting, sitting, driving, transitioning position, walking, and standing. Claimant underwent physical therapy and received injections for his lower back condition.

18. In contrast, IME physician Dr. Burris concluded that Claimant could return to regular duty employment. However, Dr. Burris acknowledged that Claimant's Kaiser physician advised him to "watch what he lifts, and he is able to self-monitor his activities at work to avoid heavy lifting." Moreover, Claimant credibly testified that his lifting abilities have been limited since his work injury and he more often uses a forklift. Claimant also remarked that he is only able to walk or stand for a certain amount of time before his back becomes tight and he must sit down. Finally, Claimant commented that his back injury limits bending and stooping and has, "really inhibited me from doing my work at 100 percent." Therefore, despite Dr. Burris' opinion, the record reveals that Claimant's lower back injury has limited his ability to perform his regular job duties.

19. As a result of his August 21, 2021 industrial injury, Claimant's earnings have been lower than his AWW of $2,337.14. When Claimant returned to work for the period October 5, 2021 through August 20, 2023 he did not receive the full hours, including overtime, he had been working prior to his lower back injury. The differences between

Claimant's AWW and weekly earnings are documented in Claimant's modified Exhibit 9. Fewer overtime hours caused a reduction in wages that was causally connected to Claimant's lower back injury. The effects of the injury placed Claimant at a competitive disadvantage relative to other employees in procuring overtime hours. As a result, Respondents are required to pay TPD benefits based on the difference between Claimant's AWW and his actual earnings during the period October 5, 2021 through August 20, 2023 except for the weeks of December 6, 2021, January 13, 2022, July 11, 2022 and October 20, 2022. Based on Claimant's impaired earning capacity and reduction in hours due to his August 21, 2021 work injury, he is entitled to receive TPD benefits in the total amount of $30,900.44 as documented in modified Exhibit 9.

20. Claimant has established it is more probably true than not that he is entitled to recover penalties under §8-43-304(1), C.R.S. for Respondents' violation of WCRP 5-5(B) by filing a medical-only GAL on March 29, 2022. Despite the mandatory language of Rule 5-5(B), Respondents filed a medical-only GAL on March 29, 2022 without explanation. Moreover, Respondents violation was objectively unreasonable because it was not based on a rational argument in law or fact. Therefore, Claimant is entitled to an award of penalties for the period from March 29, 2022 until July 19, 2023 for a total of 478 days.

21. The record reveals that the day before Insurer filed a medical-only GAL, the adjuster knew it was a lost-time claim. Specifically, in Insurer's claim notes, adjuster LM[Redacted] remarked on November 4, 2021 that Claimant's claim was "medical only" for a lower back injury. However, on the following day the claims notes reflect that there was a "Type Change" from "Medical Only" to an indemnity claim. The adjuster specifically knew Claimant had missed a number of weeks of work because of the work injury. The filing of a medical-only GAL under the circumstances constituted a violation of Rule 5-5(B). Insurer had notice of the problem and promised to address it on the same day the medical-only GAL was filed on March 29, 2022. Respondents' former attorney specified in an e-mail that the medical-only GAL would be amended "to account for the temporary indemnity period, however at this time the claim rep does not have the wage information from the employer to assess the TTD period/AWW." Nevertheless, Insurer did not fix the problem and admit for TTD benefits until July 19, 2023 or almost 16 months later. Moreover, Respondents did not cure the violation within 20 days of when Claimant filed the AFH on March 28, 2023. Instead, Respondents filed a Response to the AFH asserting that Claimant was not entitled to any TPD or TTD benefits.

22. EY[Redacted] credibly explained she began working on Claimant's file on March 1, 2023 after she took over the matter from BS[Redacted]. She agreed that, if an injured worker misses more than three working shifts because of an admitted work injury, the injury is an indemnity or lost-time claim. Furthermore, if an adjuster is aware that an injured worker has missed more than three working shifts, then a GAL should not be filed as a medical-only admission. EY[Redacted] noted that it would be standard procedure for a new claims adjuster to be assigned when there has been a switch from a medical-only claim to an indemnity claim.

23. Respondents filed a medical-only GAL on March 29, 2022 and waited approximately 16 months to file an amended GAL that admitted for indemnity benefits and an AWW. While Respondents acknowledged TTD benefits from August 22, 2021 through October 4, 2021 in the amended GAL, they also terminated all temporary benefits as of October 4, 2021 due to an alleged return to full wages/full hours of work. The record reveals that Respondents conduct in failing to file an amended GAL for approximately 16 months while aware that a medical-only GAL constituted a Rule violation, was objectively unreasonable because it was not based on a rational argument in law or fact. Insurer was aware that Claimant had missed more than three working shifts but still filed a GAL as a medical-only admission. Based on Respondents violation of Rule 5-5(B) and unreasonable conduct, Claimant has established the right to a penalty of $25 per day from March 29, 2022 through July 19, 2023 for a total of 478 days. The total penalty equals $11,950. A penalty of $11,950 is sufficient to penalize Respondents' conduct in violating Rule 5-5(B) and encourage future compliance without being excessively punitive. Fifty percent of the penalty shall be paid to Claimant and fifty percent to the Subsequent Injury Fund.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Temporary Partial Disability Benefits

4. Section 8-42-106(1), C.R.S. provides for an award of TPD benefits based on the difference between a claimant's AWW at the time of injury and earnings during the continuance of the disability. Specifically, an employee shall receive 66.66% of the difference between his wages at the time of his injury and during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (TPD benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). Once a claimant establishes that the injury has caused "disability" in the sense that the injury impairs a claimant's ability to perform his regular duties, the right to temporary disability benefits is measured by a claimant's wage loss. *See Black Roofing Inc. v. West*, 967 P.2d 195 (Colo. App. 1998). Further, "economic unemployment or underemployment" is not a claimant's "fault" and does not serve to sever the causal relationship between the injury and the wage loss. This is true because the physical restrictions caused by the injury affect a claimant's prospects for finding alternative employment. *J.D. Lunsford v. Sawatsky*, 780 P.2d 76 (Colo. App. 1989); *Kaminski v. Grand County Roofing & Sheet Metal, Inc.,* WC 4-525-562 (ICAO, Mar. 21, 2003). Section 8-42-106(2), C.R.S. provides that TPD benefits shall continue until either of the following occurs: "(a) The employee reaches maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

5. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to recover TPD benefits for the period October 5, 2021 through August 20, 2023 except for the weeks of December 6, 2021, January 13, 2022, July 11, 2022 and October 20, 2022. Initially, on August 21, 2021 Claimant sustained a work-related injury to his lower back after lifting boxes and bags. Because Employer did not direct him to a medical provider, he sought treatment with personal physician Dr. Hindt at Kaiser. By September 27, 2021 Dr. Hindt permitted Claimant to return to work, but expressed concerns due to Claimant's heavy lifting, and encouraged him to exercise caution. She noted "[i]f he does have more pain upon return to work I want him to stop and take a step back." Subsequent visits to Kaiser reveal that Claimant continued to suffer from aggravating factors including bending, lifting, sitting, driving, transitioning position, walking, and standing. Claimant underwent physical therapy and received injections for his lower back condition.

6. As found, in contrast, IME physician Dr. Burris concluded that Claimant could return to regular duty employment. However, Dr. Burris acknowledged that Claimant's Kaiser physician advised him to "watch what he lifts, and he is able to self-monitor his activities at work to avoid heavy lifting." Moreover, Claimant credibly testified that his lifting abilities have been limited since his work injury and he more often uses a forklift. Claimant also remarked that he is only able to walk or stand for a certain amount of

time before his back becomes tight and he must sit down. Finally, Claimant commented that his back injury limits bending and stooping and has, "really inhibited me from doing my work at 100 percent." Therefore, despite Dr. Burris' opinion, the record reveals that Claimant's lower back injury has limited his ability to perform his regular job duties.

7. As found, as a result of his August 21, 2021 industrial injury, Claimant's earnings have been lower than his AWW of $2,337.14. When Claimant returned to work for the period October 5, 2021 through August 20, 2023 he did not receive the full hours, including overtime, he had been working prior to his lower back injury. The differences between Claimant's AWW and weekly earnings are documented in Claimant's modified Exhibit 9. Fewer overtime hours caused a reduction in wages that was causally connected to Claimant's lower back injury. The effects of the injury placed Claimant at a competitive disadvantage relative to other employees in procuring overtime hours. As a result, Respondents are required to pay TPD benefits based on the difference between Claimant's AWW and his actual earnings during the period October 5, 2021 through August 20, 2023 except for the weeks of December 6, 2021, January 13, 2022, July 11, 2022 and October 20, 2022. Based on Claimant's impaired earning capacity and reduction in hours due to his August 21, 2021 work injury, he is entitled to receive TPD benefits in the total amount of $30,900.44 as documented in modified Exhibit 9.

Penalties

8. Section 8-43-304(1), C.R.S. authorizes the imposition of penalties not to exceed $1000 per day if an employee or person "fails, neglects, or refuses to obey any lawful order made by the director or panel." This provision applies to orders entered by a PALJ. *See* §8-43-207.5, C.R.S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Indus. Claim Appeals Off.,* 100 P.3d 949 (Colo. App. 2004). A person fails or neglects to obey an order if she leaves undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under §8-43-304(1), C.R.S. even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001).

9. The cure provision of §8-43-304(4), C.R.S., provides that,

> After the date of mailing of [any application for hearing for any penalty pursuant to subsection (1)], an alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking the penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed….

10. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must ascertain

whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of an action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Indus. Claim Appeals Off.,* 107 P.3d 965 (Colo. App. 2003) ("reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact.") *In Re Claim of Murray*, W.C. No. 4-997-086-02 (ICAO, Aug. 16, 2017). The question of whether a party's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Indus. Claim Appeals Off.,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Indus. Claim Appeals Off.*, 240 P.3d 429 (Colo. App. 2010). Where the violator fails to offer a reasonable factual or legal explanation for its actions, the ALJ may infer the opposing party sustained its burden to prove the violation was objectively unreasonable. *Human Resource Co. v. Indus. Claim Appeals Off.*, 984 P.2d 1194, 1197 (Colo. App. 1999).

11. An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital,* W.C. no. 4-619-954 (ICAO. May 5, 2006). However, any penalty assessed should not be excessive or grossly disproportionate to the conduct in question. When determining the penalty, the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the other party and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products v. Indus. Claim Appeals Off.,* 126 P.3d 323 (Colo. App. 2005).

12. The Colorado Division of Workers' Compensation Rules of Procedure Rule 5-5 addresses admissions of liability. Rule 5-5(B) specifically provides that "[a]n admission filed for medical benefits only shall state the basis for denial of temporary and permanent disability benefits within the remarks section of the admission."

13. As found, Claimant has established by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304(1), C.R.S. for Respondents' violation of WCRP 5-5(B) by filing a medical-only GAL on March 29, 2022. Despite the mandatory language of Rule 5-5(B), Respondents filed a medical-only GAL on March 29, 2022 without explanation. Moreover, Respondents violation was objectively unreasonable because it was not based on a rational argument in law or fact. Therefore, Claimant is entitled to an award of penalties for the period from March 29, 2022 until July 19, 2023 for a total of 478 days.

14. As found, the record reveals that the day before Insurer filed a medical-only GAL, the adjuster knew it was a lost-time claim. Specifically, in Insurer's claim notes, adjuster LM[Redacted] remarked on November 4, 2021 that Claimant's claim was "medical only" for a lower back injury. However, on the following day the claims notes reflect that there was a "Type Change" from "Medical Only" to an indemnity claim. The adjuster specifically knew Claimant had missed a number of weeks of work because of the work injury. The filing of a medical-only GAL under the circumstances constituted a violation of Rule 5-5(B). Insurer had notice of the problem and promised to address it on the same day the medical-only GAL was filed on March 29, 2022. Respondents' former attorney specified in an e-mail that the medical-only GAL would be amended "to account for the

temporary indemnity period, however at this time the claim rep does not have the wage information from the employer to assess the TTD period/AWW." Nevertheless, Insurer did not fix the problem and admit for TTD benefits until July 19, 2023 or almost 16 months later. Moreover, Respondents did not cure the violation within 20 days of when Claimant filed the AFH on March 28, 2023. Instead, Respondents filed a Response to the AFH asserting that Claimant was not entitled to any TPD or TTD benefits.

15. As found, EY[Redacted] credibly explained she began working on Claimant's file on March 1, 2023 after she took over the matter from BS[Redacted]. She agreed that, if an injured worker misses more than three working shifts because of an admitted work injury, the injury is an indemnity or lost-time claim. Furthermore, if an adjuster is aware that an injured worker has missed more than three working shifts, then a GAL should not be filed as a medical-only admission. EY[Redacted] noted that it would be standard procedure for a new claims adjuster to be assigned when there has been a switch from a medical-only claim to an indemnity claim.

16. As found, Respondents filed a medical-only GAL on March 29, 2022 and waited approximately 16 months to file an amended GAL that admitted for indemnity benefits and an AWW. While Respondents acknowledged TTD benefits from August 22, 2021 through October 4, 2021 in the amended GAL, they also terminated all temporary benefits as of October 4, 2021 due to an alleged return to full wages/full hours of work. The record reveals that Respondents conduct in failing to file an amended GAL for approximately 16 months while aware that a medical-only GAL constituted a Rule violation, was objectively unreasonable because it was not based on a rational argument in law or fact. Insurer was aware that Claimant had missed more than three working shifts but still filed a GAL as a medical-only admission. Based on Respondents violation of Rule 5-5(B) and unreasonable conduct, Claimant has established the right to a penalty of $25 per day from March 29, 2022 through July 19, 2023 for a total of 478 days. The total penalty equals $11,950. A penalty of $11,950 is sufficient to penalize Respondents' conduct in violating Rule 5-5(B) and encourage future compliance without being excessively punitive. Fifty percent of the penalty shall be paid to Claimant and fifty percent to the Subsequent Injury Fund.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

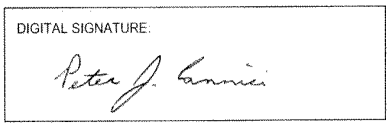
1. Claimant shall receive TPD benefits in the total amount of $30,900.44 as documented in modified Exhibit 9.

2. Respondents shall pay a penalty of $25 per day from March 29, 2022 through July 19, 2023, or 478 days, totaling $11,950. The amount is sufficient to penalize Respondents' conduct in violating Rule 5-5(B) and encourage future compliance without being excessively punitive. Fifty percent of the penalty shall be paid to Claimant and fifty percent to the Subsequent Injury Fund.

. 3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: November 9, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Respondents produced clear and convincing evidence to overcome the MMI determination of Dr. Dwight Caughfield?

- If Respondents overcame Dr. Caughfield's MMI determination, whether they also established, by clear and convincing evidence, that Dr. Caughfield erred in assigning Claimant 13% cervical spine impairment.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Lesnak, the ALJ enters the following findings of fact:

1. Claimant is employed as a field service technician for Employer. While in the field, Claimant uses a large bucket truck to complete his work duties. (Respondents' Hearing Exhibit (RHE) B, p. 19). On October 24, 2022, Claimant was involved in a roll over motor vehicle accident after being struck by a vehicle that unexpectedly pulled out in front of him. *Id*.

2. Emergency personnel responded to the scene of Claimant's accident. (RHE F, p. 109). Claimant was evaluated by EMT, [Redacted, hereinafter RS]. *Id.* While Claimant accepted EMS care, he refused transport to the hospital, agreeing instead to follow-up in the emergency room (ER) via personal vehicle.[1] *Id.*

3. Claimant presented to the ER at St. Francis Medical Center for further evaluation. (RHE D, p. 88, 91). He was evaluated by both Physician Assistant (PA) Kelly Marie Torres and Dr. Christopher Thomas Layton. *Id.* at pp. 88-95. Claimant underwent a CT of the head, neck and facial bones given his report of head trauma without loss of consciousness and right-sided neck pain. *Id.* at pp. 88, 91. Claimant's CT of the head and facial bones were read as "normal", i.e. without evidence of skull or facial fracture and no intracranial hemorrhage. *Id*. at pp. 88-89. The CT of the neck demonstrated no acute spinal fractures. There was an incidental finding of a "[c]hronic C7 spinous process tip fracture deformity" and "[m]ild but increased left C2-C3 facet arthropathy". *Id*. at p. 89. A focused physical examination revealed Claimant's neck to be supple, without midline tenderness; however, there were a "few scattered abrasions on the left lateral and base of the neck" from the seatbelt and tenderness over the sternocleidomastoid muscle extending down to the right shoulder. *Id.* at p. 92.

[1] Claimant testified he declined ambulance transport because he was able to walk but noted he had "a lot of head pain" at the scene. (Hrg. Tr. p. 15, ln. 14-19).

4. Dr. Layton noted that Claimant was found to have "soft tissue injuries but no other significant trauma. (RHE D, p. 90). Moreover, Dr. Layton opined that there was "no evidence of any significant TBI (traumatic brain injury). *Id*. Claimant was treated with anti-inflammatories and muscle relaxants for his symptoms and discharged from the ER. *Id.* at p. 90, 95.

5. Claimant was evaluated the day after the accident (10/25/2022) by PA Mendy Peterson at Concentra Medical Centers (Concentra). (RHE C, pp. 27-33). During this encounter, Claimant reported "pain pretty much everywhere" but noted most of the pain was in the following delineated locations: "right scalp, right shoulder, left knee, right wrist, lumbar area, and hips." *Id*. Claimant did not specifically indicate that he had neck pain. The physical examination of the cervical spine noted there was "normal lordosis, no tenderness and full range of motion." Among other things, Claimant was assessed with a closed head injury, a right shoulder strain, and neck strain. Claimant was then referred for physical therapy and given work restrictions that precluded him from driving a company vehicle "due to functional limitations" caused by decreased range of motion in the neck. *Id*. at pp. 28-30.

6. Claimant retuned to Concentra on October 28, 2022 with complaints of blurriness in the right eye, headaches and neck pain. He was referred for an ophthalmology evaluation. (RHE C, p. 37). PA Peterson noted that Claimant would be seen by the attending physician at his next visit. *Id.* at p. 39. She also limited Claimant to four hours of desk work per day and continued to preclude his driving company vehicles due to limited range of motion in the neck. *Id*. She anticipated that Claimant would reach maximum medical improvement on November 20, 2022. *Id*.

7. Claimant saw Dr. Marcie Wilde at Concentra on November 2, 2022. (RHE C, p. 41). Dr. Wilde noted that Claimant had suffered a "mild TBI without LOC" (loss of consciousness). *Id.* During this appointment, Claimant reported persistent "confusion, headache, trouble [with] concentration, sensitivity to light and sleep". *Id.* Claimant reported attending physical therapy noting that he felt that it had been beneficial. *Id.* No mention of pain or functional limitation concerning the cervical spine were documented in Dr. Wilde's 11/2/2022 report. Indeed, the only musculoskeletal pain noted was limited to the left hip and examination of the cervical spine revealed a "normal lordosis, no tenderness and full range of motion". *Id*. at pp. 42-43. Dr. Wilde renewed Claimant's order for PT for the lumbar spine, the neck and the right shoulder. *Id*. at pp. 43-44. No changes were made to Claimant's work restrictions. Id. at p. 46.

8. Dr. Wilde focused her treatment to Claimant's low back and hips during his November 9, 2022 appointment. Dr. Wilde, who is an osteopathic medicine specialist, performed osteopathic manipulative treatment to the right ASIS (anterior superior iliac spine) and PSIS (posterior superior iliac spine) and noted further that Claimant "[c]ontinues to have marked struggles with symptoms from head injury. *Id*. at pp. 50-51. Physical therapy was continued as was Claimant's restriction on driving company vehicles. *Id*. at p. 51, 53.

9. By his November 16, 2022 follow-up appointment, Claimant had resumed driving. (RHE C, p. 55). PA Peterson noted that Claimant was "approximately 50% toward meeting the physical requirements of his job". *Id.* at p. 58.

10. Claimant returned to Concentra on November 30, 2022, where he was reevaluated by Dr. Wilde. (RHE C, p. 61). Claimant reported persistent headaches and feeling "foggy" and a little lightheaded. *Id*. He also reported no improvement with his neck pain, complaining that it felt like it need to "pop". Id. at p. 62. While the range of motion in his neck was "better than before", Claimant reported sensitivity to touch on the lateral side of the neck which intensified his headaches. *Id.* at p. 61. Claimant was started on Ergotamine-Caffeine tablet for his headaches and given a referral for a chiropractic evaluation for his neck strain complaints. *Id*. at p. 66. Claimant was anticipated to reach MMI in two months. *Id*. at p. 68.

11. Claimant's first chiropractic visit with Dr. Lance Weidner took place on December 13, 2022. (CHE 8, p. 231). Dr. Weidner documented that Claimant was there because of an injury to his neck and right eye with a concussion and headaches. *Id.* Physical examination was completed and provocative testing done. *Id.* at p. 235. Claimant was noted to have a positive cervicocerebral vascular test which caused dizziness, headache and visual changes, which Dr. Weidner opined was an "absolute" contra-indication for cervical manipulation. *Id*. at p. 236. Accordingly, Dr. Weidner referred Claimant back to Dr. Wilde to rule out vertebral artery or other vascular injury from his MVA. *Id.*

12. Claimant returned to Dr. Wilde the following day, December 14, 2022. (RHE C, p. 70). She noted Dr. Weidner raised concern for a possible vascular disorder given Claimant's positive cervicocerebral vascular test with dizziness, headache, and visual change. *Id*. at p. 71. Dr. Wilde ordered a CT scan of the head and brain with contrast. *Id.* at p. 74. She also ordered an arteriogram of the neck. *Id.* at p. 75. Finally, Dr. Wilde placed Claimant's PT on hold pending the results of Claimant's additional imaging. *Id*. Dr. Wilde renewed Claimant's driving restriction due to reduced range of motion in the neck and opined that MMI was not anticipated for another two months. *Id.* at p. 77.

13. Claimant returned to Concentra on December 28, 2022 with complaints of a migraine headache. (RHE C, p. 78). PA Peterson documented that Claimant was not a good candidate for chiropractic care, and that he had completed his last PT session two weeks prior. *Id.* at p. 79. PA Peterson noted that Claimant had deferred medications to help with his persistent headaches and demanded a referral to a neurologist and for an MRI, which PA Peterson noted were not indicated given Claimant's normal physical examination. *Id*. PA Peterson noted that Claimant became irate stating that he thought the treatment process was "getting ridiculous" and that he would let his "attorney handle this from here on out." *Id.* PA Peterson characterized Claimant as being "angry and evasive", noting further that Claimant's objective findings [did] not support his subjective complaints" and it appeared that he was amplifying his symptoms. *Id*. at p. 82. She noted that Claimant had reached a period of stability and was capable of full duty work. Claimant was placed at MMI, without impairment and

released to full duty work. *Id*. at p. 85. At the time of MMI, it was anticipated that Claimant may experience flares of pain or loss of function, but that these flares would not require treatment beyond conservative home measures. Id at p. 83. Dr. George Johnson signed off on the report and completed a WC 164 form. *Id.*; CHE 4, p. 28. At the time he was placed at MMI, Claimant had undergone work-ups and treatment:

- Ophthalmology evaluation;
- CT scans of head and neck;
- Physical therapy for neck, back and shoulder, including dry needling;
- Chiropractic – although he was noted to be not a candidate as his findings of positive Georges' test resulting in ptosis, headache, dizziness, and visual changes;
- Osteopathic manipulation

14. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Johnson's opinions regarding MMI and impairment on January 12, 2023. (CHE 4, p. 10).

15. Claimant objected to Respondents FAL requested a Division Independent Medical Examination (DIME). Dr. Dwight Caughfield was identified as the DIME doctor and he completed the requested examination on April 25, 2023. (RHE B). Dr. Caughfield issued a report outlining his opinions concerning MMI and impairment on May 8, 2023. Dr. Caughfield diagnosed Claimant with work-related occipital neuralgia following blunt head trauma, chronic daily headaches, and cervical pain. Id. at p. 21. After a review of the medical records, taking a history from Claimant, and personally examining him, Dr. Caughfield opined that Claimant was not at MMI for his work-related injuries. *Id*. In support of his opinion, Dr. Caughfield noted:

> Chronic daily headaches (both cervicogenic and migraines) are addressed under the Mild Traumatic Brain Injury Guidelines per Cervical injury guidelines page 9 2nd paragraph [Refer to the Mild Traumatic Brain Injury Medical Treatment Guidelines (MTGs) for information on cervicogenic headache] He has undergone treatments to include passive and active physical therapy, cervical mobilizations, as well as dry needling but his headaches persist. He has returned to full duties and is independent in ADLs but reports having to go to bed early to manage his headaches indicating he has not returned to his pre-injury level of function. The Mild Traumatic Brain Injury treatment guidelines page 69 indicate further treatment require functional impairment for further procedures and treatment commended [sic]. Since he does report headaches that require him to go to bed early for relief, I believe further evaluation and treatment per the treatment algorithm are merited.
>
> Further recommended treatments include medication trials (such as Amitriptyline) and evaluation for diagnostic blocks. mTBI guidelines

> discuss diagnostic nerve blocks (Page 47 E.2.f) which can be beneficial to establish a greater occipital neuralgia while cervical guidelines Section 9.a.iv page 45 discuss medial branch blocks for upper cervical pain which can also be involved in his daily headaches.
>
> I do not feel he has reached MMI until further treatment trials for his chronic headaches have been completed to include a course of medication trials. Chiropractic manipulation, and possible right C2-C3 medial branch blocks/greater occipital nerve block. An MRI of the upper cervical spine is appropriate prior to manipulation and injections given the complaints of dizziness when his neck pops (Possible vertebrobasilar pathology as contraindication to manipulation cervical spine injury guidelines page 34).
>
> He should also be screened for psychological risk factors prior to injections per recommendation 106 page 46 of the cervical injury treatment guidelines.

(RHE B, p. 21).

16. Dr. Caughfield provided a provisional whole person impairment rating of 5% for Claimant's ongoing headaches and a 13% rating for his cervical spine: 4% for Table 53 and 9% for range of motion loss of the cervical spine. *Id.* at 21-22. Dr. Caughfield provided these ratings because his primary complaint remained his daily headaches that require him to go to bed earlier than normal for relief, but Claimant was also having significant upper neck pain, especially on extension suggesting possible facet syndrome. *Id.* at p. 21. Dr. Caughfield opined that although Claimant was able to perform his job, he was performing it in a modified, sedentary capacity, and that his headaches were still interfering with his functional abilities. *Id.* Dr. Caughfield concluded the ongoing, functionally interfering conditions require further treatment as merited per the mTBI headache treatment guidelines as outlined in section J." *Id.*

17. Respondents disagreed with the opinions of Dr. Caughfield and filed an application for hearing to overcome his MMI determination and opinions regarding permanent impairment. They also sought the opinions of Dr. Lawrence Lesnak. Indeed, Dr. Lesnak completed an independent medical examination (IME) at Respondents request on July 17, 2023. (RHE A, pp. 3-16). After taking a history from Claimant and completing a physical examination[2] and a records review, Dr. Lesnak opined that while Claimant probably sustained a mild closed head injury as a result of his MVA, there was no "medical evidence to support that [he] sustained any specific injuries to his cervical spine" related to the October 24, 2022 accident. *Id*. at p. 14.

[2] The cervical examination performed by Dr. Lesnak showed full active range of motion in all planes, negative Spurling's maneuver and Lhermitte's sign. Cervical facet joint loading activities on the left produced no symptoms, on the right, it caused some right-sided suboccipital tenderness. (RHE A, p. 12).

Indeed, Dr. Lesnak added that at the time of his IME there was no "clinical evidence of any symptomatic cervical spine pathology or any medical diagnosis involving the cervical spine that would in any way pertain to [Claimant's] work-related injury claim of 10/24/2022. *Id.*

18. Regarding Claimant's head injury, Dr. Lesnak noted that while Claimant may have "residual intermittent right greater occipital neuritis/neuralgia (which he could not reproduce during examination), he had reached MMI for this injury because dry needling for his headaches had been tried without significant relief and because the medical records document that he "declined any prescription medications that were offered to him previously". (RHE A, p. 14). Regarding Dr. Caughfield's treatment recommendations, Dr. Lesnak noted that Claimant may likely decline additional injection type treatments given his experience with dry needling. Nonetheless, Dr. Lesnak felt it may be appropriate to offer Claimant a greater occipital nerve branch block trial, which he opined should be done on a post MMI maintenance basis. Id. at pp. 14-15.

19. As noted above, Dr. Lawrence Lesnak testified by deposition on September 18, 2023. He testified that in the context of an emergency evaluation following a motor vehicle accident where a patient complains of headache, completion of cervical and head CTs are routine and there completion in this case did not necessarily mean that Claimant sustained a cervical spine injury. Dr. Lesnak testified these scans can assist in checking for reasons/causes for headaches. (Depo Tr. p. 20, ll. 5-19; RHE D, pp. 88-89). As noted above, the physical examination at ER shortly after the accident indicated the neck was "supple," which Dr. Lesnak testified meant there was no tenderness or range of motion abnormalities. He further clarified that the physical examination showed a couple of small abrasions on the neck, but no evidence that would support a diagnosis of a neck strain. (Depo Tr. p. 38, ll. 4-10; RHE D, p. 89).

20. Dr. Lesnak testified the initial cervical CT scan obtained in the ER on the date of Claimant's accident did not show any evidence of acute trauma or injury. Rather, he explained the study demonstrated an old C-7 spinous process tip fracture that was unrelated to the car accident long with facet arthropathy, which was age related and to be expected in a patient of Claimant's age. (Depo. Tr. p. 20-21).

21. Dr. Lesnak testified that the second cervical CT scan was not performed for neck pain, but for headaches and head pressure. He noted the reason for obtaining this second study was the providers wanted to make sure that there was nothing in the cervical spine causing the claimant's headaches. (Depo. Tr. p. 21-22). Based upon the evidence presented, including Dr. Wilde's December 14, 2022 report, the ALJ finds Dr. Lesnak's characterization regarding the reason Dr. Wilde ordered a second CT scan of the neck is misleading. The evidence presented persuades the ALJ that Dr. Wilde ordered a second CT scan of the neck to rule out a vascular injury caused by Claimant's MVA rather than headaches and head pressure. Indeed, Dr. Wilde's December 14, 2022 report supports a finding that she ordered a CT of the *brain* because of "eye pressure" and "intractable acute post-traumatic headache" due to a motor vehicle accident. (RHE C, pp. 74-75)(Emphasis added).

22. Dr. Lesnak testified that through the majority of Claimant's course of treatment, his main complaint was suboccipital pain and pressure, which he noted was different in character from neck pain. He identified suboccipital pain as located at the base of the head and not indicative of neck injury or even neck symptoms. (Depo. Tr. p. 22-23). Claimant testified that, as of the hearing, his sole complaint was that of ongoing headaches, that started in the lower right part of his skull wrapping up to his ear and top of his head on the right side. (Hrg. Tr. p. 35, ln. 1-16).

23. Dr. Lesnak testified that in addition to Claimant's negative imaging, the medical records documented no reproducible objective findings or any positive provocative maneuvers involving the cervical spine to suggest that Claimant injured his neck. He testified the entirety of Claimant's evaluations at Concentra paired with the imaging supported a finding that there was no impairment of the cervical spine. (Depo. Tr. p. 24-25).

24. Dr. Lesnak testified that Dr. Caughfield erred in assigning impairment for the cervical spine as Claimant had no medical diagnosis under Table 53 of the *AMA Guides* that would qualify him for an impairment rating. According to Dr. Lesnak, without that diagnosis, there was no basis for providing an impairment rating for the neck, regardless of causality. (Depo. Tr. p. 25-26).

25. Dr. Lesnak testified that based on his evaluation of Claimant, the fact that the medical records from Concentra documented consistent full pain-free range of motion of the neck, and that there were two cervical CT scans that showed no evidence of any type of injury or trauma-related pathology, Claimant had a "more than adequate workup for someone who doesn't have complaints of specific neck pains." (Depo. Tr. p. 23, ll. 14-23). The ALJ interprets this testimony to infer that Dr. Lesnak believes that had Claimant suffered a neck injury during the October 24, 2022 MVA, he would be at MMI for any injury sustained.

26. Regarding Claimant's persistent headaches, Dr. Lesnak testified that while Claimant continued to have headaches, these headaches do not affect his MMI status. Rather, where a claimant had a permanent impairment for headaches (below, he notes 5% whole person impairment for episodic neurologic conditions), Dr. Lesnak testified that one would anticipate ongoing headaches that are episodic. (Depo. Tr. p. 18-19). Accordingly, Dr. Lesnak testified that even if Claimant wanted to try a medication trial or injections as referenced by Dr. Caughfield, both of these modalities could be pursued on a maintenance basis. (Depo. Tr. p. 14, ll. 2-16). Because this treatment would not change the claimant's underlying anatomic condition and would not be expected to result in improvement in Claimant's function (given that he had returned to work and was performing normal activities), Dr. Lesnak agreed that Claimant had reached a point of stability from a medical standpoint." (Depo. Tr. p. 9, ll. 7-13). Accordingly, Dr. Lesnak opined that Dr. Caughfield erred in concluding that Claimant not at MMI simply because Claimant could try these modalities. (Depo. Tr. p. 17, ll. 4-18). Dr. Lesnak concurred with the December 28, 2022 date of MMI as assigned by Dr. Johnson. (Depo. Tr. p. 26, ll. 8-12).

27. While he disagreed with the assessed provisional impairment of 13% whole person for a cervical spine injury[3], Dr. Lesnak fully agreed with the assignment of 5% whole person impairment for Claimant's headache condition that slightly interfered with his daily living. (RHE A, p. 15; Depo. Tr. p. 26, ll. 16-23).

28. Claimant testified that he continues to suffer from persistent relentless headaches and neck pain. (Hrg. Tr. pp. 20-23). He described his pain as being located deep inside the base of the skull and radiating upwards, circling behind his right eye. (Hrg. Tr. p. 22, ll. 4-20). He believes that his headaches may be emanating from his neck. *Id.* at p. 21. Claimant testified that he is more than willing to try different medications and undergo additional care that may help alleviate his symptoms. *Id.* at p. 23. Claimant testified that he did not decline additional treatment or medications during his December 28, 2022 appointment with PA Peterson. Rather, he noted that he spoke to Dr. Wilde about the caffeine pills and reported to her that they were not providing any relief. (Hrg. Tr. p. 18, ll. 9-13). No other medication, aside from Ibuprofen, was attempted. *Id.* Claimant was then asked about PA Peterson's record stating Claimant was deferring any additional medications for his headaches. *Id.* at 19. According to Claimant, he informed PA Peterson that he was continuing to have headaches. *Id*. at p. 19, ll. 20-22. Claimant asked what could be done for the headaches and she asked him what he would like her to give him. *Id*. at ll. 22-23. Claimant then said, "You're the doctor. I don't know." *Id.* at ll. 23-24. Claimant testified at this point, the conversation turned "snippy" and he "got a little angry" because he was still having headaches and was given no additional treatment options. Id. at p. 20, ll. 1-22.

29. The ALJ credits the reports and opinions of PA Peterson and Dr. Johnson to find that Claimant reached MMI for the sequela related to his October 24, 2022 industrial injury on December 28, 2022. Based upon the evidence presented, the ALJ finds that Respondents have clearly and convincingly overcome the MMI determination of Dr. Caughfield.

30. The ALJ credits the medical record, particularly the ER report and the PT records as well as the DIME report of Dr. Caughfield to find that Claimant suffered a cervical spine strain as a consequence of his October 24, 2023 MVA. Indeed the record evidence supports a finding that Claimant suffered a medically documented "soft tissue lesion" in the cervical spine resulting in "six months of medically documented pain and rigidity with or without muscle spasm, associated with *none to minimal* degenerative changes on structural tests". (AMA Guides to the Evaluation of Permanent Impairment,

---

[3] Here, Dr. Lesnak testified that the Division IME clearly erred by assigning impairment (provisional) for a cervical condition. Noting that Claimant had full pain-free range of motion in the records and during his physical examination combined with any identifiable trauma related pathology identified on CT imaging, Dr. Lesnak reiterated his opinion that there was no permanent medical diagnosis under Table 53 of the *AMA Guides* that would qualify Claimant for or support any cervical impairment. Consequently, Dr. Lesnak testified that Dr. Caughfield erred in assigning such cervical impairment. (Depo. Tr. p. 24-26).

Third Edition (Revised), Table 53, II. B, p. 80). As presented, the evidence persuades the ALJ that Claimant experienced secondary range of motion loss in the cervical spine as a consequence of his cervical spine strain. The contrary opinions of Dr. Lesnak are not persuasive. Accordingly, Respondents have failed to establish, by clear and convincing evidence, that Dr. Caughfield's cervical spine impairment rating is highly probably incorrect.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo. App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME Opinion of Dr. Caughfield Regarding MMI and Impairment

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). Careful review and comparison of Dr. Hall's written report and oral testimony with the balance of the more persuasive medical record convinces the ALJ that Claimant reached MMI for the effects of his industrially based injuries on December 28, 2022 as opined by Dr. Johnson.

F. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. The requirement or need for periodic care after MMI to prevent deterioration of a claimant's condition does not vitiate a finding of MMI. *See Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). To affect a finding of MMI, the requirement for future care must "significantly improve the condition." § 8-40-201(11.5), C.R.S. The mere "possibility of improvement" shall not affect a finding of MMI. *Id.*

G. The Act requires Respondents to provide treatment which is reasonable and necessary to *cure* and *relieve* the claimant from the effects of an injury. § 8-42-101(1)(a), C.R.S. However, the obligation to provide treatment to *cure* the condition terminates when the claimant reaches MMI. *Corley v. Bridgestone Americas, Inc.* W.C. No. 4-993-719-004 (Feburary 26, 2020). *Grover* allows for an award of ongoing medical benefits after MMI where the treatment will be necessary to *relieve* the effects of the industrial injury. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). While there is no bright line test to distinguish treatment designed to *cure* versus that which is designed to *relieve*, the panel has previously noted that it is not the type of treatment that is significant but the reason for the treatment. *See Hayword v. UNISYS Corp.,* W.C. No. 4-230-686 (July 2, 2002). The fact that the treatment may have an incidental effect on increasing functionality does not define whether a treatment is curative or relieving. *See McCardie v. Transit Mix Concrete*, W.C. No. 4-964-260-0001

(October 1, 2019) (noting that a spinal cord stimulator aimed at addressing pain levels and improving function can be maintenance care aimed at relieving the effects of the work injury).

H. Here, the weight of the persuasive evidence demonstrates that it is highly probable that the Division IME physician erred in determining that Claimant had not reached MMI. Dr. Caughfield recommended chiropractic treatment, medication trials, and injections prior to placement at MMI.[4] However, the totality of the evidence shows that both the ATP and a reviewing chiropractor determined unequivocally the claimant was not a candidate for chiropractic care. Moreover, while Claimant denies indicating that he rejected medication trials and may be willing to try this and additional injection therapy (despite significant evidence that he did not care for trigger point injections, which provided no relief), Dr. Lesnak persuasively testified these modalities would not improve Claimant's condition and could be provided as maintenance care as such treatment might temporarily relieve the claimant's symptoms. See, *Corley, supra* (finding a neurotomy was treatment aimed at relieving the claimant's symptoms and maintaining MMI status rather than treatment designed to cure the condition). As presented, the evidence persuades the ALJ that Dr. Caughfield's recommended treatment modalities are not designed to cure, but rather temporarily relieve Claimant's persistent symptoms. Indeed, in this case, Dr. Caughfield's "recommendations" are silent as to whether the treatments will "cure" versus "relieve" Claimant's alleged complaints. He discusses options using speculative language such as "can be beneficial" while also recommending permanent impairment recognizing that Claimant may have headaches that slightly interfere with daily living on a permanent basis. That Dr. Caughfield hoped for more function (he believes further treatment is merited because the claimant still goes to bed early for relief), does not alone dictate that the recommendations are "curative." *McCardie*, *supra*.

I. Based on the totality of the evidence presented, including the persuasive testimony of Dr. Lesnak, the ALJ agrees with Respondents contention that Claimant was properly placed at MMI on December 28, 2022 as the ALJ concludes that Dr. Caughfield's recommended treatment properly classified as maintenance care aimed at maintaining MMI status rather than curing Claimant's condition. Accordingly, Respondents have overcome Dr. Caughfield's MMI determination by clear and convincing evidence. Claimant reached MMI for the effects of his industrial injury as of December 28, 2022.

J. Where the ALJ determines that the DIME physician's opinion has been overcome, the question of a claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols.

---

[4] Dr. Caughfield does not appear to assess that any cervical condition is not at MMI; rather, that he does "not feel that [Claimant] has reached MMI until further treatment trials for his chronic headaches have been completed." All recommended treatment then relates to Claimant's persistent headaches rather than to management of a neck injury. (RHE B, p. 21).

Thus, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon a preponderance of the evidence. *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). In this case, Respondents, relying principally on the testimony of Dr. Lesnak, contend that there are no physical findings on examination and/or imaging that supports Dr. Caughfield's conclusion that Claimant suffered cervical pathology that qualified him for impairment under Table 53 diagnosis and without a Table 53 diagnosis, Claimant is also not entitled to impairment for reduced range of motion. Respondents assert further that at the time Claimant reached MMI, only two months had passed since the date of injury. Accordingly, Respondents contend that Dr. Caughfield erred, as a matter of law, in concluding that Claimant qualified for a Table 53 II.B rating since Claimant failed to show that he suffered six months of documented pain and rigidity prior to MMI. The ALJ is not convinced.

K. In this case, the undersigned concludes that Dr. Caughfield's impairment rating for spinal disorders, i.e. 4% from Table 53, II, B of the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (*Revised*), hereinafter the "AMA Guides", is supported by the record. Contrary to Dr. Lesnak's testimony, the written record, particularly the PT records are replete with references to neck pain, tenderness, myofascial involvement, restricted movement and the need for driving restrictions due to limited cervical range of motion. As presented, the evidence persuades the ALJ that Dr. Lesnak relied on the erroneous premise of full, pain-free range of motion of the cervical spine. While it is true that PA Peterson and Dr. Wilde documented normal exam of the cervical spine with full range of motion, their notes contradict themselves on this issue. Indeed, Claimant was diagnosed with a neck strain and was given driving restrictions *specifically due to loss of range of motion in Claimant's neck*. *Id.* at 91. (Emphasis added). Moreover, PT was ordered, which therapy focused on treatment of the neck among other things. It is evident from the evidence presented, that Dr. Lesnak did not review or simply ignored the content of the physical therapy records, as they contradict the foundation for his opinion. (See e.g., CHE 7, pp. 18-24, 38-42, 62-67, 113-117, 124-127). Claimant's physical therapy note from October 28, 2022, further contradicts the notion of full, pain-free range of motion. (CHE 7, p. 105). Indeed, the physical therapist obtained actual range of motion measurements on October 28, 2022, and Claimant's range of motion was reduced in flexion, extension, right side bending, left side bending, right rotation, and left rotation. *Id.* Consequently, the ALJ finds Dr. Lesnak's opinions regarding the condition of Claimant's neck unpersuasive.

L. Concerning Respondents suggestion that Claimant is not entitled to spinal impairment because "there is no evidence the claimant sustained six months of pain and rigidity to support a cervical rating under Table 53(II)(b)", the ALJ finds the case of *McLane Western Inc. v. Industrial Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999) instructive. In *McLane* the claimant injured her low back approximately five months before she was determined to be at MMI. Her treating physician therefore determined she had no ratable impairment. However, the DIME doctor saw her a few months later and documented her complaints of low back pain and rigidity which was then in excess of six months duration. He therefore provided a 5% rating pursuant to

Table 53 II, and an additional 4% for range of motion deficits. The respondents argued that because six months of pain had not have been experienced by the claimant prior to attaining MMI, Table 53, as a matter of law, was not available as a source for an impairment rating. The *McLane Western* decision rejected this argument and approved of the DIME's rating. In the present case, Respondents similarly contend that because Claimant did not suffer medically documented pain for the six months after his injury, and prior to MMI, no impairment rating could be assessed under Table 53 as a matter of law. In other words, Respondents maintain that the MMI date is determinative of whether Claimant has shown six months of documented pain for the purposes of applying Table 53. As noted, the decision announced in *McLane* rejects the contention that the AMA Guides require that the documented pain occur prior to MMI and subsequent Panel decisions from the Industrial Claims Appeals Office have consistently applied interpretations of Table 53 identical to those in *McLane Western*. See, *Martinez v. MCI Communications*, W.C. No. 4-207-987 (July 24, 1996); *Velasquez v. Roaring Fork Redi-Mix*, W.C. No. 4-324-686 (September 4, 1998); *Jackson v. RBM Precisions Metal Products*, W.C. No. 4-377-460 (May 15, 2000); *Lopez v. Cargill Meat Solutions*, W.C. No. 4-757-408 (September 9, 2010); *Lopez v. Evangelical Lutheran Good Samaritan Society*, W.C. No. 4-972-365-01 (August 16, 2016), and *Wallace v. Phil Long Ford Motor City*, W.C. No. 5-106-788-001 (September 22, 2020).

M. In this case, the evidence supports a conclusion that during his April 25, 2023 DIME, approximately six months after his October 24, 2022 MVA, Claimant reported continued "constant upper neck and suboccipital pain similar to what he experienced after his MVA. He also demonstrated range of motion loss similar to that he was determined to have previously as documented in his PT records. Based upon the evidence presented, the ALJ concludes that there is sufficient support for Dr. Caughfield's assignment of cervical spine impairment pursuant to Table 53, II. B in this case. Moreover, while Dr. Lesnak apparently found no range of motion deficits during his examination on July 17, 2023, the ALJ infers that the difference of opinions between Dr. Caughfield and Dr. Lesnak concerning the existence of ratable cervical spine impairment, based upon range of motion loss, is likely due to the passage of time and/or examination techniques. See *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ free to credit one medical opinion to the exclusion of a contrary medical opinion). While Dr. Caughfield and Dr. Lesnak differ regarding the existence of cervical range of motion loss, a professional difference of opinion between medical experts does not rise to the level of clear and convincing evidence that is required to overcome Dr. Caughfield's opinions concerning impairment. See generally*, Gonzales v. Browning Farris Indust. of Colorado,* W.C. No. 4-350-356 (March 22, 2000), Consequently, Respondents have failed to meet their required legal burden to set the cervical spine impairment determination aside. This ALJ adopts Dr. Caughfield's impairment rating to find and conclude that Claimant is at MMI with 17% whole person impairment.

ORDER

It is therefore ordered that:

1. Respondent's request to set aside the MMI determination of Dr. Caughfield is GRANTED. As determined above, Claimant is at MMI with 17% whole person impairment as determined by Dr. Caughfield. Respondent shall pay permanent partial disability (PPD) benefits consistent with the 17% whole person impairment rating assigned by Dr. Caughfield.

2. Any and all issues not determined herein are reserved for future decision.

Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-210-685-002

STIPULATIONS

1. The parties stipulated on the record that Respondents have not filed a general admission on the claim.

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury on May 7, 2022, arising out of and in the course of his employment with Respondent-Employer.

2. Whether Claimant proved by a preponderance of the evidence that he is entitled to medical benefits.

3. Claimant's average weekly wage.

4. Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits from May 7, 2022, to present.

FINDINGS OF FACT

1. Claimant began working for Respondent-Employer on April 13, 2022, as a heavy equipment operator. Claimant worked at [Redacted, hereinafter CM] at an elevation of approximately 11,000 feet above sea level. Claimant would work seven days on followed by seven days off. Each seven-day series of shifts would be either day shifts or night shifts, alternating between each series. Claimant earned $30.00 per hour plus a project allowance of $7.00 per hour. Claimant testified that his average weekly wage was $1,747.69.

2. On May 7, 2022, Claimant was working a night shift, his fourth shift that week. Claimant was admitted to St. Anthony Summit Hospital Emergency Department later that night for complaints of mid and low back pain. Claimant reported that he had been sitting in the cab of his truck in the driver seat with his seatbelt on when a large loader dropped a pile of heavy rocks into the bed of the truck, causing him to get jolted in his seat. X-rays were performed of Claimant's lumbar spine. They showed multilevel degenerative changes of the lumbar spine, but no acute osseous abnormalities. On physical exam, the attending physician noted no

evidence of torso trauma or extremity injury. The attending physician noted that Claimant was hypoxic with 82% saturation. Claimant declined supplemental oxygen or any further treatment. He was discharged that same night.

3. Claimant returned to the Emergency Room two days later complaining of a fever, fatigue, and memory issues, decreased urine output consistent with acute kidney injury, and symptoms consistent with encephalopathy. The attending physician noted Claimant to be hypoxic and tachypneic and was placed on supplemental oxygen. The physician suspected sepsis. A chest X-ray showed multifocal pneumonia, and a CT scan showed what appeared to be infectious infiltrates. Claimant was given antibiotics. Initially, the attending physician was concerned of sepsis that was possibly urinary or pulmonary in origin, though the urinalysis was not consistent with an infection. Ultimately, Claimant was diagnosed with severe sepsis, acute hypoxemic respiratory failure, and pulmonary embolism. Although his diagnosis was sepsis, and Claimant had elevated white blood cell counts, tests performed with blood cultures and sputum cultures for Influenza, legionella, streptococcus, and COVID-19 did not reveal any specific infections. He was intubated and placed in the intensive care unit.

4. On May 19, 2022, Claimant underwent repeat chest X-rays that showed multiple pulmonary embolisms with a clot primarily in his right lung. The embolisms were treated with anticoagulation. He was extubated on May 27, 2022. On June 1, 2022, Claimant developed a peritoneal hemorrhage in his abdomen resulting from the anticoagulants. Claimant was taken off the anticoagulation and an IVC filter was placed on June 3, 2022, to prevent a blood clot from reaching his lungs.

5. Claimant was transferred to an inpatient rehabilitation facility on June 9, 2022, and transferred to Elkhorn Valley Rehab Hospital on June 23, 2022. While at the facility, Claimant complained of uncontrolled back pain, right foot and leg weakness and tingling in the groin, and neuropathic pain. Claimant was diagnosed with right lower extremity weakness due to lumbosacral plexopathy. Claimant underwent a lumbar MRI. The MRI of the lumbar spine showed the retroperitoneal hematoma “extends along the R lateral margin of the L1-L5 vertebral bodies. Exiting R L1-L4 nerve roots seen at the medial margin or abutting the R retroperitoneal hematoma collection.” The attending physician, Dr. Michele Mohr, felt Claimant’s right lower extremity symptoms were related to Claimant’s hematoma.

6. Claimant was discharged from Elkhorn Valley Rehab Hospital on July 9, 2022, and began care at Casper Home Health. Claimant followed up with his primary care doctor, Dr. Christina Jara on July 21, 2022. She noted that since being out of the hospital, Claimant had developed right leg weakness and pain and numbness and that Claimant had been falling. Dr. Jara felt that Claimant’s pain complaints were related to the hematoma. She reasoned that the MRI showed the right L1-L4 nerve roots at the medial margin or abutting the right retroperitoneal hematoma collection.

7. Claimant was evaluated at Casper Orthopedics on August 15, 2022, for meralgia parasthetica. Claimant underwent X-rays and an EMG of his lumbar spine. The X-rays showed "a mild asymmetric collapse at the L3-4 level. There is disc height loss at the L4-5 level. The SI joints reveal degenerative changes." The EMG showed right sided "traumatic lumbosacral plexopathy."

8. On October 11, 2022, Claimant was evaluated by Dr. Jara at Banner Health. Dr. Jara stated Claimant's injuries "seemed to be a work-related injury and he could have had either a compression or traction injury given the movement of the truck at the time of that injury. He is not fit to go back to work at his current condition."

9. On October 13, 2022, Claimant was examined by Dr. Gessel at Casper Orthopedics. Dr. Gessel stated Claimant "has sustained a significant neurologic injury from a work-related injury in May of 2022. His neurologic injury is causing significant functional impairment . . . and requires further treatment and workup to fully determine and characterize the injury."

10. On October 28, 2022, Claimant returned to Casper Orthopedics for follow-up. Claimant had MRIs performed on his lumbar spine which showed a "disc bulge with central protrusion at L4-5" and "a disc osteophyte complex that is causing lateral recess narrowing at L2-3 and that is likely catching the traversing L3 nerve root and also at L4-5 and L3-4." Dr. Gessel stated about Claimant's right lower extremity numbness and weakness, "we are trying to figure out how much is related to lumbosacral plexopathy versus lumbar radiculopathy."

11. On November 30, 2022, Claimant received a right L3-4 and L4-5 transforaminal epidural steroid injection. Claimant said the injection made his pain go from "8/10 to 5/10" and "helped a bunch of his symptoms for approximately 2 to 3 weeks." Dr. Gessel stated "for his back pain itself, I think he is also getting some pain secondary to facet arthritis and that was likely worsened by the work injury as well."

12. On January 3, 2022, Dr. Gessel stated Claimant was under his care for "what seems to now be a lumbosacral plexopathy, which he sustained while working at [Redacted, hereinafter TM] . . . He also has back pain that correlated with the time of his injury at TM[Redacted]. I suspect that injury has worsened the back arthritis he has, and that is causing his low back pain. We are treating that separate from the lumbosacral plexopathy, but both are being caused by that initial injury."

13. On January 11, 2023, Dr. Gessel stated "John has sustained a work-related traumatic lumbosacral plexopathy leading to significant right leg weakness which is causing right quadriceps atrophy."

14. Dr. Ogin determined that Claimant's right leg weakness and numbness were the direct result of a lumbosacral plexus injury due to the retroperitoneal hematoma, which was in turn the result of Claimant's anticoagulation treatment for multiple

pulmonary emboli during his hospitalization for pneumonia and sepsis. Dr. Ogin relied on Claimant's distribution of symptoms, the MRI, and electrodiagnostic studies that were more consistent with a pathology at the lumbosacral plexus rather than in the lumbar spine.

15. Dr. Ogin could not identify any connection between Claimant's development of pneumonia and Claimant's alleged injury on May 7, 2021, though, he speculated that it may have been related to underlying COPD coupled with an infectious source.

16. On March 8, 2023, Claimant underwent his own independent medical examination with Dr. John Hughes. Dr. Hughes noted that Claimant had "no past history of lumbar spine injuries or problems" and "no history of pulmonary disease prior to May 7, 2022," and that Claimant also had no history of smoking. In reviewing Claimant's records, Dr. Hughes opined, "it is clear that he sustained lumbar spinal injuries as a result of vehicular jarring that occurred May 7, 2022," and that the retroperitoneal hematoma "appears to be the proximate cause of [Redacted, hereinafter SN] right lumbosacral plexopathy." Dr. Hughes opined Claimant was "not yet at MMI with respect to his spine injuries of May 7, 2022," and "medical evaluation and treatment to date under the direction of Dr. Gessel appears to me to be reasonable, necessary and related to his lumbar spine injuries of May 7, 2022." Dr. Hughes assessed Claimant's lumbar spine impairment to be 18% whole person impairment and recommended Claimant receive continued therapies and injections.

17. Regarding Claimant's onset of pneumonia, Dr. Hughes did not specifically opine on its cause:

> "A perplexing fact is SN[Redacted] hypoxemia of May 8, 2022. He has no history of prior pulmonary disease and was listed by Dr. Doucette as a never smoker; however, it is clear that 2 days later, SN[Redacted] was admitted for acute respiratory failure with hypoxia. He subsequently underwent a complex course of inpatient and intensive care unit medical care, happily resulting in resolution of his pulmonary condition."

18. Dr. Ogin later testified at hearing as well. Dr. Ogin testified that Claimant was diagnosed with thoracic and lumbar back pain and hypoxia, for which he was prescribed Hydrocodone, a medication known to cause drowsiness. Regarding Claimant's hypoxia, Dr. Ogin testified that it had the potential to cause various health issues, including cardiac problems, stroke, loss of consciousness, memory difficulties, and cognitive impairment.

19. Dr. Ogin further testified that Claimant's health deteriorated when he sought emergency care again on May 10, 2022, for septic pneumonia, and that Claimant experienced a severe complication due to his use of blood thinners, resulting in a

retroperitoneal hematoma. Dr. Ogin emphasized that Claimant's pneumonia and its associated complications were unrelated to the workplace injury.

20. Dr. Ogin also testified regarding the possibility of lumbosacral plexopathy and noted that such conditions could manifest traumatically. However, he disagreed with the assertion that the traumatic jostling in the truck was the primary cause of Claimant's lumbosacral plexopathy. Instead, he emphasized that Claimant's extended hospitalization, bed rest, minimal physical activity, and a series of falls were significant factors contributing to his back pain. Dr. Ogin was clear in his opinion that Claimant's leg symptoms were a result of the retroperitoneal hematoma and unrelated to a back injury.

21. Respondents also obtained an expert opinion from Robert T. Lynch, P.E., to evaluate the matter from an forensic engineering perspective. Mr. Lynch issued a report in which he estimated the forces exerted on Claimant at the time of the alleged accident. Mr. Lynch credibly opined, based on the size of the truck and the estimates of the loads dropped into the bed of the truck, that the acceleration that Claimant would have experienced while in his seat was less than 2.3g.[1] Mr. Lynch further clarified that the acceleration would have been mitigated by Claimant's seat cushion and the suspension system. Based on this, Mr. Lynch concluded that there was no significant "jarring" of the haul truck as described by Claimant.

22. Mr. Lynch later testified at hearing largely consistently with his report. He admitted on cross-examination that he had not personally visited the site or equipment involved. When asked about whether Mr. Lynch should have considered the other dirt in the loader and not just the largest boulder, Mr. Lynch explained that the boulder would have caused a greater acceleration than the distributed impact of the dirt, so his analysis was focused on the boulder itself. Regarding the crack in the windshield, Mr. Lynch explained that the spiderweb crack radiating out from the middle of the windshield was more consistent with a rock hitting the windshield rather than from a vibratory source, which would have resulted in a crack radiating from the edge of the windshield, working its way in. The Court finds Mr. Lynch's analysis to be credible and persuasive.

23. Respondents also obtained an expert opinion from Dr. Robert Nobilini, Ph.D, to provide a biomechanical analysis of the mechanism of injury alleged by Claimant. Dr. Nobilini explained in his report that the acceleration experienced by Claimant during the incident was well within the range of accelerations that are incurred during everyday, non-injurious activities of daily living, and well within the range of decelerations considered safe. He later testified at hearing that his opinions were based on the forces and acceleration calculated by Mr. Lynch. Dr. Nobilini also explained that the forces experienced by the truck due to downward acceleration would not be the same as those experienced by Claimant inside the cab of the

[1] The unit "g" is a unit of acceleration equal to that which is experienced by an object at the Earth's surface as a result of the Earth's gravitational pull.

truck. Furthermore, he opined that the acceleration Claimant would have experienced would be insufficient to cause injury. The Court finds Dr. Nobilini's analysis to be credible and persuasive.

24. On June 27, 2023, Claimant testified at hearing. Claimant testified he sustained a work-related injury on May 7, 2022. Claimant began working for TM[Redacted] in April 2022. Claimant stated before he could begin working for Employer, he had to undergo a preemployment physical and fit-to-work test. Claimant testified the preemployment physical and testing were performed at Cedar Health in Casper, Wyoming. The testing included checking Claimant's breathing, hearing, vision, and an x-ray on his back. Claimant testified he was cleared to begin working following the examination.

25. Claimant testified he worked for Employer as a heavy equipment operator. Claimant testified his job duties for operating the haul truck included a pre-shift inspection of the truck, filling out a pre-shift inspection report, loading the truck with the mined materials, and then driving the truck to dump the materials. Claimant testified he had extensive experience as a heavy equipment operator and had worked at mines the past 25 years operating a variety of large equipment vehicles including haul trucks, bulldozers, and excavators.

26. Claimant testified to the nature of his schedule and pay structure by Employer because Claimant's schedule was unconventional. Claimant testified he was shuttled in to begin his work in Climax, Colorado on the morning of Wednesday, May 4, 2022, and he began working in the mines that night. Claimant testified he would work 7 P.M. to 7 A.M. each night for seven days in a row. Following a week of work, Claimant testified Employer would then pay to fly employees home and employees would have seven days off. Claimant testified even while employees were in their rest week, they were always considered employed by Employer. Claimant explained Employer's pay structure ran a pay period from Sunday to Saturday with work initiating on a Wednesday so employees would get four and three days each week of the pay period. Claimant testified he worked 48 and then 36 hours alternating on the normal schedule. Claimant testified he was paid $37.00 an hour for 40 hours, along with time and a half for the eight hours of overtime one week in addition to $37.00 for 36 hours the next week. Claimant testified to the accuracy of his pay records admitted as Claimant's Exhibit 16. Claimant testified his average weekly wage was $1,747.69.

27. Claimant testified to the events that occurred May 7, 2022, the day Claimant sustained his workplace injury. Claimant testified he followed his normal job duties for operating the haul truck including performing a pre-shift inspection and report. Claimant put on his seatbelt and proceeded to the loading unit and had performed several loads without incident prior to the injury. Claimant additionally testified that he had experience as a mechanic and his understanding of the gas-charged struts of haul trucks and how the gas charge can impact the pressure a load applies to the truck. Claimant testified a large boulder was dropped in the truck which caused

the truck to bounce and shake. Claimant testified the truck's windshield was shattered resulting from "the thrust of the rock" and "the bouncing the truck." Claimant called the operator of the excavator dropping loads into his truck on the radio immediately after his windshield shattered. Despite the shattered windshield, Claimant testified his truck continued to be loaded and stated "when you are in an accident, you should shut down right then. He shouldn't have kept loading the truck." Claimant testified he felt the onset on pain about thirty minutes later. Claimant testified he was jostled around when the load with the large boulder was dumped in his truck.

28. Following the incident of Claimant's workplace injury, Claimant testified he immediately called his supervisor, [Redacted, hereinafter JB], and relayed the incident with the broken windshield. Claimant told JB[Redacted] he needed to have his back examined due to the pain and JB[Redacted] took him to get medical treatment at St. Anthony Summit Medical Center.

29. At St. Anthony Summit Medical, Claimant testified he told the doctor he had back pain, he had been wearing his seat belt, and that his truck was jolted when the boulder fell. Claimant testified the doctor gave him medication, X-rays on his back, and informed Claimant his breathing level was low. Claimant testified the doctor wanted to put Claimant on oxygen, but he declined. Claimant testified he was discharged and returned to his hotel room where he slept for two days until he was asked to return to the clinic to be reevaluated. Claimant testified upon reevaluation at the clinic, the doctor examining him sent him to the emergency room and he was transported by ambulance.

30. Claimant testified that on May 10, 2022, he returned to Summit Medical with many health issues including bad memory, back pain, leg pain and numbness in his right leg, fever, and breathing problems. Claimant testified he was suffering septic pneumonia. Claimant testified "it was all going so fast" as he was intubated and stated "I was code blue. I was dead there for a while- then they revived me." Claimant testified he was "life-flighted" to St. Anthony's Hospital where Claimant stated "I was in a coma for two weeks, and then I was in intensive care for another two weeks. And then I did three weeks or so in therapy, and then I transferred to Elkhorn Rehabilitation Hospital and did another three weeks of therapy." Additionally, Claimant testified he had no prior contributory health issues such as smoking, pulmonary disease, COPD, asthma, heart issues, or other breathing issues.

31. Claimant testified he was unable to walk without crutches and his knee would give out without a warning. Claimant testified he had been unable to work due to his injuries and he was told by Employer HR that the company "doesn't have any jobs for a one-legged man." Claimant testified he was still unable to walk without crutches and used a leg brace and he was additionally suffering back pain, a numb leg, and sleep disturbances. The ALJ finds Claimant's testimony credible.

32. The Court finds Dr. Ogin's medical opinions as expressed in his report and testimony to be more persuasive than those of Dr. Hughes.

33. The Court finds that Claimant has not proven that it is more likely than not that Claimant sustained a low back injury on May 7, 2022. Although Claimant complained of back pain on May 7, 2022, and in fact sought treatment, the Court finds, based on the testimony of Mr. Lynch and Dr. Nobilini, that the forces involved in the incident were benign and insufficient to cause a low back injury requiring medical treatment. That is, the Court finds that Claimant experienced forces resulting from an acceleration of less than 2.3g, which would have been mitigated by Claimant's seat cushion and the suspension system, and which was well within the range of accelerations that are incurred during everyday, non-injurious activities of daily living, and well within the range of decelerations considered safe.

34. The Court finds that Claimant has not proven that it is more likely than not that his pneumonia, sepsis, and associated conditions arose out of and in the course of his employment on May 7, 2022. The Court finds that there is a near consensus among Claimant's treating and examining physicians that Claimant's pneumonia and sepsis arose from an infectious source. Although it is possible that Claimant contracted the infection at work, there is no credible evidence to that effect. Dr. Ogin credibly testified that Claimant's inhalation of dust would not have caused an infection. Claimant did not provide any credible evidence of how such an infection would have developed in the workplace. Absent such evidence, the Court finds that Claimant has not proven that it is more likely than not that his pneumonia, sepsis, and associated symptoms arose out of and in the course of his employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

An injury must "arise out of and occur in the course of" employment to be compensable, and it is the claimant's burden to prove these requirements by a preponderance of evidence. Section 8-41-301, C.R.S. *See also Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). An injury "arises out of" the employment when it is sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the service provided to the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996); *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). An injury is said to have arisen in the course of employment if the injury occurred while the employee was acting within the time, place, and circumstances of the employment. *Popovich*, 811 P.2d at 383.

As found above, Claimant has not proven by a preponderance of the evidence that he injured his low back on May 7, 2023. Although Claimant complained of back pain on May 7, 2022, and in fact sought treatment, the forces involved in the incident were benign and insufficient to cause a low back injury requiring medical treatment. Claimant experienced forces resulting from an acceleration of less than 2.3g, which would have been mitigated by Claimant's seat cushion and the suspension system, and which was well within the range of accelerations that are incurred during everyday, non-injurious activities of daily living, and well within the range of decelerations considered safe. Therefore, as found above, it is more likely than not that Claimant did not sustain a low back injury on May 7, 2022.

Claimant has also not proven that it is more likely than not that his pneumonia, sepsis, and associated conditions arose out of his employment on May 7, 2022. As found above, there is a near consensus among Claimant's treating and examining physicians that Claimant's pneumonia and sepsis arose from an infectious source. Although it is possible that Claimant contracted the infection at work, there is no credible evidence to that effect. Dr. Ogin credibly testified that Claimant's inhalation of dust would not have caused an infection. Claimant did not provide any credible evidence of how such an infection would have developed in the workplace. Absent such evidence, Claimant has not proven that it is more likely than not that his pneumonia, sepsis, and associated symptoms arose out of and in the course of his employment.

Therefore, the Court concludes that Claimant has not met his burden to prove that it is more likely than not that he sustained an injury on May 7, 2022, arising out of and in the course of his employment.

ORDER

It is therefore ordered that:

1. Claimant's claim for compensation for a date of injury of May 7, 2022, is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 10, 2023.

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the medical treatment he received for his low back condition was reasonable medical treatment necessary to maintain Claimant at maximum medical improvement ("MMI")?

FINDINGS OF FACT

1. Claimant was employed by Employer as a ski instructor. Claimant testified he sustained an injury to his low back on January 5, 2014 while skiing with clients. As a result of the low back injury, Claimant underwent two low back operations to his L4-L5 region. Claimant testified that the first operation helped partially, but he needed a second operation in February 2019 after the first operation failed.

2. According to the medical records, Claimant underwent a left sided L4-5 hemilaminectomy, facetectomy, foraminotomy and microdiscectomy on September 16, 2015. Claimant subsequently underwent an L4-5 laminectomy of L4-5 fusion on January 29, 2019.

3. Claimant was placed at MMI by Dr. Gisleson on September 26, 2019. Claimant was provided with an impairment rating of 21% whole person on January 17, 2020 by Dr. Lorah. With regard to post-MMI medical treatment, Dr. Lorah noted Claimant was not scheduled for neurosurgical follow up and recommended ongoing use of cyclobenzaprine for at least the next 12 months and an additional 10 to 15 physical therapy visits over the next 12 months to be used at Claimant's convenience and would be helpful in case of a flare. Dr. Lorah noted Claimant may be a candidate of Gabapentin or Lyrica if it was determined to be appropriate by his treating physicians. Dr. Lorah also recommended that Claimant continue his home exercise program, maintain a healthy weight and work on core strength and flexibility.

4. Respondent filed a final admission of liability ("FAL") on April 11, 2020 admitting for the 21% whole person impairment along with maintenance medical treatment.

5. Claimant testified that after being placed at MMI, he had five flare ups of his low back pain. Claimant testified he treating three of these flare ups at home and sought medical treatment for the other two. Claimant testified his first flare up of his low back condition occurred when he was shooting baskets and felt a twinge in his lower back and he jumped to put up a layup. The medical records document that Claimant sought treatment on March 23, 2021 after he had an acute exacerbation of the low back while playing basketball two months ago when he was reaching out for a rebound and felt something give on his right side of his back. Dr. Gisleson noted that Claimant had

been doing physical therapy but unfortunately continued to experience radicular symptoms down the legs past the knee along with additional feelings of weakness in his legs. Dr. Gislason recommended additional evaluation for nerve pain and prescribed gabapentin, anti-inflammatories and Flexeril.

6. Claimant received treatment with Dr. Campian on referral from Dr. Gisleson on April 7, 2021. Dr. Campian noted Claimant's complaints of low back pain radiating to both knees through the back after he jumped while playing basketball and landed funny. Dr. Campian noted Claimant's history of a low back injury at work and recommended Claimant treat his back pain with prednisone, a repeat MRI and physical therapy.

7. Claimant underwent an x-ray of his lumbar spine on April 7, 2021 that showed normal alignment and L4-L5 posterior fusion without evidence of surgical complication.

8. Claimant testified at hearing that he ended up getting a shot of Toradol and was able to get back to baseline.

9. Claimant testified that he had a second flare up of his low back pain when he was standing up from the toilet and felt a pop in his back. Claimant testified he tried to treat this flare up at home, but had additional pain when he was getting out of his truck three months later.

10. According to the medical records, Claimant returned to his physical therapist in April 2023 and reported a recent exacerbation of his symptoms. The physical therapist noted that often times a seemingly innocuous position or movement can flair up symptoms and it can take weeks to return to baseline. According to the records, Claimant underwent seven (7) physical therapy appointments between April 21, 2023 and May 26, 2023.

11. Claimant then sought treatment for this flare on June 28, 2023 with Dr. Giselson. Claimant reported at that time that he had ongoing issues with his low back from December 2022 when he was getting off a toilet seat and felt a twinge in his low back with persistent right sided discomfort and right sided radiculopathy. Dr. Gisleson noted Claimant had a known history of impingement at L4-L5 with previous lumbar spinal surgery and fusion. Dr. Gisleson recommended that Claimant use a muscle relaxer to relieve his muscle spasm, continue physical therapy and consider x-rays to determine if there has been any shift in his hardware and consider an MRI if there was no improvement.

12. Claimant testified at hearing that he was able to eventually get back to his baseline level of pain and function in 2023 after medical treatment including physical therapy and medications prescribed by Dr. Gisleson.

13. Respondent obtained an independent medical examination ("IME") with Dr. Cebrian on August 23, 2023. Dr. Cebrian reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his

IME. Dr. Cebrian noted Claimant's history of a low back injury while employed with Employer and subsequent surgeries. Dr. Cebrian noted that after Claimant was placed at MMI, he was doing well until early 2021 when he aggravated his back while playing basketball. Claimant reported to Dr. Cebrian that he received some physical therapy until June 2021 and improved.

14. Dr. Cebrian noted that Claimant had ongoing discomfort and was given Baclofen, a muscle relaxer by Dr. Gisleson. Claimant reported to Dr. Cebrian that in December 2022, he got off the toilet and had increased pain throughout January and February. Claimant reported to Dr. Cebrian that he then had another incident when he was getting out of his truck and had increased symptoms. Claimant reported that he continued to go to physical therapy and was performing stretching, but would only improve to a certain point. Claimant reported ongoing symptoms that included numbness in both feet, with numbness in the lateral right leg along with occasional sciatica that would go down both legs to the mid hamstrings.

15. Dr. Cebrian opined in his report that Claimant had a peripheral polyneuropathy that was not claim related as there is not a mechanism for a lumbar spine injury to cause a peripheral polyneuropathy. Dr. Cebrian opined that Claimant did not have any new findings of radiculopathy at other levels of his lumbar spine, and noted that Claimant's injury was at his L4-5 level. Dr. Cebrian opined in his report that further medical care was no longer medically reasonable, necessary and related to the claim of January 5, 2014 and recommended the closure of all maintenance care and Grover medications. Dr. Cebrian opined that Cliamant had a non-claim related intervening event while playing basketball in January of 2021.

16. Dr. Cebrian testified at hearing in this matter consistent with his IME report. Dr. Cebrian testified that based on his review of the records and the medical history he received from Claimant, Claimant was doing well until the 2021 basketball incident which resulted in medication and treatment for Claimant's low back condition. Dr. Cebrian testified that it was his opinion that the basketball incident was an intervening event that cause the Claimant to need medical treatment.

17. The ALJ credits Claimant's testimony at hearing and finds that Claimant has proven that it is more likely than not that the medical treatment he received after getting up off the toilet in 2022 represents reasonable medical care necessary to maintain Claimant at MMI and related to Claimant's January 5, 2014 work injury. The ALJ credits Claimant's testimony regarding the basketball incident in 2021 and finds that this incident does not represent an intervening injury that severs Respondent's liability for ongoing maintenance medical care. The ALJ notes that Claimant's medical treatment in this case, including ongoing physical therapy and additional medications prescribed by Claimant's treating physician, are consistent with the maintenance medical treatment recommendation made by Dr. Lorah in his January 17, 2020 report and admitted to by Respondent in the April 11, 2020 FAL.

18. The ALJ credits Claimant's testimony at hearing and finds that the basketball incident was a minor incident that caused a flare in Claimant's symptoms

related to his January 5, 2014 work injury and resulted in the need for maintenance medical treatment. The ALJ therefore does not credit the opinion of Dr. Cebrian that the basketball incident was an intervening injury that severed Respondent's liability for ongoing maintenance medical treatment. The ALJ notes that the medical records do not document under objective evidence of Claimant's underlying condition being changed as a result of the basketball incident, and finds that the evidence does not establish that Claimant sustained an intervening injury based on the minor incident that occurred while playing basketball as described in Claimant's testimony and reflected in the medical records.

19. The ALJ further credits the testimony of Claimant at hearing and finds that the medical treatment Claimant received from Dr. Gislason after a flare of Claimant's symptoms when getting up from a toilet represents reasonable medical treatment necessary to maintain Claimant at MMI. Specifically, the ALJ credits the testimony of Claimant that his symptoms related to the workers' compensation injury and subsequent surgeries were flared by the incident in December 2022 and resulted in Claimant needing to undergo treatment with Dr. Gislason and physical therapy sessions before returning to his baseline level that he was at when placed at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S., 2013 The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

4. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent

further deterioration of his physical condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

5. As found, Claimant has proven by a preponderance of the evidence that the medical treatment he received after the flare up of his symptoms in December 2022 was reasonable medical treatment necessary to maintain Claimant at MMI. Therefore, Respondent is liability for the cost of the medical treatment incurred by Claimant including his treatment with Dr. Gislason in June 2023 and the physical therapy sessions related to treatment of Claimant's flare of his low back symptoms.

ORDER

It is therefore ordered that:

1. Respondent is liable for the medical treatment Claimant received that was reasonable and necessary to maintain Claimant at MMI, including the physical therapy Claimant undeiwent in April and May 2023 and the treatment with Dr. Gislason pursuant to the Colorado Medical Fee Schedule.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otheiwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 27, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. In **addition,** it **is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: November 13 2023

Keith E. Mottram
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. W.C. 5-179-036-003

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he was an employee of Employer [Redacted, hereinafter RS] on July 9, 2021.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive reasonably necessary medical benefits as a result of his July 9, 2021 accident.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) or Temporary Total Disability (TTD) benefits for the period July 9, 2021 through July 9, 2022.

5. Whether Employer [Redacted, hereinafter AB] has proven by a preponderance of the evidence that it was insured by [Redacted, hereinafter LM] in the state of Colorado on July 9, 2021.

FINDINGS OF FACT

1. [Redacted, hereinafter CG] worked for Employer RS[Redacted] as a Cutter. His position involved installing granite and stone countertops. CG[Redacted] acknowledged that on July 9, 2021 he was not a managerial employee of RS[Redacted] with the authority to hire employees.

2. Claimant lived with CG[Redacted]. CG[Redacted] explained that Claimant was looking for a job and asked whether RS[Redacted] was hiring. He offered Claimant the opportunity to visit the RS[Redacted] jobsite to see if he "liked the job."

3. [Redacted, hereinafter AR] is the owner of RS[Redacted]. AR[Redacted] explained that he was solely responsible for the hiring and firing of employees. He commented that he never hired Claimant to work for RS[Redacted]. In fact, he did not know Claimant and had never spoken to Claimant. He emphasized that CG[Redacted] was not a supervisory employee and had no authority to hire new employees.

4. On July 9, 2021 CG[Redacted] brought Claimant to the RS[Redacted] job site. Claimant did not complete any paperwork before visiting the location. Moreover, AR[Redacted] was unaware that Claimant was visiting the job site. CG[Redacted] commented that no one told him to bring anyone with him to the location.

5. Claimant acknowledged that he never spoke to, or met with, AR[Redacted].

He never had any conversations with AR[Redacted] concerning anticipated wages. Importantly, AR[Redacted] did not know Claimant was at the jobsite on July 9, 2021. Claimant explained that AR[Redacted] was teaching him about the job.

6. After lunch on July 9, 2021 Claimant was attempting to move six or seven slabs of stone that weighed approximately 600 pounds each. However, the slabs fell on Claimant's right leg and caused a fracture of the medial femoral condyle and the proximal fibula. Claimant was transported to a hospital and underwent surgical repair on July 10, 2021. Claimant testified he believed he was an employee of RS[Redacted] on July 9, 2021 because "[i]f I wouldn't have gotten injured, it was a job that was going to be given to me."

7. Prior to the date of Claimant's injury RS[Redacted] had been hired by Employer AB[Redacted] as a subcontractor. On August 20, 2020 Respondent Insurer LM[Redacted] issued Workers' Compensation [Redacted, hereinafter PN] to AB[Redacted] for the policy period August 20, 2020 until August 20, 2021 (the policy). Item 3.A. of the policy specified insurance coverage applied to the Workers' Compensation Laws of the states of Texas and Florida. Item 3.C. of the policy noted, "Other States Insurance" applies to all states except North Dakota, Ohio, Washington, and Wyoming, in addition to Texas and Florida. Pursuant to Part Three at paragraph 4, the "Other States Insurance" clause provides, "[i]f you have work on the effective date of this policy in any state not listed in Item 3.A of the Information Page, coverage will not be afforded for that state unless we are notified within thirty days." Under Part Three B, the insured is required to advise LM[Redacted] "at once if you begin work in any state listed in Item 3.C. of the information page." Claims Manager for LM[Redacted] [Redacted, hereinafter MP] testified LM[Redacted] was not notified of Claimant's July 9, 2021 accident until sometime in September 2021.

8. On September 17, 2021 LM[Redacted] issued a coverage denial letter to ATB. The letter specified that all the conditions of Part Three- "Other States Insurance," had not been satisfied. There was no thus insurance coverage for Claimant's claim in Colorado. The LM[Redacted] investigation had revealed that AB[Redacted] was working in Colorado prior to the inception date of the policy. LM[Redacted] also had not been notified of AB's[Redacted] work in Colorado within 30 days. Therefore, LM[Redacted] denied coverage.

9. Claimant has failed to demonstrate it is more probably true than not that he was an employee of RS[Redacted] when he was injured on July 9, 2021. Initially, CG[Redacted] explained that Claimant was looking for a job and asked whether RS[Redacted] was hiring. He offered Claimant the opportunity to visit the RS[Redacted] jobsite to see if he "liked the job." AR[Redacted] was not a supervisory employee and had no authority to hire new employees. AR[Redacted] explained that, as the owner of RS[Redacted], he was solely responsible for the hiring and firing of employees. He remarked that he never hired Claimant. In fact, he did not know Claimant and had never spoken to Claimant.

10. On July 9, 2021 CG[Redacted] brought Claimant to the RS[Redacted] jobsite. Claimant was attempting to move six or seven slabs of stone weighing approximately 600 pounds each when they fell and injured his right leg. Although Claimant was injured on the RS[Redacted] jobsite on July 9, 2021, there is a dearth of evidence in the record that he was an employee of RS[Redacted]. Claimant failed to prove that on July 9, 2021 he was performing services for RS[Redacted] under a contract of hire. Specifically, AR[Redacted] and Claimant had never spoken and the parties did not execute a valid contract of hire. Claimant was simply at the RS[Redacted] jobsite to determine whether he might pursue a job opportunity with the company. He did not have a "meeting of the minds" with AR[Redacted].

11. Based on the credible testimony of CG[Redacted] and AR[Redacted], Claimant had not been hired by RS[Redacted]. The record reveals there was no written documentation, consideration, or mutual agreement. Because there were additional requirements before Claimant could begin formal employment with RS[Redacted], there was no valid employment contract. Claimant was thus not an employee of RS[Redacted] on July 9, 2021 and his claim for Workers' Compensation benefits is denied and dismissed.

12. Employer AB[Redacted] has failed to prove by a preponderance of the evidence that it was insured by Insurer LM[Redacted] in the state of Colorado on July 9, 2021. On September 17, 2021 LM[Redacted] issued a coverage denial letter to AB[Redacted] because the conditions of Part Three- "Other States Insurance" in the insurance policy were not satisfied. The LM[Redacted] investigation revealed that AB[Redacted] was working in Colorado prior to the inception date of the policy. LM[Redacted] had not been notified of AB's[Redacted] work in Colorado within 30 days as required by the insurance agreement. Based on AB's[Redacted] failure to notify LM[Redacted]l that it was working in Colorado as required for coverage under the policy, AB[Redacted] was not insured on July 9, 2021. Finally, AB[Redacted] has not produced any additional evidence that it was insured for Workers' Compensation coverage in Colorado on July 9, 2021.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the

issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. Generally, an “employee” is a person performing services under a contract of hire whether express or implied. §§ 8-40-201(6), 8-40-202(b); 8-40-203(1)(b); 8-41-301(1)(a), C.R.S.; *Aspen Highlands Skiing Corp. v Apostolou*, 866 P.2d 1384 (Colo. 1994). The essential elements of a contract are competent parties, subject matter, legal consideration, mutuality of agreement, and mutuality of obligation. See *Denver Truck Exchange v. Perryman*, 134 Colo. 586, 307 P.2d 805 (Colo. 1957); *Tressell v. Alpha Therapy Services, LLC.*, W.C. No. 4-322-755 (ICAO, Dec. 15, 1999). Where the parties ascribe different meanings to a material term of the contract and the term is ambiguous, the parties have not “manifested mutual assent.” There is thus no “meeting of the minds” and no valid contract exists. *Dell v. Jaz Con, LLC*, W.C. No. 4-777-941 (ICAO, Nov. 4, 2009); *see Sunshine v. M.R. Mansfield Realty, Inc.*, 575 P.2d 847 (Colo. 1978). Whether parties enter into a contract is a factual determination for the ALJ. *I.M.A., Inc. v. Rocky Mountain Airways, Inc.,* 713 P.2d 882 (Colo. 1986).

7. In *Younger v. City and County of Denver,* 810 P.2d 647 (Colo. 1991) the Colorado Supreme Court concluded that no employment contract was created by an applicant participating in pre-employment testing when the successful completion of the tests merely qualified a pool of candidates for final selection. The claimant voluntarily

applied for a position as a police officer and was taking the test for her own benefit so that she would be eligible for employment. If the claimant had successfully completed the physical agility test she would still have been required to pass background checks, polygraph tests, and a medical examination merely to qualify for the pool of candidates. The Court thus concluded there was no mutual agreement between the parties sufficient to create an employer-employee relationship that would justify an award of Workers' Compensation benefits. *Id.* Similarly, in *Lopez v. Colorado State University*, (W.C. No. 4-772-544 (ICAO, Dec. 29, 2009), the Panel upheld the ALJ's determination that a contract of hire did not exist when the claimant suffered an injury while performing a pre-employment physical. Because the applicant failed to complete additional requirements including production of a valid picture ID, bank account, and Social Security card, there was no contract.

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he was an employee of RS[Redacted] when he was injured on July 9, 2021. Initially, AR[Redacted] explained that Claimant was looking for a job and asked whether RS[Redacted] was hiring. He offered Claimant the opportunity to visit the RS[Redacted] jobsite to see if he "liked the job." AR[Redacted] was not a supervisory employee and had no authority to hire new employees. AR[Redacted] explained that, as the owner of RS[Redacted], he was solely responsible for the hiring and firing of employees. He remarked that he never hired Claimant. In fact, he did not know Claimant and had never spoken to Claimant.

9. As found, on July 9, 2021 AR[Redacted] brought Claimant to the RS[Redacted] jobsite. Claimant was attempting to move six or seven slabs of stone weighing approximately 600 pounds each when they fell and injured his right leg. Although Claimant was injured on the RS[Redacted] jobsite on July 9, 2021, there is a dearth of evidence in the record that he was an employee of RS[Redacted]. Claimant failed to prove that on July 9, 2021 he was performing services for RS[Redacted] under a contract of hire. Specifically, AR[Redacted] and Claimant had never spoken and the parties did not execute a valid contract of hire. Claimant was simply at the RS[Redacted] jobsite to determine whether he might pursue a job opportunity with the company. He did not have a "meeting of the minds" with AR[Redacted].

10. As found, based on the credible testimony of CG[Redacted] and AR[Redacted], Claimant had not been hired by RS[Redacted]. The record reveals there was no written documentation, consideration, or mutual agreement. Because there were additional requirements before Claimant could begin formal employment with RS[Redacted], there was no valid employment contract. Claimant was thus not an employee of RS[Redacted] on July 9, 2021 and his claim for Workers' Compensation benefits is denied and dismissed.

11. As found, Employer AB[Redacted] has failed to prove by a preponderance of the evidence that it was insured by Insurer LM[Redacted] in the state of Colorado on July 9, 2021. On September 17, 2021 LM[Redacted] issued a coverage denial letter to AB[Redacted] because the conditions of Part Three- "Other States Insurance" in the

insurance policy were not satisfied. The LM[Redacted] investigation revealed that AB[Redacted] was working in Colorado prior to the inception date of the policy. LM[Redacted] had not been notified of AB's[Redacted] work in Colorado within 30 days as required by the insurance agreement. Based on AB's[Redacted] failure to notify LM[Redacted] that it was working in Colorado as required for coverage under the policy, AB[Redacted] was not insured on July 9, 2021. Finally, AB[Redacted] has not produced any additional evidence that it was insured for Workers' Compensation coverage in Colorado on July 9, 2021.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for Workers' Compensation benefits is denied and dismissed.

2. AB[Redacted] was not insured for Workers' Compensation coverage in Colorado on July 9, 2021.

3. Any issues not resolved by this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. W.C. No. 5-141-572

1. Whether Claimant overcame the DIME and established by clear and convincing evidence that he is not at MMI, or if at MMI, that he is entitled to a higher impairment rating.
2. Whether Claimant's condition has worsened since being placed at MMI and his claim reopened.
3. Whether Claimant is entitled to TTD and/or TPD.
4. Whether Respondent is entitled to an offset for Claimant's receipt of short-term disability benefits.
5. Medical benefits.
    a. Whether the treatment Claimant received was authorized.
    b. Whether the treatment Claimant received was reasonably necessary to treat Claimant from the effects of his work injury.
    c. Reimbursement to Claimant and his medical providers for the medical treatment he received.
6. Average weekly wage.

II. W.C. No. 5-183-168

1. Whether Claimant suffered a compensable injury on August 31, 2021.
2. Whether Claimant is entitled to TTD and TPD.
3. Whether Respondent is entitled to an offset for Claimant's receipt of short-term disability benefits.
4. Medical benefits.
    a. Whether the treatment Claimant received was authorized.
    b. Whether the treatment Claimant received was reasonably necessary to treat Claimant from the effects of his work injury.
    c. Reimbursement to Claimant and his medical providers for the medical treatment he received.
5. Average weekly wage.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Unrelated Back Injury

1. Claimant underwent low back surgery at L5-S1 in 2018 and 2019. (Ex. Q). This surgery was not under the workers' compensation system. (Hearing Transcript (hereinafter "Hrg. Tr."), p. 128 ll 6-11).

Admitted Work Injury

2. On June 3, 2020, Claimant sustained an admitted work injury when he was pinned or crushed by a gate while working for Employer at the [Redacted, hereinafter TL] in Canon City, Colorado. (Hrg. Tr., pp. 88 ll 23-25, 89 ll 1-2).
3. Claimant was provided a designated provider list that same day. (Ex. D, p. 49-50).
4. After the accident, Claimant went to the emergency room and underwent a CT scan of his chest, abdomen, and pelvis. The CT scan did not show any significant findings. (Ex. 3, p. 37). (*See generally* Ex. 3 and K).
5. On June 8, 2020, Claimant presented to Dr. Reasoner, at Centura Urgent Care, a designated provider. (Hrg, p. 129). At this appointment, Claimant complained of pain along his sternum that he rated at 5/10. Dr. Reasoner diagnosed Claimant with acute costochondritis and a chest wall contusion. (Ex. 3, p. 37-42).
6. On June 15, 2020, Claimant returned to Dr. Reasoner at Centura. At this appointment, Claimant reported he was having "mild episodic discomfort" but reported new right lower quadrant and periumbilical discomfort. It was noted that the CT scan of his chest, abdomen, and pelvis from June 3rd showed no acute findings. Claimant stated he was not using any pain medication. On exam, there was no distention in his abdomen, no mass, negative Murphy's and McBurney's sign, no hernia was present. But despite the development of right lower quadrant and periumbilical discomfort, which developed after Claimant's work accident, Dr. Reasoner placed claimant at maximum medical improvement (MMI) without any permanent impairment. (Ex. 3, pp. 43-48).
7. The ALJ finds that Claimant was timely provided with a designated provider list and selected Dr. Reasoner, at Centura, as the authorized treating provider for the June 3, 2020, injury.
8. On June 26, 2020, Claimant presented to the emergency room stating at about 7:30 p.m. that night he felt a pop in his umbilicus, but he was able to "pop it back in" but it has been painful since and radiates towards the right. (Ex. 3, p. 55). Claimant reported he had been helping his wife make dinner at the time. (Ex. G, p. 142).
9. The June 27, 2020, report notes the CT scan showed uncomplicated umbilical hernia and slight swirling of the right upper quadrant mesenteric vessels without signs of bowel obstruction or ischemia. (Ex. 3, p. 53).
10. On July 10, 2020, and despite the findings of the CT scan finding a hernia, a Final Admission of Liability consistent with Dr. Reasoner's MMI report. (Ex. 1, pp. 7-20).

Claimant's Initial DIME on November 2, 2020, with Dr. Higginbotham

11. On November 2, 2020, Claimant underwent a Division Independent Medical Exam (DIME) with Dr. Thomas Higginbotham. (Ex. 3, pp. 72-86). Dr. Higginbotham reviewed Claimant's medical records and examined Claimant. He noted Claimant was evaluated by Dr. Botolin at his request as she was his previous general surgeon. He noted Dr. Botolin's report from July 2, 2020, showed "minimal abdominal discomfort," that the "abdominal CT showed no evidence of obvious internal hernia," and Dr. Botolin reassured Claimant that the "instrumentation from his L5-S1 fusion was not disrupted from the crush event." (Ex. 3, p. 78). Claimant informed Dr. Higginbotham that his L5-S1 fusion has not bothered him since the work-related event, "what has concerned him is periumbilical pain and swelling about the midline of the abdomen and above the umbilicus." (*Id.*). Claimant reported that "he experiences chronic pain about both lower extremities stemming from his low back conditions." (*Id*. at 80). Claimant stated his chest was "fine now." (*Id*. at 81). On exam, Dr. Higginbotham found no umbilical hernia, but found a moderate-large ventral protrusion about the midline of the abdomen. (*Id*.).

12. Dr. Higginbotham diagnosed torso crush injury, ventral hernia, periumbilical hernia (presently reduced/absent), diffuse abdominal pains, and resolved traumatic costochondritis. (*Id*. at 82). Dr. Higginbotham opined Claimant was not at MMI and recommended he return to the general surgeon for "reconfirmation of ventral hernia" and "discussion of treatment options." (*Id.* at 83). According to the initial DIME report, Claimant did not make any complaints of right lower quadrant pain. (*See generally* Ex. 3, pp. 73-84).

13. On December 29, 2020, and after the DIME report of Dr. Higginbotham, Claimant's claim was re-opened via a General Admission of Liability. (Ex. 1, pp. 5-6).

14. On January 27, 2021, Claimant underwent surgery with Dr. Botolin for a ventral hernia repair with mesh. (Ex. L, pp. 275-276).

15. On March 4, 2021, Claimant returned to Dr. Botolin. At this follow-up appointment, which was over a month after surgery, all of Claimant's symptoms had resolved and he was off pain medication. Thus, a work release was provided. (Ex. L, p. 274).

16. On March 9, 2021, Claimant was seen by his primary care physician Dr. Pennington – who noted Claimant had "no abdominal tenderness." (Ex. I, p. 212).

17. On May 10, 2021, Claimant was evaluated by PA Quakenbush, at Centura, because of a request of the insurance carrier. (Ex. K, p. 269). It was noted Dr. Botolin, the surgeon, released Claimant to full unrestricted work duty on March 10, 2021. Claimant reported he had been doing well but was "having some return of previously noted abdominal wall weakness symptoms" specifically "mid ventral abdominal wall weakness with straining" (Ex. K, pp. 269, 271). Claimant requested a return to Dr. Botolin. Claimant's full duty release continued. (*Id*. at 272). There was no mention of right lower quadrant pain during this medical visit. (*Id.*).

18. On May 21, 2021, Claimant was involved in a non-work-related motor vehicle accident. Claimant testified he was the driver of the vehicle and had his seatbelt on. (Hrg. Tr., p. 130 ll 9-15). The ALJ notes that the area in which the seatbelt would hit appears to be his right side and appears to be in the same area in which Claimant indicates his pain is

located and reportedly received the nerve block injection which relieved his pain. (Hrg. Tr., p. 111).

19. On August 6, 2021, an ultrasound was performed, and it showed no gross evidence of hernia or fascial wall defect. (Ex. R, p. 360).

20. On August 27, 2021, Claimant returned to his treating provider and was seen by PA-C Quakenbush. The August 6, 2021, ultrasound, with and without Valsalva maneuvers, was discussed and noted no gross evidence of hernia or fascial wall defect. Claimant, however, reported "stabbing abdominal pain." (Ex. K, p. 265). Thus, Claimant was to return to Dr. Botolin for re-evaluation for further surgery. (*Id*.).

Alleged August 31, 2021, Injury

21. On August 31, 2021, Claimant climbed a ladder to go to the roof regarding issues with a swamp cooler for his job. He assessed the situation, climbed back down the ladder, went to the shop to get parts and returned to repair the swamp cooler. After coming back down the ladder he reported that he felt a sharp burning, stabbing sensation just above his belly button where he understood the mesh implant to be. (Hrg. Tr., pp 104 ll 8-23, 105 ll 4-8).

22. Claimant reported a new injury from the August 31st incident and was provided a designated provider list by the employer on the same day. (Ex. D, pp. 51-53).

23. On September 1, 2021, Claimant presented to Centura Urgent Care for evaluation related to the August 31st incident. (Ex. K, pp. 258-263). Claimant reported he "did not have a significant event of pain such as a pop or swelling." Claimant stated he believed this was related to a prior workers' compensation injury where he was injured in a gate and that he was trying to visit with his surgeon for that claim. (*See id*., p. 259-260). On exam, there was no swelling, no palpable defect, and no significant tenderness. (Ex. K, p. 262). Work-relatedness was "undetermined." (*Id*. at 258).

24. Claimant testified he spoke to the workers' compensation claim adjuster, [Redacted, hereinafter MT], regarding the August 31st claim and told her that it was the same pain in the same spot that he had been dealing with for months prior to August 31st incident. (Hrg. Tr., p. 135 ll 7-18).

25. On September 7, 2021, Claimant returned to the ATP to follow-up regarding the August 31st incident. It was noted his history did not reveal any specific new injury. (Ex. K, p. 249). His "minimal" pain was once again noted to be "mid abdominal." (*Id*. at 250, 251). On exam, there was no inguinal tenderness, and he was able to flex and rotate his hips without limitation or pain. (*Id*. at 251). He was to return on October 7, 2021. (Ex. K, p. 257). Work-relatedness continued to be undetermined. (*Id*.). Work restrictions were 5 lbs. lifting, carrying, pushing, pulling were recommended. (*Id*.).

26. The ALJ finds that Claimant was timely provided with a designated provider list for the August 31, 2021, alleged work injury and again selected the Centura Urgent Care center as the ATP for care related to that incident.

27. Claimant testified that Dr. Botolin said she did not need to see him after the ultrasound results were negative. (Hrg. Tr., p. 132 ll 1-13; *see also* Ex. M, p. 306).

28. A Notice of Contest was filed for the August 31, 2021, claim (Ex. 2, p. 33), but the June 3, 2020, claim was still under a General Admission of Liability dated December 29, 2020. (Ex. 1, p. 5).

29. Claimant, however, did not return to his ATPs at Centura Urgent Care after September 7, 2021. (Hrg. Tr., pp. 135 ll 19-25, 136 ll 1-2). Moreover, there is a lack of credible and persuasive evidence that he was refused treatment for non-medical reasons under his June 2020 claim.

30. Rather than seek ongoing treatment under his June 2020 Claim with Centura, Claimant sought an evaluation and treatment with his primary care provider (PCP), Kaiser, on October 27, 2021. At this visit, Claimant reported "central abdominal pain." (Ex. M, p. 306). On exam, mid-line tenderness was noted, there is no mention of right lower quadrant pain. (*Id*. at 307). He was referred to general surgery for a second opinion. (*Id*. at 305).

31. Claimant testified he did not get permission from the claim adjuster, MT[Redacted], to treat or evaluate with his PCP Dr. Pennington or Kaiser. (Hrg. Tr., p. 138 ll 7-18).

32. Claimant saw Dr. Hess, a surgeon at Kaiser, on November 10, 2021. (Ex. M, pp. 301-302). Dr. Hess' report indicates notes from Kaiser documents a "fairly extensive past medical history including chronic fatigue, chronic pain disorder, history of lumbar compression fracture, type 2 diabetes, and nerve pain and migraines." (*Id*. at 301). Claimant reported ongoing pain in his "upper abdomen," with no mention of right lower quadrant pain. (*Id*. at 302). On exam, there was no obvious defects palpable, with "diffuse tenderness with palpation of the upper midline abdomen" with no evidence of recurrent hernia. (*Id*.). Dr. Hess recommended a CT scan to evaluate for recurrence of the hernia, but he felt exploratory surgery to remove the mesh would be high risk with uncertain benefit considering his pain. (*Id*.).

33. Claimant testified Dr. Hess did not recommend any surgery. (Hrg. Tr., pp. 136 ll 12-25, p. 137 ll 1-7).

34. Despite receiving a surgical evaluation, which is what Claimant testified that Centura Urgent Care was waiting for before seeing him again, Claimant still did not return to the ATP after this evaluation.

35. In November 2021, Claimant moved to Cheyenne Wyoming. (Hrg. Tr., p. 88 ll 19-22). He did not, however, advise the insurer at this time that he was moving and needed a new designated provider.

36. Claimant's wife found Dr. Tierney a surgeon, in Loveland Colorado, at UCHealth via a Google search and that he was a doctor that dealt with difficult abdominal issues. (Hrg. Tr., pp. 137 ll 11-25, p. 138 ll 1, and Ex. H, p. 194).

37. On December 27, 2021, Claimant was evaluated by Dr. Tierney. Claimant reported he believed he had a recurrent hernia. (Ex. H, p. 203). Dr. Tierney did not feel Claimant had a recurrent hernia. He thought the abdomen exam was more consistent with diastasis recti, but recommended a CT scan to better evaluate Claimant's complaints. (*Id*. at 202, 203).

38. Claimant testified that Dr. Tierney did not recommend any surgery. (Hrg. Tr., p. 138 ll 2-6).

39. Claimant also testified he did not obtain permission from the claim adjuster to be evaluated or to treat with Dr. Tierney. (*Id*. at ll 19-22).

40. On January 14, 2022, Claimant underwent an abdominal CT scan for "recurrent upper abdominal wall pain." The CT scan showed nothing to suggest a recurrent abdominal wall hernia. (Ex. R, pp. 357-358).

41. On February 1, 2022, Claimant presented to Dr. Khoi Le at Banner Health. Claimant reported that he was told he does not have a hernia and there is nothing to be done by the surgeon who performed the robotic assisted hernia repair (Dr. Botolin) and a second general surgeon (Dr. Tierney) at Loveland MCR. (Ex. N, p. 330). Dr. Le reviewed the CT scan report and noted the mesh was in place and Claimant has diastases, without evidence of a hernia. (*Id*.). Claimant reported he cannot sit for long periods of time, cannot walk long distances, and is otherwise hindered in his daily activity secondary to the pain in his diastases. (*Id*.). On exam, Claimant had obvious diastases present in the mid to upper abdomen. (*Id*.). Dr. Le thought it best to refer Claimant to a plastic surgeon for plication and other techniques for repair of the symptomatic diastases. Dr. Le provided work restrictions of 20-30 lbs. until his repair. (*Id*. at 331).

42. On February 3, 2022, Claimant was seen by Dr. Nathan Narasimhan, plastic surgeon with Banner Health. Dr. Narasimhan advised Claimant that pain can be difficult to treat and that surgery could be done with open approach but that this may not have a significant impact on his pain and recommended an evaluation with pain management. (Ex. N, p. 327).

43. On February 7, 2022, Claimant presented to his PCP at Kaiser. He requested a referral for his "Spine Pain" (Ex. M, p. 292). A referral was made for neurosurgery, noting a "history of spinal fracture at L5 and radicular vs. neuropathic symptoms. Had posterior fusion at L5/S1 but with persistent radiculopathy. Would like to consider ablation if this is an option." (*Id*. at 291).

44. On February 22, 2022, Claimant was evaluated by Kaiser pain management physician, Dr. Patrick Russell, for bilateral foot pain. (Ex. M, p. 280). It was noted Claimant had underlying spondylolisthesis and is now status post fusion, but Claimant reported the surgery "was not helpful" therefore persistent radiculopathy would be in the differential. (*Id*. at 281). The treatment plan included consideration for a spinal cord stimulator. (*Id*.).

45. Claimant received short term disability benefits from October 1, 2021, through February 27, 2022 totaling $3,094.27. (Ex. P, p. 340).

46. On April 7, 2022, Claimant underwent diagnostic laparoscopy with Dr. Le. Adhesions were found attached to the mesh and were removed. It was decided to leave the mesh in place. (Ex. N, p. 317-318). No recurrent hernia or other acute trauma was identified.

47. Claimant did not deny that he also found Dr. Le at Banner Health through a Google search. (Hrg. Tr., pp. 138 ll 23-25, 139 ll 1-8). He testified that Dr. Le referred him to Dr. Narasimhan, who referred him back to Dr. Le. (*Id*. at 139 ll 9-21). Claimant testified he did not get permission from the claim adjuster to treat or evaluate with Banner Health, or Dr. Le, or Dr. Narasimhan. (*Id*. at 140 ll 9-17).

Subsequent Employer – June 14, 2022

48. On June 14, 2022, Claimant started working for Belfour Beatty Military Housing Management. (Hrg. Tr., p. 148 ll 22-25). Claimant obtained health insurance for himself and his wife through [Redacted, hereinafter BR]. (Hrg. Tr., pp. 149 ll 20-25, 150 ll 1-5; *see* Ex. B).

49. Without advising the Employer of his move to Wyoming or new job, Claimant advised Employer of his voluntarily resignation/retirement effective July 1, 2022, via email. (Ex. D, p. 48).

Follow-up DIME – July 14, 2022

50. On July 14, 2022, Claimant returned for a follow-up DIME with Dr. Higginbotham in regard to the June 3, 2020, claim. (Ex. A, pp. 13-26). Dr. Higginbotham reviewed Claimant's medical records and took a verbal history from Claimant. Claimant reported he underwent surgery with Dr. Le in April 2022. He reports the surgery was planned earlier but rescheduled because of a family medical emergency of Dr. Le. (*Id*. at 18). Claimant reported that Dr. Le informed him that a "silver dollar-size scar was on the underside of the middle of his large mesh and had to be broken up and was likely accounting for his abdominal pains." (*Id.*). Claimant reported pain with his right lower quadrant but all other abdominal pain improved or was gone. (*Id*.). Claimant also reported he contracted COVID in June 2021. (*Id*. at 19). Claimant described persistent twinges of abdominal discomfort since being released to full duty after surgery in January 2021. (*Id*.). Claimant reported that he experienced continued swelling about the mid-abdomen especially when sitting up from supine or when bending forward or lifting weight greater than 35 lbs. (*Id*.).

51. Claimant testified that he reported all of his ongoing problems to Dr. Higginbotham at the July 14, 2022, DIME, including that he had an incident at work on August 31, 2021, in which he had increased pain and that he thought his current pain may be due to another adhesion. (Hrg. Tr., pp. 140 ll 18-25, 141 ll 1-22).

52. Dr. Higginbotham found Claimant reached MMI as of July 14, 2022. (*Id.* at 21). He found no mental/behavioral condition that warranted impairment consideration. (*Id*.). Dr. Higginbotham provided Claimant a 5% whole person rating under AMA *Guides*, chapter 10, Table 6, Class I p. 196. (*Id*.). In support of the impairment rating, Dr. Higginbotham specifically noted that Claimant "has a palpable defect in his abdominal wall and a slight protrusion at the site of defect with increased abdominal pressure that was regularly reducible." (*Id*. at 22). Dr. Higginbotham recommended maintenance care for follow-up with the last general surgeon (Dr. Le) one year from the surgery.

53. A Final Admission of Liability was filed on August 10, 2022, in the June 3, 2020, claim consistent with Dr. Higginbotham's report, which admitted for maintenance care. (Ex. A).

54. Claimant testified his wife found Dr. Jason Caswell online and referred him. (Hrg. Tr., p. 142 ll 9-16). Claimant testified he did not get permission from the claim adjuster to treat or evaluate with Dr. Caswell. (*Id*. at ll 17-24).

55. On November 1, 2022, Claimant presented to Dr. Caswell. Dr. Caswell noted Claimant had lysis of adhesions due to abdominal pain resulting from ventral surgery with mesh, "however his pain at this point is different. It is described as vague, right sided mostly" which Claimant likened to "having his guts ripped out." (Ex. O, p. 335). Claimant also

reported a burning and pulling sensation in his upper abdominal region. (*Id*.). Dr. Caswell's report indicates Claimant reported his symptoms started after a work-related injury "necessitating multiple intra-abdominal surgeries culminating with a small bowel resection and ventral herniorrhaphy with mesh." (*Id*.) He also noted that Claimant said that his pain is getting progressively worse and more severe. (*Id*.) In order to assist in determining the cause of Claimant's abdominal pain, Dr. Caswell performed an injection with a local anesthetic around Claimant's ilioinguinal nerve. Subjectively, the injection significantly reduced Claimant's pain. As a result, Dr. Caswell referred Claimant to Dr. Jeremy Gates, surgeon, for evaluation of potential adhesions and to Dr. Natalie Winter, pain management, for permanent ablation. (*Id*. at 334).

56. On November 7, 2022, Respondents sent a letter to Claimant advising him that they had recently learned that he moved to Wyoming and because of such, they were designating a new authorized treating provider. Respondents designated Dr. Robert Dupper at Workwell Occupational Medicine in Loveland Colorado. Claimant testified that he received the letter from Respondent about designation of a doctor in Loveland, Colorado, but that he chose not to see that provider. (*See* Hrg. Tr., pp. 114 ll 15-25, 115 ll 1-2; and Ex. C). As a result, Claimant decided to continue seeking treatment from unauthorized providers.

57. On December 22, 2022, Claimant obtained an Independent Medical Examination (IME) with Dr. John Hughes. (Ex. 3, pp. 126-132). Dr. Hughes agreed with Dr. Higginbotham that Claimant should be re-evaluated by a general surgeon. In fact, this was the primary reason for which Dr. Hughes concluded that Claimant was not at MMI (*Id*. at 131); however, Dr. Hughes himself did not see any indication to proceed with abdominal surgery nor did he recommend any additional treatment that was necessary to get Claimant to MMI. (*Id*.). Dr. Hughes did not diagnose Claimant with a nerve injury related to the June 3, 2020, injury. While he was aware of Claimant's reported pain following the described August 31, 2021, incident, he also did not conclude that the August 2021 incident resulted in a new injury. (*See* Ex. 3, pp. 126-132). Dr. Hughes disagreed with the assignment of a 5% whole person rating and believed that objective pathology described by Dr. Higginbotham justified a Class 2 categorization rather than a Class 1 as provided by Dr. Higginbotham. (*Id*. at 131). Dr. Hughes noted Claimant also reported that 3 weeks ago he was involved in installing two dishwashers and a microwave and that he "was jacked up that week." (*Id*. at 129).

58. On January 2, 2023, Claimant presented to Dr. Jeremy Gates at Cheyenne Regional Medical Center for a "a third surgical opinion regarding an abdominal wall hernia versus scar tissue within the peritoneal cavity." (Ex. F, p. 118). Claimant reported that he had a "door" at a business he was working at strike him in the chest and abdomen in 2020 causing a crush injury. (*Id*.). Claimant reported that after his hernia repair in 2021 he developed "a burning sensation of the abdominal wall to the right of midline as well as a burning sensation in the right inguinal region." (*Id*. at 119). Dr. Gates noted the prior two surgeons (initial surgeon and Dr. Le) stated there was no hernia. (*Id*.). Dr. Caswell performed an ilioinguinal nerve block and Claimant reported that all of his right inguinal symptoms resolved. (*Id*.). Claimant was requesting repeat surgical intervention for lysis of adhesions as the cause of his burning sensation of the right hemiabdomen. (*Id*.). On exam, Dr. Gates noted a "small rectus diastases present with no evidence of herniation."

(*Id*. at 121). Dr. Gates concluded that based on Claimant's reports and physical examination he would not offer surgical intervention and discussed that any additional surgery within the peritoneal cavity would cause additional scarring. (*Id.).*

59. Claimant testified that he did not get permission from the claim adjuster to treat or evaluate with Dr. Gates. (Hrg. Tr., p. 143 ll 20-22).

60. On February 1, 2023, Claimant presented to Dr. Natalie Winter for pain management evaluation. (Ex. F, pp. 103-117). Dr. Winter discussed that a lot of Claimant's pain was consistent with myofascial pain in his right lower abdomen, with evidence of several trigger points. (*Id*. at 108). She strongly suggested physical therapy to help with the myofascial trigger points and trigger point injections to help with pain relief as he does physical therapy. (Id. at 109). Claimant "was not sure he wanted to go that route." (*Id*.).

61. Claimant testified he did not get permission from the claim adjuster to treat or be evaluated by Dr. Winter. (Hrg. Tr., p. 143 ll 7-10).

62. On February 24, 2023, Claimant underwent an IME with Dr. Kathleen D'Angelo at the request of Respondent. (Ex. G). In Dr. D'Angelo's report, she includes an extensive review and summary of medical records. Dr. D'Angelo concluded that Claimant did not sustain a new injury on August 31, 2021. (*Id*. at 181). Dr. D'Angelo noted that Claimant had reported abdominal pain since his return to regular duty in March 2021 and his symptoms of pain did not change after the August 2021 incident. (*Id*.). She also agreed with Dr. Higginbotham that Claimant reached MMI for the June 3, 2020, injury as of July 14, 2022. (*Id.* at 182). Based on her physical exam, she agreed the appropriate impairment rating is 5% whole person rating pursuant to Class I p. 196 of the *AMA Guides*, as similar to Dr. Higginbotham she noted a slight protrusion in her physical exam, which is also consistent with Dr. Gates' examination in which he noted a "small rectus diastases." (*Id*. at 183-184).

63. On March 2, 2023, Dr. Hughes issued a case review. In essence, his opinions remained the same.

64. The ALJ is more persuaded by the consistent opinions of Drs. Higginbotham, D'Angelo, and Gates that Claimant's abdominal protrusion is small, over any opinion to the contrary.

65. The ALJ is also persuaded by Dr. D'Angelo's opinion that Claimant was properly placed at MMI as of July 14, 2022, as found by Dr. Higginbotham. The ALJ is further persuaded by Dr. D'Angelo's opinion that the August 31, 2021, incident did not result in a separate injury. This opinion is supported by the operative report of Dr. Le who, upon exploratory surgery did not find evidence of any recurrent hernia or other trauma, only adhesions to the mesh implant. The ALJ is also persuaded by Dr. D'Angelo's report that Claimant did not suffer a worsening of condition since she found that Claimant remained at MMI as of July 14, 2022.

66. Claimant's wife started receiving her own health insurance through her own employer on March 1, 2023. (Hrg. Tr., p. 150 ll 6-18).

67. Dr. Caswell then referred Claimant to Dr. George Girardi, another pain management specialist.

68. On March 20, 2023, Claimant saw Dr. Girardi. Dr. Girardi noted Claimant's current complaint as "low back pain with right groin pain and bilateral lower extremity pain." (Ex. H, p. 189). He noted an ilioinguinal nerve block gave him a fair amount of relief in the groin but did not affect his lower extremities. (*Id*.). Dr. Girardi assessed "back pain with bilateral leg pain which I think is multifactorial. I do think a big component is due to failed back surgery syndrome." (*Id*.). On exam, Dr. Girardi noted Claimant was "quite tender to palpation in his lumbar sacral area" and had "discomfort with any type of movements in his lower extremities." (*Id*. at 190-191). Visit diagnoses were: "Primary: Chronic pain syndrome" and "postlaminectomy syndrome of lumbar spine." (*Id.* at 193). The plan was for scans of his thoracic and lumbar spines and potentially trial him for spinal cord stimulator. (*Id*. at 189).

69. Claimant testified he did not get permission from the claim adjuster to treat or evaluate with Dr. Girardi. (Hrg. Tr., p. 144 ll 8-10).

70. On April 20, 2023, Claimant returned to Dr. Girardi's office. The history of Claimant's pain syndrome included: "back pain which has not responded to 3 months of appropriate conservative therapy…the pain is interfering with functional activities, the pain is radicular in it does extend into lower abdomen and lower extremities in a dermatomal pattern, the patient's low back is exacerbated by extension…the patient is suffering with neurological deficit…" (Ex. 3, p. 209). Assessment included lumbar radiculopathy. (*Id*. at 210). Claimant was referred to Dr. Corcoran for psychological evaluation before spinal cord stimulator trial. (*Id*. at 211).

71. On May 13, 2023, Claimant helped a co-worker at BR[Redacted] move an empty water heater, which weighed approximately 100-130 lbs., after which he had 10/10 pain. (Hrg. Tr., pp. 144 ll 21-25, 145 ll 1-16).

72. On May 16, 2023, Claimant saw Corcoran for psychological evaluation. He determined Claimant could proceed with a trial of a spinal cord stimulator and surgery to implant the stimulator if indicated. (*Id*. at 216).

73. Claimant testified that he did not get permission from the claim adjuster for evaluation or treatment with Dr. Corcoran. (Hrg. Tr., p. 144 ll 17-20).

74. On or about July 10, 2023, Claimant sent an email to Dr. Girardi's office requesting that he change his reports to indicate that the primary reason for the spinal cord stimulator was "chronic lower right abdominal pain due to work-related crush injury on 6/3/20" and the secondary reason was "bilateral nerve damage in feet due to failed back surgery in 2018/2019". (Ex. 3, p. 239-240).

75. Despite this request, the August 28, 2023, report from Dr. Girardi's office still documents treatment for active problems: "1. Postlaminectomy syndrome of lumbar region; 2. Lumbar radiculopathy, chronic; 3. Status post insertion of spinal cord stimulator, 4. Chronic pain syndrome." (Ex. H, p. 186).

76. During his testimony, Dr. Caswell stated Dr. Girardi is the subject matter expert and he trusted him explicitly. (Hrg. Tr., pp. 70 ll 18-25, 71 ll 1-3).

77. The ALJ finds that it remains Dr. Girardi's opinion that the spinal cord stimulator is due to treatment of lumbar radiculopathy due to failed back surgery, which is unrelated to either the June 2020 claim or the August 2021 alleged claim. The ALJ find Dr. Girardi's opinion

is consistent with Dr. Russell's opinion regarding Claimant's bilateral foot pain could be related to persistent lumbar radiculopathy and a spinal cord stimulator could be considered. The ALJ is more persuaded by these medical opinions than any opinion to the contrary and finds the need for the spinal cord stimulator and treatment related to same is not causally related to either the June 2020 or August 2021 claims.

Claimant's Additional Testimony

78. Claimant testified that the bills dated November 15, 2021, and December 20, 2021 from Centura Health were paid by workers' compensation. (Hrg. Tr., pp. 146 ll 4-124, 151 ll 5-9).

79. He also testified that since working at BR[Redacted] he has missed time from work unrelated to his work injury. (Hrg. Tr., p. 149 ll 4-11).

Testimony of Dr. Caswell

80. Dr. Caswell also testified at the hearing. In essence, Dr. Caswell testified that after taking a patient history and evaluating Claimant, he thought that Claimant's abdominal pain might be due to a nerve injury that occurred when the door crushed Claimant. Therefore, he decided to perform a diagnostic nerve block to determine whether Claimant's pain was nerve related. Based on the Claimant's subjective response to the nerve block-that the nerve block significantly reduced his pain for a short period of time-Dr. Caswell concluded that the Claimant's abdominal pain is due to a nerve injury.

81. During his testimony, Dr. Caswell also indicated that his opinion is also supported by his contention that Claimant's prior surgery, or surgeries, alleviated Claimant's nerve pain. Dr. Caswell testified that when Claimant underwent surgery, he was given a nerve block, and that block would have also alleviated Claimant's nerve pain – like the injection he performed. That said, a review of the medical records does not indicate that the Claimant's pain was only temporarily relieved by the nerve block performed during his first surgery. Instead, the medical records establish that Claimant's pain was relieved for weeks after the surgery, thus countering the opinion of Dr. Caswell.[1]

82. Moreover, despite Dr. Caswell stating that it was his opinion that Claimant's suffered a nerve injury during the June 2020 work accident, he still referred Claimant to a surgeon to see if the pain was being caused by adhesions. (*See* Ex. 3, p. 122). Thus, even Dr. Caswell did not conclusively think the Claimant's subjective response to the injection established Claimant's pain complaints were due to a nerve injury.

83. While Dr. Caswell's opinions seem reasonable on the surface, the ALJ does not find his opinions to be highly persuasive when considering the competing evidence and opinions contained in the record. Claimant has seen several physicians and surgeons, and the

[1] As found, on January 27, 2021, Claimant underwent surgery with Dr. Botolin for a ventral hernia repair with mesh. On March 4, 2021, approximately 5 weeks later, Claimant returned to Dr. Botolin and indicated that all of his symptoms had resolved and that he was off pain medications. Then, on March 9, 2021, Claimant was seen by his primary care physician Dr. Pennington – who noted Claimant had "no abdominal tenderness." Thereafter, almost 15 weeks later, Claimant returned for treatment and saw PA-C Quakenbush. Claimant reported he had been doing well but was "having some return of previously noted abdominal wall weakness symptoms" specifically "mid ventral abdominal wall weakness with straining." But, there was no mention of right lower quadrant pain during this medical visit.

ALJ does not find that Dr. Caswell is the only one who has been able to make a proper diagnosis and find the pain generator. As a result, the ALJ does not find Dr. Caswell's opinions to rise to the level of clear and convincing evidence that Claimant is not at MMI because he suffered a non-diagnosed nerve injury that still requires treatment. Moreover, the ALJ does not find his opinion persuasive evidence to find that Claimant's condition has worsened.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. W.C. No. 5-141-572-006

1. Whether Claimant overcame the DIME and established by clear and convincing evidence that he is not at MMI, or if at MMI, that he is entitled to a higher impairment rating.

a. Maximum Medical Improvement

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

In this case, Dr. Higginbotham, the DIME physician, evaluated claimant twice – first on November 2, 2020, then in follow-up on July 14, 2022. At the first DIME appointment, Claimant reported pain and discomfort about the mid-abdominal areas and denied any numbness or tingling sensations. Claimant reported that his chest was "fine" and non-tender. Dr. Higginbotham noted the June 3, 2020, study did not mention an umbilical hernia. At the November 2, 2020, DIME appointment, Dr. Higginbotham opined Claimant had a readily noticeable, moderately large, ventral hernia evidence with Valsalva maneuver for which he had not been properly evaluated and was not at MMI. Claimant subsequently returned for treatment, including a ventral hernia repair with mesh implant in January 2021 with Dr. Botolin, to whom he reported complete resolution of all his symptoms in March 2021. Additionally, Claimant saw the ATP on May 10, 2021, several months after the surgery, and reported return of abdominal wall weakness, but no lower right quadrant pain. Claimant subsequently underwent "exploratory" surgery with Dr. Le in April 2022 at which time a mesh adhesion was identified, and lysis performed, but no acute trauma or recurrent hernia was identified that could relate to the August 31, 2021, incident.

Claimant returned for a follow-up DIME with Dr. Higginbotham on July 14, 2022. Claimant reported continued swelling in the mid-abdomen, he reported persistent twinges of abdominal discomfort. According to Claimant's testimony, he also reported to the DIME all of his ongoing problems to Dr. Higginbotham at the July 14, 2022, DIME, including that he had an incident at work on August 31, 2021, in which he had increased pain and that he thought his current pain may be due to another adhesion. According to the follow-up DIME report, Claimant did not mention any lower right quadrant pain.

Since the July 14, 2022, follow-up DIME, Claimant has been evaluated by several physicians for abdominal pain. Dr. Hughes performed an IME on behalf of Claimant. Dr. Hughes concluded that Claimant was not at MMI just because he felt Claimant should

have a surgical re-evaluation. Claimant did have a surgical evaluation with Dr. Gates, who did not recommend any surgical intervention. In neither of his reports did Dr. Hughes conclude that Claimant had a nerve injury related to the work accident that required additional treatment prior to being placed at MMI. Dr. Caswell is the only physician who opined Claimant may have suffered a nerve injury proximately related to the June 2020 work accident. However, Dr. Caswell has not opined that Claimant is not at MMI or that additional medical treatment, including injections and/or physical therapy as recommended by Dr. Winter, would not be appropriate maintenance care. Additionally, a second pain management specialist, Dr. Girardi, opined that a spinal cord stimulator was appropriate for the primary diagnosis of failed low back surgery, despite Claimant's request for him to change his opinion to reflect the purpose of the spinal cord stimulator was for his abdominal pain. The ALJ finds the opinions of Drs. Hughes and Caswell at most amount to mere differences of opinion that do not rise to the level of clear and convincing evidence to support a finding that Claimant is not at MMI.

As a result, the ALJ finds and concludes Claimant has failed to overcome by clear and convincing evidence the DIME opinion regarding MMI.

b. Impairment Rating

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The question of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

In this case, the DIME Dr. Higginbotham assigned a 5% whole person impairment rating pursuant to the AMA *Guides* Chapter 10, Table 6, Class I of page 196. The ALJ takes judicial notice that Class I of Table 6 "Classes of Hernial Impairment" on page 196 of the AMA *Guides to the Evaluation of Permanent Impairment*, 3rd Ed. Revised allows for a 0-5% whole person impairment rating. Respondent's IME Dr. D'Angelo's physical examination of Claimant in February 2023 indicates a "slight protrusion" and Dr. Gates' physical examination of Claimant in January 2023 noted a "small rectus diastases," which the ALJ finds consistent with the DIME's findings of a "slight protrusion" and basis for his determination of a 5% whole person rating in this matter.

Claimant's expert, Dr. Hughes Dr. Hughes disagreed with the assignment of a 5% whole person rating and believed that objective pathology described by Dr. Higginbotham

justified a Class 2 categorization rather than a Class 1 as provided by Dr. Higginbotham and therefore entitled Claimant to a 10% whole person rating.

In this case, the ALJ finds that the difference of opinion between the DIME physician and Dr. Hughes is merely a difference of opinion and does not rise to the level of clear and convincing evidence. Plus, Dr. Higginbotham's impairment rating is also supported by Dr. D'Angelo.

As a result, the ALJ finds and concludes Claimant has failed to prove the DIME's 5% whole person impairment rating is "highly probably" incorrect. The ALJ finds Claimant has failed to overcome the DIME opinion regarding permanent impairment by clear and convincing evidence.

2. Whether Claimant's condition has worsened since being placed at MMI and his claim reopened.

To reopen a workers' compensation claim, a claimant must demonstrate that he has experienced a change in condition which is causally related to, or a natural consequence of, the admitted injury. *Justiniano v. Indus. Claim Appeals Office*, 410 P.3d 659, 661 (Colo. App. 2016). The power to reopen under the provisions of §8-43-303, C.R.S. is permissive and left to the sound discretion of the ALJ. *Renz v. Larimer County School Dist. Poudre R-1*, 924 P.2d 1177, 1181 (Colo. App. 1996).

In the June 2020 claim, Claimant testified, and the medical records document, that Claimant was still symptomatic with reports of abdominal pain at the time of the follow-up DIME. Nevertheless, the DIME physician concluded Claimant was at MMI as of July 14, 2022. Claimant was seen by several physicians after the DIME appointment, including a surgeon, none of whom opined Claimant's condition was worse than it was at the time of the DIME and finding of MMI nor that his condition required additional surgery related to the June 2020 injury.

Moreover, the ALJ does not find that Claimant's own IME with Dr. Hughes supports a finding that Claimant's condition is worse since the follow-up DIME appointment. While it is true that additional treatment, including injections and physical therapy, have been recommended by unauthorized providers to treat Claimant's ongoing symptoms, this recommended treatment does not establish a worsened condition. To the extent Claimant argues that the need for the spinal cord stimulator surgery is evidence of a worsened condition, the ALJ does not find this argument persuasive as the physician who recommended the spinal cord stimulator, Dr. Girardi, specifically noted the spinal cord stimulator was due to persistent lumbar radiculopathy due to failed low back surgery, which is not causally related to the June 2020 claim. This opinion is also supported by the February 22, 2022, report of Dr. Russell at Claimant's PCP at Kaiser, who evaluated Claimant's bilateral foot pain and opined that it could be caused by persistent radiculopathy and that a spinal cord stimulator may be considered.

Based on the above, the ALJ finds and concludes that Claimant has failed to prove by a preponderance of the evidence that he suffered a worsening of condition causally related to the June 2020 work injury.

3. **Whether Claimant is entitled to TTD and/or TPD.**

Because Claimant remains at MMI as of July 14, 2022, and Claimant's condition has not worsened, Claimant is not entitled to additional temporary disability benefits.

4. Whether Respondents are entitled to an offset.

Evidence regarding the offset for Claimant's receipt of short term and/or long-term disability benefits was not fully developed at hearing and in the proposed orders. For example, there is a lack of evidence to determine who financed, and to the extent financed, Claimant's short and/or long-term disability benefits. Moreover, the payment of short-term disability from October 1, 2021, through February 27, 2022, does not cover a period in which temporary disability benefits were admitted and paid to Claimant, as set forth in the Final Admission of Liability. Additionally, the payment of long-term disability benefits from February 28, 2022, through May 11, 2022, does not cover a period in which temporary disability benefits were admitted and paid, as set forth in the Final Admission of Liability. Therefore, this issue is reserved.

5. Medical benefits.

a. Whether the treatment Claimant received was authorized.

b. Whether the treatment Claimant received was reasonably necessary to treat Claimant from the effects of his work injury.

c. Reimbursement to Claimant and his medical providers for the medical treatment he received.

Authorization of Care

The claimant shoulders the burden of proving entitlement to benefits, including medical treatment, by a preponderance of the evidence. §8-43-201, C.R.S.; *see Synder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Once a claimant has established a compensable work injury they are entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. §8-42-101, C.R.S.; *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Section 8-43-404(5), C.R.S. affords the employer or insurer the statutory right, in the first instance, to select a physician to treat the industrial injury, and that the right of first selection does not pass to the claimant unless the employer or insurer fail to provide a physician willing to treat the injury. §8-43-404(5), C.R.S.; *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228, 229 (Colo. App. 1999), *cert. denied*.

Section 8-43-404(5)(a), C.R.S. provides that a claimant may not change physicians without permission from the employer, insurer, or ALJ. §8-43-404(5)(a), C.R.S.; *Yeck*, 996 P.2d at 229.

Respondents are only liable for authorized treatment. §8-43-404(7)(a), C.R.S. Authorization to provide medical treatment refers to a medical provider's legal authority to provide treatment to the claimant with the expectation that the provider will be compensated by the insurer for said services. *Mason Jar Rest. V. Indus. Claim Appeals Office*, 862 P.2d 1026, 1029 (Colo. App. 1993); *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo. App. 2006). Authorized providers include those medical personnel to whom the claimant is directly referred by the employer, as well as providers to whom an authorized provider refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Indus. Claim Appeals Office*, 70 P.3s 513 (Colo. App. 2002). Consequently, treatment is compensable under the Act where it is provided by an "authorized treating physician." *Popke v. Indus. Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). If an injured worker obtains unauthorized care, the respondents are not required to pay for it. *In Re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO June 18, 2010); *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Pickett v. Colo. State Hospital*, 513 P.2d 228 (Colo. 1973).

In this case, Claimant timely received a copy of the designated provider list from the Employer after both the June 2020 injury and alleged August 2021 injury. In both instances, Claimant sought medical treatment with Centura Urgent Care, who was on each of the Employer's designated provider lists. Centura Urgent Care thus became the authorized treating provider (ATP) for each claim. Centura Urgent Care provided evaluation and treatment to Claimant from June 8, 2020, through September 7, 2021. Despite a follow-up appointment having been scheduled for Claimant to return on October 7, 2021, Claimant testified he did not return to Centura Urgent Care because his August 31, 2021, claim had been denied by the Respondent's third-party administrator ([Redacted, hereinafter CV]) and because the ATP had wanted him to see a surgeon and Dr. Botolin would not see him because the August 6, 2021, ultrasound was negative. Despite being evaluated by two other general surgeons, Dr. Hess and Dr. Tierney, on November 21, 2021, and December 27, 2021, respectively, Claimant never returned to the ATP for re-evaluation.

To the extent Claimant argues the right of selection passed to him to choose a different treating provider due to the denial of his August 31, 2021, claim and CV's[Redacted] refusal to pay for medical benefits for that claim, the ALJ rejects this argument. This is the same argument the Court of Appeals rejected in *Yeck*, instead holding the right of selection of the physician is not conditioned on an admission of liability. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999).

Claimant testified that the claim adjuster did not give him permission to see any of the following medical providers: Valley Wide Health/Dr. Pennington, Kaiser/Dr. Hess, Dr. Tierney, Banner Health/Dr. Le/Dr. Narasimhan, Dr. Caswell, Cheyenne Regional Medical Center/Dr. Winter/Dr. Gates, UCHealth/Dr. Girardi, or Dr. Corcoran.

Additionally, the medical evidence documents that the treatment with these providers took place over a matter of months during routine office visits, physical

examinations, diagnostic testing and ultimately elective surgeries with Drs. Le and Girardi. None of the care was provided in an emergency room. Moreover, the surgeries Claimant underwent with Drs. Le and Girardi were scheduled and planned weeks if not months in advance. For these reasons, the ALJ is convinced that the treatment rendered by: Valley Wide Health/Dr. Pennington, Kaiser/Dr. Hess, Dr. Tierney, Banner Health/Dr. Le/Dr. Narasimhan, Dr. Caswell, Cheyenne Regional Medical Center/Dr. Winter/Dr. Gates, UCHealth/Dr. Girardi, and Dr. Corcoran, including the surgery performed by Dr. Le and the procedures related to the spinal cord stimulator by Dr. Girardi, was not emergent in nature.

Nor has Claimant established another way by which the aforementioned providers became authorized, *i.e*., there is no credible evidence Centura Urgent Care refused to treat Claimant for non-medical reasons, in fact they had a follow-up scheduled with Claimant to return on October 7, 2021, which would indicate they were willing to provide care for his work injuries. Here, Claimant presented no persuasive evidence that Centura Urgent Care refused to provide treatment for non-medical reasons. Moreover, Claimant testified that Respondent designated a provider in Loveland, Colorado to continue and monitor medical care for his June 2020 work injury after his move to Wyoming but he chose not to see that provider.

Consequently, the ALJ finds and concludes that Valley Wide Health/Dr. Pennington, Kaiser/Dr. Hess, Dr. Tierney, Banner Health/Dr. Le/Dr. Narasimhan, Dr. Caswell, Cheyenne Regional Medical Center/Dr. Winter/Dr. Gates, UCHealth/Dr. Girardi, and Dr. Corcoran, and any other provider not within the chain of referral from Centura Urgent Care, are not authorized providers. Accordingly, their care and treatment was and is also unauthorized.

Because the treatment Claimant received was not provided by an authorized provider, Respondents are not responsible for that treatment, regardless of whether it is reasonably necessary and related. As a result, the ALJ finds and concludes that Respondents are not liable for the medical treatment Claimant received from unauthorized providers.

5. Average Weekly Wage.

Claimant agreed to the admitted average weekly wage in his proposed order. Plus, additional temporary disability benefits are not being awarded. Therefore, it appears that the issue of Claimant's AWW is moot. If the issue is still in dispute, either party may file an application for hearing to resolve the issue.

II. W.C. No. 5-183-168-004

1. Whether Claimant suffered a compensable injury on August 31, 2021.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant alleges an injury occurring on August 31, 2021. On that day, Claimant reported experiencing pain in his abdomen where the ventral hernia mesh placed for the June 3, 2020, injury had been placed after climbing up/down a ladder to repair a swamp cooler at work. Claimant reported to the selected ATP Centura Urgent Care related to the August 31, 2021, incident on September 1, 2021. Claimant reported he "did not have a significant event of pain such as a pop or swelling." Claimant stated he believed this was related to a prior workers' compensation injury where he was injured in a gate and that he was trying to visit with his surgeon for that claim. The ATP noted work-relatedness was "undetermined." Consistent with his report to the ATP, Claimant testified he told the claim adjuster that the August 31, 2021, experience of pain was the same pain he had been dealing with for months, as such, a Notice of Contest was filed.

Dr. D'Angelo evaluated the Claimant's complaints related to the August 31, 2021, incident and noted that Claimant had reported abdominal pain since his return to regular duty in March 2021 and his symptoms of pain did not change after the August 2021 incident. The ALJ finds this opinion to be supported by the operative report of Dr. Le who, during exploratory surgery in April 2022, did not find any evidence of recurrent hernia or other trauma, only adhesions to a mesh which were related to the January 2021 surgery and not caused by anything that would have occurred on August 31, 2021.

The ALJ is more persuaded by the opinion of Dr. D'Angelo than any opinion to the contrary. As a result, the ALJ finds and concludes that Claimant has failed to prove by a preponderance of the evidence that he sustained a compensable injury on August 31, 2021.

Because the August 31, 2021, claim is not compensable, the remaining issues under this claim are moot.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome by clear and convincing evidence the DIME physician's determinations that he reached MMI for his June 3, 2020, claim as of July 14, 2022, or that he has sustained a 5% whole person impairment rating. As a result, his claim to overcome the DIME is denied and dismissed.

2. Claimant has failed to prove by a preponderance of the evidence that he suffered a worsening of condition that is causally related to a compensable injury. His petition to reopen W.C. No. 5-141-572 (DOI 6/3/20) is denied and dismissed.

3. Claimant's request for medical benefits in connection with unauthorized treatment from Valley Wide Health/Dr. Pennington, Kaiser/Dr. Hess, Dr. Tierney, Banner Health/Dr. Le/Dr. Narasimhan, Dr. Caswell, Cheyenne Regional Medical Center/Dr. Winter/Dr. Gates, UCHealth/Dr. Girardi, and Dr. Corcoran is denied and dismissed.

4. Claimant's claim for compensation under W.C. No. 5-183-168, for an August 31, 2021, date of injury, is denied and dismissed.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 16, 2023

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor

Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a whole person impairment to his right shoulder?
- Did Claimant prove he is entitled to TTD benefits from April 6, 2022 through November 21, 2022? In the alternative, did Claimant prove entitlement to TTD from May 24, 2022 through November 21, 2022?
- Did Claimant prove entitlement to a general award of medical benefits after MMI?
- Relatedness and authorization of certain treatment paid by Medicaid.
- Disfigurement.

FINDINGS OF FACT

1. Claimant worked for Employer as a line cook, primarily at the grill station. In addition to cooking, he cleaned the grills and other kitchen areas. The job was physically demanding and required lifting over 50 pounds. Many tasks involved overhead activity, such as cleaning the grill hoods and stocking the freezer.

2. In March 2021, Claimant started to experience left shoulder pain while performing cleaning tasks and lifting heavy cookware. The pain gradually worsened over the next few weeks.

3. Claimant saw Dr. Jack Chapman on April 6, 2021 for a flare of chronic low back pain. He also reported severe left-sided neck pain with radiation into the left shoulder and upper arm. Dr. Chapman diagnosed cervical radiculopathy and ordered a cervical MRI.

4. Later that day, Claimant went to the St. Mary Corwin Hospital emergency department for his low back pain. He also reported left shoulder pain and his shoulder was "cold and numb." He stated the shoulder symptoms were similar to those he experienced several years before when he tore the rotator cuff in his right shoulder.

5. Claimant saw Elizabeth Skelly, NP at Southern Colorado Family Medicine (SCFM) on April 8, 2021. He reported anterior shoulder pain that had been present for a month. He attributed the shoulder pain to repetitive activities. Ms. Skelly ordered an MRI of the left shoulder.

6. On April 13, 2021, Claimant experienced a painful pop and a tearing sensation in his left shoulder while reaching for a plate at approximately eye level.

7. Claimant went to the St. Mary Corwin Hospital emergency room the evening of April 13, 2021 to have his left shoulder evaluated. He described aching, cramping, and shooting pain in the left shoulder. Examination showed tenderness and limited shoulder ROM. X-rays showed mild AC joint degenerative changes but no fracture or other acute findings. Claimant was placed in a sling, prescribed oxycodone, and discharged.

8. Claimant saw Dr. Lloyd at SCFM on April 15, 2021, "to request a letter from doctor to his employer stating that they needed to open workman's comp case." Dr. Lloyd advised Claimant that SCFM "does not do any workmans comp cases though we will continue to provide general medical care while his case is ongoing." She recommended that Claimant speak with Employer about the shoulder injury.

9. Claimant reported the injury to Employer and was referred to Concentra. There is no persuasive evidence that Claimant reported the injury before April 15, 2021.

10. The left shoulder MRI was completed on April 22, 2021. It showed partial-width tears of the subscapularis and infraspinatus tendons and a full-thickness tear of the supraspinatus tendon.

11. Concentra referred Claimant to Dr. Jennifer FitzPatrick, an orthopedic surgeon.

12. Claimant saw Dr. FitzPatrick on May 10, 2021. He described ongoing 10/10 shoulder pain and left-sided radiating neck pain. He also reported periscapular pain around the AC joint that Dr. FitzPatrick believed "may be compensatory." Dr. FitzPatrick recommended surgery.

13. Dr. FitzPatrick performed a left shoulder arthroscopic rotator cuff repair, biceps tenodesis, and distal clavicle excision on May 21, 2021 at Parkview Medical Center.

14. Claimant started post-operative therapy at Momentum Physical Therapy on June 7, 2021. He reported 9/10 pain at the initial visit in the shoulder and around his collar bone.

15. Claimant began treatment with Dr. Pollack on June 21, 2021, for his chronic pain, primarily related to his pre-existing low back condition. Claimant was referred to Dr. Pollack by his PCP. Claimant explained that Dr. FitzPatrick had initially prescribed Percocet (oxycodone) for post-surgical pain but was unwilling to continue prescribing pain medication if Dr. Pollack would also be prescribing medication for other conditions. Dr. Pollack conferred with Dr. FitzPatrick, and they decided Dr. Pollack would assume responsibility for any additional post-operative pain medication. Dr. Pollack refilled the Percocet "a few" times to allow Claimant to wean off the narcotic. Records show Claimant last refilled Percocet on July 6, 2021. That was the last prescription Dr. Pollack wrote for any injury-related symptoms. Claimant continued treating with Dr. Pollack and received Suboxone and other medications for noninjury-related chronic pain.

16. On June 30, 2021, Dr. FitzPatrick documented Claimant was still having "significant pain around the collarbone." The collarbone was tender to palpation, but Dr. FitzPatrick saw no swelling. Examination also showed pain in the trapezial region. Claimant's therapist thought some of his shoulder pain may be referred from the neck, so Dr. FitzPatrick recommended a cervical MRI to investigate the source of his shoulder symptoms.

17. The cervical MRI was completed on July 8, 2021 at Parkview Medical Center. It showed multilevel degenerative changes greatest at C6-7 with mild-to-moderate foraminal stenosis. That same date, Claimant had a lumbar MRI for noninjury-related low back issues.

18. Dr. Pollack noted on July 19, 2021 that Claimant had increased neck pain following surgery.

19. Claimant followed up with Dr. FitzPatrick on July 28, 2021. He was still having pain in the shoulder, lateral left neck, and distal clavicle. The cervical pain was reproduced with left lateral bending. Dr. FitzPatrick recommended Claimant continue PT, "including cervical spine."

20. Dr. Jack Rook performed an IME at the request of Claimant's counsel on September 28, 2021. Claimant indicated his range of motion had improved since the surgery but he still had severe left shoulder pain from his neck to the shoulder joint. He slept poorly because he could not get comfortable and could not lie on his left side. On examination, Dr. Rook noted exquisite tenderness along the anterior shoulder capsule and with palpation of the AC joint where the distal clavicle resection was done. There was moderate tenderness with spasm in the left upper trapezius and left-sided paracervical musculature. Dr. Rook opined Claimant's shoulder issues were work-related. He believed Claimant initially developed an occupational disease from work activities such as scrubbing grills, frequent heavy lifting, repetitive reaching, and mopping. These activities probably caused rotator cuff tendonitis. Claimant then suffered a traumatic rotator cuff tear on April 13, 2021 while reaching for the plate.

21. Dr. Carlos Cebrian performed an IME for Respondents on October 4, 2021. Dr. Cebrian opined the "minimal" incident on April 13, 2021 would not cause, aggravate, or accelerate a rotator cuff tear. He further opined Claimant's work did not cause an occupational disease involving the shoulder. He concluded Claimant's left shoulder complaints and need for treatment were incidental and unrelated to his work for Employer.

22. Dr. FitzPatrick ordered a repeat left shoulder MRI on October 28, 2021 to evaluate Claimant's persistent symptoms.

23. The shoulder MRI was completed on November 18, 2021. It showed mild subdeltoid bursitis with post-surgical changes and no gross evidence of recurrent rotator cuff tear. There was muscular atrophy that could be secondary to disuse.

24. Claimant attended regular PT sessions at Momentum until March 2022. Among other findings, the physical therapist repeatedly documented Claimant was "highly tender" to palpation at the attachment of the left pectoralis major.

25. Claimant was discharged from PT on March 3, 2022. At the time of discharge, Claimant reported 6/10 pain at worst with current complaints at 4/10. Claimant reported that he was confident to perform home exercises on his own.

26. A hearing was held before Judge Richard Lamphere on December 19, 2021 to determine the compensability of Claimant's injury. On February 22, 2022, Judge Lamphere issued Findings of Fact, Conclusions of Law and an Order finding the claim compensable and awarding medical benefits and TTD benefits.

27. Claimant saw PA-C Daniel Czarniawski at Concentra for a demand appointment on April 6, 2022. Mr. Czarniawski released Claimant from care. Dr. Trina Bogart at Concentra reviewed Claimant's chart and concurred that Claimant was at MMI with no impairment on April 6, 2022. Dr. Bogart also released Claimant to work with no restrictions.

28. Claimant returned to Concentra on May 7, 2022, and saw Jennifer Livingston, FNP. Claimant reported ongoing pain, range of motion deficits, and weakness affecting the left shoulder. Examination of Claimant's neck showed tenderness and muscle spasm affecting the left paraspinals and trapezius muscle. Cervical range of motion was limited. Oddly, examination of the left shoulder was described as entirely normal. Ms. Livingston stated Claimant was "at MMI but will have permanent restrictions and/or permanent partial disability." An FCE was pending, and Claimant was to be scheduled with a Level II provider for an impairment rating.

29. Claimant was evaluated by Dr. Daniel Peterson at Concentra on May 24, 2022. Claimant reported ongoing left shoulder and clavicle pain. Examination of the shoulder showed tenderness in the bicipital groove, midshaft clavicle, anterior shoulder, and lateral shoulder, with limited range of motion in all planes. Dr. Peterson determined Claimant was not at MMI, cancelled the FCE, and imposed work restrictions no lifting, carrying, pushing, or pulling more than four pounds. He referred Claimant to Dr. David Weinstein for a second opinion.

30. Claimant was involved in a motor vehicle accident on June 19, 2022, when he was struck by a vehicle moving at a high rate of speed. Claimant was transported to the emergency department, where he complained of pain in his head, neck, left chest, and left knee. CT scans of the head, cervical spine, and pelvis were negative. The provider wrote, "Patient has a mild cervical strain but no significant traumatic injury."

31. Claimant returned to SCFM on June 24, 2022, to discuss some incidental lung findings on x-rays taken after the MVA. The report states, "He has some residual aches and pains [from the MVA] but is near baseline for this."

32. On June 29, 2022, Claimant called SCFM and requested a referral to PT for the neck, lower back, and left knee. The ALJ infers this was in relation to the MVA. Claimant was referred back to Momentum PT.

33. Claimant saw Ms. Livingston at Concentra on July 5, 2022. Insurer had denied the referral to Dr. Weinstein for the second opinion regarding the clavicle pain. Claimant stated he was having "increased pain" from the MVA but did not specify the location of the increased pain. The examination findings of the left shoulder were the same as noted by Dr. Peterson on May 24, 2022 (before the MVA). Ms. Livingston referred Claimant to Dr. Kenneth Finn for a physiatry evaluation.

34. Claimant started PT at Momentum on July 7, 2022 for the MVA, and was seen by a new therapist, Cody Payne, DPT. He reported pain in multiple areas including "neck, L shoulder/arm, L side, and L knee following MVA." Claimant stated he was "pretty sure I have a concussion and whiplash." The intake form states the referral was from Claimant's primary care physician, Dr. Alexander Grover, for treatment of "MVA." There was no referral from any ATP to Momentum after the MVA. Treatment at Momentum PT on and after July 7, 2022 was unauthorized and unrelated to the work injury.

35. Claimant saw Dr. Weinstein for a second orthopedic opinion on August 15, 2022. Claimant reported constant moderate pain in the anterior and posterior aspects of his shoulder radiating up to his neck. Dr. Weinstein noted, "it appears he did have discomfort prior to his [MVA] which has significantly exacerbated his symptoms." Dr. Weinstein opined Claimant's symptoms were primarily myofascial in origin. He stated, "it is difficult to tell whether it is related to his motor vehicle accident or persistent from his original Workman's Compensation injury." Dr. Weinstein further noted, "he does have mild inflammation of the rotator cuff, which is residual from the surgery, as well as mild adhesive capsulitis, again difficult to know what his motion was prior to his motor vehicle accident." Dr. Weinstein administered a cortisone injection to Claimant's left shoulder and recommended 6 weeks of PT with myofascial treatment and joint mobilization.

36. Claimant attended several sessions of PT at Concentra in September 2022. The exam at the initial appointment showed rotator cuff weakness and multiple myofascial trigger points. Claimant was treated with therapeutic activities and dry needling.

37. Claimant saw Dr. Finn on August 22, 2022. He reported left shoulder pain with radiation to the scapula, clavicle, and left neck. Claimant told Dr. Finn he did not think the MVA had permanently aggravated the left shoulder condition. Examination showed tenderness of the left AC joint, sternoclavicular joint, and biceps grove. Dr. Finn also noted mild tenderness and spasm of the left infraspinatus. Left shoulder strength and ROM were reduced. Dr. Finn opined Claimant's residual symptoms were probably musculoskeletal in nature, but recommended a repeat MRI to be sure there was no other anatomic basis for his shoulder pain. He also indicated Claimant could consider trigger point injections in the sternoclavicular joint.

38. The left shoulder MRI was completed on September 12, 2022. It showed post-operative changes and ongoing supraspinatus and infraspinatus tearing.

39. Claimant followed up with Dr. Finn on September 20, 2022. Dr. Finn noted decreased shoulder range of motion with positive impingement signs. He recommended Claimant follow up with Dr. Weinstein.

40. Dr. Weinstein re-evaluated Claimant on October 12, 2022. He stated the rotator cuff repair had healed and Claimant's symptoms were related to left upper extremity and paracervical myofascial inflammation. He saw no indication for additional surgery and released Claimant back to Concentra to determine MMI and impairment.

41. Claimant completed an FCE on November 7, 2022. He reported 9/10 pain in the left shoulder and clavicle with pins/needles at the left side of his neck. The evaluator determined Claimant was capable of Medium level work.

42. Claimant was put at MMI on November 22, 2022 by Dr. Kathryn Murray at Concentra. Claimant described difficulty with activities that require reaching overhead or behind his back, such as donning a t-shirt, pulling up his pants, and washing his back. His sleep was poor because of inability to find a comfortable position. He also reported difficulty with recreational activities such as golfing, playing pool, bowling, and volleyball because of the shoulder. Examination showed tenderness to palpation over the left clavicle, trapezius and parascapular muscles. Dr. Murray noted rotator cuff weakness and limited range of motion. Dr. Murray assigned a 26% upper extremity rating, consisting of 18% for range of motion deficits and 10% for the distal clavicle excision. The extremity rating converts to 16% whole person. She gave Claimant permanent work restrictions of occasional lifting and carrying up to 20 pounds, and occasional pushing/pulling up to 40 pounds. Dr. Murray opined Claimant required no maintenance treatment and released him from care.

43. Respondents filed a Final Admission of Liability on February 15, 2023, admitting for a 26% scheduled impairment rating and denying maintenance medical care per Dr. Murray's report.

44. Dr. Cebrian conducted a records review and issued a report dated June 7, 2023 addressing permanent impairment. Dr. Cebrian opined that the June 19, 2022 MVA was an intervening injury that aggravated Claimant's cervical spine, left shoulder, upper back, and low back. Accordingly, Dr. Cebrian opined Claimant's current complaints involving the neck, trapezius, and shoulder blade are secondary to the motor vehicle accident rather than the work injury. He further opined that any claim-related functional impairment was limited to the left arm and did not extend to the neck or trunk, as the ongoing complaints involving these body parts were unrelated to the work injury. Dr. Cebrian also opined that the distal clavicle resection performed did not inhibit function beyond the arm at the shoulder. Finally, Dr. Cebrian opined that no further claim-related medical care was necessary.

45. Claimant proved he suffered functional impairment not listed on the schedule of disabilities. Claimant's testimony regarding the symptoms and functional impairment related to his left shoulder is credible and persuasive. Dr. Cebrian's opinion that Claimant has no injury-related functional impairment beyond the arm is not

persuasive. Claimant's testimony is supported by medical records showing shoulder-related pain affecting areas of his torso including the left clavicle, left pectoralis muscle, trapezius, and left periscapular muscles. These issues were documented before the June 19, 2022 MVA, including in Dr. Peterson's May 24, 2022 report. The most closely contemporary records after the MVA referenced "a mild cervical strain but no significant traumatic injury," and indicated he was close to "baseline" less than a week after the accident. The accident may have caused some temporary increase in Claimant's neck pain, but the persuasive evidence shows the great majority of Claimant's proximal symptoms are related to the admitted shoulder injury. Although Claimant had some documented neck pain before the work accident, the injury aggravated and perpetuated the symptoms.

46. Claimant proved TTD benefits should be reinstated effective May 24, 2022. Claimant's TTD benefits were terminated on April 6, 2022, based on Dr. Bogart's opinion that Claimant was at MMI with no restrictions. Absent a DIME, the ALJ lacks jurisdiction to question Dr. Bogart's determination that Claimant was at MMI on April 6, 2022. However, Dr. Peterson subsequently determined Claimant was not at MMI and reinstated work restrictions. Respondents have conceded that Claimant is entitled to additional TTD benefits from May 24, 2022 through November 21, 2022, when Claimant was again put at MMI.

47. Claimant failed to prove entitlement to a general award of medical benefits after MMI. No treating or examining provider has recommended any ongoing treatment related to the work injury. Dr. Cebrian's opinion that Claimant requires no maintenance treatment is persuasive. Claimant is not a candidate for surgery, additional injections, or other active interventions. He completed PT and has been instructed in a home exercise program. He has not been prescribed medication for any injury-related condition in more than a year. Although Claimant continues to have symptoms, there is no persuasive evidence he needs treatment to relieve symptoms or prevent deterioration of his condition.

48. At the hearing, Claimant demonstrated visible disfigurement consisting of: five ½-inch diameter irregularly shaped, discolored arthroscopic surgery portal scars, and a ¾-inch diameter irregularly shaped, discolored surgical scar on the left shoulder. The ALJ finds that Claimant should be awarded $1,500 for disfigurement.

MEDICAID LIEN

49. The Colorado Department of Healthcare Policy and Financing (HCPF) issued a notice to Respondents' counsel on March 9, 2023 with an extensive Medicaid lien totaling $35,668.43, as of that date. The notice stated HCPF must be reimbursed for the amounts specified by statute if a settlement is reached on the claim.

50. The Medicaid lien includes charges for treatment unrelated to the workers' compensation claim and from providers not authorized to treat under the workers' compensation claim. These include charges from Dr. Pollack, Metamorphosis Pain

Management, Broadway Pharmacy (for Buprenorphine and Naloxone), and from Momentum PT after the June 19, 2022 motor vehicle accident.

51. Claimant sought treatment at the St. Mary Corwin emergency department shortly after the work accident on April 13, 2021. This treatment was reasonably needed and authorized as "emergency" treatment for the work injury. Respondents are liable for these charges.

52. Claimant saw Dr. Lloyd at Southern Colorado Family Medicine on April 15, 2021. Although the appointment was related to Claimant's left shoulder injury, it was not emergent in nature and occurred before Employer was given notice of Claimant's injury. Accordingly, the treatment was unauthorized. Respondents are not liable for the April 15, 2021 office visit at SCFM.

53. Claimant underwent an MRI of the left shoulder on April 22, 2021 at St. Mary Corwin Medical Center. This MRI was ordered by his PCP **before** the April 13, 2021 work injury. The April 22 MRI was unauthorized and not the responsibility of Respondents.

54. Dr. Jennifer FitzPatrick is an ATP per referral from Concentra. Medicaid paid for the following office visits with Dr. FitzPatrick: May 10, September 22, October 20, and December 1, 2021, and February 9, 2022. Those visits should have been covered by Respondents.

55. Dr. FitzPatrick performed left shoulder surgery at Parkview Medical Center on May 25, 2021. PA-C Catherine Fitzgerald assisted during the surgery. Anesthesia and other ancillary services were also provided in connection with the surgery and billed separately. The surgery was reasonably needed to cure and relieve the effects of the work injury. Accordingly, Respondents must reimburse Medicaid for all surgery-related charges from May 25, 2021.

56. Dr. FitzPatrick prescribed oxycodone for post-surgical pain management. She subsequently transferred responsibility for post-operative pain medication to Dr. Pollack. Medicaid paid for oxycodone prescriptions filled on May 25, June 7, 15, 22, and 30, and July 6, 2021 through Catholic Health Initiatives. Respondents must reimburse Medicaid for these charges.

57. Dr. FitzPatrick referred Claimant to post-operative physical therapy at Momentum Physical Therapy. Claimant treated with multiple therapists, including Kaitlin McGrath, Cydne Rossi, Kasey Ro, Justin Dirks, and Nathan Baratta. Respondents must reimburse Medicaid for these PT sessions at Momentum between June 7, 2021 and March 3, 2022.

58. Claimant had a cervical MRI on July 8, 2021 at Dr. FitzPatrick's request. The purpose of the MRI was to investigate whether Claimant's neck pain was related to the work accident or noninjury-related conditions. This diagnostic evaluation was reasonably needed and causally related to the industrial injury.

59. A repeat left shoulder MRI was performed on November 18, 2021 at Dr. FitzPatrick's request. The MRI was initially interpreted by Dr. Krynn Stegelmeier. The November 18, 2021 MRI was reasonably needed and causally related to the work accident.

60. Claimant had another left shoulder MRI on September 12, 2022 at Dr. Finn's request. This MRI should have been covered by Respondents.

CONCLUSIONS OF LAW

A. Whole Person Impairment

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc.*, W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius or scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ's finding of whole person impairment). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc.*, W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved he suffered functional impairment not listed on the schedule. Claimant has consistently reported symptoms and associated functional limitations affecting multiple areas proximal to the glenohumeral joint, including his left clavicle, pectoral muscle, trapezius, scapula, and paracervical muscles. The surgery performed by Dr. FitzPatrick objectively changed the anatomy of structures beyond the arm, including the clavicle. Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008); *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). These symptoms interfere with his ability to perform routine activies, and contributed to the imposition of significant permanent work restrictions. Admittedly, the question of causation is confounded by the June 2022 MVA. But the aforementioned issues were documented before the MVA, including in Dr. Peterson's May 24, 2022 report. While the accident may have caused some temporary increase in Claimant's neck pain, the persuasive evidence shows the lion's share of Claimant's proximal symptoms are related to the admitted shoulder injury.

B. TTD benefits after April 5, 2022

Judge Lamphere awarded TTD benefits commencing April 14, 2021. Once commenced, TTD benefits "shall continue" until the occurrence of a terminating event enumerated in § 8-42-105(3)(a). Those terminating events include reaching MMI and being released to return regular employment.

Respondents terminated TTD benefits effective April 6, 2022, based on Dr. Bogart's opinion that Claimant was at MMI and could return to work with no restrictions. Although Claimant argues Claimant could not have performed his regular work at that time, that is immaterial because the declaration of MMI was an independent basis for termination of TTD. Any ATP has the authority to put a claimant at MMI, and there is no requirement of a prior treatment relationship or in-person evaluation. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *Rosten v. City of Durango*, W.C. No. 5-128-609 (September 8, 2022). The ALJ lacks jurisdiction to question Dr. Bogart's determination that Claimant was at MMI on April 6, 2022.

However, Dr. Peterson subsequently determined Claimant was not at MMI as of May 24, 2022, referred Claimant for more evaluations and treatment, and reimposed work restrictions. Respondents have conceded that Claimant is entitled to reinstatement of TTD benefits on May 24, 2022, and continuing until he was put at MMI by Dr. Murray.

C. Medical benefits after MMI

Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). A claimant need not be receiving treatment at the time of MMI or prove that a particular course of treatment has been prescribed to obtain

a general award of *Grover* medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). If the claimant establishes the probability of a need for future treatment, they are entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove entitlement to a general award of medical benefits after MMI. No treating or examining provider has recommended any ongoing treatment related to the work injury. Dr. Cebrian's opinion that Claimant requires no maintenance care is persuasive. Claimant is not a candidate for surgery, additional injections, or other active interventions. He completed PT and has been instructed in a home exercise program. He has not been prescribed medication for any injury-related condition for well over a year. Although Claimant remains symptomatic, there is no persuasive evidence he needs treatment to relieve symptoms or prevent deterioration of his condition.

D. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained noticeable disfigurement as a direct and proximate result of his industrial injury. The ALJ concludes Claimant should be awarded $1,500 for disfigurement.

E. Medicaid Lien

If Medicaid pays for medical treatment for which a third party is liable, the Colorado Department of Health Care Policy and Financing has an automatic stautory lien for all such payments. Section 25.5-4-301(4), (5) C.R.S. The respondents are liable for medical treatment from authorized providers reasonably needed to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The respondents are also liable for diagnostic testing where such tests have a reasonable prospect of defining the claimant's condition and suggesting a course of treatment. *E.g., Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (February 23, 2012).

Besides showing that treatment is reasonably necessary, the claimant must prove the provider is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). "Authorization" refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Authorization is distinct from whether treatment is "reasonably needed" within the meaning of § 8-42-101(1)(a). *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995). Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals

made in the "normal progression of authorized treatment." *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

The mere fact that respondents deny a claim does not automatically entitle the claimant to select their own physicians. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). Unless the ATP refuses to treat based on lack of authorization or advises the claimant to follow up with their personal providers, the respondents are not liable for treatment the claimant pursues outside the chain of referral. *E.g.*, *Ruybal v. University of Colorado Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988); *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008).

Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). However, once the emergency has ended, the claimant must notify the employer of the need for continuing medical treatment and the employer then has the right to select a physician. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

As found, Medicaid paid medical expenses for which Respondents are liable. However, the March 9, 2023 lien notice from HCPF includes expenses that are not recoverable as part of Claimant's workers' compensation claim. The valid elements of the Medicaid lien are outlined in Findings of Fact Nos. 49-60 and will not be repeated here. For ease of reference, the parties may refer to the attached "Appendix A," wherein the charges that must be reimbursed by Respondents have been identified with a green checkmark.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD benefits based on a 16% whole person impairment rating. Insurer may take credit for any PPD benefits previously paid in this claim.

2. Insurer shall pay Claimant TTD benefits, at the admitted rate of $333.33 per week, from May 24, 2022 through November 21, 2022.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

4. Claimant's claim for TTD benefits from April 6, 2022 through May 23, 2022 is denied and dismissed.

5. Insurer shall pay Claimant $1,500 for disfigurement.

6. Claimant's claim for medical benefits after MMI is denied and dismissed.

7. Insurer shall reimburse the Colorado Department of Health Care Policy and Financing for injury-related expenses paid by Medicaid as set forth in the findings of fact and conclusions of law herein.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that a spinal cord stimulator trial should be approved as reasonable and necessary maintenance medical treatment for Claimant's workers' compensation claim.

FINDINGS OF FACT

1. Claimant sustained a crush injury to his right leg on May 4, 2012, and underwent eight surgeries in 2012 for repair of a tibial metadiaphyseal fracture and a transverse process fracture. Dr. Caroline Gellrick was Claimant's primary provider who placed Claimant at maximum medical improvement (MMI) on February 27, 2014. Dr. Gellrick noted at MMI that an EMG/nerve conduction study occurred on September 3, 2013, showed a peroneal nerve impairment. Claimant had a thermography and a triple phase bone scan on September 25, 2013, which were negative for CRPS. Claimant continued treatment under maintenance care.

2. On April 6, 2017, Claimant saw Dr. Dominique Schiffer at UC Health. He complained that his ankle and foot felt like they were in a vice all day and that he would experience pain that extended from the lateral part of the knee and which had a sensation similar to a person stabbing a sharp rod down into his foot. Claimant also complained that he had sensitivity in his anterior shin area. Dr. Schiffer observed some hair changes, but suspected those were attributable to Claimant's multiple operations and skin grafts. She also noted Claimant's skin was warm and dry with no color changes observed. Nevertheless, Dr. Schiffer diagnosed Claimant with chronic regional pain syndrome (CRPS). Due to failure of more conservative treatments, Dr. Schiffer recommended lumbar sympathetic blocks under fluoroscopic guidance with a consideration of a spinal cord stimulator if the blocks were not effective.

3. On May 4, 2017, Dr. Kathy McCranie performed a record review to address the recommendation for lumbar sympathetic blocks. Dr. McCranie reviewed Claimant's medical history and noted that Claimant's symptoms did not meet the Budapest criteria for determining whether Claimant had CRPS. Specifically, she noted that although Claimant exhibited allodynia, Claimant did not exhibit other criteria, such as loss of range of motion or hair changes. Dr. McCranie felt that the

blocks were indicated only if Claimant had CRPS, which, in her opinion, Claimant did not.

4. Claimant nevertheless underwent lumbar sympathetic blocks on September 11, 2017.

5. The next day, Respondents sent a letter to Dr. Schiffer requesting clarification as to Dr. Schiffer's CRPS diagnosis. Dr. Schiffer responded, explaining that Claimant exhibited pseudomotor symptoms of sweating and swelling, allodynia, vasomotor signs of temperature symptoms compared to his other extremity, and "hair loss on the normal skin on his injured leg, i.e., not the scarred area."

6. Dr. McCranie performed a second record review on October 5, 2017, to address the need for a second lumbar sympathetic block. Dr. McCranie noted that the first injection was not beneficial. Dr. McCranie also noted that the Medical Treatment Guidelines allow for diagnostic sympathetic blocks for patients who exhibit clinical signs of CRPS, but that "further complex treatment would require a confirmed diagnosis." Because Claimant's medical records documenting his first visit with Dr. Schiffer did not demonstrate symptoms consistent with the Budapest criteria, Dr. McCranie felt that a CRPS diagnosis was not appropriate.

7. Dr. Schiffer referred Claimant to Dr. George Schakaraschwili for an infrared stress thermogram and automatic testing battery, including QSART, to evaluate Claimant for CRPS. Claimant saw Dr. Schakaraschwili on October 27, 2017, and complained of occasional ankle swelling with pain throughout his right lower leg that varied between five and nine out of ten. On examination, Dr. Schakaraschwili observed no swelling or discoloration, no abnormal skin temperatures, no trophic skin, hair, or nail changes (other than the skin grafts), and no hyperhidrosis. Claimant did complain of decreased sensation in the common peroneal and saphenous nerve distributions, and he exhibited decreased ankle range of motion. Dr. Schakaraschwili performed the infrared stress thermogram and the QSART. The thermogram showed no areas of significant temperature asymmetry, except where it corresponded with a skin graft. The QSART also showed findings consistent with a low probability for CRPS, noting only some sweat output asymmetry in an area corresponding to the saphenous nerve. Based on Claimant's history of diagnostic studies and Claimant's non-response to the lumbar sympathetic block, Dr. Schakaraschwili felt that Claimant's pain did not originate from the sympathetic nervous system and that Claimant did not meet the diagnostic criteria for CRPS.

8. Dr. Schiffer reviewed the results of Dr. Schakaraschwili's evaluation on November 7, 2017, and referred Claimant for an evaluation for a spinal cord stimulator.

9. Claimant underwent an IME with Dr. McCranie sometime around January 2, 2018. On physical examination, Dr. McCranie noted that Claimant exhibited decreased vibratory sensation in the right ankle and decreased pinprick sensation in the medial and lateral lower leg, as well as "right first web space and lateral right foot with allodynia along the right anterior tibialis and first web space in the right lower leg." Dr. McCranie observed no swelling in the lower extremities, though she noted the right ankle girth to be 0.5cm greater than the left. She observed no discrepancies in hair growth, besides the scarring, and no sudomotor or temperature asymmetries or discoloration of the skin.

10. Dr. McCranie ultimately opined that Claimant did not have CRPS, given the absence of symptoms consistent with the Budapest criteria, but instead had right peroneal neuropathy. Dr. McCranie felt that Claimant did not need any further diagnostic testing nor any changes to Claimant's treatment, aside from some possible modifications of his prescription medications.

11. Claimant returned to Dr. Schiffer on May 18, 2018. Dr. Schiffer observed that Claimant exhibited allodynia and hyperalgesia on the anterior and medial aspects of his right leg and the dorsum of his right foot as well as temperature asymmetry between his right and left feet. After thirty minutes of standing in the room while barefoot, Claimant's right foot was palpably cooler on the entire medial aspect and mild edema developed around his medial malleolus. Dr. Schiffer felt that Claimant's symptoms continued to meet the Budapest criteria for CRPS and that there was no other diagnosis that would better explain his symptoms.

12. Dr. David Orgel performed a record review of the matter on June 18, 2019, to address an out-of-state referral for a CRPS pain management and Dr. Schiffer's determination that Claimant's symptoms met the Budapest criteria for CRPS. Dr. Orgel opined that Claimant did not have CRPS based on "a negative response to a sympathetic block in September 2017, normal triple-phase bone scan in October 2017, a negative thermogram in October 2017, and a negative QSART in October 2017." Dr. Orgel agreed with Dr. McCranie that Claimant more likely had peripheral neuropathy.

13. An MRI was performed on March 3, 2020. The impressions were of no evidence of active CRPS.

14. On March 12, 2020, the parties held a *Samms* conference with Dr. Schiffer to discuss her referral of Claimant to an out-of-state treater in California. Dr. Schiffer agreed to instead refer Claimant back for repeat CRPS testing with Dr. Schakaraschwili.

15. Claimant returned to Dr. Schiffer on July 24, 2020. Dr. Schiffer continued to recommend a trial of a spinal cord stimulator, a peripheral nerve stimulation, or sympathetic nerve blocks. Dr. Schiffer also recommended that Claimant continue with his pain medications, use of his TENS unit, acupuncture, massage, and behavioral therapy to help manage the pain-related stress.

16. Claimant underwent an IME with Dr. Kathleen D'Angelo on March 17, 2021, to address, in part, the reasonableness and necessity of Claimant's ongoing medical treatments.[1] Ultimately, Dr. D'Angelo concluded that none of Claimant's ongoing maintenance medical treatment was reasonable and related and that the only reasonably necessary ongoing maintenance would be weaning off the pain medications.

17. Claimant returned to Dr. Schiffer on July 30, 2021. In her report, Dr. Schiffer wrote: "Will refer back to Dr. Rzasa Lynn for a second opinion as to how to get [Redacted, hereinafter JM] a stimulator trial. He is becoming more and more despondent regarding his pain; feeling no one can help him. I strongly believe he should have a stimulator trial. If it were to work, it would be life changing for JM[Redacted].

18. Claimant saw Dr. Yamamoto of Peak to Peak Family Medicine for the first time on October 1, 2021. Dr. Yamamoto reviewed Claimant's medical history and addressed the issue of CRPS and the need for a spinal cord stimulator. Dr. Yamamoto felt that it would not be beneficial, though he reserved the right to change his opinion "depending on [Claimant's] presentation."

19. On October 14, 2021, Claimant underwent another IME with Dr. McCranie. Dr. McCranie was again asked to address the question of whether Claimant's symptoms arose from CRPS. Dr. McCranie again opined that Claimant's presentation did not meet the diagnostic criteria for CRPS. Despite Claimant reporting allodynia and hyperalgesia, Dr. McCranie noted that Claimant exhibited no diagnostic asymmetries in skin temperature or color nor any edema, unusual sweating, or trophic changes. Regarding Dr. Schiffer's finding that Claimant exhibited edema and temperature changes after standing in bare feet for thirty minutes, Dr. McCranie felt that findings when seen at rest were more indicative of CRPS. Claimant's mild decreases in dorsiflexion and hyperalgesia, per Dr. McCranie, were explained by Claimant's history of peroneal neuropathy. Therefore, Dr. McCranie opined that Claimant was not a candidate for a spinal cord stimulator.

20. Claimant underwent additional testing with Dr. Schakaraschwili on December 9, 2021. The electrodiagnostic testing showed a severe peroneal nerve injury. The

[1] Dr. D'Angelo primarily addressed in the report questions related to an injury unrelated to this matter.

thermogram was normal and identical to the prior study, and the QSART was similarly low probability for CRPS, though there were some temperature abnormalities. Claimant also had a negative bone scan and a negative response to sympathetic blocks. Dr. Schakaraschwili opined that Claimant likely had a peripheral nerve injury and was likely experiencing neuropathic pain from that injury, and he further opined that Claimant was not a candidate for a spinal cord stimulator, though he could be a candidate for a peripheral nerve stimulator.

21. On August 27, 2022, Claimant saw Dr. Roberta Anderson-Oeser at Premier Spina & Pain Institute at Dr. Yamamoto's referral. Dr. Anderson-Oeser noted that Claimant had significant pain in a right peroneal nerve distribution. She noted Dr. Schakaraschwili's recommendation for an evaluation for a peripheral nerve stimulator. Therefore, Dr. Anderson-Oeser recommended visits with a Dr. Boyd as well as Dr. Giancarlo Barolat for evaluation for a peripheral nerve stimulator trial.

22. Claimant saw Dr. Barolat on October 19, 2022. Claimant reported that his pain would spread into the proximal thigh as well as into the posterior aspect of the thigh and that he noticed swelling of the leg, particularly at the ankle. Claimant also reported that none of the medications (Percocet, Butrans, morphine, and Lyrica) had been very effective in relieving his pain, and that he had not weaned himself off of all the medications. On physical examination, Dr. Barolat observed that Claimant had significant atrophy in the right leg and an area of severe allodynia on the anterior aspect of his lower leg. Dr. Barolat felt that lumbar sympathetic blocks would not be indicated since the symptomology had been present for so long and the blocks would have an "extremely low yield." Dr. Barolat considered peripheral nerve stimulation versus nerve root stimulation and spinal cord stimulation. He felt that because Claimant's distribution of pain involved the sciatic nerves and femoral nerves as well, Claimant's pain was too widespread to be amenable to stimulation limited to peripheral nerves and that stimulation of the L3 through S1 nerve roots would be more effective. Dr. Barolat also felt that such an approach would be reasonably necessary to possibly prevent further spread of CRPS. He based his opinions on his "experience with 10,000 neurostimulation implants over the past 40 years." Dr. Barolat submitted to Respondents a request for prior authorization for a trial spinal cord stimulator pursuant to Rule 16, W.C.R.P.

23. In response to Dr. Barolat's Rule 16 request for prior authorization, Respondents obtained a medical record review performed by Dr. Albert Hattem on November 15, 2022. Dr. Hattem noted that the Medical Treatment Guidelines for chronic pain (Rule 17, W.C.R.P., Exhibit 9) provided that the only indications for a spinal cord stimulator is where a patient has persistent radicular pain after lumbosacral spine surgery or has CRPS type 1 that failed conventional medical management. Dr.

Hattem, noting Claimant's multiple negative diagnostic tests for CRPS, felt that Claimant was not a candidate for a spinal cord stimulator.

24. Dr. Barolat submitted a new request for prior authorization for the same procedure on February 6, 2023. In an addendum to his request, he clarified his findings regarding the Budapest criteria:

> "The patient does report severe pain with allodynia in the right lower extremity. He also reports temperature asymmetry and skin color changes. He also reports weakness and decreased range of motion. At the time of the examination, there was clear evidence of allodynia. There was also evidence of decreased range of motion as well as weakness in the right lower extremity. The patient therefore qualifies for the clinical Budapest criteria for the diagnosis of complex regional pain syndrome."

25. Respondents submitted Dr. Barolat's second request for another medical record review by Dr. Hattem. Dr. Hattem's opinion remained unchanged, despite Dr. Barolat's findings regarding the Budapest criteria. Dr. Hattem reiterated that Claimant had undergone diagnostic studies on three separate occasions, all of which were negative for CRPS.

26. Respondents also obtained an opinion from Dr. McCranie regarding Dr. Barolat's second request. Based on her review of the additional records, Dr. McCranie felt that a spinal cord stimulator trial was not appropriate as "CRPS has been definitively ruled out."

27. Dr. McCranie also performed another IME in this case on July 25, 2023. At that examination, Claimant reported that all of his symptoms had worsened in that they had spread up his right leg into both hips, including his left knee. On physical examination, Dr. McCranie observed an area of hypersensitivity in the scarred area and in the distribution of the peroneal nerve. She observed no mottling or other skin color changes, no trophic changes in the hair, nails, or skin, and no sudomotor changes, edema or temperature changes. Dr. McCranie again opined that Claimant did not meet the criteria for CRPS, citing the following:

> Thermogram negative x 3 (09-23-2013, 10-27-2017, and 12-02-2021).
> Triple-phase bone scan negative for CRPS, 09-25-2013.
> QSART negative x 2 (10-27-2017, 12-02-2021).
> No benefit from lumbar sympathetic blocks, 09-20-2017.

28. Dr. McCranie reiterated that she felt the symptoms were limited to a peroneal nerve distribution.

29. Dr. Barolat testified that he was a specialist and board-certified neurosurgeon in both the United States and Italy. He had treated neuropathic pain and CRPS since 1985 and had treated, ever since then, thousands of patients with those conditions, including implantation of ten thousand nerve stimulators. Regarding his diagnosis of Claimant, Dr. Barolat testified that this was based on Claimant's history and his examination of Claimant.

30. In Dr. Barolat's opinion, Claimant sustained a major nerve injury to his right leg, which in turn developed into CRPS. He clarified that CRPS would cause allodynia—a condition where even the slightest touch will cause terrible pain—as well as atrophy and temperature changes. Dr. Barolat clarified that the spinal cord stimulator trial that he recommended would involve surgical implantation of electrical leads and that the leads would be removed if Claimant did not obtain a benefit from the stimulation.

31. Dr. Barolat was questioned regarding the Medical Treatment Guidelines on chronic pain. Dr. Barolat testified that there had been advancements in research regarding CRPS since the current version of the Medical Treatment Guidelines on chronic pain were issued in 2017. Specifically, there were advancements in understanding the underlying mechanisms of CRPS and more evidence that the condition is maintained by the autoimmune system.

32. Dr. Barolat was also questioned regarding Claimant's negative response to the sympathetic nerve blocks. Dr. Barolat explained that a high percentage of patients with CRPS will not respond to nerve blocks long after their injury, even if they would have responded early on. He felt that there was no significance in Claimant's non-response to nerve blocks, and, furthermore, outside of the workers' compensation context physicians do not give much value on those tests.

33. Although several other providers and examining physicians opined that Claimant's nerve injury was limited to the peroneal nerve, Dr. Barolat disagreed. Dr. Barolat testified that he believed that all the spinal nerve roots from L3 down were involved, as well as several other nerves noted in his report, as Claimant's complaints involved symptoms in dermatomes corresponding with those other non-peroneal nerves. And, although Claimant's injury involved the peroneal nerve, it was Dr. Barolat's testimony that a peroneal nerve injury can spread and develop into CRPS.

34. Claimant testified at hearing on his own behalf as well. Claimant testified that the pain was making it hard for him to focus or concentrate, that he would grind his teeth, and that he could not lift his right foot, and would sometimes catch the foot on things, causing him to fall. He testified that he was absolutely interested in

pursuing the spinal cord stimulator trial and had discussed the risks with Dr. Barolat.

35. Respondents called Dr. McCranie to testify at hearing. Dr. McCranie testified that she specialized in physical medicine and rehabilitation and pain management, and that part of her practice for the past thirty years has involved treating patients with CRPS.

36. Dr. McCranie also testified that she participated in the 2017 draft of the Medical Treatment Guidelines on chronic pain and CRPS, though her focus was on chronic pain portion. She testified that the Medical Treatment Guidelines are based on medical literature and research, and she disagreed with Dr. Barolat that only in Colorado do medical providers consider the Medical Treatment Guidelines. Furthermore, Dr. McCranie testified that she agreed with the statement in the Medical Treatment Guidelines that "Clinical criteria alone are not dependable nor necessarily reliable and require objective testing." She explained that doctors may disagree on what they observe when examining a particular patient.

37. Regarding Claimant's presentation, Dr. McCranie testified that one should look at the Budapest criteria. She observed that one of the criteria is whether the symptoms can be explained by another diagnosis. She felt that Claimant's symptoms could be explained by another diagnosis: peroneal neuropathy.

38. The Medical Treatment Guidelines, define spinal cord stimulation as "the delivery of low-voltage electrical stimulation to the spinal cord or peripheral nerves to inhibit or block the sensation of pain.[2] The system uses implanted electrical leads and a battery powered implanted pulse generator."

39. The Guidelines also note that "spinal cord stimulation devices have been FDA approved as an aid in the management of chronic intractable pain of the trunk and/or limbs, including unilateral and bilateral pain associated with the following: failed back surgery syndrome, intractable low back pain and leg pain."[3]

40. The Guidelines also describe a "spinal cord neurostimulation screening test" as one in which "a temporary lead is implanted at the level of pain and attached to an external source to validate therapy effectiveness." The test is positive if the patient either experiences a 50% reduction in radicular or CRPS pain and "demonstrates objective functional gains."

[2] Rule 17, W.C.R.P., Exhibit 7.
[3] Rule 17, W.C.R.P., Exhibit 9.

41. The Guidelines also address peripheral nerve stimulation. They recommend peripheral nerve stimulation for "proven occipital, ulnar, median, and other *isolated* nerve injuries."[4]

42. Dr. Barolat credibly testified and opined in his reports that Claimant's nerve injuries have spread beyond Claimant's peroneal nerve. It is well documented in Dr. Schakaraschwili's October 27, 2017 examination that Claimant's symptoms involved the saphenous nerve dermatome as well. Indeed, the peroneal and saphenous nerves arise from entirely separate nerve plexus, the sciatic and femoral respectively.[5] Based on this, Dr. Barolat credibly opined that peroneal nerve stimulation would not be sufficient to address Claimant's symptoms. This appears consistent with the Medical Treatment Guidelines recommendation that peripheral nerve stimulation be only for isolated nerve injuries. While it is not entirely clear whether Claimant in fact has CRPS, the Court finds it more probable than not that Claimant's nerve injuries have spread beyond the peroneal nerve distribution.

43. Based on Dr. Barolat's extensive experience treating neuropathic injuries and CRPS and his extensive experience with roughly ten thousand nerve stimulator implants, the Court finds Dr. Barolat credible insofar as he opined that stimulation of the L3 through S1 nerve roots would be more effective than focusing solely on the peroneal nerve and insofar as Dr. Barolat opined that a trial of a spinal cord stimulator would be reasonably necessary to address Claimant's ongoing lower extremity symptoms and to prevent possible CRPS from spreading.

44. To the extent that Drs. McCranie, Hattem, Schakaraschwili, and Yamamoto find the negative CRPS diagnostic tests to be the end of the analysis when addressing the need for a spinal cord stimulator trial, and to the extent they recommend only peripheral nerve stimulation, the Court finds those opinions less persuasive than those of Dr. Barolat.

45. Weighing the potential benefits of such a trial and the failure of other reasonable modalities in managing Claimant's pain, allodynia, and other symptoms, against the invasiveness of the treatment and the possibility of complications, the Court finds the spinal cord stimulator trial recommended by Dr. Barolat to be reasonably necessary maintenance medical care.

---

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – Spinal Cord Stimulator Trial

The Colorado Workers' Compensation Act ("the Act") provides that an employer must provide medical care "as may reasonably be needed . . . to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S.

Even where a respondent has admitted for ongoing maintenance medical benefits, it is not precluded from later contesting liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo.App.1997). Further, when the respondent contests liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1998); *Snyder*, 942 P.2d 1337.

As found above, the Court finds that the spinal cord stimulator trial recommended by Dr. Barolat is reasonably necessary to address Claimant's ongoing lower extremity symptoms and to prevent possible CRPS from spreading. Therefore, Claimant has proven by a preponderance of the evidence that the spinal cord stimulator trial recommended by Dr. Barolat is reasonably necessary maintenance medical treatment.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the spinal cord stimulator trial recommended by Dr. Barolat.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 17, 2023.

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-227-822-001

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage of $337.50.

2. The correct date of injury is November 16, 2022.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffered a lower back injury during the course and scope of his employment with Employer on November 16, 2022.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his November 16, 2022 industrial injury.

3. If Claimant sustained a compensable injury, whether a penalty should be assessed against him for late reporting pursuant to §8-43-102(1)(a) C.R.S.

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period January 11, 2023 until terminated by statute.

5. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

FINDINGS OF FACT

1. Employer is a temporary staffing agency that employed Claimant. On November 15, 2022 Claimant was assigned to begin work at a [Redacted, hereinafter BR] facility that processes propane tanks. His job duties involved preparing propane tanks for washing and reuse.

2. On November 16, 2022 Claimant began work at 4:00 a.m. Claimant explained he was removing a full propane tank from a pallet. As he twisted, the tank fell and he experienced pulling in his back. Claimant advised his Floor Supervisor [Redacted,

hereinafter DM] of his injury. DM[Redacted] took Claimant into the office of BR's[Redacted[Production Supervisor [Redacted, hereinafter JS].

3. Claimant testified he received a list of providers and selected Concentra Medical Centers. He planned to visit the Broomfield Concentra Center, but first drove from the BR[Redacted] facility in Henderson to his home in Thornton. Claimant took an Advil and laid down at home. He then called Employer, stated he did not need to visit Concentra, and would return to work on Monday.

4. The record reveals that Claimant has a significant history of lower back symptoms radiating into his legs. On June 28, 2018 Claimant presented to Salud Family Health Centers for sciatic pain, radiating from his right buttock down to his toes, that had been continuing for one year. He also reported lateral right thigh pain in his hip area. Claimant's medications included Neurontin 600 mg. X-rays revealed partial lumbarization of the S1 vertebral body with fusion on the left. Providers referred Claimant to physical therapy, orthopedics, and for an MRI.

5. On March 10, 2022, or approximately eight months before his alleged work injury, Claimant visited the emergency department at St. Anthony North for right-sided lumbar pain and radiculopathy. Coughing exacerbated his chronic, right lumbar back pain. A lumbar MRI revealed a 2 mm left sub articular-foraminal disc protrusion resulting in impingement on the emerging left S1 nerve root and severe left lateral recess narrowing. The imaging also reflected severe left and moderately severe right foraminal narrowing at L5-S1. Providers recommended repeat MRIs for further evaluation. Claimant's medical history included "chronic pain disorder" of the back.

6. Claimant returned to the BR[Redacted] facility on the following Monday, November 21, 2022, and worked for the first three days of the week. He was off work on Thursday and Friday for the Thanksgiving Holiday. Claimant testified he continued to complete his regular duties after returning to work, but could not perform as usual. He specifically had to take breaks by sitting down to rest his back and leg every 30-40 minutes. Claimant remarked he struggled to keep up with his job duties until he stopped working at the BR[Redacted] facility on November 30, 2022. Claimant acknowledged he had prior back problems, but his November 16, 2022 symptoms were on a different side.

7. JS[Redacted] testified that on November 16, 2022 Claimant reported he dropped a propane tank and tried catch it, but it struck him in the knee. In fact, Claimant was wearing a sleeve from a propane tank around his knee. JS[Redacted] inquired whether Claimant desired medical attention, but he declined. He gave Claimant a list of authorized medical providers and Claimant chose Concentra-Thornton Parkway. JS[Redacted] asked Claimant to complete a written injury form and interviewed Claimant's co-workers. The completed form stated Claimant had injured his knee, but did mention his lower back. Claimant then left the BR[Redacted] facility to obtain medical care, but later called JS[Redacted] stating he did not wish to receive any treatment and would return to work on Monday.

8. JS[Redacted] explained that he continued to check on Claimant during the following week. Claimant remarked he was feeling fine and continued to wear a self-

fashioned knee brace. JS[Redacted] commented that Claimant then advised him he would be ending his job assignment on November 30, 2022. Claimant specified that the cold and physical nature of the work, combined with his previous medical issues, were too much for him. JS[Redacted] explained he could accommodate light duty, even for temporary employees, if an individual provided a physician's note of restrictions. However, Claimant never requested light duty. JS[Redacted] emphasized that he did not receive any information that Claimant had injured his lower back. On January 11, 2023, when Claimant reported his lower back injury to Employer, JS[Redacted] completed a written statement.

9. On December 1, 2022, approximately two weeks after his alleged work injury and the day following his last day at BR[Redacted], Claimant presented to Salud Family Health Centers for a telehealth visit. He reported lower back pain with radiating symptoms down the left lower extremity. Claimant commented he "has had Sx's intermittently for years." He also stated he felt pins and needles in his feet. Notably, the report did not include any mention of a work injury. Claimant remarked he had been sent for an MRI and ortho/spine referral back in 2018 but was unable to schedule at the time. His current medications included Neurontin 600 mg. Providers referred Claimant for an MRI and to a spine specialist.

10. On December 15, 2022 Claimant returned to Salud for an evaluation. He again did not report any work injury.

11. On January 4, 2023 Claimant underwent a lumbar spine MRI at St. Anthony North without contrast. He completed an MRI safety screening form and stated his injury occurred on Saturday, November 19, 2022. Claimant did not list Employer as a responsible party, but only included himself and Medicaid. Claimant had also undergone previous lumbar imaging on March 10, 2022. In comparing the MRIs, Craig Stewart, M.D. noted the following impressions:

1. Overall similar appearance of multilevel lumbar spondylosis and scoliosis when compared with 3/10/22.
2. Multifactorial multilevel spinal stenosis again noted, greatest at the L3-L4 and L4-L5 levels although generally similar in the interval.
3. Multilevel neural foraminal stenosis, appearing most severe but unchanged on the left at L5-S1.
4. Degenerative endplate Modic changes at L3-L4 and L4-5, most likely degenerative/reactive and similar to prior, although a potential source of pain.

12. On January 9, 2023 Claimant again attended a telehealth visit at Salud. Claimant did not mention a work injury. He stated he had not been contacted by Spine West, despite a referral, and did not call for an appointment.

13. On January 11, 2023 Claimant reported his back injury to Employer. He visited Gordon Arnott, M.D. at Concentra in Broomfield. Claimant recounted that he was unloading the top level of propane tanks from approximately six feet high onto a conveyor belt. As he was lowering a tank, he twisted to his left to place it on a conveyor belt.

Claimant then experienced a strong, sharp pain similar to a muscle pull in his lower back. He denied any significant past medical history. On physical examination, Dr. Arnott noted a 10% loss of strength in the left lower extremity due to radicular symptoms and a positive straight leg raising test. He diagnosed Claimant with a lumbar strain and radicular leg pain. Dr. Arnott documented that his objective findings were consistent with the history and/or work-related mechanism of injury/illness. He referred Claimant for physical therapy, prescribed medications, and assigned restrictions of only working from one to four hours each day.

14. On January 16, 2023 Claimant returned to Dr. Arnott at Concentra. Dr. Arnott recorded that Claimant was a little better since his last visit after taking prescribed steroids. Claimant had not yet started physical therapy, but due to the severity of the left leg radicular symptoms, Dr. Arnott referred him for a neurosurgical consultation. Dr. Arnott again determined his objective findings were consistent with the history and/or work-related mechanism of injury/illness. He modified Claimant's work restrictions to only working up to four hours per day, sitting 95% of the time on a chair with a back, and performing only office work.

15. After two physical therapy visits, Claimant visited Michael Rauzzino, M.D. for a neurosurgical consultation on February 13, 2023. Dr. Rauzzino noted Claimant underwent an MRI on January 4, 2023 that had been compared to a study from March 30, 2020 or approximately seven months prior to the present injury. He commented that the findings were unchanged. Claimant denied prior back problems and was not sure why the MRI had been performed. Dr. Rauzzino stated it appeared Claimant had a chronic back condition. He concluded there was some question regarding the validity of the claim, but assuming Claimant experienced a flare-up of an unknown chronic condition, Dr. Rauzzino recommended an epidural steroid injection. Respondents subsequently denied Claimant's claim and he received no further treatment from either Concentra or any other Workers' Compensation provider.

16. On June 7, 2023 Claimant underwent an Independent Medical Examination (IME) with Lawrence A. Lesnak, D.O. Claimant explained that he was injured when he lowered an approximately 35-pound propane tank onto a waist-level conveyor belt and felt an acute "pull" in his left, lower back region. He remarked that he had never experienced any type of lower back symptoms and denied any prior lower back injuries. Dr. Lesnak determined that, although there may have been some type of incident on November 16, 2022, there was insufficient evidence to support any type of medical diagnoses as a result of the occupational incident. Notably, Claimant's reported history was inconsistent with the medical records that Dr. Lesnak reviewed. Specifically, Claimant suffered "symptomatic lumbar spine pathology that clearly predated 11/15/2022, for which he had undergone multiple medical evaluations in the past including an MRI on 03/10/2022, and a lumbar spine x-ray in June 2018." Dr. Lesnak commented there was no documented evidence of significant changes on the January 4, 2023 lumbar spine MRI when compared to the March 10, 2022 imaging. He explained that, although mild, soft tissue strain injuries may not be identified on lumbar spine MRIs, if Claimant had any injuries to his discs, nerve roots, facet joints, or lumbar vertebral bodies, they would have been clearly visible.

17. Dr. Lesnak testified at the hearing in this matter. He maintained that Claimant did not sustain any injury to his lower back on or November 16, 2022. Dr. Lesnak explained that Claimant denied any back or leg symptoms prior to mid-November, 2022. He reasoned that Claimant's denial of any prior back treatment or issues was inconsistent with the medical records. Moreover, Claimant's current complaints were identical to his symptoms at the time of his pre-injury treatment as noted in the records of Salud in June of 2018 and St. Anthony North in March of 2022. Dr. Lesnak also detailed that the March 10, 2022 MRI showed significant spinal pathology. He emphasized Claimant's spinal pathology predated his alleged November 16, 2022 work injury, it remained the same, and he was symptomatic both before and after the propane tank incident. Furthermore, Claimant did not report any work injury to the first medical provider he visited after the accident, and the December 1, 2022 report noted Claimant had experienced lower back pain radiating into the left lower extremity intermittently for years. Finally, Claimant's testing results from a psychosocial screening questionnaire suggested an underlying somatoform disorder in which patients commonly exaggerate or embellish symptoms.

18. Claimant has failed to establish it is more probably true than not that he suffered a lower back injury during the course and scope of his employment with Employer on November 16, 2022. Initially, Claimant explained that, as he was lowering a propane tank from a pallet onto a waist-level conveyor belt, he felt an acute pull in his lower back region. In contrast, JS[Redacted] testified that on November 16, 2022 Claimant reported he dropped a propane tank and tried to catch it, but it struck him in the knee. Claimant completed a written injury form specifying that he had injured his knee, but did mention his lower back. He did not obtain medical treatment, but returned to work at the BR[Redacted] facility on the following Monday. On December 1, 2022, approximately two weeks after his alleged work injury and one day after he ceased working at BR[Redacted], Claimant visited Salud and reported lower back pain with radiating symptoms down the left lower extremity. Claimant commented he had experienced the symptoms intermittently for years, but did not mention any specific injury on November 16, 2021. In fact, the record reveals that Claimant has suffered a chronic history of lower back symptoms for years.

19. Claimant also did not provide accurate and complete information to his Workers Compensation medical providers. He did not disclose his prior medical history to four different providers. In contrast to his medical records, Claimant simply denied any prior lower back injuries or treatment. Furthermore, Claimant sustained a felony conviction in the last five years for failing to register as a sex offender by falsifying his address. He also did not disclose his conviction in his answers to interrogatories. The felony specifically impeaches Claimant's credibility under §13-90-101, C.R.S. and CRE 608(B) due to his lack of character for truthfulness.

20. Dr. Lesnak also persuasively maintained that Claimant did not suffer any lower back injury on November 16, 2022. He explained that Claimant denied any back or leg symptoms prior to mid-November, 2022. However, Claimant's denial of any prior back treatment or issues was inconsistent with the medical records. Moreover, Claimant's current complaints were identical to his symptoms at the time of his pre-injury treatment as noted in the records from Salud in June of 2018 and St. Anthony North in March of

2022. Dr. Lesnak also emphasized that Claimant's spinal pathology predated his alleged November 16, 2022 work accident, his condition remained the same, and he was symptomatic both before and after the propane tank incident. Furthermore, Claimant did not report any work injury to the first medical provider he visited after the incident, and the December 1, 2021 report noted Claimant had experienced lower back pain radiating to the left lower extremity intermittently for years. Finally, Claimant's testing results from a psychosocial screening questionnaire suggested an underlying somatoform disorder in which patients commonly exaggerate or embellish symptoms. Dr. Lesnak summarized that, although there may have been some type of incident on November 16, 2021, there was insufficient medical evidence to support any type of medical diagnoses caused by the event.

21. Based on Claimant's lack of credibility, his pre-existing back condition, the credible testimony of JS[Redacted], and the persuasive opinion of Dr. Lesnak, it is unlikely that Claimant suffered a lower back injury while working at the BR[Redacted] facility on November 16, 2021. Accordingly, Claimant has failed to demonstrate that his work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. His Workers' Compensation claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician may provide diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms, there is no mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to establish by a preponderance of the evidence that he suffered a lower back injury during the course and scope of his employment with Employer on November 16, 2022. Initially, Claimant explained that, as he was lowering a propane tank from a pallet onto a waist-level conveyor belt, he felt an acute pull in his lower back region. In contrast, JS[Redacted] testified that on November 16, 2022 Claimant reported he dropped a propane tank and tried to catch it, but it struck him in the knee. Claimant completed a written injury form specifying that he had injured his knee, but did mention his lower back. He did not obtain medical treatment, but returned to work at the BR[Redacted] facility on the following Monday. On December 1, 2022, approximately two weeks after his alleged work injury and one day after he ceased working at BR[Redacted], Claimant visited Salud and reported lower back pain with radiating symptoms down the left lower extremity. Claimant commented he had experienced the symptoms intermittently for years, but did not mention any specific injury on November 16, 2021. In fact, the record reveals that Claimant has suffered a chronic history of lower back symptoms for years.

9. As found, Claimant also did not provide accurate and complete information to his Workers Compensation medical providers. He did not disclose his prior medical history to four different providers. In contrast to his medical records, Claimant simply denied any prior lower back injuries or treatment. Furthermore, Claimant sustained a felony conviction in the last five years for failing to register as a sex offender by falsifying his address. He also did not disclose his conviction in his answers to interrogatories. The felony specifically impeaches Claimant's credibility under §13-90-101, C.R.S. and CRE 608(B) due to his lack of character for truthfulness.

10. As found, Dr. Lesnak also persuasively maintained that Claimant did not suffer any lower back injury on November 16, 2022. He explained that Claimant denied any back or leg symptoms prior to mid-November, 2022. However, Claimant's denial of any prior back treatment or issues was inconsistent with the medical records. Moreover, Claimant's current complaints were identical to his symptoms at the time of his pre-injury treatment as noted in the records from Salud in June of 2018 and St. Anthony North in March of 2022. Dr. Lesnak also emphasized that Claimant's spinal pathology predated his alleged November 16, 2022 work accident, his condition remained the same, and he was symptomatic both before and after the propane tank incident. Furthermore, Claimant did not report any work injury to the first medical provider he visited after the incident, and the December 1, 2021 report noted Claimant had experienced lower back pain radiating to the left lower extremity intermittently for years. Finally, Claimant's testing results from a psychosocial screening questionnaire suggested an underlying somatoform disorder in which patients commonly exaggerate or embellish symptoms. Dr. Lesnak summarized that, although there may have been some type of incident on November 16, 2021, there was insufficient medical evidence to support any type of medical diagnoses caused by the event.

11. As found, based on Claimant's lack of credibility, his pre-existing back condition, the credible testimony of JS[Redacted], and the persuasive opinion of Dr. Lesnak, it is unlikely that Claimant suffered a lower back injury while working at the

BR[Redacted] facility on November 16, 2021. Accordingly, Claimant has failed to demonstrate that his work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. His Workers' Compensation claim is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: November 20, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-212-306-001

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that Employer 1, Employer 2 and Employer 3 had notice of the hearing.

II. Whether Respondents were uninsured Employers as if July 15, 2022.

III. Whether Claimant proved by a preponderance of the evidence who her employer was on July 15, 2022.

IV. Whether Claimant proved by a preponderance of evidence that she was injured in the course and scope of her employer with one or all of the employers on July 15, 2022.

IF THE CLAIM IS DEEMED COMPENSABLE:

V. Whether Claimant has shown by a preponderance of the evidence whether she was entitled to medical benefits related to her July 15, 2022 work related injuries.

VI. Whether Claimant proved by a preponderance of the evidence who her authorized medical providers are.

VII. Whether Respondents should pay Claimant interest on unpaid medical bills.

VIII. Whether Claimant proved what her average weekly wage (AWW) was at the time of the injury.

IX. Whether Claimant has shown that she was entitled to temporary total disability benefits (TTD), including statutory interest on any unpaid TTD.

X. Whether Claimant has proven by a preponderance of the evidence that Respondents should be penalized for failure to admit or deny the claim and for failure to carry workers' compensation insurance.

XI. Whether Respondents should post a bond to secure payment of benefits due.

PROCEDURAL HISTORY

A Prehearing Conference Order was issued by Prehearing Administrative Law Judge Gregory W. Plank on June 5, 2023 listed as employers Employer 1, Employer 2, and Employer 3.

Claimant filed an Application for Hearing dated June 13, 2023 on issues that included compensability, medical benefits that were authorized, reasonably necessary and related, temporary total and partial disability benefits, and multiple penalties. In addition, Insurer was listed. No response was filed by any of the listed employers or the listed insurer.

OAC sent Respondents a Notice of Hearing dated June 30, 2023 to their agent, Employer 2.

At the end of the hearing, Counsel requested that the record remain open for submission of multiple photographs, which were received, with the exception of one of Employer 2's truck. Counsel indicated that the photograph showed Employer 2's license plate and a sticker stating "Jesus is Glory."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Jurisdiction:

1. Respondents failed to appear at the hearing. Claimant provided a history of proper service to Employer 1 and Employer 2, including showing that Employer 1's website has Employer 2's email address, which is the same as the one listed on the Notice of Hearing.

2. This ALJ confirmed with the OAC staff that no emails were returned or bounced back to the OAC after emailing the NOH.[1]

3. Claimant sent multiple other pleadings to Employer 1, Employer 2 and Employer 3 without response, including notice of the Application for Hearing, notice of prehearing conferences, and the Notice of Hearing, as well as exchange of the exhibits.

4. Employer 1's website shows that they were a masonry company in the Denver Metro area and for all of Colorado. They noted they had greater than 17 years' experience and knowledge. They offered services in brick, block, stone, think brick, "tuckpointing," and all kinds of repairs. The only contact information for Employer 1, other than completing the online contact form, was Employer 2's email address.

5. Counsel indicated that he did not receive any undelivered mail from Employer 1 or Employer 2 but did receive returned mail sent to Employer 3. This was made as an offer of proof and was accepted as this is also shown in the evidence. As found, Employers 1 and Employer 2 had notice of the hearing.

6. Employer 3 listed Employer 2's name on a business card, showing Employer 2 as the company's "Project Manager." As found, Employer 3 had notice by virtue of the fact that Employer 2 was provided notice of the hearing, the pleadings listed Employer 3 and Employer 2 had notice of the hearing.

7. This ALJ found and concluded that this ALJ had jurisdiction to hear the matter as proper notice was sent to all three employers, by virtue of listing Employer 2's contact information on Employer 1's website and Employer 3 listing Employer 2 on their business card, respectively, as their contact agent.

B. Insurance Coverage:

[1] See Exhibit 15.

8. Claimant conceded that Insurer, who was listed on the pleadings, including the Application for Hearing, did not insure either Employer 1 nor Employer 3. Claimant moved to strike the listed Insurer. This ALJ granted the motion and issued a Bench Order on October 11, 2023 noting that Insurer was not a party to this claim and ordered they be removed as a party in this matter.

9. Claimant advised this ALJ that the Colorado Uninsured Employer's Fund's third party administrator had notice of the hearing and declined to participate.

C. Generally

10. Claimant was 35 years old at the time of the hearing and went to the 9th grade in Maracaibo, Venezuela.

11. Claimant was hired by her supervisor, Employer 2. She found Employer 2 through Facebook when looking for employment in Denver, under an employment group page for the Denver area with different employers advertising, including Employer 1. It provided a phone number, which Claimant contacted and spoke directly with Employer 2.

12. This phone number was the same number Claimant had in her string of texts on [Redacted, hereinafter WP], including Employer 2's profile picture that was generated by her supervisor. She generally communicated with Employer 2 via WP[Redacted] daily with regard to her work. While the profile picture changed, Claimant captured a photo of him before the hearing took place. She would have had a different picture of Employer 2 on his boat at his home address, if she had taken a screen shot a few weeks earlier, as the profile picture had recently changed. At the time of the hearing, Claimant showed this ALJ her WP[Redacted] page for Employer 2, which then contained a meme or caricature of a laughing man instead of a photograph of Employer 2.

13. Employer 2 lived off of [Redacted, hereinafter WV] in Denver. Employer 2 took Claimant there once, when they went to exchange a vehicle, because he had to have his truck repaired. Employer 2 indicated to Claimant that this WV[Redacted] address was his home. She identified the cream colored house in the picture at Exhibit 17 as Employer 2's house. Approximately 5 days before the hearing, Claimant's husband took a picture of Employer 2 working at an address on [Redacted, hereinafter CH], in Denver.

14. Claimant spoke with Employer 2 about the work advertised as masonry type of work, and Employer 2 offered her a job. He advised her that it would be hard work in construction. He advised Claimant that he would pay her $18.00 an hour for 40 hours a week. She was just newly arrived in the state, so needed and she accepted the work. She worked Monday through Friday though she sometimes also worked on Saturdays at least twice in the four weeks she worked before her accident, working six hours though Employer 2 only paid her straight time, instead of overtime.

15. Claimant started work on June 6, 2022. [Redacted, hereinafter GO] was the one to train her, including how to mix and carry the gravel, how to fill the cinder blocks, and how to use the pulley system to get the gravel to where she was working. Employer 2 was her boss the whole time she worked in construction up to the day she had her accident.

16. Employer 2 paid her cash every Friday and when she worked Saturdays, he would pay her for the Saturday work separately. Employer 2 was the only one to hand her and pay her the cash. She never noticed any signs of a construction company on the job sites and never thought to look for any. Neither had she ever asked Employer 2 what his full name was. After the accident happened a co-workers gave her a card with Employer 2's name on it, identifying Employer 2 as the project manager for Employer 3. However, it had a different phone number and email than the one that Employer 2 had given her or that she had taken off the Facebook page and website. Employer 2 worked with her every day, supervising her work.

D. The Accident:

17. On July 15, 2022 Claimant reported to work at approximately 7:30 a.m. Claimant was working for Employer 2 at [Redacted, hereinafter ET]. She had been on the job for approximately one month when the accident happened. She was four floors up, working on the scaffolding, where the parking lot was. The scaffolding board was sitting on top of another board. She had been putting the gravel in the cinder blocks, filling them in. She had asked her supervisor if the scaffolding was safe because she did not think the scaffolding was secured correctly as there were two boards on the scaffolding instead of just the one that they generally had. She was assured that it was.

18. Claimant was in a hurry, because her boss had to turn in the project. At approximately 10 a.m. on July 15, 2022 Claimant was in the process of reaching to grab a bucket full of gravel while standing on the scaffolding when the overlapped boards of the scaffolding separated, tilting and Claimant fell four stories to the ground, hitting various parts of her body on the scaffolding, including another level of the scaffolding and a couple of the X supports of the scaffolding, ricocheting on the way down. She believed that the fact that she hit so many areas of the scaffolding, slowed her fall down to the concrete ground, saving her from worse injuries. Claimant lost consciousness when she hit the ground. Employer 2 sent her to the hospital and told her that he would pay for her medical costs.

19. When Claimant was taken to the emergency room at Denver Health, another gentleman went to the hospital though he was not Spanish speaking and Claimant could not communicate with him. Employer 2 declined to accompany her to the hospital. She was told that the other man had gone because Employer 2 did not want to go and Employer 2 sent him to the hospital to check on Claimant.

20. In the fall of July 15, 2022, Claimant injured her face, teeth causing a tooth prosthesis to brake, hurt her coccyx, low back, arms, shoulders, neck, hip, left leg, mid back and neck. She also had substantial bruising on the right leg (middle and outer portions including the quadriceps), left foot and ankle as well as her left forearm. She stated that Denver Health released her with a neck brace. They did not give her any treatment for the shoulders, low back and leg. She had not yet seen the dentist to get her missing tooth fixed, despite trying, because it was too costly, approximately $2,000.00, and she could not afford it. She was seen at Denver Health but had not returned there since July 19, 2022 as they told her how much she had to pay before she

could receive more care and she did not have the money to pay. Her bills have since gone to collections.

E. Claimant's Testimony:

21. Claimant stated that she wished to have further medical and dental care to cure or relieve her of the effects of her injuries.

22. Claimant stated that she had not been able to work since the accident due to her continuing symptoms and injuries, which she has yet been able to have addressed by medical providers. When she was released from the emergency room she was released with a walker due to her low back and lower extremity pain. When she returned to Denver Health, they provided her with narcotic medication due to the severe pain she was experiencing after the fall.

23. She continued to have pain, including in the neck, shoulders, left leg and low back, on both sides. She had difficulty with standing, crouching, leaning over, straightening up, sitting due to pain in her coccyx, and moving from side to side. She had neck pain, especially in the dawn hours, which was constant. She had a gash of approximately 5 inches on her left leg but they did not do any stitches. She also continued with symptoms in her left leg, with numbness in her shin area, pain in the left knee and felt a pulsing pins and needles sensation. She had pain in her bilateral shoulders, right greater than left, especially going into the shoulder blades when lifting. She used acetaminophen and an ointment to alleviate some of the pain.

24. Claimant considered going to a chiropractor but was concerned about making her problem worse. She took multiple pictures, including of the all the bruising. They showed, in order, bruising on her right hip and upper right leg to her mid thigh, her neck brace, the cut on her left shin, extensive bruising on her right upper arm, arm pit, elbow and forearm, while in the hospital. There were subsequent pictures of her shin healing, but Claimant stated she had some infection after she was released and it took some time to have the swelling go down and heal. There were also pictures of her arm bruises, that were significantly discolored, as well as all the abrasions, and pictures of the healing bruises on her right upper thigh, left ankle, and left thigh.

25. Claimant took screen shots of Employer 1's website, which showed her supervisor's email address.

26. Claimant recalled seeing Employer 1's Facebook page that had multiple pictures of Employer 2 working, and several job sites, showing work Employer 2 had purportedly completed. Employer 2 also advised Claimant that he was a preacher and had invited Claimant to attend one of his services, but she never accepted and he never gave her an address where he preached.

F. Division Records:

27. The Division's demand letter for the employer to state a position dated May 18, 2023, as well as the letter demanding the employer file their statement admitting or denying the claim dated June 21, 2023, were sent to Insurer, not to any of the employers listed as parties. While this ALJ understands that Insurer had an obligation to provide the

notices to the correct employer, Insurer did not insure neither Employer 1 nor Employer 3.

28. Records from Insurer did indicate that Insurer insured Employer 1 beginning July 25, 2022.

G. Medical Records:

29. On July 15, 2022 Claimant was seen in the emergency room at Denver Health by Gabriel Siegel, MD. Claimant was brought in by ambulance, complaining of back pain and lower extremity joint pain following a fall from 30 feet. Dr. Siegel noted that EMS reported Claimant was witnessed to fall/jump from a 30 foot scaffolding that she was working on, landing on her feet, and then falling to the ground. Claimant had complained of back pain, and knee, hip, and ankle pain. There were no head strikes or loss of consciousness (LOC). She had abrasions to her right arm, and no appreciable deformities. EMS administered Fentanyl *en route*.

30. Dr. Siegel noted that "[P]er chart review: patient transferred with known acute fracture to right base of dens extending into the R side with displacement and fracture fragment in the narrowing of the canal. No intracranial abnormalities."[2] He reported that Claimant complained of severe pain, but no abdominal pain, chest pain, fever or shortness of breath. She was negative for fever, facial swelling, dysuria, seizures or confusion. He noted that she was positive for arthralgias and back pain. He noted bony tenderness of the lumbar spine and sacral midline tenderness, a laceration of the left anterior shin, motor weakness and multiple abrasions. She had a GCS[3] score of 15. There were at least 40 diagnostic or x-ray images taken. He noted that the MRIs of the spine showed no evidence of acute injuries to the cervical, thoracic or lumbar spine, though there were small disc bulges at L1-L2 and L2-L3. X-rays of the forearms, elbows, wrists, chest, left ankle and foot, right foot, knees, pelvis, were all normal. CT of the chest showed a lucency suspicious for small pneumothorax[4] but no additional acute traumatic injury to the chest, abdomen or pelvis or thoracolumbar spine. CT of the head and the cervical spine were normal. Her trauma shock index was normal. Another provider noted that Claimant had sensory weakness present.

31. Dr. Leah S. Warner admitted Claimant for observation. She took a history of "34 y.o. female who presented as trauma activation after fall >30ft." She noted that initial CT scans failed to show acute injuries, and she had stable labs. The patient continued to have neck pain and lower extremity paresthesias and they ordered an MRI. She was transferred to the Clinical Decision Unit (CDU) for imaging, pain control and final recommendations. On exam she noted claimant was positive for tenderness to palpation in the midline lumbar spine, with multiple abrasions. She was neurologically intact. Multiple other providers evaluated Claimant while in the emergency room and the CDU, while awaiting test results, mainly imaging.

---

[2] Nowhere else in the records were there mentions of a fracture.

[3] This ALJ infers that GCS stands for Glasgow Coma Scale and that a 15 indicates the highest level of consciousness.

[4] This ALJ infers that pneumothorax of the chest means that air had leaked into the chest cavity between the lungs and the chest wall, which is generally caused by trauma to the chest.

32. She was administered acetaminophen, ibuprofen, Toradol and Ativan. All imaging were normal except for the chest CT. Claimant had lab work performed showing Claimant was negative for any illegal or legal but control substances. She was seen by physical therapy who recommend a four point walker and she was advised to establish care with a primary care provider (PCP). Multiple other instructions were given in Claimant's native language, Spanish. She was discharged home with a front wheel walker, with diagnoses of fall, back pain and left leg pain.

33. Claimant was evaluated at the outpatient Hospital Transition Clinic at Denver Health on July 19, 2022 for acute back and left leg pain. They took a history of Claimant having been seen in the emergency room on July 15, 2022, following a 30 foot fall from a fourth floor, landing on her feet. They noted she had multiple imaging though noting only a pneumothorax on CT of the chest. They noted Claimant had swelling and bruising on her lateral left knee, had been using ice to the area, and continued to have nightmares of the fall. Claimant reported that her employer's insurance would be responsible for the treatment. Nurse Amy J. Witte noted that Claimant had coccyx pain, pain in multiple sites on her body and psychosocial problems. On exam she noted that Claimant had a large laceration to the left shin, no signs or symptoms of infection and swelling/bruising to the left knee and arm. She stated Claimant was having difficulty sleeping at night due to the pain. She recommended Claimant acquire a donut pillow and provided narcotic medication (oxycondone-acetamenophen) and a return to the clinic for further evaluation.

34. A billing statement from Denver Health showed a balance of $894.10 (after adjustments, $2,554.56 prior to adjustments) for specified dates of service from July 15, 2022 to July 19, 2022, including for CT scans, X-Rays, and the Clinic visit as well as an outpatient service. As found, these charges were related to the July 15, 2022 work related injury.

H. Conclusive Findings:

35. As found, Claimant provided sufficient notice to Employer 1, Employer 2 and Employer 3 that she filed a workers' claim for the injuries she sustained during the fall on July 15, 2022 and that a hearing was scheduled to determine whether one or all of the employers listed on the pleadings were liable for workers' compensation benefits in this matter.

36. As found, Claimant's counsel's representation that they contacted Employer 2 multiple times without response are deem reliable. Further, communications from Insurer showed that they did not cover any of the three employers for workers' compensation. They did confirm that they covered Employer 1 as of July 25, 2022. As found, Employer 1, Employer 2 and Employer 3 do not have policies for workers' compensation in the State of Colorado.

37. As found, Employer 2 was Claimant's employer. Employer 2 hired Claimant, trained Claimant and supervised Claimant. Employer 2 was Claimant's only point of contact and he, himself, paid Claimant for the work she performed. As found, Employer 2 was not only Claimant's supervisor or manager, he was Claimant's employer.

38. As found, Claimant established that she was injured in the course and scope of her employment working for Employer 2 on July 15, 2022, while filling blocks with gravel on the fourth floor of a building when the scaffolding failed and she plummeted to the ground, hitting her body on multiple structures of the scaffolding.

39. As found, Claimant has shown that Employer 1 and Employer 3 are one and the same and that Employer 2 was the Project Manager and supervisor for both. Employer 3's card with Employer 2's name supported this conclusion. Further, Employer 1's website also had Employer 2 as their contact person. However, it is uncertain whether Employer 2 owned Employer 1 and Employer 3 or if they were separate entities. As found and concluded, there is insufficient evidence that Claimant was working for either Employer 1 or Employer 3 at the time of the July 15, 2022 accident. The issue of whether Employer 1 or Employer 3 were actually Claimant's employers or were statutory employers is reserved for future determination.

40. As found, Employer 1, Employer 2 and Employer 3 were not insured for workers' compensation in the Colorado. Division sent Insurer a request for a statement to admit or deny the claim. Insurer provided confirmation that they did not insure Employer 1, Employer 2 or Employer 3 on July 15, 2022. In fact, the evidence showed that a policy for insurance commenced as of July 25, 2022 and that there was no coverage as of July 15, 2022. None of the listed employers provided Division with any information regarding insurance.

41. As found, Claimant was attended at Denver Health emergency room on July 15, 2022. Claimant's care was related to the injuries sustained during the fall off the scaffolding. Denver Health provided the emergency care and was authorized as the emergency provider.

42. As found, Claimant continued to have ongoing symptoms and injuries related to the fall of Jul 15, 2022 which have been left untreated at the time of the hearing. Claimant was credible and continued to require medical care. As found, Claimant showed that she was entitled to reasonably necessary and related medical care related to the July 15, 2022 work injury.

43. As found, Denver Health outpatient clinic declined to provide her with further treatment unless she paid for her care. This was deemed a refusal of the provider to treat Claimant for her work related injuries caused by the fall of July 15, 2022.

44. As found, Employer 2 knew or should have known that Claimant fell four floors and was taken to the hospital emergency room for care as Employer 2 was a witness to the fall. As found, Employer 2 should have provided a designated provider list and failed to do so. As found, Claimant was entitled to select her treating provider and Claimant selected Sander Orent, M.D. to be her authorized treating provider (ATP). As found and concluded, Claimant showed by a preponderance of the evidence that Dr. Orent is Claimant's ATP.

45. As found, Claimant's average weekly wage was $720.00 and her temporary total disability benefits rate was $480.00. This was calculated based on an hourly rate of $18.00 per hour multiplied by 40 hours a week. The Claimant's testimony regarding her

overtime hours was not sufficiently persuasive to increase this average weekly wage calculation.

46. As found, Claimant was unable to work following her injury due to her multiple injuries, specifically to her low back and left lower extremity. Claimant showed that she was entitled to temporary total disability since the date of her injury until terminated by law.

47. As found, Respondent Employer 2 failed to admit or deny Claimant's claim. Claimant is entitled to any penalties for Employer 2's failure to admit or deny the claim.

48. As found, Employer 2 failed to carry workers' compensation insurance and is penalized for failure to insure.

49. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. (2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, supra.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).

In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work-related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). A claimant is not required to prove causation by medical certainty; instead, it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See Industrial Commission v. Riley, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See Bodensieck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. Arenas v. ICAO, 8 P.3d 558 (Colo. App. 2000). Assessing weight,

credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. University Park Care Center v. Industrial Claim Appeals Office, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. Cordova v. ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See Burnham v. Grant, 24 Colo. App. 131, 134 P. 254 (1913); see also Heinicke v. ICAO, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See Prudential Ins. Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Jurisdiction

Claimant established that this ALJ had jurisdiction to hear the matter. Pursuant to Sec. 8-43-103(2) (2) "administrative law judges employed by the office of administrative courts shall have jurisdiction at all times to hear and determine and make findings and awards on all cases of injury for which compensation or benefits are provided by articles 40 to 47 of this title." *Dee Enterprises v. Industrial Claim Appeals Office*, 89 P.3d 430, 437 (Colo. App. 2003) (ALJ may not exercise jurisdiction, exert any powers, perform any duties, or assume any authority unless the right is granted by statute). See also *Lewis v. Scientific Supply Co., Inc.,* 897 P.2d 905, 908 (Colo. App. 1995).

Section 8-43-211(1), states in pertinent part that "[A]t least thirty days before any hearing, the office of administrative courts in the department of personnel shall send written notice to all parties by regular or electronic mail or by facsimile." In this case, OAC sent Respondents a Notice of Hearing dated June 30, 2023 to their agent, as demonstrated by the Claimant's testimony that she was hired by Employer 2 as well as Employer 1's website identification of Employer 2's email address and Employer 3's card showing Employer 2 as their "Project Manager." The NOH showed all three employers as listed in the pleading. Notice was also appropriately provided to Insurer. Lastly, no emails were returned to the Office of Administrative Courts. Therefore, it was determined that this ALJ had proper jurisdiction to address the issues set for hearing.

C. Claimant's Employer on July 15, 2022

Claimant credibly testified that she contacted Employer 2 by responding to a Facebook notice of employment which listed Employer 1 but provided Employer 2's email address. Employer 2 communicated with Claimant by WP[Redacted] for all the work they performed. Employer 2 hired Claimant and agreed to pay her, and actually handed over personally all wages to Claimant. Employer 2 was the one to train her and supervised

her work. Claimant was not made aware of any statutory employers or other companies under which they may have been working. As found, Employer 2 was Claimant's employer of injury on July 15, 2022.

There was persuasive evidence that Employer 2 was associated with Employer 1. This ALJ cannot conclude on the available evidence that Employer 2 was an owner of said company, but he clearly represented to the world through Employer 1's website that he was a representative of that company as Employer 1 listed Employer 2's email address. However, there are no contracts of hire, no social media communications, paychecks, or other documentation in the record available at this time to conclude that Employer 1 was Claimant's employer or a general contractor for Employer 2. The issue of whether Employer 1 was an employer or a statutory employer is specifically reserved for future determination.

There was persuasive evidence in the form of a business card that Employer 2 was associated with Employer 3. This ALJ cannot conclude on the available evidence that Employer 2 was an owner of said company, but he clearly represented to the world through his business card that he was a representative of that company. However, there are no contracts of hire, no WP[Redacted] communications, paychecks or other documentation available at this time to conclude that Employer 3 was Claimant's employer or statutory employer. This issue is specifically reserved for future determination.

D. Compensability

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

As found, Claimant was in the course and scope of her employment for Employer 2 on July 15, 2022 while filling blocks with gravel on the fourth floor of a structure when she fell off a scaffolding, falling approximately 30 feet, hitting multiple scaffolding structures or braces and falling on the ground on her feet. Claimant was working for Employer 2 under a contract of hire on that day. Claimant injured multiple body parts, including her neck, back, left hip, lower extremities, and bilateral shoulders and arms. The fall also caused nightmares. Claimant proved that it was more likely than not she suffered compensable work related injuries on July 15, 2022 while working for Employer 2 and was entitled to compensation.

E. Medical Benefits, Authorized Provider and Penalties

Employer 2 is liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; Sims v. Industrial Claim Appeals Office, 797 P.2d 777 (Colo. App. 1990). A claimant must establish the causal connection between the compensable event and the need for medical care with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106

(Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co*., 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra,* 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

Authorization refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997). Section 8–43–404(5), C.R.S.2011, gives employers or insurers the right to choose treating physicians in the first instance in order to protect their interest in overseeing the course of treatment for which they could ultimately be held liable. The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury, *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006), and if medical services are not timely tendered by the employer or insurer, the right of selection passes to the employee, *Andrade v. Indus. Claim Appeals Office,* 121 P.3d 328, 330 (Colo.App.2005).

As found, Claimant was attended at Denver Health emergency room on July 15, 2022 and July 19, 2022. Claimant's care was related to the injuries sustained during the fall off the scaffolding. Denver Health provided the emergency care and was authorized as the emergency provider.

As found, Claimant continued to have ongoing symptoms and injuries related to the fall of Jul 15, 2022 which have been left untreated at the time of the hearing. Claimant credibly testified that she continued to require medical care. As found, Claimant showed that she was entitled to reasonably necessary and related medical care related to the July 15, 2022 work injury. As found, Denver Health outpatient clinic declined to provide Claimant with treatment unless she paid for her care. This is deemed a refusal of the provider to treat Claimant for her work related injuries caused by the fall of July 15, 2022.

As found, Employer 2 knew or should have known that Claimant fell four floors and was taken to the hospital emergency room for care as Employer 2 was a witness to the fall. As found, Employer 2 should have provided a designated provider list and failed to do so. As found, Claimant was entitled to select her treating provider and Claimant selected Sander Orent, M.D. to be her authorized treating provider (ATP). As found and concluded, Claimant showed by a preponderance of the evidence that Dr. Orent is Claimant's ATP for her work related fall of July 15, 2022 injuries.

As further found, Employer 2 is financially responsible for the payment of Claimant's medical expenses, including the Denver Health bill in the amount of $894.10 for the outstanding medical benefits to Denver Health.

There was insufficient evidence to establish whether Claimant was due and owing interest for failure to pay medical benefits. This issue is reserved.

F. Average Weekly wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." Claimant was hired by Employer 2 who paid Claimant $18.00 per hour, for 40 hours a week. As found,

Claimant's average weekly wage was $720.00 at the time of the July 15, 2022 work related accident.

G. Temporary Total Disability Benefits and Interest

To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric,* 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.,* 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office,* P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

As found, Claimant's credible testimony, the photographic evidence and the medical records from Denver Health show that Claimant had a significant accident and injuries as a result of the July 15, 2022 fall. As further found, Claimant's testimony was persuasive that she had not been able to return to work following the fall of July 15, 2022 and through the date of the hearing. Nothing in the records showed that Claimant had been placed at maximum medical improvement and Claimant credibly testified that she had been unable to access further medical care due to the expense involved. Claimant showed that she was entitled to TTD as a consequence of the work related accident of July 15, 2022 while in the employ of Employer 2, until terminated by law.

Claimant was also due interest on all benefits which were not paid when due pursuant to statute at the rate of 8% per annum. Temporary total disability benefits and interest through the date of the hearing were calculated as follows:

[Redacted, hereinafter calculation chart]

Therefore, Claimant is owed $32,604.74 in past due TTD, including interest, through October 10, 2023. From the day of the hearing forward, Claimant continued to be owed TTD benefits until terminated by law but would only be entitled to interest until benefits were paid and up to date.

H. Insurance, and Penalties for Failure to Admit or Deny Benefits and to Insure under the Act

Section 8-41-404(1)(a), C.R.S. states as follows

> …every person performing construction work on a construction site shall be covered by workers' compensation insurance, and a person who contracts for the performance of construction work on a construction site shall either provide, pursuant to articles 40 to 47 of this title, workers' compensation coverage for, or require proof of workers' compensation coverage from, every person with whom he or she has a direct contract to perform construction work on the construction site.

Sec. 8-41-404(5) states:

> (a) "Construction site" means a location where a structure that is attached or will be attached to real property is constructed, altered, or remodeled.
>
> (b) "Construction work" includes all or any part of the construction, alteration, or remodeling of a structure.
>
> …
>
> (c) "Proof of workers' compensation coverage" includes a certificate or other written confirmation, issued by the insurer or authorized agent of the insurer, of the existence of workers' compensation coverage in force during the period of the performance of construction work on the construction site.

Pursuant to Sec. 8-43-203(1)(a), C.R.S. "The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee … within twenty days after a report is, or should have been, filed with the division … whether liability is admitted or contested."

As found, Claimant's supervisor and Employer 2 knew of the accident as he was a witness to Claimant's fall from the scaffolding and saw Claimant off on the ambulance to the hospital. He also sent a representative to the hospital to check on Claimant. As found, Employer 2 had notice of the accident and failed to file any documents with Division to either admit or deny the claim or provide any insurance information. Neither did Employer 2 contact Claimant to provide insurance information after the accident despite advising her that he would make sure her bills would be paid. As found, Respondents failed to secure insurance coverage for workers' compensation and failed to comply with the Act.

Under Sec. 8-43-203(2)(a), C.R.S. if notice of insurance is not filed with Division, the statute states that:

> …the employer or, if insured, the employer's insurance carrier, as the case may be, may become liable to the claimant, if the claimant is successful on the claim for compensation, for up to one day's compensation for each day's failure to so notify; except that the employer or, if insured, the employer's insurance carrier shall not be liable for more than the aggregate amount of three hundred sixty-five days' compensation for failure to timely admit or deny liability. Fifty percent of any penalty paid pursuant to this subsection (2) shall be paid to the subsequent injury fund, created in section 8-46-101, and fifty percent to the claimant.

As found, Employer 2 was responsible to Claimant for failure to admit or deny and Claimant was entitled to penalties. Claimant was entitled to one day's compensation for their failure to insure. From July 16, 2022 through the date of the hearing of October 11,

2023, there were 453 days. However the statute limits the maximum penalty to 365 days. Claimant was entitled to 365 days' penalty in this matter for failure to admit or deny the claim. Claimant's daily rate was $68.57, which multiplied by 365 was a penalty in the amount of $25,028.05.

Sec. 8-43-408(5), C.R.S. in effect at the time of Claimant's July 15, 2022 injury provides,

> In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

The penalty for failure to insure only applies to indemnity benefits and does not encompass medical benefits. *Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957); *Wolford v. Support, Inc.*, W.C. No. 4-155-231 (ICAO, Feb. 13, 1998). Statutory interest is not properly considered "compensation or benefits" within the meaning of Sec. 8-43-408(5), C.R.S. Interest is a statutory right intended to secure claimants the present value of benefits to which they were entitled by creating an equitable remedy for the lost time value of money during the accrual period. *Subsequent Injury Fund v. Trevethan*, 809 P.2d 1098 (Colo. App. 1991).

As found, Employer was not insured on Claimant's July 15, 2022 date of injury. Based on the preceding sections' calculation in the present Order, Employer 2 was required to pay Claimant $31,062.86 in TTD benefits. Twenty-five percent of $31,062.86 was $9,015.71. Accordingly, Employer 2 shall pay $9,015.71 in penalties to the Colorado Uninsured Employer Fund created in Sec. 8-67-105, C.R.S.

Pursuant to Sec. 8-43-408(2), C.R.S.

> [I]n all cases where compensation is awarded under the terms of this section, the director or an administrative law judge of the division shall compute and require the employer to pay to a trustee designated by the director or administrative law judge an amount equal to the present value of all unpaid compensation or benefits computed at the rate of four percent per annum; or, in lieu thereof, such employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado.

In this matter, Employer 2 shall pay the trustee of the Division of Workers' Compensation ("Division") an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. Alternatively, "employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado." Employer 2 may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

As found, this order awards ongoing benefits so the present value calculated in this order does not limit the amount Employer 2 will be required to pay. Claimant was owed $32,604.74 in TTD and interests benefits through October 10, 2023 and penalties of $25,028.05. The CUE Fund was owed $9,015.71 in penalties and Denver Health was owed at least $894.10 for a total of $67,542.60. Employer 2 shall deposit with the trustee of the Division the amount of $67,542.60 plus 4% interest per annum.

ORDER

IT IS THEREFORE ORDERED:

1. Employer 2 was Claimant's employer on July 15, 2022.

2. Claimant sustained compensable injuries to multiple body parts, as stated above, including but not limited to the neck, bilateral shoulders, arms, back, left hip, lower extremities, head and psychological sequelae, on July 15, 2022 during the course and scope of her employment with Employer 2.

3. Employer 2 shall pay Claimant's reasonably necessary and related medical benefits caused by the July 15, 2022 work related accident, including for Denver Health and Dr. Sander Orent, who was found to be an authorized treating provider. Further, if the Colorado Uninsured Employers' Fund designates a new provider pursuant to Rule 4-1, 7 CCR 1106-1[5] Employer 2 shall pay for the medical benefits under the new designated provider as well.

4. Claimant's average weekly wage was $720.00 and her temporary total disability benefits rate was $480.00.

5. Employer 2 shall pay Claimant TTD benefits from July 16, 2022 until terminated by law. Employer 2 shall pay interest on benefits due and owing at the statutory rate of 8% per annum. Benefits due and owing through the day prior to the hearing including October 10, 2023 were $32,604.74. TTD and interests continue to be due from October 11, 2023 until terminated by law and past due benefits are paid.

6. Employer 2 shall pay Claimant penalties for failure to admit or deny the claim in the maximum amount of 365 days for a total of $25,028.05.

7. Employer 2 shall pay $9,015.71 in penalties to the Colorado Uninsured Employer Fund created in Sec. 8-67-105, C.R.S.

8. In lieu of payment of the above compensation and benefits to Claimant and the CUE Fund, Employer 2 shall:

   a. Deposit the sum of $67,542.60, adding 4% per annum, with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of

[5] Rules Governing the Colorado Uninsured Employer Fund under the Workers' Compensation Act, Colorado Department of Labor And Employment, Division of Workers' Compensation, 7 CCR 1106-1 Title 8, Article 67.

Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Trustee; or

b. File a bond in the sum of $67,542.60 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

c. Employer shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

10. Employer shall pay statutory interest at the rate of 8% per annum on benefits not paid when due.

11. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or order authorizing distribution provides otherwise.

12. Pursuant to Sec. 8-42-101(4), C.R.S., any medical provider or collection agency shall immediately cease any further collection efforts from Claimant because Employer 2 is solely liable and responsible for the payment of all medical costs related to Claimant's July 15, 2022 work injury.

13. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days

after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts** or email the Petition to Review to oac-ptr@state.co.us. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. 5-084-400-007

ISSUES

I. Whether Claimant has overcome the DIME opinion by clear and convincing evidence that he is not at MMI because he sustained a compensable injury to his right shoulder?

II. Whether Claimant has proven by a preponderance of the evidence that he sustained additional disfigurement of the left shoulder?

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On September 23, 2017, while lifting a pipe that was stuck in the ground at work, Claimant was injured. E**x. W:514.** He was treated at Advanced Urgent Care, LLC the next day for off and on left shoulder pain, which was at a 2/10 but rose to a 5 when he moved the left shoulder. **Ex. C:054**. Claimant's neck and back were normal, and there were no right upper extremity or shoulder complaints. **Ex. C:054**.
2. An MRI Arthrogram of the left shoulder on October 25, 2017, requested by Julie Parsons, MD, showed abnormal pathology. **Ex. D:073**.
3. On September 28, 2017 and November 13, 2017, Claimant treated with Julie Parsons, MD, for left shoulder complaints only, and was released to full duty work. **Ex. C:057**.
4. Dr. Parsons referred Claimant to Thomas A. Mann, MD, who first evaluated Claimant on December 7, 2017. Claimant's complaints were regarding the left shoulder, although the right shoulder was mildly stiff at the extremes but had normal rhythm and good strength. **Ex. E:081**. Dr. Mann concluded that Claimant had a "left shoulder injury with acute-on-chronic appearance of significant cuff injury." **Ex. E:083**.
5. Claimant underwent left shoulder surgery by Dr. Mann on December 28, 2017. **Ex. F:162**.
6. On January 16, 2018, Dr. Mann saw Claimant post left shoulder operation, and instructed Claimant to wear his shoulder brace for any type of activity or when he is up and around. **Ex. E:088**. There was no mention of neck or right shoulder complaints.
7. Around seven weeks postop, on February 15, 2018, Claimant followed-up with Dr. Mann. Claimant was doing well, and only noted soreness and no regular pain. **Ex. E:090**. Eleven weeks postop, On March 15, 2018, were similar with approval of fairly limited lifting and pushing. **Ex. E:097**.
8. A physical therapy report dated April 3, 2018, recorded that Claimant "reports right hand got slammed in door 3/29/2018." **Ex. G:204**. Two days later, on April 5, 2018,

a physical therapy note states, “Patient reports that he had a fall in shower and broke right hand Patient reports that he did not hurt left shoulder with fall.” **Ex. G:206**.

9. On April 17, 2018, Dr. Mann reported that Claimant, “unfortunately broke his hand in the shower two weeks ago. He is also complaining of some right shoulder pain because he is using it more.” **Ex. E:098**. That same day, a physical therapy report states, “Patient reports that he is continuing to have more pain since he hurt his R hand (april 2nd) and has started having to use his L Upper extremity more.” **Ex. G:211**. “Patient has been having increase in shoulder pain and soreness at left upper extremity reports since breaking right hand and now using only left upper extremity.” **Ex. G:213**. “Patient having increased pain and difficulty with L upper extremity due to R hand injury. He reports that he has to use L upper extremity to shoulder bc he can not get cast wet.” **Ex. G:226**.

10. Despite what is documented in the medical records by multiple providers, Claimant testified that he did not sustain injuries to his right upper extremity after September 24, 2017. **TR. 40:4-9**. As a result, the ALJ does not find Claimant credible regarding the cause of his right shoulder pain.

11. During a visit on May 15, 2018, Dr. Mann noted that Claimant continued to have significant weakness and pain across the front of his clavicle into his pectoralis. **Ex. E:103**.

12. An MRI of the left shoulder on May 23, 2018, as requested by Dr. Mann, showed abnormal pathology evidencing a re-injury. **Ex. D:075**. On May 31, 2018, Dr. Mann noted that Claimant only had left shoulder pain, and a recurrent cuff tear with retraction and ongoing atrophy. **Ex. E:108**. Dr. Mann recommended another shoulder surgery. **Ex. E:110**.

13. Claimant underwent a second left shoulder surgery on August 15, 2018. **Ex. E:128; F:165**.

14. Claimant later complained of right shoulder and neck pain. **Ex. E.138**. Nevertheless, Dr. Parsons continued to identify the injured body part was the left shoulder. **Ex. C:070**.

15. On September 18, 2018, Claimant saw Dr. Mann because of “severe progression of right shoulder pain. He has been sweeping at work and this particular activity has flared up the shoulder to the point now that it is more severe than its operative side.” **Ex. E:143**. Dr. Mann wrote, “Given his chronic rotator cuff tear that was found in his left shoulder, I am suspicious he may have similar type of pathology in the right…” **Ex. E:147**.

16. Dr. Mann requested an MRI of the right shoulder, which was performed on September 22, 2018. **Ex. D:077**. The MRI showed abnormal pathology. **Ex. D:078**.

17. Mark S. Failinger, MD, saw Claimant on November 15, 2018, for a Respondent-sponsored IME. **Ex. A**. Dr. Failinger concluded that Claimant’s right upper extremity condition was unrelated to the September 23, 2017, industrial accident unless Claimant returned to work after surgery and was performing major lifting duties and tasks with only his right upper extremity. **Ex. A:012**. “It is fallacious reasoning to state

that a patient's opposite limb symptomatology is related to overuse of the opposite limb when favoring the injured limb." **Ex. A:012**.

18. Dr. Failinger also pointed out that there was no mention of any neck pain before the December 2017 visit with Dr. Mann, which was three months following the work accident. Thus, "it would appear that the neck symptoms were transient and likely due to cervical spine pathology rather than due to the work incident on 09-23-2017." **Ex. A:013**.

19. At the hearing, Dr. Failinger testified that sweeping with the right arm would not cause Claimant's preexisting right shoulder pathology to be symptomatic, unless he was sweeping at the shoulder level or above. **TR. 58:18-25**. Dr. Failinger also testified that throwing trash bags into a dumpster would not cause Claimant's preexisting pathology to be symptomatic unless they were extremely heavy bags, and he was throwing overhead all day long. **TR. 59:3-16**.

20. Dr. Failinger also stated that:

> In fact, he fell in the shower just a couple of weeks before the first report of right shoulder symptoms. He fell hard enough that he broke his right hand. And, you know, we can't say for sure that the shoulder was injured at that point, but there was no symptoms until that fall. And that raised a question of whether or not the fall created an acceleration of what was, no doubt, preexisting rotator cuff tearing in the right shoulder, the opposite shoulder, and that's possibly the reason he had developed symptoms after that fall.

TR. 55:9-19.

21. With respect to the right shoulder and neck being aggravated because he was using it more due to the left shoulder injury, Dr. Failinger testified that, "There is no supportable evidence in the medical literature of opposite side developing a pathology based on contralateral or other side injury or so-called favoring of the opposite extremity." **TR. 60:12-20**.

22. Dr. Failinger also testified that there was no relationship between the distal clavicle and the original fall. **TR. 62:17-20**.

23. Dr. Failinger's opinions are well reasoned and supported by the medical records. Thus, the ALJ finds Dr. Failinger's opinions to be credible and highly persuasive in concluding that Claimant's right shoulder condition is unrelated to overuse or to performing work tasks, such as sweeping or taking the trash out, after his 2017 left shoulder injury.

24. On November 27, 2018, Dr. Mann wrote that Claimant's right shoulder pain increased because of relying on the right shoulder now more than the left, contrary to his September 18, 2018, note. **Ex. E:148**. Dr. Mann also recorded Claimant's neck pain complaints, with radicular symptoms and numbness on the ulnar side of the hand. **Ex. E:148**.

25. Despite Dr. Mann indicating that Claimant's right shoulder pain increased because Claimant was relying more on his right side, Dr. Mann's statement seems to be merely

repeating Claimant's assertion, and not a medical opinion that Claimant injured his right shoulder due to overuse and needs medical treatment due to the alleged overuse. Thus, the ALJ does not find Dr. Mann's statement to be persuasive in determining Claimant allegedly overusing his right shoulder caused Claimant's right shoulder complaints and need for treatment.

26. A CT scan of Claimant's left shoulder, as requested by Dr. Mann, was performed on December 14, 2018, and showed mild glenohumeral joint arthrosis and superior migration of the humeral head with volume loss of the supraspinatus and infraspinatus muscles.

27. On December 19, 2018, Dr. Parsons discharged Claimant, stating that the "Injured employee requests treatment for a condition that is unrelated to the work injury: Patient is claiming a neck injury which is not the original injury of the Left shoulder which he did not start complaining of until after his second L shoulder surgery." **Ex. C:070**. Dr. Parsons also wrote, "Patient and his wife consistently request narcotic pain medication which has never been prescribed by me but by the surgeon; it has been explained at every visit that I am not prescribing any narcotics." **Ex. C:70**.

28. Claimant's care was transferred to Marc Steinmetz, MD, following discharge by Dr. Parsons. Dr. Steinmetz reported that it did not appear that Claimant had significant neck complaints or arm numbness or neck stiffness originally back in 2017. **Ex. H:287**. Dr. Steinmetz referred Claimant to a second opinion of pain management with Dr. Lesnak. **Ex. H:287**.

29. Lawrence A. Lesnak, DO, examined Claimant on January 31, 2019, and highlighted that Claimant's right shoulder symptoms started several months after the September, 2017 occupational incident. **Ex. I:313**. Dr. Lesnak also reported that claimant had a high level of somatic pain complaints. **Ex. I:313**.

30. Dr. Lesnak conducted an electrodiagnostic evaluation of Claimant's bilateral upper extremities and cervical spine, which was normal. **Ex. I:325**.

31. On May 21, 2019, Dr. Steinmetz reported his concern that Claimant was not likely to improve and possibly have more problems with further procedures. **Ex. H:295; 297; 300**.

32. Dr. Steinmetz placed Claimant at MMI on June 20, 2019, with impairment for the left shoulder only. **Ex. H:300**.

33. On October 28, 2019, Claimant was awarded $625.00 in disfigurement benefits by ALJ Michelle Jones. **Ex. GG:551**.

34. Richard Gordon, MD, conducted a DIME on November 6, 2019, and opined that Claimant was not at MMI because he should be evaluated for a left shoulder replacement. **Ex. B:031-042**.

35. On December 30, 2019, Dr. Steinmetz reported that Claimant continued to complain of left shoulder, neck, and new leg complaints. **Ex. H:304**.

36. By February 20, 2020, Dr. Lesnak wrote, "it appears that the patient has had a dramatic increase in his diffuse pain behaviors and nonphysiologic findings, which suggests severe psychosocial factors are currently present and affecting his

symptoms, his recovery, as well as his perceived function. His presentation was nearly completely nonphysiologic in nature today." **Ex. I:364**. He concluded that Claimant's right shoulder and neck complaints were unrelated to the September 24, 2017 claim. **Ex. I:368**.

37. Claimant's primary care was transferred to Annu Ramaswamy, MD, on April 29, 2020. **Ex. P:451**.

38. On Dr. Ramaswamy's recommendation, Claimant began treating with Philip Stull, MD, who recommended a performed a left reverse shoulder arthroplasty and distal clavicle excision on September 10, 2020. **Ex. N:436; 438; 445.** Following the left shoulder replacement procedure, Claimant dislocated the prosthesis and underwent a revision of left total shoulder prosthesis on October 2, 2020. **Ex. N:448**.

39. On January 13, 2021, Dr. Ramaswamy noted that Claimant's right shoulder hurt more than the left, and that Claimant was interested in right shoulder treatment. **Ex. N:474**. Claimant attributed the right shoulder pain as a result of compensation for the left shoulder. **Ex. N:476-477**.

40. Claimant was placed at MMI by Dr. Ramaswamy on April 7, 2021. He did not receive impairment for the neck or right shoulder. **Ex. N:483-484**.

41. Dr. Gordon saw Claimant on July 21, 2021, for a follow-up DIME. **Ex. B:043**. He opined that "there is no ratable injury to the right shoulder. There is no ratable injury to the cervical spine." **Ex. B:052**.

42. Claimant returned to Dr. Ramaswamy on January 4, 2023, at the request of his attorney for an evaluation. **Ex. N:492**. Claimant noted chronic pain in both shoulders, and despite a left shoulder replacement that clearly helped him (**Ex. N:480**), he told Dr. Ramaswamy that his left shoulder condition never changed. **Ex. N:492**.

43. For the purpose of disfigurement, Claimant's scar to his left shoulder was observed to be approximately 5 inches long, and approximately ½ inch wide. The scar is different in color than the surrounding skin. In addition, Claimant has some atrophy from his clavicle into his chest. Claimant was previously paid $625.00 in disfigurement benefits.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the

claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

A preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Off.,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Med. Ctr.,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Off.,* 12 P.3d 844 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has overcome the DIME by clear and convincing evidence that he is not at MMI because he sustained a compensable injury to his right shoulder?

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Off.*, 87 P.3d 261, 263 (Colo. App. 2004).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proven by clear and convincing evidence if, considering the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra*. When there are two or more reasonably supported medical opinions, the mere difference of opinion may, or may not, constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (Nov. 17, 2000).

Here, Claimant suffered an injury to his left shoulder in September 2017. Claimant contends that the injury to his left shoulder caused him to overuse his right upper extremity and overusing his right upper extremity caused him to develop a right shoulder condition that requires medical treatment. For example, Claimant testified that performing various work duties after the September 2017 accident, with his right upper extremity - such as sweeping and taking out the trash - caused him to develop right shoulder pain.

However, Dr. Failinger credibly and persuasively testified that Claimant using his right upper extremity to sweep or take out the trash would not cause Claimant to develop a new right shoulder condition, or aggravate his preexisting shoulder pathology, and necessitate the need for medical treatment.

Moreover, in April of 2018, Claimant fell in the shower and broke his right hand. Then, after Claimant fell in the shower and broke his right hand, he started complaining of persistent right shoulder pain. Dr. Failinger also credibly testified that the fall in the shower, with the onset of right shoulder pain after the fall, could be the cause of Claimant's right sided shoulder problems.

In the end, the ALJ finds and concludes that Drs. Failinger, Parsons, Steinmetz, and Dr. Lesnak all credibly concluded that Claimant's work-related injury was to his left shoulder only. The DIME physician agreed, and placed Claimant at MMI with an impairment rating for the left shoulder injury only.

Based on the totality of the evidence, the ALJ finds and concludes that Claimant failed to overcome the DIME physician's opinion by clear and convincing evidence. As a result, the Claimant is at MMI.

II. Whether Claimant has proven by a preponderance of the evidence that he sustained additional disfigurement of the left shoulder?

For the purpose of disfigurement, Claimant's scar to his left shoulder was observed to be approximately 5 inches long, and approximately ½ inch wide. The scar is different in color than the surrounding skin. In addition, Claimant has some atrophy from his clavicle into his chest. Claimant was previously paid $625.00 in disfigurement benefits. Claimant shall be paid an additional $2,250.00 for his disfigurement.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to overcome the opinion of the DIME physician. As result, Claimant is at MMI as of April 7, 2021, and his right shoulder condition is not related to his September 23, 2017, work injury.
2. Claimant shall be paid an additional $2,250.00 in disfigurement benefits.
3. The previously endorsed issues by the parties, are reserved. This includes, but is not limited to, PPD (including conversion), PTD, overpayment, recovery of overpayment, offsets, and credits. As a result, and any all issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 28, 2023.

ISSUES

Has Claimant demonstrated, by a preponderance of the evidence, that recommended medical treatment is reasonable and necessary to maintain Claimant at maximum medical improvement (MMI)? The recommended treatment modalities at issue are:

- left shoulder subacromial bursa injections and arthrocentesis;
- left upper extremity electromyography (EMG) study; and
- bilateral C5-C7 medial branch blocks.

Have Respondents demonstrated, by a preponderance of the evidence, that post-MMI medical treatment should be terminated because it is no longer reasonable, necessary, or related to Claimant's work injury?

FINDINGS OF FACT

1. Claimant suffered a compensable injury on January 2, 2017 when she experienced a slip and fall while at work. On January 6, 2017, Claimant was first seen by her authorized treating physician (ATP) Dr. Vanessa McClellan. In the medical record of that date, Dr. McClellan listed Claimant's symptoms as left shoulder soreness; neck soreness; right arm soreness; left knee tenderness; radiating pain from the left knee up to the left hip; and radiating pain from the left knee down to the left foot. Dr. McClellan diagnosed Claimant with a neck strain and a knee contusion. Dr. McClellan referred Claimant to physical therapy for the left shoulder.

2. After a period of physical therapy, Dr. McClellan ordered magnetic resonance imaging (MRI) of Claimant's left shoulder. In addition, Dr. McClellan referred Claimant for an orthopedic consultation.

3. On April 19, 2017, Claimant began treatment with orthopedist Dr. Peter Scheffel. Dr. Scheffel read the MRI as showing a partial versus full-thickness tear of the supraspinatus tendon with the appearance of upper-border subscapularis tearing and biceps tendon instability with tendinosis. Dr. Scheffel recommended an arthroscopy of the left shoulder to include possible rotator cuff repair, biceps tenotomy, and possible acromioplasty.

4. On May 18, 2017, Dr. Scheffel performed a left shoulder arthroscopic rotator cuff repair, biceps tenotomy, glenohumeral joint debridement, acromioplasty, subacromial decompression, and extensive debridement of the subacromial space. Following the surgery, Claimant underwent physical therapy.

5. Claimant testified that there was a delay in beginning physical therapy after surgery. As a result, Claimant developed adhesive capsulitis ("frozen shoulder"). Claimant further testified that in addition to physical therapy, she underwent injections. However, these treatments did not relieve Claimant's left shoulder symptoms.

6. On October 4, 2017, Claimant returned to Dr. Scheffel and reported ongoing pain and stiffness in her left shoulder. Dr. Scheffel recommended a repeat left shoulder MRI to assess the rotator cuff for possible failure.

7. On October 18, 2017, the MRI was performed and showed post rotator cuff repair with severe tendinopathy of the distal supraspinatus tendon, possible intrasubstance tearing with no full-thickness tear, evidence of post biceps tenotomy, and linear sign in the superior glenoid labrum.

8. On October 24, 2017, Dr. Scheffel reviewed the MRI and noted that the rotator cuff repair was intact and "looks excellent". Dr. Scheffel also noted that Claimant had acromioclavicular joint arthritis that was clinically asymptomatic. Dr. Scheffel diagnosed impingement syndrome of the left shoulder and recommended Claimant undergo a subacromial steroid injection. He also recommended continued physical therapy.

9. On December 20, 2017, Claimant was seen by Dr. Scheffel. At that appointment, Dr. Scheffel told Claimant to "remain confident" and to continue with aggressive physical therapy followed by a gentle strengthening program. Dr. Scheffel also told Claimant that "most rotator cuff repair patients have a sensation of clicking or popping in the shoulder and that is nothing to be concerned about." Dr. Scheffel opined that no further injections, imaging, or surgery was appropriate.

10. On January 10, 2018, Claimant attended an independent medical examination (IME) with Dr. Brian Lambden. In connection with the IME, Dr. Lambden reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. In his IME report, Dr. Lambden opined that Claimant had reached maximum medical improvement (MMI) as of the date of the IME (January 10, 2018). Dr. Lambden further opined that no maintenance medical treatment was necessary for Claimant's left shoulder. Dr. Lambden assessed a permanent impairment rating of four percent of the left upper extremity.

11. On February 14, 2018, Claimant was seen by Dr. McClellan. At that time, Claimant indicated that she disagreed with Dr. Lambden's determination that she had reached MMI. Dr. McClellan stated her opinion that Claimant was at MMI. Dr. McClellan further opined that additional formal therapy would not be beneficial, but Claimant could

continue with strengthening and range of motion exercises. Dr. McClellan did not perform an impairment rating.

12. On March 12, 2018, Dr. McClellan responded to a letter from Insurer. In her responses, Dr. McClellan indicated her agreement that Claimant reached MMI as of January 10, 2018. Dr. McClellan also indicated that an impairment rating should be performed by another provider, and she recommended Dr. Ellen Price. Finally, Dr. McClellan identified permanent restrictions for Claimant's left arm that included no lifting over five pounds, no overhead reaching, and no pushing or pulling over ten pounds.

13. On March 14, 2018, Claimant attended a second IME with Dr. Lambden. In a letter dated April 19, 2018, Dr. Lambden stated that his opinions were unchanged.

14. On March 21, 2018, Claimant was seen by Dr. Scheffel. Claimant reported that she was "struggling with range of motion and frozen shoulder." Claimant also reported popping in her left shoulder. Claimant described the popping as "suprising", but not significantly painful. Dr. Scheffel noted that Claimant had not received much relief from a subacromial steroid injection. Dr. Scheffel recommended that Claimant could continue with eight to twelve weeks of physical therapy. He also recommended the use of Tylenol for pain control. Dr. Scheffel stated that he had no further treatment recommendations.

15. On May 10, 2018, Claimant was seen by Dr. Price for an impairment rating. In her report of that date, Dr. Price reviewed Claimant's pain diagram and noted that Claimant complained of symptoms in her arms and hands, low back, and left leg. Dr. Price further noted Claimant had a difficult time lifting and performing activities of daily living. Dr. Price stated that Claimant had reached MMI. With regard to an impairment rating, Dr. Price assessed a whole person impairment of 12 percent that included Claimant's left upper extremity and low back. With regard to maintenance medical treatment, Dr. Price recommended acupuncture and a functional capacity evaluation (FCE).

16. On July 26, 2018, Claimant attended a Division independent medical examination (DIME) with Dr. Douglas Scott. In connection with the DIME, Dr. Scott reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. In his DIME report, Dr. Scott opined that Claimant had reached MMI as of January 10, 2018. Dr. Scott also noted that Claimant's left shoulder was stable. As a result, he opined that Claimant did not require further "diagnostic testing, surgery or active treatment" of her left shoulder. Dr. Scott assessed a permanent impairment rating of eight percent for Claimant's left upper extremity. With regard to maintenance medical treatment, Dr. Scott recommended a home exercise program, hot and cold compresses, and over-the-counter pain medications, (including topical applications).

17. On October 2, 2018, Respondents filed a Final Admission of Liability (FAL) in this case. In that FAL, Respondents admitted for the permanent impairment rating of eight percent for Claimant's left upper extremity and an MMI date of January 10, 2018. Respondents also admitted for reasonable, necessary, and related post-MMI medical treatment. On January 3, 2019, Respondents filed a second FAL to reflect a disfigurement award.

18. On January 17, 2019, Respondents filed another FAL that specifically referenced Dr. Scott's July 26, 2018 DIME report. Respondents and admitted for the permanent impairment rating of eight percent for Claimant's left upper extremity and an MMI date of January 10, 2018. Respondents also admitted for reasonable, necessary, and related post-MMI medical treatment.

19. On March 14, 2019, Claimant was seen by Dr. McClellan as part of her post-MMI treatment. Claimant reported pain and popping in her left shoulder. Claimant also reported that although the popping was not initially painful, it was now "painful after every pop." Dr. McClellan referred Claimant back to Dr. Scheffel for consultation.

20. On April 25, 2019, Claimant was seen by Dr. Scheffel. At that time, Claimant reported two months of worsening left shoulder pain when reaching. Claimant also reported popping in her left shoulder. Dr. Scheffel opined that Claimant had impingement bursitis. At that time, he recommended and administered a subacromial steroid injection.

21. On May 3, 2019, Claimant returned to Dr. McClellan and reported that the injection administered by Dr. Scheffel provided approximately one week of relief. Claimant also reported continued left shoulder pain and popping. Dr. McClellan referred Claimant to Dr. Price.

22. Claimant returned to Dr. Price on June 5, 2019. Dr. Price identified the purpose of this visit was to assess an impairment rating. In her report dated August 22, 2019, Dr. Price assessed a permanent impairment rating of 11 percent for Claimant's left upper extremity. Dr. Price recommended maintenance medical treatment of ongoing care with Ors. Sheffel and McClellan and four to six visits of physical therapy.

23. Claimant did not undergo treatment with any authorized provider between August 22, 2019 and March 12, 2021.

24. On March 12, 2021, Claimant was seen with Dr. McClellan and reported painful popping in her left shoulder. Dr. McClellan referred Claimant back to Dr. Scheffel for evaluation. Dr. McClellan also noted that an updated MRI might be needed.

25. On April 12, 2021, Claimant was seen by Dr. Scheffel. In the medical record of that date, Dr. Scheffel noted that Claimant had developed pain and popping in her left shoulder. Expressing a concern for a possible re-tear of Claimant's left rotator cuff, Dr. Scheffel recommended a new left shoulder MRI.

26. On August 3, 2021, Claimant returned to Dr. Lambden for an IME. As with the January 10, 2018 IME, Dr. Lambden reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. In his IME report, Dr. Lambden agreed that a new left shoulder MRI would be appropriate. Dr. Lambden suspected that the MRI would show "significant underlying degenerative changes and tendinopathy". Dr. Lambden opined that if there were such MRI findings, they would not be related to Claimant's work injury. Dr. Lambden specifically noted that he would not recommend any further injections. Dr. Lambden also stated that Claimant remained at MMI.

27. On August 17, 2021, Claimant underwent a left shoulder MRI. The results showed supraspinatus tendinosis with a 3mm full thickness tear of the distal supraspinatus tendon; with no definite labral tear.

28. On September 14, 2021, Claimant returned to Dr. Scheffel to discuss the MRI results. Dr. Scheffel noted that Claimant's rotator cuff was intact, but he indicated that it was possible Claimant had subacromial impingement. Dr. Scheffel recommended and administered a subacromial steroid injection. Dr. Scheffel also recommended a home exercise program.

29. On January 12, 20231, Claimant returned to Dr. Scheffel. At that time, Claimant reported that the injection in September 2021 provided one day of 40 percent relief. Dr. Scheffel referred Claimant to Dr. Price for evaluation for fibromyalgia and to discuss trigger point injections.

30. On February 2, 2023, Claimant underwent a left shoulder MRI. The MRI results included findings of a stable postoperative left shoulder.

31. On February 7, 2023, Claimant was seen by Dr. Scheffel to review the MRI results. Dr. Scheffel noted that the MRI showed an intact rotator cuff repair. In that same medical record, Dr. Scheffel noted no symptoms of adhesive capsulitis. He again noted that Claimant was to see Dr. Price regarding fibromyalgia. Dr. Scheffel also wanted to order a neck MRI for evaluation with Dr. Christopherson for possible radiofrequency ablation of the left shoulder. Finally, Dr. Scheffel stated that if Claimant continued to experience left shoulder pain, he would discuss a possible diagnostic arthroscopy.

---

[1] Based upon the medical records entered into evidence, it appears that Claimant did not see Dr. Scheffel between September 2021 and January 2023.

32. On February 21, 2023, Claimant returned to Dr. Price's practice and was seen by Dr. Nikos Hollis. Claimant reported her symptoms as pain and popping in her left shoulder, with numbness, tingling, and weakness in her left hand. Dr. Hollis recommended and administered trigger point injections. These injections were made in the left thoracic paraspinal, rhomboids, trapezius, levator scapulae, infraspinatus, supraspinatus, tares minor, anterior deltoid, and splenius capitis. Dr. Hollis opined that it was possible that Claimant had left sided cervical radiculopathy. As a result, he recommended cervical flexion and extension x-rays, a cervical MRI, or EMG testing.

33. On March 7, 2023, Claimant returned to Dr. Hollis. Claimant reported that the trigger point injections initially caused a flare in her symptoms, but then provided approximately two days of relief. Claimant also reported experiencing chronic headaches. Dr. Hollis administered laser treatment to Claimant's upper back and neck. Dr. Hollis also administered bilateral occipital nerve injections. These treatments were intended to address cervical dystonia and occipital neuralgia, respectively.

34. On March 8, 2023, Claimant was seen in Dr. Price's practice by Dr. David Saldivar. At that time, Dr. Saldivar noted that Claimant had "significant neck and low back and lower extremity issues" since her work injury. Dr. Saldivar opined that claimant had facet mediated pain in her cervical and lumbar spines, trochanteric bursitis, and sacroiliitis. He recommended Claimant undergo the following: a left subacromial bursa injection; bilateral C5-C7 medial branch blocks; bilateral L3-L5 medial branch blocks; bilateral sacroiliac (SI) joint injections; and bilateral greater trochanteric bursa injections.

35. As noted above, the recommended treatment modalities currently before the ALJ are: 1) left shoulder subacromial bursa injections and arthrocentesis; 2) a left upper extremity EMG study; and 3) bilateral C5-C7 medial branch blocks.

36. At the request of Respondents, on June 19, 2023, Claimant attended an IME with Dr. F. Mark Paz. In connection with the IME, Dr. Paz reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. At the IME, Claimant reported that her left shoulder symptoms included pain and popping. In his IME report, Dr. Paz opined that Claimant's current left shoulder condition was not related to the January 2, 2017 work injury. Rather, it is Dr. Paz's opinion that the condition of Claimant's left shoulder is caused by deconditioning, coupled with comorbidities including obesity, diabetes mellitus, and a sedentary activity. Dr. Paz agreed with the DIME physician, Dr. Scott, that Claimant reached MMI for her left shoulder as of January 10, 2018. Dr. Paz also noted that Dr. Scott's recommendations for post-MMI treatment for the left shoulder included "topical applications, physical applications, and over-the-counter nonsteroidal anti-inflammatories". It is Dr. Paz's opinion that Claimant's left shoulder remains stable and no further treatment is needed.

37. Dr. Paz further opined that Claimant's cervical symptoms and any treatment of those symptoms are not reasonable, necessary or causally related to the January 2, 2017 work injury. In support of this opinion, Dr. Paz noted that Claimant has a history of chronic neck pain. Dr. Paz also noted that reports from other medical providers (including Drs. Scheffel, Price, and Scott) as well as his findings on examination at the IME are inconsistent with cervical radiculopathy. Dr. Paz noted that such a diagnosis would be secondary to cervical degenerative disease, a diagnosis which is not causally related to the January 2, 2017 incident. Dr. Paz further noted that there is no cervical diagnosis in this claim.

38. Dr. Paz specifically opined regarding the treatment modalities at issue in this case. It is Dr. Paz's opinion that the left shoulder subacromial bursa injections and arthrocentesis; the EMG study of Claimant's left upper extremity; and bilateral C5-C7 medial branch blocks; are not reasonable, necessary, or related to the January 2, 2017 work injury.

39. Dr. Paz's deposition testimony was consistent with his IME report. Dr. Paz reiterated his opinion that the only body part at issue is Claimant's left shoulder, for which she reached MMI on January 10, 2018. Dr. Paz reiterated his assessment that Claimant's deconditioning and lack of compliance with a home exercise program was one of the primary contributors (along with obesity, diabetes, and a sedentary lifestyle) to her current left shoulder symptoms. Dr. Paz testified that the specific treatments recommended for Claimant are not related to the work injury. Dr. Paz also specifically testified that, in his opinion, Claimant is not in need of any additional post-MMI treatment.

40. The ALJ credits the medical records and the opinions of □rs. Paz and Lambden. Generally, the ALJ credits the opinion of Dr. Paz that Claimant is not in need of further post-MMI medical treatment. The ALJ also specifically credits Dr. Lambden's August 3, 2021 opinion that no further injections are necessary to treat Claimant's left shoulder. The ALJ finds that Claimant has failed to demonstrate that it is more likely than not that the recommended left shoulder subacromial bursa injections and arthrocentesis is reasonable and necessary to maintain Claimant at MMI.

41. With regard to the recommended left upper extremity EMG study, the ALJ credits the medical records and the opinions of Dr. Paz. The ALJ finds that Claimant has failed to demonstrate that it is more likely than not that the recommended EMG study is reasonable and necessary to maintain Claimant at MMI.

42. The ALJ further credits the medical records, the opinions of Dr. Paz, as well as those of the DIME physician, Dr. Scott. The ALJ specifically credits Dr. Paz's opinion that his findings on physical examination are inconsistent with cervical radiculopathy. The ALJ further credits the DIME report in which Dr. Scott only assessed Claimant's left shoulder, and not her cervical spine. The ALJ finds that Claimant has failed to demonstrate that it is more likely than not that the recommended bilateral

C5-C7 medial branch blocks are reasonable and necessary to maintain Claimant at MMI.

43. With regard to the issue of whether post-MMI medical treatment should continue, the ALJ credits the medical records and the opinions of Dr. Paz. Specifically, the ALJ credit's Dr. Paz's opinion that Claimant's left shoulder remains stable and no further treatment is needed. The ALJ finds that Respondents have demonstrated that it is more likely than not that post-MMI medical treatment should be terminated because it is no longer reasonable, necessary, or related to Claimant's work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306,592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter

an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

5. As found, Claimant has failed to demonstrate, by a preponderance of the evidence, that left shoulder subacromial bursa injections and arthrocentesis is reasonable and necessary to maintain Claimant at MMI. As found, the medical records and the opinions of Ors. Paz and Lambden are credible on this issue.

6. As found, Claimant has failed to demonstrate, by a preponderance of the evidence, that a left upper extremity EMG study is reasonable and necessary to maintain Claimant at MMI. As found, the medical records and the opinions of Dr. Paz are credible and persuasive on this issue.

7. As found, Claimant has failed to demonstrate, by a preponderance of the evidence, that bilateral C5-C7 medial branch blocks are reasonable and necessary to maintain Claimant at MMI. As found, the medical records, the opinions of Dr. Paz, and Dr. Scott's DIME report are credible and persuasive on this issue.

8. When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. Section 8-43-201(1), C.R.S.; *Salisbury v. Prowers County School District,* W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District,* W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification."

9. In the present case, Respondents have admitted for reasonable, necessary, and related post-MMI medical treatment. They are now requesting to end all post-MMI medical treatment. Although Claimant bears the burden of proof with regard to the specific treatment modalities addressed above, it is Respondents' burden to prove, by a preponderance of the evidence, that no further post-MMI treatment is necessary.

10. As found, the Respondents have demonstrated, by a preponderance of the evidence, that there is no further medical treatment necessary to maintain Claimant at MMI. As found, the medical records and the opinions of Dr. Paz are credible and persuasive on this issue.

ORDER

It is therefore ordered:

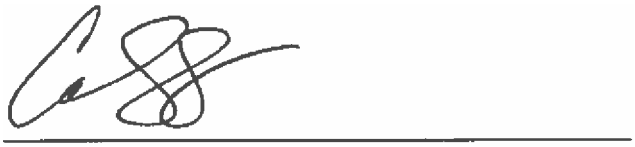
1. Claimant's request for left shoulder subacromial bursa injections and arthrocentesis is denied and dismissed.

2. Claimant's request for a left upper extremity EMG study is denied and dismissed.

3. Claimant's request for bilateral C5-C7 medial branch blocks is denied and dismissed.

4. Respondents' request to terminate maintenance medical treatment is granted.

Dated November 29, 2023.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 27. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 27(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **It is recommended that you send a courtesy copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-117-992-005

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is permanently and totally disabled as a result of the admitted work related injuries of August 10, 2019.

PROCEDURAL HISTORY

Claimant was placed at MMI by Dr. Zimmerman on October 14, 2021 with a 21% rating. Respondents filed an Application for a Division of Workers' Compensation Independent Medical Examination (DIME). Claimant was evaluated by Dr. Mark Winslow, the DIME physician on March 15, 2022.

Respondents filed a Final Admission of Liability on June 2, 2022 admitting to temporary total disability benefits paid based on an average weekly wage of $859.63 and a TTD rate of $573.09. Respondents also paid permanent partial disability benefits beginning the date of MMI. Respondents admitted to maintenance medical benefits.

Claimant filed an Application for Hearing on December 7, 2022 on multiple issues including permanent total disability benefits. Respondents filed a Response to Application for Hearing dated January 4, 2023. Present during the hearings were [Redacted, hereinafter JG] from [Redacted, hereinafter MO] office, and Claimant's daughter, [Redacted, hereinafter MA], as observers; Claimant, Dr. David Yamamoto and Cynthia Bartman who testified on behalf of Claimant; and Dr. John Raschbacher and Katie Montoya, who testified on behalf of Respondents.

This ALJ issued Findings of Fact, Conclusions of Law and Order on August 18, 2023 and served on the parties on August 21, 2023 determining that Claimant was permanently totally disabled from earning any wages proximately caused by the August 10, 2019 admitted work related accident.

Respondents filed a Petition to Review (PTR) the Order on September 8, 2023. After multiple extensions of time to file briefs in support and in opposition of the PTR, the final brief was filed on November 16, 2023. Issues raised included,

1. Whether the ALJ failed to adhere to the controlling law in Colorado concerning permanent total disability.
2. Whether the ALJ considered evidence that was not part of the record.
3. Whether the ALJ misapplied the applicable law to the findings of fact.

This Supplemental Findings of Fact, Conclusions of Law and Order followed.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally:

1. At the time of the hearings, Claimant was fifty nine years old, lived with his wife and had a ninth grade education in Mexico. Claimant worked as a laborer in construction. While he mainly performed manual labor, he also used machinery including the mixer and a forklift tractor. He had been doing the same kind of work for more than 20 years and would essentially perform the same kinds of tasks each day, so he understood the instructions in English. He would use a coworker to interpret when he was unable to understand his supervisor. He would frequently be lifting the 80 to 90 lbs. of mix when operating the tractor. His job required lifting, walking, standing, climbing scaffolding. After his accident, he performed modified duty for approximately four months sorting materials, washing cars, cleaning floors.

B. The Accident:

2. On August 10, 2019 Claimant had been preparing the mix for the mixer, went up the scaffolding to put the mix in the mixer, when the weight of the bucket of cement mix overbalanced him, it threw him back and he fell to the floor. The mixer had a solid piece of concrete in it which was shaking the scaffolding. He injured his low back and had almost immediate pain going into his right lower extremity all the way to his foot. About three weeks after the accident the pain started getting worse, then about six weeks later, the pain was even worse causing numbness going down his leg. Approximately three months prior to the March 2023 hearing, he developed increasing nerve pain radiating into the groin.

3. Claimant last worked on February 10, 2020. He had surgery on February 12, 2020. He was happy initially with the surgical results. The pain in his low back seemed to get worse after about another month or two, especially in his low back, and his right lower extremity. After the surgery he received medications, injections and physical therapy. Both the physical therapy and the injections helped with the pain. The medications only helped for a while and then the pain and symptoms would return. He continues to take Gabapentin at nighttime and sometimes when he wakes up he may take more of the Gabapentin.

C. Medical and Vocational Records:

4. Claimant was first evaluated by Dr. Carrie Burns of Concentra – Centennial on August 12, 2019. She documented that Claimant was operating a cement mixer when he felt back pain which immediately radiated down his right leg, reporting right leg pain and paresthesias. Dr. Burns noted loss of lordosis, tenderness at the L1-L5 left and right paraspinal, worse on the right, right sided muscle spasms, limited range of motion (ROM) and positive right straight leg raise (SLR). She assessed lumbar strain, right wrist sprain and acute lumbar radiculopathy. She ordered physical therapy, a wrist brace, x-rays of

the right wrist (normal) and spine; and medications. She noted degenerative joint disease of the lumbar spine and suspected some nerve irritation or compression. Dr. Burns ordered restrictions of sedentary duty, no lifting greater than 10 lbs., limited bending and twisting. Claimant started physical therapy at Concentra shortly thereafter.

5. By August 16, 2019 Dr. Burns ordered an MRI of the lumbar spine, diagnosing lumbar radiculopathy, lumbar strain and right wrist strain.

6. The August 16, 2019 MRI read by Dr. Brian Steele of Health Images showed as follows:

> 1. At L4-LS there is a medium-sized broad-based right paracentral/foraminal caudally-directed disc extrusion that causes moderate thecal sac stenosis and impinges on the transiting right L5 nerve root in the lateral recess. The disc also contacts the transiting left L5 nerve root to a lesser degree and contributes to mild bilateral foraminal stenosis.
>
> 2. A caudally-directed central disc extrusion at L5-S1 only slightly narrows the thecal sac but contacts both transiting S1 nerve roots, without nerve root compression or displacement.
>
> 3. At L3-L4 there is a broad-based right paracentral disc protrusion that contributes to mild-moderate thecal sac stenosis and contacts the transiting right L4 nerve root in the lateral recess.
>
> 4. Smaller disc protrusions at L1-L2 and L2-L3 does not cause thecal sac stenosis or specific nerve impingement. No sites of severe degenerative foraminal stenosis are present.

7. On August 19, 2019 Dr. Burns noted that the MRI showed a large disc extrusion with compression of the nerve root on the right at L4-5. Claimant continued to have right sided paraspinal spasms, limited ROM and positive SLR on the right. Claimant complained of increasing pain and numbness. She injected a Ketorolac Tromethamine intramuscular solution, prescribed pain medication and referred Claimant to Dr. Pehler, an orthopedic spine surgeon.

8. Dr. Stephen F. Pehler of Colorado Orthopedic Consultants evaluated Claimant on August 29, 2019 and diagnosed lumbar disc herniation with radiculopathy, spondylosis of the lumbar spine with radiculopathy and low back pain. He documented that Claimant had low back pain with right lower extremity radiculopathy, numbness and tingling, and was not able to work due to the pain and limped when walking. He documented Claimant had increased pain with prolonged sitting and at nighttime. He reviewed the MRI films and noted L4-5 lumbar disc herniation with right neuroforaminal narrowing and nerve root compression, and recommended a right-sided transforaminal epidural steroid injection. He commented that if symptoms did not subside, then Claimant would require a microdiscectomy. He prescribed gabapentin, flexeril and lidocaine patches.

9. Dr. Burns noted on September 6, 2019 that Claimant continued with severe pain in the low back and radiating pain down the right leg. He was having problems sleeping as he would wake up with pain down his leg and would have difficulty going back to sleep. Exam, diagnoses and restrictions remained the same. Dr. Burns administered another Ketorolac injection on September 27, 2019 while awaiting authorization for steroid injection with the specialist.

10. Claimant was attended by Dr. Barry A. Ogin of Colorado Rehabilitation & Occupational Medicine on October 10, 2019 for a right L4 and L5 transforaminal epidural steroid injection (ESI). The 7/10 pre injection pain level was immediately reduced to 0/10 post-injection. He was given a pain dairy and recommended follow up with Dr. Pehler.

11. On October 18, 2019 Dr. Burns reported that Claimant was working but that it was a struggle to make it to the end of the 4 hours and he was in significant pain, even with an extended lunch break. On October 23, 2019 Nurse Hanna Bodkin noted that she was very concerned that Claimant was having problems with getting and understanding proper instructions for follow up, medications, procedures and would benefit from a nurse case manager.

12. Dr. Pehler submitted a request for authorization on November 1, 2019 for the right sided L4-5 microdiscectomy surgery for the large herniated disc as Claimant had failed conservative treatment including therapy and injections.

13. On November 7, 2019 Dr. Burns noted that Claimant was being scheduled for surgery but it had not yet been authorized. Claimant was again out of medications on December 19, 2019 and was still awaiting authorization for surgery. Claimant was getting some weakness down his right leg. His daily pain was a 9/10. Dr. Burns noted that it was clear that Claimant needed surgery as he had a definite disc herniation that was compressing on his nerve. He was weak on the right side and short relief with injections. She discussed consulting with Dr. Pehler to refile the request for authorization since it had been 5 months since his injury.

14. Dr. Burns noted on January 31, 2020 that Claimant's back and right leg were more painful, and had been doubling up on his medications as his employer was working him for longer shifts. Dr. Burns noted that Claimant was moving very slowly, obviously limping when transitioning from sitting to standing and walking.

15. Dr. Pehler performed the surgery on February 12, 2020 at The Medical Center of Aurora with a post-operative diagnosis of lumbar disk herniation with radiculopathy, right sided at L4-L5.

16. On February 24, 2020 Dr. Pehler noted that Claimant had improving back and leg pain though still had ankle tingling. Claimant was taking oxycodone, Robaxin (Methocarbamol) and Tizanadine for pain and spasms, which were helping.

17. Claimant was not doing well three weeks post-op, when Dr. Burns examined him on March 6, 2020, with low back pain radiating down into the right leg, though his leg pain was improving. At that time Claimant was taking 3 Vicodin per day for pain. Dr. Burns noted that Claimant had been having significant difficulties with the physical requirements of his job before surgery.

18. On March 30, 2020 Dr. Pehler continued to assert that Claimant had significant improvement to his right lower extremity radiculopathy, however still noted some right toe and foot numbness. He also documented Claimant had stiffness in his low back as well as spasms. He reported that the oxycodone and Robaxin had been helping. He referred Claimant to physical therapy and provided further medications.

19. By March 27, 2020 Dr. Burns noted that Claimant's pain in the low back had intensified and the pain down his right leg was also worsened, with the right foot going

numb and walking too long causing pain and fatigue. On exam she palpated bilateral muscle spasms of the lumbar spine.

20. Claimant was treated by Devan Ohi, P.T. on March 31, 2020 who noted on exam that Claimant demonstrated high level of pain, reporting 8/10 pain, minimally changed with posture changes, except that pain increased with prolonged sitting or standing. He demonstrate limited LS ROM in all directions, most significantly with extension, which also reproduced right sided great toe numbness. He noted glute atrophy and that Claimant would benefit from physical therapy to address the deficits. Notes continued through May 13, 2020 with further recommendations for PT.

21. Dr. Burns documented on May 1, 2020 that Claimant could not stand for more than 20 minutes before his back started to hurt so bad he had to sit down, and was still having numbness in his right foot and pain behind his right knee. He continued to be on gabapentin, skelaxin and Lidoderm patches, which helped but when off medication he was miserable. She made a referral for a neurosurgery consult with Dr. Rauzzino regarding the post-surgical radiculopathy. Dr. Burns still had Claimant off work at this point

22. On May 12, 2020 Claimant had the evaluation with Dr. Michael Rauzzino, who documented that following the L5 disc extrusion surgery, Claimant had worsening low back and right leg pain, was increasingly frustrated due to failure to improve post-surgery and was unable to work. On examination he noted a well-healed lumbar incision, positive straight leg raise on the right, negative on the left; loss of ROM, subjective weakness of his right EHL. Claimant complained of diminished sensation on the top of his toe and he walked with an antalgic gait secondary to pain. Dr. Rauzzino recommended a follow up MRI.

23. The MRI was performed at Health Images -- Diamond Hill on May 20, 2020, and was interpreted by Dr. Kevin Woolley. It showed evidence of a previous right L4-L5 laminotomy with a broad-based disk bulge, a small right paracentral protrusion with mild degenerative changes, mild right-sided foraminal tension, and mild spinal stenosis. The impression was interval right-sided L4-L5 laminotomy with decreased spinal stenosis and disk extrusion, a small residual disk protrusion was noted with no recurrent disk herniation.

24. On May 28, 2020 Dr. Pehler reviewed the MRI noting that there was improvement at the L4-5 level though some degenerative compression on the descending L5 nerve root and he planned on referring Claimant for an L4-5 transforaminal ESI. Claimant reported low back and leg pain but there was no interpreter present so communication was difficult. He continued to diagnose lumbar radiculopathy.

25. Dr. Burns documented on June 1, 2020 that Claimant was unable to stand up straight, was in a flexed position, had loss of normal lordosis, had mild swelling at the incision, and had tenderness at the L3-L5 level paraspinals with bilateral muscle spasms, limited range of motion and antalgic gait. She provided ibuprofen. In July she added a Medrol pack, stating he was no better and needed a functional capacity evaluation and kept him off work.

26. Dr. Ogin performed a right L4 and L5 transforaminal ESI on June 29, 2020 at Belmar Surgery Center.

27. On August 3, 2020 Dr. Burns provided the first work restrictions of working only 4 hours a day, lifting 5 lbs. occasionally, push/pull 5 lbs. occasionally.

28. Claimant had another transforaminal ESI on November 5, 2020 by Dr. Ogin, who documented pre-injection pain of 8/10 and a post-injection 0/10 pain level.

29. Dr. Burns commented on November 5, 2020 that Claimant had his second injection with Dr. Ogin and was feeling better already, making him hopeful it would help. He was out of medications again and she prescribed Lidocaine patches and Metaxalone.

30. On November 30, 2020 Claimant reported to Dr. Burns that the injection had helped for about 2 weeks, and now he was getting worse again, had a pain level of 8/10 and felt like he was being stabbed in the right foot. On exam she noted that Claimant had loss of normal lordosis, tenderness in the bilateral paraspinals and right sacroiliac joint, right sided muscle spasms, loss of range of motion, increased pain with facet loading on the right and was limping on the right. She noted that Claimant needed to return to his surgeon for further evaluation. She also increased his work restrictions to lifting, pushing and pulling 10 lbs. occasionally but only up to 4 hours a day.

31. Dr. Pehler's PA, Maria Kaplan mentioned on December 30, 2020 that Claimant received approximately two weeks of relief from a third post-surgical ESI. Claimant continued to have significant pain in the low back and right lower extremity radiculopathy, with reduced quality of life and difficulties sitting and walking. She recommended a two level interbody fusion of L3-5 as he had failed continued conservative care.

32. Dr. Burns recorded on January 19, 2021 that Claimant continued to worsen with pain in his low back, with muscle spasms and a sensation of nails driven into his foot from time to time. She noted that Dr. Pehler was recommending a fusion. She sustained that objective findings were consistent with history and work related mechanism of injury, and she decreased restrictions to lifting 20 lbs., with no repetitive bending or stooping.

33. While Claimant awaited the decision for further surgery and an IME result, Claimant's pain in the low back continued to be documented by Dr. Burns, who ordered further medications for pain control.

34. At Respondent's request for an independent medical evaluation, Dr. Brian E. Reiss, an orthopedic spine surgeon, examined Claimant on March 17, 2021. He did an extensive medical record review including the films of both MRIs. He stated that Claimant continued with constant central low back pain of 8/10 with 9/10 at its worst and 6/10 at its best. Claimant also complained of posterior leg pain at the knee and some numbness at the bottom of his right foot. Dr. Reiss wrote that Claimant did not show pain behaviors.

35. On exam Dr. Reiss noted Claimant was able to heel and toe stand, had loss of ROM, had some tenderness centrally, and at the right SI ligament and sciatic notch. SLR was positive on the right, with decreased sensation of the right big toe and some groin pain with a Faber test. Dr. Reiss indicated that the first MRI showed a herniated disc at L4-5 but the second one was done without gadolinium, which was not optimal. He

mentioned that there might be a retained central disc protrusion at the L4-5 which might be touching the right L5. He recommended a new MRI with gadolinium and an EMG to determine nerve root involvement, but stated that there was no indication for a fusion. He diagnosed post-laminectomy syndrome[1], deconditioning, and primarily back pain.

36. Following additional record review, on April 23, 2021 Dr. Reiss opined that a multilevel fusion for the low back in the absence of instability was unlikely to provide any benefit. He specifically noted that the pain generator had not been identified and conservative care had not been completed. He recommended core strengthening, aerobic conditioning and a stretching program.

37. On June 17, 2021 Dr. Burns noted that the surgery had been denied due to failure to reinstate physical therapy after the surgery and Claimant's post-surgical decline. Dr. Burns recorded that Claimant requested a second surgical opinion and that medications were helping with his night pain. She prescribed physical therapy, and changed the lifting restrictions to 25 lbs. with no repetitive bending or stooping.

38. Dr. Rauzzino saw Claimant for a second opinion on July 6, 2021. On examination, he observed Claimant had bilateral negative SLR, limited ROM, was not able to walk on his toes or his heels. Reflexes were 1/4. Dr. Rauzzino recommended updated imaging and flexion and extension x-rays. He stated that it was not clear what was Claimant's pain generator given the diffuse nature of his axial lumbar pain. Claimant continued to take oxycodone for pain but his pain continued getting worse. Dr. Rauzzino also recommended Claimant return to see Dr. Pehler since Claimant had not been evaluated since the fusion surgery was initially recommended in December 2020. He stated that it would be difficult to know that performing a lumbar fusion would actually clinically improve Claimant's symptoms given Claimant's poor response to the microdiskectomy and the fact that he had continued persistent leg pain in the absence of a significant structural lesion.

39. Claimant's MRI of July 25, 2021 showed multilevel degenerative changes in the lumbar spine with associated disc bulging and annular fissuring at the L1-2 and L2-3; circumferential disc bulging indenting the ventral thecal sac resulting in moderate right subarticular recess stenosis at the L4-5 level which might have been impinging on the exiting L5 nerve root; and circumferential bulging at the L5-S1 level with mild foraminal narrowing.

40. On August 3, 2021 Dr. Burns emphasized that Claimant had most pain with standing, walking and driving, though medications helped, and he had pain chiefly in his right lower back which radiated down his right leg. He was unable to squat. She continued to prescribe medications and reduced restrictions to 15 lbs. maximum lifting, limited bending, twisting and stooping.

41. Dr. Pehler attended Claimant on August 5, 2021 noting that Claimant continued to have fairly significant back pain as well as right lower extremity pain, especially worse with standing and extension. Dr. Pehler remarked that the repeat MRI demonstrated some slight worsening at the L3-4 and L5-S1 levels. However, the biggest area of work-related pathology was at the L4-5 level, the site of his previous

[1] Dr. Raschbacher described post-laminectomy syndrome as failed back syndrome

microdiscectomy. He thought it would be reasonable to consider a one level L4-5 oblique lateral interbody fusion with percutaneous fixation to address his most significant level of pathology. In the interim, he sent Claimant for a right-sided transforaminal epidural steroid injection at the L4-5 level. He noted Claimant was still continuing to have worsening pain symptoms that were affecting his quality of life and ability to work.

42. Claimant was referred by Dr. Burns to Dr. Zimmerman for an impairment rating on October 12, 2021 noting that Claimant should have permanent work restrictions in the sedentary category.

43. Dr. Frederic Zimmerman placed Claimant at maximum medical improvement on October 14, 2021. He noted that Claimant failed conservative care and proceeded with surgery in February 2020. He had also had epidural steroid injections, which did not significantly improve his symptoms long term. He recorded that Claimant had constant low back pain across the lumbosacral region that radiated down the right lower extremity with bending activities, paresthesia down the right lower extremity which resolved with position changes, difficulty walking community distances and was forced to sit down after five minutes of walking. He also documented weakness and decreased sensation in the great toe.

44. On exam, Dr. Zimmerman observed that Claimant went from a seated to standing position in a very slow and stiff fashion, ambulated with antalgia/stiffness of the right lower extremity with a very short stride length, had weakness in the right EHL compared to the left with sensation subjectively decreased to light touch in the right great toe, an equivocal SLR test, positive neural tension on the right and valid ROM testing. He diagnosed low back injury status post L4-5 laminotomy and post-laminectomy syndrome with pain and radiculitis down the right lower extremity. He provided a 21% whole person impairment rating. Dr. Zimmerman issued light physical demand category work restrictions with no stooping, bending, crawling, crouching, or ladders, as well as limited to ambulating on level ground and stated he qualified for a disability parking pass.

45. Dr. Burns noted Claimant was at MMI on October 18, 2021, noting that objective findings were consistent with history and work related mechanism of injury. On exam, Dr. Burns noted that Claimant had decreased lordosis of the lumbar spine, tenderness present in right paraspinal muscles from L3-S1, but not the left and loss of range of motion. Dr. Burns diagnosed status post lumbar surgery with lumbar radiculopathy (acute). She provided work restrictions of maximum lifting to 15 lbs., limited bending, twisting, stooping, no ladders or crawling. She made a referral for a health club membership.

46. Dr. Rauzzino issued a letter to Respondents in response to specific inquires on October 26, 2021. He stated that he did not see a new large recurrent disc protrusion at L4-L5; the discs at L3-L4, L4-L5, and L5-S1 showed similar degeneration and disc protrusions. He did not see a clearly definable pain generator that would require surgery, that fusion surgery would likely not treat Claimant's pain or relieve his symptoms; and

more likely would worsen his condition. He was interested in knowing whether Dr. Pehler would consider a one level L4-L5 fusion instead of the two level fusion.[2]

47. Claimant was evaluated by Dr. Mark Winslow, the Division Independent Medical Examination (DIME) physician on March 15, 2022. Claimant reported that subsequent to the surgery, he continued to worse with lower extremity symptoms though was not sure he wanted to move forward with further surgery unless surgery was assured to relieve his symptoms. On exam, he found increased paraspinal muscle tone and pain with range of motion and valid measurements. He found no focal neurologic deficits. He diagnosed acute lumbar radiculopathy, status post lumbar surgery with residual symptoms and stiffness. He opined as follows:

> I reviewed the opinions from the neurosurgeons and their opinions regarding surgery. On review of the medical record, on clinical examination of the patient I must agree with Dr. Rauzzino. It is my opinion based on the patient's past history, current presentation, and the known pathology that the patient would most likely not do well with a subsequent surgery. In addition, it is my opinion that as Dr. Rauzzino stated he might actually be worse. The patient has had a poor outcome to his previous surgery, is a smoker, deconditioned, there is not a significant identifiable pain generator, there is no instability demonstrated on imaging that is available.

48. Dr. Winslow found Claimant to be at MMI as of October 14, 2021 as no further active treatment was likely to change Claimant's symptoms. He provided an impairment rating pursuant to the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (*Revised)*, of a Table 53IIE rating of 10% of the lumbar spine specific disorder and 14% for loss of range of motion for a combined impairment of 23% whole person. Under restrictions he stated "[l]ight physical demand category. No stooping, bending, crawling, crouching or climbing ladders. Level ground work with no stairs. Disabilities parking pass."

49. Claimant returned to see Dr. Pehler on April 1, 2022 who documented Claimant had persistent low back pain with right sided buttock and leg pain. Plain films showed spondylosis with an underlying spinal deformity and has a history of recurrent protrusion as well as progression of spondylosis at L4-5. He recommended a new MRI.

50. Respondents filed a Final Admission of Liability on June 2, 2022 consistent with Dr. Winslow's report, and admitted to maintenance medical care pursuant to Dr. Burns' October 18, 2021 report.

51. Claimant was evaluated by Cynthia Bartmann for an Employability Evaluation, who issued a report dated July 29, 2022. Ms. Bartmann interviewed Claimant and reviewed the medical records, specifically for restrictions. She relied upon the work restrictions provided by ATP Zimmerman and Dr. Winslow, of light physical demand category, no stooping, bending, crawling, crouching or ladders, ambulation on level ground only (no stairs) as well as noting he qualified for a disability parking pass. She also considered ATP Burns' restrictions of 15 lbs. lifting, limited bending, twisting, and stooping with no ladders and no climbing as well as DIME physician Winslow's light duty restrictions with no stooping, bending, crawling, crouching or ladder climbing, walking only on level ground and a disability parking pass. Ms. Bartmann noted that the lifting of 15

[2] Dr. Reiss may not have had Dr. Pehler's August 5, 2021 report that recommended a one level fusion at the L4-L5.

lbs. did not release Claimant to a full range of light work which requires up to 20 lbs. lifting. She noted that a physician's recommendation for a parking pass required limited walking no more than 200 feet without stopping.[3]

52. Claimant reported to Ms. Bartmann that he had typically 5/10 to 6/10 pain on a numeric pain scale, with pain radiating to his right leg to the knee and continuing down to his big toe, with numbness in the big toe, weakness in the right leg and occasional use of a cane. She highlighted that Claimant had a ninth grade education in Spanish and did not attend any English as a second language courses. Claimant reported working in a factory using a forklift and mixing cement to pour into molds, cutting down trees, picking up trash, and construction cement work. At his employer of injury, Claimant would lift 50 lb. bags of mix, standing and walking throughout the day. He was then moved to working modified duty, sorting materials in the shop, washing cars, and sweeping. Though while doing modified duty he required an extended break before he could complete the part time work. Claimant could not read or write English and for the majority of his time he had a bilingual supervisor, though was able to understand simple directions in English.

53. Ms. Bartmann opined that Claimant's entire work history involved working as a laborer in production, mainly unskilled work without transferable skills to other occupations. She opined that, considering Claimant's providers' restrictions, he fit more in the sedentary than light category of work, which comprised mainly of telemarketer, customer service, night auditor, concierge and front desk work, for which Claimant did not have the vocational skills. Ms. Bartmann opined that Claimant was permanently and totally disabled as any employment opportunities in the general labor market did not match Claimant's skills and work restrictions as well as the fact that employers would not be willing to train a 59 year old worker.

54. John Raschbacher, M.D. issued an Independent Medical Evaluation at Respondent's request on September 6, 2022. He took a history, reviewed the records and examined Claimant. Dr. Raschbacher noted no concerning findings on exam except for Claimant's exaggerated behaviors and complaints of pain and limitations, and that Patrick's test on the right produced groin pain. He opined that there was no physiologic or medical reason for him to have loss of range of motion, loss of strength and impairment. He mistakenly noted that Claimant qualified for a Table 53IIB impairment of 8% whole person for the lumbar spine and disagreed with both Dr. Zimmerman and Dr. Winslow regarding their assessments of restrictions and impairment. He provided a 40 lb. work restriction assuming that Claimant had any real symptoms at all, for the lumbar spine, "which he may well not, given his presentation" according to Dr. Raschbacher. ROM testing results were attached to the report August 25, 2022 Rule 8 IME but were not assessed for validity as Dr. Raschbacher did not believe them to be valid.[4] But the pain diagram attached showed a pain pattern consistent with Claimant's treaters' descriptions in the records.

---

[3] Claimant only met the eligibility requirement of Colorado disabled parking permit eligibility guidelines for limited walking.

[4] Dr. Raschbacher did not take a second set of ROM numbers during his exam pursuant to the requirements of the *AMA Guides*.

55. Kristine M. Couch, OTR performed a Functional Abilities Evaluation on September 15, 2022. During the testing she noted that Claimant had a consistent and valid performance in 22 of 22 in multiple validity testing parameters. Testing showed Claimant was able to sit for up to 21 minutes, required position changes, and had increased low back with continual sitting. Claimant attempted the 12 minute treadmill test but was only able to complete 6:38 minutes and ambulated with an altered gait, favoring his right leg and leaned heavily on the rails. He reported low back pain radiating into the right groin with walking. Claimant had difficulty and limitations with positional tolerances. He was able to lift 15 lbs. shoulder to overhead, and 20 lbs. knuckle to shoulder but was unable to lift floor to knuckle. He was limited in his ability to lift with the bilateral upper extremities to 15 lbs. for 50 feet with an altered gait but only up to 10 lbs. with either the right or left upper extremity individually. Lifting testing was terminated due to increased pain in the lumbar spine.

56. Ms. Couch noted that Claimant's abilities demonstrated a capacity to lift between sedentary and light work categories as defined by the US Department of Labor. He was unable to demonstrate the ability to tolerate repetitive horizontal reaching and forward bending, the ability to tolerate repetitive supination/pronation of the forearms while stepping side to side, unable to demonstrate the ability to tolerate sustained standing while performing repetitive reaching between chest level and the overhead on an occasional basis, and was limited in his ability to tolerate stair climbing during the evaluation. Claimant was unable to complete any crouching, stooping, kneeling or repetitive bending testing, which was consistent with the restrictions provided by his ATPs. Claimant reported his abilities as less than what testing showed during the FCE. As found, Ms. Couch's findings were consistent with Dr. Burns and Dr. Zimmerman's work restrictions previously provided at MMI.

57. Claimant was evaluated by Dr. David W. Yamamoto of Peak to Peak Family Medicine at Claimant's request for an Independent Medical Evaluation (IME) on October 26, 2022. He interviewed Claimant, took a history, reviewed the medical records and examined Claimant. He was provided a mechanism of injury of being jerked back while mixing concrete using a portable mixer and being thrown back feeling immediate pain. Claimant reported a 7/10 pain with an aching in his lower back, radiating down his right leg and stated his great toe was numb . Claimant reported he had increased pain with standing and could only walk for 10 minutes before he had major pain. He stated that he could stand for only 20 minutes at a time, had difficulty putting his socks on and tying his shoes. He also conveyed he had depression and anxiety as a result of the work injury.

58. On exam, Dr. Yamamoto observed that Claimant appeared uncomfortable with movement, had tenderness over the inguinal area, noted the surgical incision, decreased ROM, antalgic gait favoring the right leg, positive straight leg test on the right, decreased sensation over the medial right foot and decreased EHL strength on the right compared to the left. He diagnosed lumbar radiculopathy, ongoing low back pain post lumbar surgery with residual symptoms and stiffness. He conveyed that Dr. Zimmerman and Dr. Winslow's evaluations, and permanent restrictions were consistent with the FCE performed by Ms. Couch. He averred that Dr. Raschbacher arbitrarily assigned a 40 lb. work restrictions without testing or evidence of ability. Dr. Yamamoto opined Claimant had sustained a lower back injury and was treated appropriately but did not do well with

the L4-5 microdiscectomy. He disagreed with Dr. Raschbacher, noticing his mistaken citation to the *AMA Guides* for specific disorder and failure to properly assess ROM. He agreed with the restrictions that were provided by Dr. Winslow and Dr. Zimmerman. He further opined that Dr. Winslow had provided an accurate report and rating and that Claimant would be unlikely to find any work based on his chronic pain, lack of function and lack of English skills.

59. Ms. Bartmann provided an addendum report dated November 5, 2022. At that time she reviewed additional records including Ms. Couch's FCE, and IMEs from Dr. Raschbacher and Dr. Yamamoto. She noted that, even using Dr. Raschbacher's 40 lb. work restrictions, Claimant would be unable to return to his pre-injury job or any position he had performed in the past. She stated that these restrictions were categorically different and not consistent with the work restrictions of Dr. Zimmerman, Dr. Burns, Dr. Winslow, and Dr. Yamamoto. She stated that restrictions of no bending, crawling, crouching or stair climbing combined with the added work restrictions provided by Ms. Couch in her Functional Capacity Evaluation would eliminate all production and machine operator jobs. She agreed with Dr. Yamamoto's conclusion that Claimant would not be able to find any work based on his chronic pain, his lack of function and his lack of English skills and opined that Claimant was permanently and totally disabled from a vocational standpoint.

60. Katie G. Montoya performed a Vocational Assessment on November 15, 2022, though she interviewed Claimant on September 27, 2022. Claimant reported that he drove to the appointment five to ten minutes, but generally limited his driving as his low back pain would increase and his right foot would get tired. Claimant reported he had no prior injuries. Claimant reported he worked in cement, concrete and masonry work most of his working life, setting forms, making/mixing concrete, setting up scaffolds, taking up materials, stacking materials, and bringing materials where they were needed. Claimant reported that he was never in a supervisory or lead position. Claimant reported to Ms. Montoya that he did not feel he could work, that he had gone to multiple companies, including restaurants, factories, and cement companies, they had seen him and had said no. Ms. Montoya reported Claimant stated he could not work because of the following:

> He explained it is due to the fact that he cannot walk long, cannot stand long, and cannot bend over. [Claimant] believes he can walk about five to 10 minutes. He can stand still approximately 20 to 30 minutes. [Claimant] is able to sit longer but explained that he still must move. He explained that he really does not lift from the floor at all. If he lifts from the table level it is 15 pounds. This is due to back pain. [Claimant] explained that he is able to use his hands at the table level. He does not use a cane but will use a cart when he is at the store. [Claimant] had been up and down during our interview, and he explained that was typical.

61. Ms. Montoya reviewed the medical records in this smatter, including Dr. Zimmerman's MMI report, Dr. Winslow's DIME report, Dr. Raschbacher's Respondent IME report, the FCE performed by Kristine Crouch and Dr. Yamamoto's Claimant IME report. She also reviewed Ms. Bartmann's vocational assessment. Ms. Montoya opined that Claimant's work history showed he was an unskilled worker. She noted that Dr. Zimmerman, Dr. Winslow and Dr. Yamamoto's work restrictions were substantially similar and opined they allowed for light duty work, so long as Claimant was not required to perform bending, crawling, crouching, stooping, ladders and ambulate only on level

ground with no stairs. She stated that Claimant had limited options due to his unskilled Spanish speaking profile but could perform production and packaging work. She opined that, when considering Dr. Burns' 15 lb. restriction, that Claimant's work availability was further limited but included food preparation, packaging, office cleaning, and some forklift operation. She opined that when considering Dr. Raschbacher's decreased limitations, the job opportunities increased.

62. On February 3, 2023 Claimant was evaluated by Nurse Kelly F. as a walk-in patient with complaints of middle back and right foot swelling. Dr. Lesley Pepin ordered an ultrasound of the right lower extremity, which was normal. X-rays of the hip findings were inconclusive and unclear. He was advised to follow up with his primary doctor.

63. Claimant was attended at Platte Valley Medical Center for low back and right leg pain and foot swelling. Claimant reported two weeks' history of increased pain and symptoms. PA Noel Kiley noted a normal exam. Claimant reported no numbness or tingling to his legs, no weakness, no loss of bowel or bladder function and advised Claimant that an MRI of the lumbar spine was not medically indicated at that time and recommended Claimant return to see his surgeon, take Tylenol and Motrin for pain, provided a muscle relaxer, lidocaine patches to help pain control and recommended ice or heat. She diagnosed lumbar spine pain.

D. Claimant's Testimony:

64. In the past Claimant worked as a laborer driving a forklift, trimming trees, and in construction and masonry. Some of his supervisors were only English speaking and Claimant would understand some of their instructions regarding work to be performed. However, if he did not understand his supervisor, while working for Employer, he would request that the supervisor's assistant, someone from the office, the mechanic or one of the truck drivers to interpret for him, but while working modified duty, most of the time it was the mechanic that was in the shop all the time. Occasionally, his supervisor would give him instructions to wash a car or clean the floor and he would understand those instructions in English. Claimant speaks some English, but he does not read or write English.

65. He did have to fill out paperwork when he began employment with Employer, all of which were in English. He had help completing them and only signed them. He also was provided with an employee handbook and a benefits package, both of which were translated by a coworker at the Employer's yard. This ALJ noticed that the completed forms handwriting in Exhibit O and the signature handwriting were distinctly different, with the exception that the Benefit Enrollment and Change form at bate stamp 423 seems that have been completed by the signatory (name and identifying information only).

66. Approximately two months after his surgery in February 2020, Claimant went to where his original supervisor was working and was not offered any further employment. He was instructed to contact the main office to see what his options for employment would be. Claimant contacted Employer's main office and enquired about work. He was informed that there was no space for him. Employer never contacted Claimant after that time.

67. Claimant contacted multiple businesses in search for employment. He provided his phone number but did not fill out any written applications for employment.[5] He did make some specific enquiries about jobs as a laborer and did not provide his restrictions. The prospective employers were for production factories, a thrift store, an electrical business, construction work and framing work. He would go to the job sites and speak with the supervisors who had the ability to hire laborers. Claimant believed he was not hired because they would notice how he was walking but none mentioned his problems with walking.

68. Claimant understood that Dr. Pehler recommended a second surgery, which was not authorized or approve by Insurer.

69. He used to visit his father daily. His father lived approximately five blocks away but Claimant would drive to his house, not walk. His father moved away, and was living with his brother, who was taking care of him, though he later moved to Mexico for most of the time, returning to live with his brother only two to three weeks at a time. In the spring, he would water his plants and flowers every day during the season, but he did not have any grass. He would either stand or sit on a wooden chair, both at his own home and when his father lived near, his father's garden, which was approximately 10 by 10 ft., a little larger than his own. He could stand for approximately 10 minutes then would need to sit down. He did not use other tools other than the hose.

70. Claimant would drive his father to the store, appointments and other errands. He would only drive thirty to forty minutes at a time due to his back pain. At around twenty minutes his back pain increased and by thirty the pain was not tolerable and would go to his lower extremity into his foot. He attempted to get a handicap placard for his vehicle but when he went to the DMV (Department of Motor Vehicle) he was told he needed a medical form. Claimant went to Eastside Family Health Center, his primary care provider, and was told by one of the physicians that he had to be in a wheel chair to qualify for one.

71. Claimant had recently sought medical attention at Denver Health Medical Center due to the increased pain in his low back and right leg, which was hurting and was swollen, changing colors on the sole of the foot. He was also having groin pain and that was the first time he had groin pain. They provided him medication, they ordered x-rays and gave him an injection for the pain. They also did an ultrasound due to the swelling of the leg and groin pain.

72. He attempted to return to Concentra but they personally declined to attend him. He then went to Brighton Platte Valley Hospital. They referred Claimant back to his surgeon, Dr. Pehler, at Concentra. He continues to take medications which include, Cyclobenzaprine 10 mg, three times daily, Morphine but only one tablet at the time of the visit to Platte Valley, prednisone 40 mg, once per day in the mornings, and Gabapentin.[6]

---

[5] This ALJ infers that Claimant did not have anyone available to assist him in completing any formal applications for employment.

[6] The Final Admission of Liability dated June 2, 2022 shows that Respondents admitted to maintenance medical benefits. Counsel for Respondents indicated he would contact his client to have Concentra authorize the follow up visits.

73. He had a functional capacity evaluation with Ms. Couch. Claimant stated that they tested his ability to sit, stand, and required change in positions. He was able to walk on the treadmill approximately six minutes before he asked to stop the tests due to back and groin pain. He was also limited in performing the bending test, and other tests with his arms away from the body as it significantly increased his pain. There were also some tests that he declined to perform due to the back and leg pain, like crouching and squatting. He was able to do lifts from chest to shoulder level and other lifts, but not from the floor.

74. Claimant continues to have problems with pain in his low back and right leg since his injury. He is able to walk approximately 10 minutes, then he needs to rest or sit down. He is unable to bend down and lift an item from the floor. He has to lie down during the day for approximately one hour. His wife does the cooking, shopping and cleaning. He only makes the bed in the morning. Sometimes he does go with his wife to do the shopping so that he can walk for a little but goes out to wait in the car when he tires out. He generally proceeds to bed around 9 to 10 p.m. but will wake up in pain around 1 a.m. and stays up until around 5 or 6 a.m. when he returns to lay down. He then gets up again around 10 or 11 a.m. He has to alternate between laying down, standing, walking and sitting during the day. During the night he may watch TV or walk to distract him with the pain. The pain is what limits him. He is unable to bend at the waist, crouch, and squat without pain. When he needs to pick up something from the floor, he has to hold on to the wall or a table. He continues to perform his home exercise program to help with the pain. When he walks greater than ten minutes the pain increases, coming from his low back. He uses a cane to walk every so often.

75. Claimant stated that, but for the leg symptoms, he might be able to work, but the symptoms going down the leg prevent him from being able to work.

76. On multiple occasions Claimant requested to have questions repeated. This ALJ observed and noticed Claimant's confusion and lack of understanding on those occasions.

77. Claimant continues to have problems with his low back as he cannot bend forward and touch the floor. He also has problems with his foot and leg, which limit his movement and function. He stated that, if not for his leg, he might be able to work at a fast food restaurant or at a vegetable factory separating vegetables. Claimant declared his leg symptoms prevent him from working.

78. He can walk approximately 10 minutes before the pain in his back increases and now the pain is worse with groin pain. Claimant's biggest problems continue to be with the low back pain, the right leg pain and the groin pain.

79. At times, during the hearing, Claimant was visibly uncomfortable, moving around in his chair, as well as standing and sitting. This ALJ noted that Claimant took breaks from sitting on more than one occasion and request formal breaks.

Dr. Yamamoto's Testimony:

80. David W. Yamamoto, M.D., an expert in medicine generally, occupational medicine and family medicine as well as a Level II accredited physician by the Division of

Workers' Compensation, testified at hearing on June 23, 2023. Dr. Yamamoto reviewed the medical records, Claimant's restrictions as well as reviewing Respondent's IME physician's report.

81. Dr. Yamamoto agreed with the restrictions imposed by the DIME physician, as they were consistent with his examination of Claimant. He was considered to be in the light duty category, which means occasional lifting to 20 lbs., no bending, no crawling, no crouching or climbing ladders. He specifically opined that Claimant should not perform any job that would require him to bend repetitively. He also agreed that Claimant should have a handicap permit. He reviewed Kristine Couch's Functional Capacity Evaluation and stated she was extremely professional in how she did her work, was well known in the community and provided very dependable reports every time. He opined that Dr. Raschbacher's assignment of a 40 lb. restriction with no other limitations was very arbitrary and subjective. This is based on the fact that Dr. Raschbacher provided no evidence that he had done any testing for lifting limitations. He opined that Dr. Winslow and Dr. Zimmerman provided valid and objective reports in a scientific administration of the test for range of motion.

82. Dr. Yamamoto stated that it was a physician's responsibility to provide physical restrictions which can be used by vocational experts to reach an opinion with regard to the work they may perform. He expressed that Claimant had not recovered the function he had hoped following the microdiskectomy surgery. He mentioned that the MRI of May 20, 2020 showed a right-sided laminotomy with decreased spinal stenosis, a disc protrusion and multi-level degenerative changes but no longer showed the extrusion on the right at L4-L5 and stenosis. Dr. Yamamoto did not find any sign of instability post-operatively. Both he and Dr. Zimmerman observed that there was a decrease in the spinal stenosis post-surgery and no recurrent disc herniation. He noted that, unlike his examination of a positive straight leg test, a subjective finding, Dr. Zimmerman opined that Claimant had a tight hamstring, not nerve pain, which he did not consider a significant point.

83. Dr. Yamamoto opined that Claimant's work injury was the straw the broke the camel's back. In essence, Claimant was able to work a heavy duty job for many years, up to the point that he was injured, which is something that happens with laborers that are his age. He voiced that it was not uncommon to have degenerative changes in addition to what looked like a treatable condition. He specifically pointed out that neither the ATP nor the DIME physicians rated the radicular symptoms. This ALJ infers that the reason for the choice not to rate was not clear from either report. Dr. Yamamoto explained that it is the rater's choice, but under the *AMA Guides for the Evaluation of Permanent Impairment*, Third Edition (*Revised*), under Table 53IIE, Claimant had a surgically treated disc lesion with residual, medically documented pain and rigidity with or without muscle spasm. Dr. Yamamoto agreed with both Dr. Winslow and Dr. Zimmerman that the surgery, while technically successful, did not help Claimant's symptoms, as Claimant continued with radicular symptoms and he did not regain function.

E. Testimony of Cynthia Bartman:

84. Ms. Cynthia Bartman, an expert vocational evaluations, testified at hearing on June 23, 2023. Ms. Bartman interviewed Claimant, reviewed the medical records, and considered Claimant's work restrictions as well as his residual labor market, if any. She noted Claimant had light duty restrictions, no stooping, bending, crouching, crawling and no ladders and the Functional Capacity Evaluation performed by Kristine Crouch. She noted that, she considers whether a patient has a valid profile on the FCE to consider whether a Claimant had an indication of maximal effort and Claimant met 22 of 22 for validity markers. She also considered that Dr. Zimmerman, Dr. Winslow and Dr. Yamamoto all agreed he should have a handicapped parking tag. The last requires limits on walking, which were consistent with the FCE. She stated that if a physician feels a claimant is able to walk over 200 feet, they should not recommend a parking permit.

85. Ms. Bartman opined that, contrary to Ms. Montoya's opinion, there is no work that would match Claimant's vocational skills and his sedentary to light work restrictions, and his limitations. She opined that the majority of the jobs identified by Ms. Montoya were primarily in the medium or heavy work categories and did not match Claimant's work restrictions or the overwhelming medical evidence. Those jobs identified fit only within the restrictions provided by Dr. Raschbacher. Further, in assessing Claimant's skill level based on the jobs and how he performed those jobs, he primarily worked performing unskilled work and laboring manual jobs. Ms. Bartman opined that there were no jobs in the local labor market that he could perform within his skill set in the sedentary to light duty categories. [7] Ms. Bartman stated as follows:

> [Claimant] mainly worked in the unskilled work category, so what I indicated earlier is that there would be very few skills, if any, that would ever transfer into other occupations, so then you have to look at what is his chances of getting other unskilled work. But then you have to factor in his work restrictions. And when I look at his work restrictions, I do not believe there are any jobs in the local labor market that matches his vocational skills and his work restrictions and that would come available in his local labor market. There are no matches when I evaluate each one of those elements.
>
> …
>
> I do labor market research every single week by calling employers and inquiring on the physical requirements of many different jobs, I feel like I have a firm understanding.

---

[7] This ALJ takes judicial notice of the *Dictionary of Occupational Titles (4th Ed., Rev. 1991)* -- Appendix C by the U.S. Department of Labor job category list of physical demands as follows:
A) S-Sedentary Work - Exerting up to 10 pounds of force occasionally (Occasionally: activity or condition exists up to 1/3 of the time) and/or a negligible amount of force frequently (Frequently: activity or condition exists from 1/3 to 2/3 of the time) to lift, carry, push, pull, or otherwise move objects, including the human body. Sedentary work involves sitting most of the time, but may involve walking or standing for brief periods of time. Jobs are sedentary if walking and standing are required only occasionally and all other sedentary criteria are met.
B) Light Work - Exerting up to 20 pounds of force occasionally, and/or up to 10 pounds of force frequently, and/or a negligible amount of force constantly (Constantly: activity or condition exists 2/3 or more of the time) to move objects. Physical demand requirements are in excess of those for Sedentary Work. Even though the weight lifted may be only a negligible amount, a job should be rated Light Work: (1) when it requires walking or standing to a significant degree; or (2) when it requires sitting most of the time but entails pushing and/or pulling of arm or leg controls; and/or (3) when the job requires working at a production rate pace entailing the constant pushing and/or pulling of materials even though the weight of those materials is negligible. NOTE: The constant stress and strain of maintaining a production rate pace, especially in an industrial setting, can be and is physically demanding of a worker even though the amount of force exerted is negligible.
C) Medium Work - Exerting 20 to 50 pounds of force occasionally, and/or 10 to 25 pounds of force frequently, and/or greater than negligible up to 10 pounds of force constantly to move objects. Physical Demand requirements are in excess of those for Light Work.

86. Ms. Bartmann stated that there were certain types of jobs that employers would be willing train workers at Claimant's age (59) such as front desk and customer service if they had prior computer skills. However, considering Claimant's background of no skills and work restrictions, she opined employers were not willing to train. Further, she noted that while packing job may sitting allow, very infrequently, that they would also require horizontal reaching, which Claimant was unable to perform pursuant to the FCE and Dr. Yamamoto's recommendations pursuant to the FCE. Others required the ability to read and write in English, which Claimant could not do. Ms. Bartmann consulted the Dictionary of Occupational Titles (DOT)[8] to determine whether the jobs identified by Ms. Montoya were appropriate for Claimant considering his limitations and restrictions. The jobs, such as packaging, cleaning, food prep, required occasional bending, were inappropriate for Claimant considering his restricted, Ms. Bartmann never found any positions suitable for someone with Claimant restrictions. Ms. Bartmann opined that Claimant was permanently and totally disabled from employment,

F. Testimony of General Superintendent:

87. The general superintendent testified that he supervised Claimant's supervisor, as well as Claimant when he worked in the shop on modified duty after his injury form October 8, 2019 to February 11, 2020. [Redacted, hereinafter MZ] stated that he gave Claimant instructions of the jobs to perform each morning. He stated that he did not give instructions to have his instructions translated but that the workers were continuously speaking in Spanish, which was their native language. He did not recall having Claimant's supervisor or the main office contact him if Claimant went to either of them about a job following his surgery, as neither informed him as was the company policy.

G. Testimony of Katie Montoya:

88. Ms. Montoya testified as an expert vocational rehabilitation and assessment. Ms. Montoya interviewed Claimant on September 27, 2022. She obtained a history including that Claimant had ongoing low back and right leg pain that was constant. He stated that he was not the same person he used to be and could not do what he used to do. Claimant reported physical limitations consistent with his testimony at hearing. Ms. Montoya reviewed the medical records including the work restrictions prescribed by different providers, including the parking pass eligibility and the FCE performed by Ms. Couch. She discussed the jobs Claimant had sought out but that he had filed no formal applications for employment, as he had been turned away.

89. Ms. Montoya performed labor market research in this case after reviewing all available information by looking at local employment posting and sources as well as

[8] The Dictionary of Occupational Titles, Volume I & II (Forth Edition, Revised 1991) U.S. Department of Labor, Employment and Training Administration, U.S. Employment Service, found at https://babel.hathitrust.org/cgi/pt?id=umn.31951d00357017o&view=1up&seq=1 and at https://babel.hathitrust.org/cgi/pt?id=umn.31951d00357018m&view=1up&seq=1 as they are in the public domain and not updated since 1991.

.

the DOT for the job classifications and determining any transferable skills. She relied on those restrictions that allowed Claimant to work the full range of light work, identifying jobs that fit that category, and possible job leads in the general metropolitan labor market. Ms. Montoya did not identify any that were within 20 minutes of Claimant's home. She opined that Claimant could earn a wage within the light duty category. She agreed that the DOT classification for forklift operator fell within the medium unless there was a job with cross-classification. She also agreed that hand packager was also in the medium category under the DOT. Further, Ms. Montoya did not consider any walking limitations.

H. Testimony of Dr. Raschbacher:

90. Dr. John Raschbacher testified at the second hearing as an expert in occupational medicine. At the time of his examination on September 6, 2022 Claimant was complaining of low back and leg pain. He noted that the post-surgical MRI of May 2020 showed resolution of the disc extrusion that was supposedly pinching the nerve and that Dr. Rauzzino indicated that Claimant had persistent leg pain in the absence of structural lesion. He also opined that the July 26, 2021 MRI did not show any re-herniation. Dr. Raschbacher went on to state that the surgery was "technically successful" and could not explain why the Claimant continued with symptoms, going so far as to state "that assumes he is, in fact, suffering leg pain. I don't – I doubt that he is. That's just what he's saying." This ALJ infers that Dr. Raschbacher is stating that Claimant is lying when he is reporting that he has leg pain. He also stated that things to look for to determine whether there is some abnormality are normal lumbar lordosis and the presence of lumbar spine spasms, positive SLR or positive tripod sign.

91. Dr. Raschbacher went on to exhaustively articulate the need for an EMG to be ordered by providers, then stated that it would not change the outcome, his complaints, his treatment or the need for further surgery. Dr. Raschbacher noted that he did not belief Claimant was telling the truth and if he were, the surgical outcome would be successful. He disagreed with Dr. Winslow that Claimant had a poor outcome to the surgery.

92. Lastly, he opined that FCEs were rarely indicative of a patient's abilities or restrictions despite the validity criteria being met as patients rarely if ever give a good effort. He recommended a 40 lb. work restriction and stated that Claimant really does not need any restriction at all. Dr. Raschbacher opined that Dr. Winslow and Dr. Zimmerman's opinions that Claimant had a poor outcome of his surgery was incorrect because Claimant was not telling the truth. However, he could not site to any medical records where any other physician found Claimant not credible or not truthful.

93. This ALJ finds Dr. Raschbacher's opinions not credible and contrary to medical records. Nothing in the DIME report, Dr. Zimmerman's, Dr. Burns' or other treater's, or Dr. Yamamoto's reports support the conclusion that Claimant was not truthful to his providers. It is well noted that while surgeries can be "technically successful" because it takes away the source of the original offending tissue, it may leave patients with permanent conditions and ongoing symptomology. While Dr. Raschbacher did not believe this Claimant, this ALJ does not doubt the veracity of the Claimant and his complaints of symptoms that limit his abilities as Claimant has consistently been reporting the same symptoms as shown above for the last four years.

I. Ultimate Findings:

94. As found, Claimant had no significant or relevant medical conditions that limited his ability to perform work as a heavy masonry worker prior to his work injury of August 10, 2019. Claimant is found credible and persuasive.

95. As found, Claimant had ongoing consistent low back pain from the day of the work related accident on August 10, 2019 to the present that limit his function. As found, the work related injury caused the ongoing symptoms despite providers being unable to identify a specific pain generator that would be amenable to surgery. As found, Claimant's work related injury was admitted and was the reason for the surgical treatment that resulted in Claimant's failed back syndrome or post-laminectomy syndrome. As found, simply because there is no identified pathology that can be addressed by surgery does not naturally indicate that there is nothing wrong with Claimant. Claimant clearly responded to steroid injections, improving for a short while, with symptoms returning wthin weeks. Here, throughout most of the medical care, Dr. Burns document that Claimant had ongoing lumbar spine spasms on the right, stiffness and significant loss of range of motion. Multiple other providers, other than the ATPs also highlighted objective findings. Dr. Rauzzino found positive straight leg raise on the right, negative on the left; loss of ROM, subjective weakness of his right EHL. Dr. Reiss wrote that Claimant did not show pain behaviors, had loss of ROM, had tenderness centrally, a positive SLR on the right, decreased sensation of the right big toe and some groin pain with a Faber test. Dr. Winslow found increased paraspinal muscle tone, and loss of range of motion. Dr. Yamamoto found decreased ROM, antalgic gait favoring the right leg, positive straight leg test on the right, decreased sensation over the medial right foot and decreased EHL strength on the right compared to the left. This ALJ is persuaded by the multiple providers that recorded objective findings over the lone physician that did not even believe Claimant had any symptoms. As found, Claimant has significant ongoing chronic pain caused by the work related August 10, 2019 injury.

96. As found, Dr. Winslow's opinion regarding a 'significant identifiable pain generator" was in the context of his opinion against recommending further surgery and not that Claimant was either symptom magnifying or was not truthful as Dr. Raschbacher suggested. It was simply noting that, from a surgical perspective, there was not sufficient identified pathology to operate again, and was not a comment about Claimant's credibility or disability, which are for this ALJ to determine and not a medical opinion. As found, Dr. Winslow, Dr. Zimmerman and Dr. Burns clearly found Claimant trustworthy as they provided ongoing care recommendations, work restrictions and formal significant impairment ratings. The opinions of Drs. Burns, Zimmerman, Winslow and Yamamoto were consistent and more credible than the contrary opinions of Dr. Raschbacher, who is specifically found not credible.

97. As found, Dr. Zimmerman, Dr. Winslow and Dr. Yamamoto all agreed Claimant qualified for a parking permit. As found, when a physician indicates that a patient qualifies for a permit, they are indicating that the patient meets the legal criteria of limited walking up to 200 feet and ranges greater than that only with breaks or assistance.

98. As found, the job of office cleaner would require stooping, bending, crouching, and possibly stairs, which Claimant is unable to perform, which is fully

document in the credible medical records. The job of hand packer and food preparer would require bending forward and horizontal reaching. Claimant was unable to perform these activities during the functional capacity evaluation, which is found credible, valid and consistent with Dr. Yamamoto's credible endorsement of the evaluation. These types of jobs would also require occasional bending to pick items off the ground, which Claimant credibly testified and Dr. Burns documented he was unable to perform. These jobs would also most likely involve standing and sitting for extensive periods of time, which Claimant is unable to do as he requires frequent rests to lay down during the day. As found, Claimant could not perform the job of fork lift driver pursuant to the work restrictions of his ATPs as it would involve climbing on to the machine, and would not be considered to be on level ground. As found, any of the jobs which were potentially identified as possibly available to Claimant do not meet all of the Claimant's functional limitations or work restrictions. As found, even if the work restrictions of the ATPs had fit within the parameters of the proposed jobs identified, Claimant is unable to obtain and retain a job because he is unable to rest a full night without frequently waking up and staying awake for long hours at a time and requires rest breaks laying down during the day due to the unremitting low back and leg pain caused by the August 10, 2019 work injury.

99. As further found, considering Claimant's ongoing consistent complaints of low back pain and radicular symptoms, Claimant's background and experience, his transferable skills or lack thereof, as well as the persuasive vocational evidence Claimant has proven that he is permanently and totally disabled. As found, despite the robust current labor market, Ms. Bartmann's opinions and testimony are found more credible and persuasive that those presented by Ms. Montoya. Not because Ms. Montoya is not credible, but because Ms. Montoya's assessment did not include all of Claimant's credible and persuasive work restrictions and physical limitations caused by the chronic pain that prevent him from performing the full range of light duty jobs identified. In light of Claimant's education, primarily Spanish language skills, limited unskilled laboring experience, the accumulation of work restrictions provided by his ATPs, the DIME physician and Dr. Yamamoto, related to the admitted work injury, and his ongoing functional limitations, from the totality of the credible and persuasive evidence, Claimant is permanently and totally disabled.

100. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Permanent Total Disability Benefits

To prove his claim that he is permanently and totally disabled, Claimant shoulders the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Yeutter v. Indus. Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53 ¶ 26. Claimant must

also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Wallace v. Current USA, Inc.* W.C. No. 4-886-464 (ICAO, Dec. 24, 2014).

The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). In weighing whether Claimant can earn any wages, the ALJ may consider various human factors, including Claimant's physical condition, mental ability, age, employment history, education and availability of work that Claimant could perform. *Weld County Sch. Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998); *Yeutter* 2019 COA 53 ¶ 26. The ALJ may also consider Claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (ICAO. Apr. 10, 1998). The critical test is whether employment exists that is reasonably available to Claimant under his particular circumstances. *Weld County Sch. Dist. Re-12 v. Bymer*, *supra*; *Blocker v. Express Pers.* W.C. No. 4-622-069-04 (ICAO, July 1, 2013.). Whether Claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

Because permanent total disability is based upon a claimant's impaired access to the labor market, medical evidence is neither required nor dispositive of permanent total disability. See *Baldwin Construction Inc., v. Industrial Claim Appeals Office*, 937 P.2d 895 (Colo. App. 1997). To the contrary, the claimant's testimony, if credited, may alone be sufficient to support a finding of permanent total disability. Chacon v. I.C.A.O., W.C. No. 54-382-050 (September 26, 2003). However, to the extent medical evidence is presented, the ALJ is the final abiter of conflicts in the evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990). It is immaterial if the record contains some medical and vocational evidence which, if credited, might support a contrary determination. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). The determination of the weight to be accorded the various pieces of evidence is a matter within the ALJ's province as the fact-finder. *Rockwell International v. Turnbull, supra*.

This ALJ finds and concludes Claimant has proven, by a preponderance of evidence, that due to the restrictions that flow directly from his work injury he is permanently and totally disabled. Most important, the ALJ credits Claimant's testimony as it relates to his development of symptoms and limitations after his August 10, 2019 work injury and his surgery. This includes his limited ability to engage in activities of daily living, and physical activities necessary to obtain and retain employment.

The ALJ also credits the opinions of Dr. Burns, Dr. Zimmerman, and Dr. Winslow, all of whom listed work restrictions that were similar and substantially consistent. Those work restrictions include lifting no more than 15 to 20 lbs. occasionally, no bending, no stooping, no crouching, no crawling, no ladder climbing, as well as limited twisting, ambulating on level ground (no stairs or climbing) and was qualified to obtain a parking permit that includes limited walking up to 200 feet without breaks. These restrictions largely concurred with the findings of the Functional Capacity Evaluation which was later performed by Ms. Crouch. Ms. Crouch's evaluation is found to be persuasive, and markedly consistent with Claimant's acknowledged functional abilities.

This ALJ also credits and finds persuasive the testimony of Claimant's vocational expert, Cynthia Bartmann. Ms. Bartmann credibly explained Claimant's limited education, advanced age, lack of English skills including reading and writing, his limited work experience as an unskilled laborer, the physical restrictions as laid out by his ATPs Dr. Burns and Dr. Zimmerman, which are the human factors considered, all support the conclusion that Claimant is precluded from work due to his work injury of August 10, 2019 and that Claimant is permanently and totally disabled. This ALJ credits Claimant's testimony, the opinions of the authorized treating physicians, Dr. Burns and Dr. Zimmerman as well as the opinions of the DIME physician, and the opinion of Ms. Bartmann to conclude that the claimant is permanently and totally disabled. Further, when these are considered with the opinions of Dr. Winslow and Dr. Yamamoto, and the findings of the FCE by Ms. Crouch, as well as the Claimant's inability to find, secure and retain any jobs that may have become available in the labor market due to his inability to sleep, requiring rest periods during the day and his ongoing chronic pain, are all human factors that, collectively, support the finding that Claimant is unable[9] to earn a wage due to his August 10, 2019 work related injuries, and therefore, is not employable in a competitive job market, despite its current robustness.

While Respondents argue that this ALJ misapplied the facts to the law, this ALJ disagrees. Here, Respondents state that both Dr. Zimmerman and Dr. Winslow identified that Claimant could perform work in the light duty category. This ALJ interprets light duty work as the general ability to stand for up to 8 hours day and lift up to 20 lbs., with frequent lifting up to 10 lbs. Dr. Zimmerman issued light physical demand category work restrictions with no stooping, bending, crawling, crouching, or ladders, as well as limited to ambulating on level ground and stated he qualified for a disability parking pass.

Dr. Burns provided work restrictions of maximum lifting to 15 lbs., limited bending, twisting, stooping, no ladders or crawling, though she did not state she considered this light work, though it may be classified as not the full range of light duty. Both physicians limited the kind of work that Claimant could perform to something less than the full range of light work. In fact, Claimant's functional abilities, as demonstrated by the credible FCE performed by Ms. Couch, were less than this category when considering all of Claimant's limitation caused by the severe back injury and pain Claimant continued to experience following the unsuccessful lumbar surgery. Further, Claimant credibly testified that he could not lift from the floor or more than occasionally lift items or walk for more than 10 minutes without taking a break, and, required multiple breaks to lay down during the day. While Ms. Montoya identified several jobs available in the market, which involved the full range of light duty work. One of the jobs was as a tomato packer. This was a line job and would not be consistent with Dr. Burns' restrictions of 15 lbs. lifting, limited bending, twisting, and stooping, and this ALJ inferred that it would require reaching and standing for extensive periods of time, which Claimant stated he was not able to do. This ALJ did not consider this type of job to be within Claimant's functional abilities, given the credible and persuasive evidence.

[9] The FFCL issued on August 18, 2023 stated "able" instead of unable as appropriate given the context of the order. This was a scrivener's error.

Respondents argue that because Claimant had a recent complaint of groin pain, that the ongoing complaints cannot be linked to the August 10, 2019 work related injury. Claimant was placed at MMI as of October 18, 2021 and established what his physical limitation were at that time. The groin pain did not come about until 2023 and are found not to be a significant factor in the determination of whether Claimant was permanently and totally disabled upon reaching MMI.

Lastly, Respondents argue that Claimant's functional limitations as testified by Claimant cannot be relied upon for a determination of permanent total disability. Yet they cite no specific case law that supports this conclusion. In fact, case law states that an ALJ can make such a determination based on Claimant's testimony alone, if found credible, and need not rely on a specific medical opinion. However, in this case, Claimant's functional limitations is actually documented by providers. For example, Dr. Burns found Claimant to have difficulty standing up straight, had loss of normal lordosis and noted that objective findings were consistent with history and work related mechanism of injury. Dr. Burns noted that Claimant had spasming of the lumbar spine, tenderness present in right paraspinal muscles from L3-S1, and loss of range of motion. Other providers also documented multiple difficulties Claimant had with function that support his testimony. This bolsters Claimant's credibility in the final assessment of the totality of the evidence.

This ALJ concludes that Claimant cannot perform the full range of light duty work, has significant physical factors and functional limitations beyond those provided by his providers, as well as a significant amount of personal and human factors that affect Claimant's ability to return to the work force and cannot earn any wages. This ALJ finds and concludes that Claimant has proven by a preponderance of the evidence that Claimant is permanently and totally disabled.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant is permanently and totally disabled.

2. Respondents shall pay permanent total disability benefits beginning October 14, 2021, which is the date Claimant reached MMI.

3. Based on the admission in the record, Claimant's TTD rate is $573.09. As a result, Claimant's PTD rate is currently $573.09.

4. Respondents may take credit for any temporary disability, permanent partial disability benefits or other allowable offset for benefits paid to Claimant after MMI against any retroactive PTD benefits payable to Claimant.

5. Respondents shall pay Claimant interest at the rate of eight percent (8%) per annum for all compensation benefits which were not paid when due.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts** or email the Petition to Review to oac-ptr@state.co.us. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 29th day of November, 2023.

By: _____

Elsa Martinez Tenreiro
Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-220-689-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury arising out of the course of his employment with Employer in September 2022.

2. Whether Claimant established by a preponderance of the evidence entitlement to medical benefits.

3. Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability benefits.

4. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant worked for Employer as a delivery driver beginning July 10, 2022. (Ex. G). Claimant testified he was injured while pulling a dolly up a truck ramp in early September 2022 while making a delivery, although Claimant could not recall the precise date of the alleged injury, or the location where it occurred.

2. On September 3, 2022, Claimant saw Heather Roesly, M.D., at the UCHealth emergency room in Green Valley Ranch, reporting intermittent left leg cramping for several months, which he reported was worse over the previous few days. Claimant reported he had always suffered from cramps, and it was likely due to excessive sweating association with working outside. Dr. Roesly recommended Claimant hydrate appropriately and follow up with his primary care provider. Claimant did not report any work-related injury at this visit. (Ex. D).

3. On September 6, 2022, Claimant saw Kimberly Maiers, PA-C, at the UCHealth emergence department at the Anschutz Medical Campus, reporting left lower calf pain, radiating into his upper thigh and back, and left calf swelling. He reported the pain as severe enough to prevent him from working and doing normal activities of daily living. Claimant reported having intermittent left calf pain for a year. Evaluation for deep vein thrombosis was negative. Ms. Maiers' clinical impression was pain of the lower extremity, with possible neuropathy. She prescribed gabapentin and recommended physical therapy. Claimant did not report any work-related injury at this visit. (Ex. E).

4. On September 9, 2022, Claimant was seen at Swedish Medical Center for a lumbar x-ray. The x-ray was negative for acute abnormality in the lumber spine. (Ex. C). No other record of Claimant being seen at Swedish Medical Center was offered or admitted into evidence. However, other providers reviewed the treatment note and summarized Claimant's evaluation, indicating Claimant reported left leg pain beginning approximately one year earlier. Claimant reported a distant history of motor vehicle

collision in and that he was told he had an L4-L5 disc bulge. Claimant stated his symptoms resolved so he never pursued surgery. (Ex. F).

5. On September 13, 2022, Claimant saw Alvin Padua, D.C., at Aim High Chiropractic, reporting shooting pain in his leg, shooting into his lower back. Claimant reported acute leg pain starting one week earlier, without a known origin, but noted that it started as a cramp "over a year ago." Claimant did not report a work-related injury. (Ex. C).

6. On September 21, 2022, Claimant was seen again at the UCH emergency department for low back and left leg pain. Although Claimant indicated he lifted heavy objects at work, he did not report a specific mechanism of injury, or being injured in the course of his employment. (Ex. A).

7. On October 20, 2022, Claimant reported to Employer that he sustained an injury to his lower back when he slipped on a ramp while loading a truck in a dark alley at a unknown location. Employer completed a First Report of Injury on October 20, 2022, which lists the date of injury as October 20, 2022. (Ex. G).

8. Also on October 20, 2022, Claimant saw Brian Cass, M.D., at UC Health, for complaints of back pain radiating into his left leg after heavy lifting at work 2½ months earlier. (The treatment note for this date was not offered or admitted into evidence). (Ex. A).

9. On November 1, 2022, Claimant was first seen by a workers' compensation provider, when he was evaluated at Workwell by Casey Jones, PA-C. The record from the initial evaluation was not offered or admitted into evidence, but was summarized by various other providers. Claimant reported he was injured while carrying a large load of plates and dishes on a dolly up a ramp. He reported he tried to catch himself, and the dolly fell on him, forcing him into a wall. Claimant reported left calf and lower back pain. Claimant denied prior similar problems, and was diagnosed with a lower back strain. Physical therapy was recommended. (Ex. F & A).

10. Over the following month, Claimant received physical therapy at Workwell, and had follow up appointments with Workwell providers. No records of Workwell visits from November 2022 were offered or admitted into evidence, although the treatment was summarized by others. (Ex. A).

11. On November 3, 2022, Claimant saw Ms. Jones, who noted that Claimant had a motor vehicle accident in 2012 which resulted in an L4-L5 disc bulge, for which Claimant was told surgery may be required. Ms. Jones opined that Claimant's pre-existing L4-L5 disc bulge was asymptomatic prior to his September incident, and that Claimant's current symptoms were work-related. She recommended a lumbar MRI and spine referral. (Ex. A).

12. At Claimant's initial physical therapy evaluation on November 3, 2022, Claimant reported needing to use a cane to ambulate, and that his pain was unrelenting, impacting his ability to sit, bend, walk and sleep. (Ex. A).

13. Claimant saw Lynne Yancey, M.D., at Workwell on November 9, 2022 and November 28, 2022. (Ex. F & A). At the November 28, 2022 visit, Claimant reported he had completed a course of steroids, and was moving better, but had now regressed to his pre-medication baseline. Claimant reported using a cane for ambulation. Dr. Yancey referred Claimant to Stephen Pehler, M.D., for evaluation of his ongoing reported symptoms. (Ex. F & A).

14. On December 2, 2022, Claimant had a lumbar MRI which showed a minimal disc bulge at L4-L5 with mild facet arthropathy and ligamentum flavum hypertrophy, without spinal canal or neuroforaminal stenosis. The MRI also showed a mild disc bulge at L5-S1, with a subarticular disc protrusion resulting in mild to moderate spinal canal stenosis, with compression of the traversing left L5 nerve root. (Ex. A & F).

15. Claimant's next documented medical visit was December 7, 2022 with Dr. Yancey, M.D., at Workwell, for a date of injury of September 1, 2022. Dr. Yancey documented her review of Claimant's records from a September 9, 2022 Swedish Medical Center visit, and noted Claimant had provided a history indicating his symptoms had existed for one year prior to that evaluation. Dr. Yancey also reviewed Claimant's October 20, 2022 and indicated Claimant reported a 2.5-month history of lower back and left leg radiation after "heavy lifting at work." She opined that the timeline would put his injury date in early August 2022, several weeks before his reported injury date. (Ex. F).

16. At the December 7, 2022 visit, Claimant reported his lower leg was worse, and that his pain level was 10/10. He reported his pain was worse with all movements, and that he was unable to tolerate prolonged standing or walking. Dr. Yancey opined that Claimant's reported symptoms corresponded to the disc bulge shown on his MRI, and noted he was scheduled for an evaluation with Samuel Chan, M.D., for an EMG. (Ex. F).

17. On December 8, 2022 and December 12, 2022, Claimant attended physical therapy visits at Workwell. Claimant's physical therapy records document that Claimant reported severe pain with transitions and gait, and that he was using a cane. One of Claimant's functional goals was listed as "To be able to ambulate without quad cane > 100 feet." (Ex. F).

18. On December 14, 2022, Claimant saw Dr. Yancey with no reported significant changes in his condition. (Ex. F).

19. On December 15, 2022, Claimant saw Dr. Pehler. (Dr. Pehler's note from this date was not offered or admitted into evidence, but is summarized by other providers). Claimant reported debilitating pain, difficulty weight bearing, and needing to use a cane. Dr. Pehler performed x-rays and recommended an L5-S1 epidural steroid injection for a large central and left-sided L5-S1 disc herniation with nerve impingement. Dr. Pehler noted that if injections did not improve, a microdiscectomy would be recommended. (Ex. F & A).

20. On December 16, 2022, Claimant saw Samuel Chan, M.D., for a physiatry consultation. (The treatment note for Dr. Chan's December 16, 2022 visit was not offered

or admitted into evidence, but is summarized and referenced in other records). In a June 4, 2023 letter, Dr. Chan indicated Claimant was using a single point cane at his visit, and had significant pain behavior. On December 16, 2022, Dr. Chan performed an EMG study of Claimant's left leg which was within normal limits. He noted that there was no electrophysiologic evidence of left sided lumbar radiculopathy or lumbosacral plexopathy, and no evidence of nerve entrapment or neuropathy of the left leg. (Ex. A & B).

21. On January 12, 2023, Dr. Chan performed a left L5-S1 transforaminal epidural steroid injection (TESI). Eight days later, on January 20, 2023, Claimant returned to Ms. Jones using a cane for ambulation, and reporting 10/10 pain, without obvious signs of discomfort. Ms. Jones indicated the TESI provided no benefit and recommended additional physical therapy. (Ex. A).

22. Claimant's next documented treatment notes is a physical therapy re-evaluation from February 16, 2023. Claimant had attended 13 physical therapy visit, and reported continued severe pain. He reported "increased pain after walking a few steps," and his goals continued to include walking without a cane for greater than 100 feet. It was also noted that Claimant had not responded to conservative therapy. (Ex. F).

23. On February 17, 2023, Claimant saw Jacqueline Denning, M.D., at Workwell. Ms. Denning documented that Claimant sustained a fall injury in September 2022, and that there was a "delay of care [due to] insurance coverage logistics." Claimant reported to Ms. Denning that he woke that morning experiencing the worst pain since his injury, radiating down his left leg, and now had popping in his left knee. On examination, required support to stand on his heels and toes, and reported requiring a cane for ambulation. Dr. Denning diagnosed Claimant with a lower back strain and lumbar radiculopathy. (Ex. F).

24. On February 23, 2023, Claimant saw Dr. Pehler, reporting that buttock and leg pain and requiring a cane for ambulation assistance. Dr. Pehler characterized Claimant as having a very large and significant herniation on the left-hand side at the L5-S1 level. He recommended a left-sided L5-S1 microdiscectomy. (Ex. F).

25. Respondents performed video surveillance of Claimant on eight days between November 8, 2022, and January 5, 2023. The video surveillance footage contained in Exhibit I is approximately 22 minutes in length. The surveillance videos show Claimant walking, jogging a short distance, walking his dog, riding an electric bicycle, carrying various items, loading, and unloading vehicles, getting in and out of a vehicle, working in a garage, ducking under a partially open garage door, going into various buildings, and shopping in a store, all without apparent difficulty. Although Claimant is seen carrying a cane at various points in the video, the majority of footage shows Claimant walking without the use of a cane, and with a normal gait. At some points, Claimant is shown carrying, but not using a cane to walk. When using the cane, Claimant alternately used it in his right or left hand, and did not appear to be placing any weight on the cane, or using it to assist in walking. On November 9, 2022, the day Claimant had two appointments with Workwell, Claimant is shown walking in and out of a building and into a parking lot using a cane or adjustable walking stick. Video from November 11 and 12, 2022, shows Claimant walking, jogging, and working in a garage, without a cane. When considered in

its totality, the video surveillance demonstrates that Claimant symptoms were not as reported to his health care providers, and that he did not require a cane for ambulation. (See Ex. I). Although Claimant testified briefly regarding the video footage, he offered no credible, cogent explanation for his ability to perform these tasks without apparent difficulty, while reporting severe pain and limitations to his physicians.

26. On February 8, 2023, Claimant underwent an independent medical examination (IME), with Carlos Cebrian, M.D., at Respondent's request. Dr. Cebrian reviewed Claimant's medical records and performed an examination. After completion of the evaluation, Dr. Cebrian was provided with video surveillance footage of Claimant. Dr. Cebrian's description of the surveillance footage he reviewed is consistent with the ALJ's interpretation of the video provided for hearing. Dr. Cebrian noted that Claimant presented at the IME with an exaggerated limp of the left leg while using a cane in the right hand. Based on his review of records, examination, and review of video surveillance, Dr. Cebrian opined that Claimant had no work-related diagnoses. He indicated that Claimant's lumbar pain was degenerative changes at L5-S1 due to a disc protrusion compressing the left S1 nerve root, but did not attribute Claimant's condition to any work-related cause. The ALJ finds Dr. Cebrian's opinion credible.

27. On June 4, 2023, Dr. Chan authored a letter to Respondents' counsel after reviewing Dr. Cebrian's report. Dr. Chan noted that Claimant's clinical presentation was significantly different than that described by Dr. Cebrian in his report. For example, Dr. Chan noted that when he saw Claimant he was using a single-point cane, and had significant pain behavior, including alternating sitting and standing during his clinical visit. Dr. Chan opined that Claimant's lumbar pain and left leg complaint "is incidental, independent and unrelated to his work" for Employer. He opined that Claimant required no further treatment modalities, and that any further treatment should be provided outside the workers' compensation system. (Ex. B).

28. At hearing, Claimant testified his work for Employer was labor intensive, and that he worked more hours than other employees. He testified that he was injured when pulling a dolly up a ramp while making a delivery, but he did not recall the specific date or the location where he was injured. Claimant testified that had his condition been preexisting, he would not have been able to perform a labor-intensive job, and that he had no leg or back problems prior to his alleged injury. Claimant testified that he underwent back surgery in June 2023, and now he is better.

29. Claimant's co-worker, [Redacted, hereinafter SY] testified at hearing that he has worked with Claimant for frequently, and does not recall seeing Claimant limp or exhibit signs of an injury before September 2022. He confirmed that Claimant's job is labor intensive, and that Claimant worked a lot of hours.

30. [Redacted, hereinafter BL], Employer's general manager, testified at hearing that Claimant worked full -time from September 2022 through October 2022. BL[Redacted] testified that Claimant reported an injury on October 20, 2022, and Claimant has not worked for Employer since.

31. The admitted evidence is insufficient to permit the ALJ to determine Claimant's average weekly wage.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. § 8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant

demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, WC 4-898-391-01, (ICAO Aug. 25, 2014).

Claimant has failed to establish that he sustained an injury arising out of the course of his employment with Employer. Claimant testified and reported to various medical providers that he was injured in early September 2022. Claimant's claim that he sustained an injury in the course of his employment with Employer is not credible for multiple reasons. First, although Claimant was evaluated at least four times from September 3, 2022 through September 21, 2022, by physicians at UC Health and by chiropractor Dr. Padua, he did not report a work injury to these providers. Claimant indicated to these providers that he had a history of left leg pain for approximately one year prior to September 2022. The ALJ does not find it credible that Claimant would seek care from multiple providers without reporting to any of them alleged incident which he claims caused his pain. Nor is it credible that four different providers failed to document a report of the alleged incident.

Next, Claimant did not report a work-related injury until October 20, 2022, more than six weeks after it allegedly occurred. When Claimant did report the incident, as described on the First Report of Injury, he did so in vague terms, without identifying the location where the incident allegedly occurred. In testimony, Claimant could not recall the date of the alleged incident. The ALJ does not find it credible that Claimant cannot recall the location of the alleged injury, or the date on which it occurred.

Next, Claimant was able to work full-time for all of September 2022, until reporting an injury to Employer on October 20, 2022. Claimant's assertion that he would not be able to work if his injury was preexisting is inconsistent with his ability to work full-time for approximately six weeks after it allegedly occurred. Moreover, the surveillance videos are inconsistent with his reports to medical providers, and demonstrate that Claimant's condition was not as represented.

The ALJ credits the opinions of Drs. Cebrian and Chan that Claimant's symptoms are not work-related. Although Claimant's treating providers have opined that his condition is work-related, these opinions rely on the Claimant's self-report of the mechanism of injury and the emergence of symptoms. Those reports are inconsistent with his contemporaneous reports to his providers prior to October 20, 2022. Although Claimant had pathology at the L4-L5, and L5-S1 levels, the evidence does not establish that these conditions were caused by or aggravated by his employment with Employer.

At hearing, and in position statements, Claimant appears to contend that Respondents' payment for medical care helps establish that he sustained a work-related

injury. Although Insurer apparently paid for medical treatment Claimant received for his back and left leg, the payment of medical services is not in itself an admission of liability, and such payments do no prevent respondents from challenging the compensability of a claim. *See Ashburn v. La Plata School Dist. 9R*, W.C. No. 3-062-779 (ICAO May 4, 2007); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO Jun. 3, 2020) (Provision of medical care "does not necessarily establish that claimant was injured, it only establishes that the claimant claimed she was injured.")

Based on the totality of the evidence, the ALJ concludes that Claimant has failed to meet his burden to establish that it is more likely than not that he sustained an injury to either his lower back or left leg arising out of the course of his employment with Employer.

Medical Benefits

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish that he sustained a compensable injury, Claimant has failed to establish an entitlement to medical benefits.

Temporary Total Disability

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103 (1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Because Claimant has failed to establish that he sustained a compensable injury, Claimant has failed to establish an entitlement to temporary total disability benefits.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's average weekly wage (AWW) based on a claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the default method for calculating AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., establishes the so-called "discretionary exception," which affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Benchmark*/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., *supra*; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007).

Because Claimant has failed to establish that he sustained a compensable injury, determination of Claimant's average weekly wage is moot.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that he sustained a compensable injury to his back or left leg arising out of the course of his employment with Employer.

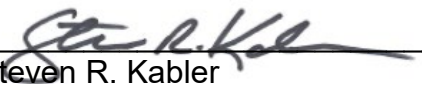
2. Claimant's claim for medical benefits is denied and dismissed.

3. Claimant's claim for temporary total disability benefits is denied and dismissed.

4. Determination of Claimant's average weekly wage is moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 29, 2023



Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Has Claimant demonstrated, by a preponderance of the evidence, that all medical treatment after June 8, 2022 (including all recommendations and referrals made by Dr. Kennan Vance and Dr. Benjamin Sears) constitutes reasonable medical treatment necessary to cure and relieve Claimant from the effects of the admitted September 20, 2021 work injury?

Have Respondents demonstrated, by a preponderance of the evidence, that Claimant experienced an intervening event on June 8, 2022 or June 9, 2022 that was sufficient to sever Respondents' liability?

Has Claimant demonstrated, by a preponderance of the evidence, that on August 30, 2023 she suffered further injury while in the quasi-course of employment?

FINDINGS OF FACT

1. Claimant worked for Employer as a cashier and "self check-out host". On September 20, 2021 Claimant suffered an injury to her right shoulder while lifting a case of beer while working for Employer. Respondents have admitted liability for the September 20, 2021 work injury.

2. Following the September 20, 2021 injury, Claimant was diagnosed with a torn right rotator cuff. On December 22, 2021, Dr. Keenan Vance performed a repair of Claimant's torn rotator cuff. Specifically, the procedure included "diagnostic operative arthroscopy of the right shoulder with extensive intra articular debridement", and "repair of a massive retracted rotator cuff tear and subacromial decompression including acromioplasty".

3. Unfortunately, the initial surgery failed and on May 17, 2022, Dr. Vance performed a right reverse total shoulder arthroplasty. In the operative report, Dr. Vance noted "63-year-old female with osteoporosis that failed her rotator cuff repair. Intraoperatively on the rotator cuff repair we had difficulty with her anchors holding into the bone."

4. At the completion of the May 17, 2022 surgery, x-rays were performed and showed that the hardware from the reverse total shoulder arthroplasty was "intact and well seated".

5. Thereafter in June 2022, Claimant suffered two falls at home. Claimant testified that the first fall occurred on June 8, 2022, when she was exiting her vehicle, and she slipped and fell onto her right side.

6. Claimant further testified that she fell a second time on June 9, 2022. In this instance, Claimant was on her porch and placing a water bowl for her cat. As she returned to standing, she began to feel lightheaded and fell backwards onto her buttocks.

7. In a medical record dated June 22, 2022, Claimant was seen by her primary care provider (PCP) Dr. Daniel Sullivan regarding recent shortness of breath. At that appointment, Claimant reported to Dr. Sullivan that she had fallen twice at home. Dr. Sullivan recorded that the first fall occurred when "she was getting some bags out of the trunk and she landed on her side and knees." Dr Sullivan also noted that with this first fall she thought she had broken ribs on her right side. With regard to the second fall, Dr. Sullivan noted that it was "a porch fall as she began to black out due to not having her oxygen. She landed on her bottom".

8. On July 6, 2022, Claimant returned to Dr. Vance. In the medical record of that date, Dr. Vance noted Claimant's report that she had fallen at home "a couple of weeks ago". Claimant informed Dr. Vance that she "tried everything not to fall on her shoulder but she did break [four] ribs and she fell on her knee." Based upon Claimant's report of a fall, Dr. Vance ordered x-rays.

9. On that same date, x-rays of Claimant's right shoulder revealed a heme fracture of the glenoid with dislodgement of the glenoid component. Dr. Vance listed it as an active problem of an acute periprosthetic fracture around the prosthetic joint.

10. Dr. Vance advised Claimant that due to this fracture, another revision surgery would be necessary. Dr. Vance noted that such a revision surgery would require bone grafting and a new glenoid component. As a result, Dr. Vance referred Claimant to another surgeon with experience with such complex procedures. This referral was made to Dr. Benjamin Sears in Denver, Colorado.

11. On August 3, 2022, Claimant was seen by Dr. Sears. In reciting Claimant's history, Dr. Sears noted that after the reverse total shoulder arthroplasty, Claimant "had another fall about [six] weeks later". Dr. Sears noted that the fall resulted in loosening the surgical hardware that is now "completely dislodged". Dr. Sears recommended a two stage procedure and placement of a custom glenosphere. Prior to scheduling the procedure, Dr. Sears also expressed concern about a possible infection and ordered a CT scan of Claimant's right shoulder. Dr. Sears also ordered nerve conduction studies.

12. On August 30, 2022, Claimant attended an independent medical examination (IME) with Dr. John McBride. In connection with the IME, Dr. McBride reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. In his IME report, Dr. McBride opined that Claimant's need for the initial rotator cuff repair and the reverse total arthroplasty were both related to the September 20, 2021 work injury. Dr. McBride also noted that both of those procedures were reasonable and necessary medical treatment. Dr. McBride further opined that Claimant's fall at home resulted in the fracture of Claimant's scapula and caused the glenosphere to become dislodged. Specifically, Dr. McBride noted that it was that fall

that was "the etiology for [Claimant's] need for revision of her reverse total shoulder replacement." Dr. McBride agreed that it would be wise to determine if there is an underlying infection in Claimant's shoulder. However, he further noted that if such testing was negative, then the trauma of the fall would be the cause of Claimant"s periprosthetic fracture, and therefore not related to the work injury.

13. Clamant resides in Grand Junction, Colorado and the IME with Dr. McBride was conducted in Denver. Respondents provided Claimant with air travel to attend the IME. On August 30, 2022, Claimant was at [Redacted, hereinafter DA] to take her flight back to Grand Junction. While at DA[Redacted], Claimant suffered another fall.

14. Claimant testified regarding her fall at DA[Redacted]. Specifically, she testified that the fall occurred while she was on a moving sidewalk. While on that moving sidewalk, she moved to the side and "blacked out". When she was next conscious she discovered she had fallen face first with both of her hands extended in front of her. On cross examination, Claimant confirmed that there was nothing specific about the moving walkway that caused her to fall. With regard to the reason for the loss of consciousness on this occasion, Claimant testified that Dr. Sullivan had diagnosed her with severe anemia.

15. Claimant further testified that emergency services were called and she was transported to the hospital by ambulance. Claimant was transported from DA[Redacted] to the emergency department (ED} at University of Colorado Hospital. Claimant testified that she remained in the hospital for two days.

16. On September 7, 2022, x-rays of Claimant's right humerus showed an acute oblique fracture of the midshaft of the right humerus "at the tip of the humeral component of the reverse total shoulder arthroplasty".

17. On September 22, 2022, Dr. Sears authored a letter to Respondents' counsel. In that letter, Dr. Sears again noted his concern that there may be an underlying infection in Claimant's right shoulder. Dr. Sears also stated his opinion that Claimant's current need for revision surgery is related to her workers' compensation injury. In support of this opinion, Dr. Sears stated that "[t]he complication of a catastrophic base plate failure requiring revision arthroplasty would only occur as a secondary condition to her placement of a reverse shoulder arthroplasty which was due to a [workers' compensation] accident." Dr. Sears also noted that the most recent fall on August 30, 2022 resulted in "a relatively nondisplaced midshaft fracture distal to the stem of the implant." Dr. Sears noted the most recent fracture was being treated nonoperatively.

18. On October 10, 2022, an x-ray of Claimant's right humerus showed a prosthetic fracture of the right humerus.

19. On November 8, 2022, Dr. Sears performed revis1on surgery on Claimant's right shoulder. Specifically, the procedure included resection arthroplasty right reverse shoulder arthroplasty; placement of long intramedullary (IM)nail; placement of allograft at the humeral shaft fracture and at the glenoid; and placement of a cement spacer.

20. On January 13, 2023, Dr. McBride authored an addendum to his September 2022 IME report after reviewing additional medical records. In the addendum Dr. McBride reiterated his opinion that Claimant's falls at home resulted in the periprosthetic fracture. Dr. McBride also addressed Claimant's fall on August 30, 2022 at DA[Redacted]. Dr. McBride opined that Claimant's falls that occurred after the successful reverse total shoulder arthroplasty are unrelated to the work injury.

21. Claimant testified that on April 25, 2023 she underwent the second revision surgery with Dr. Sears. Claimant testified that it is her understanding that in that second procedure Dr. Sears removed the IM nail from the humerus and performed a second replacement operation. Claimant testified she has improved since surgery and is now undergoing treatment with a bone clinic. Claimant testified that she is planning to undergo additional post-surgery physical therapy, as recommended by Dr. Sears.

22. Dr. McBride's testimony was consistent with his written reports. Dr. McBride testified that the procedures performed by Dr. Vance (the initial rotator cuff repair and the reverse total shoulder arthroplasty) were both reasonable, necessary, and related to Claimant's work injury. Dr. McBride noted that immediately following the reverse total shoulder procedure imaging showed that the hardware was intact and well seated. Dr. McBride testified that this indicates that the reverse total shoulder arthroplasty was successful. Dr. McBride further testified that the fall Claimant suffered that resulted in four broken ribs was a significant fall. Dr. McBride testified that he agrees with Dr. Vance that the periprosthetic fracture occurred secondary to that fall. With regard to Dr. Sears's concern related to infection, Dr. McBride testified that was a reasonable concern. Dr. McBride further testified that ultimately infection was ruled out in this case.

23. Prior to the June 8 and June 9, 2022 falts at her home, Claimant has a history of other falls. Medical records entered into evidence show that in October 2018, Claimant underwent x-rays following a "fall into tub back in August". On June 11, 2020, Claimant underwent a number of imaging studies (including x-rays of her right wrist and cervical spine, and a CT scan of her pelvis) after suffering a fall. This June 2020 fall is further addressed by Dr. Sullivan in a July 19, 2020 medical record. At that time, Dr. Sullivan noted that Claimant had suffered a sacral and pubic rami fracture in a fall.

24. The ALJ credits the medical records and the opinions of Drs. Vance and McBride. The ALJ finds that Claimant's fall at home on June 8, 2022 resulted in four broken ribs and the fracture to the reverse total shoulder hardware. That fall was not related to the admitted work injury. The ALJ finds that Claimant has failed to demonstrate that it is more likely than not that medical treatment she received after the

June 8, 2022 fall is related to the work injury. The ALJ also finds that Respondents have successfully demonstrated that it is more likely than not that the June 8, 2022 fall at home was an intervening event sufficient to sever Respondents' liability for the September 20, 2021 work injury.

25. With regard to specific medical treatment requested in this case, the ALJ finds that although the two revision surgeries performed by Dr. Sears were reasonable and necessary in treating Claimant's condition, those procedures are not related to Claimant's work injury.

26. Although the ALJ has determined that Respondents' liability in this matter was severed as a result of the June 8, 2022 fall at home, the ALJ must now turn to the August 30, 2022 fall at DA[Redacted]. Specifically, the ALJ must determine whether the quasi-course of employment doctrine is applicable to that fall. Furthermore, if that fall did occur within the quasi-course of employment, the ALJ must consider Claimant's pre-existing condition of anemia and determine if there was any special hazard present at the time of the August 30, 2022 fall.

27. The ALJ finds that it is clear that on August 30, 2022, Claimant was within the quasi-course of employment as she was traveling home after attending the IME with Dr. McBride. However, the ALJ finds that Respondents have successfully demonstrated that Claimant's fall on August 30, 2022 was precipitated by her pre-existing conditions of anemia and syncopal episodes. As noted above, Claimant has a history of falling. The ALJ credits Dr. McBride's opinion that Claimant's falls that occurred after the successful reverse total shoulder arthroplasty are unrelated to the work injury. The ALJ finds that it was Claimant's dizziness and "blacking out" on August 30, 2022 that resulted in the fall on that date. Although the fall occurred at an airport while Claimant was utilizing a moving walkway, the ALJ credits Claimant's testimony that there was nothing specific about the moving walkway that caused her to fall. The ALJ further finds that there was no special hazard present at the time of the fall.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306,592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *V. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. V. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, Claimant has failed to demonstrate, by a preponderance of the evidence, that medical treatment after June 8, 2022 is related to the admitted September 20, 2021 work injury. As found, the medical records and the opinions of Drs. Vance and McBride are credible and persuasive on this issue.

6. If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing* & *Publishing* Co. *V. Erickson,* 94 Colo. 382, 384, 30 P.2d 327, 328 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. V. Ball,* 172 Colo. 510,474 P.2d 622 (1970).

7. As found, Respondents have demonstrated, by a preponderance of the evidence, that on June 8, 2022, Claimant suffered an intervening event that was sufficient to sever Respondents' liability related to the admitted work injury. As found, the medical records and the opinions of Drs. Vance and McBride are credible and persuasive on this issue.

8. Under the quasi-course of employment doctrine injuries sustained while undergoing or traveling to and from authorized medical treatment are compensable, even though they occur outside the ordinary time and place limitations of normal employment. *Excel Corp. V. Industrial Claim Appeals Office,* 860 P.2d 1393 (Colo. App. 1998); *Schreiber v. Brown* & *Root, Inc.,* 888 P.2d 274 (Colo. App. 1993). The rationale for this principle is that because an employer is required to provide medical treatment, and because the claimant is required to submit to treatment in order to receive benefits, travel to receive authorized treatment is an "implied part of the employment contract." *Turner V. Industrial Claim Appeals Office,* 111 P.3d 534 (Colo. App. 2004).

9. If the precipitating cause of an injury is a preexisting health condition that is personal to the claimant, the injury does not arise out of the employment unless a "special hazard" of the employment combines with the pre-existing condition to contribute to the accident or the injuries sustained. *National Health Laboratories v. Industrial Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Rice v. Dayton Hudson Corp.,* W.C. No. 4-386-678 (ICAO July 29, 1999); *Stanley Alexander v. Emergency Courier Services,* W.C. No. 4-917-156-01 (ICAO Oct. 14, 2014). This rule is based upon the rationale that, unless a special hazard of the employment increases the risk or extent of injury, an injury due to the claimant's preexisting condition lacks sufficient causal relationship to the employment to meet the arising out of employment test. *Ramsdell v. Hom,* 781 P.2d 150 (Colo. App. 1989); *Stanley Alexander v. Emergency Courier Services, supra.* In order for a condition of employment to qualify as a "special hazard" it must not be a "ubiquitous condition" generally encountered outside the workplace. *Ramsdell v. Hom, supra; Joan Briggs v. Safeway,* Inc. W.C. No. 4-950-808-01 (I.C.A.O July 8, 2015). Conversely, if the precipitating cause of the injury involves conditions or circumstances of the employment, there is no need to prove a "special hazard" in order for the injury to arise out of the employment. *Cabe/a v. Industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008); *H&H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

10. As found, the August 30, 2022 fall, while within the quasi-course of employment, occurred due to Claimant's preexisting conditions and no special hazard was present. Therefore, the injuries sustained on August 30, 2022 are not compensable. As found, the medical records, Claimant's testimony, and Dr. McBride's opinions are credible and persuasive on this issue.

ORDER

It is therefore ordered that Claimant's request for medical treatment after June 8, 2022 is denied and dismissed.

Dated November 30, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the

ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 27. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 27(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **It is recommended that you send a courtesy copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-229-784-001

ISSUE

I. Claimant's average weekly wage.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This case involves an admitted claim.
2. Claimant started working for Employer on or about August 7, 2022.
3. Claimant was injured on January 16, 2023.
4. Claimant earned the following wages:

Pay Period Ending	Gross Earnings
8/14/2022	$1,170.00
8/21/2022	$150.00
8/28/2022	$1,330.00
9/4/2022	$1,076.25
9/11/2022	$630.00
9/18/2022	$1,400.00
9/25/2022	$1,400.00
10/2/2022	$1,120.00
10/9/2022	$1,382.50
10/16/2022	$1,400.00
10/23/2022	$1,400.00
10/30/2022	$1,400.00
11/6/2022	$1,400.00
11/13/2022	$1,400.00
11/20/2022	$1,120.00
11/27/2022	$280.00
12/25/2022	$560.00
1/1/2023	$576.00
1/8/2023	$576.00
1/15/2023	$1,440.00
Total Wages	**$21,210.75**

5. From August 7, 2022, through January 15, 2023, a 23-week period, Claimant earned $21,210.75. Claimant contends that in order to fairly calculate his average weekly wage, his total earnings over the 23-week period should be used. Using Claimant's earnings over the entire 23-week period results in an average weekly wage of $922.21.
6. From October 3, 2022, through January 15, 2023, a 15-week period, Claimant earned $12,934.50. Respondents contend that in order to fairly calculate Claimants' average weekly wage, a period of 15 weeks should be used. Using Claimant's earnings over this 15-week period results in an average weekly wage of $862.30.
7. Both Claimant's and Respondents' calculations consider that Claimant did not work and earn any wages from November 28, 2022, through December 18, 2022. Plus, Claimant earned less than usual from November 21, 2022, through January 1, 2023.
8. There was no testimony provided by either party regarding why Claimant's wages varied during any weekly period. Moreover, there was no testimony that established Claimant had to be available for 40-hours week – if the work was available.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and

credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Claimant's average weekly wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

There was no testimony presented at the hearing regarding why Claimant's wages varied during the 23-week period. The only evidence submitted and admitted into evidence was Claimant's wage records. As found, Claimant worked 23 weeks before he suffered his work injury. During this period, Claimant's weekly earnings varied – and Claimant did not work for an approximate three-week period. The 15-week period urged by Respondents is arbitrary and disproportionately impacts Claimant's average weekly wage, in a negative way, based on the three weeks Claimant did not work during that period.

Thus, based on the fluctuation of Claimant's wages during the 23-week period, the ALJ finds and concludes that the most reasonable calculation to determine Claimant's average weekly wage is to take his total earnings over the 23-week period of $21,210.75 and divide it by 23 weeks. While the ALJ considered using the $1,440 amount Claimant earned the week he was injured, the ALJ ultimately finds and concludes that the most reasonable and fair method to determine Claimant's average weekly wage is the method proposed by Claimant.

Therefore, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that his average weekly wage is $922.21-which is the $21,210.75 amount divided by 23 weeks.

ORDER

Based on the above findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's average weekly wage is $922.21.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents proved by a preponderance of the evidence that the September 13, 2021 Final Admission of Liability (FAL) was filed in error, and should be withdrawn based on the Division Independent Medical Examination (DIME) opinion that Claimant did not suffer a compensable injury.

2. Whether Claimant overcame the DIME opinion regarding maximum medical improvement (MMI) and impairment by clear and convincing evidence.

3. Whether Claimant proved by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits.

4. If Claimant met her burden regarding TTD benefits, whether Respondents proved by a preponderance of the evidence that Claimant is not entitled to TTD benefits after March 10, 2021 based on termination for cause.

5. Whether PALJ Phillips' Prehearing Order requiring Respondents to pay the fee for the rescheduled DIME violated procedural due process.

STIPULATION

The parties stipulated, via email communications, to the admissibility of communications between Claimant's former counsel and the DIME physician (Ex. N and Ex. O) with the stipulation that the DIME physician cancelled both DIME appointments.[1]

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 66 year-old woman who previously worked for Employer as a custodian.

2. On July 7, 2019, Claimant was walking between buildings when her right knee buckled. She was not pushing, pulling or carrying anything. There was no uneven terrain, and she did not slip. Claimant did not feel a pop or a snap when her right knee buckled. (Ex. M Ex. J.)

[1] Exhibits N and O were admitted during the hearing.

3. Claimant did not immediately report her alleged injury, but reported it to her supervisor sometime between July 9 and July 11, 2019.[2] Claimant's supervisor, [Redacted, hereinafter JR], completed an "Injury & Illness Prevention Plan" form regarding Claimant's injury on July 11, 2019. He specifically noted that it was an "unusual accident" and the "cause [was] not clear." JR[Redacted] offered Claimant treatment through workers' compensation, but Claimant refused, and she signed a document entitled "Medical Treatment Refusal." (Ex. M pp. 274-276). Claimant testified that this was not her signature on the form. Claimant's employment records contain multiple documents that Claimant signed – Employment Application (Ex. M p. 246), Employer Handbook acknowledgement (Ex. M p. 258), and patient information sheet (Ex. M p. 175). Each of the signatures on these documents closely resembles the signature on the form refusing medical treatment. The ALJ finds that Claimant's testimony denying this is her signature on the Medical Treatment Refusal form is not credible.

4. Claimant saw her primary care physician, Mark Unger, M.D., on July 11, 2019. The medical record for this visit was not complete, so there is no indication as to the primary reason for Claimant's visit. Nevertheless, four issues were noted under her assessment and plan: 1) anxiety; 2) chronic left-sided low back pain with left-sided sciatica; 3) osteopenia; and 4) acute pain of right knee. According to the medical record "[t]his past Sunday she was walking from one building to another at work when her right leg buckled on her. She has a remote history of cartilage tear and reports having arthroscopy for meniscus repair many years ago but she had not had any recent problems with her knee giving out on her." (Ex. I). Dr. Unger ordered an x-ray, but also strongly recommended that Claimant follow up with Employer about seeing a workers' compensation doctor for her knee issue.

5. On July 12, 2019, Claimant presented to UC Health for a diagnostic evaluation of her right knee. The x-rays showed moderate to severe tricompartment osteoarthritis. The imaging was compared to a prior right knee x-ray from May 28, 2012 and it was noted there was no joint effusion or fractures. (Ex. L).

6. On July 12, 2019, Employer's First Report of Injury was completed. (Ex M). A few days later, on July 16, 2019, Claimant went to Concentra for an evaluation of her right knee, and she was evaluated by Keith Meier, N.P. Mr. Meier noted that Claimant strained her right knee when she was "[s]imply walking briskly from building to building." Claimant told Mr. Meier she has had problems with her right knee in the past. Mr. Meier concluded that based upon his examination and the information about Claimant's job duties and mechanism of injury, "it does not appear that the presenting complaints arose out of her job duties in the course of the patient performing those duties." Claimant was placed at MMI as of July 16, 2019, and she had no work restrictions. (Ex. H).

7. There is no objective evidence in the record that Respondents were unaware of Mr. Meier's opinion that Claimant's injury was not work-related.

---

[2] The Worker's Claim for Compensation form completed by Claimant on November 17, 2020, states that she notified employer of the injury on July 9, 2019. (Ex. D). Claimant's supervisor signed the "Medical Treatment Refusal" form on July 11, 2019. (Ex. M).

8. Claimant continued to see her primary physician, Dr. Unger, for treatment. He diagnosed Claimant with right knee osteoarthritis that was "recently exacerbated by walking for longer distances than usual." (Ex. M).

9. Claimant saw Brian Lancaster, M.D., on December 31, 2019, and reported walking at work when her knee buckled and she fell. She denied feeling a pop or snap. The medical record notes that the case was evaluated by workers compensation and denied, so Claimant wanted to proceed with addressing the issue under private insurance. Dr. Lancaster indicated Claimant had predominant severe osteoarthritis present on imaging with bone-on-bone pathology. Dr. Lancaster recommended an MRI and an injection. (Ex. J).

10. Claimant had an MRI of her right knee taken at UC Health on January 14, 2020. The MRI showed: markedly truncated medial meniscus likely related to prior partial meniscectomy with prominent chondral loss; partial thickness chondral loss of the patellofemoral compartment cartilage; and small-to-moderate sized suprapatellar joint effusion. The indication was primary osteoarthritis of the right knee. (Ex. L).

11. On February 11, 2020, Claimant returned to Concentra for a "recheck of injury," and she was evaluated by Jeffery Baker, M.D. In the medical record, Dr. Baker noted "[p]atient seen on 7/16/19 for knee pain. It was felt to not be a work related issue. She states that WC insurance has decided to pay for everything. She has subsequently been seen by Dr. Lancaster at OCR. She ha[d] an injection on 1/24/20 and states she will get another one in 6 months." Dr. Baker referred Claimant for physical therapy, twice a week for three weeks. He also gave Claimant work restrictions. (Ex. H).

12. Claimant received treatment from Concentra from February 11, 2020 through August 27, 2020 and Respondents paid for the treatment. There is no objective evidence in the record as to why Claimant returned to Concentra in February 2020.

13. After treating her right knee conservatively with injections, Claimant saw C. Dana Clark, M.D., an orthopedic surgeon, on July 28, 2020. Dr. Clark diagnosed Claimant with end-stage arthritis of the right knee. Dr. Clark recommended a total right knee arthroplasty. (Ex. J).

14. On behalf of Respondents, William Ciccone, M.D., conducted a records review and opined that the request for a total right knee replacement should be denied because Claimant did not suffer a work-related injury. He specifically noted, "[i]t is unclear from the records provided why the claimant was seen again by occupational medicine on 2/11/2020 and was being treated as a work injury after it was denied on 7/16/2019. I am in agreement with the opinion given on 7/16/2019 that the claimant's symptoms are related to her preexisting knee arthritis and are unrelated to a work injury."

15. Claimant saw Dr. Baker for a recheck of her knee on August 27, 2020. Claimant told Dr. Baker she was slowly progressing, but was very fatigued due to the pain. Dr. Baker noted that Dr. Ciccone performed an IME on August 10, 2020, and determined she did not suffer a work-related injury. Dr. Baker noted "[t]his was the original determination

and I still do not understand why she was told to return for treatment." Dr. Baker explained to Claimant that he agreed with Dr. Ciccone that she had not suffered a work-related injury. He placed Claimant at MMI as of August 27, 2020, with no impairment rating. Dr. Baker subsequently completed a WC 164 form noting the MMI date of August 27, 2020 and no impairment. (Ex. H).

16. There is no objective evidence in the record that Respondents were unaware that both Dr. Ciccone and Dr. Baker opined that Claimant did not suffer a work-related injury.

17. Over the course of her employment with Employer, Claimant received multiple written warnings. On March 10, 2021, Employer terminated Claimant for the unauthorized use of a family member's login information to access a client's computer system. (Ex. M). The ALJ finds that Employer terminated Claimant for cause on March 10, 2021.

18. On September 13, 2021, Respondents filed a Final Admission of Liability (FAL). In the FAL, Respondents admit to medical benefits only. According to the FAL, medical benefits of $10,194.47 had been paid to date. The FAL specifically notes that future medical benefits and indemnity benefits are denied. The FAL lists the MMI date as August 27, *2021*, and this is based upon Dr. Bakers' August 27, *2020* report.[3]

19. Claimant objected to the FAL and requested a Division Independent Medical Exam (DIME). Alicia Feldman, M.D. was selected as the DIME physician, and the DIME was scheduled for January 25, 2022. Dr. Feldman cancelled the appointment because Respondents failed to timely provide the packet of medical records. The DIME was rescheduled for April 15, 2022. Dr. Feldman cancelled this appointment because an interpreter had been requested, but no interpreter appeared at the scheduled DIME.

20. Respondents' counsel entered his appearance in this matter on February 17, 2022. His office communicated with the DIME unit, and received confirmation that a DIME had not been rescheduled. Respondent's counsel also emailed Claimant's counsel on February 18, 2022 regarding the requested DIME and cancelled appointment. Claimant's counsel did not respond. On February 25, 2022, Respondents' counsel told his office, via email, that "it is Claimant's DIME so let's let them reset." (Ex. N).

21. Unbeknownst to Respondents' counsel, between January 25, 2022 and April 18, 2022, Insurer's adjuster, [Redacted, hereinafter PC], dealt directly with [Redacted, hereinafter RS], a non-attorney representative from Claimant's counsel's office regarding rescheduling the DIME and the request for an interpreter. On or about April 18, 2022, Respondents' counsel received notice from the adjuster that Claimant did not attend the April 15, DIME appointment. He subsequently emailed RS[Redacted], copying Claimant's counsel, and explained, among other things, that his office was not given any notice of the rescheduled DIME. Respondents' counsel further stated he would be seeking a prehearing conference on the following issues: Motion to Compel Releases and

[3] In the section denying maintenance care, Dr. Baker's August 27, *2021* report is noted. The report in evidence from Dr. Baker noting Claimant's MMI date of August 27, 2020, is his August 27, *2020* report.

Disclosures; Motion to Hold DIME in Abeyance; Motion to Compel Claimant to Pay Costs of Rescheduled DIME; and Motion to Show Cause to Terminate Dime.

22. A prehearing conference was held on April 26, 2022 on two issues: Respondents' Motion to Compel releases and essential information and Respondents' Motion to hold DIME in abeyance. PALJ Sandberg compelled Claimant to provide essential information and signed medical releases, and the DIME process was held in abeyance pending a settlement conference, until May 20, 2022. (Ex. B).

23. The parties did not settle this matter, and a prehearing conference was set on Claimant's Motion to Compel Respondents to pay the DIME rescheduling fee; Claimant's Motion to Compel Respondents to provide interpreter for the DIME, and Respondents' Motion to Compel Claimant to provide a sworn affidavit regarding the ability to speak English. PALJ Phillips denied Respondents' Motion to Compel, and granted Claimant's Motions to Compel. She found that "[i]t is undisputed that Claimant requested an interpreter in the notice and proposal for a DIME. This request was provided to the DIME Unit, to Respondents and to the DIME physician." She further found that good cause existed to reschedule the DIME and Respondents were responsible for paying the rescheduling fee. (Ex. C).

24. It is undisputed that Respondents knew a DIME appointment had been scheduled for April 15, 2022, and an interpreter was requested. There is no objective evidence in the record as to why neither Respondents, nor Claimant's counsel, included Respondents' counsel on the emails. Regardless, the ALJ finds that Respondents had proper notice that an interpreter was requested for the April 15, 2022 DIME appointment. The ALJ further finds that PALJ Phillips' Order is correct and does not violate procedural due process.

25. The DIME with Dr. Feldman occurred on September 19, 2022. Dr. Feldman opined Claimant did not sustain a work-related injury on July 7, 2019. Dr. Feldman further noted that she agrees with Dr. Baker's MMI date of *August 10, 2020*.[4] She gave Claimant a 0% impairment rating because of her opinion that Claimant did not sustain a work-related injury. Dr. Feldman specifically noted that she agreed with Dr. Baker and Dr. Ciccone that there was no work-related injury. (Ex. E).

26. F. Mark Paz, M.D., performed a records review on January 10, 2023, including a review of Dr. Feldman's DIME. Dr. Paz opined that the mechanism of injury reported was consistent with an activity of daily living and that, based on a reasonable degree of medical probability, it was not medically probable that the activity aggravated or accelerated Claimant's preexisting right knee osteoarthritis. Dr. Paz opined that the need for further treatment was attributable to the preexisting right knee osteoarthritis and not the July 7, 2019, event. (Ex. F).

27. Claimant presented no objective evidence to overcome Dr. Feldman's DIME opinion. The ALJ finds that Dr. Feldman's DIME opinion is credible and persuasive.

[4] Dr. Baker's MMI date is August 27, 2020.

28. Respondents seek to withdraw the September 13, 2021 FAL based upon the DIME report and Dr. Feldman's opinion that Claimant did not suffer a work-related injury. Specifically, Respondents assert "the conditions reported pursuant to the July 7, 2019 alleged injury were personal to the Claimant and not related to her employment. ***This is supported by the overwhelming majority opinion of the treating and examining physicians throughout the claim.*** The September 13, 2021, FAL was filed in error and should be withdrawn." (Respondent's Proposed FFCL p. 16, ¶ 9) (emphasis added).

29. As found, Mr. Meier of Concentra, placed Claimant at MMI on July 16, 2019, and opined this was not a work-related injury. It is undisputed that despite this opinion, Respondents continued to authorize medical treatment for Claimant. When Dr. Clark recommended a right total knee replacement, Respondents retained Dr. Ciccone to conduct a records review. Dr. Ciccone prepared a report dated August 10, 2020, and opined that Claimant did not suffer a work-related injury. He questioned why Claimant was being seen by occupational medicine, since the opinion on July 16, 2019 was that this was not a work related injury. On August 27, 2020, ATP, Dr. Baker placed Claimant at MMI with no impairment rating. He too noted that it was unclear why Claimant was told to return for treatment.

30. The ALJ finds that Respondents had notice on July 16, 2019, August 10, 2020, and August 27, 2020 that Claimant's treating providers opined she did not suffer a work-related injury. Despite three different ATPs opining Claimant did not suffer a work-related injury, Respondents admitted liability and paid Claimant medical benefits, as evidenced by the September 13, 2021 FAL.

31. Respondents, however, assert that the FAL was filed in error and should be withdrawn. As found, Respondents were on notice since July 16, 2019 that the providers opined this was not a work-related injury. There is no evidence that Respondents were unaware of Mr. Meier's opinion, Dr. Ciccone's opinion, or Dr. Baker's opinion that Claimant did not suffer a work-related injury when they filed the FAL. Dr. Feldman reviewed and relied on these medical opinions in her DIME report, and she reached the same conclusion. There is no objective evidence in the record that Respondents were unaware multiple providers opined Claimant did not suffer a work-related injury, and they only became aware of this from Dr. Feldman's DIME report.

32. The ALJ finds that there is no objective evidence in the record that Respondents filed the FAL in error.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the

evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Withdrawal of Admission of Liability

If an admission of liability is contested, the matter must be litigated before an ALJ, who may permit or deny withdrawal at her discretion. *Rocky Mountain Cardiology v. ICAO*, 94 P.3d 1182 (Colo. App. 2004); *HLJ Mgmt. Group v. KIM*, 804 P.2d 250 (Colo. App. 1990). A party seeking to modify an issue determined by general or final admission shall bear the burden of proof for any such modification by a preponderance of the evidence. § 8-43-201(1), C.R.S. Respondents assert, however, that "Claimant has the burden to overcome the DIME on MMI and impairment by clear and convincing evidence on causation *before* any threshold compensability is addressed." (Proposed FFCL p. 14). It is unclear to the ALJ what Respondents are specifically arguing. Regardless, Claimant challenged the FAL to overcome the MMI date and impairment rating. Claimant never challenged compensability, and it is illogical to think Claimant would challenge compensability. Respondents' argument is without merit. Respondents filed the Application for Hearing, and Respondents bear the burden to prove by a preponderance of evidence that they filed the FAL in error and should be allowed to withdraw the FAL.

Respondents seek to withdraw the September 13, 2021, FAL on the basis that there was no compensable injury per the opinions of the DIME physician, the ATP Dr. Baker, Dr. Ciccone, Dr. Lancaster, and Dr. Paz. Respondents' position is that there was no compensable injury in the first place and the FAL was filed in error.

If a claimant does not timely object to the final admission in a timely fashion, admitted issues are closed and may only be reopened in accordance with § 8-43-303, C.R.S. In other words, respondents are in no position to challenge their own final admission where claimant has not objected. *Perry Kizer v. Phil Long Ford*, WC 4-391-990 (Nov. 19, 2001); *Weber v. Mesa Cnty. Sheriff's Dept.*, W.C. 3-113-179 (May 28, 1998). Here, Claimant objected to the FAL and requested a DIME to address MMI and impairment. Claimant never objected to the issue of compensability. Regardless, Respondents have failed to prove by a preponderance of the evidence that the FAL was filed in error. Notably, Respondents were aware of the opinions of Mr. Meier, Dr. Baker, and Dr. Ciccone, all of whom opined that Claimant did not suffer a compensable injury, ***before*** Respondents filed the FAL. Dr. Feldman and Dr. Paz did not offer any new opinion regarding compensability. Thus, Respondents have no basis to argue that the FAL was filed in error. As found, Respondents failed to prove by a preponderance of the evidence that the FAL was filed in error and should be withdrawn.

Overcoming DIME Opinion

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colo. Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy,* WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start,* WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café,* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). As found, Claimant presented no objective evidence to challenge Dr. Feldman's DIME opinion regarding MMI and impairment. Claimant failed to overcome Dr. Feldman's DIME opinion by clear and convincing evidence.

Temporary Total Disability (TTD) Benefits

To qualify for temporary disability benefits, an injured worker must establish three things: 1) the work injury caused the disability; 2) claimant left work as a result of the injury or has reduced wages as the result of the injury; and 3) temporary disability is total and lasts for more than three working days. *Colo. Springs v. Indus. Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Employer properly accommodated all of Claimant's restrictions. Claimant remained working modified duty under restrictions throughout the duration of her remaining employment with Employer. There is no objective evidence in the record that Claimant lost time after the injury on July 9, 2019. Thus, Claimant has failed to prove by a preponderance of the evidence that she is entitled to TTD benefits.[5]

Appeal of June 24, 2022 Prehearing Order

Interlocutory prehearing orders are reviewable by an ALJ. *Indus. Claim Appeals Office v. Orth*, 965 P.2d 1246 (Colo. 1998). PALJ Phillips granted Claimant's motion and compelled Respondents to pay the cost of rescheduling a DIME appointment and providing an interpreter. It is undisputed that a representative from Claimant's attorney's office, coordinated the DIME with the adjuster without advising Respondents' counsel. W.C.R.P. 11-4(A)(8) states, in pertinent part: "[t]he requesting party shall immediately notify the DIME Unit and the opposing party in writing of the date and time of the examination." W.C.R.P. 1-4(A) states: "[w]henever a document is filed with the Division, a copy of the document shall be mailed to each party to the claim and attorney(s) of record, if any."

The Colorado Supreme Court has held that, where a party is represented by counsel, due process requires that the attorney of record be provided with notices since a party is entitled to rely on his attorney. *Mountain States Tel. & Tel. v. Dep't of Labor & Employment*, 520 P.2d 586 (Colo. 1974). The court stated:

> "It follows that when a client has employed an attorney to present his defense to claims in litigation, and notice of this representation by entry of appearance has been given to the opposing party and the court, or other adjudicatory body, all notices required to be given in relation to the matters in controversy, including notice of the decision and entry thereof, should be given to the attorney of record. This basic requirement flows from the attorney-client relationship by which the management, discretion and control of all procedural matters connected with the litigation is invested in the attorney. By virtue of such delegation of authority, the client is bound by the actions of his attorney. (citations omitted). If the attorney through no fault of his own is denied notice of the critical determination in the case, and by reason thereof fails to take procedural steps necessary to preserve his client's rights, fundamental unfairness results. Procedural due process cannot be satisfied when counsel, upon whom a client is entitled to rely, is not notified of decisions affecting his client's interests."

---

[5] As found, Claimant was terminated for cause on March 10, 2021.

Where a party denies receipt of notice, the issue becomes one of fact for determination by the ALJ. *Chacon v. R&L Carriers Shared Servs*, W.C. No. 5-178-236 (July 25, 2022). If the issue turns on credibility determinations, then the ALJ is obliged to hold a hearing to resolve the matter. *See Trujillo v. Indus. Comm'n*, 735 P.2d 211, (Colo. App. 1987). Respondents assert that defense counsel was never given notice of the DIME appointment and therefore could not schedule an interpreter on Respondents' behalf. While the ALJ does not take lightly that Claimant's previous counsel and RS[Redacted] did not respond to Respondents' counsel's emails, this is not a sufficient basis to find that due process was violated. As found Respondents had notice the DIME had been rescheduled and that an interpreter was requested, and one was not provided. Respondents could have also notified ***their*** counsel of the communications, just as Respondents notified counsel that there were issues with the April 15, 2022 DIME appointment. PALJ Phillips' Order does not violate procedural due process.

ORDER

It is therefore ordered that:

1. Respondents failed to prove by a preponderance of the evidence that the admission of liability should be withdrawn.

2. Claimant failed to overcome the DIME opinion by clear and convincing evidence.

3. Respondents proved by a preponderance of the evidence that Claimant was terminated for cause.

4. Claimant failed to prove by a preponderance of the evidence that she is entitled to TTD benefits, and her claim for TTD benefits is denied.

5. Respondents' appeal of the June 24, 2022 Prehearing Order is denied.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 3, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimants proved by a preponderance of the evidence that each sustained an injury arising out of and in the course of their employment on June 29, 2021.

2. Whether Claimants proved by a preponderance of the evidence that the treatment that each received at Sky Ridge Medical Center on June 29, 2021, was reasonably necessary to cure and relieve them of the effects of the June 29, 2021 motor vehicle accident.

FINDINGS OF FACT

1. Claimants [Redacted, hereinafter MC] and [Redacted, herainfter JC] are married and reside together in Arvada, Colorado. Both worked for Respondent-Employer and were injured in a motor vehicle accident on June 29, 2021.

2. At the time of the accident, Claimants were commuting from home to work in a vehicle provided by Respondent-Employer. JC[Redacted] was driving, and MC[Redacted] was riding as a passenger. Claimants would regularly commute to work together in the company vehicle.

3. MC's[Redacted] position with the Employer was as a pavement marking technician III. His responsibilities included working as a foreman, commercial driving, managing timecards, and submitting job reports. JC[Redacted] was also a pavement marking technician III, and her responsibilities included driving company equipment and trucks, generating reports, performing inspections and maintenance, implementing traffic striping, and mentoring and training employees.

The Employer's Safety Handbook

4. The Employer's Safety Handbook provided regarding "Vehicle Use" that:

> The use of a company vehicle is intended for official company business only. Company vehicles shall not be used for personal purposes except when commuting between home and business for those co-workers specifically assigned a vehicle for that purpose. Incidental stops, such as at a convenience store, restaurant, financial institution, or gas station are not considered to be violations of this policy. Drivers must abide by the Federal DOT hours of service regulations. Drivers must comply with applicable state and local laws regarding cell phone usage while driving.

5. The Safety Handbook also prohibited transportation of non-coworkers in company vehicles, including non-coworker family members, and prohibits drivers from making "incidental stops at locations the public might perceive as inappropriate." The Safety Handbook also indicated that fuel cards were issued for each vehicle, implying that Respondent-Employer paid for the gasoline for the vehicle.

MC's[Redacted] testimony

6. At hearing, MC[Redacted] testified on his own behalf, as well as in support of JC's[Redacted] case. His testimony can be summarized in pertinent part as follows.

7. MC[Redacted] is a supervisor and pavement marking technician for Respondents. He is paid hourly. His responsibilities include supervising the crew, completing timecards, and recording truck numbers to submit to his boss. His primary responsibility is to make sure his crew returns home safe at the end of their shift. MC[Redacted] would supervise eight people.

8. MC[Redacted] and JC[Redacted] would typically get to the workplace by 4:00 P.M. by commuting to work in a company pickup truck. Their crewmembers would show up at the workplace by 6:00 P.M. The reason they would show up to work early was to prepare for the shift.

9. The truck in which MC[Redacted] and JC[Redacted] would commute to work was a specific truck assigned by Respondent-Employer. MC[Redacted] was instructed that he was not to use the truck for personal purposes.

10. Every morning, during their commute in the company truck, MC[Redacted] would have a pre-safety meeting with his wife, JC[Redacted]. JC[Redacted] was a supervisor on MC's[Redacted] crew. JC[Redacted] would assist MC[Redacted] with anything MC[Redacted] could not complete on his own. Additionally, she would deal directly with employees. During the commute from home to the shop, MC[Redacted] and JC[Redacted] would discuss the plan for the day, what they would need to do to be productive and safe, and the performance of their crewmembers. MC[Redacted] testified that he and his wife could wait until they arrived at the shop before having that conversation, but that it would put them behind by an hour. If the jobsite for the day was within the Denver metro area, MC[Redacted] and JC[Redacted] would first clock in at the Englewood facility and then drive out to the worksite in a different vehicle to perform the work. If, however, the jobsite for the day was outside of the Denver metro area, MC[Redacted] and JC[Redacted] would clock in as they left their home and would drive directly to the jobsite.

11. On the date of injury, MC[Redacted] and JC[Redacted] were driving from their home in Arvada to the Employer's Englewood facility at Peoria and I-470. They

were discussing work on the entire commute, including the job performance of their employees and some prior projects. The only personal item they discussed was the fact that they were working on their anniversary. MC[Redacted] and JC[Redacted] were not paid for the time they spent commuting, even though they were discussing work during their commute, nor were they required by the Employer to have pre-shift meetings in the vehicle on the way to work. They were to arrive at the Englewood facility by 4:00 P.M. However, at 3:40 P.M., their vehicle was involved in a motor vehicle accident, and both MC[Redacted] and JC[Redacted] were injured.

12. On the date of injury, both MC[Redacted] and JC[Redacted] departed their home in the company pickup truck. JC[Redacted] was driving. MC[Redacted] was in the passenger seat writing down the employees' hours and truck assignments.

13. The Claimants and their team were to stripe a highway that day. Among the tools MC[Redacted] had with him were his backpack with the employer's emblem on it, tape measures, headlamps, a laser light, a flashlight, and paperwork for "tank charts." MC[Redacted] would carry those tools with him at all times no matter where he was just in case he would need them. He would carry a second backpack with paperwork, his work phone, and his iPad.

14. MC[Redacted] testified that he went to the emergency room at Sky Ridge Medical Center for treatment immediately after the accident. He had internal bleeding and a portion of his intestines were resected at the hospital. The Court finds these injuries to be urgent in nature and the treatment at Sky Ridge Medical Center to be therefore reasonably necessary and related.

15. The Court finds MC's[Redacted] testimony credible.

JC's[Redacted] testimony

16. JC[Redacted] testified on her own behalf and in support of MC's[Redacted] case. Her testimony was largely consistently with MC's[Redacted]. Her testimony is summarized in pertinent part as follows.

17. JC[Redacted] testified that her job was primarily administrative work, including communicating with employees regarding personnel issues.

18. JC[Redacted] added that she was typically the one who would drive the truck in the morning while MC[Redacted] would ride in the passenger seat and work on his phone.[1] Both MC[Redacted] and JC[Redacted] would field text messages and phone calls from their crewmembers during the commute. On the morning commute, the two typically did not talk for the first forty-five minutes of the trip so that MC[Redacted] could perform work on his phone. During the drive, JC[Redacted] prepared a checklist of tasks to perform that day. MC[Redacted]

[1] MC[Redacted] would typically drive the truck on the way home after the shift.

and JC[Redacted] had to do the planning on the way to work because once they reach the Englewood facility they would be saturated with other work. JC[Redacted] acknowledged that she was not required by her employer to conduct a meeting with MC[Redacted] during her morning commute.

19. On the morning of the accident, JC[Redacted] performed a pre-trip inspection of the truck, including checking the fluids, as was required by the Employer each time the truck was driven. She testified that prior to driving the truck, including for the morning commute, she would have to log into the employer's electronic fleet monitoring system. JC[Redacted] explained that the system would monitor driving behaviors. Despite being engaged in work during the morning commute, JC[Redacted] testified that she was not permitted to clock in until reaching the employer's facility, since that day's jobsite would be in the Denver metro area.

20. JC[Redacted] testified that she would have clocked in around 3:45 P.M. were it not for the motor vehicle accident.

21. JC[Redacted] was treated at Sky Ridge Medical Center following the accident for multiple injuries, including ruptured prosthetics. The Court finds these injuries to be urgent in nature and the treatment at Sky Ridge Medical Center to be therefore reasonably necessary and related.

22. The Court finds JC's[Redacted] testimony to be credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the

witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

An injury must arise out of, and in the course of, the Claimant's employment to be compensable. § 8-41-301(2)(b) and (c), C.R.S. Injuries sustained by employees going to and from work are usually not compensable. *Berry's Coffee Shop, Inc. v. Palomba*, 423 P.2d 2 (Colo. 1967). One exception, however, to the coming and going exclusion is when "special circumstances" create a causal relationship between the employment and the travel beyond the employee's arrival at work. *Madden v. Mountain W. Fabricators*, 977 P.2d 861, 863 (Colo. 1992); *Monolith Portland Cement v. Burak*, 772 P.2d 688 (Colo. 1989). Where Claimant is injured while on travel status, under certain circumstances that injury is compensable. *SkyWest Airlines, Inc. v. Indus. Claim Appeals Office*, 487 P.3d 1267 (Colo. App. 2020).

The *Madden* Court identified several factors to be evaluated to determine whether special circumstances exist. These factors include, but are not limited to: (1) whether the travel occurred during working hours; (2) whether the travel occurred on or off the premises; (3) whether the travel was contemplated by the employment contract; and (4) whether the obligations or conditions of employment created a "zone of special danger" in which the injury arose. 977 P.2d at 865. The question of whether Claimant presented "special circumstances" sufficient to establish the required nexus is a factual determination to be resolved by the ALJ based upon the totality of circumstances. *Anthony Morrison v. Rock Elec.*, W.C. 4-939-901-03 (ICAO February 22, 2016). The *Madden* Court reasoned that "the going to and from work rule is such a fact-specific analysis that it cannot be limited to a predetermined list of acceptable facts and circumstances. . . . the proper approach is to consider a number of variables when determining whether special circumstances warrant recovery under the Act." 977 P.2d at 864.

In *Industrial Commission v. Lavach*, 439 P.2d 359, 165 Colo. 433 (Colo. 1968), an employee was injured during his commute home in his employer's vehicle. The employer in that case provided the employee with a pickup truck, all expenses paid, for delivering packaging materials to customers and preparing estimates for local moving jobs. The employee was permitted to commute between his home and work in the truck, and the claimant would occasionally deliver material for the employer while commuting home from work, though he was not making any such deliveries on the evening of the accident. The Colorado Supreme Court, citing the facts that the employee was provided the truck at the employers expense and that the employee would sometimes make deliveries during his commute home, concluded that the scope of the employee's employment had enlarged to include the employee's transportation to and from work.

In *Varsity Contractors and Home Ins. Co. v. Baca*, 709 P.2d 55 (Colo.App.1985), an employee was injured during his commute home. The employee had stopped at a bar to have drinks with a friend on his way home. The employee had planned to go home, shower, change clothes, and await a call from his employer to return to work. However, he was involved in a motor vehicle accident after leaving the bar. The Colorado Court of Appeals agreed that the nexus between the accident and the employee's employment was insufficient to establish compensability.

The Court of Appeals reached a different outcome in *Monolith Portland Cement v. Burak*, 772 P.2d 688 (Colo.App.1989). In *Burak*, the employee died in a motor vehicle accident while commuting from his home in Fort Collins to his office in Laramie in a vehicle provided by his employer. In addition to providing the vehicle, the employer also provided a credit card with which the employee could purchase fuel for the vehicle. The employee would frequently work from home and during his commute. At the time of the accident, he was dictating into a recording device. The Court of Appeals found the case distinguishable from *Varsity Contractors* in that the employee's home car had become part of the workplace, thus bringing the accident within the scope of the employment. *Id.* at 690.

The Court finds the facts in the present case most analogous to those in *Burak*. The Claimants, like the employee in Burak, were provided with a company vehicle and fuel card for commuting between home and work. Also, like the employee in *Burak*, the Claimants were in fact working at the time of the accident, as they were conducting their pre-shift meeting in the vehicle. Although Respondents argue that there was no dictating device or other documentary evidence of the Claimants' pre-shift meeting, the Court does not find the distinction meaningful, as both Claimants credibly testified that they routinely conducted pre-shift meetings during the morning commute and were in fact conducting such a meeting on the day of the accident.

Furthermore, the fact that Respondent-Employer required Claimants to log into the electronic fleet monitoring system prior the commute, prohibited them from using the vehicle for personal errands, required them to conduct a pre-trip inspection even prior to the commute, and required them to be mindful of their driving hours during the commute so as not to violate the federal DOT hours of service regulations, all suggest that the

employer maintained some level of control over the manner in which the Claimants commuted to work.

Based on the totality of the facts, the Court finds and concludes that the Claimants' pre-shift commute on June 29, 2021, was more probably within the scope of the Claimants' employment with Respondent-Employer. The Court therefore finds and concludes that the Claimants' motor vehicle accident and resulting injuries on June 29, 2021, arose out of and in the course of their employment with Respondent-Employer.

Medical Treatment

The Colorado Workers' Compensation Act ("the Act") provides that an employer must provide medical care "as may reasonably be needed . . . to cure and relieve the employee from the effects of the injury." Section 8-42-101(1)(a), C.R.S.

Although respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo.App.2002)(upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures).

As found above, both Claimants credibly testified that they sustained serious injuries following the accident, including MC[Redacted] sustaining internal bleeding and JC[Redacted] sustaining ruptured prosthetics. The Court also finds these injuries to be most likely urgent in nature and the treatment at Sky Ridge Medical Center to be therefore reasonably necessary and related.

ORDER

It is therefore ordered that:

1. Both Claimants sustained compensable injuries in the motor vehicle accident on June 29, 2021.

2. Claimants' treatment at Sky Ridge Medical Center on June 29, 2021, was reasonably necessary and related to the injuries Claimants sustained on the same date. Respondents shall pay for the treatment Claimants' received at Sky Ridge Medical Center on June 29, 2021.

3. Respondents shall pay for all other medical treatment reasonably necessary to cure and relieve Claimants of their June 29, 2021 injuries.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 4, 2023

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether the issue endorsed on Claimant's April 19, 2023 Application for Hearing is within the OAC's limited jurisdiction to determine following settlement of the claim on a full and final basis.

II. If so, whether Claimant established, by a preponderance of the evidence, that Respondents were required to file a Petition to Modify, Suspend or Terminate Compensation to stop his temporary disability benefits.

Because the undersigned ALJ concludes that the OAC no longer has jurisdiction over this claim and Claimant failed to establish that Respondents were obligated to file a Petition to Modify, Terminate or Suspend Compensation, if it had jurisdiction, this order does not address Respondents' contention that Claimant is barred by the doctrine of *res judicata* from litigating issue number II above.

FINDINGS OF FACT

1. This case has a lengthy and complex history. There have been multiple hearings and several post-hearing requests for review, including an appeal to the Colorado Court Appeals and a Petition for Writ of Certiorari to the Colorado Supreme Court. The ALJ was assisted in understanding the history of this claim by reference to the Chronological History of the file maintained by the Division of Workers Compensation and the materials contained in the OAC files. In order to address the jurisdictional issue raised by Respondents, it is necessary to provide a detailed statement regarding Claimant's injury and the complete procedural history of the claim.

2. Claimant, as the finance manager for Employer, suffered admitted injuries on March 31, 2009, when he was hit on the head by a retractable garage door. Claimant, was attempting to secure a repair estimate when he entered a repair shop through a manual garage door. As Claimant lifted the door and stepped into the shop, the door came back down and hit him on the head. (Resp. Ex. E, p. 3). As referenced, liability for Claimant's injuries was admitted and he proceeded through a protracted course of care to treat reported headaches, neck pain and a constellation of cognitive complaints.[1]

3. On April 11, 2011, ALJ Bruce Friend presided over a hearing to determine whether Respondents were liable for a neck surgery performed by Dr. William Choi on November 16, 2010. (Clmt's. Ex. 1). Judge Friend issued an Order containing Findings of Fact and Conclusions of Law on May 25, 2011. (Clmt's. Ex. 1, p. 50). ALJ Friend

[1] The ALJ adopts and incorporates by reference, the Factual Findings of ALJ Spencer regarding the nature and extent of Claimant's medical, psychological and cognitive treatment as set out in his December 31, 2020 Order. (Resp. Ex. E).

credited the opinions of Dr. Douglas Scott and Dr. John Douthit to find and conclude that the cervical spine surgery performed by Dr. Choi was not reasonably necessary or related to Claimant being struck on the head by the falling garage door. *Id.*

4. Claimant filed a Petition to Review Judge Friend's Order and the matter was taken up by the Industrial Claim Appeals Office (ICAO). The ICAO affirmed ALJ Friend's Order on November 7, 2011. The ICAO Panel found no error in Judge Friend's credibility determination and held his findings and conclusions were supported by substantial evidence. Claimant did not appeal further and ALJ Friend's Order became final. (Resp. Ex. F, p. 2).

5. According to medical reports authored by Drs. Jill Castro and Howard Entin, Claimant reached maximum medical improvement (MMI) for the sequela related to his neck and head injury on April 18, 2011.[2] (Resp. Ex. K). Based upon the MMI reports of Drs. Castro and Entin, Respondents filed a Final Admission of Liability on April 11, 2012. *Id.* In addition to reflecting liability for various periods of temporary partial disability, the FAL reflected that Respondents admitted liability for temporary total disability (TTD) benefits beginning January 4, 2010 and running through April 17, 2011. *Id.* Because Claimant had reached MMI for all components related to his industrial injuries per the opinions of Drs. Castro and Entin on April 18, 2011, Claimant's TTD benefits were terminated as of 4/17/2011 pursuant to statute and rule of procedure. *Id.* The FAL also admitted liability for whole person impairment. *Id.* The FAL computed the value of the impairment ratings as $35,849.35 (10% physical) and $17,924.68 (5% psychiatric). However, the FAL also noted benefits were capped at $75,000 pursuant to § 8-42-107.5, and Claimant had already been paid $107,139.96 in TTD and TPD (temporary partial disability). The FAL claimed an overpayment of $38,775.87 which "will be applied towards any future benefits." A copy of the FAL was mailed to Claimant at his address of record of: [Redacted, hereinafter CA]. *Id.* By this date, Claimant was represented by Attorney, [Redacted, hereinafter GY].[3] Accordingly, the Division of Workers Compensation mailed the FAL to GY[Redacted] at: [Redacted, hereinafter AS]. *Id.*

6. Claimant objected to the 4/11/2012 FAL and GY[Redacted], filed an Application for Hearing on April 17, 2012. (Resp. Ex. L).[4] He also requested a Division Independent Medical Examination (DIME). (Resp. Ex. F, p. 2). Based upon the statement that Claimant would seek to continue any hearing as a DIME on PPD/MMI was pending,

---

[2] Per the report of Dr. Entin dated 4/2/2012, Claimant had reached psychiatric MMI on 6/14/2010, however, per the 1/10/2012 report of Dr. Castro, Claimant did not reach MMI for the physical components of his injury until 4/18/2011.

[3] GY[Redacted] also represented Claimant in a third-party personal injury suit against the property owner of auto repair shop. Respondents intervened in the third-party litigation to advance and protect its subrogation interest. [Redacted, hereinafter CS] represented Respondents in the third-party case. The third-party case went to mediation before Judge Sandy Brooke on January 28, 2012. GY[Redacted] represented Claimant. The suit settled for $110,000. Insurer's lien at that time was $200,000, but it agreed to compromise its subrogation claim for $20,000. (Resp. Ex. E, pp. 6-7, FOF ¶¶ 26-27).

[4] Contrary to Respondents' assertion, as reflected in their post-hearing position statement, Claimant did endorse TTD from April 17, 2011 and ongoing as an issue for determination in his April 17, 2012 Application for Hearing.

the ALJ infers that the hearing on Claimant's April 17, 2012 Application was continued and ultimately abandoned. (Resp. Ex. L, p. 1). Claimant would also abandon the DIME process and apply for a hearing claiming entitlement to permanent total disability (PTD) benefits on May 29, 2012. (Resp. Ex. F, p. 2). In preparation for his PTD hearing, Claimant saw Dr. Lynn Parry for an independent medical examination (IME) on July 4, 2012. Dr. Parry documented a lengthy history of Claimant's treatment and cataloged numerous ongoing problems she believed were related to the accident. Dr. Parry noted "two major residual problems secondary to his industrial accident that have not been adequately addressed. Primarily his nausea and vestibular dysfunction." Dr. Parry ultimately opined that Claimant was not at MMI. She recommended that he return to vestibular therapy. (Resp. Ex. E, p. 9, FOF ¶ 41).

7. Dr. Henry Roth performed an IME for Respondents on March 4, 2013. Dr. Roth had previously issued several Rule 16 reports on the claim. Claimant completed a lengthy questionnaire before the evaluation. Dr. Roth spent one hour and 43 minutes with Claimant conducting the interview and examination. Dr. Roth also reviewed hundreds of pages of medical records and subsequently issued a 94-page report. Claimant's chief complaints were headaches, facial pain, neck pain, problems thinking, changed behavior, depression, sleep disturbance, nausea, and vision problems. Claimant complained "bitterly" about headaches and his vision. Dr. Roth opined none of Claimant's ongoing complaints were related to the accident. He opined the injury mechanism was minor and insufficient to injure Claimant's visual system, auditory system, vestibular system, or cause cognitive impairment. (Resp. Ex. E, p. 9, FOF ¶ 42).

8. Dr. Victor Chang also issued a supplemental IME report on March 18, 2013. He opined Claimant suffered a concussion in the accident, "but his ongoing symptoms should not be considered as a manifestation of the concussion itself." He noted Claimant's presentation was "atypical for MTBI," and concluded, "[Claimant's] symptoms are not related to the concussion. It is more probable than not that his ongoing symptoms are related to mental/behavioral and/or motivational factors." He also opined Administrative issues commonly seen in litigation" were also likely contributing to Claimant's presentation. He did not think Claimant had any permanent impairment related to a concussion but agreed with Dr. Entin's decision to provide a 5% rating for "a mental/behavioral condition related to the work injury." He opined that any residual symptoms of the MTBI had resolved and no further treatment was expected to improve Claimant's condition. Dr. Chang disagreed with a previously expressed opinion issued by Dr. David Zierk that Claimant could not work in any capacity. He also commented,

> [Claimant] has previously submitted 2 large binders that detailed his treatment since his injury. At first, I thought these binders were prepared by an attorney's office, as the contents were very organized and had numerous cross-references. I later discovered that these binders had been prepared by [Claimant] himself, which I found to be quite impressive for any person. The ability for a layperson to obtain, organize, cross-reference, draw conclusions, and rebut opinions made by medical providers and legal experts was, in my

> professional opinion, something that would be difficult for any non-legal professional to complete. This compilation of work submitted by [Claimant] demonstrated a high degree of cognitive functioning, including attention to detail, organizational skills, and complex deductive reasoning. These abilities would indicate readiness to perform in a competitive workplace.

(Resp. Ex. E, pp. 9-10, FOF ¶ 43).

9. On March 26, 2013, Claimant and his Attorney, GY[Redacted] along with Respondents Counsel, [Redacted, hereinafter EA] agreed to settle the claim on a full and final basis for a lump sum payment of $182,500.00 plus a contingent Medicare Set-Aside (MSA) agreement. The parties further agreed to leave the medical portion of the claim open pending a response from the Centers for Medicare and Medicaid Services (CMS) regarding the proposed MSA. Respondents retained the right to fund an MSA per CMS requirements or leave Claimant's medical benefits open indefinitely. (Resp. Ex. E, p. 10, FOF 44; Resp. Ex. F, p. 4, Resp. Ex. M, p. 9, ¶ 9(A).

10. The settlement documents contained the following language:

> Claimant sustained or alleges injuries or occupational disease as arising out of and in the course of employment with the employer on or about March 31, 2009 including, but not limited to, head, neck, shoulder, back, knee, psychological, cognitive, and G.I. System. *Other disabilities, impairments and conditions that may be the result of these injuries or diseases but that are not listed here are, nevertheless, intended by all parties to be included in and resolved FOREVER by this settlement.* (emphasis added).

(Resp. Ex. E, p. 10, FOF 45); Resp. Ex. F, p. 4).

11. In consideration for the $182, 500.00, Claimant was paid under the terms of the settlement, he acknowledged that he was rejecting, waiving, and forever giving up the right to claim all compensation to which he might be entitled for each injury or occupational disease he claimed, including: Temporary total and temporary partial disability benefits to compensate Claimant for time he missed from work. (Resp. Ex. M, p. 8).

12. The settlement documents also provided that in keeping with the requirements of the WC Act, the settlement could only be reopened on the grounds of "fraud or mutual mistake of material fact". (Resp. Ex. M, p. 9; Resp. Ex. E, p. 10, FOF ¶ 45; Resp. Ex. F, p. 4). Finally, the agreement stated, "Claimant has reviewed and discussed the terms of the settlement with claimant's attorney, has been fully advised, and understands the rights that are being given up in this settlement." (Resp. Ex. M, p. 10) *Id.* Claimant executed the agreement on April 26, 2013, and it was approved by the Division on May 9, 2013. (Resp. Ex. M, pp. 10, 12). Upon approval by the Division of

Workers' Compensation, Respondents forwarded the lump sum check of $182,500.00 to Claimant's Counsel on June 12, 2013. (Resp. Ex. M, pp. 6-7).

13. An MSA proposal in the amount of $32,178.00 was submitted to CMS for approval. CMS rejected the proposed payment as insufficient, noting instead that a total of $102,126.00 would need to be set-aside to fully protect Medicare's interests. Insurer exercised its rights under the settlement to not fund the MSA at that time. Ultimately, Respondents agreed to fund a self-administered structured MSA under the terms required by CMS. The MSA was funded with a lump sum payment $8,881, plus $4,238 per year for 22 years, if Claimant is living. Claimant reviewed and agreed to the terms of the structured settlement regarding his medical benefits as evidenced by his May 21, 2015 signature. (Resp. Ex. M, p. 3). The parties' then filed a Joint Motion to Amend the Settlement Documents on April 29, 2015 and the Division approved the amended agreement on May 21, 2015. (Resp. Ex. E, p. 11, FOF ¶ 48; Resp. Ex. F, p.5). The claim then closed as all benefits, compensation, penalties and interest to which Claimant might be entitled as a result of his injuries, including medical and other health care benefits had settled on a full and final basis.

14. On May 7, 2020, Claimant, proceeding *pro se*, filed a Petition to Reopen and an Application for Hearing requesting that the settlement be set-aside on the grounds of fraud and mutual mistake of material fact. The Petition and Application for Hearing were received in the Colorado Springs Office of Administrative Courts on May 11, 2020 and a hearing on Claimant's Petition to Reopen was held before ALJ Patrick Spencer over four nonconsecutive days on September 16, October 27, November 9 and November 13, 2020. The hearings were conducted remotely via video/teleconference due to the COVID-19 pandemic. (See generally, Resp. Ex. E).

15. At hearing Claimant asserted multiple instances of "fraud, misrepresentation, or concealment," including:

- "Someone had to cut and paste Claimant's name" onto another patient's medical record and gave it to Dr. Douthit for his IME.

- Respondents "manufactured" evidence, including a prescription made by a physician who never treated Claimant, "with the intent Dr. Roth would act upon false information and produce opinions and reports."

- Judge Friend's May 25, 2011 FFCLO was "altered and falsified by a second author." This allegedly falsified Order was then allegedly used to influence and limit benefits that might otherwise have been available to Claimant.

- Respondents' counsel "recklessly" misrepresented to Dr. Castro that Judge Friend found "the neck is not a compensable component" of his claim.

- Respondents did not regularly send copies of Claimant's medical records to Dr. Castro or Dr. Entin.

- Respondents intentionally presented "incomplete" medical files to ATPs and IMEs to induce them to act to Claimant's detriment.

- Respondents concealed medical records from Claimant's attorney.

- Dr. Roth produced reports for Respondents without having "all medical records."

- Respondents violated *Samms* by corresponding with Claimant's ATPs.

(Resp. Ex. E and F).

16. Following hearing, ALJ Spencer concluded that Claimant had been represented by counsel through much of his claim, including from April 2012 (when the FAL was filed) through the date of the settlement. Claimant neither argued nor suggested he was not adequately informed of the progress of his case. In fact, the record documents several instances of communication between Claimant and his counsel. Accordingly, ALJ Spencer concluded that the persuasive evidence demonstrated that Claimant was "aware of and participated in the tactical and strategic decisions regarding his case through the time of settlement". (Resp. Ex. E, pp. 11-12, FOF 55). Based upon the evidence presented, ALJ Spencer found no persuasive evidence to support any intent on Respondents part to "deceive, misrepresent or conceal material information" relating to the settlement. Thus, ALJ Spencer concluded that Claimant had failed to establish any fraud which would justify reopening the settlement.[5] Likewise, ALJ Spencer concluded that the evidence presented failed to prove that there were any mutual mistakes of material fact to support reopening the settlement. (Resp. Ex. E and F). Accordingly, ALJ

[5] In concluding that Claimant had failed to establish fraud as required by statute to set the settlement aside and reopen the claim, ALJ Spencer specifically considered Claimant's contention that ALJ Friend's May 25, 2011 order had been "altered and falsified" because there were multiple versions of the order containing a signature of ALJ Friend. In addressing this as part of his December 31, 2020 order, ALJ Spencer, notes: "Claimant refers to multiple "versions" of Judge Friend's May 25, 2011 Order. Claimant believes the version at Ex. 18-1 to 18-4 is the "real" Order. The ALJ disagrees. The version referenced by Claimant is incomplete and contains no findings pertinent to the issue being decided, *i.e.*, Respondents' liability for the surgery recommended by Dr. Choi. Judge Friend's true order is located at multiple places in the exhibits and pleadings, including at 18-5 through 18-15. It is then reproduced twice at 18-16 through 18-40, with slightly different formatting. At the time of Judge Friend's FFCLO, the OAC served its orders electronically in Word format. The small formatting differences in the multiple copies of the Order were probably the result of the document being opened and printed on a computer with a different version of Word, or different installed fonts. There is no persuasive evidence anyone "altered" or "falsified" Judge Friend's Order. In this case, Claimant reviews his assertion that ALJ Friend's order was altered and he includes the various copies of the May 25, 2011 order in his hearing exhibits. After careful review of Claimant's Exhibit 1, this ALJ concurs with ALJ Spencer to find and conclude that the likely explanation for there being several copies of ALJ Friends order in slightly different formats with different fonts is that the order was opened and copied from a different computer with different software versions. Like ALJ Spencer, this ALJ is not convinced that the true and accurate version of ALJ Friend's May 25, 2011 Order is contained at Ex. 1, pp. 1-5, because this version of the order is devoid of important findings of fact regarding the issues litigated and contains nothing in the way of a Finding of Fact at paragraph 4 and 5. (Clmt's. Ex. 1, pp. 1-5).

Spencer denied and dismissed Claimant's request to reopen the approved settlement in this claim. *Id.*

17. Claimant timely appealed to the ICAO. On April 26, 2021 a panel from the ICAO affirmed ALJ Spencer's determinations prompting Claimant to seek review of the final order of the ICAO by the Colorado Court of Appeals. The Court of Appeals considered 14 separate arguments advanced by Claimant in support of his request to reverse the ICAO's order. (Resp. Ex. G, pp. 13-16). These enumerated arguments along with several others were rejected by the Court in affirming the Panel's order in an unpublished opinion announced February 3, 2022. It is noted that the Court, to the extent that Claimant raised a challenge to the 2011 order of the ICAO affirming ALJ Friend's order, concluded it did not have jurisdiction to consider such a challenge "[b]ecause [Claimant] didn't timely appeal that order". Citing, *Cornstubble v. Indus. Comm'n.*, 722 P.2d. 448, 450 (Colo. App. 1986) (concluding that the Court of Appeals was deprived of jurisdiction to consider the appeal because the claimant failed to seek review within the statutory period contained in former section 8-53-111(8), which is substantially similar to section 8-43-301(10)).

18. Claimant appealed to the Colorado Supreme Court; however, the Petition for Writ of Certiorari was denied by Order of the Court on May 16, 2022. (Resp. Ex. H, p. 1).

19. On June 30, 2022, Claimant submitted a blank copy of a Petition to Modify, Terminate, or Suspend Compensation Form along with a completed Objection to the Petition to the Division of Workers' Compensation. (Resp. Ex. A). In his objection, Claimant noted: "Claimant is requesting this Petition [be] completed (meaning the blank Form accompanying his objection). Claimant never received this Petition as Required by Statute and Rule. Claimant is requesting this so as to make an informed decision whether to object". *Id*. at p. 1.

20. On September 22, 2022, Claimant filed an Application for Hearing endorsing a single issue for determination. (Resp. Ex. B). Claimant framed the issue as a question of whether Respondents were required to present a Petition to Modify, Terminate of Suspend Compensation. *Id*. at p. 2. A response to Claimant's Application for Hearing, endorsing multiple defenses, including jurisdiction and r*es judicata* (claim preclusion) was filed by Respondents on October 7, 2022 and a virtual hearing was scheduled for January 11, 2023 at 1:00 p.m. before ALJ Spencer. (Resp. Ex. C).

21. Claimant failed to appear for his scheduled hearing. Accordingly, ALJ Spencer issued a Show Cause Order on January 12. 2023, affording Claimant 30 days to demonstrate good cause for his failure to appear. (Resp. Ex. O, p. 1). The show cause order also required Claimant to "show cause why the September 12, 2022 Application for Hearing should not be dismissed for lack of jurisdiction" as the claim was "previously closed by full and final settlement" and a prior "petition to reopen the settlement based on fraud or mutual mistake of material fact was denied and dismissed in a final order dated December 31, 2020, for which all appeals had been exhausted. *Id*. at pp. 1-2.

22. Claimant responded the January 12, 2023, Show Cause Order on January 13th and 17th, 2023. He asserted that he did not receive the electronic invitation to the virtual hearing. He did not otherwise respond to the jurisdictional issue raised by ALJ Spencer. In a February 14, 2023 Order, ALJ Spencer dismissed Claimant's September 12, 2023 Application for Hearing with prejudice noting that the OAC lacked jurisdiction to adjudicate the issues endorsed in Claimant's September 12, 2022 Application for Hearing because the claim was closed by a full and final settlement and a petition to reopen based upon fraud or mutual mistake of material fact had been dismissed and the appeals concerning that determination had been exhausted. Indeed, ALJ Spencer noted: "Absent a reopening for fraud or mutual mistake of material fact, a full and final settlement divests the OAC of jurisdiction over all but a tiny handful of issues. (Resp. Ex. O, pp. 5-9) (citations omitted).

23. No appeals were taken from ALJ Spencer's February 14, 2023 Order dismissing Claimant's September 12, 2022 Application for Hearing. Rather, Claimant simply filed a new Application for Hearing on April 19, 2023. In this application, Claimant endorsed the same issue he outlined in his September 12, 2022 Application for Hearing, namely whether Respondents can terminate benefits without petitioning the Court. As noted above, the hearing concerning Claimant's endorsed issues proceeded on July 20, 2023 and August 24, 2023.[6]

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item

[6] While the issue endorsed for hearing, i.e. "Can Respondents terminate benefits without Petitioning the Court? could arguably be characterized as a request for an advisory opinion, the ALJ is persuaded, based upon the statements of the parties during a prehearing/status conference held May 22 and August 18, 2023, in addition to the hearing convened July 20, 2023, that Claimant contends that he is entitled to additional TTD and other benefits because Respondents improperly terminated his TTD benefits because they failed to file a Petition to Modify, Terminate or Suspend Compensation. Accordingly, the ALJ elected to adjudicate the matter upon established facts.

contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claim Closure and Jurisdiction

C. The Workers' Compensation Act permits injured workers to settle all or part of their claim. Section 8-43-204(1), C.R.S. (20022). Accepting the full and final settlement in this claim effectively closed all issues relating to the claim. Indeed, paragraph 7 of the Settlement Agreement in this case provides: "Claimant understands that this is a final settlement and that approval of this settlement by the Division of Workers' Compensation or by an administrative law judge form the Office of Administrative Courts dismisses this matter with prejudice and FOREVER closes all issues relating to this matter." (Resp. Ex. M, p. 9). Accordingly, Claimant waived and forever gave up the right to claim any additional TTD/TPD he might have been entitled to (See ¶ 3, Resp. Ex. M, p. 8) and all matters concerning Claimant's entitlement to such disability benefits closed upon approval of the settlement agreement by the Division of Workers' Compensation on May 9, 2013. Nonetheless, all final settlements are subject to reopening, *at any time* "on the ground of fraud or mutual mistake of material fact."[7] The party seeking to reopen a settlement bears the burden of proof by a preponderance of the evidence. Section 8-43-303(4), C.R.S.

D. In this case, Claimant failed in his effort to reopen his claim on the basis or fraud or mutual mistake of material fact at hearing before ALJ Spencer and the order denying his petition to reopen was affirmed by the ICAO and the Colorado Court of Appeals. Moreover, a Petition for Writ of Certiorari was denied by the Colorado Supreme Court on May 16, 2022. Accordingly the claim remains closed. In the present action, Claimant did not file a subsequent petition to reopen or allege fraud. Indeed, he did not endorse reopening at all. Rather, he simply sought a determination as to whether the Respondents could terminate his compensation (TTD/TPD) without petitioning the Court to do so. As noted above, the ALJ considers Claimant's endorsement as a demand for additional indemnity benefits based upon his assertion that his TTD/TPD benefits were improperly terminated because Respondents failed to file a Petition to Modify, Terminate or Suspend Compensation. Regardless, because the claim is closed and Claimant waived all rights to additional TTD/TPD and reopen any prior awards, except on the

[7] Compare C.R.S. § 8-43-204(1), providing that settlements shall not be "subject to being reopened under any provisions of articles 40-47 of [the Act] other than on the ground pf fraud or mutual mistake of material fact with C.R.S. § 8-43-303(1) which provides that "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the grounds of fraud, an overpayment, an error, a mistake, or a change in condition, except for those settlements entered into pursuant to section 8-43-204 in which the claimant waived all rights to reopen an award; but a settlement may be reopened at any time on the ground of fraud or mutual mistake of material fact." Also, § 8-43-303(2)(a), C.R.S., allows an administrative law judge to reopen a claim on the grounds of fraud, an overpayment, an error, a mistake, or a change in condition "at any time within two years after the date the last temporary or permanent disability benefits or dependent benefits excluding medical benefits become due or payable…." Similarly, § 8-43-303(2)(b), C.R.S., allows an administrative law judge to reopen a claim for medical benefits only on the grounds of error, mistake or change in condition "at any time within two years after the date the last medical benefits become due and payable…."

grounds of fraud or mutual mistake of material fact, which he did not endorse for hearing[8], this ALJ agrees with ALJ Spencer that absent reopening of the claim, Claimant's acceptance of the full and final settlement divests the OAC of jurisdiction over the issue endorsed for hearing. Even if the ALJ had jurisdiction to determine the issue Claimant endorsed for hearing, the evidence presented fails to establish that Respondents were required to file a Petition to Modify, Terminate or Suspend Compensation when they terminated Claimant's TTD on April 11, 2012.

Respondents Obligation to File a Petition to Modify, Terminate or Suspend Compensation

E. As found, Claimant's TTD benefits were terminated after he was determined by Dr. Castro and Entin to have reached MMI. (Resp. Ex. K). Per C.R.S. § 8-42-105(3), TTD benefits shall continue until the first occurrence of any one of the following:

(a) The employee reaches maximum medical improvement;

(b) The employee returns to regular or modified employment;

(c) The attending physician gives the employee a written release to return to regular employment; or

(d)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

F. In this case, the evidence persuades the ALJ that Respondents were within their rights to terminate Claimant's TTD benefits, without a hearing, by filing the FAL contained at Respondents' Exhibit K because he had reached MMI. The evidence presented also supports a conclusion that Respondents complied with WCRP 6-1 when filing their FAL, because the medical reports from Claimant's authorized treating physicians stating he had reached maximum medical improvement were attached to the FAL and the FAL clearly took a position on permanent disability benefits. Nonetheless, Claimant argues that Respondents were required to file a Petition to Modify, Terminate or Suspend Compensation before terminating his lost wage benefits after April 17, 2011.

G. A Petition to Modify, Suspend or Terminate Compensation provides prospective relief to an Insurer when a claimant is receiving indemnity benefits and there is a basis to change (modify), terminate or suspend those benefits. (WCRP 6-4-6-8). It does not address medical benefits. Claimant did not present any statutory reason for such a Petition to have been filed when the claim was open, and it is undisputed that Insurer was

[8] To the extent that Claimant argues that Respondents defrauded him by actively concealing the Petition to Modify, Terminate of Suspend Compensation form and this caused him harm and otherwise constitutes fraud, the ALJ refuses to determine the merits of those allegations as the issue of fraud, no matter the theory, was not plead or tried by consent of Respondents. Nonetheless, as presented the evidence fails to support Claimant's assertions.

not liable for benefits at the time he filed his objection to Respondents April 11, 2012 FAL. This issue cannot be decided retroactively, and claimant is not entitled to retroactive relief. WCRP 6-4 addresses suspension, modification or termination of temporary disability benefits by petition. This rule provides in pertinent part:

> (A) When an insurer seeks to suspend, modify or *terminate temporary disability benefits pursuant to a provision of the Act, and Rules 6-1, 6-2, 6-3, 6-5, 6-6, 6-7 or 6-9 are not applicable*, the insurer *may*[9] file a petition to suspend, modify or terminate temporary disability benefits on a form prescribed by the Division. All documentation upon which the petition is based shall be attached to the petition. The petition shall indicate the type, amount and time period of compensation for which the petition has been filed and shall set forth the facts and law upon which the petitioner relies. (emphasis added).

H. In this case, Respondents terminated Claimant's TTD benefits based upon C.R.S. § 8-42-105(3) (a). The evidence presented supports a conclusion that they did not seek/move to terminate, modify or suspend Claimant's compensation for any other reason for which a Petition would be required. (See WCRP 6-4(B), 6-5, 6-6 or 6-7). Because the only basis used to terminate TTD was MMI and the evidence presented supports a conclusion that Respondents followed WCRP 6-1 when filing their FAL, the ALJ agrees with Respondents that Insurer was not under a duty file a Petition to Modify, Terminate or Suspend Compensation prior to terminating Claimant's TTD.

ORDER

It is therefore ordered that:

1. The claim is closed.

2. Claimant's request for additional TTD and that Respondents file a Petition to Termination, Modify or Suspend Compensation is denied and dismissed.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email

[9] Rather than file a Petition, an insurer could simply choose to continue to pay indemnity benefits as established; however, if they wish to modify, terminate or suspend the benefit prospectively, they must file the petition and following the process set out in WCRP 6-4(A)-(G).

address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove she suffered a compensable injury on January 27, 2023 arising out of and in the course of her employment?
- If Claimant proved a compensable injury, did she prove Dr. Miguel Castrejon is the ATP because the right of selection passed to Claimant?
- What is Claimant's average weekly wage?
- Did Claimant prove entitlement to TTD benefits commencing January 28, 2023?

FINDINGS OF FACT

1. Claimant works for Employer as a personal care provider. Her duties include household tasks such as housekeeping, meal preparation, personal hygiene, grocery shopping, and running errands. Another core function of her job is providing "companionship," including but not limited to, social interaction, emotional support, reading, writing, and other "mind-stimulating activities."

2. On January 27, 2023, Claimant was working at the home of one of Employer's clients. The client's care plan covered basic ADLs like personal hygiene, toileting, bathing, and transfers. It also included to "homemaking" activities such as housecleaning, laundry, meal preparation, and "shopping errands."

3. On January 27, Claimant was covering the shift of a co-worker from 12:00 PM to 4:00 PM. She left the client's home before the end of her shift to go to the [Redacted, hereinafter DT] and [Redacted, hereinafter KS] stores nearby. Claimant intended to purchase craft supplies and butterscotch candies for the client from the DT[Redacted] store. The craft supplies were for a project Claimant and the client would be working on the next day. The client was distressed about the health of her dog, and they decided to make a "paw print" memento. After obtaining the supplies at the DT[Redacted], Claimant planned to stop at KS[Redacted] to purchase beverages for the client. Claimant was trying to complete these errands before the end of her shift.

4. Claimant was involved in a motor vehicle accident shortly after leaving the client's home. The front of her vehicle was struck by a large Ford F-250 pickup that had turned into her lane. Claimant's vehicle suffered significant damage.

5. Claimant texted Employer shortly after the accident with photos of her vehicle. She also spoke with [Redacted, hereinafter ST] and [Redacted, hereinafter PM] by telephone while still at the scene. Claimant had contacted Employer immediately because, "I was still on the clock, so I wasn't really sure what to do because I've never been in a car accident while I was at work."

6. Most of Employer's clients are Medicaid beneficiaries, including the client with whom Claimant was working on January 27, 2023. Medicaid generally covers two 60-minute shopping trips per week for each client. Medicaid pays for time but does not pay mileage. Because there is no reimbursement for vehicle expenses beyond the caregiver's hourly wage, the caregivers are encouraged to "try to limit the number of shopping errands so it is not as cost exorbitant on the . . . caregiver who is performing the errands."

7. Claimant routinely ran errands at the request of clients or Employer. The errands were not always related to grocery or medication needs. Examples include buying a storage tote from [Redacted, hereinafter WT], going to the pet hospital, and picking up fast food. Claimant also picked up vape pens for a client on at least one occasion.

8. Claimant typically asked her supervisor, ST[Redacted], for permission before running errands other than the two 60-minute shopping trips each week. However, the record contains at least one documented instance when Claimant forgot to contact ST[Redacted] before running the errand. When Claimant mentioned it to ST[Redacted] a few days later, ST[Redacted] responded "that's all okay."

9. On January 27, Claimant neglected to advise ST[Redacted] before leaving the client's home that she was running errands. However, based on the evidence presented, there is no persuasive reason to infer ST[Redacted] would have prohibited her from doing so.

10. Claimant occasionally ran errands at the start of her shift, on the way to a client's home. On those occasions, she was advised to "clock in" and begin her shift when she arrived at the store. The ALJ infers that Claimant would follow the inverse procedure and clock out after leaving the store if she ran an errand at the end of her shift.

11. Claimant initially felt no symptoms after the accident and told ST[Redacted] and PM[Redacted] that she felt "fine." However, she started to experience pain in her back, left shoulder, and neck, and had "a major headache" a few hours after the accident.

12. Claimant went to the UCHealth Urgent Care in Fountain, Colorado the evening of January 27, 2023. She reported pain from her shoulder down to her low back, a headache, and minor chest pain from the seatbelt. CT scans of her head and pelvis were negative and she was discharged home.

13. Claimant spoke with ST[Redacted] and PM[Redacted] before going to the urgent care, and again thereafter. ST[Redacted] and PM[Redacted] conceded they knew within a day of the accident that Claimant had sought treatment for injury-related symptoms.

14. Claimant returned to the UCHealth Urgent Care facility on January 31, 2023, because of worsening injury-related symptoms, including "blacking out." Her decision to go to urgent care was motivated in part by a text from ST[Redacted] suggesting she go to the emergency room and been seen "immediately" if the blackout spells continued. Claimant texted ST[Redacted] after leaving urgent care and stated,

“they said the blacking out is most likely from swelling/inflammation from whiplash and concussion even though I didn’t hit my head.”Employer did not give Claimant a list of designated providers at any time after the accident. A provider list was included in the new-employee paperwork when Claimant was hired in April 2021, but there is no persuasive evidence she recalled the list or any of the named providers after the January 27, 2023 MVA.

16. Claimant had multiple text exchanges with ST[Redacted] in the week after the accident stating she was still symptomatic and did not feel ready to return to work.

17. Claimant was evaluated by Dr. Miguel Castrejon on February 13, 2023. She reported pain, stiffness, and muscle spasms in her neck and low back, numbness and tingling in her hands, and headaches. Claimant described a pre-injury history of headaches, for which she had been prescribed Topamax by Dr. Bower, a neurologist. She stated the headaches had become more intense and frequent since the MVA and now seemed to originate from the base of her neck. She also reported “absence episodes” that were new since the accident. Physical examination showed tenderness and muscle spasm of the cervical and lumbar musculature. Dr. Castrejon diagnosed cervical and lumbar strains with myofascial pain, left SI joint dysfunction, a probable mild concussion, post-traumatic aggravation of pre-existing headaches, and occipital neuralgia contributing to the headaches. He prescribed muscle relaxers, massage therapy, and chiropractic treatment. He was unsure what was causing the absence episodes, so he referred Claimant to Dr. Bowser for further evaluation. Dr. Castrejon restricted Claimant from until her next appointment.

18. Claimant followed up with Dr. Castrejon on March 27, 2023. The corresponding report is not in evidence, but Dr. Castrejon described the encounter during his hearing testimony. Claimant’s neck pain and headaches had improved significantly in the interim. Her low back was improved too, but not to the same extent as her neck. Dr. Castrejon maintained Claimant’s work restrictions, including the limitation on driving because he had not received information from Dr. Bowser whether it was safe for Claimant to drive.

19. Dr. Fall performed an IME for Respondents on May 10, 2023. Claimant’s symptoms had improved since the accident, but she was still having low back pain. Dr. Fall concluded the accident caused a left cervicothoracic myofascial strain and mild lumbopelvic dysfunction. She opined a course of PT would be reasonable.

20. At hearing, Dr. Castrejon opined the work accident aggravated Claimant’s pre-existing headaches and caused new symptoms in her neck and low back. Dr. Castrejon could not offer definitive opinions about Claimant’s current condition because he had not seen her since March 2023. Based on Claimant’s testimony and Dr. Fall’s IME, Dr. Castrejon stated Claimant is probably at or close to “baseline” regarding the headaches and neck pain, but requires additional conservative treatment for her low back. However, he declined to put Claimant at MMI or release her to regular duty during the hearing.

21. Dr. Fall testified via deposition on July 10, 2023. In her deposition, Dr. Fall questioned the reliability of Claimant's subjective complaints and suggested they may be influenced by psychological factors.

22. Dr. Castrejon's opinions and conclusions are credible and more persuasive than any contrary opinions offered by Dr. Fall.

23. Wage records show Claimant earned $7,805.05 in the 12 weeks before the injury. This equates to an average weekly wage (AWW) of $650.42, with a corresponding TTD rate of $433.61.

24. Claimant has been off work since the work accident, at least in part because of limitations and restrictions related to the work accident. As of the hearing, she had not been put at MMI by an ATP, released to regular duty, or returned to work in any capacity.

25. Claimant's testimony is credible.

26. Claimant proved the January 27, 2023 MVA arose out of and occurred in the course of her employment.

27. The treatment Claimant received from UCHealth Urgent Care on January 27 and January 31, 2023 was reasonably necessary emergency treatment for to the work injury.

28. Claimant proved the right to select the treating physician passed to her because Employer did not timely provide a list of designated providers.

29. Claimant selected Dr. Castrejon as the ATP.

30. Claimant proved entitlement to TTD benefits commencing January 28, 2023 and continuing until terminated by law.

CONCLUSIONS OF LAW

A. Compensability

To establish a compensable claim, a claimant must prove they suffered an injury while "performing service arising out of and in the course of employment." Section 8-41-301(1)(b). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The injurious activity need not be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996). "Many job functions involve discretionary or optional activities on the part of the employee, devoid of any duty

component and unrelated to any specific benefit to the employer, but nonetheless are sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment." *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). There is no presumption that an injury occurring at work or during work hours necessarily arises out of employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). The claimant must prove a causal nexus between the injury and their employment by a preponderance of the evidence. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, Claimant proved the January 27, 2023 MVA arose out of and occurred in the course of her employment. Multiple factors support this conclusion. The accident occurred during Claimant's shift while she was still "on the clock." Shopping and running errands are a routine part of Claimant's job. Although most shopping trips are related to groceries or medications, she occasionally shops for other personal items, with Employer's approval. The limitations Employer placed on shopping trips were largely intended to protect the employee from incurring unreimbursed travel expenses, rather than limiting the scope of employment. The items Claimant intended to purchase on the day of the accident related entirely to the client's needs. There is no persuasive evidence to suggest any personal aspect of the journey. Obtaining craft supplies for a project related to the client's aging pet was directly ancillary to Claimant's core job duties of providing companionship and emotional support. As such, the shopping trip was sufficiently incidental to Claimant's job to support a determination that it arose out of and occurred in the course of her employment.

B. Authorized treating providers

The respondents are liable for medical treatment from authorized providers reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). Authorization refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993).

Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). As found, Claimant's treatment at UCHealth Urgent Care on January 27 and January 31, 2021 was reasonably necessary emergency treatment for her injuries. The initial onset of symptoms occurred after regular business hours, making urgent care the only reasonably available option. The January 31 visit was instigated in part by her supervisor's suggestion that she go to the emergency room to be evaluated "immediately."

Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. The employer must tender medical treatment "forthwith" upon receiving notice of the injury, or the right of selection passes to the claimant. *Rogers v.*

Industrial Claim Appeals Office, 746 P.2d 565 (Colo. App. 1987). An employer's attempt to "pre-designate" a provider with posted notices or printed forms is not a sufficient tender of treatment if the injured worker does not recall the notice at the time of injury. *E.g*., *Park v. Phil Long Ford d/b/a Academy Ford*, W.C. No. 4-373-188 (December 14, 1999); *Broadmoor Hotel v. Industrial Claim Appeals Office*, (Colo. App. No. 92CA1635, May 27, 1993) (NSOP).

Employer did not timely refer Claimant to a provider after receiving notice of her injuries, and there is no persuasive evidence Claimant recalled the designated provider list she was given in April 2021, nearly two years before the work accident. Claimant had multiple text and phone conversations with ST[Redacted] and PM[Redacted] in the week after the accident in which she indicated a need for treatment related to the MVA. Employer had ample opportunity to give Claimant a provider list but failed to do so. The right of selection passed to Claimant, and she selected Dr. Castrejon. Treatment provided by, and on referral from, Dr. Castrejon is authorized.

C. Average weekly wage

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly compute" the employee's AWW in any manner that seems most appropriate under the circumstances.

As found, Claimant's AWW is $650.42, with a corresponding TTD rate of $433.61. This determination is based on the 12 weeks immediately preceding the injury, which provides a fair approximation of Claimant's earnings capacity "at the time of the injury.

D. TTD commencing January 28, 2023

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability may be evidenced by a complete inability to work, or by restrictions or limitations that impair the claimant's ability to perform their regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). A claimant need not prove that the work-related injury was the sole cause of the wage loss to establish entitlement to TTD benefits. Rather, eligibility for TTD requires only that the work-related injury contributes "to some degree" to a temporary wage loss. *PDM Molding, supra*. Once commenced, TTD benefits continue until the occurrence of one of the events listed in § 8-42-105(3)(a)-(d).

As found, Claimant proved entitlement to TTD benefits commencing January 28, 2023. Claimant's job is physically demanding and requires the ability to help infirm clients with transfers, toileting, and other bodily functions, as well as housekeeping activities such as cooking, cleaning, and laundry. The compensable injury impaired Claimant's ability to perform these functions. Additionally, the absence episodes raised concern for the safety of Employer's clients and Claimant's ability to perform work-related driving.

As of the hearing date, no terminating event listed in § 8-42-105(3)(a)-(d) has occurred. Accordingly, Claimant's entitlement to TTD benefits is ongoing at present.

ORDER

It is therefore ordered that:

1. Claimant's claim is compensable.

2. Dr. Miguel Castrejon is Claimant's authorized treating provider.

3. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of her compensable injury, including but not limited to the charges Dr. Castrejon and UCHealth Urgent care.

4. Claimant's average weekly wage is $650.42, with a TTD rate of $433.61.

5. Insurer shall pay Claimant TTD benefits at the weekly rate of $433.61 commencing January 28, 2023 and continuing until terminated according to law.

6. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: October 6, 2023

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether or not Respondents have shown by a preponderance of the evidence that Claimant did not sustain a compensable work-related injury (and therefore are permitted to withdraw the admissions of liability).

2. Whether Respondents are entitled to reimbursement for medical and temporary total disability benefits issued on this claim due to fraud (and the amount of that reimbursement Claimant must pay back per month).

FINDINGS OF FACT

Notice

1. Respondents' counsel's paralegal, [Redacted, hereinafter SE], credibly testified that she sent all pleadings related to this hearing, including the hearing confirmation and the notice of hearing, to Claimant at the address [Redacted, hereinafter PO]. The claims adjuster, [Redacted, hereinafter HD], credibly testified that the address was obtained directly from Claimant.

2. The Court finds that Claimant had notice of the September 26, 2023 hearing and the issues to be addressed. The Court also finds that Claimant had an opportunity to present his case.

Personal and Employment Information

3. Claimant is a 50-year-old former technician with the Employer.

Alleged Work Injury – August 25, 2022

4. Claimant alleged that he injured his left shoulder when he lifted a thirty-pound fire extinguisher with the Employer on August 25, 2022. Resp. Ex. W.

5. The First Report of Injury confirms that the Claimant did not report the injury until the day following the alleged work injury. As a result, there were no witnesses to the alleged work injury.

6. Respondents accepted the claim based on Claimant's representation that the injury was legitimate. Respondents also accepted the claim not knowing that Claimant was running his own company or had a prior shoulder condition.

7. Respondents also began paying claimant TTD benefits and for all the medical treatment related to Claimant's left shoulder injury. Respondents paid these benefits based on Claimant's representations that he suffered a legitimate injury and was disabled from working due to the alleged work injury.

Surveillance Demonstrates that Claimant Runs His Own Company

8. Respondents obtained surveillance on Claimant. Resp. Ex. J and Ex. M. Surveillance efforts revealed that Claimant runs his own company, [Redacted, hereinafter BF]. The surveillance also demonstrated that Clamant was working at his company while collecting temporary total disability benefits. Resp. Ex. J, p. 180 and Resp. Ex. L, p., 190, p. 196.

9. Surveillance showed Claimant carrying heavy materials and operating vehicles for his own company while he was also collecting TTD benefits from respondents. Resp. Ex. M.

10. Contemporaneous medical records indicated that Claimant had been placed on medical restrictions that included no lifting, pushing, pulling, carrying with the left arm, repetitive lifting, and no climbing ladders. Resp. Ex. B, p. 7. These restrictions were completely inconsistent with Claimant's work with his company as demonstrated on the surveillance.

11. Claimant's own business, BF[Redacted], performs the same type of work as the Employer.[1]

Claimant has Prior Left Shoulder Injury and Evidence that Rotator Cuff Tear was Pre-Existing

12. Medical records indicate that Claimant previously suffered a left shoulder separation before the alleged work injury with the Employer. Resp. Ex. A, p. 4.

13. The MRI Scan taken of the Claimant's left shoulder demonstrated a supraspinatus full thickness tear and advanced acromioclavicular joint degenerative changes. More importantly, the supraspinatus tear was noted to have "delamination of the retracted fibers." Resp. Ex. F, p. 46. As a result, there is evidence suggesting that the rotator cuff tear in the left shoulder was pre-existing.

---

[1] Adverse inference made consistent with Respondents' Exhibit L, p. 190. ("Subject listed as a current fire suppression systems contractor. A business was located for the subject BF[Redacted].") Adverse inference is appropriate where Claimant has failed to participate in his claim and Respondents' investigation of his pertinent medical history and treatment and potential concurrent employment. C.R.C.P. 37.

14. Based on Claimant's misrepresentations involving his ability to perform work and his pre-existing shoulder problems, respondents contended that no work injury occurred with the Employer. Respondents began a further investigation into the claim and attempted to withdraw the admissions of liability filed on the case.

Termination of TTD Benefits

15. HD[Redacted] was the claims representative at [Redacted, hereinafter BE] who formerly handled the file. She credibly testified that upon discovery of Claimant's concurrent employment and surveillance showing him working outside of his restrictions, Respondents sought to terminate TTD benefits.

16. On February 8, 2023, Respondents filed a Petition to Terminate Compensation pursuant to C.R.S. § 8-42-105(3)(b) on the basis that Claimant was working for his own company while simultaneously collecting TTD benefits. Resp. Ex. R.

17. The Division granted the Petition on March 15, 2023, thereby allowing Respondents to terminate benefits as of February 8, 2023. Resp. Ex. S.

Claimant Failed to Provide Discovery Responses and Violated Multiple Prehearing Conference Orders

18. On April 21, 2023, Prehearing ALJ Mueller issued a Prehearing Conference Order compelling production of medical releases and healthcare provider list pursuant to W.R.C.P. 5-4(C). Releases and the provider list were due within fourteen days of the date of the order. Resp. Ex. N, p. 207.

19. On June 14, 2023, Prehearing ALJ Phillips issued a Prehearing Conference Order that compelled Claimant to provide discovery responses pursuant to W.C.R.P. 9-1 by June 24, 2023. Resp. Ex. O, p. 211.

20. Claimant did not respond to either Order. Therefore, on July 20, 2023, Prehearing ALJ Mueller entered a Prehearing Conference Order imposing sanctions on Claimant. Sanctions prohibited Claimant from presenting any documentary evidence or witnesses at the hearing. Prehearing ALJ Mueller stated that the Court had discretion to draw adverse inferences from Claimant's failure to answer Respondents' discovery requests. Resp. Ex. P., p., 217-218.

21. Claimant never attempted to cure his failure to provide discovery. Instead, he refused to participate in this claim or to allow Respondents to investigate his medical history or whether a work injury actually took place.

Fraud Referral

22. Respondents filed a Uniform Suspected Insurance Fraud Referral Form on the basis that Claimant may have exaggerated his condition and was working while receiving benefits in violation of Colorado law. Resp. Ex. K, p. 185. Claimant never notified Respondents of any written objection to receiving TTD benefits. *Id.*

Respondents Paid Substantial Medical and Indemnity Benefits to the Claimant

23. Respondents paid $31,811.92 in temporary total disability benefits as outlined in the table below. *See also* Resp. Ex. W.

Indemnity Ledger		
Starting Date	**End Date**	**Amount**
08/29/2022	09/04/2022	$1,228.99
08/26/2022	08/28/2022	$526.71
10/12/2022	10/25/2022	$2,457.98
11/9/2022	11/22/2022	$2,457.98
11/23/2022	12/06/2022	$2,457.98
12/07/2022	12/20/2022	$2,457.98
12/21/2022	01/03/2023	$2,457.98
01/04/2023	01/17/2023	$2,457.98
01/18/2023	01/31/2023	$2,457.98
01/11/2023	01/20/2023	$33.75
02/01/2023	02/14/2023	$2,457.98

11/10/2022 - 11/21/2022	$57.75
10/30/2022 - 11/10/2022	$226.25
9/1/2022 - 10/28/2022	$737.00

25. Respondents have collectively paid $62,256.03 in indemnity and medical benefits on this claim.

Respondents Have Proven that Claimant Did Not Suffer a Work Injury with the Employer

26. The evidence has demonstrated that Claimant did not suffer a work injury with the Employer. Instead, the Claimant's shoulder condition was pre-existing or resulted from an injury to his shoulder while working for his own company (BF[Redacted]). Respondents have proven that the Claimant did not suffer a work injury to his left shoulder with the Employer.[2]

27. The evidence demonstrates that Claimant intentionally mispresented that an injury occurred with the Employer and also whether he was earning money or disabled from work to improperly obtain workers' compensation benefits from the respondents.[3]

Respondents Have Proven that the Admissions on this Case Can be Withdrawn and are Void <u>Ab Initio</u> and Claimant Must Repay Respondents the $62,256.03 for the Indemnity and Medical Benefits Paid on this Case

28. Respondents have proven that the Claimant engaged in fraud both in alleging that a work injury occurred with the Employer and to obtain ongoing indemnity and medical benefits. Respondents are entitled to withdraw their admissions *ab initio* and collect back all the money paid to Claimant for medical and indemnity benefits.[4]

29. Claimant's admitted average weekly wage was $2,274.48, which corresponds with $9,856.08 monthly. The Court finds this was most likely what Claimant was earning at the time of his alleged injury. There is no direct evidence as to what Claimant's current earnings are. However, the Court infers, based on Claimant's prior earnings, and the fact that he is now performing the same type of work but for his own company, that Claimant is earning roughly the same amount as he was before.

---

[2] Adverse inference made because Claimant failed to respond to discovery to allow Respondents adequate ability to investigate a potential pre-existing or intervening injury in addition to investigating Claimant's concurrent employment. See C.R.C.P. 37; *Sheid v. Hewlett Packard, supra.*

[3] Adverse inference made because Claimant failed to respond to discovery to allow Respondents adequate ability to investigate a potential pre-existing or intervening injury in addition to investigating Claimant's concurrent employment. See C.R.C.P. 37; *Sheid v. Hewlett Packard, supra.*

[4] Adverse inference made because Claimant failed to respond to discovery to allow Respondents adequate ability to investigate a potential pre-existing or intervening injury in addition to investigating Claimant's concurrent employment. See C.R.C.P. 37; *Sheid v. Hewlett Packard, supra.*

30. Because Claimant is currently earning roughly $9,856.08 monthly, the Court finds that a repayment plan of $500.00 per month would not cause Claimant undue hardship.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability – Withdrawal of Admissions

The beneficial intent of the Act is predicated on claimant's providing accurate information. Therefore, when a claimant supplies materially false information upon which his employer and its insurer relied in filing an admission of liability, the court is justified in declaring the admission void *ab initio*. *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981); *Kraus v. Artcraft Sign Co.*, 710 P.2d 480 (Colo. 1985); *Lewis v. Scientific Supply Co., Inc.*, 897 P.2d 905 (Colo. App. 1995); *West v. Lab Corp. of America*, W.C. No. 4-684-982 (ICAO February 27, 2009). *Vargo* and *Lewis* stand for the proposition that the authority of an ALJ to remedy fraud is limited to the express provisions of the statute, except where the fraud occurs prior to entry of a final admission or closure of the claim by way of an order. In circumstances where no final adjudication has occurred, "Retroactive Withdrawal" is a permissible remedy. *Cf. Johnson v. Industrial Commission*, 761 P2d 1140 (Colo. App. 1988).

In this case, Respondents filed admissions of liability and paid medical and temporary total disability benefits based on fraudulent information provided by Claimant.[5]

The Court credits the testimony of HD[Redacted] and the exhibits submitted in the claim.

Based on the above, Respondents have proven that it is more likely than not that Claimant did not suffer a work injury with the Employer. Instead, he sustained an injury, or an aggravation thereof, to his shoulder at a prior time or while on the job for his own company. [6] Specifically, Respondents have proven by a preponderance of the evidence that Claimant did not suffer a work injury,[7] and that Claimant fraudulently induced Respondents to admit the compensability of the claim.

As found, Respondents have proven by a preponderance of the evidence that Claimant's medical condition and subsequent medical treatment were not work-related. Accordingly, Respondents may withdraw all admissions of liability filed on this claim.

Fraud and Repayment

To prove fraud, a party must generally show the following: (a) a party made a false representation of a material fact; (b) the party knew that the representation was false; (c) that the person to whom the representation was made was ignorant of the falsity; (d) that

---

[5] Adverse inference made due to Claimant's failure to comply with providing releases pursuant to W.C.R.P. 5-4(c) thereby preventing Respondents an opportunity to thoroughly investigate the claim. Adverse inference also made due to Claimant's failure to respond to discovery or comply with the April, 2023 and June, 2023 prehearing conference orders compelling the same. See Respondents' Exhibits N-P.

[6] Adverse inference made Adverse inference made based on Claimant's failure to provide requisite releases, cooperate with discovery as required by W.C.R.P. 5-4(c) and W.C.R.P. 9-1, and comply with the prehearing conference Orders. *See* Resp. Ex. N, Ex. O, Ex. P. Additionally, adverse inference made consistent with the surveillance and social media investigations. See Resp. Ex. J, Ex. L, Ex. M.

[7] Adverse inference made based on Claimant's failure to provide requisite releases, cooperate with discovery as required by W.C.R.P. 5-4(c) and W.C.R.P. 9-1, and comply with the prehearing conference Orders. *See* Resp. Ex. N, Ex. O, Ex. P.

the representation was made with the intention that it be acted upon; and (e) that the reliance resulted in damages to the plaintiff. *See Nelson v. Gas Research Institute*, 121 P.3d 340, 343 (Colo. App. 2005).

"The existence of these elements is generally a question of fact for determination by the ALJ. *See Vargo v. Industrial Commission, supra*. Because proof of fraud is a factual issue, the ALJ may base his decision on inferences drawn from circumstantial evidence, as well as direct evidence. *See Electric Mutual Liability Insurance Co. v. Industrial Commission*, 391 P.2d 677 (1964). Insofar as the ALJ's inferences are supported by substantial evidence in the record they must be upheld on review. *May D & F v. Industrial Claim Appeals Office*, 752 P.2d 589 (Colo.App.1988); *Essien v. Metro Cab, Inc.*, W.C. No. 3-853-693 (I.C.A.O. Aug. 22, 1991).

As found, Claimant was performing substantially similar work for his own company, BF[Redacted] and was doing so while collecting TTD from Respondents. Claimant failed to provide medical releases, engage in discovery, or timely respond to the prehearing conference orders. Failure to cooperate in his claim has prevented Respondents a meaningful opportunity to investigate Claimant's medical history and ascertain if the left shoulder condition was related to or aggravated by the August 25, 2022 incident with the Employer or if related to a naturally progressing preexisting condition and/or related to a work incident at BF[Redacted]. Therefore, this ALJ makes an adverse inference that it is more likely than not that the left shoulder condition is unrelated to the August 25, 2022 incident at [Redacted, hereinafter SP]. *See* C.R.S. § 8-43-207(1)(3) (stating that the administrative law judge may improve the sanction provided in the rules of civil procedure in the district courts for willful failure to comply with permitted discovery); *See C.R.C.P. 37(b); see also Sheid v. Hewlett Packard*, 826 P.3d 396 (Colo. App. 1991).

Because Respondents were induced to make the workers' compensation payments based on Claimant's material misrepresentations, the appropriate remedy is for the admissions of liability filed to be declared void *ab initio* and to order the Claimant to repay the $62,256.03 in benefits administered on this claim. The Colorado Court of Appeals has held that ALJs have discretion to fashion such a remedy with regard to overpayments. *See Turner v. Chipotle Mexican Grill*, W.C. No. 4-893-631-07 (Feb. 8, 2018), *citing Simpson v. Industrial Claim Appeals Offi*ce, 219 P.3d 354 (Colo.App.2009); *see also Arenas v. Industrial Claims Appeals Office*, 8 P.3d 558 (Colo.App.2000); *see Louisiana Pacific Corp v. Smith*, 881 P.2d 456 (Colo.App.1994).

As found above, Claimant's earnings of $9,856.08 monthly are sufficient that a payment of $500.00 per month would not cause undue hardship to Claimant. Payment of $500.00 per month from Claimant until the fraudulently paid out benefits are fully repaid is appropriate.

ORDER

It is therefore ordered that:

1. Respondents have proven by a preponderance of the evidence that Claimant did not sustain a work-related injury with the Employer. Therefore, Respondents are permitted to withdraw the admissions of liability previously filed on this claim and they are deemed void ab initio.

2. Because the evidence shows that Respondents were induced to administer benefits due to Claimant's misrepresentations, it is appropriate for the Claimant to repay $62,256.03 in benefits that he obtained through fraud.

3. Claimant is ordered to pay back this amount at a rate of $500.00 a month until the entire amount has been reimbursed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 27, 2023

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-219-282-002

ISSUES

1. Has Claimant demonstrated, by a preponderance of the evidence, that on August 16, 2022, she suffered a right shoulder injury arising out of and in the course and scope of her employment with Employer?

2. If the claim is found compensable, has Claimant demonstrated, by a preponderance of the evidence, that treatment of her right shoulder including reverse total shoulder arthroplasty performed on February 7, 2023 by Dr. Jared Lee constitutes reasonable medical treatment necessary to cure and relieve Claimant from the effects of the work injury?

3. If the claim is found compensable, has Claimant demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability {TTD) benefits beginning November 15, 2022 and ongoing until terminated by law?

STIPULATIONS

1. At the hearing, the parties stipulated that if the claim is found compensable, Basalt After Hours Care Clinic is an authorized treating provider (ATP).

2. In their position statements, the parties stipulated that if the claim is found compensable, Claimant's average weekly wage (AWW) is $1,500.00.

FINDINGS OF FACT

1. Claimant began working for Employer in January 2011. In 2022, Claimant worked as a server in private dining. Claimant testified that she earned between $1,200.00 and $2,000.00 per week.

2. Claimant testified regarding an incident that occurred at work on August 16, 2022. Claimant testified that it was very busy in her department on that day. At one point during her shift, Claimant noted that a large tray had been left on the floor. Claimant estimates that the tray and its contents weighed approximately 20 pounds. Claimant bent at the waist to lift this tray. Claimant testified that as she began to lift the tray, she immediately felt pain in her right shoulder. Claimant did not report this incident at that time because she had other work to do and she completed her shift.

3. When she reported for her next scheduled shift, Claimant reported the August 16, 2022 incident regarding her right shoulder. Claimant was provided with a list of designated medical providers. Subsequently, Claimant was seen at the Basalt After Hours Care Clinic on August 24, 2022.

Right shoulder treatment prior to August 16, 2022

4. Claimant testified that she has had prior right shoulder issues. She further testified that approximately 10 years ago Dr. Liotta recommended that she undergo rotator cuff repair. Claimant testified that she chose not to undergo the recommended surgery at that time.

5. On April 8, 2014, Claimant was seen by Dr. Donald Corenman at The Steadman Clinic. The purpose of that evaluation was to discuss symptoms of low back pain. However, in that medical record, Dr. Corenman noted Claimant's report that Dr. Liotta had recommended right shoulder surgery.

6. On September 28, 2021, Claimant was seen by Dr. Tomas Pevny for treatment of her right shoulder. In the medical record of that date, Dr. Pevny referenced magnetic resonance imaging (MRI) from 2014 that showed a full thickness rotator cuff tear. Dr. Pevny recommended and administered a right shoulder injection. Dr. Pevny also recommended an updated MRI. Claimant declined to pursue an MRI at that time.

Right shoulder treatment after August 16, 2022

7. As noted above, Claimant underwent treatment of her right shoulder on August 24, 2022 at the Basalt After Hours Care Clinic. At that time, Claimant was seen by Kelly Hill, FNP-C. Claimant reported that she already had an appointment scheduled with Steadman Clinic on October 3, 2022 to address her right shoulder. Nurse Practitioner Hill ordered x-rays of Claimant's right shoulder and diagnosed a chronic rotator cuff tear. Nurse Practitioner Hill assessed work restrictions of no lifting over five pounds. In addition, she referred Claimant for an orthopedic consultation.

8. As previously scheduled, on October 3, 2022, Claimant was seen at The Steadman Clinic by Dr. Dustin Anderson for an orthopedic consultation. On that date, Claimant reported a number of issues including pain in her right shoulder, neck, left low back and hip[1]. Dr. Anderson documented Claimant "has had pain in both her right shoulder and neck since roughly 2015 both have recently worsened over the course of the last 3 months." With regard to her right shoulder, Claimant reported that she had a rotator cuff tear in 2015, which she treated non-surgically. Claimant further reported that she reinjured her right shoulder by "lifting heavy objects at work". On examination, Dr. Anderson noted "significant atrophy of her supraspinatus muscle" and recommended a right shoulder MRI.

9. On October 28, 2022, an MRI of Claimant's right shoulder was performed. In the MRI report, radiologist, Dr. Elizabeth Kulwiec indicated a comparison to an MRI performed on May 13, 2014. Dr. Kulwiec noted a full thickness tear of the distal supraspinatus tendon that had extended since the 2014 MRI. The MRI also showed a new partial thickness bursal surface tear of the subscapularis tendon, with new mild

[1] As the only body part at issue at this time is Claimant's right shoulder, further discussion of symptoms and related treatment of any other body parts is not addressed here.

atrophy of the subscapularis muscle. Dr. Kulweic also noted, *inter alia,* new mild infraspinatus tendinosis; moderate osteoarthritis of the acromioclavicular joint, a new complete tear at the origin of the long head biceps tendon; moderate joint effusion; a new superior labrum anterior and posterior (SLAP) tear; and a new humeral avulsion glenohumeral (HAGL) lesion.

10. On November 2, 2022, Claimant returned to Dr. Anderson to discuss the MRI results. At that time, Dr. Anderson referred Claimant to Dr. Jared Lee to discuss surgical options.

11. On November 7, 2022, Dr. Anderson completed an order for the referral to Dr. Lee. That same document states that Claimant was unable to return to work.

12. Claimant testified that November 15, 2022, was the date that employees were to return to work to begin the season. However, because Dr. Anderson had taken her off of all work, Claimant was unable to return to work on November 15, 2022. As of the date of the hearing, Claimant has not returned to work for Employer.

13. On December 1, 2022, Claimant was seen by Dr. Lee. In the medical record of that date, Dr. Lee noted his independent review of the October 2022 right shoulder MRI. Dr. Lee identified the condition of Claimant's right shoulder as "acute on chronic". Claimant reported to Dr. Lee that her job was physical and recently her shoulder pain had increased. Dr. Lee documented "no know[n] specific injury or trauma but patient does endorse that symptoms have noticeably increased more recently especially with movement." Dr. Lee discussed several treatment options, including a reverse total shoulder replacement, three other surgical procedures, or a steroid injection. At that time, Claimant wished to continue with conservative treatment.

14. On January 5, 2023, Claimant returned to Dr. Lee and reported that her symptoms had persisted, but had not worsened. Dr. Lee again recommended a right reverse total shoulder arthroplasty. Claimant agreed to proceed with the surgery and on February 7, 2023, Dr. Lee performed a right reverse total shoulder arthroplasty with biceps tenodesis.

15. At the request of Respondents, on February 22, 2023, Claimant attended an independent medical examination (IME) with Dr. F. Mark Paz. In connection with the IME, Dr. Paz reviewed Claimant's medical records, obtained a history from Claimant, and performed a physical examination. In an IME report dated February 22, 2023, Dr. Paz opined that Claimant's rotator cuff tear was not caused by the activity of lifting the tray on August 16, 2022. Dr. Paz also opined that the pre-existing rotator cuff tear in Claimant's right shoulder was not aggravated or accelerated by her work activities on August 16, 2022. In support of these opinions, Dr. Paz noted that Claimant has a history of chronic right shoulder complaints. Dr. Paz points to the 2021 medical record in which Dr. Corenman noted that in 2014 Dr. Liotta recommended right shoulder surgery. Dr. Paz further noted that the 2022 MRI results are consistent with a chronic rotator cuff tear and related degenerative changes.

16. Dr. Paz's testimony was consistent with his IME report. Dr. Paz testified that Claimant's need for reverse total shoulder arthroplasty is not related to her work activities on August 16, 2022. Dr. Paz further testified that Claimant had pre-existing degenerative changes in her right shoulder that were documented as early as 2014. Dr. Paz explained that the term "new" as used in the October 28, 2022 MRI report does not mean "acute". Rather, since the radiologist was comparing the MRI taken in October 2022 to the MRI taken in May 2014, the term "new" describes a chronic change in the anatomy from that which existed in May 2014. Dr. Paz explained that the degenerative changes noted in the 2022 MRI is typical degeneration that occurs from instability caused by a rotator cuff tear.

17. The ALJ does not find Claimant's testimony regarding the nature and onset of her right shoulder symptoms to be credible or persuasive. The ALJ credits the medical records and finds that Claimant had ongoing right shoulder symptoms prior to the alleged August 16, 2022 incident. The ALJ credits the opinions of Dr. Paz and finds that Claimant's right shoulder was not injured on August 16, 2022. The ALJ further credits Dr. Paz's opinions and finds that Claimant's work activities on August 16, 2022 did not aggravate, accelerate, or combine with the pre-existing degenerative condition of Claimant's right shoulder to necessitate surgery.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201,
C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306,592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory, supra.*

5. The fact that a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *Gotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and because a coincidental correlation exists between a claimant's work and their symptoms does not mean there is a causal connection between the claimant's injury and work activities.

6. As found, Claimant has failed to demonstrate, by a preponderance of the evidence, that on August 16, 2022, she suffered a right shoulder injury arising out of and in the course and scope of her employment with Employer. As found, the medical records and the opinions of Dr. Paz are credible and persuasive.

ORDER

It is therefore ordered that Claimant's claim related to an alleged August 16, 2022 right shoulder injury is denied and dismissed.

Dated October 9, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

Jf you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be finat. Section 8-43-301(2), C.R.S. and OACRP 27. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 27(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-177-827-001

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that his scheduled eye impairment should be converted to a whole-person impairment.

2. Whether Respondents are liable for penalties for filing the final admission of liability beyond the period set forth in § 8-42-107.2(4)(c), C.R.S.

3. Whether Claimant is entitled to a disfigurement award.

FINDINGS OF FACT

1. Claimant sustained an admitted injury to his right eye on July 8, 2021, while he was re-treading a tire. A strap broke and struck his safety goggles, causing the safety goggles to strike his right eye.

2. Claimant was taken to the emergency department at Denver Health that same day and underwent eye surgery, consisting of a peritomy and globe exploration of the right eye.

3. On October 11, 2021, Claimant underwent a second right eye surgery with Dr. Jesse Smith. The procedure was a "[c]omplex [p]hacoemulsification and cataract extraction with intraocular lens implantation, CTR, no kenalog."

4. On October 19, 2021, Claimant saw his authorized treating physician, Dr. Jay Reinsma at Concentra. Dr. Reinsma noted that Claimant had one more follow-up scheduled with a retinal specialist, at which point he anticipated Claimant would be released from care and returned to work at full duty. Dr. Reinsma referred Claimant for an impairment evaluation in anticipation of maximum medical improvement (MMI).

5. Claimant underwent an impairment rating evaluation[1] with Dr. Chester Roe on January 25, 2022. Dr. Roe opined that Claimant had reached MMI with a 99% impairment to his right eye based on Table 2, page 163 of the *AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)*, which given the absence of impairment of the left eye, resulted in a total visual system impairment of 25%. Dr. Roe noted that "one entirely blind eye with no visual field can only at

[1] The record is ambiguous as to whether this evaluation was at the referral of Dr. Reinsma or whether it was an independent medical examination sponsored by Respondents pursuant to 8-43-404(3), C.R.S. The distinction does not affect the Court's analysis in this case, and so the Court does not make any findings in this regard.

worst be a 25% visual system impairment, if the other eye is normal, according to the Guides."

6. Dr. Roe later testified at hearing that Claimant would be legally blind if both eyes were as bad as his right eye. Regarding depth perception, Dr. Roe testified that stereo vision—or vision with two eyes—provides better depth perception than one eye alone. Regarding the impairment, Dr. Roe testified that the visual system chapter of the AMA Guides, the calculations were 99% vision impairment in the right eye, which is a 25% visual system impairment, or 24% whole-person impairment. He clarified that he chose not to assign a whole person impairment for cosmetic disfigurement because he could not perceive much of a pupil abnormality from several feet away. The Court finds Dr. Roe's testimony credible and persuasive.

7. Claimant obtained a Division independent medical examination (DIME) with Dr. James McLaughlin on August 2, 2022, a level II accredited physician under the Workers' Compensation Act.[2] Dr. McLaughlin examined Claimant and noted that Claimant was able to drive his seven-minute commute to work. However, Dr. McLaughlin noted that Claimant had difficulty getting in and out of the vehicle because he has to feel around for the handle, would have to hold onto the railing while ascending or descending stairs, and would sometimes miss his mouth while eating. The Court infers that these difficulties are related to his loss of depth perception resulting from his loss of vision in his right eye.

8. Dr. McLaughlin agreed that Claimant was at MMI, and he determined that date to be January 25, 2022. He assigned a 98% impairment to Claimant's right eye, and therefore a 25% visual impairment. Dr. McLaughlin clarified that this would convert to a whole-person impairment of 24%. Regarding permanent work restrictions, Dr. McLaughlin recommended Claimant not work at exposed heights and not operate heavy equipment, power tools, or sharp tools due to loss of depth perception and decreased stereo acuity.

9. The Court finds Dr. McLaughlin's opinion regarding permanent impairment to equate to total loss of use of the eye.

10. Claimant testified at hearing that he cannot see movement in his right eye and that he sees lots of rays of different colors. Claimant also reported left eye fatigue and headaches. In his testimony, Claimant also recounted his difficulties with depth perception, including difficulty putting paste on his dentures in the morning, difficulty preparing food, and difficulty driving.

11. The Court finds Claimant's testimony credible. The Court also finds that Claimant's left eye fatigue and headaches are the result of overuse of his left eye to

[2] Rule 11-1, W.C.R.P. (2022), requires that a DIME physician be level II accredited, have sufficient recency of experience treating patients, and be board-certified in Colorado. Because Dr. McLaughlin performed the DIME, the Court infers that he met these criteria.

compensate for his right eye's loss of vision. Therefore, those symptoms lead the Court to find that Claimant's right eye impairment is beyond that which is set forth on the schedule of injuries at § 8-42-107(2), C.R.S.

12. The Court finds, based on Dr. McLaughlin's DIME report, Dr. Roe's testimony, and Claimant's testimony, that Claimant's loss of vision in his right eye for which he received an impairment rating from DIME Dr. McLaughlin constitutes a total loss of use of his right eye.

13. Dr. McLaughlin sent a copy of his DIME report to the Division as well as to counsel for the parties at some point in time between August 2 and September 7, 2022. Claimant and Respondents had a copy of the report for review by September 7, 2022 at the latest.

14. On September 7, 2022, The Division of Workers' Compensation issued a notice to the parties that the DIME process had concluded. The notice was sent by e-mail, and a copy was sent to Respondents' counsel. Respondents had actual notice as of September 7, 2022, that the DIME process had concluded.

15. On October 4, 2022, the Division issued a notice to Respondent-Insurer that "[t]he period for filing an application for hearing [pursuant to § 8-42-107.2(4)(c), C.R.S.] has expired and a final admission of liability is required." The Court finds that Respondent-Insurer received a copy of this letter.[3]

16. That same day, [Redacted, hereinafter RO], a representative of Claimant's counsel's office, e-mailed Respondents' counsel advising that the DIME process had concluded on September 7, 2022, and asking whether Respondents would be filing a FAL.

17. Respondents' counsel contacted Claimant's counsel via e-mail on October 10, 2022, regarding the possibility of settlement. Claimant's counsel responded on October 14, stating:

    a. *I have discussed the possibility with the client, and there is a possibility of settlement. However, I would like to receive the FA before evaluating this with the Client. If I'm not mistaken, this was due by September 27, and remains outstanding. Please advise on its status*.

18. On Wednesday, October 19, 2022, [Redacted, hereinafter BS], claims management supervisor for the Division, sent an e-mail to [Redacted, hereinafter JH][4] of Respondent-Insurer indicating that a "DIME conclusion notice" was sent to Respondent-Insurer on September 7, and that a FAL was due on September 27,

[3] Respondents' counsel, however, did not receive a copy of the letter until October 19, 2022, after learning about the existence of the letter and requesting a copy from the Division.

[4] JH[Redacted] role with Respondent-Insurer is not entirely clear, but the Court infers based on the circumstances that JH[Redacted] is a claims supervisor for Respondent-Insurer.

2022. BS[Redacted] also made reference to the October 4, 2022 letter sent by [Redacted, hereinafter DC]. BS[Redacted] requested that a FAL be filed by that Friday.

19. Respondents filed a FAL on November 7, 2022, admitting for a 25% scheduled impairment rating of the eye based on DIME Dr. McLaughlin's report and corresponding PPD benefits in the amount of $9,456.20. Respondents reserved the right to credit an overpayment of $715.35 toward PPD. The FAL was filed 61 days after the notice of conclusion of the DIME process, and 41 days after the FAL was due pursuant to § 8-42-107.2(4)(c), C.R.S. Based on the multiple notices Respondents received regarding the need to file an FAL, there is clear and convincing evidence that Respondents should have known that an FAL was due by no later than September 27, 2022, and that they were in continuing violation of the Workers' Compensation Act. The Court finds that Respondents' delay in filing the FAL was unreasonable and was the result of negligence. The Court also finds that with each successive notice, the delay in filing of the FAL became more unreasonable.

20. Four days prior to filing the FAL, Respondents had voluntarily issued a lump sum PPD payment to Claimant without discount in the amount of $8,740.85, the value of the admitted PPD minus an asserted overpayment of $715.35. The Court finds this to be a mitigating factor with regard to the issue of penalties. Though, the Court does also observe that Claimant would have been entitled to the same lump sum upon request pursuant to Rule 5-10, W.C.R.P., and § 8-43-203(2)(b)(II).

21. On December 7, 2022, exactly thirty days after the FAL was filed, Claimant filed an Application for Hearing (AFH) to challenge the FAL on the issues of average weekly wage, disfigurement, temporary disability benefits, permanent disability benefits, and penalties. December 7, 2022, was the latest date Claimant could file an AFH challenging the FAL pursuant to § 8-43-203(2)(b)(II), C.R.S.

22. The Court finds that Claimant's choice to wait thirty days from the date of the FAL before filing an AFH, notwithstanding having a copy of the DIME report since at least September 7, 2022, is evidence that Claimant perceived minimal ongoing harm resulting from delay of resolution of the issues endorsed in Claimant's AFH. The Court finds that the harm Claimant sustained as a result of Respondents' late filing of the FAL consisted of a delay in receipt of PPD benefits and a delay in resolution of the hearing issues. The former was somewhat mitigated by Respondents' voluntary payment of a lump sum PPD award without discount. The latter was of little harm, as evidenced by Claimant's own lack of urgency in seeking to challenge the FAL.

23. The harm resulting from the late filing of the FAL was slightly greater than *de minimus*, and the delay resulted from the negligence of Respondents. However, with each successive notice that Respondents received regarding their late FAL, the degree of culpability increased. Therefore, the Court finds that the following

daily penalties during the 41-day delay in filing of the FAL would be fairest and within Respondents' ability to pay:

a. From September 27 through October 4, 2022, daily penalties of $8 per day;
b. From October 5 through October 10, 2022, daily penalties of $10 per day;
c. From October 11 through October 19, 2022, daily penalties of $15 per day; and
d. From October 20 through November 6, 2022, daily penalties of $20 per day.

24. At the time of hearing, Claimant allowed the Court to observe his right eye for a disfigurement award. The Court observed that Claimant's right eye was slightly more dilated than the left and slightly redder. The Court finds that the disparities in pupil dilation and eye redness are related to Claimant's July 8, 2021 injury, and that Claimant has proved by a preponderance of the evidence that he has been seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view, as described, so as to entitle him to a disfigurement award. While the disfigurements are not particularly stark, their location in Claimant's right eye contributes to their prominence. The Court finds that a $700 disfigurement award is appropriate.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*,

183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Whole-Person Conversion

The ALJ is the finder of fact on the question of whether the Claimant sustained a "loss of an arm" within the meaning of schedule of disabilities in § 8-42-107(2)(a), C.R.S., or a whole person rating under § 8-42-107(8)(c), C.R.S. *Strauch v. PSL Swedish Healthcare System,* 917 P. 2d 366, 369 (Colo.App.1996). In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp*., 937 P.2d 883, 884 (Colo.App.1996)*; Strauch* at 368-369.

Injury is the manifestation in part or parts of the body which been impaired or disabled as a result of the industrial accident. *Mountain City Meat v. ICAO,* 904 P.2d 1333 (Colo. App. 1995). The part of the body that sustains the ultimate loss is not necessarily the particular part of the body where the injury occurred. *McKinley v. Bronco Billy's,* 903 P.2d 1239, 1242 (Colo.App.1995). When evaluating functional impairment the ALJ shall look at the alteration of the claimant's functional abilities by medical means and by non-medical means, as well as the claimant's capacity to meet personal, social, and occupational demands. *Askew v. Industrial Claim Appeals Office,* 927 P.2d 1333, 1337 (Colo. 1996).

Section 8-42-107(1), C.R.S., provides that a claimant is limited to a scheduled disability award if the claimant suffers an "injury or injuries" described in subsection (2) of that provision. *Strauch*, 917 P.2d 366. The schedule of impairments includes "[t]otal blindness of one eye." § 8-42-107(2)(gg), C.R.S. However, the Act also provides that "[w]hen an injury results in the total loss or total loss of use of . . . an eye . . . the benefits for such loss shall be determined pursuant to this subsection (8),[5] except as provided in subsection (7)(b)(IV)[6] of this subsection." § 8-42-107(8)(c.5), C.R.S.

The only distinction between these two provisions appears to be between total blindness and total loss of use of an eye. Although the distinction is not obvious at first glance, the Colorado Court of Appeals clarified the distinction in *McKinley v. Bronco*

[5] Whole-person.
[6] Where it provides that you must admit for the scheduled rating if it results in greater compensation.

Billy's, 903 P.2d 1239 (Colo.App.1995). The court in *McKinley v. Bronco Billy's* held that "[i]f the loss of use was partial, then . . . the amount of compensation was to be the proportionate share of the amount stated in the schedule for the total loss of a member." However, if the loss was total, then the permanent partial disability award was to be calculated based on the scheme for whole-person impairments set forth at § 8-42-107(8), C.R.S.

Claimant points to the case of *Parra v. Spectrum Retirement Communities*, W.C. No. 5-052-120-005 (May 6, 2021), as a case analogous to the present one. The panel in *Parra* upheld the ALJ's finding that the claimant's impairment of the eye was not limited to the schedule. The claimant in *Parra* suffered a full-thickness corneal laceration. As a result, he did not have a cornea or lens in his right eye and experienced headaches. Nevertheless, he was able to distinguish between lightness and darkness with his injured eye, as well as perceive motion if within several inches of his eye. The DIME physician declined to assign the claimant a whole-person impairment rating because the claimant still had some vision and still had his eyeball. The ALJ concluded that the claimant sustained a total loss of use of the eye and converted the scheduled rating to a whole-person rating.

The respondents in *Parra* appealed, arguing in part that the ALJ's finding that the claimant had "total loss of use" of his affected eye was not supported by the evidence, and that the loss of use was only partial because the claimant could still distinguish between lightness and darkness and perceive some motion. The ICAO panel, however, upheld the ALJ's finding, citing *Employers' Mut. Ins. Co. v. Indus. Comm'n*, 199 P. 482 (1921), for the proposition that an award for total blindness is correct where the vision remaining is of no value for working. The panel further upheld the finding that the impairment was not contained on the schedule in light of the facts that the claimant's "entire life has been altered by this injury" and the claimant experienced "continual headaches."

Here, just as in *Parra*, Claimant has not sustained enucleation of his right eye. Claimant retains some vision, just like the claimant in *Parra*, but the vision is of no value for Claimant's work. He cannot see movement in his right eye, but can see rays of different colors. Claimant's loss of vision has also caused Claimant continual headaches and altered Claimant's activities of daily living in substantial ways.

Parra is sufficiently analogous to the facts in this case such that the Court concludes, based on *Parra*, that it has the discretion to convert the scheduled eye impairment rating if the Court finds that Claimant sustained a total loss of use of his eye for all practical purposes. *See Mut. Ins. Co.*, 199 P. 482.

As found above, Claimant's loss of vision in his right eye for which he received an impairment rating from DIME Dr. McLaughlin constitutes a total loss of use of his right eye. Additionally, given Claimant's decreased ability to meet his personal needs in his activities of daily living, the strain placed on his contralateral eye, and his recurring

headaches, the Court concludes that Claimant's impairment is beyond that which is set forth on the schedule at § 8-42-107(2), C.R.S.

Therefore, Claimant has proved by a preponderance of the evidence that he is entitled to a conversion of his right eye impairment to a whole-person impairment of 24%.

Penalties

Section 8-43-304(1), C.R.S., provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S., is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the violation. *See Associated Business Products v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo.App.2005).

Whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital*, 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

Section 8-42-107.2, C.R.S., provides that Respondents shall, within twenty days after the date of mailing of the Division's notice that hit has received the DIME report, either file a FAL or request a hearing to contest the DIME's findings. As found above, the Division issued its notice on September 7, 2022. Respondents had until September 27, 2022, to either file a FAL or request a hearing challenging the DIME. Respondents did neither. Respondents were therefore in violation of the Act.

The Court also considers whether Respondents' violation of § 8-42-107.2, C.R.S., was reasonable. As found above, it was not. Respondents had notice that they were to file a FAL or request a hearing by no later than September 27, 2022, yet did not.

Section 8-43-304(4), C.R.S. permits an alleged violator twenty days to cure the violation. If the violator cures the violation within the twenty-day period "and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed." The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo.App.2003). Section 8-43-304(4), C.R.S., modifies the rule and adds an extra element of proof when a cure has been effected. Specifically, the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo.App.1997); *see Tadlock v. Gold Mine Casino*, W.C. No. 4-200-716 (May 16, 2007).

Respondents came into compliance with the Act upon filing the November 7, 2022 FAL. However, in so doing, Respondents did not cure the daily violations of the Act already accrued for the period between September 27 and November 6, 2022. Even had it done so, as found above, Claimant has proved by clear and convincing evidence that Respondents should have known they were in violation of the Act. Therefore, penalties are appropriate.

An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hosp.*, W.C. No. 4-619-954 (May 5, 2006). However, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Business Products v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo.App.2005); *Espinoza v. Baker Concrete Construction*, W.C. No. 5-066-313 (Jan. 31, 2020).

When determining the penalty the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products*, 126 P.3d at 324. When an ALJ assesses a penalty, the Excessive Fines Clause of the Eighth Amendment to the U.S. Constitution requires the ALJ to consider whether the gravity of the offense is proportional to the severity of the penalty, whether the fine is harsher than fines for comparable offenses in this or other jurisdictions and the ability of the offender to pay the fines. The proportionality analysis applies to the fine for each offense rather than the total of fines for all offenses. *Conger v. Johnson Controls Inc.*, W.C. 4-981-806 (July 1, 2019).

As found above, the harm resulting from the late filing of the FAL was slightly greater than *de minimus*. Respondents took measures to mitigate the late filing of the FAL by promptly issuing a lump sum payment without discount of all PPD admitted. The mitigation is partial, as Claimant would have been entitled to the same lump sum upon request pursuant to Rule 5-10, W.C.R.P., and § 8-43-203(2)(b)(II).

As found above, the harm Claimant sustained as a result of Respondents' late filing of the FAL consisted of a delay in receipt of PPD benefits and a delay in resolution of the hearing issues. The former was somewhat mitigated by Respondents' voluntary payment of a lump sum PPD award without discount. The latter was of little harm, as evidenced by Claimant's own lack of urgency in seeking to challenge the FAL.

As for reprehensibility, as found above, Respondents' violation is the result of negligence. Nevertheless, the degree of culpability increased with each successive notice Respondents received that their FAL was untimely. Therefore, the Court concludes that daily penalties should be imposed proportional to the unreasonableness of Respondents' failure to file the FAL during each period during which Respondents had additional notice. Penalties should be imposed as follows:

- From September 27 through October 4, 2022, daily penalties of $8 per day;
- From October 5 through October 10, 2022, daily penalties of $10 per day;
- From October 11 through October 19, 2022, daily penalties of $15 per day; and
- From October 20 through November 6, 2022, daily penalties of $20 per day.

Based on the above findings, the penalties payments should be apportioned equally between Claimant and the Colorado Uninsured Employer Fund.

Disfigurement

Section 8-42-108(1), C.R.S. permits an ALJ to award disfigurement benefits up to a maximum of $4,000 if the claimant is "seriously, permanently disfigured about the head, face or parts of the body normally exposed to public view. . . ." The ALJ may award up to $8,000 for "extensive body scars" and other conditions expressly provided for in § 8-42-108(2), C.R.S. These awards are subject to annual adjustment by the Director of the Division of Workers' Compensation pursuant to §8-42-108(3), C.R.S.

Based on Claimant's testimony and the records submitted at hearing, Claimant's injury caused a visible disfigurement to his body consisting of slight redness in the right eye and slightly more pupil dilation in the right eye than the left. Claimant has proved entitlement to a disfigurement award. As found above, and as the Court here concludes, a disfigurement award of $700.00 is most appropriate for a disfigurement that is not salient in appearance but located in the prominent location of Claimant's eye.

ORDER

It is therefore ordered that:

1. Respondents shall file an amended FAL admitting for a 24% whole-person impairment.

2. Respondents shall pay daily penalties as follow:

   a. From September 27 through October 4, 2022, daily penalties of $8 per day;
   b. From October 5 through October 10, 2022, daily penalties of $10 per day;
   c. From October 11 through October 19, 2022, daily penalties of $15 per day; and
   d. From October 20 through November 6, 2022, daily penalties of $20 per day.

   The penalties shall be paid 50% to Claimant and 50% to the Colorado Uninsured Employer Fund.

3. Respondents shall pay Claimant a disfigurement award of $700.00.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 10, 2023

Stephen J. Abbott
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-110-218-003

ISSUES

1. Whether temporary total disability (TTD) benefits Respondents paid to Claimant before Claimant reached MMI which exceed the statutory cap constitute an overpayment.

2. Whether Respondents may recover TTD benefits Claimant received in excess of the statutory cap prior to MMI, as either a credit against future benefits or in some other form.

FINDINGS OF FACT

1. On June 20, 2019, Claimant sustained an admitted injury arising out of the course of her employment with Employer. (Ex. 1). As a result of his injury, Respondents paid Claimant temporary total disability (TTD) benefits in the amount of $179,786.88 from June 21, 2019 through December 14, 2022. (Ex. 1).

2. Claimant was placed at maximum medical improvement (MMI) effective January 18, 2023, and assigned a whole-person impairment rating of 21%. (Ex. 1).

3. On February 22, 2023, Respondents filed a Final Admission of Liability (FAL) admitting for the whole person impairment of 21%, and for TTD benefits. Respondents asserted an overpayment in the amount of $88,660.04. Respondents' asserted overpayment is based on the difference between the applicable statutory cap on combined TTD and PPD benefits of $91,126,84, and the amount paid for TTD benefits (*i.e.*, $179,786.88 - $91,126.84 = $88,660.04). (Ex. 1). (For the purposes of this order the $88,660.04 in TTD benefits will be referred to as the "Excess TTD Payments").

4. On May 9, 2023, Claimant filed an Application for Hearing challenging the asserted overpayment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of

the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overpayment

Ripeness

At hearing, the parties agreed the issue of whether the Excess TTD Payments constituted an overpayment was appropriate for determination. In position statements, Respondents now contend otherwise. An issue is "ripe" when it is real, immediate, and fit for adjudication. *Olivas-Soto v. Indus. Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006). An issue is "fit for adjudication" where the issue is disputed and there is no legal impediment to immediate adjudication. *Meacham v. American Blue Ribbon Holdings*, W.C. No. 4-885-416-02 (ICAO July 18, 2014). Where an issue is addressed in a final admission of liability, and the legal prerequisites to adjudication of the issue have been satisfied, the issue is ripe for hearing. *Chavez v. Cargill, Inc.*, W.C. No. 4-421-748 (Nov. 1, 2002).

With respect to the issue of overpayment, these criteria have been met. Respondents identified an alleged overpayment in the February 22, 2023 FAL, and calculated the alleged overpayment based on the TTD benefits paid. The legal prerequisites to determination also have been satisfied. Specifically, Claimant's right to TTD benefits ended pursuant to § 8-42-105 (3)(a), C.R.S., when Claimant reached MMI on January 18, 2023. Respondents filed an FAL, and Claimant did not challenge the FAL with respect to MMI or permanent impairment. That Respondent has not yet sought repayment of the alleged overpayment "[does] not render the issue premature for resolution at a hearing or otherwise not ripe." *Tully v. Southwest Health Systems, Inc.*, W.C. No. 5-062-753-001 (ICAO Feb. 9, 2021). The ALJ finds the issue of whether the Excess TTD Payments constitute an overpayment to be a real, immediate dispute, that is fit for adjudication.

Classification of Excess TTD Payments

Respondents contend the Excess TTD Payments constitute either an "overpayment," or a "credit." The Act defines an "overpayment" as:

> "[M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce death or disability benefits payable under said articles."

§ 8-40-201 (15.5), C.R.S. (2020).[1] Section 8-42-113.5 (1)(c), C.R.S., authorizes insurers to seek an order for repayment of overpayments, and ALJs are authorized to conduct hearings to require such repayments. § 8-43-207(1)(q), C.R.S. Respondents bear the burden of proof to establish by a preponderance of the evidence that a claimant received an overpayment, and that respondents are entitled to repayment or recovery. *City & Cty. of Denver v. Indus. Claim Appeals Off.*, 58 P.3d 1162, 1164-1165 (Colo. App. 2002). Respondents may also retroactively recover an overpayment of benefits. *In re Wheeler*, W.C. No. 4-995-488-004 (ICAO Apr. 23, 2019); *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

The present scenario was addressed in *United Airlines v. Indus. Claim Appeals Office*, 312 P.3d 235 (Colo. App. 2013), where the issue was whether TTD benefits a claimant received in excess of the statutory cap in § 8-42-107.5, C.R.S., constituted an overpayment subject to recovery by respondents. The claimant received TTD benefits before any condition for termination of TTD benefits under § 8-42-105 (3), C.R.S., had been satisfied. The Court held these were benefits to which the claimant was entitled, and did not constitute an "overpayment." The Court further held that the statutory cap applies to "combined" temporary and permanent disability benefits, and is not applicable where a claimant receives only temporary benefits to which they are entitled. Because the claimant's TTD benefits exceeded the cap before an award of permanent benefits was made, claimant never received combined permanent and temporary benefits. Thus, the statutory cap is not applicable to TTD benefits properly paid, even if they exceed the cap. The Court of Appeals further held that the respondents were not entitled to recovery of TTD benefits that exceeded the statutory cap.

The present case is not factually distinguishable from *United Airlines*. The Excess TTD Payments Claimant received were to compensate him for lost wages before any of the conditions for termination of TTD benefits under § 8-42-105 (3), C.R.S. occurred. Thus, the Excess TTD Payments were benefits to which Claimant was entitled and did not constitute an "overpayment" as that term was defined prior to January 1, 2022. Because the Excess TTD Payments are not an "overpayment," Respondents are not entitled to repayment or recovery of those benefits.

Respondents contention that the Excess TTD Payments may be defined as a "credit," rather than an "overpayment," is without basis. While the Act defines "overpayment," it contains no provision classifying any payments as a "credit." Instead, in appropriate circumstances, respondents may be permitted to "offset" or "credit" overpayments against other benefits. In other words, a "credit" or "offset" is a vehicle for the recovery of an "overpayment," but is not a separate entity itself.

[1] Section 8-40-201 (15.5), C.R.S., amended the definition of "overpayment" effective January 1, 2022. However, the statute does not apply to injuries or causes of action occurring before January 1, 2022, and this is not applicable to Claimant's claim. *See Barnes v. City and Cty. of Denver, W.C*. No. 5-063-493 (ICAO Mar. 27, 2023)

Application of Excess TTD Payments To Future Benefits.

Ripeness

The second issue relates to the application of the Excess TTD Payments toward potential future indemnity benefits. Respondents contend even if the Excess TTD Payments are not an "overpayment," they are entitled to apply the Excess TTD Payments toward future indemnity benefits should they be owed, and that the Excess TTD Payments should not be "expunged." Although the parties agreed this issue should be determined, the ALJ finds the issue to be a hypothetical question not appropriate for adjudication at this time.

As noted above, an issue is ripe when the dispute is real, immediate and there are no legal impediments to adjudication. *Olivas-Soto, supra; Meacham, supra.* "[A]djudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which may never occur." *Tully, supra*. "No court can appropriately adjudicate a matter … 'in the absence of a showing that a judgment, if entered, would afford [the parties] present relief.'" *Cacioppo v. Eagle Cty. School Dist.*, 92 P.3d 453 (Colo. 2004) *citing Farmers Ins. Exch. v. Dist. Court*, 62 P.2d 944, 947 (Colo. 1993). "Above all, there must be a present and actual legal controversy and 'not a mere possibility of a future legal dispute over some issue.'" *Id*.

Respondents raise several hypothetical scenarios in which the Excess TTD Payments could potentially be applied as a credit or offset against future benefits, but do not establish more than a possibility of future disputes based on currently-non-existent facts. These scenarios include Claimant reopening his claim and receiving new permanent impairment rating greater than 25%; Claimant's condition worsening to the point he is no longer at MMI, and becoming entitled to additional TTD benefits; or scenarios which could result in duplicate benefits. Respondents argue if these scenarios were to occur, future indemnity benefits, if any, should be reduced by the Excess TTD Payments. No evidence was presented, however, that any of these potential scenarios has occurred, or that a real, present controversy exists.

The ALJ concludes that determination of the issue Respondents' ability to recover, offset, or credit the Excess TTD Benefits against some as-yet-determined future indemnity benefits involves uncertain, contingent future matters which may never occur. Accordingly, the issue is not a real or immediate dispute, and is not fit for adjudication at this time.

ORDER

It is therefore ordered that:

1. The Excess TTD Payments Claimant received do not constitute an "overpayment" under the Workers Compensation Act.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-231-678-001

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the left shoulder surgery requested by Authorized Treating Physician (ATP) Nathan Faulkner M.D. is reasonable, necessary and causally related to his January 5, 2023 industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Field Technician. His job duties involved assisting with and repairing cabinet installations. While exiting his car at a jobsite on January 5, 2023 Claimant suffered admitted industrial injuries during the course and scope of his employment. He specifically slipped on ice and fell on his left side.

2. Claimant initially received medical treatment for his January 5, 2023 injuries from Authorized Treating Provider (ATP) Concentra Medical Centers on January 6, 2023. He reported to Barry Nelson, D.O. that he had slipped on ice and fallen on his left side. Claimant specifically landed on his left shoulder and elbow. He also twisted his left ankle. Claimant noted that he was scheduled to undergo total reverse left shoulder surgery on January 17, 2023 through private medical provider Kaiser Permanente. Dr. Nelson diagnosed Claimant with a left ankle sprain as well as contusions of the left shoulder and elbow.

3. Claimant testified that he had been receiving treatment for his left shoulder from Kaiser prior to January 5, 2023. Notably, medical records reveal Claimant had a pre-existing history of left shoulder problems. On September 10, 2018 Claimant visited Kaiser and presented with continued left shoulder pain and difficulties with movement for just over one week. Claimant reported he initially injured his left shoulder when he fell while hunting approximately two weeks earlier.

4. On September 20, 2022 Claimant visited Seth R. Olson, D.O. at Kaiser. Claimant reported his chief concern was left shoulder pain. He commented that left shoulder pain had been a chronic issue but worsened over the past few days. Claimant specified he has suffered pain in his left arm for three years and reported that "lately arm feels weak" and he kept dropping things. Claimant explicitly denied any recent left shoulder injuries, but noted that it hurt to merely lift his arm a quarter of the way up and move his steering wheel when driving. He acknowledged that left shoulder surgery had previously been recommended, but he never underwent the procedure. Dr. Olson assessed acute and chronic left shoulder pain and recommended an MRI.

5. Claimant testified that on September 28, 2022 he suffered an injury to his left shoulder while working on a drawer at a private residence for Employer. While adjusting the front face of the drawer by pushing it from the bottom with his hands, he felt increased left shoulder pain. Claimant visited David J. Mackey, PA at Kaiser Urgent Care for treatment. PA Mackey noted a recent September 23, 2022 MRI revealed a massive left shoulder rotator cuff tear. Claimant exhibited debilitating pain and was unable to move his left arm. PA Mackey

remarked that Claimant had "extremely limited range of motion." He determined that, based on the mechanism of injury, he did not "suspect any new severe pathology except for possibly new rotator aspect." PA Mackey placed an urgent referral for an orthopedic consultation.

6. On September 30, 2022 Claimant again visited Kaiser and received treatment from Andrew J. Morris, M.D. Dr. Morris remarked that Claimant had a well-established chronic history of a left massive rotator cuff tear. However, Claimant reported he re-injured his left shoulder at work and was unable to use his arm because of pain. Dr. Morris commented that Claimant had suffered pain in his left shoulder that worsened with overhead activities for many years. He recommended a reverse total shoulder arthroplasty once Claimant quit smoking.

7. Employer's Field Manager [Redacted, hereinafter JJ] testified at the hearing in this matter. He explained that Claimant never reported a work-related incident on September 28, 2022 as reflected in a text message he received from Claimant. Instead, Claimant advised JJ[Redacted] that he was experiencing a re-aggravation of a previous injury. The September 28, 2022 text message only specified that Claimant "had some lifting restrictions until I meet with orthopedic surgeon." Employer thus did not complete an Accident/Injury Incident Report.

8. On January 19, 2023 Claimant returned to Kaiser and visited Dr. Morris for an examination. Claimant reported left shoulder pain that had been occurring "for many years" and worsened with overhead activities. Dr. Morris discussed surgical options including a reverse total shoulder arthroplasty because Claimant had not smoked for three months.

9. On February 21, 2023 Claimant returned to Concentra and visited Dr. Nelson for an evaluation. Dr. Nelson recorded that Claimant's left shoulder symptoms were the result of an "old work comp injury from August" where Claimant sustained a rotator cuff tear. He remarked that Claimant had "plans for a reverse total shoulder" based on the recommendations of his Kaiser physicians. Dr. Nelson referred Claimant for an orthopedic evaluation with Nathan Faulkner, M.D. at Orthopedic Centers of Colorado.

10. On March 15, 2023 Claimant visited Dr. Faulkner for an examination. Claimant reported that he initially injured his left shoulder "in August when he was hitting a drawer up while installing a cabinet and developed immediate left shoulder pain." Dr. Faulkner summarized that Claimant had suffered two separate injuries to his shoulder that occurred at work. In addition to the August, 2022 injury Claimant again injured his left shoulder in January, 2023 when he slipped on ice and fell.

11. On March 20, 2023 Claimant underwent an MRI of his left shoulder. The MRI revealed a "massive full-thickness rotator cuff tear." Therefore, on March 24, 2023 Dr. Faulkner sought authorization for a reverse total shoulder arthroplasty. Dr. Faulkner mentioned Claimant's intermittent pain prior to the work injury but explained that he now experienced significant weakness and limited range of motion.

12. On May 3, 2023 Claimant underwent an Independent Medical Examination (IME) with William Ciccone II, M.D. Dr. Ciccone reviewed Claimant's medical records and performed a physical examination. He recounted that Claimant had reported a work injury to his left shoulder in September 2022 when he pushed up on a drawer that weighed about seven

pounds. Claimant stated that he again injured his left shoulder at work on January 5, 2023 when he slipped on ice and landed on his left side. Dr. Ciccone concluded that Claimant's need for a reverse left shoulder arthroplasty was not causally related to either of the preceding work events.

13. Initially, Dr. Ciccone explained that the minor event of simply pushing up on a drawer in September 2022 was unlikely to cause any significant injury to Claimant's shoulder. Moreover, a left shoulder MRI from September 23, 2022 at Kaiser had revealed a massive chronic retracted rotator cuff tear. Kaiser discussed the possibility of a shoulder replacement if Claimant ceased smoking.

14. Dr. Ciccone also determined that the January 5, 2023 slip and fall at work did not aggravate Claimant's pre-existing rotator cuff tear. Notably, Dr. Ciccone compared Claimant's left shoulder MRI from September 23, 2022 with the more recent left shoulder MRI from March 20, 2023. The imaging did not reveal any differences. Both scans reflected a "massive, retracted rotator cuff tear with atrophy." Dr. Ciccone remarked that there have been no differences in the suggested treatment for Claimant's shoulder following his work accident. He emphasized that Claimant has chronic, pre-existing cuff tear arthropathy in the shoulder that was not changed by the fall on January 5, 2023. Dr. Ciccone thus concluded that the reverse shoulder replacement surgery requested by Dr. Faulkner is not causally related to Claimant's work activities. Claimant's need for shoulder surgery preceded any work events.

15. On June 13, 2023 Claimant underwent an IME with Sander Orent, M.D. Dr. Orent reasoned that Claimant's "initial shoulder injury was work related and should have been managed inside the Workers' Compensation system." He remarked that Claimant exacerbated his left shoulder when he slipped and fell on ice on January 5, 2023. Although Dr. Orent recognized that Claimant had planned left shoulder surgery before the fall, the event exacerbated his symptomology. He concluded that Claimant's request for a left shoulder reverse arthroplasty should be covered under Workers' Compensation.

16. On August 23, 2023 the parties conducted the post-hearing evidentiary deposition of Dr. Ciccone. Dr. Ciccone maintained that Claimant's request for reverse left shoulder arthroplasty is not causally related to either the September 28, 2022 or January 5, 2023 work events. He reiterated that both the September 23, 2022 and March 20, 2023 left shoulder MRIs revealed that Claimant had a "massive rotator cuff tear" that was chronic in nature. Notably, the September 28, 2022 work incident in which Claimant was pushing a seven-pound drawer would not have changed his left shoulder condition. Claimant was not trying to reach or lift the drawer. Dr. Ciccone reasoned that the mechanism was unlikely to cause a significant shoulder injury. Furthermore, Claimant's January 5, 2023 slip and fall did not cause the need for a reverse left shoulder arthroplasty. Instead, the necessity of a left shoulder arthroplasty was the pain and dysfunction from a chronic rotator cuff tear that existed prior to the January 5, 2023 accident. Furthermore, the fall on January 5, 2023 did not aggravate Claimant's pre-existing rotator cuff tear arthropathy because the MRIs from September of 2022 and March of 2023 both revealed chronic, complete, full thickness rotator cuff tears. Accordingly, Claimant's request for left rotator cuff surgery was not causally related to an industrial event.

17. Claimant has failed to demonstrate it is more probably true than not that the left shoulder surgery requested by ATP Dr. Faulkner is reasonable, necessary and causally related to his January 5, 2023 industrial injury. Initially, Claimant explained that he slipped on ice, landed on his left side and injured his shoulder while at a jobsite on January 5, 2023. However, the record is replete with evidence that Claimant had significant left shoulder symptoms prior to his accident at work. On September 20, 2022 Claimant visited Dr. Olson at private medical provider Kaiser and reported that he had suffered chronic left shoulder pain that had worsened over the past few days. Claimant specified he had experienced pain in his left arm for three years and reported that "lately arm feels weak" and he kept dropping things. He acknowledged that left shoulder surgery had previously been recommended, but he never underwent the procedure.

18. Claimant testified that on September 28, 2022 he suffered an injury to his left shoulder while repairing a drawer at a private residence for Employer. He visited Kaiser Urgent Care for treatment. PA Mackey noted a September 23, 2022 MRI had revealed a massive left shoulder rotator cuff tear. On September 30, 2022 Claimant again visited Kaiser and Dr. Morris remarked that he had a well-established chronic history of a left massive rotator cuff tear. The preceding Kaiser records reveal that Claimant had chronic, long-standing left shoulder problems, including a massive rotator cuff tear, that warranted surgery even before any alleged industrial injuries.

19. After Claimant's January 5, 2023 work accident in which he slipped and fell on ice, he obtained medical treatment from ATP Concentra. On January 6, 2023 he reported to Dr. Nelson that he was already scheduled to undergo total reverse left shoulder surgery on January 17, 2023 through Kaiser. On a February 21, 2023 visit to Concentra, Dr. Nelson recorded that Claimant's left shoulder condition was the result of an "old work comp injury from August" where Claimant sustained a rotator cuff tear. He remarked that Claimant had "plans for a reverse total shoulder" based on the recommendations of his Kaiser physicians. On March 20, 2023 Claimant underwent an MRI of his left shoulder that revealed a "massive full-thickness rotator cuff tear." Dr. Faulkner at Concentra thus requested a reverse left shoulder arthroplasty.

20. Dr. Ciccone conducted an IME and testified through a post-hearing evidentiary deposition in this matter. He persuasively determined that Claimant's need for a reverse left shoulder arthroplasty was not causally related to either the September, 2022 or January 5, 2023 work events. Dr. Ciccone explained that the minor event of simply pushing up on a drawer in September 2022 was an unlikely mechanism to cause a significant shoulder injury. Furthermore, Claimant's January 5, 2023 slip and fall did not cause the need for a reverse left shoulder arthroplasty. Instead, the cause of Claimant's need for a left shoulder arthroplasty was the pain and dysfunction from the massive, chronic rotator cuff tear visible on the September 23, 2022 MRI at Kaiser. Furthermore, the fall on January 5, 2023 did not aggravate Claimant's pre-existing left shoulder condition because the MRIs from September of 2022 and March of 2023 both revealed chronic, complete, full thickness rotator cuff tears. Dr. Ciccone also remarked that there have been no differences in the suggested treatment for Claimant's shoulder following his work accident. He emphasized that Claimant simply has chronic, pre-existing cuff tear arthropathy in the left shoulder that was not changed by the fall on January 5, 2023. Dr. Ciccone thus persuasively concluded that Dr. Faulkner's requested reverse shoulder replacement surgery is not causally related to Claimant's work activities.

21. In contrast, Dr. Orent remarked that Claimant's September 28, 2022 left shoulder injury was related to his work activities and he exacerbated his symptoms when he fell on ice on January 5, 2023. Although Dr. Orent recognized that Claimant had planned left shoulder surgery before the fall, the event nevertheless aggravated his condition. He concluded that Claimant's request for a left shoulder reverse arthroplasty was related to his work activities and should be authorized. However, although Dr. Orent was correct that Claimant's left shoulder surgery had been planned before the January 5, 2023 fall, the records reveal that he was incorrect in assuming the initial injury was related to Claimant's employment. Extensive medical records from Kaiser clearly show that Claimant had reported left shoulder problems eight days before the September 28, 2022 alleged incident. Notably, a September 23, 2022 MRI showed a "massive rotator cuff tear'" that was the cause of Claimant's need for surgery. Therefore, based on the medical records and persuasive testimony of Dr. Ciccone, Claimant's request for left shoulder surgery is not likely causally related to his work activities for Employer. Accordingly, Claimant's request for a reverse left shoulder arthroplasty as recommended by Dr. Faulkner is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the

subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

6. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the left shoulder surgery requested by ATP Dr. Faulkner is reasonable, necessary and causally related to his January 5, 2023 industrial injury. Initially, Claimant explained that he slipped on ice, landed on his left side and injured his shoulder while at a jobsite on January 5, 2023. However, the record is replete with evidence that Claimant had significant left shoulder symptoms prior to his accident at work. On September 20, 2022 Claimant visited Dr. Olson at private medical provider Kaiser and reported that he had suffered chronic left shoulder pain that had worsened over the past few days. Claimant specified he had experienced pain in his left arm for three years and reported that "lately arm feels weak" and he kept dropping things. He acknowledged that left shoulder surgery had previously been recommended, but he never underwent the procedure.

7. As found, Claimant testified that on September 28, 2022 he suffered an injury to his left shoulder while repairing a drawer at a private residence for Employer. He visited Kaiser Urgent Care for treatment. PA Mackey noted a September 23, 2022 MRI had revealed a massive left shoulder rotator cuff tear. On September 30, 2022 Claimant again visited Kaiser and Dr. Morris remarked that he had a well-established chronic history of a left massive rotator cuff tear. The preceding Kaiser records reveal that Claimant had chronic, long-standing left shoulder problems, including a massive rotator cuff tear, that warranted surgery even before any alleged industrial injuries.

8. As found, after Claimant's January 5, 2023 work accident in which he slipped and fell on ice, he obtained medical treatment from ATP Concentra. On January 6, 2023 he reported to Dr. Nelson that he was already scheduled to undergo total reverse left shoulder surgery on January 17, 2023 through Kaiser. On a February 21, 2023 visit to Concentra, Dr. Nelson recorded that Claimant's left shoulder condition was the result of an "old work comp injury from August" where Claimant sustained a rotator cuff tear. He remarked that Claimant had "plans for a reverse total shoulder" based on the recommendations of his Kaiser physicians. On March 20, 2023 Claimant underwent an MRI of his left shoulder that revealed a "massive full-thickness rotator cuff tear." Dr. Faulkner at Concentra thus requested a reverse left shoulder arthroplasty.

9. As found, Dr. Ciccone conducted an IME and testified through a post-hearing evidentiary deposition in this matter. He persuasively determined that Claimant's need for a

reverse left shoulder arthroplasty was not causally related to either the September, 2022 or January 5, 2023 work events. Dr. Ciccone explained that the minor event of simply pushing up on a drawer in September 2022 was an unlikely mechanism to cause a significant shoulder injury. Furthermore, Claimant's January 5, 2023 slip and fall did not cause the need for a reverse left shoulder arthroplasty. Instead, the cause of Claimant's need for a left shoulder arthroplasty was the pain and dysfunction from the massive, chronic rotator cuff tear visible on the September 23, 2022 MRI at Kaiser. Furthermore, the fall on January 5, 2023 did not aggravate Claimant's pre-existing left shoulder condition because the MRIs from September of 2022 and March of 2023 both revealed chronic, complete, full thickness rotator cuff tears. Dr. Ciccone also remarked that there have been no differences in the suggested treatment for Claimant's shoulder following his work accident. He emphasized that Claimant simply has chronic, pre-existing cuff tear arthropathy in the left shoulder that was not changed by the fall on January 5, 2023. Dr. Ciccone thus persuasively concluded that Dr. Faulkner's requested reverse shoulder replacement surgery is not causally related to Claimant's work activities.

10. As found, in contrast, Dr. Orent remarked that Claimant's September 28, 2022 left shoulder injury was related to his work activities and he exacerbated his symptoms when he fell on ice on January 5, 2023. Although Dr. Orent recognized that Claimant had planned left shoulder surgery before the fall, the event nevertheless aggravated his condition. He concluded that Claimant's request for a left shoulder reverse arthroplasty was related to his work activities and should be authorized. However, although Dr. Orent was correct that Claimant's left shoulder surgery had been planned before the January 5, 2023 fall, the records reveal that he was incorrect in assuming the initial injury was related to Claimant's employment. Extensive medical records from Kaiser clearly show that Claimant had reported left shoulder problems eight days before the September 28, 2022 alleged incident. Notably, a September 23, 2022 MRI showed a "massive rotator cuff tear'" that was the cause of Claimant's need for surgery. Therefore, based on the medical records and persuasive testimony of Dr. Ciccone, Claimant's request for left shoulder surgery is not likely causally related to his work activities for Employer. Accordingly, Claimant's request for a reverse left shoulder arthroplasty as recommended by Dr. Faulkner is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a reverse left shoulder arthroplasty as recommended by Dr. Faulkner is denied and dismissed.

2. Any issues not resolved in this order are resolved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that trigger point injections are reasonable, necessary, and related to her admitted industrial injury.

2. Whether Claimant proved by a preponderance of the evidence that prescriptions for Oxycodone and Tizanidine are reasonable, necessary, and related to her admitted industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant worked in Employer's warehouse. On October 28, 2021, Claimant sustained admitted injuries to the right side of her neck and right shoulder while cleaning a machine with her right arm overhead.

2. Claimant first saw her authorized treating physician (ATP) Annu Ramaswamy, M.D., on November 11, 2021. Claimant reported pain in her right shoulder and neck that had not resolved. Based on his examination and history, Dr. Ramaswamy diagnosed Claimant with shoulder impingement and secondary myofascial pain in the neck and rhomboid regions. Dr. Ramaswamy referred Claimant for physical therapy and massage therapy. He also noted that if Claimant did not improve in time, he would perform trigger point injections. (Ex. 4, pp. 9-11).

3. At Claimant's November 17, 2021 appointment, Dr. Ramaswamy noted on the exam that Claimant had moderate trigger point activity involving the right trapezius and levator musculature with tenderness. He gave Claimant trigger point injections in the right trapezius/levator, and noted that a twitch response was obtained. (Ex. 4 p. 14).

4. On November 30, 2021, Dr. Ramaswamy examined and treated Claimant. He noted mild to moderate trigger point activity involving the right trapezius and levator musculature with tenderness. Claimant received three trigger point injections (one to the right praspinous region and two to the right trapezius and levator regions). Dr. Ramaswamy noted that a local twitch response was obtained. Claimant reported some relief from the trigger point injections. (Ex. 4 p. 21).

5. Claimant saw Dr. Ramaswamy for a follow up appointment on December 21, 2021. Dr. Ramaswamy found that Claimant had very localized trigger point activity in the right trapezius/levator musculature with tenderness. Claimant reported that the trigger point injections "helped quite a bit." (Ex. 4 p. 25).

6. Dr. Ramaswamy referred Claimant to Levi Miller, M.D., of Colorado Rehabilitation & Occupational Medicine. Claimant saw Dr. Miller on January 28, 2022, and reported the nature of her injury and detailed her persistent right shoulder pain, popping, and clicking. Claimant reported increased symptoms with reaching and overhead activities. She reported pain with cervical range of motion and some radiating pain into her arms. Claimant also reported some left shoulder pain and other issues from overcompensating on her right shoulder. On physical exam, Dr. Miller noted decreased cervical range of motion, tenderness in her bilateral mid and lower paraspinals, trapezius, and levator scapula. Dr. Miller diagnosed Claimant with a right shoulder sprain and cervical sprain. He recommended an EMG, chiropractic care, and medications. Dr. Miller also discussed possible shoulder injections. (Ex. 5, pp. 110-113).

7. On February 10, 2022, Claimant treated with Dr. Ramaswamy and upon examination, he recorded that significant trigger point activity was present involving the trapezius and levator musculature with tenderness. The following day, February 11, 2022, Claimant saw Dr. Ramaswamy for trigger point injections. She had trigger point injections in her left trapezius/levator, and a local twitch response was obtained. Claimant gained range of motion following the injections. (Ex. 4, pp. 32-37).

8. On February 26, 2022, Respondents filed a General Admission of Liability, and Claimant started receiving temporary total disability benefits on February 14, 2022. (Ex. 1).

9. Claimant continued to be treated by Dr. Ramaswamy. On March 1, 2022, he noted Claimant had moderate trigger point activity involving the right trapezius and levator musculature with tenderness. On April 12, 2022, Claimant also presented with moderate trigger point activity involving the right trapezius and levator musculature with tenderness, and mild trigger point activity involving the left trapezius/levator complex. Dr. Ramaswamy performed trigger point injections to both the trapezius and levator regions. (Ex. 4 pp. 39-49).

10. On June 9, 2022, Claimant told Dr. Ramaswamy that the trigger point injections helped quite a bit, even if the relief was temporary. On exam, Claimant had moderate trigger point activity involving the right trapezius and levator musculature with tenderness. Dr. Ramaswamy recommended trigger point injections every three weeks. He noted the trigger point injections and chiropractic dry needling were treating the secondary issues to maintain the patient. (Ex. 4, pp. 57-58).

11. Claimant returned to Dr. Ramaswamy on June 14, 2022, for treatment. According to the medical record, he noted moderate trigger point activity involving the right trapezius and levator musculature and mild trigger point activity involving the left trapezius and levator musculature. He administered trigger point injections in the left and right trapezius/levator junctions. Dr. Ramaswamy noted Claimant would undergo chiropractic care and trigger point injections every two weeks. (Ex. 4, pp. 60-62).

12. At her June 29, 2022 appointment with Dr. Ramaswamy, Claimant reported that the trigger point injections helped her for about four to five days, but this was the only

thing giving her relief. On examination, Dr. Ramaswamy noted moderate trigger point activity involving the right trapezius and levator musculature with tenderness and mild trigger point activity involving the left trapezius and levator musculature. Dr. Ramaswamy performed trigger point injections, and a twitch response was noted 50% of the time. (Ex. 4 pp. 64-65).

13. On July 14, 2022, Dr. Ramaswamy performed trigger point injections on Claimant. She again noted that the injections gave her temporary relief of four to five days. (Ex. 4, p. 69). At Claimant's August 11, 2022 appointment, Dr. Ramaswamy noted on examination that Claimant had moderate trigger point activity involving the bilateral trapezius and levator regions. He administered three trigger point injections. (Ex. 4 p. 75).

14. Dr. Ramaswamy treated Claimant on August 25, 2023. On examination he noted moderate trigger point activity involving the left trapezius and levator musculature, and mild trigger activity on the right side. He administered trigger point injections. He noted twitch responses on the left side, but not on the right side. (Ex. 4, p 78). On September 8, 2022, Dr. Ramaswamy noted Claimant had trigger point activity in both the trapezius and levator regions, much more on the right side. He gave Claimant two trigger point injections. (Ex. 4, p. 81).

15. At Claimant's October 10, 2022 appointment, on examination, Claimant had moderate trigger point activity involving her right trapezius and levator musculature, and mild trigger point activity on the left side. Claimant underwent trigger point injections and twitch responses were noted on the right side. (Ex. 4, p. 88).

16. Dr. Ramaswamy treated Claimant on November 7, 2022. On examination he noted Claimant presented with moderate trigger point activity in the right trapezius, levator regions and the right parascapular region. He added steroid to the trigger point injection mixture in an effort to obtain a more long-lasting response. Dr. Ramaswamy also discussed Claimant's use of Percocet. He reviewed the PDMP and there were no issues, but his plan was to conduct a urine drug screen at the next visit, and have Claimant sign another narcotic contract. (Ex. 4, p. 95).

17. A hearing was held on November 18, 2022 because Claimant was seeking authorization for cervical medial branch blocks as recommended by her ATPs. On January 9, 2023, ALJ Kabler granted Claimant's request for authorization of cervical medial branch blocks. (Ex. 11).

18. At Claimant's November 21, 2022 follow-up appointment with Dr. Ramaswamy, Claimant expressed her frustration that she continued to suffer from chronic pain. Claimant stated that the last trigger point injections were quite helpful, and she wanted another steroid trigger point injection. On examination, Claimant had moderate trigger point activity involving the right trapezius/levator region, and mild trigger point activity involving the right rhomboid region. (Ex. 4, p. 99).

19. Dr. Ramaswamy had previously referred Claimant to Michael Hewitt, M.D. at Orthopedic Centers of Colorado, and Dr. Hewitt recommended proceeding with non-surgical management, including a PRP injection. On January 11, 2023, Claimant treated with Dr. Hewitt, who performed a PRP injection. (Ex. 6).

20. Claimant had a telemedicine appointment with Dr. Ramaswamy on February 1, 2023. He noted her PRP injections with Dr. Hewitt three weeks prior, and stated he would contact Dr. Miller's office to get the medial branch blocks scheduled. (Ex. 4., p. 105).

21. On February 23, 2023, Claimant had another telemedicine appointment with Dr. Ramaswamy. Claimant told him she noticed improvement following the PRP injection and had a diagnostic response to the C4-C6 medial branch blocks. Dr. Ramaswamy refilled her prescriptions for Percocet and Tizanidine. He noted Claimant took the Percocet very rarely. Dr. Ramaswamy also noted his clinic was closing as of March 5, 2023. (Ex. 4, pp. 107-109).

22. On February 24, 2023, Claimant presented to Dr. Miller. He discussed with Claimant her diagnostic response to the medial branch blocks and requested a follow-up visit to perform trigger point injections. Dr. Miller specifically noted that according to Claimant, Dr. Ramaswamy requested the trigger point injections be performed through his clinic. (Ex. 5, p. 130). The ALJ infers that Dr. Ramaswamy made this request because his clinic was closing.

23. On March 13, 2023, William Barreto, M.D. completed a peer review report regarding Dr. Miller's request for additional trigger point injections. Dr. Barreto opined that the trigger point injections were not medically necessary because there was "no documentation of well circumscribed trigger points demonstrating a local twitch response to support this treatment." He also stated it was unclear how the injections improved Claimant's condition. Dr. Barreto reviewed limited medical records from Claimant's ATP, Dr. Ramaswamy. He reviewed the records from her appointments on February 1, 2023 and February 23, 2023. Both of these appointments were virtual, so Dr. Ramaswamy did not administer trigger point injections, and his examination was limited. Dr. Baretto also reviewed records from Claimant's January 11, 2023 appointment with Dr. Hewitt and her February 24, 2023 appointment with Dr. Miller. But neither of these appointments involved the administration of trigger point injections, or an examination related to trigger point injections. (Ex. V).

24. Dr. Barreto's opinion is neither credible, nor persuasive. Dr. Barreto did not examine Claimant, nor did he review the medical records from the multiple visits, between November 17, 2021 and November 21, 2022, where Dr. Ramaswamy administered trigger point injections, and recorded his examination of Claimant prior to the injections and any twitch response from the injection.

25. Claimant credibly testified she has been experiencing knots in her trapezius area and muscle spasms. Previous trigger point injections have provided her pain relief and increased mobility in her neck. She credibly testified that the reduction in pain and

increase in mobility following a trigger point injection allows her to better perform other recommended treatment. (Tr. 12:20-13:11, 15:18-16:10, and 26:4-7).

26. Claimant's testimony and her medical records demonstrate the trigger point injections provide Claimant with pain/symptom relief and increased range of motion and increased function. Based on the totality of the evidence, the ALJ finds that the requested trigger point injections recommended by Dr. Ramaswamy and Dr. Miller are reasonable, necessary, and related to Claimant's admitted industrial injury.

27. Dr. Ramaswamy prescribed Percocet for Claimant to take as needed when her pain was intolerable. He first prescribed the opioids on November 11, 2021. (Ex. 4, p. 11). Claimant periodically received refills of the Percocet while being treated by Dr. Ramaswamy. As found, Dr. Ramaswamy checked the PDMP and instituted other safeguards to ensure Claimant was not abusing the opioid. Claimant refilled the prescription only sparingly. Claimant credibly testified she only takes the medication as needed. (Tr. 18:3-20:10). Claimant takes the Tizanidine at night so she can sleep. Claimant testified the Tizanidine controls her pain and muscle spasms. (Tr. 20:15-21:16).

28. On March 3, 2023, Respondents denied the Percocet prescription based on a utilization review report from Eddie Sassoon, M.D. Dr. Sassoon recommended denying the prescription for a lack of documentation of the opioid's efficacy at decreasing Claimant's pain and improving function. (Ex. U). The ALJ does not find this opinion to be persuasive.

29. Respondents argue in their position statement that Claimant takes the Tizanidine daily and "muscle relaxers have a potential for addiction and prolonged use can lead to a physical dependence." There is no objective evidence in the record as to why Respondents denied the Tizanidine.

30. Based on the totality of the evidence, the ALJ finds the prescriptions of both Percocet and Tizanidine are reasonable and necessary to help cure and relieve Claimant from the effects of her industrial injury.

31. The ALJ finds Claimant proved by a preponderance of the evidence that the trigger point injections and Percocet and Tizanidine prescriptions are reasonable, necessary, and related to her admitted industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find

that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MEDICAL BENEFITS

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 293, 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 474 P.2d 622 (1970). As found, Claimant proved by a preponderance of the evidence that the trigger point injections and Percocet and Tizanidine prescriptions recommended by Drs. Miller and Ramaswamy are reasonable, necessary, and related to her admitted industrial injury.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of the evidence that the trigger point injections recommended by her ATP are reasonable, necessary and related to her admitted industrial injury. Respondents shall pay for the injections subject to the Division of Workers' Compensation Medical Fee Schedule.

2. Claimant proved by a preponderance of the evidence that the prescriptions for Percocet and Tizanidine, recommended by her ATP are reasonable, necessary and related to her admitted industrial injury. Respondents shall pay for the prescriptions subject to the Division of Workers' Compensation Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 11, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

The issues determined by this decision are:

I. Whether Respondents established, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment thereby precluding his entitlement to TTD pursuant to C.R.S. §§ 8-42-103 (1) (g) and 8-42-105 (4) (a).

II. If Respondents failed to demonstrate that Claimant was responsible for his resulting wage loss, whether Claimant established, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits commencing April 16, 2023 and ongoing.[1]

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

General Findings

1. Claimant was working as a mason for Respondent-Employer when he suffered admitted burn injuries to his face, left upper extremity, chest and abdomen on November 14, 2022. On the day of his injury, Claimant and a co-worker were using a demolition saw to cut rebar. The co-worker had filled the saw with gas but unbeknownst to Claimant, had not tightened the gas cap sufficiently causing gas to slosh out of the tank while Claimant was operating the saw. The spilled gasoline ignited, burning Claimant's abdomen/chest[2], left hand/forearm and face. Claimant was taken to the hospital and subsequently transported by ambulance to the UC Health Burn Clinic where he was hospitalized for 17 days. While in the burn unit, Claimant underwent extensive grafting from donor skin harvested from his right thigh. (Exhibit 2, Page 25; Exhibit 4, page. 40).

2. Claimant was unable to work and was paid Temporary Total Disability (TTD) benefits from November 15, 2022 through February 9, 2023, as he recovered from his injuries. (Exhibit F, page 26). However, on February 2, 2023, senior claims representative, [Redacted, hereinafter LP], sent correspondence to Dr. Annu Ramaswamy, Claimant's authorized treating provider, outlining a modified job offer Respondents intended to extend to Claimant in order to return him to work within his physical restrictions. The offer acknowledged that Claimant was under restrictions of no

[1] Although Claimant also sought to litigate his entitlement to Temporary Partial Disability (TPD), the ALJ sustained Respondents objection to hearing this issue as it was not endorsed for hearing.
[2] Claimant's Hearing Testimony, Tr2, page 8, ll. 19-23.

lifting more than 20 pounds, no use of the left hand and limits on carrying, pushing, pulling and climbing ladders. (Exhibit 2, page 28; Exhibit I, page 32).

3. Dr. Ramaswamy approved the modified job offer and Claimant returned to modified duty, in a supervisory capacity at full wages with Employer on February 10, 2023. (Exhibit 2, page 28; Exhibit F, page 26; Claimant's Hearing Testimony, Tr2, page 15, ll. 20-24). At the time, Respondent-Employer was the masonry subcontractor to [Redacted, hereinafter EC]., a general contractor assigned to build a [Redacted, hereinafter DT] location in Peyton, Colorado. (Testimony of [Redacted, hereinafter MS], Tr2, page 22, ll. 4-25).

4. Prior to his return to work on February 10, 2023, Claimant and all other employees of [Redacted, hereinafter MC] signed and acknowledged receipt of Employer's Employee Handbook on February 8, 2023. (Exhibit A, page 19; Claimant's Hearing Testimony, Tr2, page 13, ll. 2-13; Testimony of EA[Redacted], Tr2, page 47, ll. 12-21). Included in the Acknowledgement of Receipt that Claimant signed on February 8, 2023 were the statements: "I understand that I am responsible for familiarizing myself with the policies in this handbook and agree to comply with all rules applicable to me" and "I have received the Company Employee Handbook. I have read (or will read) and agree to abide by the policies and procedures contained in the Employee Handbook." (See Exhibit A, page 19).

5. Claimant testified that his proficiency with English is limited and that the handbook was written in English. Nonetheless, he testified that he tried to read the handbook on his own. (Claimant's Hearing Testimony, Tr2, page 15, ll. 12-19). Regardless, of his English capabilities, Claimant never requested a copy of the handbook in Spanish, nor did he ever indicate that he was unable to understand its contents prior to or following his signing the acknowledgement form. Tr2 at page 47, ll. 22-25; Tr2 at page 48, ll. 1-8). Moreover, Claimant testified that he understood that engaging in certain conduct, including insubordination and failure to comply with Employer's rules could result in discipline up to termination. *Id*. at page 14, ll. 22-25 through page 15, ll. 1-4.

6. The handbook Claimant received and acknowledged on February 8, 2023 contains Employer's "Drug and Alcohol Policy", which included a zero-tolerance policy for drug and alcohol use during working hours and on any sites. (Exhibit A, Section 2.11, page 8). The policy further provides that anyone caught using any substance would be automatically terminated and that Respondent-Employer had the "right to drug test anyone at any time without notice." *Id*. Finally the policy states that "[i]f a drug test is found positive to any drugs or alcohol, [the] employee will automatically be terminated". *Id.* Respondent-Employer reserved the right to pick up the employee or employees suspected of using drugs and/or alcohol during work hours or on jobsites and transport them to a drug testing facility. *Id.*

7. Also contained in the Employee Handbook are policies relating to "Discipline and Standards of Conduct." (Exhibit A, Section 4.3, page 19). This section of the handbook states explicitly that engaging in any conduct the Employer deems

inappropriate may result in disciplinary action up to and including termination. *Id.* "Insubordination, failure to perform assigned duties or failure to comply with the Company's health, safety or other rules" are examples of conduct that is deemed to be inappropriate. *Id*. at Section 4.3(f), page 12.

8. Claimant was given his final paycheck and his employment was terminated on April 17, 2023 for insubordination and failing to submit to drug testing as requested by Employer. (Testimony of [Redacted, hereinafter EA], Tr2, page 70, ll. 1-24). EA's[Redacted] request that Claimant take a drug test has its roots in Claimant's conduct/actions as observed by MS[Redacted] on April 10 and April 14, 2023.

The Testimony of MS[Redacted]

9. MS[Redacted], testified as the construction site superintendent for the general contractor, EC[Redacted]. As noted, Employer had been selected as the masonry subcontractor for EC[Redacted] for the DT[Redacted] build in Peyton, Colorado and Claimant worked for Employer as a foreman on that job. MS[Redacted] testified that as site superintendent, he had numerous interactions with Claimant leading up to his termination in April 2023. (Testimony of MS[Redacted], Tr2, pages 22-23).

10. MS[Redacted] testified that he would call EA[Redacted], as the owner/operator of MC[Redacted] every day, at least once per day, to discuss work on the job site and any issues with the performance of Employer's crew on the DT[Redacted] job site. (Testimony of MS[Redacted], Tr2, page 23, ll. 13-25; Tr2, page 47, l. 5).

11. According to MS[Redacted], he came out of his office on the job site around 3:00 p.m.[3] on April 10, 2023, to observe Claimant's pickup truck parked near, i.e. approximately 20 from the front of his office with the windows rolled down. (Testimony of MS[Redacted], Tr2, pages 24-25). MS[Redacted] testified that he could smell a strong order of marijuana, so he approached Claimant's truck. *Id*. at page 24, ll. 18-19. MS[Redacted] testified that as he advanced towards the truck the order became stronger and he could see lingering smoke. *Id.* at ll. 19-20. MS[Redacted] testified that he advised Claimant that smoking marijuana was not acceptable on the jobsite and that he would need to remove him from the job. Id. at page 25, ll. 22-23. All parties then left for the day. *Id.* at l. 24. As MS[Redacted] was getting fuel, he called EA[Redacted] and explained what he had observed and that he (EA[Redacted]) would need to remove Claimant from the job based upon EC[Redacted] policy. *Id.* at page 25, l. 1; page 26, ll. 7-8.[4]

---

[3] According to MS[Redacted], as foreman of others who were still on site, Claimant was on the clock when he was observed smoking in his truck. (Testimony of MS[Redacted], Tr2, page, 34, ll. 1-6).

[4] EA[Redacted] confirmed this conversation took place, noting that MS[Redacted] called him late in the day on April 10th and reported that he (MS[Redacted]) suspected that employees were getting high on the job. (Testimony of EA[Redacted], Tr2, page 50, ll. 20-25; Tr2, page 51, ll.3-12).v

12. Although MS[Redacted] intended to have Claimant removed from the job site following the April 10, 2023 incident, he permitted Claimant's return to work on April 11, 2023. (Testimony of MS[Redacted], Tr2, page 26, ll. 7-14).

13. On April 14, 2023, the entire crew, i.e. both EC[Redacted] and MC[Redacted]. employees working at the DT[Redacted] job site were scheduled to work a half day. According to MS[Redacted], both he and EA[Redacted] were on the job site on this date, during which MS[Redacted] had a conversation with Claimant. MS[Redacted] testified that Claimant was asking incomplete and incoherent questions and that his eyes were bloodshot. (Testimony of MS[Redacted], Tr2, page 27, ll. 1-21). MS[Redacted] suspected Claimant was under the influence of something, either marijuana or pills. *Id*. at ll. 4-5. Accordingly, MS[Redacted] testified that sometime between 11:00 a.m. and 12:00 noon, he discussed his suspicions that Claimant was intoxicated with EA[Redacted]. During this conversation, MS[Redacted] informed EA[Redacted] he wanted Claimant removed from the job site. (Testimony of MS[Redacted], Tr2, page 27, ll. 17-25; Tr2, page 41, ll. 12-19).

14. MS[Redacted] testified that after discussing the situation with EA[Redacted], he believed that Claimant was going to be asked to take a drug test. As the end of the work day was approaching, and everyone was preparing to leave for the day, MS[Redacted] testified that Claimant was not removed from the job site immediately. (Testimony of MS[Redacted], Tr2, page 42, ll. 7-25).

The Testimony of EA[Redacted]

15. EA[Redacted] testified that because he was not present during the April 10, 2023 incident when MS[Redacted] alleged Claimant was smoking marijuana and because MS[Redacted] did not actually see Claimant smoking, he elected to warn his work crew rather than remove Claimant from the job site. (Testimony of EA[Redacted], Tr2, page 51, ll. 2-22). EA[Redacted] gave a verbal warning to the entire crew in Spanish on April 11, 2023 advising all employees that drug use on the job was unacceptable. *Id.* at pages 51, ll. 13-23 and 52, ll. 3-9. Despite this verbal warning, MS[Redacted] suspected Claimant of being intoxicated while working on the DT[Redacted[job site on April 14, 2023.

16. EA[Redacted] testified that MS[Redacted] called him on April 14, 2023, alleging that Claimant was intoxicated on the job site. (Testimony of EA[Redacted], Tr2, page 53, ll. 19-25). This contradicts MS's[Redacted] testimony that he and EA[Redacted] spoke in person about Claimant's alleged intoxication. EA[Redacted] testified that he told MS[Redacted] that he intended to have Claimant drug tested before making any drastic moves, i.e. removing him from the job. (Testimony of EA[Redacted], Tr2, page 53, ll. 9-25). According to EA[Redacted], at approximately 12:15 p.m. on April 14, 2023, he called Claimant and instructed him and another employee to remain on the clock and proceed to Concentra and submit to drug testing. *Id.* at page 54, ll. 1-9; page 58, ll. 11-24; page 62, ll. 1-9.

17. As evidenced by the [Redacted, hereinafter TS] data Claimant was probably still on the clock at 12:15 p.m. when he was instructed to proceed to Concentra to take a drug test. Indeed, the TS[Redacted] data supports a finding that Claimant probably did not clock out on April 14, 2023 until 12:45 p.m. (Exhibit C, page 22; see also, Tr2, page 55, ll. 1-19; page 58, ll. 11-24; page 62, ll. 1-4).

18. While Claimant acknowledges that EA[Redacted] instructed him to take a drug test, he claims that he was already clocked out for the day and was on his way home in preparation for attending an "important appointment" when he received EA's[Redacted] call to proceed to Concentra.[5] (Claimant's Hearing Testimony, Tr2, page 99-100, ll. 1-10). Claimant maintains that because he is paid by the hour and had clocked out for the day, the request for drug testing was outside his work hours. *Id.* Accordingly, Claimant informed EA[Redacted] that he could ask for such testing during work hours but not after he had clocked out and was on the way home from work. *Id.*

19. Claimant's opposition to proceed with drug testing prompted a lengthy text message string between himself and EA[Redacted]. (Exhibit 5). The text message exchange can be summarized from Claimant's perspective primarily as his assertion that the request for testing came after he had clocked out of work for the day and that his personal time was equally important as the testing request.[6] Conversely, EA[Redacted] text messages convey his assertion that he could request and send Claimant for drug testing at any time, that Claimant clocked out in contravention of Employer's express direction to remain on the clock and proceed to Concentra for testing and that submitting to testing was important because failure to take the test would be taken as a failure to pass it. (See, Tr2, pages 101-117).

20. Regarding the text message exchange, EA[Redacted]testified that he offered to get a cup of coffee with Claimant to discuss the issues and try to find a solution, but Claimant instead insisted he was off the clock and did not want to be bothered. Testimony of EA[Redacted], Tr2, page 59, ll. 6-25; Tr2, page 61, ll. 3-21; Tr2, page 64, ll. 3-19; Exhibit B, page 20). EA[Redacted] also testified that he told Claimant to "get back on the clock and do it" in referring to the drug testing requested on April 14, 2023, however Claimant refused to submit to the same. *Id*. at page 76, ll. 2-13; page 87-88.

21. During cross examination, Claimant admitted that EA[Redacted] asked him to take a drug test. Nonetheless, he reiterated his position that the request came after he had clocked out for the day and he didn't submit to testing because he was on

[5] No corroborating evidence regarding this appointment was presented at hearing.

[6] Despite his limited English capabilities, the evidence presented supports a finding that Claimant was able to respond to text messages written in English by EA[Redacted]. (See Exhibit B). Moreover, EA[Redacted] testified that Claimant was selected to be a foreman for Employer in part because of his ability to communicate in English and Spanish. (Testimony of EA[Redacted], Tr2, page 52, ll. 22-25; Tr2 page 53, ll. 1-11).

his personal time when the request was received.[7] (Testimony of Claimant, Tr2, page 118-119, ll. 1-21). Claimant also admitted that it was his decision to clock out and that he knew he could be terminated if his test was positive.[8] *Id*.

22. EA[Redacted] testified that after Claimant refused to submit to testing on Friday, April 14, 2023, he returned to work on Monday, April 17, 2023. According to EA[Redacted] Claimant was promptly terminated upon his arrival at work due to his failure to submit to drug testing as requested and for insubordination resulting from his failure to comply with Employer's directives/policy. (Testimony of EA[Redacted], Tr2, page 70, ll. 1-24).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.

---

[7] Concentra Medical Center confirmed, that Claimant and his co-worker never presented for the drug screening on April 14, 2023 despite Employer's request for the same. (Exhibit D, Testimony of EA[Redacted], Tr2, page 64, ll. 23-25).

[8] Claimant testified that despite not submitting to testing, his test would probably have been positive for marijuana because he uses marijuana outside work due to anxiety caused by his accident. (Testimony of Claimant, Tr2, page 94, ll. 16-25; page 95 - 96, ll. 1-6). He also admitted to taking Gabapentin for the residual effects of his injury, which he reported caused dizziness and blurred vision. Id. at page 96, ll. 9-17.

App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). In this case, the ALJ credits the testimony of MS[Redacted] and EA[Redacted] to conclude that Claimant performed a volitional act which he would reasonably expect to cause the loss of his employment, namely failure to submit to drug testing and refusing the reasonable directives of his Employer. See *Patchek v. Dept. of Public Safety*, W.C. No. 4-432-201 (ICAO, Sept. 27, 2001).

Responsibility for Termination

D. Because Claimant's injury in this case was after July 1, 1999, C.R.S. §§ 8-42-103 (1) (g) and 8-42-105 (4) (a), collectively referred to as the "termination statutes", apply to assertions that Claimant is responsible for his wage loss. These provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Under the termination statutes, a claimant who is responsible for the termination of modified or regular employment is not entitled to temporary disability benefits absent a worsening of condition, which reestablishes the causal connection between the injury and the wage loss. See *Anderson v. Longmont Toyota*, Colo. 102 P.3d 323 (Colo. 2004); see also *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo.App. 2002); *Grisbaum v. Industrial Claim Appeals Office*, 109 P.3d 1054 (Colo. App. 2005). As a result, the claimant loses the right to temporary benefits following the termination date. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414, 416 (Colo.App. 1994).

E. Since the termination statutes provide a defense to an otherwise valid claim for temporary disability benefits, Respondents shoulder the burden of proving, by a preponderance of the evidence, that Claimant is responsible for his termination and subsequent wage loss. *Colorado Compensation Insurance Authority v. Industrial Claims Appeals Office,* 20 P.3d 1209 (Colo.App. 2000). Claimant's suggestion that Respondents' failure to follow its own progressive disciplinary policy precludes a determination of whether he was responsible for his termination is unpersuasive. See generally, *Keil v. Industrial Claim Appeals Office*, 847 P.2d 235 (Colo.App. 1993) (employer's failure to follow its established discipline procedures did not prohibit a determination that an employee was responsible for termination). To the contrary, as noted in *Keil*, the dispositive issue is whether the employee performed a volitional act or otherwise exercised a degree of control over the circumstances resulting in discharge. Moreover, Respondents do not have to prove Claimant knew or should have known that his conduct would result in his termination. *Gonzales v. Industrial Commission*, 740 P.2d. 999 (Colo. 1987). Rather, it is necessary only that Respondents establish that Claimant

is “responsible” for his/her termination and subsequent wage loss through a volitional act or the exercise of some control over the circumstances surrounding the termination.

F. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. See, *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control of the circumstances surrounding the termination. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo.App. 1994). “Fault” does not require “willful intent” on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996) (unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008). In other words, an employee is "responsible" for their termination if the employee precipitated the employment termination through a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety, supra.* A volitional act does not mean moral or ethical culpability. It simply means that the claimant performed an act, which led to his/her termination. *Gleason v. Southland Corp*., W.C. No. 4-149-631 (ICAO, June 13, 1994). Thus, as noted above, the fault determination depends upon whether a claimant performed some volitional act or otherwise exercised a degree of control over the circumstances resulting in termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo.App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo.App. 1995). In this case, Respondents assert that Claimant is responsible for his termination and subsequent wage loss after April 14, 2023 because he refused to comply with Employer’s request that he take a drug test.

G. Despite legalization of marijuana in Colorado, the Colorado courts have reiterated that an employer may terminate an employee for drug use. *See, e.g., Coats v. Dish Network, LLC*, 350 P.3d 849 (Colo. 2015); *Bolerjack v. Water Edge Pond Service*, W.C. 4-905-434 (ICAO 2014). In the seminal case of *Coats*, the Colorado Supreme Court considered a wrongful termination action where an employee was terminated after a random drug test came back positive for marijuana. In that case, the employer terminated the employee under their zero-tolerance policy. The employee argued that he was licensed by Colorado to use medical marijuana and that his use was off-premises. The Colorado Supreme Court found the termination was lawful because even state-licensed marijuana use was not lawful activity as it related to the employment. *Bolerjack*, an Industrial Claims Appeals Office (ICAO) case, on the other hand, applies this exact reasoning to the termination of TTD post-termination of employment in the workers’ compensation context. As found here, Employer’s handbook, as acknowledged by Claimant, clearly states that Employer had a zero-tolerance policy for drug and alcohol use on any work site and Employer had the right to drug test “anyone at any time without notice.” (Exhibit A, page 8). The Employer’s Handbook also included rules, which Claimant acknowledged, indicating that engaging in certain conduct, such as insubordination or failing to comply with Employer’s rules/policies could result in discipline up to termination. (Exhibit A, page 12; Tr2, page 14, ll. 22-25; Tr2, page 15, l. 4). In this case, Claimant through his testimony, as well as his text message responses to Employer, demonstrated his ability to comprehend the terms of the aforementioned policies. In fact, Claimant was selected to be a foreman for

Employer upon his return to modified duty in part due to his ability to communicate in both English and Spanish. As such, any assertion that Claimant was unable to understand the express terms of the handbook or the policies in question is unpersuasive and without merit.

H. While the evidence presented fails to convince the ALJ that Claimant was using marijuana on the job site on April 10, 2023, the ALJ is persuaded that EA[Redacted] had a reasonable basis to request that Claimant submit to drug testing based upon the observations of MS[Redacted] on April 14, 2023. The totality of the evidence presented persuades the ALJ that EA[Redacted] probably contacted Claimant around 12:15 p.m. on April 14, 2023 and told him to remain on the clock and proceed to Concentra to take a drug test. Instead of following this directive, Claimant elected to clock out and leave the job site.

I. As noted, a finding of fault for termination requires a volitional act or Claimant's exercise of a degree of control over the circumstances leading to his termination. *Gillmore v. Indus. Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008). Here, the evidence presented supports a conclusion that Claimant exercised a degree of control over the circumstances leading to his termination, notably by refusing to submit to the drug screening by 4:30 PM as requested by Employer on April 14, 2023, by arguing with his Employer that he was off the clock on his personal time and as such could not be tested. Claimant's attempts to justify his refusal to submit to testing are contradictory to the handbook policy allowing drug testing to occur at "any time", but also contrary to the facts of this claim. Claimant was advised numerous times by Employer, both before and after he elected to clock out and left the job site, that he was to remain on the clock and submit for drug testing. Not only did Claimant's failure to comply with Employer's reasonable requests violate Employer's drug testing policy, but also Employer's policies surrounding the Standards of Conduct guiding employee behavior. Indeed, the evidence presented persuades the ALJ that Claimant's disobedience and volitional refusal to follow reasonable orders amounts to the type of impermissive insubordination outlined in Section 4.3(f) of Employer's Employee Handbook. Based upon the degree of defiance and contempt Claimant directed towards his employer in this case, it is not surprising that he was terminated. Indeed, the ALJ concludes that any employee acting in a similar fashion would reasonably expect such behavior to result in the loss of employment. Claimant is found to be responsible for the termination of his employment pursuant to C.R.S. §8-42-105(4) (a), and the resulting wage loss from such volitional conduct is not attributable to his November 14, 2022 work injury.

ORDER

It is therefore ordered that:

1. Respondents have proven by a preponderance of the evidence that Claimant is responsible for the termination of his employment. Accordingly, his claim for TTD benefits after April 17, 2023 is hereby denied and dismissed.

2. All matters not determined herein are reserved for future determination

Dated: October 12, 2023

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondents have shown by a preponderance of the evidence that Claimant's maintenance medical benefits regime is no longer reasonably necessary, in the form of medications of Ambien, Percocet, Flexeril and Lyrica.

PROCEDURAL ISSUE

The parties advised that ALJ Kimberly B. Turnbow issued an order dated February 14, 2018 relating to overcoming a DIME physicians' opinion regarding medical impairment by clear and convincing evidence and finding that Claimant only had a temporary aggravation of his preexisting condition of his lumbar spine when considering permanent impairment. It did not address maintenance medical benefits. This order was not entered as evidence.

The parties also advised that ALJ Edwin L. Felter issued a subsequent decision on September 11, 2018 finding Claimant permanently totally disabled and ordering reasonably necessary post maximum medical improvement maintenance medical benefits. This order was part of the evidence submitted in Claimant's packet.

The parties both indicated that Claimant had been receiving, as part of his maintenance regime, four maintenance medications which included Ambien (zolpidem) 10 mg once a day, Percocet (oxycodone) Acetaminophen 5mg/325mg once a day, Flexeril (cyclobenzaprine) 10 mg once a day, and Lyrica (pregabalin) 50 mg twice a day.

A Final Admission of Liability dated June 20, 2019 was filed admitting to permanent total disability benefits and medical maintenance benefits pursuant to the ALJ's order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally:

1. On January 20, 2015, Claimant sustained an admitted industrial injury while employed for the mining company, held by Employer, located in Leadville, Colorado, where Claimant has continued to reside and has lived all his life.

2. The Claimant hurt himself when he, and three other coworkers, carried a magnetic belt weighing an estimated 400-450 pounds. One of the workers lost his grip on the belt jolting the Claimant forward and causing him to fall to his knees.

3. The Claimant immediately felt severe pain in his lower back. Dr. Zwerdlinger, the Claimant's primary care physician, saw him on the same day as his injury. Dr. Zwerdlinger took Claimant off work. Since his date of injury, Claimant has not worked.

4. Dr. Zwerdlinger was Claimant's provider prior to this injury and had seen Claimant regarding some back pain before it happened. However, she indicated that Claimant had significantly improved after treatment with a chiropractor.

5. Claimant testified that prior to his injury he had an ankle and foot injury and surgery, which left him with a shorter leg. What he was really having problems with before his injury was his hip, not his back, which was what the chiropractor had worked on successfully. Claimant was able to continue working his heavy duty job without significant problems until this January 20, 2015 work injury happened.

B. Medical Records:

6. Claimant had an MRI on March 16, 2015 showing a central L3-4 disc herniation with annular fissure measuring 4.5 mm in maximum AP dimension and indented thecal sac which in combination with mild bilateral facet arthrosis produced mild-to-moderate central stenosis. There was an L4-5 broad-based disc bulge asymmetrical left with an annular fissure in combination with bilateral facet arthrosis producing mild-to-moderate central stenosis.

7. Dr. Corenman, Claimant's authorized treating provider (ATP), found a central L3-L4 disc herniation with mild to moderate central stenosis. He also found an L4-L5 disc bulge and left lateral recess stenosis.

8. Dr. Barry Ogin performed an Independent Medical Examination at Respondent's request on December 16, 2016 and a medical record review. At that time Claimant was having back and bilateral leg pain, problems sleeping due to the numbness in his legs, though no shortness of breath or abdominal complaints. He noted Claimant was significant for multiple pain behaviors and had pain that, with a seated straight leg test reproduced back and buttock pain, numbness along his thighs extending down into his lower legs as well, including his dorsal and plantar feet, Patrick maneuver produced inguinal region pain, and limited range of motion though no valid tests were produced. Dr. Ogin's impressions included possible lumbar strain following work injury of January 20, 2015 and somatoform pain disorder. He believed Claimant was at maximum medical improvement and remarked that Claimant's medication regime was Lyrica 150 mg b.i.d., cyclobenzaprine 10 mg twice per day, Percocet 5/325 one per day, metformin, glipizide, Ambien, and atorvastatin. The report provides no further credible assistance regarding Claimant ongoing medication needs in this report.

9. Dr. Ogin performed a second IME on May 31, 2017. He noted Claimant was maintained on Percocet 5/325 four times per day, Ambien and Lyrica 150 mg b.i.d. as well as cyclobenzaprine only once per day. Claimant confirmed that injections had offered relief for a few weeks or a month but not a sustained period of time. He mentions an MRI performed on April 26, 2017 which showed L4-5 has a superimposed central to left posterolateral disc extrusion that contributed to moderate to severe left lateral recess narrowing compressing the descending left L5 nerve root. There was also mild to

moderate facet joint arthritis and small facet joint effusions. There was mild to moderate central spinal stenosis. It stated that the extruded component was new compared to the prior examination. There were also modic endplate changes. The spondylosis had progressed since the prior study of May 6, 2015. The L3-4 disc protrusion was unchanged at 5 mm. The spondylosis at L4-5 had mildly progressed. He opined that the new herniated disc, which was caused by an event in April 2017, was not related to the work related injury of January 20, 2015 and should be addressed outside of the workers compensation system. He provided no further insight with regard to continuing medication management.

10. On February 15, 2018 Dr. Ogin performed a third IME on Respondents' behalf, including reviewing additional medical records. In this report Dr. Ogin agreed that Claimant was a candidate for surgical intervention for the low back but did not agree that it was related to the January 20, 2015 claim.

11. The fourth IME report issued by Dr. Ogin on June 27, 2018 included consideration of further medical and vocational assessments, examination and addressed Claimant's ability to work as well as his work restrictions, and agreed with his ATP, Dr. Corenman's work restrictions assigned when he reached MMI on March 17, 2016, of no lifting more than 20 pounds, no pushing or pulling more than 40 pounds, no squatting, pivoting, crawling, or kneeling, limited stooping, bending, twisting, and limited overhead work. Dr. Ogin opined that Claimant did not require any maintenance medical for the work related conditions.

12. In the last report dated August 2, 2018 Dr. Ogin revised his opinion with regard to the work restrictions not being related to the January 20, 2015 work incident. This is specifically not found credible.

13. Dr. Ernest Braxton of Vail-Summit Orthopaedics & Neurosurgery evaluated Claimant on July 23, 2018. He noted that Claimant had undergone multiple transforaminal epidural steroid injections, facet blocks, rhizotomies and SI joint blocks with diagnostic relief. He noted that EMG nerve conduction studies showed radiculopathies and little evidence of peripheral neuropathy. He noted that the most recent MRI showed degenerative changes at L3-4 and L4-5 with Modic changes in the L5 body, along with a large central disc herniation causing central stenosis. He also noted contributing bilateral facet arthropathy at the L4-5 level with bilateral proximal leg pain as well as leg pain that descended below the knees. He remarked that Claimant had a recommendation of a 2 level fusion and was seeing Dr. Braxton for a third opinion. He noted that Claimant was on Lyrica, Cyclobenzaprine HCI, Zolpidem Tartrate and Percocet 5-325 mg as needed for pain.

14. On exam he noted that Claimant was walking with an antalgic gait, abnormal tandem and Romberg tests, decreased sensation of the left lower extremity and decreased strength, positive straight leg test and increased low back pain with external rotation of the hips bilaterally. Dr. Braxton noted that given Claimant's radiculopathy findings that stabilization and decompression were indicated. He diagnosed lumbar degenerative disc disease, radiculopathy (lumbar region) and lumbar stenosis with neurogenic claudication and recommended an anterior lumbar interbody fusion with L4-

5 posterior pedicle screws and rods. Dr. Braxton performed the surgery on September 11, 2018.

15. On August 11, 2018 Dr. Lisa Zwerdlinger noted that Claimant was being seen for maintenance medication with a 30% pain relief and no side effects. She noted that the MRI of March 2015 showed hepatic steatosis with no suspicious lesions seen. She continued the Ambien, Lyrica and Percocet. She recommended that Claimant taper off of narcotics after his surgery.

16. Claimant was attended by Dr. Braxton's PA Holley Spears in post-surgical follow up on October 2, 2018. Claimant reported interval improvement of his right lower extremity pain symptoms which extend below the knee. He also had improvement in his walking tolerance since surgery. He continued to experience some low back pain and some right lower extremity radiating pain into his anterolateral thigh with some burning and tingling as well as some intermittent left groin pain which was positional. He denied any new areas of pain. There were some additional pain medications that were added to Claimant's regime including Medrol, Methocarbamol and Ultram.

17. On October 17, 2018 Claimant reported he had had improvement of the low back pain symptoms. He continued to have some right lower extremity paresthesia and numbness in his anterior thigh. He also had some intermittent medial thigh pain in the right leg. Dr. Braxton noted that "Patient has new 2 view x-rays of the lumbar spine done in clinic today. The imaging shows that the instrumentation is intact and appropriately placed without signs of loosening or subsidence. Patient's lumbar spinal alignment is within normal limits."

18. Following the surgery, Dr. Braxton recommended he increase the pregabalin from 150 mg to 300 mg BID. Dr. Zwerdlinger refilled the pregabalin at 150 mg twice a day on October 18, 2018.

19. On April 13, 2020 Dr. Zwerdlinger completed a Physician's Report of Workers' Compensation refilling Claimant's four medications, Percocet, Ambien, Flexeril and Lyrica.

20. Amanda King, P.A.-C noted on May 13, 2021 that maintenance medications control Claimant's pain and made it tolerable.

21. On June 14, 2021 PA King examined Claimant noting that he was a healthy appearing, well-nourished and well developed 51 year old male. She prescribed oxycodone-acetaminophen 5mg/325 mg 30 tablets, cyclobenzaprine 10 mg 30 tablets, pregabalin 50 mg 90 capsules, and zolpidem 10 mg 30 tablets. She diagnosed chronic pain syndrome, degenerative lumbar intervertebral disc disease and lumbar radiculopathy. She remarked that he was there for follow up regarding his chronic pain management. She documented that he was seeing the orthopedic specialist who was trying to determine if some of his pain in the leg was coming from his hip, not his back. She observed that the last provider he had seen believed that pain, tingling and weakness was coming from his back and needed to go back to a neurosurgeon. She found that he had a small tear in his right labrum but that Claimant's symptoms were not consistent with the labrum being the issue. She noted that Claimant had the following:

> Patient reports no fever, no night sweats, **no significant weight loss**, no exercise intolerance, and **no fatigue**. He reports no vision change and no irritation. He reports no difficulty hearing and no ear pain. He reports no sinus problems. He reports no sore throat, no dry mouth, no oral ulcers, and no teeth problems. He reports **no chest pain**, no palpitations, and no known heart murmur. He reports no cough, no wheezing, **no shortness of breath**, and no coughing up blood. He reports **no abdominal pain**, no nausea, no vomiting, no constipation, normal appetite, no diarrhea, no GERO, and no dyspepsia. He reports no penile lesions, no erectile dysfunction, no incontinence, no difficulty urinating, no hematuria, and no increased frequency. He reports no changing skin lesions, **no jaundice**, no rashes, and no laceration. He reports no loss of consciousness, no seizures, no dizziness, no headaches, and no tremor.

22. PA King noted on July 14, 2021 that Claimant followed up regarding his workers compensation case, with generally no changes, except that on the top of his left foot he felt like it was on fire but was relieved by taking 100 mg of Lyrica and after 20 minutes he felt better.

23. An MRI was performed on November 15, 2021 which showed post-surgical changes and was compared to a July 2019 MRI without any significant interval changes. Dr. Chelsea Jeranko noted that the interbody fusion and posterior stabilization remained patent and adjacent segment disc degeneration stable. There was mild paraspinal muscle atrophy associated with the surgical levels and was chronic and symmetric.

24. Dr. Matthew Gnirke of Vail-Summit Orthopaedics evaluated Claimant on November 29, 2021. He reported that Claimant continued to have bilateral low back pain with radicular pain, weakness, numbness, and tingling in the bilateral lower extremities. He rated his pain as a 4 out of 10 on the VAS pain scale and noted that it was constant, and had problems with sleep. He was taking Lyrica, cyclobenzaprine, and Percocet for pain management and was ambulating with the assistance of a cane. This is the first time fatty liver showed in the past medical history at Vail-Summit Orthopaedics.

25. On February 14, 2022 Dr. Gnirke noted Claimant continued to have bilateral anterior hip pain as well as bilateral low back pain with radicular pain down both lower extremities and into the bilateral groins. He also complained of weakness in bilateral lower extremities. He rated his pain to be 5 out of 10 on the VAS pain scale, described as burning, shooting and electric in nature. This pain was constant and woke him up from sleep. He was taking Percocet, Lyrica and cyclobenzaprine for pain management. Dr. Gnirke performed a bilateral L3 transforaminal epidural steroid injection on February 18, 2022.

26. Claimant followed up with PA King on March 10, 2022 PA King reporting some abdominal pain, difficulty urinating and increased frequency. He denied any swelling in his lower extremities, no weight loss, no fatigue, no shortness of breath, no jaundice, among other denials. Due to the complaints, PA King did a full abdominal exam. Lisa Zwerdlinger, M.D. performed an ultrasound and Ms. King, by using a catheter removed urine, after which the bladder normally collapsed. They suspected diverticulitis based on the physical exam. They ordered multiple labs and a CT.

27. Upon Claimant's return to see PA King on April 7, 2022, Claimant was no longer reporting abdominal pain or urinary problems. He reported no weight loss, no fatigue, no shortness of breath, no abdominal pain, no jaundice. He did report leg spasms

and shooting pain in the left leg but no swelling. PA King continued to prescribe the same four medications.

28. On April 28, 2022 Claimant had an MRI of the sacrum that showed unremarkable SI joints, no evidence of fracture and moderate to severe bilateral L5-S1 facet arthropathy with small facet joint effusion.

29. Dr. Gnirke performed a bilateral L5-S1 intra-articular facet corticosteroid injection on June 10, 2022.

30. On October 4, 2022 PA King noted no swelling in the extremities, no weight loss, no fatigue, no shortness of breath, no abdominal pain, and no jaundice among other things. She remarked that Claimant's medications were necessary for quality of life and that she discussed the risks of continued medications. There were no change in his four medications related to his workers compensation case.

31. Claimant underwent an EMG nerve conduction study on October 10, 2022 with Dr. Gnirke which showed evidence of a remote right L5/S1 lumbar radiculopathy, which was consistent with Claimant's prior EMG from 2015, no active denervation noted in the right lower extremity, no evidence of a left or right peroneal neuropathy across the fibular head and no evidence of a large fiber peripheral neuropathy affecting the lower extremities. Dr. Gnirke performed an L3-L4 interlaminar epidural steroid injection on October 28, 2022.

32. On December 12, 2022 Dr. Gnirke's PA Haley Zipperer referred Claimant to UCH Neurology clinic for a second opinion EMG/nerve conduction study and again on January 19, 2023.

33. Claimant returned to see PA King on January 5, 2023 in follow up for medication maintenance. She remarked that Claimant had a failed back surgery due to "delay in WC company approving his surgery." She observed that Claimant subsequently continued with persistent numbness/tingling/weakness in the lower extremities and had to walk with a cane. She documented that Claimant reported muscle aches and back pain but no weight loss, fatigue, shortness of breath, abdominal pain, urinary problems or jaundice. She remarked that she would prefer Claimant not have such sedating medication but that they were required for Claimant's quality of life. She prescribed the same medications, zolpidem 10 mg 30 tablets, oxycodone-acetaminophen 5mg/325 mg 30 tablets, cyclobenzaprine 10 mg 30 tablets, and pregabalin 50 mg 90 capsules, making arrangements for a mail order delivery system.

34. Linda Manna, Pharm.D,[1] on January 9, 2023 issued a Pharmacist Report pursuant to Insurer's request. Dr. Manna stated that:

> While long-term opioid therapy may benefit some patients with severe suffering that has been refractory to other medical and psychological treatments, it is not generally effective in achieving the original goals of complete pain relief and functional restoration.

She stated that adverse effects from the chronic use of opioids included multiple conditions, none of which were identified by any provider in this matter as happening to

[1] As found, Dr. Manna is not an "M.D." as stated by Respondents, but is licensed in Michigan (MI) and Maryland (MD).

Claimant. Dr. Manna also stated that neuroendocrine problems included hypogonadism and erectile dysfunction, both of which Claimant had at the time of the hearing. However, Claimant was not seeking "complete pain relief" nor complete functional restoration, simply to be able to function in his daily life considering his conditions.

35. Dr. Manna stated that pregabalin has been known to augment the euphoric effect of opiates, particularly when used long-term and at high doses, putting the injured worker at risk for physiological/physical dependence. Claimant, however, is not using the opioid at a high dose and there is no evidence that he is experiencing a euphoric effect from his limited opioid use.

36. She opined that the addition of cyclobenzaprine was not recommended as adjunct with other medications and not to be used for longer that two to three weeks. She noted that long-term use of zolpidem (Ambien) can impair function, memory, and cause decreased high-level cognitive functioning. None of which were identified by his providers nor the IME physician.

37. To an inquiry to the treating provider, Ms. King, she responded that

> The medication help the patient to maintain function with symptomatic relief. This combination of medication and MED of 8 mg/day is the lowest baseline that the patient can tolerate. If there is improvement in the future, then there can be plans to wean. The patient has no aberrant signs of behavior and is counseled on the signs of respiratory depression.

38. PA King responded to Dr. Manna that she did not agree to wean Claimant off his four medications.

39. On February 2, 2023 Claimant was evaluated by Nicholas Olsen, D.O. of Rehabilitation Associates of Colorado at Respondents' request for an independent medical examination. Dr. Olsen took a history consistent with Claimant's testimony at hearing, reviewed the records and examined Claimant. Claimant rated his pain as 4/10. He reported he believed the surgery helped him. He noted, prior to the surgery, his pain as 7 to 8/10 and felt that he did get some relief from the spine surgery. He also noted his back was now straight up and down. He reported aggravating factors as walking greater than 20 minutes, standing, increased activities, bending, twisting, sitting on hard surfaces. He reported relief with lying flat or reclining, heat, ice and holding onto a supportive device, with injections and pain medications.

40. On exam Claimant was pleasant; oriented to time, place and person; appropriate; nonantalgic, but had difficulty ambulating; with neutral mechanics, limited range of motion and pain with terminal flexion; and an equivocal straight leg raise on the right but negative on the left. He had decreased pinprick on the right L5 dermatome. He stated that Claimant was status post a work injury on January 20, 2015 and an MRI of March 16, 2015 that showed a herniated disc at L3-4 with annular fissure measuring 4.5 mm, an indented thecal sac and facet arthrosis producing mild to moderate central canal stenosis. There was a broad disc bulge on the left at the L4-5 level with an annular fissure and bilateral facet arthrosis producing central canal stenosis. There was no disc herniation at L5-S1. He reported that Dr. Brian Shea placed Claimant at MMI on March 17, 2016 and provided a rating of 18% whole person.

41. Dr. Olsen opined that after the review of the records and a scathing critic of PA King's documentation and records, he opined that within a reasonable degree of

medical probability, that Claimant should be weaned off of all four medications. He opined that none of these medications were indicated by the fact that he has a nonalcoholic fatty liver disease, none of these have demonstrated a significant increase in functional benefit to Claimant, that he has only taken these habitually and was not trialed on alternate medications.

42. PA King evaluated Claimant on February 9, 2023 at St. Vincent General Hospital. She noted that the patient seemed hydrated, was non-toxic appearing, with no findings of acute occlusion in his bilateral lower extremities though pulses were diminished. She noted that Claimant had a long standing diagnosis of Type II diabetes without complications, with numbness, tingling and weakness in the lower extremities and had a chronic failed back surgery which was complicating his lower extremity symptoms. She ordered a CT scan/angiogram with contrast of the abdomen with runoff.

43. A CT angiogram of the abdomen, pelvis and runoff vessels from February 24, 2023 noted that the "visualized solid organs and hollow viscera in the abdomen and pelvis are within normal limits." This ALJ infers from this report that Claimant's organs were within normal limits including his liver.

44. On March 9, 2023 Dr. Dianna Quan of UCHealth neurosciences performed an EMG nerve conduction study which showed chronic right L5-S1 radiculopathies and no electrophysiologic evidence of superimposed generalized polyneuropathies affecting the lower limbs. This ALJ finds that this is in opposite to the suggestions made by Dr. Olsen that Claimant's diabetes may be causing lower extremity neuropathy that could explain the Claimant's lower extremity symptoms. As found, Claimant does not have diabetic neuropathy and has had symptoms into his legs from his initial complaints on January 20, 2015, including by Dr. Ogin.

45. PA King documented that Claimant had steatosis of liver or fatty liver disease with an onset of October 3, 2015. She notes her observations at each visit. For example, on April 13. 2023 she documented that Claimant has

> no arthralgias/joint pain and **no swelling in the extremities**. He reports weakness and numbness but reports no loss of consciousness, no seizures, no dizziness. no headaches, no tremor, and no muscle weakness. He reports no fever, no night sweats, **no significant weight loss,** no exercise intolerance, and **no fatigue**. He reports no vision change and no Irritation. He reports no difficulty hearing and no ear pain. He reports no sinus problems. He reports no sore throat, no dry mouth, no oral ulcers and no teeth problems. He reports no chest pain, no palpitations, and no known heart murmur. He reports no cough, no wheezing, **no shortness of breath**, and no coughing up blood. He reports **no abdominal pain**, no nausea, no vomiting, no constipation, normal appetite, no diarrhea, no GERD, and no dyspepsia. He reports no incontinence, no difficulty urinating, no hematuria, and no increased frequency. He reports **no jaundice**, no rashes, no laceration, and no changing skin lesions. He reports no swollen glands, no bruising, and no excessive bleeding. [**Emphasis added.**]

46. PA King continued to prescribe oxycodone-acetaminophen 5mg/325 mg 30 tablets, cyclobenzaprine 10 mg 30 tablets, pregabalin 50 mg 90 capsules, and zolpidem 10 mg 30 tablets. This is the same dosage as two years prior. She documented that Claimant was there for a "WC f/u. Is here for his monthly visit for meds he needs to maintain his quality of life. Today pain is worse but this happens-pain will ebb and flow. No recent Injury. Right leg has been painful and spasming. Is seeing Dr. [Gnirke] later

this month." She continued to diagnose degenerative lumbar intervertebral disc, chronic pain and insomnia. She remarked that

> … meds are required for quality of life. Will cont to rx. Pt aware of risks of medications. During his 7 years of treatment with me, we have tried numerous medications. Some didn't work and others had side effects. My preference would be that he didn't need as much of this sedating medication but this is what is required for quality of life. Pt has never exhibited any worrisome behavior for misuse or abuse.

47. Dr. Gnirke evaluated Claimant on April 23, 2023 following up on his lumbar spine complaints. He noted that

> …he rates his pain to be 3 out of 10 on the VAS pain scale describes it as stabbing, aching, throbbing, shooting, and sharp in nature. This pain is constant and does occasionally wake him up from sleep. His pain is located in his low back and radiates down the lateral aspect of the right lower extremity. He takes cyclobenzaprine, Lyrica, and Percocet for pain management. He engages in a home exercise program with an emphasis on core strengthening and aquatic therapy. He had an L3-4 interlaminar epidural steroid injection performed on October 28, 2022 which gave him a few weeks of pain relief. Of note, he has a history of an L4-5 ALIF performed in 2018. He recently had an EMG performed at UC health…

48. On exam he noted that claimant had radicular pain greater on the right than the left lower extremity in a patchy L3-L5 distribution, diminished gross sensation to light tough over the right lower extremity in the L4-5 distribution grossly, antalgic gait using a cane. He diagnosed a failed back surgical syndrome, which had a diagnosis code of M96.1 and was primary; lumbar radiculopathy; history of lumbar fusion; and right knee pain. They discussed the fact that Dr. Quan's EMG nerve conduction study as being similar in results to the one he performed. The nerve conduction study showed the exact same findings that he found on previous EMG with a chronic right LS/S1 lumbar radiculopathy without active denervation and no evidence of superimposed peripheral neuropathy or other compressive peripheral neuropathies. Considering the chronic nature of the L5 radiculopathy, he referred Claimant for a new MRI of the lumbar spine. The request for authorization was sent to the Insurer's adjuster on April 26, 2023.

49. Dr. Olsen performed a second IME on behalf of Respondents on May 18, 2023. Dr. Olsen conducted a phone interview of Claimant and reviewed additional records. He was asked to assess whether the Claimant's current right knee conditions were related to the work injury of January 20, 2015. Dr. Olsen assessed Claimant as status post a lumbar spine injury on January 20, 2015, status post L4-5 ALIF on September 11, 2018, steatosis of liver with onset of October 3, 2015, nonalcoholic fatty liver disease with onset of June 14, 2021, male hypogonadism, Type II diabetes mellitus, hyperlipidemia and status post right knee arthroscopy in 1989. Dr. Olsen opined that Claimant did not suffer from a knee injury related to the January 20, 2015 work injury and would be preexisting and related to his prior injury of 1989, though he did recommend Claimant continue to use his straight cane for support related to his altered gait dysfunction.

50. The June 8, 2023 MRI was read by Dr. Mark Murray and was compared to the prior MRI of November 21, 2021. It showed no significant interval changes, no stenosis at the fusion level, adjacent segment facet arthrosis without stenosis at the L5-S1 level and an annular tearing and disc protrusion at the L2-3 level with questionable contact of the exiting left L2 nerve root.

C. Dr. Olsen's Testimony:

51. Nicholas K. Olsen, D.O. testified at hearing as a board certified physician in physical medicine and rehabilitation as well as a Level II accredited physician with 30 years' experience treating musculoskeletal conditions with physical therapy, medications and referrals to surgery as well as electrodiagnostic testing and interventional medicine performing spinal injections under fluoroscopy. Dr. Olsen evaluated Claimant on February 2, 2023 and May 18, 2023 at Respondent's request. Dr. Olsen was asked to determine if ongoing prescription medications, including those for pain and sleep, were reasonably necessary.

52. Dr. Olsen stated that Claimant had been receiving maintenance medications prescribed by Amy King, PA-C. He was not able to determine from the records who was Ms. King's supervising physician. He noted that Claimant was on cyclobenzaprine (Flexeril), oxycodone, pregabalin (Lyrica), zolpidem (Ambien). He explained that Flexeril was a muscle relaxant that worked at the level of the brain, similarly to an antidepressant when used long term, to calm the central nervous system and relieve muscle spasms. Oxycodone was an opioid that affect the brain in the opioid receptors to reduce the expression of pain to provide pain relief. He questioned its effectiveness when using it chronically. He expounded that Lyrica affected the GABA receptors in the brain helping to control the peripheral nerve system. Ambien was a hypnotic which induced somnolence and helps people fall asleep, typically used acutely, not chronically.

53. Dr. Olsen discussed the report issued Dr. Manna. Dr. Olson stated that he agreed with Dr. Manna's statement that opioid treatment failed to achieve complete pain relief and functional restoration because there were multiple studies that demonstrated that there was a buildup of tolerance to opioids over time and proved less effective. He stated that the study showed that those weaned off of the opioids showed no difference than those on opioids, as over time they became less effective. However, this ALJ concludes that Claimant is not attempting to obtain complete pain relief or functional restoration but simply maintaining MMI status. Dr. Olsen agreed that there were neuroendocrine problems with the chronic use of opioids, including psychomotor/cognitive impairment, daytime sedation, and respiratory depression when used with Flexeril, Ambien and Lyrica because they work on similar pathways in the brain. Also, all three medications needed to be cleared through the liver.

54. Dr. Olsen agreed with Dr. Manna regarding the combined increased euphoric effect of using opioids and pregabalin because both opioids and GABA receptors are co-expressed by neurons in the brain, meaning one neuron can be affected by either opioid or GABA, and you get a combination of effect because they are GABA analogues. He noted that the addition of cyclobenzaprine was not recommended as an adjunct to other medications because of the risk of respiratory depression.

55. Dr. Olsen disagreed that Claimant had a failed lumbar surgery because Claimant had a good response the first four months following the surgery. He stated that Ms. King failed to properly document how medications enhanced Claimant's function or symptom relief. He also opined that Ambien was to be used as a short term, usually two to six weeks, for treatment of insomnia. He stated that it was rare from him to have a patient on long term Ambien. He stated that articles alluded that long term use can impair

function, memory and decreased higher level cognitive function because the patient only gets restorative sleep and does not go through the process of deep sleep, REM sleep and regular sleep. He explained that multiple of the medications, in addition to having these side effects, they are cleared through the liver, with the exception of Lyrica, and when a patient is having liver issues, like Claimant's nonalcoholic fatty liver disease (NAFLD), the risks need to be weighed against the benefits of continuing the medication. Dr. Olsen opined that continued use of narcotics, Ambien and cyclobenzaprine were probably going to affect his liver function.

56. Dr. Olsen stated that Claimant had been diagnosed with diabetes and that Claimant may have peripheral neuropathy instead of failed back syndrome. However, multiple EMG nerve conductions studies including the one by Dr. Gnirke and Dr. Quan showed the contrary, that there was no peripheral neuropathy.

57. Dr. Olsen stated that Claimant also had hyperlipidemia, which is high cholesterol, and the current medications being metabolized through the nonalcoholic fatty liver was challenging his liver because the liver also helps manage cholesterol. Dr. Olsen opined that Claimant had to be weaned off of these medications that were challenging his liver until the medications are discontinued completely within six months on an outpatient basis.

58. Dr. Olsen agreed that Claimant was being prescribed narcotics to treat his ongoing chronic low back pain. He was uncertain why the other medications were being prescribed but assumed that the Ambien was being prescribed as a sleep aid. He agreed that the prescriptions of Percocet (Oxycodone), Ambien, Lyrica and Flexeril were not prescribed before his workers' compensation injuries to his low back and that they were prescribed by his workers' compensation providers while treating his work related injuries.

59. Dr. Olsen was concerned that PA King failed to document Claimant's other medical concerns in conjunction with any side effects of the medications but is providing the maintenance medications. Dr. Olsen agreed that he did not seen any reports of side effects in any of the medical records he reviewed.

60. Dr. Olsen testified that the Type 2 diabetes caused the fatty liver disease, which in turn caused the hyperlipidemia or high cholesterol. The three diagnosis worked together, one creating the other. He noted that Claimant could not have normal labs considering these diagnosis, but they may be stable for Claimant.

D. Claimant's Testimony:

61. Claimant was initially prescribed Tramadol by Dr. Zwerdlinger but it was not sufficient to help him with the pain. In fact, Tylenol helped more than the Tramadol. That is when she changed the prescription to low dose Percocet about two months after his injury.

62. Claimant had not taken this kind of medications prior to his injury of January 2015 nor did he have any problems with his back prior to his admitted work injury. Claimant had excruciating lower back pain and could barely walk at the time because it was affecting both of his legs. He was even on crutches for a time before his surgery.

63. Claimant had taken other medications than the ones he was on at the time of the hearing, including gabapentin, Methocarbamol, Tramadol, Effexor and Cymbalta

under the direction of Dr. Zwerdlinger and Ms. King, her PA as well as her nurse practitioner, Ms. Laura Hoffman. At the time he was being seen by Dr. Evans at Steadman Hawkins, for injections, who also knew about the medications he was being prescribed.

64. Claimant testified that he took Zolpidem (Ambien) as a sleep agent, because he has back pain, and numbness and pain in his right leg that prevent him from sleeping, noting that he was unable to sleep without the medication. When he does not take the Zolpidem, he would remain awake most of the night, and then would have to increase his intake of Lyrical for the nerve pain going from his back down his leg. He even sleeps with pillows between his legs due to symptoms.

65. Claimant testified that he had suffered severe pain for approximately three years until a physician was willing to perform his back surgery. He had been prescribed Dexamethasone for the back pain flare ups, which was a five day steroid. He had pain going into his groin.

66. After the surgery, he continued to have groin pain, numbness in the thigh and has back pain. He stated he believed he had a failed back fusion because he had continued back pain.

67. Claimant continues to take pregabalin (Lyrica) for the nerve pain in the right leg that comes from permanent damage to the spine. If he is unable to take the Lyrica, the pain in his right leg becomes severe and cause a flare up. He generally takes 100 mg of pregabalin a day but is allowed up to 300 mg per day for flare ups. Prior to that he had taken 300 mg pills and it would cause brain fog. When he reported the symptoms, his prescription was changed to 50 mg pills and he takes them as needed.

68. Claimant takes cyclobenzaprine (Flexeril) only when he has back or leg spasms and he may use one when he feels the spasms come on. He limits how much he takes and only takes one at a time. The Flexeril generally takes 20 to 30 minutes to take effect and start calming the muscle spasms. This normally happens on a daily basis.

69. Claimant takes a low dose oxycodone acetamitaphen 5 mg/325 mg (Percocet) for pain. He generally only takes one a day. He only takes two a day when that pain in his back and hip are not well controlled. He has a hard time functioning when he is unable to take the low dose medication. He stated that the Flexeril and low dose Percocet is the combination of pain relief that has been most effective for him. He stated that he has his labs on a regular basis to test him. He also has his fatty liver disease checked on a frequent basis too, with the last one approximately six months prior to the hearing at St. Vincent Health where he sees either Dr. Stewart or PA Amy King, as Dr. Zwerdlinger left the system. He reported that his kidney function is good without any issues.

70. Claimant testified that the medications keep him functioning, able to do small chores around his house. If he was unable to take them, he would not be able to function and his quality of life would go downhill. He had used a cane since approximately 2019 in order to walk because his right leg gives out. He is able to drive.

71. He has attended a water core strengthening class weekly upon the recommendation of Dr. Evans since August 2022. This is in order for his muscles not to atrophy. The exercise help his right leg and low back.

72. Claimant testified that he has had no side effects related to taking the four medications.

73. From both Claimant's testimony and the records, it is determined that PA King worked under Dr. Zwerdlinger at St. Vincent's Health, until Dr. Zwerdlinger left the practice and PA King continued to provide Claimant's maintenance care.

74. Claimant stated that he was not taking any narcotic medications at the time of the January 20, 2015 accident because he was afraid of being drug tested and being fired. Neither did he recall taking any pain medications at that time.

E. Other Evidence:

75. The Medical Treatment Guidelines propounded by the Division of Workers' Compensation, Rule 17, Exhibit 9 state that the CDC recommends limiting opioid dose to 90 MME per day to avoid increased risk of overdose and that there was strong evidence that any dose above 50 MME per day was associated with a higher risk of dead. Claimant is taking Oxycodone 5 mg, which, when multiplied by the opioid factor of 1.5 is an MME equivalent to 7.5 mg, well below the recommended maximum dosage.

76. Under Opioid Medication Management of the Guides, it states that in selective cases, opioids may prove to be the most cost effective means of ensuring the highest function and quality of life.

77. In this case, Claimant has been on a stable dose of 5 mg of oxycodone since after his 2018 surgery and has maintained a stable medication regime. PA King has documented that she has considered other alternatives and ruled them out as well as assessing that Claimant is not at risk for abusing his narcotic medication. Ms. King sees Claimant every month to assess continuing need for opioids, risks, and signs of abuse. Claimant credibly stated that he has his labs drawn and had done so recently before the hearing. PA King is found credible and persuasive. While the records do not show significant details of each question Ms. King asked of Claimant, she documents what is most important. Specifically that Claimant has no swelling in the extremities, no weight loss, no fatigue, no shortness of breath, no abdominal pain, and no jaundice, all of which might indicate poor liver function. As found, Claimant has used his medications to remain and maintain function for many years without significant worsening or requiring more aggressive treatment.

ALJ Felter issued Full Findings of Fact, Conclusions of Law and Order on September 11, 2018. ALJ Felter found Claimant permanently totally disabled and ordered reasonably necessary post maximum medical improvement maintenance medical benefits. This order was part of the evidence submitted in Claimant's packet. ALJ Felter considered ALJ Turnbow's opinion, noting that she had only issued a decision regarding permanent partial impairment, not regarding permanent total disability or maintenance medical benefits and that the determination of the DIME physician as to which body parts and resulting work restrictions were related to the work injury could be considered, but they

were not entitled to additional weight by the statute. *Cole v. Dish Network,* W.C. No. 4-918-651-02 [Indus. Claim Appeals Office (ICAO), January 15, 2016] *(aff'd sub nom. Dish Network v. Indus. Claim Appeals Office,* 2016 WL 7404847 (Colo. App., December 22, 2016). ALJ Felter did note that ALJ Turnbow's determination regarding MMI as of March 17, 2016 was binding.

78. Facts that may be pertinent to this decision are that ALJ Felter found Dr. Ogin was of the opinion that Claimant's permanent restrictions were causally related to the admitted injury, and was inconsistent with his insistence that Claimant had only a "temporary aggravation." He found that Lisa Zwerdlinger, M.D., the Claimant's primary care physician, saw him on the same day of his injury of January 20, 2015. She took the Claimant off work. Since his date of injury, the Claimant had not worked nor had he been released to return to his pre-injury job by an authorized treating physician. The Claimant had seen Dr. Zwerdlinger prior to his injury. Although Dr. Zwerdlinger's reports indicated that the Claimant had back pain prior to January 4, 2015 she noted that the Claimant's back pain had "significantly improved" after visits with chiropractor. At the hearing of August 23, 2018, the Claimant stated that the pain prior to his injury was related to his hip. Notwithstanding the Claimant's prior symptoms, the Claimant testified that he had no problems performing the duties related to his heavy duty job for the Employer until his admitted injury occurred on January 20, 2015. ALJ Felter found that the MRI on March 16 2015, as interpreted by Donald S. Corenman, M.D., the Claimant's primary authorized treating provider, showed Claimant had a central L3-L4 disc herniation with mild to moderate central stenosis and an L4-L5 disc bulge with left lateral recess stenosis. Dr. Corenman stated that the Claimant was unable to work. He further added, "I do not expect [Claimant] will ever be able to do heavy lifting." On May 6, 2015, Kelly Lindauer, M.D., performed an MRI which showed a disc protrusion at both Claimant's L3-4 and L4-5. Two years later, in April of 2017, Dr. Lindauer performed an additional MRI on the Claimant. She compared her findings to the prior imagining from May of 2015. She agreed that the findings were similar to the prior imaging done on the Claimant's lumbar spine in 2015 with some progression of pathology since the earlier imaging noting a "left posterolateral disc extrusion." He found Dr. Kuklo credible in his opinion that a "450-pound load can literally hit 1500 pounds of force across the disk *(sic),* which tears the annulus or the outer rim resulting in a disk (sic) bulge, back pain, [or] strain" and had worsened Claimant's condition since his industrial injury. ALJ Felter found Dr. Kuklo's, Dr. Zwerdlinger's and Corenman's opinions highly persuasive and credible over the opinions of Dr. Ogin and Dr. Reiss, stating that Dr. Kuklo's opinions were not available to ALJ Turnbow before her decision of February 14, 2018. Ultimately, ALJ Felter found that Claimant was entitled to maintenance medical care, which was reasonably necessary to address the injury and ordered Respondents to pay the costs of authorized, causally related and reasonably necessary post maximum medical maintenance care, including care by Dr. Corenman, and by Dr. Zwerdlinger.

79. This decision was appealed and the ICAO affirmed the decision in *In re Claim of Bertolas v. Climax Molybdenum,* WC 4-972-988-001, I.C.A.O. (May 3, 20219). The panel noted that there was no issue preclusion due to the distinct issues addressed in each case. ALJ Turnbow's determination was regarding overcoming the DIME physician's opinion and ALJ Felter addressed permanent total disability

and maintenance medical benefits. The panel determined that ALJ Turnbow's findings were not binding with regard to the issues addressed by ALJ Felter. This ALJ failed to find any further appeals and the panel's decision was final.

F. Conclusive Findings:

80. After consideration of both prior orders issued by ALJ Turnbow and ALJ Felter, this ALJ determines that the orders in those matters have little bearing on the single issue before this ALJ regarding the reasonableness and necessity of the ongoing maintenance medications, specifically Ambien, Oxycondone-Acetamenophen, Flexeril and Lyrica, in light of the evidence presented at this hearing. While it is clear from ALJ Felter's order that he considered ALJ Turnbow's findings overcoming the DIME physician's medical impairment, he found that the standard of proof was different in both cases and Judge Turnbow's decision only related to a finding regarding MMI and permanent partial disability benefits. Issue preclusion did not apply. This is true for this case as well.

81. As found, fatty liver is caused by buildup of excess fat in the liver when blood from the digestive system filters through the liver. Symptoms include fatigue, weight loss and abdominal pain, though there can be other more severe signs such as jaundice, swollen lower extremities, and shortness of breath.

82. As found, it is confusing to this ALJ how Dr. Olsen simply relies on other providers notes and Claimant's report of fatty liver disease and that he has failed to review any lab work reports. In fact, no lab work-up was provided by either party to this ALJ for consideration.

83. As found, Dr. Manna stated that use of opioids included hypogonadism and erectile dysfunction but did not identify whether she considered Claimant's ongoing need for pain management and what the options were. Only that all four medications should be discontinued. Further, PA King, who has managed Claimant's ongoing problems, has stated that she would prefer that Claimant not be on narcotics but, in light of the fact that Claimant had been tried on multiple other medications which caused side effects or were not effective, Claimant's current medication regime was necessary to keep Claimant functional. PA King is found to be credible and persuasive in this matter. This opinion was determined to be shared by other providers like Dr. Zwerdlinger, Dr. Corenman and Dr. Gnirke, as all noted Claimant's continued use and need for medication management after he was found to be at MMI on March 17, 2016.

84. Further, Claimant was credible in the fact that he testified that he tries to take as little medication as possible, frequently less than the prescribed amount, but requires it in times when the muscle spasm, intractable pain and problems sleeping increases in order to maintain some level of activity. If he does not have access to the maintenance medications, Claimant persuasively stated that he would not functioning well, could not walk around, do his core strengthening or the limited chores or simple daily living activities as needed. Further, he credibly stated that he has been stable due to the medication management. Claimant was credible and persuasive.

85. As found, Respondents have failed to prove by a preponderance of the evidence that the Claimant's Ambien, Percocet, Flexeril and Lyrica (or their generic counterparts) were no longer reasonably necessary or related to his ongoing needs for maintenance care related to Claimant's admitted January 20, 2015 work injury.

86. As found, Claimant has proven by a preponderance of the evidence that he continues to require maintenance medical care, as found by ALJ Felter, that is reasonably necessary and related to the January 20, 2015 admitted work related accident.

87. Testimony and evidence inconsistent with the above findings is not credible, persuasive or relevant to the issue determined herein.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial*

Claim Appeals Office, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Continuing Post MMI Medical Benefits

Section 8-42-101(1)(a), C.R.S. provides that respondents are liable for authorized medical treatment which is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). This includes maintenance medical treatment recommended after MMI. W.C.R.P. Rule 5-5(A)(1). The question of whether a particular treatment modality is reasonable and necessary is one of fact for resolution by the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995); *Young v. Bobby Brown Bail Bonds, Inc.,* W.C. No. 4-632-376, I.C.A.O. (April 7, 2010)(the question of whether the continued use of narcotic medications is reasonable and necessary is one of fact for determination by the ALJ); *Deane v. Regis Corp*., W.C. No. 4-664-891, I.C.A.O. (August 7, 2023)

A claimant is entitled to post-MMI maintenance medical benefits if future medical treatment will be "reasonably necessary to relieve the claimant from the effects of the industrial injury or occupational disease even though such treatment will not be received until sometime subsequent to the award of permanent disability". *Grover v. Indus. Comm'n*, 759 P.2d 705, 710 (Colo. 1998). In deciding whether maintenance care is necessary there must be evidence which establishes "but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that [s]he will suffer a greater disability than [s]he has thus far." *Stollmeyer v. Industrial Claim Appeals Office of State of Colo.*¸916 P.2d 609, 610 (Colo. App. 1995). Where the claimant's entitlement to continuing benefits is disputed, the claimant has the burden to prove the reasonableness and causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office, supra.*

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability,

reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). When respondents seek to terminate post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn,* W.C. No. 4- 754-838 (ICAO, Oct. 1, 2013). Specifically, respondents are not liable for future maintenance benefits when they no longer reasonable and necessary, or relate back to the industrial injury. See *In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

In *Deane,supra,* the ALJ credited the opinions of Dr. Olsen and Dr. Patel that the claimant needed to be weaned from her opioid medications. There was no evidence suggesting that the claimant's opioids should be immediately discontinued. Consequently, the ALJ determined that the claimant had established that ongoing opioid medications and Ketamine were reasonable, necessary, and related through the weaning process. *George v. Industrial Commission,* 720 P.2d 624 (Colo. App. 1986). The panel in *Deane* determined that an ALJ was unable to direct a medical professional to administer a treatment the professional did not believe was appropriate because it was not a matter arising under articles 40 to 47 of title 8 for which the ALJ is provided authority by Sec. 8-43-201(1), C.R.S. and Sec. 8-43-503(3), C.R.S. (employers, insurer. claimant or their representative shall not dictate to any physician the type or duration of treatment...). The panel emphasized that, should the respondents dispute the reasonableness and necessity of the opioids during the weaning process, the respondents remained free to file another application for hearing pursuant to Sec. 8-43-207, C.R.S., *Snyder v. Industrial Claim Appeals Office*, supra, or to possibly request a utilization review under Sec. 8-43-501(2), C.R.S. See Deane v. Regis Corp., *supra; Torres v. City & County of Denver,* W.C. No. 4-937-329-03, I.C.A.O. (May 15, 2018) and *Short v. Property Management of Telluride,* W.C. No. 3-100-726, I.C.A.O. (May 4, 1995).

The Medical Treatment Guidelines (MTGs), contained in Workers' Compensation Rule of Procedure 17, 7 CCR 1101-3, provide that health care providers shall use the Guidelines adopted by the Director of the Division of Workers' Compensation. Sec. 8-42-101(3)(b), C.R.S. In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003), the Colorado Court of Appeals noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. The Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the claimant's condition. *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005). The ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the

deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (Jan. 25, 2011). The Guidelines, however, do not constitute evidentiary rules, and an expert's compliance with them does not dictate whether the expert's opinions are admissible, or whether they may constitute substantial evidence supporting a fact finder's determinations. Rather, compliance with the Guidelines may affect the weight given by the ALJ to any particular medical opinion. *Cahill v. Patty Jewett Golf Course*, W.C. No. 4-729-518 (February 23, 2009); *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (April 27, 2009; *In re Claim of Foust*, 102120 W.C. No. 5-113-596, I.C.A.O. (October 21, 2020). Neither are the Guidelines definitive. *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150, I.C.A.O. (May 5, 2006), affirmed *Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (NSOP); *In re Claim of Reyes*, W.C. No. 4-968-907-04, I.C.A.O. (December 4, 2017)

Respondents' major arguments are that the four medications being prescribed by ATPs are no longer reasonably necessary for Claimant to continue due to the diagnosis of NAFLD and other risks as well as PA Kings lack of documentation as indicated in the Medical Treatment Guidelines and that they are not related to the January 20, 2015 work related injury.

Respondents' arguments that Claimant's continuing maintenance is related to the preexisting spinal degeneration and not the admitted January 2015 work related injury is not persuasive. Prior to Claimant's injury, Claimant was clearly able to work a very heavy duty job and, in fact, was moving a very large and heavy 450 lb. belt, which required four men to move, when he was injured. Claimant persuasively testified that he was not having significant problems with his lower back that prevented him from performing his heavy work and was not taking narcotic or pain medications at the time of his January 20, 2015 injury. While the records do show some indications that Claimant had either lower back pain or hip pain prior to his injury, they did not affect his ability to work. Claimant persuasively showed that it was more likely than not that his injury, and subsequent progression of disability and need for medications was as a consequence of the aggravation and acceleration of Claimant's spinal degeneration, was caused by the admitted work injury of January 20, 2015. Claimant's accident and injury of January 20, 2015 was the tipping point that led to a significant and progressive acceleration of his preexisting condition, causing his continued need for a medical maintenance regime of medications provided by Dr. Zwerdlinger and PA King, and other treatments such as the injections provided by Dr. Gnirke, in order to maintain Claimant's condition stable and prevent any further worsening.

This ALJ is not persuaded by Dr. Olsen's opinions with regard to either the NAFLD or the risks assessed by Dr. Manna. PA King, and Dr. Zwerdlinger before she left the St. Vincent Health practice, persuasively and frequently addressed all the risks involved, including examining Claimant with symptoms associated with NAFLD, such as fatigue, weight loss, abdominal pain, jaundice, swollen lower extremities, and shortness of breath. PA King has been assessing risk with regard to abuse and finding none. This is supported by the stability of Claimant's continued medications at the lowest level dosages possible, while still being effective in controlling his symptoms and maintaining Claimant at MMI without any further worsening other than occasional flares in symptoms. PA King, Dr. Gnirke and Dr. Zwerdlinger are more credible and persuasive than the contrary opinions

of Dr. Ogin and Dr. Olsen. Respondents have failed to show that it is more likely than not that the Ambien, Oxycodone, Flexeril and Lyrical are no longer reasonably necessary and related to the January 20, 2015 admitted work related injury.

Both parties failed to submit any lab work results or imaging showing what Claimant's liver condition is at this time. This might have been support for an argument that Claimant's medications are no longer reasonably necessary because his NAFLD has worsened over time, such as an increasing decline in liver function. Claimant has purportedly had this diagnosis of NAFLD, or steatosis, for many years, maybe even before the work related injury of 2015. Yet multiple ATPs have been prescribing Claimant narcotics, and other medications, which are metabolized by his liver, since his work related injury in 2015.

Respondents argue that the four medications, Ambien, Oxycodone, Flexeril, and Lyrica are no longer reasonably necessary due to Claimant's diagnosis of steatosis because the medications are potentially hazardous to Claimant's liver. This ALJ concludes that it is not because the medications are not reasonably necessary, but that they may be unwise for Claimant to continue the medications in light of the steatosis diagnosis without further confirmation that the NAFLD is being affected or that Claimant's liver function is declining due to the continued use of medications that are metabolized by the liver. In fact, while this ALJ has no authority or jurisdiction to direct Claimant's ATP to either continue or terminate medical treatment that is reasonably necessary, this ALJ encourages Claimant to consult with this ATP to wean the narcotics or other medications, even if for a short time, to determine if Claimant's function remains the same or declines, and assess whether continuing on the prescription medications is affecting his steatosis. Further, this ALJ encourages Claimant to confer with his ATP if the ATP has an opioid contract in effect, that regular lab tests are taking place, that Claimant have regular urine drug screens and that the ATP is monitor the PDMP.

Respondents also argue that PA King has failed to comply with the Medical Treatment Guidelines by not laying out every one of her assessments and findings regarding the benefits of medications and Claimant's functional performance which is assisted by the medications. This ALJ is not persuaded by this argument either. While providers are required to use the MTGs, this ALJ determines and finds that Claimant's ATPs are documenting Claimant's benefits from his continuing medications regime, though maybe not in the manner that Dr. Olsen is stating is required by documenting every specific activity that shows Claimant has benefited from the use of medications. This ALJ finds that, in fact, PA King is substantially complying with the rules and documenting that Claimant is benefiting from the medication, is not abusing them and understands the risks of continuing to use them. Respondents have failed to show that Claimant's continued use of the four medication is no longer reasonably necessary and related to the January 20, 2015 admitted work injury.

Claimant has proven by a preponderance of the evidence that Ambien, Oxycodone, Flexeril and Lyrical continue to be reasonably necessary. Claimant credibly and persuasively explained the medications he has taken for the last multiple years have helped him remain as functional as possible, including with activities of daily living, driving, core strengthening, aquatic exercises and chores around his home, considering his

ongoing continued and persistent lumbar spine pain, lower extremity radicular pain and muscle spasms, and difficulties with sleeping.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall continue to pay for Claimant's reasonably necessary and related medical care, including the Ambien, Oxycodone, Flexeril and Lyrical as long as they are prescribed by his authorized treating providers. Medical benefits are subject to the Colorado Workers' Compensation Fee Schedule. Respondents retain the right to challenge any treatment recommendation of the grounds that it is not reasonable, necessary or related to Claimant's 2015 injury.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts** or email the Petition to Review to oac-ptr@state.co.us. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 13th day of October, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-217-011-002

ISSUES

The hearing in this matter was set on the endorsed issue of Respondents overcoming the Division IME with respect to rating and Claimant's temporary partial disability. The following stipulations were offered and accepted:

- The Claimant's Average Weekly Wage is $580.00.
- TPD is owed from September 7, 2022 to September 29, 2022, when Claimant was initially placed at MMI.
- Dr. Johnson initially placed claimant at Maximum Medical Improvement (MMI) on September 29, 2022.
- Respondents stipulate that the date of MMI is December 29, 2022, as opined by the DIME doctor, Dr. Higginbotham.

The issues remaining for determination are:

- Did Respondents overcome the DIME's cervical spine rating by clear and convincing evidence?
- Did Claimant prove by a preponderance of the evidence that she is entitled to TPD beginning September 30, 2022 through December 28, 2022?

FINDINGS OF FACT

1. Claimant was employed as a cook for the employer and sustained an admitted injury on September 7, 2022 when she fell backward, tripping over a co-employees foot as she was carrying a container of chicken wings on her way to the fryer. When she fell backwards, she sustained a whiplash type injury.

2. Claimant treated at Concentra beginning on September 10, 2022. Claimant received conservative care from Dr. Johnson until he placed Claimant at MMI on September 29, 2022 with no impairment.

3. Respondent filed a Final Admission of Liability (FAL) on November 7, 2022 based on Dr. Johnson's report dated September 29, 2022. Claimant timely objected to the FAL and requested a DIME.
