27. Claimant continued to be out of pocket for the cost, which were not covered by her personal insurance, of the oxygen concentrator, which is a large machine that holds 2 liters of oxygen, and CPAP machine. She paid a portion of the oxygen machine, purse and CPAP machine but some of the cost were paid by her prior insurance, BC[Redacted]. She paid $2,185.00, for the oxygen machine and oxygen purse, which have not been reimbursed. She did not contact BCBS to find out how much the insurer paid because they discontinued her insurance since July 2020 and she was no longer a member. In addition, she required the cannulas, used to place the oxygen into her nose, the headset and mask since approximately 2017. This was mentioned by ALJ Goldman in June 2020. She also had a small portable oxygen purse. She used the oxygen concentrator from the time she had her surgery in 2017 continuously while in Granby, CO. She has been able to taper off of the oxygen since moving to New Mexico due to the lower altitude. The oxygen machine, purse and CPAP machine as well as all the necessary supplies are reasonably necessary and related to the 2015 work injury.

28. Claimant continues to use the CPAP machine, which is a machine that provides forced air (but not concentrated oxygen). It helps her breath while sleeping at night. The CPAP machine requires supplies as well, including cannula, mask, headgear, tubing, filters, replacement water chambers and a CPAP cleaner. She has purchased the equipment on her own, except for the CPAP cleaner, which she does not have as she could not afford to purchase the cleaner, which cost $264.99 at Walgreens. The cleaner sanitizes the supplies including the headgear, cannula, and tubing. This is required to keep bacteria and germs from forming on the equipment and supplies. She explained that she runs the risk of infection without the sanitizer and has been operating the machine without cleaning it properly since 2017, sucking whatever forms on the supplies into her lungs. While ALJ Nemechek specifically stated Respondent shall pay for "CPAP machine and supplies (including cannula, tubing/headgear)" he did not specifically address the equipment necessary to keep the CPAP supplies clean. Claimant testified that the cleaner is recommended for use every day. As found, Claimant requires this machine to keep her CPAP equipment clean and sterile for use and avoid any further risks of infections or bacterial overgrowth. This durable equipment is a reasonably necessary medical benefit and related to the July 23, 2015 work injury.

29. Claimant testified that her inability to care for herself as recommended by her prior provider has affected her emotionally and financially. Following the long process of trial and appeal, she continued to be somewhat skeptical that she would have resolution of the issues and finally obtain the funds to purchase those items she has been unable to obtain due to failure of the insurance to provide her with any options. As found, Respondent's failure to take any steps to provide either the equipment itself or the payment for the cost of the equipment is inexcusable.

---

[4] There was also a picture of a "Transport chair," which is one that a patient cannot move herself. Claimant credibly testified that this chair was not suitable for her as she would be dependent on others to push her. ALJ Nemechek also found it reasonably necessary and related to the injury.

[5] While there was mention of an electric chair, Claimant stated that she did not require one at this time.

30. Claimant continued to have to make the trip to Denver to see Dr. Paulson, until approximately May 2021, when she had her last appointment in person. Claimant advised that she was informed by Dr. Paulson it was too far for Claimant to be travelling for maintenance care from Farmington, New Mexico to Denver, Colorado. Further, he declined to provide virtual appointments. Lastly, he did not provide a referral to a medical provider in Farmington, New Mexico. It is clear that Respondent provided consistent payments for medical care including for prescription medication by TS[Redacted] through May 7, 2021. Following this date there were only three more payments to TS[Redacted], two for a November 12, 2021 date of service and one for February 11, 2022. No other payments were shown on the payment log and there is no indication that the payment log is incomplete.

31. Claimant stated that she had worked long hours with the assistance of her sister to write all the expenses she had incurred since her injury that had not been paid. She initially submitted spreadsheet to Respondent by early December, 2022.[6] Further, on January 13, 2023 Claimant submitted some receipts and again, prior to trial, Claimant found, after a three to four hour in her storage, several other receipts which were sent to Respondent.

32. Respondent was responsible for the costs of reasonably necessary and related maintenance medical care as previously established by orders issued by ALJ Goldman and Nemechek. Claimant noted that she required additional assistance even when she was treating with the medical providers, which included the alternating use of over the counter Tylenol and ibuprofen. Further, to assist her with pain relief, Claimant obtained Theraworx, a topical pain relief foam. As found Claimant's use of these three products was and is reasonably necessary and related to her July 23, 2015 work related injury.

33. Claimant has been unable to purchase the recumbent bike ordered by ALJ Nemechek because she could not afford the purchase price of $469.99. Given ALJ Nemechek's denial of a gym membership, it was critical for her to receive the exercise equipment needed to maintain her functional abilities, to allow her to lose some weight, and help control pain and depression. She also has to keep up her strength as she needs to be able to keep as mobile as possible for as long as possible. Further, the balancing pad would help her as well. These also were items ordered by ALJ Nemechek to be paid by Respondent and continue to be reasonably necessary and related to the claim.

34. Claimant further paid for the exercise balls, weights, a treadmill, exercise bands, also photographed in the exhibits and listed on her spreadsheet. Claimant paid for this equipment out of her own pocket and requested that Respondent reimburse her, pursuant to ALJ Nemechek's order, without response. For these items alone she is still owed approximately appropriate $342.88.

35. On March 3, 2023 Respondent obtained some of the pricing through OM[Redacted] for multiple of the items which Claimant purchased. The OM[Redacted] pricing was submitted as a spreadsheet of the items with prices. After considering the pricing that OM[Redacted]

[6] As Claimant was unable to pinpoint the exact date, this ALJ will infer it was no later than December 31, 2022.

recalculated, Claimant re-drafted a second spreadsheet which more accurately reflected her expenses.[7]

36. As found, Respondent knew or should have known that Claimant would require continuing medical care.

37. As found, Respondent knew or should have known that they were responsible to pay for the ordered medical benefits listed by ALJ Nemechek. This put the onus on Respondent to comply with the order. There was an order stating that "Respondents shall pay" for the items listed. As further found, the order does not specify that Claimant has to make a claim as she had already made a claim and it was discussed by ALJ Nemechek and ordered.

38. As found, by combining the information that was persuasive and credible from both the Claimant's and OM's[Redacted] spreadsheets as well as considering Claimant's testimony and other receipts in the record, this ALJ makes the reasonable choice to determine the actual cost of past due benefits that Respondent was ordered to pay.

39. This ALJ issued a Summary Order dated April 13, 2023, finding that Respondent knew or should have known that Claimant moved to Farmington, New Mexico as of at least November 10, 2020 tough likely around May 2020. Respondent knew that Claimant required ongoing medical care for her low back, respiratory conditions and her urinary incontinence. Yet, when Claimant moved, they did not designate a provider nor did they pay for any further medical care other than the occasional prescription.

40. As found, Respondent were aware and had notice of the itemized list of medical benefits Claimant required by July 27, 2022 when the appeal process terminated and ALJ Nemechek's order became final. Respondent had knowledge of the items Claimant was requesting as they featured prominently in both ALJ Goldman's and ALJ Nemechek's Final Orders which were found as reasonably necessary medical benefits related to the claim. Respondent failed to comply with ALJ Nemechek's Order to pay the reasonable, necessary and authorized medical care.

41. Respondent shall pay Claimant as follows:

Bladder & Incontinence Supplies

Item description	Price per unit	Amount	Total price
EQUATE OPTION PADS, DISCREET BLADDER PROTECTION LONG LENGTH, MAXIMUM ABSORBENCY; BAG OF 72	$14.34	368	$ 5,277.12
CARDINAL HEALTH DISP DRY WASHCLOTH, 9" X 13.5", WHITE CS/500 (MFR# AT907)	$ 13.10	85	$ 1,113.50
FIBERLINKS TEXTILES INC AMERICARE ULTRA	$13.50	14	$ 189.00

[7] With the exception of the "Handicap Features for her Household," which have not been requested and

were not at issue at this hearing, and reserved for future determination.

WATERPROOF SHEET PROTECTOR WITH HANDLES 34" X 36" TWIN SIZE (MFR# A12605/H)				
BARD ALL PURPOSE RED RUBBER URETHRAL CATHETER 16FR, CASE/100 (MFR# 9416)	$ 82.30	10	$	823.00
URINARY DRAIN BAG MCKESSON ANTI-REFLUX VALVE STERILE 2000ML, VINYL, CS/20 (MFR# 37-2802)	$40.95	10	$	409.50

Recumbent Bike	$469.99	1	$	469.99
Balancing Pad	$159.99	1	$	159.99
Ibuprofen (OTC)	$13.70	42	$	575.40
Tylenonl (OTC)	$8.99	28	$	251.72
THERAWORX TOPICAL PAIN RELIEF SPRAY (MFG# AZVTWR08SPH)	$24.50	28	$	686.00
				$2,485.98

Cum. Total	**$**	**16,753.40**

42. Respondent shall pay Claimant the total amount of $ 16,753.40 for those benefits as established by the chart above.

43. Respondent shall pay past due medical benefits to [Redacted, hereinafter BC] for any out of pocket reasonably necessary medical care they may have paid for problems with incontinence and oxygen or lung issues suffered by Claimant related to her July 23, 2015 work injury.

44. Further, as found, Respondent failed to comply with ALJ Nemechek's order, which merits an additional penalty due to the violation of the order to pay. This penalty is deemed to be from July 27, 2022 and continuing until the funds are paid by Respondent to Claimant.

45. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

(2022). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

B. Failure to Comply with ALJ Order

Claimant alleges that Respondent failed to comply with ALJ Nemechek's Summary Order on November 26, 2021 and subsequent Findings of Fact, Conclusions of Law and Order of March 2, 2022 wherein he ordered Respondent to pay for, in compliance with the Colorado Workers' Compensation Fee Schedule, certain items he found were reasonably necessary and related to the injury. These items included, but were not limited to, medical supplies related to Claimant's urinary incontinence, oxygen concentrator, CPAP machine and supplies, walking cane, 4-wheel walker, wheelchair, and specific exercise equipment. Some of the items Claimant had already purchased, some had been partially paid by her personal insurance, some of the items required an ongoing recurring purchase and some of the items had not been purchased due to the costly nature of the items.

What is clear is that Respondent neither paid for nor made arrangements to pay for what Claimant paid for, what she could not pay for and/or failed to make arrangements for Claimant's receipt of the items prescribed. Nothing in ALJ Nemechek's order could be confused. He specifically stated that Claimant had established she was entitled to maintenance medical benefits and that "Respondent shall pay for the following items." The use of "shall" here is interpreted as mandatory. Nothing in ALJ Nemechek's order indicated that they only needed to pay for the items if Claimant produced a receipt that Respondent accepted as accurate or reasonable. Nothing in the order noted that Claimant had to purchase the items and then produce the receipts. Neither did the order indicated that Respondent was able to reject the price or value of what Claimant had purchased. In fact, pursuant to Sec. 8-42-101(6)(b) Claimant must be reimbursed the full amount of what she paid.

No persuasive evidence was provided by either party as to the cost of the items listed pursuant to the Colorado Workers' Compensation Fee Schedule or what items were not listed on the Fee Schedule. It is not up to this ALJ to provide those costs and rule on what medical services or items are on the Fee Schedule. However, Claimant either provided a receipt, an estimate of the cost of the item or agreed to the number identified by Respondent on the OM[Redacted] listing, which Respondent tendered as an exhibit of potential costs of the item. Respondent did not state or assert that those per item cost listed on the OM[Redacted] document were in compliance with the Fee Schedule either. However, what is clear from the evidence is that ALJ Nemechek ordered Respondent to pay for items which were reasonably needed to maintain Claimant at MMI and ordered Respondent to pay. Nothing in the evidence indicated that any of the items listed by Claimant in her spreadsheet had actually been paid for previously. In fact, the only statement that indicated that Respondent had paid pursuant to a stipulation of the parties which specifically stated "Counsel for Respondent stipulated to pay for the co-pays of (sic.) incurred by Claimant for urinary incontinence pads totaling $360.00. This Stipulation was accepted by the Court and is made part of this Order." However, Claimant credibly testified that she had not been paid pursuant to the stipulation and Employer's log does not show a payment.

What is patently clear to this ALJ is that Respondent failed to comply with ALJ Nemechek's order once it became final. They did not make the arrangements necessary for Claimant to receive the items or the promised payment. They did not send any inquiries of what Claimant would prefer to happen or make arrangements with Claimant

to pay for the items. They did not provide persuasive evidence that they were in the process of acquiring the items to send to Claimant through a vendor, which is commonly done within the workers' compensation system in cases like these, where Claimant has an ongoing disability that requires frequent refills, like medications, incontinence pads, or equipment. What is clear, is that, pursuant to ALJ Nemechek's order, Respondent had, at the very least, a list of Claimant's ongoing medical need requirements as authored by ATP Paulsen since August 26, 2020. It is inconceivable that Respondent had the list of these items by no later than the hearing of November 10, 2020 and, still, Respondent provided little evidence that they had taken any affirmative steps to procure the items or pay for the items. Therefore, they cannot credibly assert that they had no knowledge of them or not enough time to provide them. This pattern of behavior is a blatant disregard for the Workers' Compensation System and to the Act as it showed that Respondent, had indeed, not given any importance to the ALJ's findings and his order. Claimant has shown by a preponderance of the evidence that Respondent failed to comply with ALJ Nemechek's order when it became final.

C. Reasonably necessary and related medical benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover* v. *Indus. Commission*, 759 P.2d 705 (Colo. 1988). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000). Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Commission, supra*. When the respondents contest liability for a particular

benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. *Id.*

ALJ Nemechek found that multiple items were reasonably necessary and related to the July 23, 2015 work injury. This ALJ also finds those items are reasonably necessary and related to the July 23, 2015 work injury. That includes:

- All medical supplies related to Claimant's urinary incontinence (including catheters, small and large wipes).
- Oxygen concentrator (reimbursement for expenses previously incurred).
- CPAP machine and supplies (including cannula, tubing mask/headgear).
- The walking cane, 4-wheel walker, wheelchair.
- Exercise equipment (large and small exercise balls, 1 and 3 pound weights, treadmill, exercise bands, balancing pad, and recumbent bike), [reimbursement for expenses previously incurred].

This ALJ also determines that the antibacterial soap was critical to avoid infections and to remain sanitary in light of Claimant having to deal with incontinence and is reasonably necessary and related to the July 23, 2015 work injury.

While ALJ Nemechek specifically stated Respondent shall pay for "CPAP machine and supplies (including cannula, tubing/headgear)" he did not specifically address the equipment necessary to keep the CPAP supplies clean. Claimant testified that the cleaner is recommended for use every day. As found, Claimant requires this machine to keep her CPAP equipment clean and sterile for use and avoid any further risks of infections or bacterial overgrowth. This durable equipment is a reasonably necessary medical benefit and related to the July 23, 2015 work injury.

Claimant continued to be out of pocket for the cost, which were not covered by her personal insurance, for the oxygen concentrator, OxyGo (small portable oxygen purse) and CPAP machine in the amount of $2,185.00. She paid a portion but some of the costs were paid by her prior insurance, BC[Redacted]. In addition, Claimant required the cannulas, the headset and mask since approximately 2017. This was mentioned by ALJ Goldman in June 2020. The oxygen machine, purse and CPAP machine as well as all the necessary supplies are reasonably necessary and related to the 2015 work injury. Claimant has shown by a preponderance of the evidence that both Claimant and BC[Redacted] should be paid for the costs listed above.

Claimant credibly and persuasively testified that she required additional assistance to control pain levels, even when she was treating with the medical providers, which included the alternating use of over the counter Tylenol and ibuprofen. Further, to assist her with pain relief, Claimant obtained Theraworx, a topical pain relief foam. As found Claimant has shown it is more likely than not that her of these three products was and is reasonably necessary and related to her July 23, 2015 work related injury.

Claimant purchased some exercise equipment that ALJ Nemechek already found reasonably necessary and related to her injury. What Claimant has not been able to afford on her own is the recumbent bike ordered by ALJ Nemechek because she could not afford the purchase price of $469.99. As found, the exercise equipment needed to

maintain her functional abilities listed in the chart above including the recumbent bike are reasonably necessary and related to the injury.

Claimant has shown by a preponderance of the evidence that Respondent owes Claimant the amount of $ 16,753.40 for those benefits as established by the chart above, which will not be replicated here. Further, Claimant has shown she has continuing needs for ongoing supplies, both due to the incontinence as well as for use of the CPAP machine. Respondent is liable for both past benefits set out in the chart above and ongoing benefits, which Respondent shall send to Claimant through a vendor or Respondent shall pay Claimant at the rate established in the chart.[8]

D. Interest Penalties on Past Due Benefits

Sec. 8-43-401(2)(a), C.R.S. states as follows:

> After all appeals have been exhausted … all … employers shall pay benefits within thirty days after any benefits are due. If any … self-insured employer knowingly delays payment of medical benefits for more than thirty days …, such … employer shall pay a penalty of eight percent of the amount of wrongfully withheld benefits....

Claimant alleges that Respondent owe eight percent interests on all benefits not paid when due, specifically citing to the items that ALJ Nemechek listed as reasonably necessary medical benefits in his final order of March 2, 2022. However, in looking at case law, the Court in *Pena v. ICAO*, 117 P.3d 84 (Colo. App. 2005) provides some guidance. In that case, the Court stated that the ALJ appropriately denied penalties under Sec. 8-43-401(2)(a) for failure to pay benefits timely because Claimant did not submit evidence of medical bills that were not timely paid. *Id.* at p. 90.

Like in the *Pena* case, here, there was no requirement for prior authorization and the insurer did not treat the order as a request for prior authorization by contesting it in accordance with rules that apply to prior authorizations. Further, it is not a situation in which Claimant received treatment, the provider submitted a bill for the treatment, payment was due, and Respondent delayed payment of that medical benefit for more than thirty days after the due date or stopped payment. Sec. 8-43-401(2)(a) does not apply as it does not specifically provide a penalty for Respondent's actions following receipt of the ALJ's decision and Respondent's failure to provide medical benefits in accordance with the order. Claimant established that Respondent failed to comply with the Order issued by ALJ Nemechek and failed to provide the medical benefits Claimant was entitled to pursuant to the Order. The appropriate penalty is pursuant to Sec. 8-43-304, C.R.S. Therefore, Claimant's request for penalties under Sec. 8-43-401(2)(a) is denied.

E. Penalties Due for Violation of an Order

[8] The amounts may be subject to change and either party may request a change in the costs set out in the chart incorporated in this order or challenge the continuing reasonable, necessity of the supplies.

Under Sec. 8-43-304(1), C.R.S. (2022), penalties of up to one thousand dollars per day may be imposed against a party who: (1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or the Panel; or (4) fails, neglects, or refuses to obey any lawful order. *Pena v. Indus. Claim Appeals Office,* 117 P.3d 84, 87 (Colo. App. 2004). Further, Sec. 8-43-305, C.R.S. states that "Every day during which any employer … fails to comply with any lawful order of an administrative law judge, … shall constitute a separate and distinct violation thereof."

To determine whether penalties should be imposed under Sec. 8-43-304(1), C.R.S. there is a two-step process, first requiring the ALJ to determine if the employer's conduct violated the Act, a rule, or an order. If a violation occurred, the ALJ must then determine whether the party's actions were objectively reasonable. An ALJ may impose a penalty under Sec. 8-43-304(1) if it is shown that the employer failed to take an action that a reasonable employer would have taken to comply with the order. The employer's conduct is measured by an objective standard of reasonableness. *Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965, 967 (Colo. App. 2003). Different divisions of the Colorado Court of Appeals have reached different conclusions regarding the measure of "objectively reasonable" conduct. Some divisions have concluded that the relevant inquiry is whether the conduct was based upon a rational argument in law or fact, while others have concluded that the question is merely whether the conduct was unreasonable. *See Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97, 100 (Colo. App. 2005) [discussing the two lines of cases]; *Diversified Veterans Corporate Ctr. v. Hewuse,* 942 P.2d 1312, 1313 (Colo.App.1997).

The ALJ also has wide discretion in determining the amount of any penalty. *Crowell v. Industrial Claim Appeals Office*, 298 P.3d 1014 (Colo. App. 2012). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The penalty should be sufficient to discourage future violations, but should not be constitutionally excessive or "grossly disproportionate" to the violation found. *Colorado Dept. of Labor & Employment v. Dami*, 442 P.3d 94 (Colo. 2019). When assessing proportionality, the ALJ should "consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions. In considering the severity of the penalty, the ability of the regulated individual or entity to pay is a relevant consideration. And the proportionality analysis should be conducted in reference to the amount of the fine imposed for each offense, not the aggregated total of fines for many offenses." *Id*. at 103. The ALJ can also consider factors such as the reprehensibility of the conduct involved and the harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005); *Pueblo School Dist. No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996). Actual prejudice or harm to the claimant is relevant but is not dispositive, particularly where the violation is not explained by the evidence. *Strombitski v. Man Made Pizza, Inc*., W.C. No. 4-403-661 (July 25, 2005).

Here, Claimant alleges Respondent failed to comply with ALJ Nemechek's Summary Order dated November 26, 2021 and subsequent Findings of Fact, Conclusions

of Law and Order dated March 2, 2022, wherein the ALJ ordered Respondent to pay, in compliance with the Colorado Workers' Compensation Fee Schedule, for certain items he found were reasonably necessary and related to the injury. This ALJ acknowledges Respondent's right to appeal in this matter and the fact that the ALJ's order was not final until all appeals were abandoned on July 27, 2022. Here, this ALJ was persuaded there was a violation of the Order issued by ALJ Nemechek. Specifically, ALJ Nemechek issued an order that stated that Respondent "shall provide medical benefits to Claimant required to treat the effects of her work injury and to maintain MMI, pursuant to the Colorado Workers Compensation Medical Fee schedule" and that "Respondents shall pay" Claimant for specific items, which he listed in his order.

Respondent argues that they did not pay because Claimant had not provided receipts for the items she was purchasing. However, nothing in the order stated that was required of Claimant, only that "Respondents will be required to reimburse Claimant for said equipment." And even if it implied that some form or proof was necessary, the Claimant's statement alone in sufficient to establish what she paid and what should have been reimbursed to Claimant. Stated another way, Claimant was not required by the ALJ's order to provide a receipt in order to receive reimbursement. The onus here was on Respondent, not Claimant, to make the payment in accordance with the Colorado Workers' Compensation Fee schedule. Respondent's "negligence in failing to take the action a reasonable carrier would take should result in the imposition of penalties..." See *Diversified, supra*, at p. 1313. As found, Respondent failed to take any credible or persuasive steps to even investigate the costs of the items until March 2, 2023 when they obtained the OM[Redacted] listing of items priced. Nothing in counsel's statements or in the evidence presented at hearing clarifying the OM[Redacted] pricing stated that the OM[Redacted] pricing was consistent with the Colorado Fee Schedule. While Claimant's statements clarifying her actual costs of what she had paid for certain items that were not provided by Respondent, was helpful in determining what Claimant is owed, this was not a critical element in determining the reprehensibility of Respondent's failure to comply with ALJ Nemechek's order. Respondent provided no reasonable or appropriate explanation for violating the Order and Respondent's neglect was not objectively reasonable.

Respondent knew what the Summary Order issued by ALJ Nemechek on November 26, 2021[9] stated. They knew what ALJ Nemechek stated in his order of March 2, 2022. Yet they waited until a year later to take any steps whatsoever to investigate the costs. And even when they obtained the OM[Redacted] pricing, still they paid nothing. Had this been a bill that was being disputed by a medical provider, they would have paid what they believed the Medical Fee schedule said and fought about the reasonable costs or discrepancy at a later time. The same would happen if Respondent had received a demand for mileage reimbursement. A reasonable Respondent would have paid what was undisputed and fought over the disputed mileage at a later time. Here, as found, Respondent failed to take any action that a reasonable Respondent would have taken to comply with the order and Respondent failed to act even when they received Claimant's spreadsheet or when they received the OM[Redacted] pricing estimate, by not paying Claimant anything even by the date of the hearing. A reasonable Employer would have paid

[9] Mailed on November 29, 2021.

something, even if it was less than what Claimant paid. Respondent's conduct was objectively unreasonable.

Respondent also argued that Claimant, in fact, obtained some of the equipment and supplies she needed and was not deprived of the needed medical benefits. This argument seems egregious. Claimant credibly testified that she had to set aside funds she would normally use for other household needs, like needed groceries, in order to get some of those supplies she needed. She is forced by that added expense to just sit at home and wait since any extra money has gone towards paying for products and supplies that should be paid for by Employer as part of her ongoing medical benefits. Further, Claimant was not able to obtain some of the essential supplies she does need, such as the CPAP cleaner that keeps the supplies sanitized and lowers her risk of infections or transferring germs into her lungs. Respondent was not the one to supply the funding, Claimant had to do so to her own detriment. This one simple thing, Respondent's failure to pay pursuant to the order, is in violation of the very principles of the Workers' Compensation Act, "to assure the quick and efficient delivery of disability and medical benefits to injured workers." Sec. 8-40-102(1), *supra.* Therefore, Respondent's conduct was objectively unreasonable.

Also as found, Respondent knew or should have known that Claimant required maintenance medical benefits to maintain her at MMI pursuant to both ALJ Goldman's and ALJ Nemechek's orders. The payment log showed that Respondent was consistently making payments for medical care through the time she was no longer able to see Dr. Paulsen. Since then, there were only three payments made to [Redacted, hereinafter TS].[10] However, this showed Claimant consistently required medical care which Respondent stopped providing and/or paying. Claimant cannot be faulted by the fact that she was attempting to handle her medical conditions in any manner she could. Respondent even made a stipulation to make a payment of $360.00 and Respondent did not pay this agreed upon amount. This ALJ finds that Respondent acted reprehensibly in failing to act at all after Claimant moved to New Mexico, first to designate a provider, then not paying the stipulated amount of $360.00 and lastly to provide the maintenance care she required. The Workers' Compensation Act does not prohibit a Claimant from moving from the state of the injury. In this matter, Claimant acted in a reasonable manner given her circumstances, especially considering her continual need for oxygen in Colorado, which she was actually able to ween off of after the move, with the exception of the nightly forced air treatment provided by the CPAP machine. As found, Respondent's conduct was objectively unreasonable.

Next, this ALJ considers the appropriate amount of the penalty to "punish the violator and deter future misconduct." Case law instructs that when assessing proportionality, the ALJ should "consider whether the gravity of the offense is proportional to the severity of the penalty." The ALJ can also consider factors such as the reprehensibility of the conduct involved and the harm to the non-violating party. Here, the ALJ considers that the failure to act and pay Claimant in accordance with the ALJ's Order significantly limited Claimant's ability to obtain the maintenance care she required to

[10] It is not clear from the log whether the payments were made for medical services before she no longer had access to Dr. Paulson or after, but this ALJ is inferring that it was after. This ALJ also is assuming that the TS[Redacted] benefits was for prescription medications.

maintain MMI, including additional equipment ordered to maintain her functionality. The original Summary Order was issued in November 2021, so Respondent knew or should have known what benefits Claimant was due, and any further delays past the final order of July of 2022 is reprehensible. This has been an extremely stressful situation for Claimant and caused Claimant depression related to Respondent's failure to pay. Respondent failed to provide evidence regarding Respondent's ability to pay, so consideration of this factor is limited. However, this ALJ takes notice that the employer and its' parent company is a large chain store under multiple names and has stores in at least 10 states in the nation when considering their ability to pay. Respondent knew or should have known that the *Dami* test would be applied and they had the opportunity to put on evidence in defense of the penalties issue including ability to pay. This ALJ finds that Respondent not only acted reprehensibly but acted in a manner that showed total lack of regard to the Act and to the ALJ's order and failed to put on a defense to the issue despite the opportunity to do so.

Therefore, it is found and concluded that Claimant proved that Respondent acted objectively unreasonable in this matter. *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999). Claimant proved by a preponderance of the evidence that a penalty is due. As found, Respondent shall pay $150.00 per day for each day's failure to comply with ALJ Nemechek's March 2, 2022 order beginning from the date the Order became final on July 27, 2022 to the present and continuing until paid. As found, from July 27, 2022 to the date of the hearing of March 29, 2023 a 245 day period, penalties owed are $36,750.00. Thereafter, Respondent shall continue to owe ongoing penalties per day until the benefits are paid. As found, this is a penalty that is reasonable (only 15% of the maximum allowed), and not grossly disproportionate to the violation in light of the reprehensible act of Respondent in failing to make any payments in accordance with the order. While this ALJ views Respondent's actions as extremely and objectively unreasonable and reprehensible in failing to act and should merit a $1,000.00 a day penalty for their non-actions, when comparing similarly placed parties in other cases, this ALJ determined that the $150.00 per day may be viewed by any reviewing panel or court as "not disproportionate" to the harm caused to Claimant and Respondent's complete disregard of the order issued and a sufficient penalty to punish Respondent and deter future misconduct. As found, there is no evidence indicating Respondent is unable to pay a penalty that is proportionate to its offense. Based on the degree of reprehensibility of Respondent's conduct, the harm suffered by Claimant, and penalties assessed in comparable cases, the ALJ concludes that a penalty of $150.00 per day is appropriate. The amount of the penalty is more than proportionate to the harm to Claimant and Respondent's disregard for the order issued by the ALJ as well as to punish Respondent and deter this conduct in the future.

ORDER

IT IS THEREFORE ORDERED:

1. Respondent failed to comply with ALJ Nemechek's order of March 2, 2022.

2. Respondent shall pay the past due $ 16,753.40 for the reasonably necessary and related medical benefits itemized in the above chart.

3. Claimant's request for interest on the past due amounts pursuant to Sec. 8-43-401(2)(a) is *denied* and *dismissed*.

4. Respondent shall pay a penalty for failure to comply with ALJ Nemechek's order of March 2, 2022 in the aggregate amount of $36,750.00, and continuing thereafter at the rate of a $150.00 per day until Respondent issues payment to Claimant for the $ 16,753.40 for ordered reasonably necessary and related medical benefits based on the chart shown above. Of the penalties, seventy five percent of the fine shall be apportioned to Claimant and twenty five percent of the fine shall be apportioned to the Colorado Uninsured Employer Fund.

5. Respondent shall either arrange for delivery of the monthly items Claimant requires which have previously been found to be reasonably necessary and related to the July 23, 2015 injury or send a payment based on the chart above on a monthly basis for Claimant's future supplies.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 9th day of May, 2023.

ISSUES

- Did Claimant prove he suffered a whole person impairment to his right shoulder?
- If Claimant did not prove whole person impairment to his right shoulder, what is the proper scheduled rating based on a preponderance of the evidence?
- Did Respondents prove the DIME process is incomplete?
- Did Respondents overcome the DIME's whole person rating(s) by clear and convincing evidence?

FINDINGS OF FACT

1. Claimant works for Employer as journeyman gas fitter, installing and servicing natural gas lines. He has done this work for Employer for seven years. The job is physically demanding and requires heavy lifting, digging, and awkward postures.

2. Claimant suffered admitted injuries to his low back and right shoulder on February 12, 2020. He was walking across a snow-covered area and stepped on a PVC pipe buried in the snow, which caused him to lose his balance and fall onto his right arm and back.

3. Claimant's case is complicated by a pre-injury history of low back and right shoulder issues. He had a two-level lumbar fusion in 2001. The surgery was largely successful, but he was left with chronic left leg radiculitis. The lumbar fusion was the result of a personal health condition and not associated with any work-related injury.

4. On December 23, 2009, Claimant injured his right shoulder while working for [Redacted, hereinafter CT]. He underwent a right shoulder arthroscopy with biceps tenolysis in late-March 2010. Claimant also injured his right hip in the December 2009 accident and had a total hip arthroplasty. Claimant was put at MMI on March 31, 2011, with a combined 13% whole person rating for both injuries. The MMI report is not in the record and no evidence was offered at the hearing to show what portion of the 13% rating, if any, was attributable to the right shoulder.[1]

5. After the February 12, 2020 accident, Claimant treated at Advanced Urgent Care. He was referred to Dr. Michael Hewitt for his shoulder and Dr. Karen Knight for his back.

[1] Some portion of the overall 13% rating was probably for the hip arthroplasty, which is typically assigned at least 20% lower extremity/8% whole person under Table 45 of the *AMA Guides*.

6. Claimant's initial evaluation with Dr. Knight took place on November 30, 2020. He described back pain radiating to the right buttock, with associated numbness and tingling. Recent imaging studies showed postsurgical changes from the prior fusion at L4-S1, and multilevel degenerative disc disease with central stenosis. Dr. Knight recommended lumbar epidural steroid injections (ESIs).

7. Dr. Hewitt performed a right shoulder arthroscopy on December 30, 2020. Dr. Hewitt repaired a supraspinatus tear and debrided the superior labrum.

8. Advanced Urgent Care closed its clinic and Claimant's care was transferred to Dr. Matthew Lugliani at Colorado Occupational Partners. Claimant's first saw Dr. Lugliani on March 9, 2021. He reported ongoing right shoulder and low back pain. The shoulder was tender to palpation, but there was no tenderness or other abnormality on examination of the trapezius, AC joint, or scapula. Dr. Lugliani agreed with Dr. Knight's recommendation for lumbar ESIs.

9. The record contains only two pain diagrams completed by Claimant, dated January 14, 2021 and March 9, 2021. The diagrams are barely legible but appear to show pain limited to the superior aspect of the right shoulder and low back. There is no persuasive indication of neck, trapezius, or scapular pain.

10. At a three-month surgical follow up appointment on March 24, 2021, Dr. Hewitt noted Claimant was making "excellent progress" with PT and taking no pain medication. Examination of the shoulder showed reduced range of motion and strength, but "minimal pain" and "no focal shoulder tenderness."

11. Claimant attended PT from January to early May 2021. On April 7, 2021, the therapist noted Claimant could not perform heavier household chores and yard work, but "all other ADLs have returned to normal." On May 5, 2021, the therapist documented, "Shoulder is not impacting any ADL function." Claimant had his final PT appointment on May 10, 2021. Claimant reported, "overall, shoulder is treating him well. Began 'light duty' work today. Back has been bothering him a bunch." Claimant was seeing chiropractor and a massage therapist for his ongoing low back symptoms. Shoulder strength was normal with all movements. Lumbar range of motion was reduced in all planes. The report makes no mention of any neck, trapezius, or scapular symptoms.

12. Claimant received chiropractic treatment from Dr. Zachary Jipp in April through July 2021. The treatment was primarily focused on Claimant's back. Dr. Jipp's records contain no persuasive evidence of any scapular, trapezius, or neck symptoms related to Claimant's shoulder injury.

13. Claimant also received massage therapy from April through June 2021. The therapist typically worked on Claimant's entire back including his "traps," "lats," and thoracolumbar paraspinal muscles. The therapist repeatedly observed hypertonicity on palpation of Claimant's low back, buttocks, and upper legs. However, there are no similar clinical findings related to the trapezius or latissimus dorsi, such as spasm, trigger points, or tenderness.

14. Dr. Knight eventually performed ESIs at L3-4 and L4-5 in August 2021. The injections resolved Claimant's lower extremity radicular symptoms and reduced his low back pain. At the last documented appointment with Dr. Knight on September 24, 2021, Claimant reported "good days and bad days" but was generally doing well. Lumbar range of motion was limited. Dr. Knight released Claimant to follow up as needed if his back pain worsened.

15. Dr. Lugliani put Claimant at MMI on October 27, 2021. Claimant had "minimal pain" and estimated 95% improvement since the injury. He was working full duty without difficulty. Examination of Claimant's right shoulder showed well-healed surgical sites and no tenderness to palpation. Shoulder and lumbar ranges of motion were reduced in all planes. Dr. Lugliani assigned a 6% upper extremity rating for the right shoulder, which converts to 4% whole person. He also provided a 16% whole person lumbar rating, consisting of 5% under Table 53 and 12% for range of motion. Dr. Lugliani opined, "while apportionment may be indicated in this case, we have no previous medical records to evaluate. Patient does have a history of lumbar fusion." Regarding medical maintenance, Dr. Lugliani recommended one year of follow-up with pain management and repeat injections for flareups. He released Claimant to full duty with no formal restrictions, but stated "patient is aware of his limitations and will interact with them."

16. Claimant saw Dr. Brian Beatty for a DIME on July 20, 2022. Dr. Beatty documented a thorough record review, including extensive pre-injury records. The records include a March 31, 2011 report from the December 2009 injury claim documenting a 13% combined whole person rating for Claimant's right hip and right shoulder. Dr. Beatty provided no breakdown of the rating. Claimant reported he was working regular duty but having some difficulty with shoulder pain with overhead work and reaching away from his body. He also had ongoing low back pain. Claimant was not interested in additional injections because the first set had not produced sustained benefit. Examination of Claimant's low back showed tenderness but no apparent spasms. Lower extremity strength and sensation were normal. The lateral aspect of the right shoulder was tender to palpation. There is no mention of any proximal symptoms or limitations, such as neck, trapezius, or scapular pain. Lumbar and shoulder motion were limited in all planes. The lumbar ROM measurements were internally consistent and valid per the *AMA Guides'* reproducibility criteria.

17. Dr. Beatty agreed Claimant reached MMI on October 27, 2021. He assigned a 21% whole person rating, based on 5% under Table 53 combined with 17% for ROM. He also assigned a 9% upper extremity rating for the right shoulder, which coverts to 5% whole person. Dr. Beatty commented,

> [T]here was a significant difference between my range of motion measurements and Dr. Lugliani's range of motion measurements and therefore I would like to bring the patient back to repeat the range of motion measurements.

18. Dr. Beatty opined apportionment of the low back rating was not appropriate because the prior lumbar fusion was not work-related and "was not independently

disabling at the time of this injury." He opined Claimant required no work restrictions and no maintenance care.

19. After receiving Dr. Beatty's DIME report, the DIME Unit issued an "Incomplete Notice" dated August 12, 2022. Specifically, the Notice indicated Dr. Beatty had (1) miscalculated the percentage rating for lumbar flexion under Table 60, and (2) added the lumbar and shoulder ratings rather than combining the ratings. The Notice made no mention of a follow-up evaluation for repeat ROM measurements.

20. Dr. Beatty issued an amended report correcting the errors identified by the DIME Unit. The corrected final rating was 27% whole person, including 23% for the lumbar spine and 5% whole person for the right shoulder. The amended report was otherwise identical to the first report.

21. On August 19, 2022, the DIME Unit issued a Notice entitled "DIME PROCESS CONCLUDED." The Notice stated, "The Division Independent Medical Examination Unit is in receipt of the sufficient DIME report. The DIME process is now concluded."

22. Respondents filed an Application for Hearing on September 8, 2022 on the issue of PPD to challenge Dr. Beatty's ratings.

23. Dr. John Raschbacher performed a record review for Respondents and testified at the hearing. Dr. Raschbacher opined that Dr. Beatty "wasn't done" with the DIME, and that Claimant should return for repeat range of motion measurements. Dr. Raschbacher testified that the Division's Form WC201 requires the DIME to "Address any impairment rating differences between providers." Dr. Raschbacher explained that the language from the Division indicates this it is a mandatory requirement. Dr. Raschbacher noted that Dr. Beatty tried to address the rating differences, as evidenced by his request for Claimant to return for repeat measurements. He testified, "Dr. Beatty said basically he wasn't finished. [Claimant] should come back. Those are the instructions per the DIME unit." Dr. Raschbacher concluded, "[Dr. Beatty] didn't make an error. . . . Look to the DIME unit for the error."

24. Dr. Raschbacher opined the difference in ROM measurements is not a validity issue, but rather a disparity issue, which must be addressed by the DIME. Additionally, Dr. Raschbacher testified the ROM measurements must "make sense" medically. He went on to question whether Claimant's range of motion measurements were medically appropriate or an accurate depiction of his function.

25. Dr. Raschbacher's opinions that the DIME Unit "erred," and that Dr. Beatty's ROM measurements do not "make sense" are not persuasive.

26. Respondents failed to prove by a preponderance of the evidence that repeat ROM measurements are needed to "complete" the DIME.

27. Respondents failed to overcome the DIME's 23% whole person lumbar rating by clear and convincing evidence.

28. Claimant failed to prove he suffered impairment whole person impairment to his right shoulder.

29. The preponderance of persuasive evidence shows Claimant suffered a 6% scheduled right upper extremity impairment.

30. Respondents failed to prove Claimant's shoulder or lumbar ratings should be apportioned. There is no persuasive evidence to prove the specific rating Claimant received for his previous work-related right shoulder injury. The previous lumbar spine impairment was not work-related and not "independently disabling" at the time of the February 12, 2020 work accident.

CONCLUSIONS OF LAW

A. The DIME is "complete"

Section 8-42-107.2(4)(a)(II) requires the Division to review all DIME reports and determine whether the report contains "any deficiencies." Consistent with this provision, WCRP 11-5(E)[2] provides that "Services rendered by a DIME physician shall conclude upon acceptance by the Division of the final DIME report."

After receiving Dr. Beatty's amended report, the DIME Unit notified the parties the report was "sufficient" and "this DIME process is now concluded." Under the plain language of Rule 11-5(E), the DIME's "services" ended at that time, and the DIME was "complete." Respondents failed to show any "deficiency" that obliged the Division to keep the DIME open and arrange for a follow-up evaluation. Dr. Beatty rated all involved body parts using the proper tables in the *AMA Guides*. He completed all required worksheets and applied the right "math" (*i.e.*, adding or combining components where appropriate). And his rating was based on valid ROM measurements obtained during the DIME. Given the absence of any express provision in the Act, Rules, Level II Curriculum, or Rating Tips requiring a repeat evaluation when the DIME has obtained valid measurements, the decision to accept the DIME report was a reasonable exercise of the Division's discretionary authority to manage the DIME process. Respondents failed to prove by a preponderance of the evidence that the DIME process is "incomplete" pending repeat ROM measurements.

B. Burdens and standards of proof

The DIME assigned ratings for Claimant's lumbar spine and right shoulder. The lumbar spine rating is unquestionably a whole person impairment, which is binding unless overcome by clear and convincing evidence. But the shoulder rating a whole person or scheduled impairment, which has implications for the burden and standard of proof.

Whether a claimant sustained a scheduled or non-scheduled impairment is a threshold question of fact for determination by the ALJ. The heightened burden of proof

[2] Rule 11-5 was amended effective March 2, 2023, and this provision is now found at 11-5(F). No substantive change was made to the text.

that attends a DIME rating applies only if the claimant establishes by a preponderance that the injury caused functional impairment not found on the schedule. Then, and only then, does either party face a clear and convincing evidence burden to overcome the DIME's rating. *Webb v. Circuit City Stores, Inc*. W.C. No. 4-467-005 (August 16, 2002). Although the DIME's opinions may be relevant to this determination, they are not entitled to any special weight on this threshold issue. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998) (DIME provisions do not apply to the scheduled ratings).

In light of the foregoing principles, the ALJ has allocated the burdens of proof in the following manner: (1) Respondents must overcome the DIME's lumbar rating by clear and convincing evidence; (2) Claimant must prove by a preponderance of the evidence he sustained whole person impairment to his right shoulder; (3) if Claimant has whole person impairment to his shoulder, Respondents must overcome the DIME rating by clear and convincing evidence; (4) if Respondents overcome the DIME whole person rating, the proper rating is a factual question based on a preponderance of the evidence; (5) if Claimant does not have a whole person impairment, then Claimant must prove the proper shoulder rating by a preponderance of the evidence.

C. Claimant's right shoulder is a scheduled impairment

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant failed to prove his injury caused functional impairment beyond the right arm. Claimant's testimony regarding referred pain from his shoulder to his trapezius and neck is not substantiated by other persuasive evidence. Dr. Failinger

documented some proximal findings in his IME, but that was before the surgery performed by Dr. Hewitt. No treating or examining provider documented similar complaints after surgery. Claimant successfully returned to his physically demanding job and requires only minor self-modifications for a handful of tasks. While Claimant may still experience transient trapezius or neck, there is no persuasive evidence those symptoms give rise to permanent functional impairment affecting parts of his body not listed on the schedule.

D. Claimant has a 6% upper extremity impairment to his right shoulder

Permanent impairment ratings must be "based on" the *AMA Guides to the Evaluation of Permanent Impairment* (3d ed. rev. 1991) ("AMA Guides"). Section 8-42-101(3.7). Where, as here, the claimant suffers a purely scheduled impairment, the claimant must prove entitlement to a rating by a preponderance of the evidence. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000).

MMI is the dividing line between temporary disability and permanent impairment. Section 8-40-201(11.5). Ideally, permanency would be measured and determined on the date of MMI. However, the practical realities of the workers' compensation system make that impossible in many cases. *E.g., Lopez v. Redi Services*, W.C. No. 5-118-981 & 5-135-641 (October 27, 2021). Nevertheless, as a general proposition, and all other factors being equal, measurements taken contemporaneous with MMI probably provide a more accurate assessment of a claimant's impairment at the time of MMI, as opposed to measurements taken many months later.

The preponderance of persuasive evidence shows Dr. Lugliani's 6% upper extremity rating is the most appropriate under the circumstances. Dr. Lugliani completed his rating the same day he put Claimant at MMI. There is no persuasive evidence of any flaw in Dr. Lugliani's measurement methodology, or that Claimant's condition was not fairly representative of his general level of function. The measurements appear valid on their face, and there is no persuasive suggestion of any inconsistency with the *AMA Guides*. Dr. Lugliani selected the proper percentages from the rating tables and completed the worksheets correctly. In the absence of any persuasive reason to prefer a later assessment (such as presumptive weight given a DIME's whole person rating), the measurements taken on the date of MMI are probably the best representation of Claimant's impairment.

E. Respondents failed to overcome the DIME's 23% lumbar rating

A DIME's whole person impairment rating is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing burden also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62

P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc.*, W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondents failed to overcome the DIME's 23% lumbar rating by clear and convincing evidence. Respondents pointed to no technical flaw in Dr. Beatty's rating methodology or his application of the rating tables and other guidelines. Indeed, Dr. Raschbacher conceded that Dr. Beatty "didn't make an error." Respondents' primary argument is that repeat ROM measurements are necessary to "resolve" a perceived "discrepancy" between Dr. Beatty's rating and the lower rating assigned by Dr. Lugliani. Respondents cited no statue or Rule reflecting this purported "requirement." The only authority Dr. Rasbacher cited is the DIME report template promulgated by the Division (Form WC201).

Dr. Raschbacher's opinion that repeat range of motion measurements were required is not persuasive. A DIME is typically a self-contained, one-time evaluation. In most cases, the rating is based on data obtained at the DIME appointment. However, the *AMA Guides* and Impairment Rating Tips contemplate repeat measurements in limited circumstances, none of which are present here. The *AMA Guides* provide that, "if acute spasm . . . is observed by the examiner . . . the patient must be reexamined in a few days or weeks after the spasm has resolved." *AMA Guides*, § 3.3a, p. 78. The Impairment Rating Tips state that "to invalidate spinal range of motion measurements, due to internal or straight leg validity, or for physiologic reasons, claimants must have two visits". Desk Aid #11 – Impairment Rating Tips (July 2020), p.6 (underlining in original). There is no mention of repeating measurements in any other context.

Dr. Beatty's lumbar ROM measurements are "valid" because they satisfy the *AMA Guides*' "reproducibility" criteria and the straight leg raise test. Dr. Beatty found no muscle spasm or acute flare that would necessitate deferring the ROM measurements to another day. Nor did he opine Claimant was malingering, exaggerating, or otherwise gave less than full effort during ROM testing. There is no indication Dr. Beatty considered the measurements "nonphysiologic." The only alleged "discrepancy" is that the DIME measurements show less motion than those obtained by Dr. Lugliani. The Respondents have pointed to no authority that *requires* repeat ROM measurements where, as here, the DIME obtains valid measurements that are simply different than those obtained by the ATP. Indeed, the hope of obtaining a different rating than given by the ATP is one of the primary reasons parties request DIMEs. Respondents failed to prove Dr. Beatty's 23% spinal rating was highly probably incorrect.

F. Respondents failed to prove apportionment is appropriate

Once the rating physician determines a claimant has a work-related permanent impairment, the question of how to account for any pre-existing impairment is answered § 8-42-104(5) (the "apportionment statute").[3] The current iteration of the apportionment

[3] There have been several iterations of the apportionment statute since 1991. From July 1, 1991 to June 30, 1999, apportionment of PPD was codified in § 8-42-104(2). From July 1, 1999 to June 30, 2008,

statute distinguishes work-related and nonwork-related prior impairments. Sections 8-42-104(5)(a) and (b). If the prior impairment was work-related, the current rating must be reduced by a previous rating involving "the same body part" that resulted in "an award or settlement." In such a case, the prior rating "as established by the award or settlement" is subtracted from the rating for the current injury. Section 8-42-104(5)(a). In cases of prior nonwork-related impairment, the statute only allows apportionment if the prior impairment was "independently disabling" at the time of the subsequent injury. Because application of the apportionment statute hinges on legal issues rather than medical factors, apportionment under § 8-42-104(5) is a factual question for the ALJ's determination under the preponderance standard. *Public Service Co. v. Industrial Claim Appeals Office*, 40 P.3d 68, 71 (Colo. App. 2001).

Respondents failed to prove Claimant's lumbar or shoulder ratings should be apportioned. Although the previous right shoulder impairment resulted in an "award" in a prior workers' compensation claim, there is no persuasive evidence to prove the specific rating. The prior shoulder rating was not offered at the hearing, and the only evidence is the notation in Dr. Beatty's report that Claimant received a combined 13% whole person rating for the right hip and right shoulder. Accordingly, there is no basis to discern the prior impairment "established by the prior award or settlement" as required by § 8-42-104(5)(a).

Additionally, Respondents failed to prove the medical impairment from Claimant's 2001 nonwork-related lumbar fusion was "independently disabling" at the time of the February 12, 2020 accident. The phrase "independently disabling in § 8-42-104(5)(b) invokes the analysis set forth in *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). *Askew* held that "medical impairment" is not synonymous with "disability." Impairment is "an alteration of an individual's health status that is assessed by medical means," whereas disability is assessed by "nonmedical means," and pertains to "an individual's capacity to meet personal, social, or occupational demands." The court held that, "Impairment gives rise to disability only when the medical condition limits the individual's capacity to meet the demands of life's activities." *Id*. at 1337. Dr. Beatty's opinion that Claimant's lumbar spine was not disabling before February 2020 is credible and supported by persuasive evidence in the record. Claimant maintained a physically demanding job without limitation or difficulty for almost two decades after his back surgery. Nor is there any persuasive evidence to show limitation in the performance of avocational activities.

ORDER

It is therefore ordered that:

1. Respondents' request to return Claimant to the DIME for repeat range of motion testing is denied and dismissed.

---

apportionment of PPD was codified in § 8-42-104(2)(b). Effective July 1, 2008, apportionment of PPD is governed by § 8-42-104(5).

2. Respondents' request to overcome the DIME's 23% whole person lumbar rating is denied and dismissed.

3. Claimant's request whole person impairment to the right shoulder is denied and dismissed.

4. Insurer shall pay Claimant PPD benefits based on a 23% whole person lumbar rating and a 6% scheduled right upper extremity rating.

5. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

6. Claimant's request for PPD based on a 9% upper extremity rating is denied and dismissed.

7. Respondents request for apportionment of Claimant's lumbar spine and or shoulder rating is denied and dismissed.

8. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-215-058-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his lower back arising out of the course of his employment with Employer.

2. If Claimant established a compensable injury, whether Claimant established by a preponderance an entitlement to medical benefits.

3. If Claimant established a compensable injury, determination of Claimant's authorized treating physician.

FINDINGS OF FACT

1. Claimant works for Employer as a delivery truck driver, delivering seafood products to grocery stores and other customers. Claimant alleges that on August 17, 2022, while making a delivery to a grocery store in Colorado Springs, he sustained an injury to his lower back.

2. Claimant testified that while in the process of making a delivery, he was sorting through boxes of products located in his truck, he moved a box on the floor of the truck using his foot and felt and pain in his lower back, hip, tailbone, and thigh.

3. Claimant has a history of injuries and conditions to his lower back that predate the August 17, 2022 incident. On January 10, 2014, Claimant sustained a work-related injury to his lower back. Claimant's authorized treating provider (ATP) for that injury was John Sacha, M.D., who opined that Claimant had discogenic lower back pain from this injury. He placed Claimant at maximum medical improvement (MMI) for that injury on July 23, 2014, and assigned a whole person impairment of 11% due to his injury. However, he also noted that Claimant had a non-work-related condition -- diffuse idiopathic skeletal hyperostosis ("DISH") -- which also contributed to Claimant's loss of lumbar range of motion. Consequently, Dr. Sacha ultimately assigned Claimant with a 5% whole person impairment for his work-related lumbar radiculopathy. (Ex. 6)

4. Claimant returned to Dr. Sacha on September 25, 2019 reporting he had a flare of pain in his lower back and right buttock after riding in a truck that bounced. Dr. Sacha opined that Claimant sustained a minor aggravation of his pre-existing work-related lumbar discogenic pain, but remained at MMI. (Ex. 6). Claimant's symptoms continued for several months, and he received a lumbar epidural steroid injection (LESI) on November 21, 2019. (Ex. F).

5. On December 10, 2019, Dr. Sacha examined Claimant and noted he received excellent relief from the LESI, and was nearly back to his baseline pain level. (Ex. G).

6. Claimant next saw Dr. Sacha on February 3, 2020, when he reported minimal back pain. Dr. Sacha noted some lumbar spasms, and pain with straight leg raise, and diagnosed Claimant with lumbosacral radiculopathy. Dr. Sacha discharged Claimant with instructions to comply with a home exercise program, and to return on an as-needed basis. (Ex. 6)

7. Claimant returned to Dr. Sacha on October 16, 2020, noting a "slight flare" of pain in his low back and buttocks. Dr. Sacha documented an equivocal straight leg raise test, lumbar paraspinal spasms, and diminished thoracic and lumbar range of motion. He provided Decadron and recommended Claimant return in one year. (Ex. 6)

8. Claimant's next documented lower back examination was on February 22, 2022, when he saw Dr. Sacha. At that time, Claimant reported low back pain (right greater than left), right hip pain, bilateral buttocks pain, and bilateral shoulder pain. No radiating pain was documented. Claimant reported that his pain had been worse over the previous six months. He recommended x-rays of Claimant's lumbar spine and hips to evaluate a diagnosis of ankylosing spondylitis of the lumbosacral region. (Ex. J).

9. Dr. Sacha saw Claimant again on March 8, 2022. At that visit, Dr. Sacha indicated Claimant's x-rays demonstrated "ongoing worsening of his spinal osteophyte bridging" and mild osteoarthritic changes in the bilateral hips. These findings were attributable to Claimant's DISH or ankylosing spondylitis diagnoses. On examination, he noted pain with straight leg and neural tension testing. He also indicated Claimant's back and buttock pain was reproduced with extension and rotation to the right. Dr. Sacha recommended Claimant undergo medial branch blocks for his lumbar spine, and a steroid injection for his hips. (Ex. K & L).

10. On April 14, 2022, Dr. Sacha performed medial branch blocks on the right side at L3-4, L4-5, L5-S1 and S1-S2, and bilateral hip injections. (Ex. M). On April 26, 2022, Claimant reported improvement in his lower back and hips. Dr. Sacha recommended proceeding with a radiofrequency ablation, but Claimant decided not to undergo the procedure noting that he had significant reduction in his hip pain with the injections. (Ex. N).

11. Claimant's next documented medical treatment was on August 17, 2022, when he saw Gary Childers, M.D. at Aviation & Occupational Medicine. Claimant reported that when he was unloading his truck that morning, he turned to the right exit his truck and had a sharp pain from the right side of his tailbone radiating to the right lateral hip through the posterior thigh. Claimant advised Dr. Childers of his 2014 injury and his treatment with Dr. Sacha and that Dr. Sacha had performed lumbar injections in April 2022. Dr. Childers examined Claimant, finding a positive straight leg test on the right without radiation, and tenderness in the lower back, buttock, flank, and right hip. X-rays were negative for acute findings. He diagnosed Claimant with a sprain of the lumbar spine and pelvis and radiculopathy. He further opined that Claimant's condition was more likely than not work-related. Dr. Childers placed claimant on modified duty, and referred him to Dr. Sacha. (Ex. 9).

12. Claimant followed up with Dr. Childers on August 19, 2022, with no significant changes. (Ex. 9).

13. On August 22, 2022, Claimant saw Jennifer Voag, P.A. and/or Michael Ladwig, M.D.,[1] at Aviation & Occupational Medicine, and reported continued burning and stabbing pain and tingling in his right hamstring that stopped at the knee. Claimant advised Ms. Voag of his April injections, and indicated he had no symptoms until the August 17, 2022 injury. Claimant requested to see a different specialist than Dr. Sacha. Ms. Voag ordered a lumbar MRI to rule out internal derangement as a cause of his radicular symptoms, and referred Claimant to Nicholas Olsen, D.O, for evaluation. (Ex. 9).

14. An MRI was performed on August 25, 2022, and was interpreted as showing progressive degenerative changes combined with congenitally short pedicles and dorsal epidural lipomatosis resulting in high-grade spinal stenosis at L2-5. The MRI also showed "progressive disc bulges" at each level with facet arthropathy at L2-3 through L4-5. (Ex. R).

15. On August 29, 2022, Claimant saw Dr. Olsen. Claimant described the mechanism of injury to Dr. Olsen as occurring when was turning to the right, while unloading his delivery truck, without lifting anything. Claimant reported pain in his right lower back, and right buttock radiating toward the thigh. Dr. Olsen found negative straight leg raises for radicular pain, and increased right lower back pain with facet loading. He diagnosed Claimant as sustaining a lumbar sprain/strain injury on August 17, 2022. Dr. Olsen also opined that Claimant did not sustain a work-related injury and that "it was more likely that his symptoms have returned after his successful injection in April." He indicated that "a simple turn to the right and having the onset of severe pain is not characteristic of an injury. It is more likely that his symptoms have returned after his successful injection in April." Dr. Olsen opined that he was unable to identify a specific work injury that "would qualify as a distinct and separate work injury." He recommended Claimant return to Dr. Sacha for treatment including repeating the April 2022 injection, under his commercial insurance and outside the workers' compensation system. (Ex. 10).

16. On September 6, 2022, Claimant saw Ms. Voag and/or Dr. Ladwig again but was no examined. Dr. Ladwig discharged Claimant from his care based on Dr. Olsen's opinion that Claimant's condition was not work-related and recommendation that Claimant return to Dr. Sacha "for continued management of his pain outside the workers' comp system." Dr. Ladwig placed Claimant at maximum medical improvement (MMI) with no maintenance care, and provided no further care to Claimant for his August 17, 2022 injury. (Ex. 9).

17. Claimant returned to Dr. Sacha on September 20, 2022, reporting pain in his low back, buttock, and thigh, all on the right side. Claimant's description of the mechanism of injury was consistent with his testimony at hearing, but different than his reports to other physicians. Dr. Sacha opined that Claimant's leg symptoms were new, and that he had

[1] The record is unclear whether Claimant saw Dr. Ladwig at this visit. Claimant testified he saw Ms. Voag several times and saw Dr. Ladwig twice.

not had any for more than one year. He recommended that Claimant have a one-time lumbar epidural on the right at L4-5, and if the result was diagnostic, he believed it would be a work-related injury and aggravation of his pre-existing problem. He opined that if the steroid injection was not diagnostic, then the problem would not be work-related, and presumably a result of his DISH diagnosis. He also provided Claimant with an oral steroid, Decadron. (Ex. 11).

18. Claimant returned to Dr. Sacha on October 4, 2022, who noted Claimant received some temporary relief from the oral steroid. Dr. Sacha indicated he had reviewed Claimant's medical records from Dr. Olsen and opined that Claimant sustained a work-related injury that was discogenic or radicular in nature, or, at a minimum, a flare up of a preexisting problem. As of October 4, 2022, Claimant had not undergone the lumbar epidural injection Dr. Sacha recommended on September 20, 2022. (Ex. 11).

19. Claimant testified that he underwent a transforaminal injection on the right side at the L4-L5 level on October 27, 2022. He testified that the injection resulted in some lasting relief, although it took a few days. No medical record of the October 2022 injections was offered or admitted into evidence.

20. On December 16, 2022, Claimant saw Lawrence Lesnak, D.O., for an independent medical examination at Respondents' request. Dr. Lesnak opined that Claimant did not engage in any activity on August 17, 2022 that would have caused an injury to his lumbar spine or pelvis, or aggravation of any preexisting pathology. He stated "there is no medical evidence to support that [Claimant] has any medical diagnosis or sustained any type of injury whatsoever that would in any way pertain to his reported occupational incident of 08/17/2022." He opined Claimant's did not have any objective evidence of injury and that his subjective symptoms were "merely symptoms from his ongoing chronic symptomatic lumbar spine/pelvic pathology that has apparently been present since 01/2014." He opined that any medical treatment Claimant received would be unrelated to his work incident on August 17, 2022. (Ex. U). Dr. Lesnak testified at hearing and was admitted as an expert in physical medicine and rehabilitation. His testimony was consistent with his December 16, 2022 report.

21. Dr. Lesnak's statement that Claimant had "ongoing" lumbar symptoms since January 2014 is incorrect. The medical records demonstrate that Claimant did not have "ongoing" symptoms, but did have periodic exacerbations. Claimant had no documented treatment from June 2014 through September 2019, or from October 2020 until February 2022. Following the medial branch blocks in April 2022, Claimant did not have any documented treatment or symptoms until August 17, 2022. The records demonstrate Claimant's symptoms were not "ongoing" on August 17, 2022. Moreover, Claimant's admitted medical records do not document any pain radiating into his right thigh prior to August 17, 2022. The ALJ finds that Dr. Lesnak's opinion is neither credible nor persuasive.

22. Dr. Olsen testified through deposition and was admitted as an expert in physical medicine and rehabilitation. Dr. Olsen testified that when examined on August 26, 2022, Claimant had "a lumbar sprain/strain/maybe muscular." He also testified that Claimant did

not sustain a work-related injury on August 17, 2022. Dr. Olsen indicated Claimant had no clinical symptoms of a lumbar radiculopathy when he examined him, based on his review of records, it is more likely Claimant's post-August 17, 2022 pain was from his hip than from his back, although he did not evaluate Claimant's hip at his examination. Dr. Olsen testified that DISH is a condition of the thoracic, and not the lumbar spine, and that Claimant has congenital stenosis of his lumbar spine, independent of DISH. With respect to the Claimant's MRI, Dr. Olsen testified that a comparison of prior MRIs would be necessary to determine whether Claimant's lumbar spine pathology had progressed, or if he had new pathology after August 17, 2022. Dr. Olsen opined that Claimant's symptoms had been waxing and waning for years, and the waxing and waning of symptoms was consistent with Claimant's MRI.

23. Dr. Sacha testified through deposition in lieu of live testimony and was admitted as an expert in physical medicine and rehabilitation. Dr. Sacha testified that Claimant had discogenic pain and also facet-based pain before August 17, 2022. He testified that Claimant's original discogenic pain was related to his 2014 injury, and the facet-based pain was related to his DISH diagnosis. Dr. Sacha testified that by the time he saw Claimant in 2021, his pain was not discogenic, and was facet-based, and that Claimant had no evidence of discogenic pain after 2021. He testified that the medial branch blocks in April 2022 were to address facet-based pain caused by DISH. He indicated that when he examined Claimant in September 2022, Claimant's pain was predominantly discogenic pain, which he believed was related to the August 17, 2022 injury. Dr. Sacha indicated that the Claimant's relief from the October 2022 L4-5 injections demonstrated that the Claimant's pain was discogenic in nature, and not related to his DISH diagnosis.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's

testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The claimant must prove his injury arose out of the course and scope of her employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, *supra*. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co, supra*; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO Apr. 9, 2014).

Claimant has established by a preponderance of the evidence that he sustained a compensable injury arising from the course of his employment with Employer on August 17, 2022. The evidence demonstrates that, although Claimant has preexisting back conditions, he was symptom-free for approximately four months before August 17, 2022, and had not seen a health care provider for back pain since April 2022. Moreover, when Claimant saw Dr. Childers, and thereafter, he reported pain radiating into his right thigh, which he had not previously reported. Regardless of the later inconsistencies in Claimant's description of the mechanism of injury, Dr. Childers initially found Claimant's injury to be work-related, based on Claimant's report of sustained an injury while turning to the right. Dr. Olsen also opined that Claimant sustained a lumbar sprain/strain on August 17, 2022. He also opined, that Claimant sustained no work-related injury, but offered no cogent, credible explanation for this inconsistency. Dr. Ladwig did not express any independent opinion that Claimant's injury was not work-related, and instead reiterated Dr. Olsen's opinion. Dr. Olsen and Dr. Lesnak each determined that the mechanism of twisting or turning was insufficient to cause an injury or aggravation of a preexisting condition. The ALJ does not find these opinions credible or persuasive. As found, Claimant has a history of lower back and hip pain that was prone to exacerbation. Claimant was not experiencing ongoing symptoms in the months before August 17, 2022, when the symptoms returned while Claimant was performing work for Employer. Dr. Olsen's and Dr. Lesnak's opinions imply that on August 17, 2022, Claimant's then-asymptomatic preexisting conditions became symptomatic by coincidence, and independent of any work-related activity. The ALJ does not find these opinions persuasive.

The ALJ finds it more likely than not that Claimant's work-related activities caused an aggravation of his preexisting conditions. As such, Claimant has established that it is more likely than not he sustained a compensable injury.

Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Because Claimant sustained a compensable injury, he is entitled to reasonable and necessary authorized medical treatment to cure or relieve the effects of his injury.

Authorized Treating Physician

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo.

App. 1999). “The insurer’s right to select the treating physician contemplates the insurer will appoint a physician willing to treat the claimant based on the physician’s best medical judgment. *Dover v. Ameriserve Food Distrib.*, WC No. 4-451-332 (ICAO Sept. 27, 2002). “Consequently, if the designated treating physician refuses to provide medical treatment for non-medical reasons, the insurer must designate a new treating physician or the right of selection passes to the claimant,” and the physician selected by the claimant is authorized. *Id*., *see also Garcia v. McDonald’s Corp.*, WC No. 4-862-853-01 (ICAO Jan. 2, 2014); *Davis v. Interstate Brand Corp.*, WC No. 4-291-678 (ICAO May 17, 1999). The insurer’s obligation to appoint a new treating physician arises forthwith upon notice that the previously designated physician has refused to treat. *Dover, supra*. Whether the ATP has refused to treat the claimant for non-medical reasons is a question of fact for the ALJ. *Rubyal v. Univ. Health Sciences Ctr.*, 768 P.2d 1259 (Colo. App. 1988).

On September 6, 2022, Claimant’s ATP, Dr. Ladwig discharged Claimant and declined to provide further medical care based on Dr. Olsen’s opinion that Claimant’s need for further treatment was not work-related. Both Dr. Olsen and Dr. Ladwig indicated that Claimant may require further treatment, and indicated that Claimant should seek that treatment from Dr. Sacha outside the workers’ compensation system. The decision to decline treatment was not medical in nature, but on Dr. Olsen’s opinion concerning legal issues of compensability and causation. *See e.g.*, *Dover v. Ameriserve Food Distrib.*, W.C. No. 4-451-332 (Mar. 12, 2003); *Garcia, supra*; *Davis, supra*. Dr. Ladwig’s report includes a notation that it was received by Respondents’ counsel on October 27, 2022, from which the ALJ infers that Respondents either knew, or should have known, that Dr. Ladwig had declined to provide further treatment. Respondents were, therefore, under the obligation to appoint a new ATP “forthwith,” and did not do so. Consequently, the right of selection passed to Claimant, and Claimant selected Dr. Sacha as his ATP. Claimant has satisfied his burden of establishing that Dr. Sacha is his ATP.

ORDER

It is therefore ordered that:

1. Respondent sustained a compensable injury to his lower back on August 17, 2022.

2. Respondents shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant’s August 17, 2022 industrial injury.

3. Dr. Sacha is Claimant’s authorized treating physician.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the left knee surgery performed by Dr. David Elfenbein on October 20, 2022, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted February 2022 work injury.

FINDINGS OF FACT

1. The claimant is employed with the employer at the [Redacted, hereinafter GN]. The claimant's job duties include checking-in airline passengers, weighing and tagging luggage, assisting with boarding, and related activities. This airport has a busy period during ski season, which typically runs from December to April. During ski season, passengers will often have larger and heavier bags containing ski equipment.

2. While performing her normal job duties on February 22, 2022, the claimant noted that she was experiencing pain in her left knee. The claimant noted this pain developed and worsened when she would lift luggage from the scale, and turn to place it on a conveyor belt behind her work station.

3. This conveyor belt was a new and temporary arrangement during construction at the airport. Prior to the placement of this conveyor belt, employees would not lift and place luggage on a belt. Rather, after a bag was weighed, the passenger would place the bag through a door. From there an employee with [Redacted, hereinafter TA] would handle the luggage for boarding.

4. The placement of the temporary belt was very close to the work station. The claimant testified that due to the narrow space, it was necessary to pivot on her left leg as she lifted and turned with the bags. This resulted in the development of pain in her left knee. The claimant communicated her concerns about the placement of the belt in an email to her supervisor, [Redacted, hereinafter ES], on February 22, 2022.

5. After February 22, 2022, the claimant attempted to work through this left knee pain, however, the pain did not improve. On March 23, 2022, the claimant emailed ES[Redacted] and stated: "Last month I mentioned to you I was struggling with bags and I still am. In addition what was originally just soreness has turned into a full blown injury. My knee is swollen and I can't bend it and I have numbness in both legs and feet." Following this email, the claimant was instructed to complete an OJI Incident Report.

6. On March 23, 2022, the claimant completed the requested report. The claimant specifically noted "since the new baggage belt has been installed I have had to twist and lift baggage sometimes exceeding 60 [pounds] [onto] the belt in a confined area." She also noted that she initially had soreness that would go away, "but now I have a constant pain, swelling and limited movement in my knee."

7. Thereafter, the claimant began treatment with Bonnie Strickland, FNP as her authorized treating provider (ATP). Nurse. Strickland recommended physical therapy. When the claimant's symptoms did not improve, on April 27, 2022, Nurse Strickland referred the claimant for an orthopedic consultation. In the medical record of that date, Nurse Strickland opined "although a pre-existing condition, her symptoms were exacerbated by the new requirement to move luggage."

8. On May 4, 2022, the claimant was seen for an orthopedic evaluation by Dr. David Elfenbein. In the medical record of that date, Dr. Elfenbein noted that the claimant had experienced two months of left knee pain since experiencing a twisting injury. At that time, the claimant's left knee symptoms included aching, stabbing, clicking, popping, numbness, and tingling. On examination, Dr. Elfenbein noted that the claimant's left knee had mild effusion, and medial joint line tenderness. Dr. Elfenbein opined that the claimant had suffered a tear of the medial meniscus. At that time, he ordered magnetic resonance imaging (MRI) of the claimant's left knee.

9. On May 31, 2022, the claimant underwent the recommended left knee MRI. The MRI showed a mildly displaced horizontal cleavage tear of the medial meniscus body, and scattered high-grade degenerative changes involving all compartments.

10. On June 3, 2022, the claimant returned to Dr. Elfenbein to discuss the MRI findings. Dr. Elfenbein noted that the claimant had an undersurface posterior medial meniscus tear with mild arthritic changes. Dr. Elfenbein also noted some subchondral edema and cyst formation. On that date, Dr. Elfenbein recommended that the claimant undergo four weeks of physical therapy.

11. On July 6, 2022, Dr. Elfenbein continued to recommend physical therapy. He specifically noted "I am not recommending a surgical intervention at this time, this may be recommended or necessary in the future to alleviate or treat this condition, especially if conservative measures fail or the condition continues to progress or worsen."

12. On July 29, 2022, the respondents filed a General Admission of Liability regarding the claimant's injured left knee.

13. On August 3, 2022, the claimant returned to Dr. Elfenbein. On that date, the claimant reported continuing left knee pain with little improvement from physical therapy. Dr. Elfenbein recommended that the claimant undergo surgery to her left knee. Specifically, Dr. Elfenbein recommended a left partial meniscectomy.

14. At the request of the respondents, Dr. Timothy O'Brien conducted a review of the claimant's medical records. In a report dated September 15, 2022, Dr. O'Brien opined that the claimant did not suffer a left knee injury at work in February 2022. With regard to the recommended left knee surgery, Dr. O'Brien opined that the surgery would fail, cause an increase in pain, and aggravate the arthritic condition in the claimant's left knee. In support of his opinions, Dr. O'Brien noted that the claimant did not report a specific incident that resulted in her left knee pain. Dr. O'Brien also noted that the claimant did not immediately seek treatment of her left knee and the MRI findings demonstrate chronic and long-standing degenerative conditions in the claimant's left knee.

15. The respondents relied upon the opinions of Dr. O'Brien and denied authorization for the requested left knee surgery.

16. Following the respondents' denial, the claimant elected to undergo the recommended left knee surgery. On October 20, 2022, Dr. Elfenbein performed a left knee diagnostic and surgical arthroscopy with partial medial and lateral meniscectomies and chondroplasty of the patella trochlea. This surgery was paid for by the claimant's private insurance, [Redacted, hereinafter RP].

17. On February 13, 2023, Dr. Elfenbein authored a letter regarding the claimant's need for left knee surgery. In that letter, Dr. Elfenbein noted that a twisting injury is an extremely common mechanism of meniscal tearing. Dr. Elfenbein stated his opinion that the claimant suffered an acute left meniscal tear. Dr. Elfenbein noted that the medial meniscal tear was complex, which indicates some chronic component. Dr. Elfenbein also noted that during the surgery there was significant synovitis, which also suggests "an acute or subacute component to that tear." Although Dr. Elfenbein agrees with the medical literature identified in Dr. O'Brien's report, it is Dr. Elfenbein's opinion that those studies do not apply to the claimant's left knee condition.

18. Dr. O'Brien's testimony was consistent with his written report. Dr. O'Brien testified that it continues to be his opinion that the claimant did not suffer a work injury. Dr. O'Brien also testified that the type of surgery performed by Dr. Elfenbein on the claimant's left knee should never be performed on an individual with osteoarthritis.

19. The claimant testified that prior to feeling pain in her left knee at work in February 2022, she did not experience pain in her left knee. The claimant further testified that since the surgery in October 2022, she has significantly less pain and improved range of motion. The claimant testified that since the surgery her left knee has "improved tremendously".

20. The ALJ credits the medical records, the claimant's testimony, and the opinions of Dr. Elfenbein and Nurse Strickland over the contrary opinions of Dr. O'Brien. The ALJ finds that the claimant has demonstrated that it is more likely than not that the left knee surgery performed by Dr. David Elfenbein on October 20, 2022, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted February 2022 work injury. The ALJ finds that the pre-existing condition in the

claimant's left knee was aggravated and accelerated by her February 2022 injury, resulting in the need for the surgery performed by Dr. Elfenbein.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that the left knee surgery performed by Dr. David Elfenbein on October 20, 2022, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted February 2022 work injury. As found, the medical records, the claimant's testimony, and the opinions of Dr. Elfenbein and Nurse Strickland are credible and persuasive.

ORDER

It is therefore ordered that the respondents shall pay for the claimant's left knee surgery performed by Dr. Elfenbein on October 20, 2022.

Dated May 10, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-208-346-002

ISSUES

I. The parties seek an order accepting the stipulated facts and allocating dependency benefits at this time evenly between Decedent's three minor biological children, Dependent-Claimants [Redacted, hereinafter CF], [Redacted, hereinafter JG], and [Redacted, hereinafter KF].

STIPULATIONS

The parties entered into stipulated facts as follows:

1. Alleged Dependent-Claimant [Redacted, hereinafter MG] is not a dependent of Decedent under the Act;
2. Alleged Dependent-Claimant [Redacted, hereinafter AA] is not a dependent of Decedent under the Act;
3. Alleged Dependent-Claimants JG[Redacted], JG[Redacted], and KF[Redacted] are dependents of Decedent entitled to dependency benefits under the Act;
4. Dependency benefits should be allocated evenly between Decedent's three biological children, each of whom is currently a minor, CF[Redacted], JG[Redacted], and KF[Redacted];
5. Decedent's AWW for calculating dependent benefits is $1,692.85;
6. Respondents shall not seek a safety rule violation offset against the above identified entitled Dependent-Claimants' dependency benefits; and
7. Respondents have reimbursed Decedent's family for funeral benefits and therefore owe no additional funeral benefits under the Act.

FINDINGS OF FACT

Based on the evidence presented at hearing, and the stipulation of the parties, the Judge enters the following specific findings of fact:

1. Decedent was hired by Employer November 1, 2021. (Resp. Ex. B, bn 006). Decedent filled out an Employee Information Form identifying his emergency contact as his girlfriend, [Redacted, hereinafter MZ]. (Resp. Ex. A, bn 001) He also completed a W-4 form (Employee's Withholding Certificate) indicating he was single, or married filing separately. (Id. at bn 003)
2. Decedent passed away on June 18, 2022, in the course and scope of his duties for Employer. (Resp. Exs. B-D)
3. An Amended Workers' Claim for Compensation was filed on behalf of Decedent on July 7, 2022. (Resp. Ex C)

4. A Dependents' Notice and Claim for Compensation was filed by Alleged Dependent-Claimant MG[Redacted] on behalf of herself, Dependent-Claimant surviving son CF[Redacted], Dependent-Claimant surviving son JG[Redacted], Dependent-Claimant surviving daughter KF[Redacted], and Alleged Dependent- Claimant AA[Redacted], who was not related to Decedent, but is the biological son of MG[Redacted]. (Resp. Ex. D)

5. Alleged Dependent-Claimant MG[Redacted] is the biological mother and legal guardian of Dependent-Claimant surviving son CF[Redacated] (D.O.B. 9/27/05), Dependent-Claimant surviving son JG[Redacted] (D.O.B. 9/19/07), and Dependent-Claimant surviving daughter KF[Redacted] (D.O.B. 08/12/10). (Resp. Ex. D; Clt Exs. 1-3) As stipulated, MG[Redacted] is not a dependent of Decedent under the Act. (Stipulation #1)

6. Alleged Dependent-Claimant AA[Redacted] (D.O.B. 9/23/14) is the biological son of MG[Redacted] and [Redacted, hereinafter JH]. (Resp. Ex. D, bn 013) He is not the biological son of Decedent. MG[Redacted] is the mother and legal guardian of AA[Redacted]. As stipulated, AA[Redacted] was not a dependent of Decedent under the Act. (Stipulation #2)

7. As stipulated, on his date of death, Decedent left three Dependents, his biological minor children identified as Dependent-Claimant surviving son CF[Redacted] (D.O.B. 9/27/05), Dependent-Claimant surviving son JG[Redacted] (D.O.B. 9/19/07), and Dependent-Claimant surviving daughter KF[Redacted] (D.O.B. 08/12/10). (Resp. Ex. D; Clt. Exs. 1-3; Stipulation #3)

8. On April 7, 2023, Respondent Insurer filed a Fatal Case – General Admission. (Resp. Ex H) In the remarks section Insurer indicated it was admitting for funeral benefits, and a hearing was set for April 18, 2023 to determine dependents. (Id. at bn 023) A copy of the Statement of Funeral Goods and Services Selected Worksheet was attached to that admission. (Id. at bn 026) As stipulated, by the date of hearing Insurer had fully reimbursed Decedent's family for the funeral benefits. (Stipulation # 7)

9. At the time of Decedent's death, he was living with MZ[Redacted], his girlfriend. (Resp. Ex. A, E) On October 17, 2022 a prehearing was held before PALJ Zarlengo which included MZ[Redacted], who testified by phone. (Ex. C) During the prehearing MZ[Redacted] verbally represented that she has no intention of pursuing a dependency claim. (Id.) As of the date of hearing, MZ[Redacted] has not filed a dependency claim. As of the date of hearing, the parties had no knowledge of any other possible dependents of Decedent who were dependents of Decedent as of the date of Decedent's death.

10. Dependent-Claimants, through their counsel, represented that none of the entitled Dependent-Claimants have received any social security survivor benefits as of the date of the hearing. Respondents therefore withdrew and reserved the issue of offsets.

11. As stipulated, the Decedent's average weekly wage for calculating dependent benefits is $1,692.85

CONCLUSIONS OF LAW

Based on the foregoing stipulations and findings of fact, the Judge draws the following conclusions of law:

1. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).
2. Section 8-42-121, C.R.S,. 2021, provides in pertinent part that death benefits "shall be paid to such one or more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable."
3. The parties seek an order affirming their stipulation regarding the identity of entitled Dependent-Claimants, and for an allocation of death benefits/dependency between Dependent-Claimant surviving son CF[Redacted] (D.O.B. 9/27/05), Dependent-Claimant surviving son JG[Redacted] (D.O.B. 9/19/07), and Dependent-Claimant surviving daughter KF[Redacted] (D.O.B. 08/12/10), at equal amounts of 1/3 each, to try to help protect these children's workers' compensation benefits for their future needs.
4. As found, the ALJ finds that an apportionment of the death benefits between Dependent-Claimant surviving son CF[Redacted] (D.O.B. 9/27/05), Dependent-Claimant surviving son JG[Redacted] (D.O.B. 9/19/07), and Dependent-Claimant surviving daughter KF[Redacted] (D.O.B. 08/12/10), in a 1/3 split, is equitable and fair.
5. The ALJ finds, consistent with the Act, that the allocation of dependency benefits between the identified entitled Dependent-Claimants will continue until an event occurs that requires a reallocation of dependency benefits between entitled dependents, as determined by law, such as death of an entitled dependent-claimant, or a dependent-claimant reaching the age of majority as defined by the Act.
6. The ALJ finds that MG[Redacted], as mother and guardian of the Dependent-Claimants, should establish separate bank accounts for Dependent-Claimant surviving son CF[Redacted], Dependent-Claimant surviving son JG[Redacted], and Dependent-Claimant surviving daughter KF[Redacted], so that each currently minor Dependent-Claimant receives all benefits which they are entitled to under the Act.

ORDER

1. Dependent-Claimant CF[Redacted], Dependent-Claimant JG[Redacted], and Dependent-Claimant KF[Redacted] are the only persons entitled to recover death benefits/dependency benefits under the Act in this case.
2. Decedent's AWW for computing death benefits/dependency benefits is $1,692.85.

3. Respondents waive their right to assert a safety rule offset against the identified Dependent-Claimants.
4. Respondents shall pay death benefits/dependency benefits to identified Dependent-Claimant CF[Redacted], Dependent-Claimant JG[Redacted], and Dependent-Claimant KF[Redacted] in an allocation of 1/3 each, from the date of Decedent's passing until said benefits can be modified/reallocated and/or terminated by operation of law.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-213-239-002

ISSUES

- Did Claimant prove by a preponderance of the evidence that a left total shoulder arthroplasty recommended by Dr. David Weinstein and Dr. Joseph Ruzbarsky is reasonably needed and causally related to the admitted June 6, 2022 industrial injury?

FINDINGS OF FACT

1. Claimant works for Employer as a ski lift mechanic. The job is physically demanding and requires frequent heavy lifting, overhead work, and awkward postures. He has worked for Employer approximately 18 years. Repair and maintenance of ski lifts occurs year-round.

2. On June 6, 2022, Claimant and a co-worker were in a ski lift basket repairing equipment on a lift tower. The bucket was approximately 40 feet above the ground. Claimant misstepped and started to fall forward out of the basket. He reached behind his body with his left arm and grabbed a bar to prevent himself from falling. He hung by his left arm, which caused him to swing around and hit his right shin on the basket frame. He then crawled back into the basket.

3. Claimant suffered a significant laceration to his right shin and felt immediate pain in his left shoulder. After resting for few moments, Claimant continued working. However, the shoulder pain made it difficult to lift his arm. The co-worker performed the bulk of the remaining work because Claimant could not effectively use his left arm.

4. Claimant returned to the base of the ski lift, where he was met by EMTs. They gave Claimant a sling and he returned to work. Claimant finished the shift, and also worked the next day, using primarily his right arm. He did not seek treatment because he hoped the shoulder would improve on its own.

5. Claimant saw Kimberly Woodke, PA-C at the Rio Grande Hospital Clinic on June 8, 2022. Ms. Woodke observed Claimant held his left arm close to his body to minimize pain with movement. Shoulder range of motion was significantly limited. X-rays showed severe glenohumeral joint narrowing and osteophyte formation, but no fracture or dislocation. Ms. Woodke ordered an MRI and referred Claimant to Dr. David Weinstein, an orthopedic surgeon. Claimant was put in a sling and released to work with limited use of the left arm.

6. Claimant had the left shoulder MRI on June 27, 2022. The interpreting radiologist noted rotator cuff tendinosis but appreciated no tears. The MRI showed advanced glenohumeral joint osteoarthritis with degenerative labral tearing and maceration, osteophytes, and prominent subchondral cysts.

7. Claimant saw Dr. Weinstein on June 29, 2022. Dr. Weinstein personally reviewed the MRI images. He agreed with the radiologist about the advanced osteoarthritis, but also saw signal consistent with a partial-thickness subscapularis tear and medial subluxation of the biceps. Dr. Weinstein advised Claimant could consider an arthroscopic rotator cuff repair and subacromial decompression, but such a procedure would probably not be effective because of the extensive degenerative changes. The most likely surgical option was a total shoulder replacement. Because of his age and "high activity level," Claimant wanted to avoid arthroplasty as long as possible. Dr. Weinstein administered a steroid injection and ordered six weeks of PT.

8. Claimant returned to Dr. Weinstein on August 10, 2022 and reported no improvement. He described constant aching, exacerbated by any use of the left arm. Claimant stated, "Prior to his injury, he was having mild discomfort but was able to do full activities, he is no longer able to do so." Dr. Weinstein opined Claimant's injury caused "significant aggravation of his pre-existing glenohumeral arthritis." Dr. Weinstein recommended a total shoulder arthroplasty.

9. Dr. Jon Erickson reviewed the preauthorization request for Respondents on August 18, 2022. Dr. Erickson noted conflicting interpretations from Dr. Weinstein and the radiologist about whether the MRI showed a tendon tear. Dr. Erickson opined, "Based upon the lack of indication of aggravation or worsening of his pre-existing condition . . . [I] recommend denial of the surgical request. Based on the patient's MRI, clearly this procedure is indicated but should be pursued using his private healthcare insurance."

10. Dr. Weinstein appealed the preauthorization denial on August 26, 2022. Dr. Weinstein wrote,

> Apparently, there is a question regarding the patient having a partial tear or not. There is certainly evidence of inflammation on the patient's MRI scan from 06/29/2022. By my interpretation on series 4, image 13, there is evidence of interstitial tearing of the supraspinatus. On image 15 and 16 of series 3, there is subluxation of the biceps, which would indicate at least partial tearing of the superior portion of the subscapularis. While there is certainly preexisting glenohumeral arthritis, he appears to have aggravated this from his Workman's Compensation injury of 06/06/2022, as he was able to perform all full activities prior to his injury and is no longer able to do so.

11. Dr. Erickson responded to Dr. Weinstein's appeal on September 1, 2022. He opined, "The fact that [Claimant] is no longer able to do his work is not in any way evidence of aggravation or worsening of a pre-existing condition. What is needed is radiographic evidence of acute trauma, and that is not present on this MRI." However, Dr. Erickson stated, "Out of deference to the skills of Dr. Weinstein, I will request that I have a chance to review the actual MRI, and I will do so with an MSK expert radiologist. We will try to determine whether or not there is evidence of any acute tears."

12. Claimant had a second surgical opinion with Dr. Joseph Ruzbarsky on September 15, 2022. Dr. Ruzbarsky reviewed the MRI images did not see a rotator cuff

tear. He agreed with the recommendation for a total shoulder arthroplasty. Regarding causation, Dr. Ruzbarsky concluded Claimant suffered an "acute exacerbation of shoulder arthritis due to an injury at work," and stated, "we would submit for approval through his workers' compensation insurance."

13. Dr. Erickson issued a supplemental report on September 19, 2022. He had reviewed the MRI with a MSK expert radiologist, and opined "all the abnormalities seen on this MRI are clearly pre-existing and in no way were caused by his injury of 06/06/2022." Dr. Erickson opined, "the presence of pain or dysfunction, according to the medical treatment guidelines, is not adequate to provide evidence of aggravation or worsening of a pre-existing condition." Rather, Dr. Erickson opined there must be "actual objective evidence of acute trauma on the patient's MRI." Accordingly, Dr. Erickson maintained his opinion the shoulder arthroplasty is unrelated to the work injury.

14. On October 26, 2022, Ms. Woodke issued a report disagreeing with Dr. Erickson's causation assessment. She stated, "based on my physical examination there was a definite change and significant limitation of strength and range of motion following the reported injury." Ms. Woodke later reiterated, "I strongly believe [the] need for shoulder surgery is related to his industrial injury."

15. At hearing, Claimant credibly described the substantial change in the condition and function of his shoulder since the work accident. Claimant previously had periodic aches and pains, including occasional left shoulder discomfort, but never injured the shoulder and never required any left shoulder treatment. His shoulder never interfered with his ability to perform physically demanding work. Additionally, Claimant regularly participated in activities such as hunting, fishing, backpacking, kayaking, maintaining his mountain property, and vehicle maintenance without difficulty.

16. By contrast, Claimant's left shoulder has been severely limited since the work accident. Even simple movements with his left arm cause severe pain and discomfort. He has difficulty sleeping and awakens frequently because of shoulder pain. He now needs to support his arm with a pillow while driving. Claimant can no longer access a drive-up ATM with his left arm and has trouble closing his vehicle door. He has been unable to engage in his normal recreational activities or home maintenance tasks.

17. Dr. Erickson testified at hearing consistent with his reports. Dr. Erickson agrees a total shoulder arthroplasty is reasonable because of the severe bone-on-bone glenohumeral joint arthritis. However, he reiterated that the need for the surgery is related to the natural progression of Claimant's severe, pre-existing arthritis, and not the June 6, 2022 work accident. He opined that relying on Claimant's subjective report of symptoms and post-injury functional capacity to determine causation "goes against the basis of . . . the medical treatment guidelines which is based purely on objective medical evidence." Dr. Erickson opined Claimant suffered a minor strain on June 6, 2022, which resolved within 4-6 weeks. Claimant's ongoing symptoms are solely related to his pre-existing condition.

18. Claimant's testimony is credible and persuasive.

19. The causation opinions of Dr. Weinstein, Dr. Ruzbarsky, and Ms. Woodke's are credible and more persuasive than the contrary opinions offered by Dr. Erickson.

20. Claimant proved the total shoulder arthroplasty recommended by Dr. Weinstein and Dr. Ruzbarsky is reasonably needed to cure and relieve the effects of the June 6, 2022 work accident. The industrial injury aggravated, accelerated, or combined with Claimant's underlying pre-existing condition to produce the need for shoulder replacement surgery.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

A pre-existing condition does not disqualify a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

Considering the severe, "bone-on-bone" osteoarthritis in Claimant's shoulder, there is no substantial question that the proposed arthroplasty is reasonbly needed. The real issue here is causation. As found, Claimant proved the work accident aggravated, accelerated, or combined with his pre-existing condition and proximately caused the need for a left total shoulder arthroplasty. The causation opinions of Dr. Weinstein, Dr. Ruzbarsky, and Ms. Woodke are credible and more persuasive than the contrary opinions offered by Dr. Erickson. Claimant's testimony regarding the significant change in his symptoms and level of function after the accident is credible and persuasive. Claimant's left shoulder was severely arthritic and "bone on bone" immediately before the work accident, but he was still able to perform physically demanding work and engage in a wide range of outdoor-related avocational activities without difficulty.

Dr. Erickson's insistence on the need for "objective evidence of actual trauma on Claimant's MRI" is inconsistent with the legal standard for compensable aggravations. A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment they would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). Certainly, the absence of

objective structural change is a factor to consider when assessing the veracity of reported symptoms, but the persuasive evidence supports Claimant's statements his shoulder was asymptomatic or minimally symptomatic before the work accident. The June 6, 2022 accident caused an abrupt, substantial, and long-lasting change in Claimant's symptomology and functional abilities. As such, the injury proximately caused disability and a need for treatment, *i.e.*, arthroplasty, that would not have existed "but for" the accident.

ORDER

It is therefore ordered that:

1. Insurer shall cover the left total shoulder arthroplasty recommended by Dr. David Weinstein and Dr. Joseph Ruzbarsky.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: May 11, 2023

Administrative Law Judge

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to withdraw their July 23, 2021 General Admission of Liability (GAL) acknowledging that Claimant suffered compensable injuries on August 9, 2019.

2. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recover an overpayment of Temporary Total Disability (TTD) benefits in the amount of $52,610.34.

FINDINGS OF FACT

1. Claimant worked for Employer as a Robot and Freezer Operator. He testified that on August 9, 2019 a robot was not functioning on line one. While helping the line one operator hand-stack 30-pound cases of cheese, Claimant tripped over an empty palate, fell backwards and landed on his back. Claimant noted he experienced pain in the middle of his lower back. He completed an incident report and Employer offered medical treatment. However, Claimant declined. Notably, the incident report specified "[n]ot seeking medical attention." Claimant felt he could manage the symptoms on his own with stretching and taking over-the-counter medications.

2. Claimant explained that for three days after the accident he stayed home in a chair and took Ibuprofen for his symptoms. About one month after the August 9, 2019 incident he began having pain in the right thigh with numbness and weakness into his entire right leg. He also suffered pain in the right buttock. Although Claimant attempted to manage his symptoms with pain patching and Ibuprofen, they progressively worsened. Nevertheless, Claimant continued to work full duty for Employer. However, he explained that other employees would hand-stack for him because of his continuing lower back symptoms when a robot broke down.

3. On May 14, 2021 Claimant was disciplined by Employer and told that his job performance was unacceptable. Furthermore, on June 22, 2021 Claimant was disciplined by Employer for repeatedly failing to complete paperwork.

4. Claimant did not seek professional medical treatment for his August 9, 2019 industrial accident until he visited primary care physician Garrett Urban, M.D. on June 25, 2021. Dr. Urban recounted that Claimant had a previous back Injury that was well-controlled "until a fall at work a few years ago. His pain has persisted since with flares. It is currently flaring," Dr. Urban permitted Claimant to return to modified duty employment with restrictions of not lifting, carrying, pushing, or pulling in excess of 10 pounds. He was also limited to walking and standing for no more than two hours per day.

5. Claimant explained that he had suffered a Workers' Compensation injury in the form of a bulged disc while working for a different employer in 2005. He received medical treatment for about six to eight weeks and had no symptoms after 2005. Claimant had no additional injuries prior to his August 9, 2019 back injury while working for Employer.

6. On June 29, 2021 Claimant saw Nurse Practitioner Ryan Reiss, who is in practice with Dr. Urban. NP Reiss recounted that Claimant continued to suffer lower back pain as the result of a workplace injury. He noted that x-ray findings revealed minimal grade 1 spondylolisthesis of L4-5 and lumbar spondylosis. NP Reiss assigned Claimant 5-pound weight restrictions with no lifting or bending at the waist.

7. On July 23, 2021 Respondents filed a General Admission of Liability (GAL) acknowledging that Claimant was entitled to receive medical benefits and Temporary Total Disability (TTD) benefits as a result of his August 9, 2019 industrial injury.

8. Because Employer was unable to accommodate the restrictions from Dr. Urban and NP Reiss, Claimant has not returned to work. Respondents began paying Claimant TTD benefits at the rate of $595.91 per week beginning June 29, 2021. TTD benefits paid up to the date of hearing totaled $52,610.34 (88 2/7 weeks x $595.91).

9. On September 15, 2021 Claimant underwent an MRI of his lumbar spine. The imaging showed mild degenerative disc disease and facet arthritis at L4-5 and L5-S1; a rightward disc bulge and annular fissure with mild right foraminal stenosis at L4-5; and mild central canal and mild bilateral foraminal stenosis, left greater than right, at L5-S1.

10. Based on a referral from NP Reiss, on October 21, 2021 Claimant underwent an evaluation with Physician's Assistant Sherrie Kay McCoy of Greeley Neurosurgery. PA McCoy noted that Claimant had suffered lower back pain since he was stacking boxes in 2019. She commented that on June 21, 2021 Claimant "got up but could not stand up straight." PA McCoy diagnosed Claimant with back pain, obesity and tobacco use.

11. On December 21, 2021 Claimant returned to PA McCoy for an examination. She remarked that the MRI findings of the lower back revealed only a "small HNP at L5/S1 which is not causing his symptoms. This is a very small disc, not causing impingement." PA McCoy administered an L5/S1 epidural steroid injection at L5/S1.

12. On January 6, 2022 Claimant visited NP Reiss for an evaluation and noted little improvement. NP Reiss recounted that Claimant had suffered a complex injury several years ago when he fell at work. He had been treating his lower back pain with Ibuprofen but the symptoms had become severe and radiated down his right leg with any type of flexion. NP Reiss referred him to orthopedic surgery. The surgeon's office referred Claimant for an EMG/NCV study due to the new symptom of radiculopathy down the right thigh. The EMG/NCV testing performed on February 17, 2022 was unremarkable.

13. On March 21, 2022 Claimant returned to NP Reiss for an examination. NP Reiss summarized that Claimant had undergone the following treatment:

> [He] has had MRIs and x-rays. [N]eurosurgical PA Sherry McCoy has seen patient who states this is not a surgical problem. He has had conservative therapy with injections and PT. [N]othing seems to be making pain better or worse. [A]ctivity and standing seems to cause worsening symptoms. [S]edentary lifestyle also seems to cause more stiffness…. Neurosurgery also recently x-rayed both of patient's hips to see if there are more than 1 issue causing his pain from shooting down the right leg. There were findings of mild osteoarthritis.

14. On March 21, 2022 NP Reiss also referred Claimant to physiatrist Greg Reichhardt, M.D. However, on April 6, 2022 Claimant visited physiatrist John Shonk, M.D. at PM&R for an evaluation. Dr. Shonk determined Claimant's facet joints were driving his myofascial pain and referred him for L1-S1 facet blocks. If successful, then Claimant would be referred for median branch blocks. If the branch blocks were successful, then Claimant would be referred for possible ablations.

15. On May 31, 2022 Claimant visited Jerome Allen Swanson, M.D. Dr. Swanson noted that the reason for the visit was lumbar facet joint arthropathy. He performed bilateral facet injections.

16. On June 30, 2022 Claimant underwent an independent medical evaluation with Katherine F. McCranie, M.D. After conducting a physical examination and reviewing Claimant's medical records, Dr. McCranie concluded that Claimant likely did not sustain an injury that caused a disability or need for medical treatment on August 9, 2019 while working for Employer. She recounted that on August 9, 2019 Claimant was involved in an incident at work in which he tripped and fell onto his back. However, Claimant did not experience significant enough symptoms at the time to seek medical treatment. Dr. McCranie reasoned that, considering the two-year gap between the time of the incident and when Claimant first sought medical treatment, "causality is not within a degree of medical probability." She commented that, if the injury on August 9, 2019 was an acute lumbar discogenic or facetogenic event, it would have been significant enough to seek medical treatment.

17. Dr. McCranie explained that the progressive nature of Claimant's increase in symptoms over time was more suggestive of degenerative disc disease rather than an acute injury. Furthermore, Claimant continued regular duty employment during the two years after the incident. Dr. McCranie reasoned that Claimant's symptoms were not significant enough during the intervening period before medical treatment to warrant time off work. She also remarked that it is unknown what other activities Claimant was involved with outside of the workplace that could have contributed to the onset of progressive symptomatology. Dr. McCranie thus determined that there was not a 50% causality link between Claimant's current symptoms and the August 9, 2019 incident. She summarized that Claimant's lack of medical treatment for two years, continued full-time work without

restrictions and reported progressive symptomatology was more consistent with a degenerative process.

18. At a follow-up appointment with NP Reiss on July 25, 2022 Claimant noted his symptoms had significantly improved. NP Reiss assessed lumbar back pain with radiculopathy affecting the lower extremities. Claimant could resume moderate activities with a five-pound weight restriction.

19. On August 17, 2022 Claimant returned to Dr. Shonk for an examination. Dr. Shonk noted the facet injections were wearing off after providing two months of very good relief. He referred Claimant for nerve ablations.

20. On September 9, 2022 Claimant underwent bilateral medial branch blocks and medial branch ablations at L3, L4, and L5. He subsequently received bilateral medial branch ablations at L1 and L2 on September 30, 2022.

21. On October 28, 2022 Claimant visited East Morgan County Hospital for physical therapy based on a referral from Dr. Schonk. Angela Eicher, PT recounted that Claimant "tripped and was flipped on his back at work and had severe pain which he tried to medicate with tylenol and ibuprofren but eventual had to see the MD due to pain and cramping." PT Eicher assessed Claimant with chronic lower back pain based on a history of ruptured and herniated discs. She remarked that Claimant had suffered right lower extremity pain, but improved with recent nerve ablations. Pt Eicher recommended physical therapy once or twice per week for six weeks.

22. On November 18, 2022 Claimant returned to NP Reiss for an examination. NP Reiss assessed Claimant with radiculopathy that affected his right lower extremity. He referred Claimant to Dr. Reichhardt for a second opinion. NP Reiss noted that Claimant felt the ablations and therapies had been unsuccessful because he was unable to perform basic household tasks without significant pain and spasms.

23. On January 3, 2023 Claimant again visited NP Reiss for an examination. NP Reiss remarked that Claimant had been released from employment. Nevertheless, he continued Claimant's five-pound lifting restriction based on his "poor response to multipole etiologies of treatment." Treatment had included injections, physical therapy, dry needling and, rest over the preceding 1.5 years. NP Reiss diagnosed Claimant with lower back pain including right-sided sciatica.

24. On January 31, 2023 Claimant returned to Dr. Reichhardt for an evaluation. Dr. Reichhardt documented that Claimant's mechanism of injury was tripping over a pallet and landing on his lower back on August 9, 2019. He noted that the objective findings were consistent with a work-related mechanism of injury causing lower back pain. Dr. Reichhardt reviewed possible lower back pain generators with Claimant and commented on a negative SI joint screen. He explained that, because of Claimant's lack of improvement with radiofrequency ablation, he likely did not have facet-mediated pain. The most likely pain generator was discogenic. Dr. Reichhardt thus suggested an independent exercise program and continued physical therapy. He noted that, once

Claimant completed physical therapy and strengthening, he would likely be approaching Maximum Medical Improvement (MMI).

25. After considering additional medical records, Dr. McCranie issued a supplemental report on February 9, 2023. She maintained that Claimant's symptoms were not likely causally related to the August 9, 2019 work incident.

26. Dr. McCranie also testified at the hearing in this matter. She explained that Claimant's lower back symptoms were not causally related to the August 9, 2019 work accident. Dr. McCranie reiterated that Claimant stated he had fallen at work on August 9, 2019 but did not seek any medical treatment for a period of about 23 months. She reasoned that, if Claimant had suffered a significant back injury, there would not have been a significant temporal gap in medical treatment. Moreover, Claimant continued to work on a full-time basis during the almost two-year period. Dr. McCranie remarked that, if he had suffered a back injury and received treatment earlier, his work restrictions would have been greater in the beginning and lessened over time. Third, Dr. McCranie commented that there was a lack of objective pathology to suggest a traumatic injury. She explained that electrodiagnostic testing was normal, there was no evidence of acute or chronic radiculopathy, and an MRI essentially revealed age-appropriate discogenic changes.

27. Respondents have failed to demonstrate that it is more probably true than not that they are entitled to withdraw their July 23, 2021 GAL acknowledging that Claimant suffered compensable injuries on August 9, 2019. Initially, Claimant testified that, while hand-stacking 30-pound cases of cheese on August 9, 2019, he tripped over an empty palate, fell backwards and landed on his back. He noted he experienced pain in the middle of his lower back. Claimant completed an incident report and Employer offered medical treatment but he declined. Claimant subsequently developed pain in his right thigh with numbness and weakness into his entire right leg. He attempted to manage his back symptoms with pain patches and Ibuprofen, but they progressively worsened. Although Claimant continued to work full duty for Employer, he explained that other employees would hand-stack for him when a robot broke down because of his continuing lower back symptoms. Claimant did not seek professional medical treatment for his August 9, 2019 industrial accident until he visited primary care physician Dr. Urban on June 25, 2021. He has subsequently undergone significant medical treatment including physical therapy, diagnostic testing, epidural steroid injections, bilateral medial branch blocks and medial branch ablations. Although a specific diagnosis has been elusive, on January 31, 2023 Dr. Reichhardt determined Claimant's most likely pain generator was discogenic. Claimant has not reached MMI.

28. Although Respondents filed a GAL on July 23, 2021, Dr. McCranie concluded that Claimant likely did not sustain an injury on August 9, 2019 that caused a disability or need for medical treatment. She reasoned that, considering the two-year interval between the time of the work accident and when Claimant first sought medical treatment, "causality is not within a degree of medical probability." Dr. McCranie commented that, if Claimant had suffered a back injury, there would not have been a significant temporal gap in seeking medical treatment. Moreover, Claimant continued full-

time work during the almost two-year period. Dr. McCranie thus determined that there was not a 50% causality link between Claimant's current symptoms and the August 9, 2019 incident. She summarized that Claimant's lack of medical treatment for two years, continued full-time work without restrictions and reported progressive symptomatology was more consistent with a degenerative process.

29. Despite Dr. McCranie's testimony, the medical records reveal that Claimant has consistently maintained he suffered an industrial injury while working for Employer on August 9, 2019. When Claimant initially sought professional medical treatment on June 25, 2021, Dr. Urban recounted that Claimant had a previous back Injury that was well-controlled "until a fall at work a few years ago. His pain has persisted since with flares. It is currently flaring." During an October 21, 2021 evaluation at Greeley Neurosurgery, PA McCoy noted that Claimant had suffered lower back pain since he was stacking boxes in 2019. She commented that by June 21, 2021 Claimant "got up but could not stand up straight." On January 6, 2022 NP Reiss recounted that Claimant had suffered a complex injury several years ago when he fell at work. He had been treating his lower back pain with Ibuprofen but the symptoms had become severe and radiated down his right leg with any type of flexion. On October 28, 2022 PT Eicher recounted that Claimant had "tripped and was flipped on his back at work and had severe pain which he tried to medicate with tylenol and ibuprofren but eventually had to see the MD due to pain and cramping." Finally, on January 31, 2023 Dr. Reichhardt documented that Claimant's mechanism of injury was tripping over a pallet and landing on his lower back on August 9, 2019. He determined that the objective findings were consistent with a work-related mechanism of injury.

30. As the preceding chronology illustrates, the medical records are replete with references to a work injury in 2019 that necessitated the use of over-the-counter medications until Claimant's back symptoms became severe enough to seek professional medical treatment. Despite the lack of temporal proximity, there is a causal connection between Claimant's August 9, 2019 work injury and his subsequent medical treatment. There was no break in the causal chain between Claimant's work accident while hand-stacking 30-pound cases of cheese and his current back symptoms. Therefore, Claimant's work activities on August 9, 2019 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Accordingly, Respondents' request to withdraw the July 23, 2021 GAL is denied and dismissed. Respondents are therefore not entitled to recover an overpayment of TTD benefits in the amount of $52,610.34.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. Generally, a claimant is required to prove by a preponderance of the evidence that an alleged injury was directly or proximately caused by the employment or working conditions. However, §8-43-201, C.R.S. provides that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." As found, on July 23, 2021 Respondents filed a GAL acknowledging that Claimant was entitled to receive medical and TTD benefits as a result of his August 9, 2019 industrial injury. Because Respondents seek to withdraw their GAL, they bear the burden of proof by a preponderance of the evidence.

7. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are entitled to withdraw their July 23, 2021 GAL acknowledging

that Claimant suffered compensable injuries on August 9, 2019. Initially, Claimant testified that, while hand-stacking 30-pound cases of cheese on August 9, 2019, he tripped over an empty palate, fell backwards and landed on his back. He noted he experienced pain in the middle of his lower back. Claimant completed an incident report and Employer offered medical treatment but he declined. Claimant subsequently developed pain in his right thigh with numbness and weakness into his entire right leg. He attempted to manage his back symptoms with pain patches and Ibuprofen, but they progressively worsened. Although Claimant continued to work full duty for Employer, he explained that other employees would hand-stack for him when a robot broke down because of his continuing lower back symptoms. Claimant did not seek professional medical treatment for his August 9, 2019 industrial accident until he visited primary care physician Dr. Urban on June 25, 2021. He has subsequently undergone significant medical treatment including physical therapy, diagnostic testing, epidural steroid injections, bilateral medial branch blocks and medial branch ablations. Although a specific diagnosis has been elusive, on January 31, 2023 Dr. Reichhardt determined Claimant's most likely pain generator was discogenic. Claimant has not reached MMI.

8. As found, although Respondents filed a GAL on July 23, 2021, Dr. McCranie concluded that Claimant likely did not sustain an injury on August 9, 2019 that caused a disability or need for medical treatment. She reasoned that, considering the two-year interval between the time of the work accident and when Claimant first sought medical treatment, "causality is not within a degree of medical probability." Dr. McCranie commented that, if Claimant had suffered a back injury, there would not have been a significant temporal gap in seeking medical treatment. Moreover, Claimant continued full-time work during the almost two-year period. Dr. McCranie thus determined that there was not a 50% causality link between Claimant's current symptoms and the August 9, 2019 incident. She summarized that Claimant's lack of medical treatment for two years, continued full-time work without restrictions and reported progressive symptomatology was more consistent with a degenerative process.

9. As found, despite Dr. McCranie's testimony, the medical records reveal that Claimant has consistently maintained he suffered an industrial injury while working for Employer on August 9, 2019. When Claimant initially sought professional medical treatment on June 25, 2021, Dr. Urban recounted that Claimant had a previous back Injury that was well-controlled "until a fall at work a few years ago. His pain has persisted since with flares. It is currently flaring." During an October 21, 2021 evaluation at Greeley Neurosurgery, PA McCoy noted that Claimant had suffered lower back pain since he was stacking boxes in 2019. She commented that by June 21, 2021 Claimant "got up but could not stand up straight." On January 6, 2022 NP Reiss recounted that Claimant had suffered a complex injury several years ago when he fell at work. He had been treating his lower back pain with Ibuprofen but the symptoms had become severe and radiated down his right leg with any type of flexion. On October 28, 2022 PT Eicher recounted that Claimant had "tripped and was flipped on his back at work and had severe pain which he tried to medicate with tylenol and ibuprofren but eventually had to see the MD due to pain and cramping." Finally, on January 31, 2023 Dr. Reichhardt documented that Claimant's mechanism of injury was tripping over a pallet and landing on his lower back on August

9, 2019. He determined that the objective findings were consistent with a work-related mechanism of injury.

10. As found, as the preceding chronology illustrates, the medical records are replete with references to a work injury in 2019 that necessitated the use of over-the-counter medications until Claimant's back symptoms became severe enough to seek professional medical treatment. Despite the lack of temporal proximity, there is a causal connection between Claimant's August 9, 2019 work injury and his subsequent medical treatment. There was no break in the causal chain between Claimant's work accident while hand-stacking 30-pound cases of cheese and his current back symptoms. Therefore, Claimant's work activities on August 9, 2019 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Accordingly, Respondents' request to withdraw the July 23, 2021 GAL is denied and dismissed. Respondents are therefore not entitled to recover an overpayment of TTD benefits in the amount of $52,610.34.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw the July 23, 2021 GAL is denied and dismissed. Respondents are thus not entitled to recover an overpayment of TTD benefits in the amount of $52,610.34.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

1. Whether Claimant established by a preponderance of the evidence grounds for reopening his claim.

2. Whether the medical treatment recommended by ATP Holmboe is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury.

3. Alternatively, whether the medical treatment recommended by ATP Holmboe is reasonable and necessary to relieve the effects or prevent deterioration of Claimant's industrial injury.

4. If Claimant establishes grounds for reopening, whether Claimant is entitled to temporary disability benefits.

FINDINGS OF FACT

1. On October 31, 2019, Claimant sustained an admitted injury arising out of the course of his employment with Employer. The injury occurred when Claimant fell on ice and landed on his back, striking his head on the ground.

2. On November 1, 2019, Claimant began treatment with authorized treating physician (ATP), Kirk Holmboe, D.O., at Midtown Occupational Health Services. Dr. Holmboe diagnosed Claimant with a closed head injury, abdominal wall strain and cervical, thoracic, and lumbar strains. Dr. Holmboe referred Claimant for physical therapy, massage and chiropractic care, and Claimant reported improvement with treatment. In January 2020, Dr. Holmboe referred Claimant to Samuel Chan, M.D., for a physiatry evaluation. (Ex. B).

3. Claimant saw Dr. Chan initially on January 14, 2020, with complaints of head pain, right shoulder pain, and right-sided lower back pain with numbness and tingling into the right foot. Dr. Chan indicated his clinical findings were suggestive of facet-related pain, but ordered a lumbar MRI to rule out disc issues. (Ex. D). The MRI, performed on January 20, 2020, did not reveal any acute findings, and Dr. Chan interpreted the results as being within normal limits. (Ex. E & D).

4. Dr. Chan determined that Claimant's symptoms were suggestive of suprascapular neuritis and right SI joint dysfunction, and recommended a right suprascapular nerve block, and right SI joint injection. He performed the suprascapular nerve block on February 4, 2020, and the SI joint injection on February 20, 2020. (Ex. D). Claimant reported to both Dr. Chan and Dr. Holmboe that he received significant benefit from both injections and that his pain was minimal. (Ex. B & D).

5. On March 19, 2020, Dr. Chan indicated that Claimant was having only occasional pain with no functional limits, and that Claimant was likely at maximum medical improvement (MMI). He did not anticipate any permanent impairment, and recommended maintenance care in the form of two additional SI joint injections over the following 4-6 months. (Ex. D).

6. On March 20, 2020, Dr. Holmboe placed Claimant at MMI, with no formal work restrictions and no impairment rating. (Ex. B).

7. Claimant next sought treatment on October 22, 2020, when he saw Dr. Chan. Claimant reported that his lumbar spine pain had returned. Dr. Chan recommended a repeat SI injection. He opined that Claimant remained at MMI, but that the injection shoulder be performed as maintenance care. (Ex. 5).

8. On November 12, 2020, Dr. Chan performed the SI injection. Claimant returned one week later and reported his pain had resolved, and he was discharged. (Ex. D).

9. Approximately four months later, on April 6, 2021, Claimant returned to Dr. Holmboe, reporting that pain had returned to his right lower back, and reported symptoms radiating down his right leg. Dr. Holmboe referred Claimant back to Dr. Chan. (Ex. 6). Dr. Holmboe opined that Claimant's symptoms were related to his original, November 30, 2019 injury because the symptoms had returned without an intervening event. He recommended a repeat lumbar MRI and referred Claimant to Dr. Chan. Dr. Holmboe indicated that Claimant remained at MMI, but the case may need to be reopened depending on Dr. Chan's treatment recommendations. (Ex. 6).

10. The MRI, performed on April 28, 2021, showed no significant changes when compared to the January 20, 2020 MRI. (Ex. D).

11. Claimant saw Dr. Chan on May 4, 2021, reporting that he had done well following the November 2020 SI injection, and that his pain had returned slowly. Dr. Chan indicated that Claimant's leg pain was not likely related to his work injury, if he had not previously reported leg symptoms. Dr. Chan's clinical findings were consistent with a chronic SI joint dysfunction. Due to the recurrence of symptoms, Dr. Chan recommended Claimant undergo a L5 medial branch block (MBB) and S1-3 lateral branch blocks (LBB) for diagnostic purposes. He indicated that if the blocks were diagnostic, Claimant may be a candidate for radiofrequency rhizotomies in both locations. He further opined that these procedures should be considered as maintenance care. (Ex. D).

12. Claimant saw Dr. Holmboe on May 27, 2021, reporting continued pain over the right SI joint with some pain radiating into his thigh. Dr. Holmboe requested additional chiropractic sessions noting that Claimant found these helpful previously. Dr. Holmboe indicated Claimant was not at MMI, but offered no explanation for the change in MMI status from April 6, 2021. (Ex. 6).

13. On June 10, 2021, Dr. Holmboe indicated the medial and lateral branch blocks recommended by Dr. Chan were reasonable, and that Claimant's symptoms were the result of his November 30, 2019 work injury. Dr. Holmboe indicated Claimant was at MMI

effective March 20, 2020, and that he was receiving current treatment under maintenance care. His record contains no explanation for the change in MMI status from May 27, 2021. (Ex. 6).

14. On July 8, 2021, Dr. Chan performed a right SI injection, which resulted in a temporary improvement in Claimant's symptoms. Dr. Chan indicated that the injection provided some diagnostic benefit, and that consideration of the medial and lateral branch blocks would be appropriate. (Ex. D).

15. On August 5, 2021, Dr. Holmboe saw Claimant and indicated that he had no further treatment to offer except the rhizotomies recommended by Dr. Chan. He discharged Claimant from care, noted that Claimant remained at MMI and imposed no formal work restrictions. (Ex. 6).

16. Respondents have not authorized the MBB or LBBs requested and recommended by Dr. Holmboe and Dr. Chan.

17. Respondents conducted surveillance of Claimant on March 19, 2022, June 7, 2022, and August 1, 2022. (Ex. F, G & H). In the surveillance videos, Claimant is seen walking, driving, climbing in and out of vehicles, climbing on and off of trailers, and lifting various objects, without apparent difficulty.

18. On March 30, 2022, Claimant saw Allison Fall, M.D., for an independent medical examination (IME) at Respondents' request. Dr. Fall testified at hearing and was admitted as an expert in physical medicine and rehabilitation. Dr. Fall opined that Claimant had no significant objective findings which would indicate a worsening of condition. She recommended Claimant participate in an active exercise program. In a later addendum, on May 3, 2022, Dr. Fall opined that there was no medical indication for MBB, because Claimant's complaints were subjective. She also opined there was no indication for additional active medical treatment. In her report, Dr. Fall opined that it is "inappropriate to recommend maintenance care when there is no permanent impairment." Dr. Fall offered cogent explanation for this opinion. (Ex. A).

19. On April 28, 2022, Claimant saw Caroline Gellrick, M.D., for an IME requested by Claimant's counsel. Dr. Gellrick opined that Claimant is not at MMI, and that the MMI determination should be reversed "due to further active treatment intervention that was in process." She further opined that the medial and lateral branch blocks requested by Dr. Chan are reasonable and necessary, and if Claimant has an RFA that is not successful, he may require further facet injections at the L4-5 level. Dr. Gellrick's opinion that Claimant is not at MMI is not persuasive. Her opinion regarding the reasonableness and necessity of medial and lateral branch blocks is credible. Dr (Ex. 4).

20. Employer terminated Claimant's employment on October 6, 2020.

21. [Redacted, hereinafter TM] was Claimant's supervisor when he worked at Employer in 2020, and testified at hearing regarding Claimant's termination. TM[Redacted] testified that Employer terminated Claimant for "a number of reasons, the primary one being falsifying recounts of incidents." TM[Redacted] testified that Claimant

sustained a finger injury in July 2020, and told TM[Redacted] he initially did not want treatment. He testified that later he was "made aware after the fact that [Claimant] was trying to seek financial compensation" from Employer. TM[Redacted] testified that it was "brought to [his] attention that [Employer] was unable to help in that regard because -- specifically because [Claimant] had told his medical provider that this incident, in fact, did not happen at work." TM[Redacted] offered no explanation as to how he learned this information, or whether he had personal knowledge. TM[Redacted] also testified that in September 2020, Claimant sustained another finger injury. TM[Redacted] indicated that Claimant did not want to file an injury report, and that while walking to TM's[Redacted] supervisor's office, Claimant "made it clear to me at that point that he planned on lying once we got up to the office, he told me that was his intent, and he didn't understand why we're going up to the office." TM[Redacted] offered no cogent testimony as to whom Claimant allegedly intended to lie or what he intended to lie about. He later testified that he did not know if Claimant wanted to file a worker' compensation claim, or whether Claimant ultimately filed a claim regarding the September 2020 finger injury. TM's[Redacted] testimony is of little evidentiary value because his testimony demonstrates he had little, if any, personal knowledge of the information to which he testified.

22. Claimant testified at hearing that his pain is worsened by certain activities, primarily driving, and lifting. He testified that when he lifts things, he tends to feel the effects the following day or evening. He testified that he did not work from October 2020, when he was terminated by Employer until April 5, 2021. During this period, he testified that he did not sustain any new injuries involving his lower back. Claimant testified that his back pain waxes and wanes, and has good and bad days depending on activities. Claimant's testimony was credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible

inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Reopening for Change in Condition

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving her condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Indus. Comm'n*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Constr. Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO July 19, 2004)

Claimant has failed to establish that his claim should be re-opened due to a change in condition. The evidence establishes that Claimant has experienced an return of symptoms, but not that his original work injury has changed. Neither Dr. Chan nor Dr. Holmboe have opined that Claimant's condition has changed. The April 2021 MRI, when compared to the January 2020 MRI confirmed that Claimant's lumbar pathology was unchanged. When Claimant was placed at MMI in March 2020, Dr. Chan and Dr. Holmboe opined that maintenance medical treatment (*i.e.*, injections) may be reasonable and appropriate in the future, despite the fact that Claimant was reporting minimal pain at that time. From this, the ALJ infers that it was reasonably anticipated that Claimant may experience a return of symptoms after MMI, without a change of condition. The fact that

Claimant has experienced exacerbations or recurrence of symptoms is not evidence that Claimant's physical condition has changed since reaching MMI. Additionally, both Dr. Chan and Dr. Holmboe opined that Claimant remained at MMI when each last saw him, and neither opined that Claimant's physical condition had changed or worsened.

Maintenance Medical Benefits

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has established that the medial and lateral branch blocks and the SI joint injections recommended by Dr. Chan and Dr. Holmboe is reasonably necessary to relieve the effects or prevent the deterioration of Claimant's work-related injury. The procedures recommended by Dr. Chan - MBB and LBB, are diagnostic tests that are performed to determine the potential efficacy of a radio frequency rhizotomy or radio frequency ablation (RFA) procedure. *See* W.C.R.P. Rule 17, Ex. 1, F.4.e, and F.4.f. As Dr. Chan indicated, the results of the medial and lateral branch blocks would dictate whether RFA procedures are warranted. No credible evidence was presented that an RFA would "cure" Claimant's work-related injury. However, the RFA procedure is a procedure that provides extended pain-relief of 7-9 months or longer. *Id*. The ALJ therefore finds that the MBB and LBB procedures recommended by Drs. Chan and Holmboe are more likely than not reasonably necessary to relieve the effects of the Claimant's industrial injury.

While the surveillance video demonstrates that Claimant was able to function without apparent difficulty at the time of surveillance, the actions performed in the video are do not conflict with the restrictions placed on Claimant and do not demonstrate that Claimant does not experience symptoms which may be relieved by the MBB and LBBs recommended by Dr. Chan and Dr. Holmboe.

With respect to the July 8, 2021 SI injection, Claimant received the injection based on Dr. Chan's recommendation. Dr. Chan indicated that the SI injection should be considered maintenance care based on the Claimant's chronic right SI symptoms, and that he had concordant findings on examination. Claimant had also received symptomatic relief from previous SI joint injections. Although the Claimant received only temporary relief from the July 8, 2021 injection, this does not render the treatment unreasonable given the information available before the injection was performed. Claimant has established that the July 8, 2021 SI injection was reasonably necessary to relieve the effects of his industrial injury.

With respect to chiropractic care recommended by Holmboe, Claimant has failed to establish that the treatment is a reasonably necessary maintenance medical treatment. Although Claimant reported subjective improvement to Dr. Holmboe from chiropractic care, no records of chiropractic care were offered or admitted into evidence from which it can be determined whether chiropractic care resulted in any objective improvement. The ALJ finds it more likely than not that further chiropractic care is not reasonably necessary to relieve the effects of or prevent deterioration of Claimant's industrial injury.

Temporary Disability Benefits

An injured worker entitlement to temporary disability benefits continue until terminated pursuant to § 8-42-105 (3), C.R.S., which provides: "Temporary total disability benefits shall continue until the first occurrence of any one of the following: (a) The employee reaches maximum medical improvement; (b) The employee returns to regular or modified employment; (c) The attending physician gives the employee a written release to return to regular employment; or (d) (I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." See also § 8-42-106 (2), C.R.S. (temporary partial disability benefits).

Claimant was placed at MMI on March 20, 2020. Although Dr. Holmboe briefly stated Claimant was not at MMI on May 27, 2021, the following visit, two weeks later he stated Claimant was at MMI. When Dr. Holmboe discharged Claimant on August 5, 2021, he indicated the date of MMI was March 20, 2020, from which the ALJ infers his May 27, 2021 MMI statement was a mistake or typographical error. Notwithstanding, because Claimant has failed to establish grounds to reopen his claim, and remains at MMI, Claimant has failed to establish an entitlement to temporary disability benefits. Claimant's request for temporary disability benefits is denied and dismissed.

The issue of whether Claimant is responsible for his termination is moot.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his claim is denied and dismissed.

2. Respondents shall pay for the medial branch block and lateral branch blocks, recommended by Dr. Chan and Dr. Holmboe and for the July 8, 2021 SI injection performed by Dr. Chan according to the Medical Fee Schedule, as maintenance medical benefits.

3. Claimant's request for authorization of chiropractic care as a maintenance medical benefit is denied and dismissed.

4. Claimant's request for temporary disability benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 15, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-147-757-003

STIPULATION

- The parties stipulate that the Claimant was assigned a 2% left upper extremity rating by the ATP and neither party disputes this rating.

ISSUES

- Did Respondents overcome the DIME's cervical rating and determination of MMI by clear and convincing evidence?

- Whether the medical treatment for Claimant's cervical spine, including the cervical surgery is reasonable, necessary, and related?

FINDINGS OF FACT

1. Claimant was a custodian for the [Redacted, hereinafter KC] District.

2. Claimant suffered admitted injuries on August 6, 2020 when she fell as she was exiting a vehicle after driving to another school building to use the bathroom.

3. Claimant initially treated at Keefe Memorial Hospital, Prairie View Clinic on the date of the injury. Her primary complaint was "LEFT SHOULDER INJURY /BUMP ON FOREARM". She also added that she also hurt her right hip. The assessment was:

    1. work related injury

    2. fall – tripped over curb

    3. left elbow strain

    4. lumbar strain

    5. left shoulder strain

    6. chest wall bruising

    She was treated with an injection of Toradol and given a prescription for Ibuprofen. (Respondents' Exhibit F, pp. 54 – 55).

4. On October 15, 2020 Claimant returned for examination at Keefe Memorial Hospital and noted "vast improvement" in her medial elbow pain. Her treating provider had growing concern Claimant had sustained a left wrist injury given her medial elbow improvement and lack of findings elsewhere and Claimant's physical therapist was concerned she had sustained a scapholunate injury. She was noted as wearing a thumb splint for the past 2 weeks and had continued pain with movements like turning a doorknob. A left wrist MRI was ordered. (Respondents' Exhibit F, p.73).

5. On December 21, 2020 Claimant reported to Dr. Nicholas Olsen for further work-up of her upper extremity issues. (Respondents' Exhibit N, pp. 280-283). Claimant denied mid or lower back pain and physical examination by Dr. Olsen **showed Claimant's c-spine to have full range of motion, no signs of radiculopathy, and was otherwise unremarkable.** Dr. Olsen believed Claimant had a fairly extensive workup thus far but had yet to complete an EMG. **He noted that Claimant was unlikely to have cervical radiculopathy as she had an unremarkable cervical spine examination.** He noted a fairly benign examination, but ordered tests to rule out CRPS as all other explanations for her pain had been eliminated.

6. Similar physical examination findings were documented by Dr. Olsen during Claimant's January 11, 2021 examination as she continued to have full range of motion in her c-spine without pain or dysfunction. (Respondents' Exhibit N, p. 286). **He noted EMG results were negative for findings of cervical radiculopathy** and all CRPS testing was negative.

7. A February 11, 2021 MRI of Claimant's c-spine showed stenosis of the central canal at C4-5 with moderate bilateral foraminal narrowing, moderate stenosis of the central canal at C5-6, and mild stenosis of the central canal at C6-7. (Respondents' Exhibit E, p. 27).

8. Claimant followed up with Dr. Olsen on May 13, 2021 with reports of an undiagnostic response to both the c-spine TESIs that were attempted by Dr. Olsen. (Respondents' Exhibit N, p. 308), Claimant noted that the "only injection that has helped her to date is the first coronavirus. She states that after getting the coronavirus, she noted her left arm paresthesia had improved for a week." Dr. Olsen was not able to offer an explanation as to why she may have experienced relief. He explained to Claimant that "we have thoroughly worked up a pain generator in the cervical spine. Neither the left C4-5 or C5-6 transforaminal epidural steroid injection offered significant efficacy. This would rule out her neck as the source of her symptoms." (Respondents' Exhibit N, p. 309).

9. Claimant continued to treat until she was placed at MMI by Dr. Olsen on July 6, 2021. This was following an IME with Dr. Mark Paz. Dr. Olsen agreed with the 2% upper extremity rating given by Dr. Paz.

10. Claimant underwent a Division Sponsored IME with Dr. Winslow on March 1, 2022. The initial report issued by Dr. Winslow is undated and unsigned. (Claimant's Exhibit 9). In his report, Dr. Winslow agreed to the 2% upper extremity rating. He also noted that the Claimant had a cervical surgery recently and felt that the cervical spine was related. In his initial report he states "The patient presented to the clinic in a neck brace with a recent cervical spine fusion. I have no notes from surgeon, consult, surgical notes or information regarding the surgery. While the previous independent medical examiner dismissed and did not include cervical thoracic or lumbar spine, the patient's injury MOA was indeed injured during a fall, had symptoms early on of neck, back and lower back symptoms, was treated and accepted as part of her care." However, with respect to the neck, Dr. Winslow does not reference any neck or cervical diagnosis or treatment in the medical records until December 21, 2020. In the summarized note for that date, he notes a consultation from Associates of Colorado and the notation that it is unlikely she has cervical radiculopathy as she has an unremarkable cervical examination. Despite this apparent contradiction, he determined in the initial report that the cervical spine was work related. Having made that determination, he deferred a cervical rating since the evaluation was too soon after Claimant's cervical surgery and he could not perform the range of motion testing.

11. Dr. Winslow subsequently issued an addendum report dated June 28, 2022 where he provided an updated rating of 19% impairment for the cervical spine, in addition to the 2% upper extremity rating. (Claimant's Exhibit 10). He also determined that the Claimant reached MMI on May 3, 2022. This is the date of his follow up DIME. He states "Dr. Paz reports MMI June 8, 2021, MMI in my opinion is after the patient completes her therapy for her surgery which can be completed as maintenance. She will be placed at MMI today 5/3/2022". (Respondents' Exhibits H, p. 24). In his rationale for his decision as to MMI and impairment, he states "On review of the medical records in my opinion and based on application of the guidelines it is apparent that causally this is related to her work accident and is reasonable and necessary care. She had no symptoms prior to this, she had cervical spine disease that necessitated surgery resulting in significant improvement in the patient's clinical symptoms. Either this is the most incredible coincidence or more likely the work injury aggravated accelerated and placed the patient in a position where she required a fusion that she did not require prior to this injury, there was no indication in the medical record, history or any other information provided that the patient was getting ready for or would likely have needed a spinal fusion/surgery if this had not been case. She is therefore rated appropriately; her surgery will be included and her previous injury and subsequent impairment rating related to her accident." (Respondents' Exhibit H, p. 125).

12. Dr. Hattem testified on behalf of Respondents. He performed a record review IME of the Claimant on behalf of Respondents. He issued reports dated August 25, 2022 and January 17, 2023. Dr. Hattem was qualified as an expert in occupational medicine with Level II accreditation. In addition to review of extensive medical records regarding Claimant's treatment, he also reviewed the DIME report from Dr. Winslow.

According to his initial report, Dr. Winslow assigned an impairment rating to the left upper extremity of 2%.[1]

13. Dr. Hattem persuasively testified, consistent with his report, that Dr. Winslow made various errors in his cervical rating including providing a Table 53 rating for a 1 level fusion, instead of a 2 level fusion, and errors in range of motion testing where he provided incorrect ratings for cervical right rotation and cervical left rotation. The range of motion ratings were both inaccurate based on the applicable tables in AMA Guides resulting in an under-rating based on the range of motion measured by Dr. Winslow.[2] Although these errors exist and, are well documented, they do not resolve the central issue as to whether there should be a cervical rating in first place and whether that part of the DIME Report is clearly incorrect.

14. Dr. Hattem also testified that with respect to causation of the neck, he reviewed the medical records which revealed all cervical exams prior to March 2020 were normal. He reviewed Dr. Olsen's records with respect to evaluation of symptoms that might be related to the neck. With respect to Dr. Olsen's evaluation in December, 2020, Dr. Hattem interpreted his evaluation as an attempt to rule out the cervical spine as a pain generator, even though Claimant had never complained of cervical pain.

15. Dr. Hattem testified consistently with his IME report that utilizing a causation analysis, his opinion was that the cervical spine was not related to the work injury. As part of his analysis, he noted that Dr. Winslow was under the false impression that Claimant had never experienced similar types of symptoms. According to the records reviewed by Dr. Hattem, Claimant had consulted with an orthopedic surgeon, Dr. Hurley in June 2017 and presented with non-traumatic bilateral elbow pain, neck, bilateral shoulder, bilateral hand pain, soreness in the hips, knees, ankles and toes.[3]

16. Dr. Hattem also opined that Dr. Winslow's inclusion of a cervical impairment rating as a work related injury was clearly in error based on the lack of an adequate causal analysis. In his report dated January 17, 2023 he concludes that based on his analysis, ". . . Dr. Winslow clearly erred when he attributed [Redacted, hereinafter MA] cervical spine condition to her fall of August 6, 2020." Additionally, Dr. Hattem testified that the causal analysis employed by Dr. Winslow, namely that because X followed Y that Y caused X, was insufficient. I find Dr. Hattem's testimony and report to be persuasive, credible and more than a difference of opinion with the opinions of Dr. Winslow as to causation. Based on Dr. Hattem's testimony and written opinions, I find Dr. Winslow's inclusion of a cervical impairment rating to be clearly incorrect.

17. Dr. Reiss also testified at the hearing via telephone on behalf of Respondents. Dr. Reiss, an orthopedic surgeon was qualified as an expert in orthopedic

---

[1] The DIME summary sheet references the right upper extremity in error, but in the narrative, he correctly refers to the left upper extremity. (Respondents' Exhibit H, p. 121).

[2] These errors are also noted by the Division IME Unit in an incomplete notice dated July 15, 2022. (Respondents' Exhibit Z). The evidence is devoid of any response to the notice.

[3] Dr. Hurley's note of June 8, 2017 is consistent with the testimony of Dr. Hattem. (Respondents Exhibit G).

surgery and as a level II accredited physician. He testified that he reviewed the X-Rays and MRI images and it was his opinion that the imaging showed degenerative preexisting changes rather than anything acute. He elaborated that if there was an acute cervical strain at the time of the injury, there would be neck pain at the time of the injury. Contrary to that, there was considerable documentation of a lack of neck symptomatology and a normal exam of the neck. It was his opinion that it is very unlikely that Claimant injured her neck in the incident and that is supported by the non-diagnostic cervical injections and the results of the EMG testing. Dr. Reiss opined that Dr. Winslow made a significant error in determining that the cervical spine was causally related to the work injury incident.

18. After the Claimant was placed at MMI and before the DIME occurred, the Claimant underwent a 2 level cervical fusion at C4 – C6 with Dr. Rauzzino. However, the exhibits submitted by the parties do not include the pre-operative or operative reports. The only records from Dr. Rauzzino's office are post-surgery. As such, absent is a complete, concurrent historical record as to the Claimant's symptoms or the rationale for surgery, other than the historical data contained in the post-surgical records.

19. Post-fusion, Claimant reported an improvement of symptoms for the first few weeks to few months. However, according to a report of December 19, 2022 from Dr. Rauzzino, approximately 11 months after the surgery, the Claimant was complaining of pain in her left upper extremity. Dr. Rauzzino reviewed a recent CT scan and MRI scan and found no obvious complications. He wanted to do an EMG/nerve conduction study for potential RSD.[4]

CONCLUSIONS OF LAW

A. Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

[4] Dr. Hattem noted in his testimony that Claimant had a work up for CRPS previously, which was negative.

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

B. Burden and standard of proof

The DIME physician's findings include his subsequent opinions, as well as his initial report. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330 (Colo. App. 2005). The finding of a DIME physician concerning a claimant's MMI status or medical impairment rating is binding on the parties unless it is overcome only by clear and convincing evidence. C.R.S. §8-42-107(8)(b)(III). Clear and convincing evidence is that which is "highly probable and free from serious or substantial doubt." Thus, the party challenging the DIME physician's finding must produce evidence contradicting the DIME which is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015 (Colo. App. 2002).

In this case, Respondents must overcome the DIME's cervical rating and MMI determination by clear and convincing evidence. With respect to the medical benefits sought, Claimant must prove that the medical treatment sought, including the surgery performed by Dr. Rauzinno was reasonable, necessary and related.

C. Respondents overcame the cervical rating and determination of MMI of the DIME by clear and convincing evidence.

A DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing standard also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME's whole person rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As noted in the findings, Dr. Hattem persuasively testified that Dr. Winslow made errors in his rating of the Claimant's cervical spine. However, more concerning than the errors with respect to the Table 53 rating and the range of motion ratings is the lack of a meaningful causation analysis by Dr. Winslow with respect to the claimed injury to the cervical spine. His causation analysis is based on a "temporal" relationship between the occurrence of the injury followed by the neck surgery. He states "Either this is the most incredible coincidence or more likely the work injury aggravated accelerated and placed the patient in the position where she required a fusion that she did not require prior to this injury. . ." (Claimant's Exhibit 10, p.38). This *post hoc* fallacy ignores the facts that Dr. Winslow notes in his own report. Specifically, Dr. Winslow summarized in his initial report the medical records he reviewed beginning on August 6, 2020. Importantly, in the summary of the chart note of September 24, 2020 from KC[Redacted], he notes "KC[Redacted] clinic again focusing everything seems to be focused around the assessment left elbow sprain pain, continued left elbow pain. *(No comments conversations discussions about cervical spine low back are noted in the exam, treatment, history."* (Claimant Exhibit 9, p. 25). Clearly, at the initial DIME evaluation, Dr. Winslow noted the lack of temporal complaints or discussion of cervical pain or injury. However, without any discussion regarding this prior observation, he determines in the addendum report that there is a causal relationship between the initial injury and the need for subsequent cervical fusion.

I conclude that Dr. Hattem's opinions that Dr. Winslow's causation determination is deficient, based on his incomplete causation analysis, to be credible and persuasive. I further conclude that Dr. Winslow clearly erred in his determination that the Claimant's cervical spine condition is related to the compensable work injury of August 6, 2020.

Since the Respondents' have overcome the determination of Dr. Winslow that the neck was related, the treatment for the neck at the hands of Dr. Rauzzino is rendered moot since the treatment for the neck is not related.

Respondents' have also challenged the date of MMI assigned by Dr. Winslow. I conclude that based on the totality of the evidence that the date of MMI assigned by Dr. Winslow was based on his consideration that the surgery performed by Dr. Rauzzino extended the MMI date since it was his opinion that the surgery was related. Since I conclude that the surgery was not related to the work injury, I conclude that the date of MMI assigned by Dr. Olsen of July 6, 2021 to be the date of MMI.

ORDER

It is therefore ordered that:

1. Respondents prevailed in their challenge to the Division IME impairment rating for the cervical spine by clear and convincing evidence. Respondents are not obligated to pay the 19% whole person rating for the cervical spine imposed by the Division IME physician, Dr. Winslow. The date of Maximum Medical Improvement is July 6, 2021.

2. Pursuant to the parties' stipulation, the 2% impairment rating for the left upper extremity is determined to be awardable.

3. Respondent may take credit for any PPD benefits previously paid to Claimant in connection with this claim.

4. Claimant has failed to sustain her burden of proof that the surgery performed by Dr. Rauzzino was reasonable, necessary and related and the request for the medical benefits related to that surgery are denied.

5. Respondent shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUE

1. Did Claimant overcome the DIME physician's permanent impairment rating by clear and convincing evidence, and if so, what is Claimant's correct permanent impairment rating?

PROCEDURAL ISSUES

At the hearing, Claimant endorsed the issue of disfigurement, specifically as it related to voice/vocal issues. Claimant has withdrawn that issue.

On October 24, 2022, the second day of the hearing, Claimant offered Exhibit 4, an addendum report from Karin Pacheco, M.D. dated October 4, 2022, into evidence. Respondents' counsel objected, and moved to exclude the report. On the first day of hearing, Claimant's counsel completed Dr. Pacheco's direct examination, and Respondents' counsel was in the middle of cross-examination when the June 27, 2022 hearing was continued because Dr. Pacheco was no longer available to testify that day. Claimant's counsel asserted, in support of Exhibit 4, "I requested that Dr. Pacheco prepare this supplemental report in order to conserve the time, energy, and effort of the Court, because I'm entitled to redirect, and that is basically, the report would be the redirect testimony that Dr. Pacheco would provide." (Vol. II Tr. 13:19-24). The ALJ took Exhibit 4 under advisement. Respondents' counsel completed his cross-examination of Dr. Pacheco, and Claimant's counsel completed her redirect of Dr. Pacheco. Exhibit 4 is not admitted into evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

Claimant's Prior Medical History

1. Claimant is a 48 year-old woman who worked for Employer as a registration clerk in the emergency department (ED).

2. On May 31, 2019, Claimant was seen by her PCP for symptoms that had been ongoing for three weeks, including coughing, dyspnea/shortness of breath (SOB), and bronchitis. According to the medical records, Claimant had checked into the ED the previous Thursday, had a chest x-ray and a nebulizer treatment, and she received steroids. Claimant rested for a few days and returned to work, but she could not make it through her 12-hour shift. (Ex. A).

3. Less than two weeks later, on June 11, 2019, Claimant returned to her PCP for escalating issues that included wheezing, a recurring cough, an upper respiratory infection (URI) and dyspnea/SOB. Blanca Richmond-Coca, M.D., documented in the medical record that Claimant's wheezing was a new problem, and they should consider whether Claimant has undiagnosed asthma. She also documented that at times exertion provoked flares of coughing and difficulty talking, so Claimant would require FMLA leave one to three times each month, for one to two days for each episode. She referred Claimant to pulmonologist, James, Meyer, M.D. (Ex. A).

Claimant's Admitted Work Injury Through October 20, 2020 (MMI)[1]

4. On June 13, 2019, Claimant was working for Employer. Law enforcement brought a man to the ED who was placed in the behavioral health unit. When Claimant entered the room to band the patient, she noticed a strong pungent odor. Shortly after leaving the room, Claimant started sneezing, her nose and face started to swell, and she had trouble breathing. (Ex. D).

5. Claimant continued to have difficulty breathing so she went to the ED. Kelli Jones, M.D., treated Claimant emergently as Claimant's problems were becoming severe, and she was suffering respiratory distress and wheezing. Dr. Jones intubated Claimant and noted that Claimant's "presentation was very rapidly progressive and [she] was concerned she may need a cricothyroidotomy if she could not be intubated. She had an in-line nebs and at one point was difficult to bag." Dr. Jones noted that after Claimant was intubated, they took a chest x-ray to verify correct placement of the tube. Based on the x-ray, respiratory therapy withdrew the tube 4 cm. Dr. Jones specifically noted in the medical record that there were no complications with the intubation, and Claimant tolerated the procedure well. Claimant was admitted to the ICU. (Ex. B).

6. The ALJ finds that Claimant's intubation on June 13, 2019 was emergent, but there were no documented complications.

7. Claimant was extubated on June 15, 2019. James Knight, M.D. examined Claimant that day. Claimant reported dyspnea, throat tightness, and chin numbness. Dr. Knight noted Claimant was moving air well. On June 17, 2019, Claimant was discharged from the hospital with a primary diagnosis of anaphylaxis, and secondary diagnoses of airway obstruction and acute respiratory failure. It was recommended that Claimant follow up with an allergist. (Ex. F).

8. On June 19, 2019, Claimant saw Dr. Richmond-Coca, her PCP, with a chief complaint of worsening anxiety. Dr. Richmond-Coca noted that Claimant's anxiety increased following her recent hospitalization. (Ex. F).

9. On July 3, 2019, Claimant was evaluated by Authorized Treating Provider (ATP), William Woo, M.D. He diagnosed Claimant with respiratory distress, and noted in the medical record that he spoke with another allergist who agreed that Claimant's labs were not consistent with an anaphylaxis type reaction. Dr. Woo further documented that

[1] The MMI date, October 20, 2020, is not at issue.

Claimant experienced respiratory anxiety after the intubation, and her PCP prescribed her Xanax. Claimant remained fearful, so Dr. Woo recommended she see a psychologist, and referred her to John DiSorbio, Ed.D. (Ex. D). Dr. DiSorbio's treatment notes identify the emotional impact Claimant's work injury and personal stressors have had on Claimant. (Ex. E).

10. On July 15, 2019, Claimant was seen at an ED for her continued cough, increased SOB, and wheezing. These are the same symptoms Claimant had prior to the admitted work-related injury on June 13, 2019. Her pulmonary function testing (PFT) on July 15, 2019, was normal. On July 19, 2019, she was seen by John Ferguson, M.D., a pulmonologist, who performed another PFT, which was also normal. On September 4, 2019, Claimant was seen by another pulmonologist, Majd Kobitary, M.D. Dr. Kobitary administered another PFT and performed spirometry testing, both of which were normal. (Ex. F).

11. On September 11, 2019, Claimant was evaluated by Justin King M.D., an ENT. Dr. King performed a laryngoscopy on Claimant. The laryngoscopy was normal. (Ex. F).

12. Claimant went to an ED on September 13, 2019, for an URI and bronchitis. The following day she was seen at a different ED for SOB. (Ex. F).

13. Dr. Woo evaluated Claimant on October 23, 2019. He noted that since his last evaluation, Claimant had been on a cruise when she experienced a coughing episode that caused her vocal cord to spasm and close, and she passed out. The ship's doctor performed a chest x-ray and diagnosed her with bronchitis. Claimant continued to be anxious, and fearful that if she coughed it would trigger a larynx spasm. Dr. Woo referred Claimant to Gary Gutterman, M.D., a psychiatrist. (Ex. F).

14. On November 11, 2019, Claimant was seen at the UCHealth ED, with SOB and chest heaviness that had been ongoing since June. A CT of her neck and upper chest showed no masses or evidence of other lesions along the course of the vagus or recurrent laryngeal nerves. A laryngoscopy showed left vocal cord weakness, but no significant paradoxical movement of the cords or upper airway obstruction. (Exs. F and M).

15. Daniel Beswick, M.D., the ENT Stat Consult at UC Health ED, evaluated Claimant and performed a fiberoptic laryngoscopy on Claimant the same day, November 11, 2019. The testing indicated Claimant had left vocal fold hypomobility, and the right vocal fold had normal and full abduction and adduction. The neck CT showed no evidence of masses along the course of the left recurrent laryngeal nerve, and there was no subglottic stenosis on imagining. Dr. Beswick indicated that Claimant had left vocal cord weakness that ***could be*** from intubation several months prior. He also noted that the laryngoscopy examination had limited utility in evaluating for vocal cord dysfunction (VCD) as it is an episodic disorder that was not seen on that date. According to the medical record, Claimant's symptoms improved with nebulizer treatments and steroids with no airway obstruction, and no acute ENT intervention was needed. Dr. Beswick

recommended Claimant follow up in an ENT clinic for an evaluation of the left vocal cord paresis. (Ex. F).

16. On November 15, 2019, Claimant had her third session of speech therapy. Claimant told her therapist about her recent trip to the ED. The therapist noted that Claimant had a new diagnosis of a paralyzed vocal cord, and she had been diagnosed with left TVF paralysis, which would explain Claimant's hoarseness and breathy vocal quality. (Ex. F).

17. On December 1, 2019, Claimant presented to the ED with SOB and mild hoarseness. She was diagnosed with simple vocal cord dysfunction, SOB, vocal cord dysfunction (VCD), and chronic cough. Claimant was to follow up with the ENT. (Ex. F).

18. A few days later, on December 6, 2019, Claimant was evaluated by Mona Abaza, M.D., an ENT at UC Health. Dr. Abaza performed a video stroboscopic vocal cord evaluation on Claimant. The testing showed Claimant had muscle tension dysphonia (MTD), laryngopharyngeal reflux, and striking zone mass. Claimant was assessed with vocal cord weakness, functional voice disorder, vocal cord nodules, vocal cord leukoplakia and spasm of the larynx. Dr. Abaza recommended a referral to a speech ENT and she felt Claimant would benefit from 8-12 aggressive voice therapy sessions. (Ex. F).

19. Dr. Woo evaluated Claimant on January 15, 2020, and noted Claimant was using inhalers, had started speech therapy, was seeing a psychiatrist, and had a cold. Dr. Woo indicated that since he last saw Claimant, she had a laryngoscopy that identified possible left-sided vocal cord paralysis or weakness, but she then went to an ENT clinic and had another laryngoscopy that revealed there was no paralysis, and only some vocal cord nodules. He also noted that Claimant might have a form of cough variant asthma, and it is possible that the cough variant asthma had been irritating her vocal cords, and could be the underlying cause of the vocal cord nodules. (Ex. D)

20. On January 17, 2020, Claimant was seen by a certified speech pathologist for a therapy session. Claimant had a URI that was worsening her cough and causing more difficulty with her breathing. (Ex. 2) On February 12, 2020, Claimant's speech therapist diagnosed Claimant's speech issue as being related to MTD, and she recommended Claimant see Daniel Fink, M.D., an Otolaryngologist, for a trial of superior laryngeal nerve (SLN) blocks and a repeat vocal cord scope. (Ex. M).

21. On March 13, 2020, Claimant saw Dr. Fink for administration of an SLN block. The SLN block was performed in his office without any difficulty. On July 9, 2020, Dr. Fink performed a laryngoscopy that showed normal abduction and adduction on the right, and a reduced abduction and adduction on the left, with no lesions. Dr. Fink's plan was to give Claimant laryngeal Botox injections bilaterally and concurrent with the SLN blocks. On August 13, 2020, Dr. Fink diagnosed Claimant's conditions as MTD, vagus neuropathy, and a cough. He noted Claimant received a good, but temporary response, from the SLN blocks. Following Claimant's first Botox injection, her breathlessness resolved, her cough resolved, her breathing improved, and her speech was normal. On

September 24, 2020, Dr. Fink reported that Claimant's symptoms returned two weeks prior, and were back to baseline. On October 1, 2020, Dr. Fink noted Claimant was only getting about six weeks of relief from the SLN Block and Botox injections, so she would need them on a more frequent basis than the standard recommendations. (Exs. I and M).

22. At Respondents request, Kathleen D'Angelo, M.D. performed an Independent Medical Examination (IME) on Claimant. She conducted an extensive review of Claimant's medical records and issued a very long and detailed IME report dated March 15, 2020, summarizing those records. Dr. D'Angelo opined that Claimant had work-related acute respiratory failure as well as a resultant vocal cord dysfunction and paralysis, pre-existing asthma, Anosmia (not work related), and an aggravation of Claimant's anxiety and insomnia due to her work-related condition. Dr. D'Angelo recommended a repeat laryngeal scope to determine if the vocal cord function was normalized. She also recommended that Claimant continue with speech therapy. (Ex. F).

23. Dr. D'Angelo noted that "due [to] what appears to have been a difficult intubation" Claimant sustained a known complication of vocal cord dysfunction/paralysis. She noted that Dr. Jones had difficulty intubating the patient and had considered performing a stat-tracheotomy. According to Dr. D'Angelo it is well known in ER medicine that anaphylaxis causes swelling to the airway with associated problems in passage of an endotracheal tube. She noted that once on the ventilator, [Redacted, hereinafter MM] was documented to be "difficult to bag" which is another sign of airway obstruction. (Ex. F).

24. The ALJ finds Dr. D'Angelo's opinion generally credible, but not persuasive. Dr. D'Angelo completed a very detailed and comprehensive review of Claimant's medical records. But Dr. D'Angelo's conclusion regarding Claimant's intubation being difficult is not supported by the medical records. As found, there were no complications with Claimant's intubation on June 13, 2019, and Claimant tolerated the procedure well.

25. Between March 15, 2020 and October 20, 2020 (Claimant's date of MMI), Claimant continued to treat with Dr. Woo (Ex. D), Dr. DiSorbio (Ex. E), Dr. Gutterman (Exs. G and H), and Dr. Fink (Ex. I).

26. On June 10, 2020, Dr. Gutterman opined Claimant reached MMI for the mental aspect of her claim with a 6%-7% mental impairment rating associated with PTSD. (Ex. H)

27. Dr. Woo opined Claimant was at MMI as of October 20, 2020. He noted that during the examination, Claimant did not cough throughout the visit, there was no wheezing and her speech was coherent and intelligible. He further noted that as a result of Dr. Fink's injections Claimant experienced better speech and breathing control without laryngeal spasms, and Claimant's respiratory distress with vocal cord dysfunction was stable. With regard to permanent impairment, Dr. Woo indicated that "there is no evidence of impairment. She has good breathing ability when she is optimally treated. She has

had previous PFT's which were normal. Using Table VI on page 182 of the AMA Guides to the Evaluation of Permanent Impairment, 3rd Edition, Revised she is Class 1 for speech and I would assess zero percent impairment." He recommended regular intervals of SLN blocks about every six weeks. (Ex. J).

Claimant's Post October 20, 2020 MMI History

28. On October 23, 2020, Claimant was seen by her PCP for hypertension, fatigue, snoring apnea fatigue, possible sleep apnea, chronic anxiety, and wheezing. Claimant's PCP noted that Claimant "has a complex history prior to her work comp injury where she was intubated. There has been [a] question if she has had asthma in the past and would like to see specialists at NJH." On November 20, 2020, Claimant was seen by her PCP for COVID, and another episode of bronchitis. Her symptoms included SOB, and a worsening cough. (Ex.1).

29. After being placed at MMI by Dr. Woo, Claimant still treated with Dr. Fink, who continued to provide the same diagnoses, including MTD. He continued to administer SLN bocks and Botox injections every six weeks, without any identified side effects. (Ex. I).

30. On December 21, 2020, Respondents filed a Final Admission of Liability consistent with Dr. Woo's opinions regarding MMI, and impairment. (Ex. K) On January 15, 2021, Claimant filed a Notice and Proposal for a DIME. On the Notice, the two regions selected for evaluation were Region 5, ENT (Nose & Throat) and Region 6, Other (Respiratory/Pulmonary). (Ex. L).

31. Michael Volz, M.D., a Level II accredited pulmonologist was selected as the DIME physician. Dr. Volz met with Claimant on March 20, 2021, took a history from Claimant, performed a comprehensive record review, and physically examined Claimant (including an oropharynx/throat exam). (Ex. M).

32. Dr. Volz spent over 12 hours reviewing Claimant's medical records, and he prepared a 29-page DIME report. He listed numerous pertinent medical conditions and 14 different clinical diagnoses (work and non-work related), none of which included difficulty swallowing/dysphagia. He agreed that Claimant achieved psychiatric MMI as of June 20, 2020, and opined Claimant achieved overall MMI by October 20, 2020. He agreed with Dr. Gutterman's 6-7% mental health impairment for PTSD. Dr. Volz addressed the medical impairment aspect of this claim, as follows:

> Determination of Permanent Disability related to laryngeal problems is based upon Section 9.3a – Respiration (page 180-181) as found in Chapter 9, pages 173-183, of the Revised 3rd Edition of the AMA Guides to the Evaluation of Permanent Impairment. More specifically, the PI is related to the larynx as discussed in the narrative on pages 180-181 and in Table 5 – Classes of Air Passage Defects found on page 181. Using this information, I am assigning an IR of 5%. She has Class [1] IR of WP that is moderate and therefore applying 5% IR.

> Additionally, the claimant has experienced cough and shortness of breath (dyspnea) as well as hypoxemia/hypoxia. These manifestations are discussed in Chapter 5, pages 115-126, of the Revised 3rd Edition of the AMA Guides to the Evaluation of Permanent Impairment. None of these manifestations have attributable designation for Permanent Impairment and a search for the underlying basis is recommended or needed to ascertain attribution as there are a number of diagnoses/causes for these manifestations, whether lung/pulmonary or another organ system. (Ex. M).

33. Dr. Volz opined that the "medical aspect of the MMI that is or might be attributed to the injury on the DOI is exclusively related to laryngeal problems that Dr. Fink is managing. The most current diagnosis is related to laryngeal problems of adductor spasmodic dysphonia as well as vocal cord edema." He assigned Claimant a 12% whole person impairment rating (7% psychological and 5% other/air passage defect). (Ex. M).

34. The ALJ finds that Dr. Volz's opinions are based upon an exhaustive review and analysis of all available information, and his opinions are credible and persuasive.

35. On October 5, 2021, Respondents filed a new FAL consistent with Dr. Volz's opinions. (Ex. O). Claimant disagreed with the impairment rating provided by Dr. Volz and requested a hearing to overcome his opinion. (Ex. P).

36. On behalf of Respondents, Jeffrey Schwartz, M.D. conducted an IME on Claimant. Dr. Schwartz is a pulmonologist, but he is not Level II accredited. Dr. Schwartz reviewed over 1,200 pages of Claimant's medical records (including prior medical records and reports from Drs. Woo, DiSorbio, Kobitary, King, Gutterman, Fink, D'Angelo, and Volz). As part of his IME, Dr. Schwartz took a history from Claimant, examined her, and ran additional spirometry testing, which was normal. (Ex R).

37. In his IME report, Dr. Schwartz discussed the complexity of Claimant's medical situation, including the cause of Claimant's symptoms in light of her preexisting issues. Dr. Schwarz opined that there was no evidence of laryngeal damage from intubation. He noted Claimant had undergone multiple laryngoscopies since November 2019, all of which failed to confirm VCD. Dr. Schwartz noted that Dr. Fink diagnosed Claimant as having MTD, and Dr. Fink treated this successfully with injections. He opined that Claimant's MTD was likely secondary to her PTSD. He indicated that Dr. Volz's reasoning in providing a limited respiratory rating was appropriate given Claimant's repeated normal objective measures on PFTs. (Ex. R).

38. At the hearing, Dr. Schwartz testified that in his opinion, Claimant has MTD, which is a speech disorder, and it is caused by her PTSD. (Vol II Tr. 163:12-164:14). He explained that with MTD the muscles in the throat get tense or overly active, and therefore this condition affects the muscles in the larynx, which controls speech, so speech is abnormal. (*Id*. at 164:22-165:6) He opined that MTD is a speech disorder, not an air passage disorder, and the correct treatment for MTD is speech therapy and Botox injections, which is consistent with Dr. Fink's treatment. (*Id*. at 165:22-166:18). Dr. Schwartz also testified that there is no evidence that Claimant had a swallowing issue as

of her date of MMI, he explained that Claimant's swallowing issue could be caused by a number of non-work injury related conditions including GERD, and in his opinion, to a reasonable degree of medical probability, Claimant's swallowing issue is not causally related to the injections administered by Dr. Fink. (*Id*. at 171:22-173:3). The ALJ finds Dr. Schwartz's testimony to be credible and persuasive.

39. Karin Pacheco, M.D., is an allergist, immunologist and occupational medicine physician at National Jewish Hospital. She is also Level II accredited. Dr. Pacheco performed an Occupational/Environmental Consultation on behalf of Claimant. She received a subjective history of Claimant's symptoms and present illness from Claimant, and she reviewed select medical records. According to Dr. Pacheco's report, she reviewed the following: two reports from Dr. Fink (9/24/20 and 10/1/20), imaging from Platte Valley Medical Center, notes from Claimant's hospitalization from June 13, 2019 – June 17, 2019 (ER notes, 6/13/19 note from the internal medicine attending physician, 6/15/19 progress note, 6/13/19 pulmonary consult, and discharge summary), and National Jewish test data from 2022. The testing performed at National Jewish in April of 2022, all of which was normal, included full pulmonary function testing, methacholine challenge, laryngoscopy, and a CT scan of the chest. (Ex. V).

40. Dr. Pacheco testified that the documents listed in her report are the only records she reviewed (Vol. I Tr. 123:17-22). Thus, in forming her opinion, Dr. Pacheco did not review any of the following: Dr. Volz's DIME report; Dr. Woo's records; Claimant's PCP's records; ED records after the work-related event; post-hospitalization pulmonology reports; or any ENT reports other than the two reports from Dr. Fink. Dr. Pacheco also did not review the PFT reports, spirometry reports or laryngoscopy reports for testing administered prior to 2022.

41. According to her report, Dr. Pacheco was asked to reconsider Claimant's impairment rating regarding the upper airway work-related injuries that Dr. Pacheco stated were related to vocal cord trauma from intubation or from treatment of the vocal cord trauma. In her report, Dr. Pacheco writes, "[a]ccording to her records, it is unclear if the patient underwent a traumatic intubation. She reports several attempts, but only 1 is recorded in the emergency room record." (Ex. V).

42. Claimant testified she currently has problems speaking, difficulty breathing and has to exert herself to speak. Her condition is made worse with stress. (Vol. I Tr. 41:18-42:15). Claimant testified she had has difficulty swallowing and started choking on her food in December 2021/January 2022. (Vol I Tr. 49:20-50:7).

43. Dr. Pacheco used the same Table (Table 5 Classes of Air Passage Defects) from the AMA Guidelines as utilized by Dr. Volz. She opined that Claimant's presentation was consistent with Class II from that table, for 15 to 30% impairment of the whole person. Dr. Pacheco also opined that Claimant's swallowing issue, warranted permanent impairment ratings. She concluded:

> I consulted the AMA guides to the evaluation of permanent impairment, third edition (revised) as used in the state of Colorado. I first turned to Chapter 9, "Ear,

nose, throat and related structures" on page 173. I then turned to table 5, classes of air passage defects, on page 181. I considered that the patient's presentation was consistent with class II, 15 to 30% impairment of the whole person. Specifically, a recognized air passage defect exists, as described by Dr. Fink, and includes decreased motion of the right vocal cord, and no movement of the left vocal cord [untrue]. Dyspnea does not occur at rest and is not produced by walking freely on the level. Dyspnea is produced by stress, prolonged exertion, hurrying, hill climbing, etc. Part of the patient's dyspnea relates to difficult in regulating vocal cord movement. Examination does reveal partial obstruction of the laryngeal pharynx and larynx. Treatment for vocal cord dysfunction requires Botox injections every 6 weeks, on an ongoing basis. I therefore placed the patient at the upper range of class II impairment at 25% impairment of the whole person.

I then turned to chapter 10, the digestive system, and specifically consulted table 2, classes of impairment of the upper digestive tract on page 189. I noted that the patient developed dysphagia and abnormal swallowing, as evidenced by the barium swallowing study obtained May 9, 2022. I considered that the patient's findings fall in class I, 0 to 5% impairment of the whole person, as symptoms and signs of upper digestive tract disease are present with anatomic loss or alteration, but continuous treatment is not required and weight can be maintained. Further treatment with speech pathologist will be necessary to maintain adequate and safe swallow. I therefore assigned a 5% impairment of the whole person for this condition. (Ex. V).

44. At the hearing, Dr. Pacheco testified that Claimant suffers from VCD caused by vocal cord trauma sustained during intubation. (Vol I. Tr. 77:16-79:25). She based her opinions primarily on the November 2019 laryngoscopy showing left vocal cord weakness, but she also reasoned Claimant must have VCD because Dr. Fink would not have provided ongoing injections if Claimant did not have a vocal cord injury. (*Id*. 77:6-15). Dr. Pacheco admitted that the most recent laryngoscopy performed in April 2022 at National Jewish did not identify any airway obstruction or difficulty. (Vol. II. Tr. 56: 7-17; Ex. V). She attributed each of the normal laryngoscopies obtained after the November 2019 laryngoscopy, to where Claimant was in her Botox cycle. (Vol. I Tr. 98:10-99:1).

45. With regard to Claimant's swallowing issue, Dr. Pacheco indicated that while Claimant responded well to Dr. Fink's injections, in her opinion this treatment resulted in the side effect of dysphagia/difficulty swallowing. Specifically, she testified that Claimant's injection treatment with Botox, Marcaine and Kenalog caused Claimant's repetitive disorganized tongue movement, reduced tongue based retraction leading to dysphagia, vocal breathiness, and SOB with talking. (Vol. I Tr. 75:23-77:15, 90:15-91: 1-15). Again, in her opinion, because the swallowing issue is a consequence of claim-related treatment, Claimant is entitled to an impairment rating under Chapter 10 of the AMA Guidelines, which she assessed at 5%.

46. Other than Dr. Pacheco's testimony, there is no objective evidence in the record that Claimant experienced side effects, including swallowing issues, from Dr. Fink's injections. Dr. Fink's records do not document any swallowing side effects from

the SLN blocks and Botox injections.

47. Furthermore, the Notice for DIME only specified two regions for the DIME evaluation: Nose and Throat, and Respiratory/Pulmonary. Thus, these are the only two regions Dr. Volz, the DIME physician evaluated. (Ex. L). The ALJ finds that Claimant never requested a DIME evaluation of her digestive system.

48. Dr. Pacheco was not aware of Claimant's preexisting issues (URIs, bronchitis, coughing, anxiety), or that Claimant was being treated for escalating URI issues just prior to her date of injury. Similarly, Dr. Pacheco was unaware Claimant was experiencing difficulty with talking, physical exertion and SOB severe enough that just prior to her date of injury, she was being referred to a pulmonologist, and regular FMLA leave was recommended. Dr. Pacheco was also not aware that after the work injury Claimant went to the ED repeatedly for bronchitis and SOB. (Ex. V.; Vol. I Tr. 114:22-25, 118:6-119:17, 120:23-123:22). Dr. Pacheco was not aware of these numerous issues because she only reviewed a very limited subset of Claimant's medical records before rendering her opinion.

49. Claimant has an extremely complex mental and physical medical history both before and after her work incident that involved some claim-related issues, and some unrelated issues.

50. Claimant's ATP, Dr. Woo gave Claimant a permanent impairment rating of 0%, and he relied upon Table 6 (Speech Classification Chart). Dr. Woo diagnosed Claimant with respiratory distress with VCD. He noted that Claimant had good breathing ability when she is optimally treated, and her PFTs were normal. Dr. Volz gave Claimant an impairment rating of 12% (5% Medical and 7% Mental Health), and he relied upon Table 5 (Classes of Air Passage Defects). Dr. Volz noted that a vocal cord disorder has been established, but a VCD has not yet been determined or diagnosed. Dr. Pacheco gave Claimant an impairment rating of 29 % (Medical only), and relied upon Table 5 (Classes of Air Passage Defects) and Chapter 10 (Digestive System), Table 2 (Classes of Impairment of the Upper Digestive Track). Dr. Pacheco testified that Claimant has vocal cord trauma caused by intubation resulted in VCD.

51. As found, Dr. Volz's DIME report is thorough, credible, and persuasive. He was familiar with Claimant's complex medical history and treatment. While he and Dr. Woo relied upon different tables in Chapter 9 of the AMA Guidelines, their impairment ratings were not drastically different. In contrast, Dr. Pacheco's medical impairment rating, just for Claimant's medical condition is nearly five times what Dr. Volz assigned. Further, Dr. Pacheco did not have all of Claimant's relevant medical records, and she assigned an impairment rating for a condition not listed on the Notice of Dime, and not present until after Claimant reached MMI.

52. Based on the totality of the evidence, Claimant failed to prove by clear and convincing evidence that it is highly probable that Dr. Volz's impairment rating is incorrect.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME's Impairment Rating

The determination and assessment of permanent impairment requires the DIME physician to diagnose the claimant's condition or conditions, and determine their causal relationship to the industrial injury. *See Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 190 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998) A DIME physician's findings regarding causation, relatedness, and impairment are binding on the parties unless overcome by "clear and convincing

evidence." § 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). Clear and convincing evidence is that quantum and quality of evidence that renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it is highly probable the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. Wellbridge d/b/a Colo. Athletic Club*, W.C. No. 4-914-378-02 (ICAO, June 25, 2015). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO July 19, 2004). This enhanced burden of proof for non-scheduled injuries reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med*, 961 P.2d at 592.

In addition to examining Claimant, Dr. Volz, the DIME physician, spent over 12 hours reviewing Claimant's voluminous medical records. He thoroughly reviewed and summarized Claimant's medical care from March 2015 through January 5, 2021. This included Claimant's pre-existing conditions, and her claim-related and unrelated care subsequent to her admitted work injury on June 13, 2019. Dr. Volz reviewed Claimant's multiple laryngoscopies, her PFTs, the reports of her ATP, and the multiple reports from Dr. Fink regarding the current treatment he was providing (SLN blocks and Botox injections). In his DIME report, Dr. Volz discussed 14 different clinical diagnosis, including, but not limited to, disorder of vocal cords, respiratory distress, laryngeal edema determined by laryngoscopy, cough, dyspnea, and wheezing. Dr. Volz noted that this was a "highly complex case" and many of Claimant's listed diagnosis are symptomatic diagnoses. (Ex. M). As found, Dr. Volz's DIME opinion is credible and persuasive.

Dr. Schwartz, a pulmonologist, agreed that Claimant's medical situation is very complex, including the cause of Claimant's symptoms in light of her preexisting issues. Dr. Schwartz reviewed over 1,200 pages of Claimant's medical records and he examined her. Dr. Schwartz credibly testified that Dr. Volz's reasoning in providing a limited respiratory rating was appropriate given Claimant's repeated normal objective measures on PFTs. While Dr. Schwartz and Dr. Volz have different opinions as to whether Claimant suffers from a speech disorder or a laryngeal disorder, the ALJ finds this is a mere difference of medical opinion. Claimant's voluminous medical records contain diagnoses of MTD, VCD, and vocal cord disorder. As found, Dr. Schwartz is credible and persuasive.

Dr. Pacheco is board-certified in Internal Medicine, Allergy/Immunology, and Occupational Medicine. Dr. Pacheco, unlike Dr. Schwartz is Level II accredited. Dr. Pacheco examined Claimant, and relied upon Claimant to provide her with a summary of her injury, history and treatment. As a part of her Occupational/Environmental Consultation, Dr. Pacheco reviewed a very limited number of Claimant's medical records. Claimant saw Dr. Fink on numerous occasions, yet Dr. Pacheco only reviewed two of his records. In addition to these records, Dr. Pacheco reviewed Claimant's medical records from June 13, 2019 – June 17, 2019, when Claimant was intubated and hospitalized after the admitted work-injury, imaging from Platte Valley Medical Center, and testing Dr.

Pacheco ordered in April 2022. As found, Claimant has a complex medical history, including treatment before and after the admitted injury. Dr. Pacheco, however, did not have Claimant's complete set of medical records to base her opinion on, but instead her opinion is based upon incomplete information and assumptions. Dr. Pacheco's limited review of this complex case is not sufficient to meet the burden of proving that Dr. Fink's impairment rating is wrong.

Claimant testified her swallowing issues and choking on food started in December 2021/January 2022. Dr. Pacheco opined that Claimant's post-MMI swallowing issue is directly related to the injection treatment provided by Dr. Fink under this claim, and is a side effect of that treatment. She further opined this swallowing issue entitles Claimant to a 5% rating under Chapter 10 of the AMA Guidelines. This opinion is not persuasive for several reasons. First, as found, there is no objective evidence in Dr. Fink's medical records that Claimant was experiencing side effects, particularly difficulty swallowing food, as a result of his SLN blocks and Botox injections. Second, the Notice of Dime noted two regions for evaluation: Region 5, ENT (Nose & Throat) and Region 6, Other (Respiratory/Pulmonary). (Ex. L). Dr. Volz did not diagnosis, relate or rate Claimant's swallowing issue because that issue had not materialized as of the date of MMI, and it was not identified as an issue by Claimant or any other provider as of the date of Dr. Volz's DIME evaluation. As such, Dr. Volz did not err in failing to diagnose, relate and rate a condition that had not yet developed, and one that he had not been asked to evaluate.

Claimant has an extremely complex medical history, both before and after her admitted work injury. Dr. Volz thoroughly reviewed and outlined Claimant's complex medical history, and analyzed Claimant's situation before ultimately rendering his opinions on impairment. As found, Claimant failed to prove by clear and convincing evidence that it is highly probable that Dr. Volz's impairment rating of 5% for an air passage defect is incorrect.

ORDER

It is therefore ordered that:

1. Claimant failed to overcome the DIME opinion of Dr. Volz regarding permanent impairment with clear and convincing evidence.

2. Claimant's request for a 29% whole person impairment rating is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove that Respondent CS[Redacted] is subject to a penalty pursuant to C.R.S. §8-43-304 for violation of C.R.S. §8-42-101(3)(a)(1).[1]

PROCEDURAL HISTORY (NOTICE TO PMC AND JURISDICTION)

An Application for Hearing was filed in this matter on October 26, 2022 by Claimant requesting penalties against [Redacted, hereinafter PM] and [Redacted, hereinafter CS] for "seeking to recover bills from the Claimant despite knowing the bills are covered under this workers compensation claim". According to the Certificate of Mailing, the Application was sent to counsel for CS[Redacted], counsel for Employer and PM[Redacted]. The notice of hearing sent by OAC on December 7, 2022 provided notice that the hearing scheduled for April 11, 2023 at 1:00 p.m. would be held at the Pueblo Municipal Courthouse. The certificate of service indicated service to counsel for Claimant and Counsel for CS[Redacted]. The official notice does not include counsel for the employer or PM[Redacted]. Counsel for Claimant has provided evidence that his office forwarded the notice to PM[Redacted] separately. This forwarded notice was not served by the Office of Administrative Courts as provided by C.R.S. 8-43-211(1). As such, it does not constitute statutory notice of the hearing to be held. Further, even if the Claimant's notice was sufficient, there is no evidence that PM[Redacted] was advised that the in person hearing scheduled in Pueblo was converted to a "virtual" video hearing. Finally, since PM[Redacted] was neither joined pursuant to C.R.C.P 19, or waived personal jurisdiction, it was not subject to the jurisdiction of this tribunal for the purposes of imposition of a penalty. *See, Delta County Memorial Hospital v. ICAO*, 495 P.3d 984 (Colo. App. 2021). As such, the penalties against PM[Redacted] may not proceed due to lack of notice and lack of jurisdiction.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on April 13, 2020 while working as a police officer for the [Redacted, hereinafter CP] when he was struck from behind in his patrol car while investigating an accident. He was taken to PM[Redacted] by ambulance.

[1] As indicated below, the ALJ considers the issue of violation of C.R.S. §8-42-101(4) as tried by consent instead of C.R.S. §8-42-101(3)(a)(1), which was an incorrect citation utilized by Claimant in his Application for Hearing.

2. Claimant was provided treatment at PM[Redacted] on the date of the injury and released the following day. (Claimant's Exhibit 4, pp. 18 -23).

3. A general admission of liability admitting for medical benefits and temporary disability benefits was filed on December 2, 2020. The certificate of service indicates that the admission was served on the Employer, the Division of Workers' Compensation and the Claimant.

4. A Final Admission of Liability was filed on March 18, 2022 and was served on Claimant, Claimant's attorney, the Employer and the carrier's attorney and the Division of Workers Compensation. (Respondent CS's[Redacted] Exhibit C, p.11).

5. Following the apparent non-payment of the medical bills for Claimant's treatment at PM[Redacted], Respondent CS[Redacted] prepared a Complaint on or about October 21, 2021 to be filed in Pueblo Count Court alleging damages for its Client, PM[Redacted] for two dates of service; November 26, 2019 and April 14, 2020. The amount sought for the workers compensation date of injury was $4,884.56 in principal and $299.60 in interest. The Summons, Complaint and Return of Service were filed in the Pueblo County Court on November 9, 2021 by CS's[Redacted] counsel, [Redacted, hereinafter MB]. (Respondent CS's[Redacted] Exhibit D, p. 28).

6. On November 2, 2021, attorney [Redacted, hereinafter AS], on behalf of Claimant, sent a letter to attorney MB[Redacted] and informed him, among other things, that the incident on April 14, 2020 that resulted in the treatment with PM[Redacted] was while the Claimant was an employee of the CP[Redacted] and was covered by Workers Compensation and that information was communicated to PM[Redacted]. He further stated "As you are aware, "It is unlawful, void and unenforceable as a debt for any physician, chiropractor, **hospital**, person, expert witness, reviewer, evaluator or institution to contract with, bill, **or charge any party** for services, rendered in connection with injuries coming within the purview of this article." (Emphasis in the original). (Claimant's Exhibit 3, p. 16).[2]

7. Claimant, now Defendant in the County Court action, through counsel [Redacted, hereinafter LS], filed an Answer to the Complaint on December 13, 2021 generally denying the allegations in the Complaint and specifically alleging that the claim for treatment was covered under and admitted workers compensation claim with a WC number of 5-148-418. (Claimant Exhibit 1, p. 6). The filing fee for the Answer was $124.73 (Claimant Exhibit 5, p. 24).

8. A trial on the County Court case was set for June 2, 2022. (Claimant Exhibit 1, p. 9). The trial was continued by unopposed motion dated June 1, 2022. An order granting the continuance was entered on that date. (Respondent CS[Redacted] Exhibit D, p. 28). On July 11, 2022 the County Court E-Filing record indicates that the case was

[2] This quotation from the statute is incomplete and misleading since it omits the reference to billing medical fees in excess of the medical fee schedule.

closed on that date. No other information as to the basis for the closure is evidenced on the E-Filing record or provided by the parties.

9. On July 13, 2022, counsel for CS[Redacted], [Redacted, hereinafter HC] sent an email for Respondents' counsel [Redacted, hereinafter LM] requesting a Financial (sic) Admission of Liability or letter of liability. LM[Redacted] responded on July 20, 2022 providing the Final Admission of Liability "which is evidence of the compensable work related injury that [Redacted, hereinafter LC] sustained on 4.13.20". (Respondent CS[Redacted] Exhibit C, p. 009).

CONCLUSIONS OF LAW

A. Penalty

Section 8-43-304(1) provides that any person who ". . .violates articles 40 to 47 of this title 8, or does any act prohibited thereby. . . shall also be punished by a fine of not more than one thousand dollars per day for each such offense. . ." Further, C.R.S. §8-43-305 provides that 'Every day during which any . . other person . . . fails to perform any duty imposed by articles 40 to 47 of this title. . . shall constitute a separate and distinct violation thereof."

The assessment of penalties is governed by an objective standard of negligence and involves a two-step analysis. First, the ALJ must determine whether, in this case, CS[Redacted] violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003).

Initially, CS[Redacted] argues in its position statement that Claimant incorrectly cites to C.R.S. 8-42-101(3)(a)(I) as the basis for the penalty. As correctly pointed out by CS[Redacted], that section deals with charging a medical fee in excess of the fee schedule. No evidence of a violation of that section was provided. Clearly, based on Claimant's arguments, evidence presented and the arguments and evidence presented by CS[Redacted], the penalty sought is for a violation of 8-42-101(4). For example, the issue framed by Claimant in his position statement is "Whether Claimant proved by a preponderance of the evidence that he is entitled to penalties from CS[Redacted] for its attempt to collect a debt against the Claimant? Similarly, CS[Redacted] presented testimony from [Redacted, hereinafter DC] that no admission pertaining to W.C. 5-148-418 was received until it was transmitted by LM[Redacted] (Respondents' attorney) to HC[Redacted] on July 20, 2022. Based on this, I conclude that this issue was tried by consent. Issues may be tried by consent if not properly raised by the pleadings,

amendments to the pleadings at the conclusion of the trial or hearing. See, *Robbolino v. Fisher-White Contractors*, 738 P.2d 70 (Colo. App. 1987).

C.R.S. 8-42-101(4) provides that "Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee."

Although Claimant submitted copies of the General Admission and the Final Admission, Claimant has failed to sustain its burden of proving that is provided adequate notice of either of these two documents to CS[Redacted] until it was provided by attorney LM[Redacted] to CS's[Redacted] attorney on July 20, 2022. By then, all collection activity by CS[Redacted] had ceased. Claimant has not provided evidence that there was any collection activity occurred after this date. Claimant has argued that he provided information regarding the claim on February 11, 2022 in his position statement to MB's[Redacted] and that the Final Admission sent at that time was on another claim. Instead of sending the correct Final Admission on this claim to CS[Redacted], he argues he sent the hearing notice with all the information to get the bills paid to CS[Redacted], through counsel, on February 24, 2022. While this information is helpful to understand the communications that occurred, the actual communications were not submitted into evidence. As such, the ALJ is unable to credit this argument without the supporting documentation which may be subject to examination by counsel for CS[Redacted]. Relying on the actual evidence submitted, I conclude that CS[Redacted] was not adequately notified of the compensable nature of the claim for which payment of the medical fees were requested until it was supplied with the Final Admission of Liability on July 20, 2023. The collection activities prior to that date did not violate C.R.S. 8-42-101(4) since CS[Redacted] did not have proper notice that the medical fees sought were related to a compensable workers compensation claim. I conclude that based on the evidence presented, any representations prior to the submission of the Final Admission of Liability, in this case, were not sufficient notice to trigger compliance with that statute.

ORDER

It is therefore ordered that:

1. Claimant's request for imposition of penalties against the Respondent CS[Redacted] is denied and dismissed.

2. Any issue not resolved by this order is reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will

be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: May 18, 2023

/s/ Michael A. Perales
Michael A. Perales
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-215-086-001

ISSUES

1. Whether Dependent has demonstrated by a preponderance of the evidence that she a proper and sole recipient of death benefits related to Decedent's industrial fatality.

STIPULATIONS OF THE PARTIES

1. By stipulation of the parties and Order of Administrative Law Judge Royce Mueller on April 28, 2023, Decedent's weekly death benefit rate is $1,228.99.

FINDINGS OF FACT

1. Decedent died on August 30, 2022, while in the course and scope of his employment. Respondents ultimately filed a Fatal General Admission of Liability on January 4, 2023, establishing the compensable nature of Decedent's industrial fatality. The General Admission of Liability noted that dependency was still undetermined at that time.

2. There is a question as to whether another individual, [Redacted, hereinafter EV], is an appropriate dependent under the Workers' Compensation Act regarding the death benefits related to Decedent's industrial fatality.

3. Counsel for Claimant/Dependent [Redacted, hereinafter MG] provided various representations during the hearing, as an officer of the court. Respondents did not object to the representations made. Counsel for MG[Redacted] stated that he made contact with EV[Redacted] by telephone in December of 2022. During the telephone conversation, Counsel for Claimant obtained EV's[Redacted] mailing address and email address from EV[Redacted].

4. On February 6, 2023, Claimant's counsel's office mailed a copy of the Notice of Hearing for the May 4, 2023, hearing to EV[Redacted]. The Notice of Hearing was mailed by regular USPS mail as well as by certified mail, return receipt requested.

5. On March 30, 2023, the Notice of Hearing Claimant's counsel mailed to EV[Redacted] by certified mail, return receipt requested was returned to Claimant's counsel's office as unclaimed. The Notice of Hearing mailed by Claimant's counsel that was sent by regular USPS mail was not returned. After receiving the certified mail back as unclaimed, counsel for Claimant mailed a second Notice of Hearing for the May 4, 2023, proceedings to EV[Redacted] by regular mail and also emailed EV[Redacted] a

copy of the same. The Notice of Hearing mailed to EV[Redacted] on March 30, 2023, was not returned to Claimant's counsel's office.

6. On April 19, 2023, counsel for Respondents mailed a copy of the Notice of Hearing for the May 4, 2023, proceedings to EV[Redacted] using the same address as that used by counsel for Claimant. Respondents' counsel's office did not receive the mail returned.

7. On May 3, 2023, counsel for Claimant contacted the Colorado Division of Workers' Compensation. After searching by both Decedent's name and social security number, the customer service representative confirmed that only Claimant's claim for fatal benefits had been filed.

8. EV[Redacted] did not appear at the May 4, 2023, hearing.

9. Claimant and Decedent were married on June 3, 2000. Prior to his death, Decedent and Claimant cohabitated as husband and wife at [Redacted, hereinafter MA]. Decedent was the sole financial provider of the household.

10. Claimant credibly testified that Decedent had five biological children, but none of them were under the age of 21, Decedent had minimal contact with any of the adult children, and Decedent was not financially supporting any of his adult children prior to his death.

CONCLUSIONS OF LAW

1. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. A widow is presumed to have been wholly dependent on a decedent unless she was either "voluntarily separated and living apart from the spouse at the time of the

. . . death or was not dependent in whole or in part on the deceased for support." §8-41-501(1)(a), C.R.S.

Dependency

5. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

6. A widow is presumed to be wholly dependent on a decedent unless she was either "voluntarily separated and living apart from the spouse at the time of the . . . death or was not dependent in whole or in part on the deceased for support." §8-41-501(1)(a), C.R.S.

7. As found, Claimant has demonstrated by a preponderance of the evidence that she was married to Decedent at the time of his industrial fatality. Furthermore, Claimant has demonstrated that she and Decedent were living together at the time of Decedent's death and that she was financially dependent on Decedent prior to his death.

8. As found, the parties have provided appropriate and adequate notice to Decedent's other potential dependent and such dependent has failed to file a claim for benefits. As Claimant is the only individual that has filed a claim for death benefits and has established herself as a whole dependent under §8-41-501, C.R.S., she is the sole recipient of said benefits.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following Order:

1. Claimant is the whole dependent of Decedent and is hereby awarded death benefits at a weekly rate **$1,228.99**.

2. Respondents shall pay death benefits dating back to Decedent's death plus interest at a rate of 8% per annum.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-212-186-001

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the respondent.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his low back, including a surgery performed by Dr. Brian Witwer on September 13, 2022, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. The issues of average weekly wage (AWW), temporary total disability (TTD) benefits, temporary partial disability (TPD) benefits, and any related offsets were also endorsed for hearing. At the hearing, the ALJ determined that these issues shall be reserved and held in abeyance pending a determination of compensability.

FINDINGS OF FACT

1. The claimant worked for the respondent as a state trooper. The claimant's job duties included all aspects of law enforcement including speed enforcement, road safety, and crash investigation. This matter involves an alleged injury that occurred in October[1] 2021.

2. As a state trooper the claimant is required to wear a duty belt. The duty belt allows a trooper to attach the following: a flashlight, a radio, a taser, a firearm, two additional magazines for the firearm, handcuffs, and an expandable asp. When all of the items are attached to the duty belt, it weighs approximately 18 pounds. As a trooper, the claimant spent a significant amount of every shift driving. As a result, the claimant arranged the items of his duty belt around the front of the belt and on the sides. This allowed the claimant's low back to be free to rest against the back of his vehicle seat without obstruction.

3. In 2021, the claimant underwent four surgeries: a lumbar fusion, bilateral shoulder replacements, and cataract surgery. All of these surgeries were paid for by the claimant's personal health insurance, Cigna.

---

[1] The First Report of Injury and later documents identify the date of injury as November 3, 2021. However, the ALJ is persuaded that this was the date the claimant reported his issues/symptoms to a supervisor, and not the date of the incident involving his duty belt. The ALJ finds that the date of the alleged injury was October 8, 2021.

4. The lumbar fusion was performed by Dr. Brian Witwer on February 16, 2021. That surgery involved an L4 to S1 anterior lumbar interbody fusion (ALIF) and an L4-L5 laminectomy. The claimant underwent the February 2021 surgery because he had a five to six year history of low back pain. The claimant testified that following that surgery, his pain symptoms were resolved.

5. The claimant was released to return to work from all of his 2021 surgeries by October 6, 2021. The claimant was released to full duty as a state trooper without restrictions. The claimant testified that as of October 6, 2021 he was pain free.

6. The claimant reported to work with the respondent on October 8, 2021. As he was preparing for his shift, he put on his duty belt. At that moment, he felt immediate pain in his back. The claimant described this pain as the same as that he experienced prior to the February 2021 surgery.

7. Following this onset of pain on October 8, 2021, the claimant attempted to work with the pain. However, the claimant continued to experience low back pain that radiates into his right hip and leg. In addition, the claimant began experiencing right foot numbness.

8. On November 3, 2021, the claimant informed his supervisor of his pain symptoms and requested to return to light duty. On November 1, 2021, the respondent prepared an Employer's First Report of Injury. The date of injury was identified as November 3, 2021. However, the ALJ is persuaded that the incident at issue occurred on October 8, 2021.

9. After reporting his low back symptoms to his supervisor on November 3, 2021, the claimant was placed on light duty and worked in dispatch out of the [Redacted, hereinafter ML], Colorado location from November 2021 until August 2022.

10. The claimant's authorized treating provider (ATP) for this claim is Dr. Craig Stagg. The claimant was first seen by Dr. Stagg on December 2, 2021. At that time, the claimant reported his history of low back pain and the success of the February 2021 surgery with Dr. Witwer. The claimant also described the incident involving his duty belt and the onset of immediate low back pain with radiating symptoms. At that time, Dr. Stagg referred the claimant to Dr. Witwer for consultation.

11. On December 2, 2021, the claimant was seen in Dr. Witwer's practice by Audrey Kramer, NP. At that time, the claimant reported that after wearing his duty belt he felt that all of his preoperative pain had returned. NP Kramer referred the claimant to physical therapy and ordered magnetic resonance imaging (MRI) of the claimant's lumbar spine.

12. On January 19, 2022 the claimant underwent a lumbar spine MRI. The results showed evidence of the prior interbody fusion at the L4-L5 and L5-S1 levels; persistent moderate spinal stenosis at the L4-L5 level; persistent right neural foraminal narrowing at the L5-S1 level due to a lateral disc bulge. The radiologist, Dr. Michael Neste, opined that there was likely impingement of the exiting L5 nerve root.

13. On January 31, 2022, the claimant was seen by Dr. Witwer. At that time, the claimant described the return of his preoperative low back and right leg symptoms. Dr. Witwer discussed the MRI findings and recommended an epidural steroid injection.

14. On February 18, 2022, the claimant underwent a right L5-S1 transforaminal epidural steroid injection (TFESI). The claimant testified that this injection provided approximately one month of relief.

15. On February 22, 2022, the claimant underwent computed tomography (CT) of his lumbar spine. The CT scan showed mild scoliosis and mild retrolisthesis at the L2-L3 level; mild anterolisthesis at the L4-L5 and L5-S1 levels; hardware from the prior lumbar surgery; a posterior disc bulge at the L4-L5 level; and multilevel facet arthrosis.

16. Based upon his review of the claimant's CT scan, Dr. Witwer recommended the claimant undergo a right L5-S1 laminectomy, lateral recess release and facetectomy with wide foraminotomies.

17. On July 25, 2022, Dr. Philip Stull authored a report following his review of the claimant's medical records. In his report, Dr. Stull opined that the symptoms the claimant experienced when returning to work in October 2021 are related to pre-existing chronic and advancing degenerative lumbosacral spondylosis and degenerative disc and facet joint disease. Dr. Stull further opined that the surgery recommended by Dr. Witwer would be reasonable and necessary to address the claimant's lumbar spine condition. However, it is Dr. Stull's opinion that the need for surgery is not related to the action of putting on a duty belt at work. Based upon the opinions of Dr. Stull, the respondents denied authorization for the recommended surgery.

18. On September 13, 2022, Dr. Witwer performed the recommended surgery. The surgical note of that date identifies the procedure as "wide facetectomy, completed removal of bone over the foramina at L5-S1 on the right, lumbar decompression decompressing the right L5 nerve root, microscope technique." This surgery was paid for by the claimant's private insurance, Cigna.

19. At the request of the respondent, on February 21, 2023 the claimant attended an independent medical examination (IME) with Dr. Anant Kumar. In connection with the IME, Dr. Kumar reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Kumar listed the claimant's diagnosis as a long history of degenerative disc disease, mild right lumbar scoliosis, gradually worsening multilevel arthrosis with facet effusion, and instability at the L4-L5 level. Dr. Kumar specifically noted that between 2018 and

November 17, 2020 there was "significant worsening of [the claimant's] facet degeneration with severe facet effusion at multiple levels with the worse facet effusion at the L4-5 level." Dr. Kumar also noted significant pathology at LS-S-1 level.

20. Dr. Kumar noted that the most recent MRI showed that the cage from the February 2021 fusion surgery has subsisted into the spine. It is Dr. Kumar's opinion that the claimant's need for the September 2022 surgery, while reasonable, is unrelated to any work injury. It is Dr. Kumar's opinion that the claimant did not suffer a compensable injury in October 2021. Dr. Kumar further opined that the claimant's need for surgery is solely related to the long-standing pre-existing degenerative changes in his lumbar spine.

21. On March 20, 2023, Dr. Kumar issued a supplemental report after his review of additional medical records. Dr. Kumar's opinion regarding the relatedness of the September 2022 surgery was unchanged.

22. On March 31, 2023, the claimant retired from his position as a state trooper.

23. Dr. Kumar's testimony was consistent with his IME reports. Dr. Kumar testified there is no medical explanation to support the claimant's claim that his duty belt caused an injury to his lumbar spine. Dr. Kumar explained that the duty belt does not put pressure on the lumbar spine because it sits on top of the wearer's trochanter (hip) bones. Dr. Kumar further testified that the surgery performed by Dr. Witwer in February 2021 did not properly stabilize the claimant's spine. It is this spinal instability that has resulted in the return of the claimant's low back and leg pain. It is Dr. Kumar's further opinion that the claimant's chronic low back pain and radiating leg symptoms were caused by multiple levels of facet effusion, foraminal stenosis, and degenerative disc disease.

24. Dr. Kumar testified that due to the lack of correct stabilization at the L5-S1 level, there is evidence of cage subsidence in the claimant's imaging studies. This subsidence has gradually worsened with time, which has resulted in incomplete fusion at the L4-S1 segment. Dr. Kumar testified that during the fusion surgery an additional plate should have been placed at the L5-S1 level to better stabilize the spine.

25. With regard to the surgery performed by Dr. Witwer on September 13, 2022, Dr. Kumar testified that the surgery was reasonable and necessary to correct issues caused by the April 2021 surgery. However, it continues to be Dr. Kumar's opinion that the need for the September 2022 surgery was not caused by the duty belt. Rather, the need for that surgery was the initial failed fusion.

26. The issues of claimant's entitlement to TTD benefits, TPD benefits, the calculation of his AWW and any offsets available to the respondent have been held in abeyance, as noted above.

27. The ALJ credits the medical records, the opinions of Dr. Stull, and the testimony and opinions of Dr. Kumar. The ALJ is not persuaded by the claimant's belief that the back and leg symptoms he felt in October 2021 were caused by the placement of his duty belt. Although there may have been a temporal relationship between the use of the duty belt and the onset of symptoms, the ALJ does not find that the use of the duty belt caused the symptoms. The ALJ specifically credits the testimony of Dr. Kumar that the duty belt does not put pressure on the lumbar spine, because it sits on top of the wearer's trochanter (hip) bones. The ALJ also credits the opinion of Dr. Kumar that the claimant's need for the September 2022 surgery was related to the failed 2021 fusion surgery, and not the act of using the duty belt. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that when he put on his duty belt in October 2021, that he suffered an injury necessitating medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); see a/so *Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is

compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the respondent. As found, the medical records, the opinions of Dr. Stull, and the testimony and opinions of Dr. Kumar are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits in this matter is denied and dismissed. All remaining endorsed issues are dismissed as moot.

Dated May 19, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.$. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-164-544-002

ISSUE

Whether Claimant has established by a preponderance of the evidence that the right shoulder surgery recommended by Authorized Treating Physician (ATP) Douglas A. Foulk, M.D. is reasonable, necessary and causally related to his November 24, 2020 admitted industrial injury.

FINDINGS OF FACT

1. Claimant works for Employer as a restaurant manager. He testified that as he was leaving work and walking to his truck on November 24, 2020, he slipped and fell on ice. Claimant stated he twisted his right knee and landed on his right side. He was able to drive himself home and reported the incident to Employer on the following day.

2. Claimant initially sought treatment for his injuries on November 28, 2020 at NextCare Urgent Care. He reported that he was walking at work and slipped on ice. Claimant complained of right knee pain. He noted that there was no other associated pain or injuries. Claimant was assessed with a sprain of the right knee and advised to follow-up with workers' compensation.

3. On November 30, 2020 Employer completed a First Report of Injury. The body part listed on the form is the "lower extremities – knee." Under "how the injury occurred," the form specifies, "I slipped and fell on a patch of ice in the parking lot, and twisted my knee trying not to fall." Employer's First Report of Injury does not mention any damage to the right shoulder or any other body part. Respondents subsequently filed a General Admission of Liability (GAL) on March 8, 2021.

4. On December 10, 2020 Claimant attended his first appointment at Midtown Occupational Health Services with Matthew Edwards PA-C/Larence Cedillo, D.O. Claimant reported that three weeks earlier he slipped on ice and injured his right knee. Claimant did not specify the exact mechanism of injury, but explained that his right leg went sideways. Claimant also reported that he was developing some left leg and mild low back soreness from compensation. He had no other concerns and did not report any right shoulder pain or symptoms. Claimant was diagnosed with a right knee sprain and referred for an MRI scan.

5. On December 15, 2020 Claimant attended his first physical therapy appointment at Midtown Occupational Health Services. Claimant reported that he slipped and fell at work and twisted his knee. He was unable to describe the specific mechanism of injury or how his knee twisted. Notably, Claimant again did not report any right shoulder symptoms.

6. Claimant followed-up with PA Edwards on December 22, 2020 for his right knee. He did not mention any right shoulder symptoms and the report specifically notes "no new concerns." Claimant subsequently attended two additional physical therapy sessions on January 5, 2021 and January 7, 2021 with no mention of any right shoulder symptoms.

7. Respondents' claims adjuster notes were admitted into evidence. For the entry on January 4, 2021 adjuster [Redacted, hereinafter CS] documented that Claimant's present symptoms included "Right knee: pain/swelling/sometimes difficulty walking. Right shoulder pain swelling/hard to move sometimes/pretty much sore all the time/has difficulty sleeping as he can't have pressure on his right shoulder. Thinks he had a torn R/C tear prior, got some PT about 10 years ago." Adjuster CS[Redacted] also noted that Claimant "[s]lipped on a patch of ice, twisted his right knee, and fell down on the right side. He said he fell down flat on his right side. Major concern was right knee, Right shoulder has been bothering him and he is concerned about that."

8. Claimant denied he was ever actually diagnosed with a rotator cuff tear. After a short period of time his shoulder healed and he never required any treatment besides a couple of physical therapy visits in the 1990's. Claimant also denied any other right shoulder injuries or treatment prior to November 2020.

9. On January 13, 2021 Claimant was evaluated by Joseph Hsin, M.D. at Orthopedic Centers of Colorado. Claimant reported that two months earlier he had slipped and fallen on ice at work. He did not report any right shoulder symptoms.

10. On February 18, 2021 Claimant underwent a right knee arthroscopy with partial medial meniscectomy and chondroplasty of the patella. Claimant followed-up with Orthopedic Centers of Colorado on February 23, 2021 and March 23, 2021. Notably, he still did not report any right shoulder symptoms. Claimant also underwent physical therapy at Orthopedic Centers of Colorado on March 2, 2021 and March 11, 2021. He again did not mention any right shoulder symptoms.

11. After undergoing right knee surgery and rehabilitation, Claimant returned to Midtown Occupational Health Services and was evaluated by Sadie Sanchez, M.D. on May 18, 2021. Claimant reported that on November 24, 2020 he was leaving work and slipped on ice. He twisted his right knee, fell onto his right side and landed on his right shoulder. Claimant alleged that during the entire period of time that he received medical treatment for his slip and fall he experienced right shoulder pain. He hoped the symptoms would improve. Dr. Sanchez recounted that Claimant did not state anything to his medical providers about his right shoulder but mentioned it to his adjuster. She could not find any reference to Claimant's right shoulder in the notes and wanted to confirm with the adjuster. Dr. Sanchez could not state with 51% or greater certainty that Claimant's right shoulder condition was causally related to the November 24, 2020 work injury.

12. On June 15, 2021 Claimant followed-up with Lon Noel, M.D. at Midtown. Dr. Noel documented that Claimant had been undergoing physical therapy and chiropractic treatments twice weekly based on Dr. Sanchez's recommendations.

Examination of the right shoulder revealed active range of motion deficits. Claimant also exhibited generalized shoulder girdle tenderness and tightness. Although there was no pain to direct palpation of the acromioclavicular joint, there was pain on palpation of the long head of the biceps tendon. Dr. Noel diagnosed status post right shoulder injury with chronic pain.

13. On June 29, 2021 Claimant underwent an MRI arthrogram of the right shoulder. The MRI revealed a remote osseous Bankart lesion injury and Hill-Sachs deformity. There was also an anterior labral tear and supraspinatus tendinosis with an interstitial type of tear of the distal supraspinatus tendon. Finally, there was a degenerative change of the acromioclavicular joint with acromial morphology predisposing to impingement.

14. On July 2, 2021 Claimant returned to Dr. Noel for an examination. Dr. Noel again reviewed Claimant's November 24, 2020 mechanism of injury in which he torqued his right knee and fell on his right shoulder. Claimant continued to exhibit right shoulder pain and decreased range of motion. Dr. Noel remarked that Claimant would continue physical therapy two times each week and undergo an orthopedic evaluation to be scheduled with Douglas A. Foulk, M.D.

15. On August 10, 2021 Claimant was evaluated by Dr. Foulk at Panorama Orthopedics. Dr. Foulk determined that the MRI imaging and physical examination were consistent with a rotator cuff tear. He recommended proceeding with a right shoulder arthroscopy including a rotator cuff repair, evaluation of the labrum, subacromial decompression, and debridement.

16. On August 30, 2021 William Ciccone, II, M.D. performed a medical records review at the request of Respondents. Dr. Ciccone determined the right shoulder surgery proposed by Dr. Foulk was reasonable, but not causally related to Claimant's November 24, 2020 work accident. He based his opinion on Claimant's failure to report shoulder symptoms to any medical provider until May 18, 2021 or approximately six months following his injury. Dr. Ciccone would have expected right shoulder complaints prior to six months after Claimant's date of injury.

17. On November 29, 2022 the parties conducted the pre-hearing evidentiary deposition of Dr. Ciccone. Dr. Ciccone maintained that the right shoulder surgery proposed by Dr. Foulk was not causally related to Claimant's November 24, 2020 work accident. He noted that Claimant's first mention of right shoulder pain in the medical records that could be associated with a shoulder injury occurred on May 18, 2021 or almost six months after the accident. Dr. Ciccone would have expected some complaints of shoulder pain prior to six months after the accident. He also remarked that it was not likely that the right knee pain overshadowed any right shoulder symptoms. Dr. Ciccone commented that, when sees patients with various injuries, they complain of multiple injuries.

18. Dr. Ciccone explained that Claimant's right shoulder MRI showed an anterior labral tear with a possible Hill-Sachs deformity, including partial-thickness rotator

cuff tearing and degenerative changes in the AC joint. He was unable to determine the age of the pathology in Claimant's right shoulder. Although a fall on the right side could produce the shoulder pathology documented on the MRI, Claimant would have experienced symptoms at the time of the incident and not six months later. Assuming Claimant mentioned his right shoulder symptoms to the claims adjuster about six weeks after the November 24, 2022 slip and fall, Dr. Ciccone did not change his opinion because Claimant would have experienced symptoms at the time of the accident.

19. On December 2, 2022 Dr. Noel responded to a letter from Claimant's counsel inquiring whether Claimant's right shoulder injury was causally related to his November 24, 2020 industrial accident. Counsel recounted the history of Claimant's claim and specified that Claimant sought medical treatment for his right shoulder after he had recovered from right knee surgery. Claimant reported that his right shoulder pain continued throughout his treatment and rehabilitation for his right knee and hoped it would resolve. Dr. Noel determined that the fall described by Claimant on November 24, 2020 caused, aggravated or accelerated his underlying right shoulder pathology as evidenced by the MRI of June 29, 2021. He noted that the MRI was consistent with an acute partial rotator cuff tear superimposed on chronic changes. Dr. Noel concluded that Claimant's need for right shoulder surgery as recommended by Dr. Foulk was caused, aggravated or accelerated by the work-related fall on November 24, 2020.

20. Claimant testified at the hearing in this matter. He commented that his major concern after the November 24, 2020 fall involved his right knee until he obtained treatment and underwent surgery. As Claimant proceeded through the treatment process, he continued to experience right shoulder symptoms that did not improve over time. Claimant remarked that he ultimately discussed his right shoulder with his Workers' Compensation physicians because he required treatment.

21. Claimant has failed to establish it is more probably true than not that the right shoulder surgery recommended by Dr. Foulk is reasonable, necessary and causally related to his November 24, 2020 admitted industrial injury. Initially, Claimant explained that, while leaving work and walking to his truck on November 24, 2020, he slipped and fell on ice. He stated he twisted his right knee and landed on his right side. Claimant sought treatment for his injuries on November 28, 2020 at NextCare Urgent Care. *He* complained of right knee pain and noted there were no other injuries. On November 30, 2020 Employer completed a First Report of Injury. The body part listed on the form states "lower extremities – knee." The document does not mention an injury to the right shoulder or any other body part.

22. Claimant subsequently obtained medical treatment and physical therapy over a lengthy period of rime with multiple providers but did not mention any right shoulder symptoms. The medical records are simply devoid of documentation that Claimant suffered a right shoulder injury during his slip and fall on November 24, 2020. Nevertheless, Claimant explained that his primary concern involved his right knee. As he proceeded through the treatment process, he noted he was experiencing right shoulder symptoms that he believed would improve over time. After undergoing right knee surgery and rehabilitation, Claimant finally mentioned right shoulder symptoms to Dr. Sanchez on

May 18, 2021. Notably, Dr. Sanchez could not state with 51% or greater certainty that Claimant's right shoulder condition was causally related to the November 24, 2020 work injury.

23. On August 10, 2021 Dr. Foulk determined that Claimant's right shoulder MRI and physical examination were consistent with a rotator cuff tear. He recommended proceeding with a right shoulder arthroscopy. On December 2, 2022 Dr. Noel responded to a letter from Claimant's counsel and determined that the fall described by Claimant on November 24, 2020 caused, aggravated or accelerated his underlying right shoulder pathology as evidenced by the MRI of June 29, 2021. He noted that the MRI was consistent with an acute partial rotator cuff tear superimposed on chronic changes. Dr. Noel thus agreed with the right shoulder surgery recommended by Dr. Foulk.

24. In contrast, Dr. Ciccone maintained that the right shoulder surgery proposed by Dr. Foulk was not causally related to Claimant's November 24, 2020 work accident. Dr. Ciccone noted that Claimant's first mention of right shoulder pain in the medical records that could be associated with a shoulder injury occurred on May 18, 2021 or almost six months after the accident. He would have expected some complaints of shoulder pain prior to six months after the event. Dr. Ciccone also remarked that it was not likely that the right knee pain overshadowed any right shoulder symptoms. He commented that, when he sees patients with various concerns, they complain of multiple injuries. Dr. Ciccone was unable to determine the age of the pathology shown on Claimant's right shoulder MRI. Although a fall on the right side could produce the shoulder pathology documented on the MRI, Claimant would have experienced symptoms at the time of the incident and not six months later. Assuming Claimant mentioned his right shoulder symptoms to the claims adjuster about six weeks after the November 24, 2022 slip and fall, Dr. Ciccone did not change his opinion because Claimant would have experienced symptoms at the time of the accident.

25. In Claimant's conversation with adjuster CS[Redacted] on January 4, 2021, adjuster notes document that Claimant "[s]lipped on a patch of ice, twisted his right knee, and fell down on the right side. He said he fell down flat on his right side. Major concern was right knee, Right shoulder has been bothering him and he is concerned about that." Despite recently expressing concerns to the adjuster, Claimant failed to mention any right shoulder symptoms at an evaluation with Dr. Hsin on January 13, 2021. Furthermore, after his right knee surgery, Claimant followed-up with Orthopedic Centers of Colorado on February 23, 2021 and March 23, 2021. Notably, he still did not report any right shoulder symptoms. Claimant also underwent physical therapy at Orthopedic Centers of Colorado on March 2, 2021 and March 11, 2021. He again did not mention any right shoulder symptoms. Although Claimant expressed concerns about his right shoulder to adjuster CS[Redacted] on January 4, 2020, the record demonstrates that he failed to mention any right shoulder symptoms to medical providers until May 23, 2021. The temporal delay in reporting pain to medical providers despite his expressed concerns to adjuster CS[Redacted] diminishes Claimant's assertion that his right knee pain overshadowed any right shoulder symptoms.

26. Despite Claimant's testimony and Dr. Noel's opinion, the medical records and persuasive medical opinion of Dr. Ciccone reflect that Claimant did not likely suffer a right shoulder injury during the course and scope of his employment on November 24, 2020. Moreover, although not determinative, the significant temporal delay in reporting any right shoulder symptoms to medical providers suggests that Claimant's right shoulder condition was not causally related to the November 24, 2020 accident. The medical records are simply devoid of any evidence that the slip and fall caused a right shoulder disability or the need for medical treatment. Claimant did not mention any right shoulder symptoms to medical providers until approximately six months after the incident. He has thus failed to demonstrate his work activities on November 24, 2020 aggravated, accelerated or combined with his pre-existing condition to produce a need for surgical intervention. The right shoulder surgery recommended by ATP Foulk is thus not causally related to the November 24, 2020 slip and fall. Accordingly, Claimant's surgical request is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence

before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

7. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

8. As found, Claimant has failed to establish by a preponderance of the evidence that the right shoulder surgery recommended by Dr. Foulk is reasonable, necessary and causally related to his November 24, 2020 admitted industrial injury. Initially, Claimant explained that, while leaving work and walking to his truck on November 24, 2020, he slipped and fell on ice. He stated he twisted his right knee and landed on his right side. Claimant sought treatment for his injuries on November 28, 2020 at NextCare Urgent Care. *He* complained of right knee pain and noted there were no other injuries. On November 30, 2020 Employer completed a First Report of Injury. The body part listed

on the form states “lower extremities – knee.” The document does not mention an injury to the right shoulder or any other body part.

9. As found, Claimant subsequently obtained medical treatment and physical therapy over a lengthy period of rime with multiple providers but did not mention any right shoulder symptoms. The medical records are simply devoid of documentation that Claimant suffered a right shoulder injury during his slip and fall on November 24, 2020. Nevertheless, Claimant explained that his primary concern involved his right knee. As he proceeded through the treatment process, he noted he was experiencing right shoulder symptoms that he believed would improve over time. After undergoing right knee surgery and rehabilitation, Claimant finally mentioned right shoulder symptoms to Dr. Sanchez on May 18, 2021. Notably, Dr. Sanchez could not state with 51% or greater certainty that Claimant’s right shoulder condition was causally related to the November 24, 2020 work injury.

10. As found, on August 10, 2021 Dr. Foulk determined that Claimant’s right shoulder MRI and physical examination were consistent with a rotator cuff tear. He recommended proceeding with a right shoulder arthroscopy. On December 2, 2022 Dr. Noel responded to a letter from Claimant’s counsel and determined that the fall described by Claimant on November 24, 2020 caused, aggravated or accelerated his underlying right shoulder pathology as evidenced by the MRI of June 29, 2021. He noted that the MRI was consistent with an acute partial rotator cuff tear superimposed on chronic changes. Dr. Noel thus agreed with the right shoulder surgery recommended by Dr. Foulk.

11. As found, in contrast, Dr. Ciccone maintained that the right shoulder surgery proposed by Dr. Foulk was not causally related to Claimant’s November 24, 2020 work accident. Dr. Ciccone noted that Claimant’s first mention of right shoulder pain in the medical records that could be associated with a shoulder injury occurred on May 18, 2021 or almost six months after the accident. He would have expected some complaints of shoulder pain prior to six months after the event. Dr. Ciccone also remarked that it was not likely that the right knee pain overshadowed any right shoulder symptoms. He commented that, when he sees patients with various concerns, they complain of multiple injuries. Dr. Ciccone was unable to determine the age of the pathology shown on Claimant’s right shoulder MRI. Although a fall on the right side could produce the shoulder pathology documented on the MRI, Claimant would have experienced symptoms at the time of the incident and not six months later. Assuming Claimant mentioned his right shoulder symptoms to the claims adjuster about six weeks after the November 24, 2022 slip and fall, Dr. Ciccone did not change his opinion because Claimant would have experienced symptoms at the time of the accident.

12. As found, in Claimant’s conversation with adjuster CS[Redacted] on January 4, 2021, adjuster notes document that Claimant “[s]lipped on a patch of ice, twisted his right knee, and fell down on the right side. He said he fell down flat on his right side. Major concern was right knee, Right shoulder has been bothering him and he is concerned about that.” Despite recently expressing concerns to the adjuster, Claimant failed to mention any right shoulder symptoms at an evaluation with Dr. Hsin on January 13, 2021. Furthermore, after his right knee surgery, Claimant followed-up with Orthopedic

Centers of Colorado on February 23, 2021 and March 23, 2021. Notably, he still did not report any right shoulder symptoms. Claimant also underwent physical therapy at Orthopedic Centers of Colorado on March 2, 2021 and March 11, 2021. He again did not mention any right shoulder symptoms. Although Claimant expressed concerns about his right shoulder to adjuster CS[Redacted] on January 4, 2020, the record demonstrates that he failed to mention any right shoulder symptoms to medical providers until May 23, 2021. The temporal delay in reporting pain to medical providers despite his expressed concerns to adjuster CS[Redacted] diminishes Claimant's assertion that his right knee pain overshadowed any right shoulder symptoms.

13. As found, despite Claimant's testimony and Dr. Noel's opinion, the medical records and persuasive medical opinion of Dr. Ciccone reflect that Claimant did not likely suffer a right shoulder injury during the course and scope of his employment on November 24, 2020. Moreover, although not determinative, the significant temporal delay in reporting any right shoulder symptoms to medical providers suggests that Claimant's right shoulder condition was not causally related to the November 24, 2020 accident. The medical records are simply devoid of any evidence that the slip and fall caused a right shoulder disability or the need for medical treatment. Claimant did not mention any right shoulder symptoms to medical providers until approximately six months after the incident. He has thus failed to demonstrate his work activities on November 24, 2020 aggravated, accelerated or combined with his pre-existing condition to produce a need for surgical intervention. The right shoulder surgery recommended by ATP Foulk is thus not causally related to the November 24, 2020 slip and fall. Accordingly, Claimant's surgical request is denied and dismissed.

ORDER

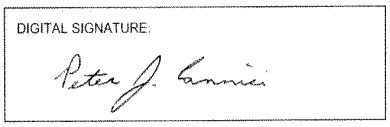
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for the right shoulder surgery recommended by ATP Foulk as a result of his November 24, 2020 slip and fall is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 19, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-200-468-003

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he sustained a compensable injury on or about, August 20, 2021?

2. Did Claimant prove by a preponderance of the evidence that he sustained a compensable injury on or about, October 14, 2021?

3. If Claimant proved by a preponderance of the evidence that he sustained a compensable injury, is he entitled to temporary total disability benefits?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 47-year old man who worked for Employer. He was hired by Employer on or about April 17, 2019. Claimant had a Commercial Drivers' License (CDL), and was hired as a CDL driver. Claimant delivered shingles to roofing jobs. Claimant testified he would physically lift and move the materials to the roof. The ALJ finds this was a physically demanding job.

2. On March 10, 2021, Claimant established care with Anthony Doft, M.D. at Banner Health. Dr. Doft prescribed Claimant Lamotrignine for his depression/anxiety. Claimant returned to Banner Health a few months later, on May 1, 2021, for a Well Adult Examination. Robert Mason, M.D. conducted the examination. Dr. Mason noted that the Lamotrigine helped Claimant with his depression, but Claimant wanted to increase the dose. (Ex. P).

3. On July 12, 2021, Claimant saw Dr. Doft for a follow-up appointment, and he specifically wanted to "discuss his Adderall dose." Under the history of present illness it states "[e]xperimentation with Adderall 10 mg bid no help at all. Went to 30 mg bid and it was night and day difference. . . . . He stopped lamotrigine 3/5 weeks ago. Just on Adderall alone [and] he feels a hundred times better." Dr. Doft changed Claimant's Adderall prescription to 30 mg, twice a day. (Ex. P). It is not clear from the records who first prescribed Adderall to Claimant. Claimant testified he did not want to "cross reference" his medical records, so he played back and forth between UCHealth and Dr. Doft for his Adderall prescription.

4. Claimant went to Concentra on August 11, 2021, for his U.S. Department of Transportation examination and recertification of his CDL license. Despite the recent voluntary increase in his Adderall dosage on July 12, 2021, Claimant marked "no" when asked if he was taking any prescription medication during his DOT examination. (Ex. O).

5. Claimant testified he did not realize he could not drive on his CDL license while on Adderall, but later testified he allowed his CDL license to expire because of the Adderall. And he further testified he drove for a couple of months while on Adderall even though he knew it was not allowed. The ALJ finds that Claimant's assertion he did not realize he could not maintain his CDL while taking Adderall, not credible.

6. Claimant testified that on August 20, 2021, he returned from his morning shift at about noon. The flat-bed truck he was driving had a conveyor on the back. Claimant testified he was wearing a hard hat when he fell off the back of the truck and hit his left shoulder and then his head on the cement. Claimant testified his hard hat came off, he took a knee by his truck, and a co-worker came to check on him. There is no objective evidence in the record as to the name of this co-worker. Claimant testified that about 10 minutes later he told [Redacted, hereinafter KK], his supervisor, about his fall and KK[Redacted] asked if Claimant could keep doing his job. Claimant testified that he answered affirmatively, and continued working.

7. KK[Redacted] is the Operations Manager for Employer. He testified that he would lay out the game plan for Claimant every day, and directed Claimant where to deliver shingles for roofs. The ALJ infers that Claimant and KK[Redacted] were in regular communication with each other. KK[Redacted] credibly testified that he has no recollection of Claimant telling him that he fell on August 20, 2021.

8. KK[Redacted] credibly testified that if an employee is injured, they can report the injury directly to him, they can go to the safety manager, or call "[Redacted, hereinafter TN]." RA[Redacted], managing partner for Employer, also credibly testified that employees should report any injury to KK[Redacted], corporate, "TN[Redacted]," or to himself. Employer provided Claimant with materials specifying how to report an injury. (Ex. T).

9. Claimant testified that sometime in October 2021, he spoke with KK[Redacted] about his shoulder pain, and he asked KK[Redacted] if he could do a lighter job. Claimant testified that KK[Redacted] moved him to the warehouse.

10. KK[Redacted] testified that he moved Claimant to the warehouse in October or November 2021 because it was the slow season, and he wanted to give Claimant the opportunity to have more hours. RA[Redacted] also testified that Claimant was moved to the warehouse in 2021, during the slow season, to get him 40 hours of work. RA[Redacted] testified that he liked Claimant and wanted to help guarantee he would get 40 hours of work.

11. The ALJ finds the testimony of KK[Redacted] and RA[Redacted] to be credible and persuasive. The ALJ finds Claimant was moved to the warehouse sometime in October/November 2021 because it was the slow season, and Employer wanted to get Claimant more hours of work.

12. Claimant testified that on October 14, 2021, at approximately 5:30 p.m., he was working alone in the warehouse when he fell onto a pallet. According to Claimant, the fall

did not hurt, but about 30 minutes later he felt something like a racquet ball coming out of the soft tissue on his lower spine, and this scared him. Claimant testified he called KK[Redacted] and told him what happened. KK[Redacted] credibly testified he had no recollection of Claimant contacting him on October 14, 2021 regarding his alleged fall. The ALJ finds KK[Redacted] credible. Claimant further testified he took a shower and decided to go to the ED. Claimant testified that he was trying to jump over the sensor in his garage, but he only made it half way when he collapsed. He testified that 911 was called and he went to UC Health.

13. Claimant arrived at the emergency department (ED) of UC Health – Medical Center of the Rockies on October 14, 2021, at approximately 6:32 p.m. per the medical records. According to the records, Claimant arrived at the ED by car. Amongst Claimant's complaints were back pain, left-sided abdominal mass as well as the syncopal episode that occurred that day. According to the medical record "[p]atient says he does a lot of ***heavy lifting while at work***. He states that ***this is what caused his back pain***. He states this [has] been going on for several months but the worst of it has been today." (emphasis added). Claimant also reported feeling dehydrated so he went out to the garage to get something to drink. He bent over to get water out of the refrigerator and when he stood up he began to feel lightheaded and fainted. At the ED he was evaluated for his syncopal episode and a mass on the left side of his abdomen. There is nothing in the record to indicate Claimant fell onto a pallet at work that day. Upon examination, Claimant had "no reproducible tenderness to the midline or paraspinal muscles of the cervical, thoracic or lumbar spine. No CVA tenderness." (Ex. Q).

14. The providers at UC Health completed a WC 164 Form and noted that Claimant was lifting heavy shingles and developed worsening back and abdominal pain. Claimant was diagnosed with abdominal contusion, lumbar strain and dehydration. (Ex. Q). The "After Visit Summary" notes that Claimant was to call UC Health Occupational Medicine Clinic in one day. (Ex. 7). There is no objective evidence in the record that Claimant went to the UC Health Occupational Medicine Clinic the next day.

15. With respect to the fainting episode in his garage, Claimant testified he was beginning to get addicted to Adderall, but did not want to show the physician treating him his sporadic behavior. Claimant further testified that while in the ED he reported acute left shoulder pain, and reported his fall at work that day, but did not think about reporting the date of injury. The medical record at UCHealth makes no reference to Claimant having acute left shoulder pain. The medical record also has no reference to Claimant falling at work that day. Claimant testified that he "talked the nurse out of reporting it as a work injury" because he did not want to get KK[Redacted] in trouble for letting him work alone in the warehouse. Claimant's October 14, 2021 ED visit was billed to Medicaid.

16. The ALJ finds Claimant's account of the events on October 14, 2021 to be inconsistent and not credible.

17. On October 25, 2021, Claimant saw Dr. Doft for a general follow up, and for a refill of his medications, including his Adderall. Claimant did not complain of any shoulder or

back pain, nor did he report any work injuries. The medical record notes that Claimant was very busy with work, and working 12-14 hours per day. (Ex. P).

18. Claimant saw Dr. Doft on December 6, 2021 for a follow-up appointment. Claimant reported wanting to decrease his Adderall dosage primarily due to his weight loss. He also discussed getting a medical marijuana card so he could use edibles for calming at the end of work. Claimant did not report any work injuries, any shoulder pain, or any back issues. (Ex. P).

19. Claimant resigned from Employer, and according to Claimant, things between he and RA[Redacted] "ended on a horrible note." Claimant, however, further testified that he intended to go back to work for Employer in the spring of 2022.

20. Claimant notified Employer on or about March 10, 2022, of his alleged injury in the summer of 2021 when he alleged to have fallen from the truck bed. The First Report of Injury lists the date of injury as June 21, 2021. The body parts that were affected were "both shoulders and elbows." The correct injury date of August 20, 2021 was clarified and confirmed, at a July 1, 2022 prehearing conference. (Exs. B and D).

21. Claimant testified that in March 2022, he had not done anything for three months, and one day lifted one pound dumbbells and this is when he experienced pain in his left shoulder, so he decided to contact Human Resources. Employer directed Claimant to go to an authorized treating provider, and he went to Concentra.

22. Claimant was evaluated at Concentra on March 14, 2022. He reported falling five and a half feet off a truck on August 20, 2021. He reported hitting his head, causing his hard hat to come off and also injuring his left shoulder. Claimant reported going "in and out of consciousness." He reported that the pain in his left shoulder was 8/10 and radiates to his back. Claimant said he had not been working since December because it was the offseason. Claimant told the provider that a "[f]ew weeks ago [he] tried to lift 3 lb weight for a bicep curl and reports pain flared up." Claimant further reported memory loss, mood changes, and depression since the injury. Claimant made no mention of his alleged injury in October 2021. Claimant was referred for MRIs of his left shoulder and head. (Ex. O).

23. The ALJ finds that Claimant suffered from depression and anxiety as early as March 2021, which was prior to his alleged injury on August 20, 2021. Further, Claimant testified that he was lifting one pound weights.

24. The first time Claimant mentioned any shoulder pain to Dr. Doft was on March 23, 2022. Under "chief complaint" Dr. Doft noted Claimant "is here to discuss left shoulder pain. He has had an MRI done already and is needing a referral to ortho." Claimant reported "struggling with shoulder pain since August 20, 2021" when he fell off a flatbed truck. He also told Dr. Doft that a month prior he picked up some dumbbells to do curls and after about 15 reps, he noticed his left arm did not go up correctly, and had "severe" pain the next day. Claimant reported not being able to sleep on his left shoulder, and the pain kept him awake most nights. Dr. Doft referred Claimant to Dan Heaston, M.D. Again

Claimant did not mention any issues with his back, or the alleged injury he suffered on October 14, 2021. (Ex. P).

25. On March 25, 2022, Claimant was evaluated by Dr. Heaston at Banner Health Orthopedics. Claimant reported that "about a month ago []he got his arm caught in a chair and jerked forward and caused him quite a bit of pain." The record also states that workers' comp ordered the MRI showing a partial thickness tear of the left supraspinatus and an intrasubstance tear of the infraspinatus. Dr. Heaston diagnosed Claimant with a partial tear of his left rotator cuff. (Ex. R).

26. Claimant saw Dr. Doft on May 16, 2022 to follow up on his medications and shoulder pain. Claimant reported that the pain in his left shoulder was worse, and it was radiating to his arms and chest. According to the medical record, Dr. Heaston advised against surgery since it was a partial tear. (Ex. P).

27. Claimant returned to Banner Orthopedics on June 30, 2022, and saw Garrett Snyder, M.D. He reported left shoulder pain ongoing since January of 2022. Claimant reported throwing shingles for a living, and that he reached behind him at home to grab something and felt a pop in his shoulder, and has experienced significant pain since that time. According to the medical record, Claimant wanted to proceed with surgery and did not have a preference if Dr. Snyder or Dr. Heaston performed the surgery. (Ex. R).

28. At a prehearing conference in this matter on July 1, 2022, Employer first learned of Claimant's alleged injury on October 14, 2021. Claimant was advised to file a Worker's Claim for Compensation form with respect to the October 14 2021, injury. (Exs. B and D).

29. On July 11, 2022, Claimant saw Dr. Doft because he needed a letter of explanation "to give the court for income abilities." The records note that Claimant fell off a flatbed work truck almost a year ago, but Claimant did not lose consciousness. This is contrary to Claimant's report to Concentra. Dr. Doft noted Claimant had "worse shoulder pain over the next 45 days. Took a break in the winter and then in the spring when he started lifting again and doing the tossing motion the left shoulder started hurting again. Had to switch to throwing the other direction." (Ex. P). There is no indication in the record that Claimant was allegedly injured on October 14, 2021, or that Claimant quit working for Employer on December 13, 2021.

30. On July 11, 2022, Dr. Doft wrote a letter on behalf of Claimant stating that Claimant was about to undergo surgery for a torn supraspinatus muscle and a torn biceps tendon. He went on to write "[i]t is my medical opinions that this injury started on August 20th of 2021 when he fell off a flat bed work truck and landed on his left shoulder. Further, continued manual labor throwing large bundles (75 lbs) of shingles the rest of the summer undoubtedly worsened that immediate damage to the point of requiring the above mentioned surgery. Thus, this should definitely be considered a work related injury." Dr. Doft completed a WC164 Form and stated that Claimant had a left shoulder rotator cuff tear. (Ex. P).

31. On August 2, 2022, Dr. Snyder operated on Claimant and performed a left shoulder arthroscopic distal clavicle resection, open biceps tenodesis. (Ex. R).

32. While questioning Dr. Doft at hearing, Claimant asserted that he saw Dr. Heaston one time for surgery and never met Dr. Snyder. The medical records, however, indicate that Dr. Snyder not only met with Claimant before his surgery, but he is also the doctor who performed Claimant's surgery.

33. Claimant testified that Medicaid paid for his surgery and three months of physical therapy post-surgery. (Ex. 8). Claimant testified that he needed the surgery, so he had to present his injury differently (i.e. not presenting it as a workers' compensation injury) to be able to use Medicaid.

34. Dr. Doft testified on Claimant's behalf at the hearing. The ALJ notes that Dr. Doft was never offered as an expert by Claimant at hearing and he is not Level II accredited. Dr. Doft testified that it was highly likely that Claimant's work caused the injury to his left shoulder, particularly throwing shingles five days a week. On cross examination, Dr. Doft testified that the first time Claimant reported an alleged work injury to him was on March 23, 2022. Dr. Doft further testified that he did not have all of Claimant's medical records.

35. The ALJ finds Dr. Doft's testimony to be neither credible nor persuasive. Dr. Doft is Claimant's PCP, and his opinion was based upon Claimant's subjective reports and very limited medical records.

36. Jeffrey Raschbacher, M.D., completed an Independent Medical Examination (IME) on September 27, 2022, on behalf of Respondents. Dr. Raschbacher disagreed that Claimant sustained a cumulative trauma injury as there was no evidence to support such a conclusion. He likewise confirmed that the medical records failed to support an injury on either of the dates complained of. (Ex. S).

37. Dr. Raschbacher credibly testified in support of his IME. Dr. Raschbacher confirmed that Claimant's first mention of left shoulder pain was in March of 2022, despite his numerous medical appointments and physical examinations between the alleged dates of injury and March 2022. Dr. Raschbacher testified that Claimant's injury and the medical records where more consistent with an injury at home as opposed to an acute injury months prior. He did not believe Claimant could continue to work his extensive duties for multiple months had he injured his left shoulder in August 2021. Dr. Raschbacher concluded, in his expert opinion, that it was more likely than not that Claimant was not injured at work.

38. The ALJ finds Dr. Raschbacher's opinion to be credible and persuasive.

39. On multiple occasions, Claimant saw different medical providers, yet he never reported any shoulder pain until March 2022. When Claimant went to the ED on October 14, 2021, just a short time after allegedly injuring himself, he never mentioned the alleged work-injury, and there was no objective evidence of something like a racquet ball coming out of the soft tissue on his lower spine. Further, Claimant routinely changes his story. He asserts that he injured his left shoulder when he fell off a truck on August 20, 2021.

But he tells some medical providers that he reached behind him and something popped. Claimant attempts to clarify his multiple stories by testifying he had to present the injury differently to the physicians so he could use Medicaid. The ALJ finds Claimant's testimony throughout the hearing to be inconsistent. Furthermore, his testimony was neither credible nor persuasive.

40. Based on the totality of the evidence, the ALJ finds that Claimant did not suffer a compensable injury on August 20, 2021 or on October 14, 2021.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. § 8-41-301(1)(b), C.R.S. (2006); *see Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of, or natural progression of, a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dep't Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *Boulder*, 706 P.2d at 786; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant saw multiple medical providers, but he never reported the alleged August 20, 2021 work injury, until March 2022. When Claimant went to the ED on October 14, 2021, just a short time after allegedly injuring himself, he never mentioned the alleged work injury, and there was no objective evidence of something like a racquet ball coming out of the soft tissue on his lower spine. Further, Claimant routinely changes his story. He asserts that he fell off a truck on August 20, 2021 and this is how he injured his left shoulder. But he tells some medical providers that he reached behind him and something popped. Claimant attempts to clarify his multiple stories by testifying he had to present the injury differently to use Medicaid. As found, Claimant's description of his alleged injuries was inconsistent and not credible.

Dr. Doft opined that Claimant's work of throwing shingles five days a week likely caused the injury to his shoulder. This, in and of itself, is inconsistent with Claimant's alleged mechanism of injury. Dr. Doft is not Level II accredited, and he did not have a

complete set of medical records to rely upon. As found, Dr. Doft's opinion is neither credible nor persuasive.

Dr. Raschbacher disagreed that Claimant sustained a cumulative trauma injury as there was no evidence to support such a conclusion. He likewise confirmed that the medical records failed to support an injury on either of the dates complained of. Dr. Raschbacher credibly testified that Claimant's first mention of left shoulder pain was in March of 2022, despite his numerous medical appointments and physical examinations between the alleged dates of injury and March 2022. Dr. Raschbacher testified that Claimant's injury and the medical records where more consistent with an injury at home as opposed to an acute injury months prior. Dr. Raschbacher concluded in his expert opinion that it was more likely than not that Claimant was not injured at work. As found, Dr. Raschbacher's testimony is credible and persuasive. Based on the totality of the evidence, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable injury on either August 20, 2021 or October 14, 2021.

Medical Treatment

Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. V. Nofio*, 886 P.2d 714, 716 (Colo. 1994). The question of whether the need for treatment is causally-related to an industrial injury is one of fact. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). Claimant is seeking reimbursement for his surgery. As found, Claimant failed to prove by a preponderance of the evidence that he suffered a compensable industrial injury, so Respondents are not liable for any medical treatment.

Temporary Total Disability Benefits

Claimant has the burden of proving entitlement to temporary total disability benefits in the first place. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). Temporary total disability benefits are payable if Claimant proves a causal connection between his industrial injury and the temporary loss of wages. As found, Claimant did not suffer a compensable injury, so he is not entitled to temporary total disability benefits.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable work injury on August 20, 2021. His claim for compensability is denied and dismissed.

2. Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable work injury on October 14, 2021. His claim for compensability is denied and dismissed.

3. Claimant's request for reimbursement of medical expenses is denied and dismissed.

4. Claimant's request for temporary total disability benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 19, 2023

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-202-694-001

ISSUE

1. Did Claimant suffer a compensable injury, or was his injury due to a pre-existing condition?

2. If Claimant suffered a compensable injury, is he entitled to medical benefits?

3. If Claimant suffered a compensable injury, is he entitled to TTD benefits?

4. If Claimant suffered a compensable injury, is he entitled to TPD benefits?

STIPULATION

The parties have stipulated to an average weekly wage of $1,537.86.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 25 year-old man who has worked for Employer as a fuel technician since 2018. Claimant's work involves installing fuel systems, as well as repairing and updating them.

2. On March 9, 2022, Claimant was working a job at the [Redacted, hereinafter SD]. [Redacted, hereinafter SS] was the supervisor on the job. Claimant testified he was helping install a fuel tank that was being lowered by a crane onto the tank platform. Claimant was kneeling down on the tank pad trying to get the fuel tank lined up when he felt a popping sensation in his left knee before it locked up. After a few minutes, Claimant was able to hyperextend his knee, and pop it back into place. Claimant's left knee was swollen and painful. Claimant credibly testified he immediately notified SS[Redacted] about his knee. Claimant was able to walk and over time the pain alleviated slightly.

3. Claimant previously injured his left knee playing lacrosse in 2014. Claimant received treatment from Orthopedic & Spine Center of the Rockies (OCR). He had a left knee arthroscopic ACL reconstruction and a partial lateral meniscectomy. (Ex. F).

4. Claimant credibly testified that he successfully recovered from his 2014 ACL surgery, and was able to play lacrosse again within six months. Claimant credibly testified his left knee had been asymptomatic up until March 9, 2022.

5. Claimant worked the next several weeks, but continued to have pain in his left knee. On March 28, 2022, Claimant was evaluated by Mark McFerran, M.D., at OCR.

Claimant told Dr. McFerran he injured his knee two weeks prior at work when he "was installing a fuel tank and was in an awkward position and felt a pop and locking sensation in the lateral part of the left knee. He moved his knee and felt it pop again." Dr. McFerran suspected Claimant had suffered a lateral meniscus tear in his left knee. Dr. McFerran noted that they would navigate through the workers compensation system because this occurred at work. (Ex. 2).

6. Claimant credibly testified that between March 9 and March 31, 2022, his knee would pop and lock at least daily. As more time passed, this progressed to two to three times a day. At times, Claimant would wake up in the middle of the night and have to manipulate his knee.

7. On March 31, 2022, Claimant called [Redacted, hereinafter DH], the Project Manager in the Refined Fuels Department, to report his left knee issue. Claimant testified he was driving home from work that day, and had to pull over because his knee was popping and locking. Claimant was concerned he was experiencing the same pain and problems with his knee while driving. DH[Redacted] and [Redacted, hereinafter MM], the Health & Safety Officer, recommended Claimant go to Concentra for an evaluation.

8. DH[Redacted] completed a "Supervisor's Accident/Incident Investigation Report." According to the report, under the section entitled "Description of Accident" it states "[w]hile working on hands and knees, knee seems to lock up. As movement continues, felt like tendon would snap back into place. Within an hour after the first time, swelling began around knee. [Redacted, hereinafter MZ] did not think it was necessary to see doctor right away. He wanted to see if it would work itself out." The witnesses to the event were SS[Redacted] and [Redacted, hereinafter BS]. Claimant, DH[Redacted] and MM[Redacted] all signed this document. (Ex. G).

9. MM[Redacted] completed a First Report of Injury on March 31, 2022. According to the report, Claimant reported that on or about March 9, 2022, his left knee would "lock up" and pop back into place. MM[Redacted] said Claimant was not able to define a specific incident or action where the problem began, but advised he works on his hands and knees. (Ex. N).

10. On March 31, 2022, Claimant was evaluated by Jeffrey Baker, M.D., at Concentra. Claimant reported injuring his left knee on March 9, 2022. He told Dr. Baker he started having sudden tightness, pain and numbness in his left knee. Claimant reported doing a lot of crawling at work. He also told Dr. Baker about the previous ACL surgery on his left knee. The medical record states "[t]here was no actual injury event." Dr. Baker noted that he needed to get Claimant's previous surgery notes to determine if this was a new injury or an exacerbation. Claimant was diagnosed with a left knee strain and given a referral for two weeks of physical therapy, three times a week. (Ex. 3).

11. Claimant returned to Concentra for a follow-up appointment on April 5, 2022. Claimant's left knee had not improved so he was referred for an MRI of his left knee. (Ex. 3).

12. Claimant underwent an MRI of his left knee on April 27, 2022. The MRI indicated "[e]vidence of prior partial meniscectomy with residual peripheral tear in the posterior horn and truncation of the body free edge." (Ex. 4).

13. Despite physical therapy and modified work duty, Claimant did not improve. On April 29, 2022, ATP, Dr. Baker, referred Claimant to an orthopedic specialist. (Ex. 3).

14. Claimant saw Dale Martin, M.D. at OCR on May 4, 2022. Dr. Martin reviewed the MRI and opined he thought Claimant was subluxating his popliteus tendon laterally. Dr. Martin kept Claimant on light-duty activities and added specific stretching to his physical therapy. (Ex. 2).

15. Claimant saw Dr. Martin on May 25, 2022, for a follow up appointment. Dr. Martin noted that therapy was not providing relief. Dr. Martin recommended a left knee arthroscopy and evaluation of the meniscal tear and percutaneous release of the popliteus. (Ex. 2).

16. Dr. Martin retired and Claimant was referred to his colleague, David Beard, M.D. On August 9, 2022, Dr. Beard examined claimant. He noted in the record that Claimant had an extensive course of physical therapy, used a knee brace, had modified duties, but had not improved. Dr. Beard agreed with the recommendation for surgery to repair Claimant's left lateral meniscus tear, and noted that the surgery had been reportedly denied by Insurer. (Ex. 2).

17. Claimant credibly testified he decided to proceed with the surgery because he needed to use his knee. On October 3, 2022, Dr. Beard performed a left arthroscopy with arthroscopic partial lateral meniscectomy to repair Claimant's left knee lateral meniscus tear. (Ex. 2).

18. Dr. Beard saw Claimant on October 14, 2022 to exam him post-surgery. Dr. Beard noted that Claimant only used crutches for one day, and was back to his regular activities. Dr. Beard further noted that in his professional opinion, Claimant's "lateral meniscus tear was not due to any type of residual laxity in his knee from his previous ACL reconstruction." (Ex. 2).

19. Claimant testified that he missed one week of work following surgery. He also testified that he was released to full duty work on October 14, 2022. This, however, is not specifically noted in Dr. Beard's October 14, 2022 medical record. Claimant further testified he has no current treatment recommendations.

20. The claimant took a DOT physical for Employer on January 14, 2022. The results of the physical reflect Claimant has no health problems or physical limitations. (Ex. 1).

21. The medical records document that Claimant fully recovered following the 2014 ACL repair and was able to work without restrictions until the March 9, 2022 incident. (Ex. F). This is consistent with Claimant's testimony that he did not experience any issues with his left knee until March 9, 2022, while kneeling and trying to install a fuel tank in the course of his employment.

22. DH[Redacted] prepared a letter regarding Claimant's report of the injury. The contents of the undated letter is consistent with Claimant's testimony regarding reporting of the injury to SS[Redacted], and the onset of pain dating back to March 9, 2022, and the progression of symptoms. (Ex. G).

23. MM[Redacted] credibly testified at hearing. He confirmed the incident report noted a specific time, date, location and cause of injury, and that these were consistent with Claimant's testimony.

24. Prior to having surgery, Claimants' physicians limited him to 40 hours of work per week. Claimant credibly testified that when he was on modified duty, he was unable to work overtime. There is no objective evidence in the record as to the frequency or availability of overtime for Claimant.

25. Claimant credibly testified that he needs and loves his job. He has continued to work for Employer and elected to proceed with surgery to expedite his recovery and return to work without restrictions.

26. Claimant incurred out-of-pocket expenses for medical treatment, including surgery, related to the March 9, 2022 work injury.

27. James Lindberg, M.D., testified at hearing on behalf of Respondents. Dr. Lindberg was admitted as an expert in orthopedic surgery, specializing in hips, knees, shoulders, and causation analysis. Dr. Lindberg is Level II accredited and has practiced as an orthopedic surgeon for 40 years.

28. Dr. Lindberg conducted a records review. He summarized this review in an October 31, 2022 letter to Respondent's counsel. Dr. Linberg opined that Claimant's injury was a continuation of his 2014 injury. He wrote "[o]n my reading of the MRI, it appears that there is a complete tear of the posterior horn of the lateral meniscus that was left in place at the time of his surgery in 2014. This is basically a continuation of his initial injury in 2014." He opined that since this happened occasionally at work, and there was no precipitating incident, this was not an acute injury but a continuation of his 2014 injury. (Ex. A). Dr. Lindberg never examined Claimant.

29. Dr. Lindberg testified in support of his report. He testified that during the 2014 surgery, they took 15% of Claimant's lateral meniscus, and did not repair the remaining portion of the meniscus or address the lateral meniscus tear. Dr. Lindberg testified that failing to repair that meniscus was an error of judgement by the initial surgeon because the meniscus has a terrible blood supply, and once it is torn, it is damaged and is not going to heal. Dr. Lindberg testified that the natural history of the knee following the 2014 injury was that the tear easily progressed over time and Claimant was "doomed." Dr. Lindberg explained that whether or not there was laxity, this situation would have happened with this meniscus after 2014. Dr. Lindberg further testified that there was no mechanism described by claimant occurring on March 9, 2022 that would cause a tear in the meniscus: no impact, no fall, no twisting of the knee. The ALJ finds Dr. Lindberg's testimony credible, but not persuasive.

30. As found, Claimant's left knee was asymptomatic until March 9, 2022. It was only when Claimant was kneeling on the tank pad and helping to get the fuel tank in place that his knee popped and locked up. The ALJ finds that Claimant suffered a compensable injury on March 9, 2022.

31. The ALJ finds that Claimant incurred medical expenses related to his March 9, 2022 work injury that he paid for out of pocket, including the October 3, 2022 surgery.

32. The ALJ finds that Claimant was out of work for at least a week following his October 3, 2022 surgery and is entitled to TTD benefits.

33. The ALJ finds that from March 10, 2022 until October 2, 2022, Claimant was restricted from working more than 40 hours per week, and was unable to earn overtime wages. The ALJ finds that Claimant is entitled to TPD benefits during the period of time he was on modified duty.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus the entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. ICAO*, 24 P.3d 29 (Colo. App. 2000).

It is undisputed that Claimant injured his left knee and underwent an ACL reconstruction and a partial lateral meniscectomy in 2014. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). But when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (I.C.A.O. Aug. 18, 2005).

As found, Claimant was performing his regular job duties for Employer on March 9, 2022. Claimant was kneeling and maneuvering a large fuel tanker into place when his left knee popped and locked up. He experienced an acute onset of pain and swelling. Claimant credibly testified that prior to March 9, 2022, his knee had been asymptomatic since his 2014 surgery. The medical records support Claimant's testimony that he had fully recovered following the 2014 ACL repair and was able to work without restrictions until March 9, 2022. Based on the totality of the evidence, Claimant proved by a preponderance of the evidence that he suffered a compensable injury on March 9, 2022 that aggravated his pre-existing condition.

Employer referred Claimant to Concentra for treatment of his injuries. As the ATP, Concentra subsequently made referrals to OCR, bringing them into the chain of referrals and also authorized to treat Claimant. Claimant underwent a course of conservative treatment that failed to resolve his symptoms. Claimant ultimately required surgery to repair the left meniscal tear. Based on the totality of the evidence, Claimant has proven by a preponderance of the evidence that treatment for the left knee, including surgery, is reasonable, necessary and related to cure and relieve the effects of the March 9, 2022, work injury.

TTD

To prove entitlement to TTD benefits, Claimant must prove (1) that the industrial injury caused a disability lasting more than three work shifts; (2) that he left work as a

result of the disability and; (3) that the disability resulted in an actual wage loss. *See* §§ 8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995); *Colorado Springs v. Indus. Claim Appeals office*, 954 P.2d 637 (Colo. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" refers to the claimant's inability to perform his regular employment. *McKinley v. Bronco Billy's*, 903 P.2d 1239 (Colo. App. 1995). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. § 8-42-105(3)(a)-(d), C.R.S.

As found, Claimant became temporarily and totally disabled for a short period of time, during which time he was unable to work because of his injury. Claimant credibly testified that he was not able to work for a week following his surgery. Claimant is entitled to TTD because his disability caused him to leave work, and to miss more than three regular working days. Claimant is entitled to TTD benefits beginning October 3, 2022 until terminated by operation of law.

TPD

Section 8-42-106(1), C.R.S., provides for an award of TPD benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). As found, Claimant was under restrictions that limited his work to 40 hours per week. Claimant credibly testified this prevented him from earning overtime wages following the work injury. The ALJ finds claimant is entitled to TPD benefits from March 10, 2022 through October 2, 2022.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable work injury to his left knee, on March 9, 2022.

2. Claimant is entitled to medical benefits related to treatment of the March 9, 2022 work injury as recommended by his treating physicians.

3. Claimant is entitled to reimbursement for his out-of-pocket expenses related to the treatment and surgery to cure and relieve the effects of his March 9, 2022 work injury.

4. Claimant is entitled to TTD benefits beginning October 3, 2022 until terminated by operation of law.

5. Claimant is entitled to TPD benefits beginning March 10, 2022 until October 2, 2022.

6. Respondents shall pay statutory interest of eight percent on all sums ordered.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 1, 2023

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

STIPULATIONS

At the outset of the hearing, the parties stipulated that the surveillance video and corresponding reports contained at Respondents' Hearing Exhibits J, K, L, and M were admissible without foundational testimony, and that the person featured in the videos is Claimant on the dates referenced therein.

The parties also stipulated that if Claimant is awarded permanent total disability (PTD) benefits, Respondents are entitled to an offset against such benefits based on Claimant's receipt of social security disability income (SSDI) benefits. The parties agreed that the offset shall be based upon the original monthly SSDI entitlement of $1,964.80.

These stipulations were accepted and approved by the ALJ.

REMAINING ISSUES

I. Whether Claimant established that his need for ongoing opioid medication, specifically levorphanol is reasonable and necessary.

II. Whether Claimant established, by a preponderance of the evidence, that he is unable to earn a wage in the same or other employment, and is therefore, permanently and totally disabled as a consequence of his admitted September 15, 2011 industrial injury.

III. Whether Claimant established, by a preponderance of the evidence, that he is entitled to a disfigurement award pursuant to C.R.S. § 8-42-108.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted work-related accident on September 15, 2011. At the time of the September 15, 2011 injury, Claimant worked for Employer as a roofing salesperson. As Claimant stepped off a curb while carrying a ladder on the date of injury he "rolled" his right ankle. Claimant reported the injury and medical treatment was provided by the Respondents.

2. Claimant has treated with several authorized providers for the effects of his September 15, 2011 industrial injury, including Dr. Douglas Bradley, Dr. Michael Simpson, Dr. Michael Sparr, Dr. Scott Primack, Dr. Levi Miller, Dr. Haley Burk, Dr.

Tashof Bernton and others. He has also been evaluated in an independent medical evaluation (IME) setting by Dr. Allison Fall, Dr. Rachel Basse, and Dr. George Schakaraschwili. A medical records review has been completed by Dr. Joseph Fillmore and Dr. Kathrine McCraine, both experts in physical medicine and rehabilitation (PM&R). On September 12, 2022, Claimant completed an "Employability Evaluation" with Cynthia Bartmann. Ms. Bartmann authored a comprehensive report outlining her opinions regarding Claimant's ability to earn wages following her evaluation. Her report is dated December 5, 2022 and is found at Exhibit C of Respondents Hearing Exhibits.

3. As noted, Claimant has been treated by a number of physicians. His treatment post injury treatment has been lengthy and complicated by symptoms consistent with Complex Regional Pain Syndrome (CRPS). Indeed, Claimant has undergone three ankle/lower extremity surgeries and he has been diagnosed as having Complex Regional Pain Syndrome (CRPS) in the past.

4. Claimant underwent a functional capacity evaluation ("FCE") on February 27, 2014, during which he demonstrated the ability to stoop and kneel frequently, walk, balance, and climb stairs occasionally. His lifting activities were in the heavy exertional level and his push/pull activities were in the medium level. (Resp. Ex. A, p. 4).

5. On February 28, 2014, Dr. Bradley placed claimant at MMI. He noted that claimant's sural nerve and peroneal nerve had been operated upon. He recommended restrictions of 65 pounds lifting, 35 pounds carrying, 100 pounds pushing, and 50 pounds pulling. Dr. Bradley also recommended post-MMI medical care due to ongoing complaints of pain. (Resp. Ex. E, p. 127).

6. Claimant continued post-MMI care with Dr. Bradley for persistent symptoms in the right lower extremity associated with his September 15, 2011 industrial injury. On March 24, 2015, Dr. Bradley returned Claimant to Dr. Scott Primack for follow-up evaluation. Claimant was also referred to Dr. Tashoff Bernton for completion of autonomic testing.

7. On May 6, 2015, Dr. Scott Primack of Colorado Rehabilitation & Occupational Medicine ("CROM") issued a report noting that Claimant had been through autonomic testing with Dr. Bernton and that this testing was "consistent for someone with complex regional pain syndrome" (CRPS). Dr. Primack also noted that Dr. Bernton suggested that Claimant proceed with a lumbar sympathetic injection[1] and if that injection improved his function including the motion in his ankle, than Claimant would meet the diagnostic criteria for CRPS. Claimant would be diagnosed with CRPS and would receive maintenance medical treatment including additional injection therapy/blocks and prescriptions for levorphanol[2] for the next several years.

---

[1] Claimant would go on to receive multiple lumbar sympathetic blocks on a maintenance basis as administered by Dr. Stephen Scheper.

[2] Dr. Miller first recommended Claimant be prescribed levorphanol on November 21, 2017. (Resp. Hrg. Ex. B, pg. 35).

8. On June 5, 2019, Dr. Primack opined that Claimant was not at MMI and needed more blocks (contrary to the opinion expressed by Dr. Rachel Basse in her February 27, 2018, IME report)[3] (Resp. Hrg. Ex. F, p. 135). In addition to addressing the appropriateness of continued injection/block therapy, Dr. Primack commented on the necessity/reasonableness of Claimant's ongoing need for levorphanol. (See generally, Resp. Hrg. Ex. F, p. 135).

9. Claimant has a long history of marijuana use which has complicated his concomitant use of opioid medication to relieve his persistent pain symptoms. Indeed, as far back as November 29, 2017, Dr. Joseph Fillmore, as part of his records review, raised concern about Claimant's "appropriateness for opioids given his regular marijuana use". (Resp. Hrg. Ex. B, pg. 35).

10. On February 13, 2018, Dr. Miller's office recommended that Claimant be weaned off levorphanol given his marijuana use. (Resp. Ex. B, p. 36). During this appointment Claimant reported that marijuana "helps" him sleep so he would rather continue using marijuana. *Id*. In her June 7, 2018 physician advisor report, Dr. McCraine opined that Claimant's use of levorphanol was contraindicated because he had "not shown significant functional gains" and it had not "allowed him to return to work". (Resp. Ex. H, p. 179). Moreover, Dr. McCraine noted that "because the [Claimant] is using marijuana, he should not be also using opioid medication", since these drugs should not be combined. *Id.* Dr. McCranie agreed with Dr. Miller that Claimant's levorphanol should be tapered and discontinued. *Id.*

11. In his June 5, 2019 report, Dr. Primack agreed with Dr. Miller that "opioids and marijuana, in combination, would not be considered reasonable or appropriate care". (Resp. Ex. F, p. 135). Dr. Primack found "no good rationale for the utilization of both substances", noting that "if [Claimant] wants to be maintained on levorphanol, he should test negative for marijuana". *Id*. Conversely, "if [Claimant] wants to just be maintained on marijuana, then he should have his levorphanol eliminated over a three-month timeframe". *Id*.

12. During a follow-up visit with Dr. Miller on June 18, 2020, Claimant reported that levorphanol was "quite beneficial for *pain* relief". (Resp. Hrg. Ex. F, p. 137)(emphasis added). Nonetheless, Dr. Miller noted that Claimant's drug testing was positive for THC raising concern for continued marijuana use. Although recognizing that CBD products (which Claimant's also uses) contain impurities, including THC, Dr. Miller indicated that any THC from CBD products should be at a level to produce trace amounts of THC in Claimant's urine sample and that his tested levels for THC were higher than that. *Id.* Claimant acknowledged an understanding that he needed to stop all THC containing products and Dr. Miller indicated that should future drug testing reveal the presence of THC in higher levels, the levorphanol would be tapered to a stop. *Id.* Claimant's levorphanol was continued at 2 mg. three times/day. *Id*. at p. 138.

[3] See Resp. Ex. B.

13. On January 13, 2021, the results of Claimant's 12/21/2020 urine drug screen were again reported as positive for elevated THC. (Resp. Hrg. Ex. 140). Dr. Miller reviewed the results and wrote that he would start a taper of Claimant's levorphanol prescription to a stop because he was no longer comfortable prescribing opioids. *Id.* Claimant promptly sought a different provider.

14. On January 21, 2021, Claimant visited Dr. Bernton. Claimant voiced "concerns" about Dr. Miller, but the only specific complaint documented was that Dr. Miller was allegedly not listening to him. (Resp. Hrg. Ex. F, p. 142). The ALJ finds it reasonable to infer that Claimant was upset that his subjective complaints had not convinced Dr. Miller to continue prescribing opioids in the face of his continued marijuana use. Although Dr. Bernton described his "full confidence" in Dr. Miller's skills as a physician trained in the "management of [Claimant's] condition," he disregarded Dr. Miller's decision to stop the levorphanol. *Id.* Dr. Bernton admitted "it would be better . . . to look at alternatives". *Id*. at p. 143. Nevertheless the record supports a finding that prescriptions for levorphanol continued.

15. On August 15, 2021, Dr. Haley Burke of CROM issued a detailed report after reviewing Claimant's records. She began treating Claimant in February 2021 after Dr. Miller decided to stop prescribing levorphanol and after Claimant's complaints to Dr. Bernton. Initially Dr. Burke maintained the levorphanol without a full understanding of Claimant's treatment history. (See Resp. Hrg. Ex. F, pp. 148-151). However, after reviewing many years of medical records concerning Claimant's treatment, Dr. Burke noted that there did not appear to be a "clear rationale" for continuing Claimant's levorphanol. Dr. Burke opined that Claimant's symptoms were not typical for CRPS and cited the "minimal to absent" physical examination findings as partial support for this conclusion. *Id.* at p. 150. She opined that levorphanol had not caused any meaningful functional improvement, nor did eliminating it decrease Claimant's function. *Id.* She recorded that using THC with levorphanol violated the practice's general clinical standards (presumably a reference to CROM's internal rules), that THC had provided no demonstrable reduction in pain, and Claimant was "adamant about continuing his marijuana use" and was "dismissive of the . . . risk of continuing marijuana with twice daily dosed levorphanol." *Id.* Dr. Burke recommended terminating the levorphanol after a 3-month taper. *Id.*

16. On September 2, 2021, Claimant told Dr. Burke that it took a long time to recover after doing things like "going out on his boat." (Resp. Hrg. Ex. F, p. 152). He also described having recently attended a concert and taking his children to school. *Id.* Dr. Burke observed that Claimant's reported current functional capacity "[did] not appear to substantially differ compared to his reported state prior to his monthly injections and levorphanol use," noting that his pain scores did not meaningfully change after the levorphanol and blocks were discontinued. *Id.* at p. 154. Claimant tried to convince Dr. Burke that she had agreed to prescribe him levorphanol indefinitely, but she adamantly denied this suggestion, wrote that she would never make such a promise, and refused his request for more opioids. *Id.* at p. 157.

17. On September 30, 2021, Claimant returned to Dr. Burke and reported being worse, but also disclosed walking 4 holes of golf the previous week and being able to cook dinner. (Resp. Ex. F, p. 155). Claimant admitted to continued marijuana use indicating that he uses it for "personal reasons", specifically to cope with past traumas rather than pain control. *Id*. Dr. Buke noted that there were "obvious concerns about behavioral health that may be contributing to [Claimant's] overall clinical picture", for which she recommended psychologic care. Dr. Burke informed Claimant that she was not comfortable continuing his current dose of levorphanol given his marijuana use and advised him that she planned to decrease his levorphanol to ½ tablet every 8 hours at his next visit. On October 1, 2021, Dr. Burke indicated that continued prescriptions for levorphanol were not reasonable or necessary and she recommended reducing and discontinuing this medication. *Id*. at p. 160.

18. On October 22, 2021, Claimant was examined by Dr. Bernton, who did not observe any swelling in his hands or any clinical changes since his prior evaluation. (Resp. Hrg. Ex F, p. 161). Dr. Bernton addressed Dr. Burke's levorphanol tapering recommendation by noting:

> I also reviewed Dr. Haley Burke's opinion dated 10/01/2021 recommending tapering and discontinuing the [Claimant's] levorphanol. While I believe that is an appropriate and clinically reasonable goal, my plan would be to first work on discontinuing blocks, and once that has been (hopefully) accomplished, then we will look at medication and tapering and hopefully discontinuing the levorphanol.

Id. at pp. 161-162.

19. On November 22, 2021, Claimant followed up with Dr. Bernton, and reported discomfort making a fist, but demonstrated full range of motion and the ability fully grip and open the hand. (Resp. Ex. F, p. 164). Claimant reported planning to spend a week in Mexico in December 2021. *Id.* Dr. Bernton reiterated his hopes of someday tapering the levorphanol, but only after seeing whether "we can get him stable without further blocks". *Id.* He then noted that the next block was cancelled due to the vacation. *Id.*

20. Claimant saw Dr. Bernton on January 7, 2022, and reported his "head [had] been ringing" since returning from vacation. (Resp. Hrg. Ex. F, p. 166). Claimant stated that his head symptoms "started on the way home from Mexico when . . . my ears popped and never stopped." *Id.* Physical exam was again negative for swelling, asymmetry of color, or restricted motion. *Id.* Dr. Bernton acknowledged the difficulty of ascribing Claimant's symptoms to CRPS without objective correlation. *Id.*

21. On April 7, 2022, Claimant underwent an IME with Dr. George Schakaraschiwili. After completion of a comprehensive medical records review and physical examination, Dr. Schakaraschiwili opined that most of Claimant's responses to the blocks were non-diagnostic, that Dr. Bernton had not commented on the non-

diagnostic responses. He also noted that Dr. Bernton's exam findings were "significantly greater than those of other evaluators." (Resp. Hrg. Ex. D pp. 89, 91, 92, 99). Finally, he noted that Dr. Fillmore had previously recommended that all blocks be ceased on March 19, 2020 because there was no sustained functional improvement with the blocks and that by March 4, 2022, Claimant's examinations no longer fit the Budapest Criteria for CRPS and the "blocks had not provided any significant long-term relief and that Dr. Burke had not recommended continuing them". *Id*. at p. 96, 105.

22. Dr. Schakaraschiwili's physical exam revealed no swelling, discoloration, temperature changes, tropic changes, hair changes, or nail changes, although there might have been mild swelling in the fingers. *Id*. at p. 106. Dr. Schakaraschiwili' documented that Claimant presented "as quite comfortable during the evaluation until the physical examination commenced," and no finger twitching occurred during the interview, but twitching was seen during the examination. (Resp. Hrg. Ex. D, p. 106). Dr. Schakaraschiwili explained that the previous CRPS diagnosis was questionable due to the prior thermogram findings being inconsistent, the reportedly positive autonomic testing battery results being confounded by peripheral nerve injuries, and the lack of meaningful symptomatic or functional improvement from the blocks. Id. at p. 107. Nonetheless, Dr. Schakaraschiwili performed repeat autonomic battery and infrared stress thermogram testing. The thermogram of the upper extremities and an autonomic testing battery "failed to reveal any evidence of significant sympathetic dysautonomia". *Id*. at p. 108. Similarly, lower extremity testing revealed no clinical signs of CRPS other than potentially decreased range of motion (ROM) in the toes, although Dr. Schakaraschiwili was uncertain whether the decreased ROM was voluntary or due to a peroneal motor injury. *Id.* The thermogram revealed no evidence of temperature asymmetry except in the toes, which showed paradoxical warming (rather than asymmetry), the clinical significance of which Dr. Schakaraschiwili explained is uncertain. *Id.*

23. Based upon Claimant's autonomic and thermogram testing results in combination with the non-diagnostic response to the majority of the blockades directed to the upper/lower extremities, Dr. Schakaraschiwili concluded that Claimant did not meet the Division criteria for CRPS in any extremity at this time. (Resp. Hrg. Ex. D, p. 108).[4] He opined that Claimant's finger twitching is likely "functional, as it has been inconsistently reported in the records and inconsistently observed on [his] evaluation when [Claimant] was distracted." *Id*. at p. 109. Dr. Schakaraschiwili further opined that there is "evidence of significant psychological overlay to the Claimant's presentation and reporting of symptoms", that the record demonstrates that Claimant has "magnified and multiplied symptoms", has an unusual presentation for CRPS, and that there is scant evidence to support Claimant's reports of functional improvement with very "extensive and prolonged treatment". *Id*. In short, Dr. Schakaraschiwili opined that Claimant's reported symptoms "far exceed any objective findings reported on multiple physical examinations," and he was "engaging in activities which would appear inconsistent with his reported functioning, such as traveling to Mexico for vacation . . ." *Id.* Rather than a

[4] As noted in Dr. Basse' February 27, 2018, CRPS can and does burn itself out. (See Resp. Hrg. Ex. B, p. 40).

case of CRPS, Dr. Schakaraschiwili opined that Claimant's lower extremity and toe symptoms "can be almost completely explained by" the peroneal nerve injury and "right ankle sprain, superficial peroneal neuritis, and right sural resection with neuropathic pain." *Id.*

24. Dr. Schakaraschiwili recommended against additional blocks and levorphanol. (Resp. Hrg. Ex. D, p. 109). He opined that the blocks "are operating as placebos," and Claimant's pain scores for the peripheral nerve blocks and the majority of sympathetic blocks are either non-diagnostic or borderline. *Id.* He also concluded that Claimant is likely "psychologically and physically dependent on levorphanol" and that there is "insufficient evidence that the use of this medication is resulting in any functional gains". *Id*. Accordingly, Dr. Schakaraschiwili recommended that Claimant's use of levorphanol be tapered and discontinued. *Id.* Dr. Schakaraschiwili predicted that Claimant would strenuously object and report increased pain and decreased function if the blocks and levorphanol were discontinued, but pointed out that treatment should still be guided by objective clinical findings. *Id.*

25. On May 30, 2022, Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Jack Rook. He told Dr. Rook "it is very painful to walk barefoot," but in the July 2022 surveillance, less than 2 months after the DIME, Claimant is seen walking in stocking feet on a concrete surface on two separate occasions. (See Resp. Hrg. Ex. I, p. 194 and Ex. L). Claimant also reported to Dr. Rook that his blocks had been discontinued (seven months prior to the DIME) by Dr. Burke because of the radiation involved with the fluoroscopy and his continued marijuana use. (Resp. Hrg. Ex. I, p. 194). Dr. Rook also documented that Dr. Bernton had decreased Claimant's levorphanol from three 2 mg tablets per day to two 2 mg tablets per day. *Id.*

26. Claimant and his wife reported to Dr. Rook that during the time his blocks had been discontinued and his levorphanol dosage cut, he had an increase in body pain and a decrease in function. (Resp. Hrg. Ex. I, p. 194). According [Redacted, hereinafter MST], Claimant was so tired throughout the day that that he would just lay around dosing off intermittently. *Id*. at p. 195. In contrast to Drs. Miller, Burke, Primack, McCraine and Schakaraschiwili, Dr. Rook recommended *increasing* Claimant's levorphanol dosage to compensate for the discontinuation of additional blocks. Dr. Rook opined that Claimant's use of THC and CBD products were not contraindicated as these "medications" were not causing adverse side effects and were providing benefits for Claimant including, "some degree of analgesia, improvement in his mood, and [helping] him to deal with his chronic pain condition and associated functional limitations. (See generally, Resp. Ex. I, p. 208-210). Dr. Rook also assigned sedentary-level restrictions and noted that Claimant could lift, carry and push and pull up to 10 pounds occasionally. (Resp. Ex. I, p. 212, 215).

27. On May 31, 2022, Dr. Bernton reviewed Dr. Schakaraschiwili's report. He noted that Dr. Schakaraschiwili performed a repeat autonomic battery and a stress thermogram which he had previously recommended and requested permission to complete. (Resp. Hrg. Ex. F, p. 169). He discussed the negative testing results for CRPS with Claimant and agreed with Dr. Schakaraschiwili that Claimant's levorphanol

should be tapered and he be referred to psychology.[5] *Id*. According to the note from this date of visit, Dr. Bernton left the exam room to prepare the psychology referral and the prescription for a lower levorphanol dose to 3 mg total per day (rather than 2mg twice per day), and upon returning discovered that Claimant had abruptly departed. *Id.* Dr. Bernton also recommended a trial of laser therapy as a "non-habituating, safe and cost effective" alternative to medication to treat Claimant's persistent complaints.

28. On June 14, 2022, respondents filed a final admission, which included an admission for $1,800.00 in disfigurement benefits. (Resp. Hrg. Ex. I, p. 184).

29. On June 21, 2022, Claimant returned to Dr. Bernton. He presented as "quite distraught." (Resp. Hrg. Ex. F, p. 171). Consistent with Dr. Schakaraschiwili's prediction, Claimant reported decreased function and increased pain in response to Dr. Bernton's attempt to taper the opioids. *Id.* Claimant reported recently visiting an ER where he obtained ketamine. *Id.* After treating alleged CRPS for years with unhelpful blocks and opioids, Dr. Bernton admitted he did "not have a diagnosis and that makes it very difficult to continue, particularly narcotic treatment." *Id.* Nevertheless, Dr. Bernton increased the levorphanol dose back to 2 mg twice per day until completion of Claimant's psychological evaluation, which he noted could not be completed with Dr. Hawkins until early August. *Id.* While he did not have frank evidence of malingering, Dr. Bernton noted that he was uncertain to what extent somatoform versus physiologic factors were playing a role in Claimant's presentation. *Id*. at p. 172. In the absence of a psychological evaluation and because of Claimant's reported increase in symptoms and decrease in function, Dr. Bernton opined that it was "medically necessary" to increase Claimant's levorphanol to the level he was taking before the most recent reduction in dosage, at least until Claimant's psychological examination had been completed. *Id*

30. From July 21, 2022, through July 27, 2022, Claimant was surveilled outside of his home over the course of seven (7) consecutive days. During this time, Claimant demonstrated the ability to stand and walk for long periods of time (while wearing tennis shoes, Crocs, and occasionally in stocking feet), drive a large truck and a minivan, lift and carry large boxes and bags with his hands/arms, bend at the waist, push a wheelbarrow, open and close a tailgate on a truck, and use a power washer, garden hose, lift buckets of water and push and pull a small pick-up truck in and out of a garage using his arm and legs. At least on one occasion Claimant push the truck into the garage without the assistance of anyone. (See, generally, Resp. Hrg. Exs. J, L). All of the aforementioned activity was performed without apparent difficulty or overt pain. *Id.*

31. On August 23, 2022, Dr. Bernton noted that Claimant's THC use may cause sleep disruption. (Resp. Hrg. Ex. F, p. 173). He noted that Claimant had been evaluated by psychologist Rebecca Hawkins who opined that somatoform complaints alone did not explain Claimant's ongoing pain. *Id*. Instead, she noted that both a combination of physiologic with secondary psychologic factors were a more probable driver of Claimant's persistent pain complaints. She recommended an evaluation by

[5] Dr. Bernton recommended a referral to psychologist Rebecca Hawkins.

psychiatrist Stephan Moe for pharmacologic management of depression. *Id*. at p. 174. Accordingly, Dr. Bernton opined that he would not "further taper narcotics, as based on all the information available, [Claimant] does have a probable physiologic cause for his pain". *Id*. Contrary to Dr. Schakaraschiwili conclusions, Dr. Bernton opined that the "most likely cause" of Claimant's pain is CRPS. *Id.* Dr. Bernton referred Claimant to Dr. Moe for recommendations of medication management for anxiety and depression and he switched his focus on providing low side effect treatments, including a trial of laser therapy to treat Claimant's reported pain complaints. *Id.*

32. Claimant failed to attend his virtual appointments with Dr. Moe. (Resp. Hrg. Ex. G, p. 178). Dr. Bernton has made no further attempts levorphanol.

33. Claimant underwent an IME with Dr. Allison Fall on September 7, 2022. During this examination, Claimant reported that he is prescribed 2 mg. of levorphanol two times a day. (Resp. Hrg. Ex. A, p. 1). According to Claimant, "[i]t definitely helps". *Id*. He also reported pain relief with laser therapy. *Id*. Claimant reported that he could "work half-a-day doing physical labor such as pulling weeds and cutting grass with a lawnmower," but that he would "pay for it" and have to lay in bed the next day. *Id*. at p. 2. He also reported that while receiving injections/blocks he could work a full day doing things like "[working] on his rental homes, fixing things, and painting." *Id*. at p. 2. Claimant reported that prolonged standing causes his leg to go numb and that walking increases his pain. *Id*. His hands, arms and legs are always achy, he cannot get comfortable and had to change position every five minutes while sleeping. *Id*.

34. Claimant listed his occupation as disabled and reported to Dr. Fall that he has not looked for any type of part time or volunteer work. (Resp. Hrg. Ex. A, p. 8). As noted above, he is receiving social security disability benefits. Physical exam of the hands revealed no hair, skin, color, or temperature changes. *Id.* at p. 9. There was no loss of balance during ambulation and while ambulating, Claimant sometimes favored the right leg and other times the left. *Id*.

35. Dr. Fall reviewed the surveillance from July 2022. She commented that Claimant wore tennis shoes and Crocs sandals, went barefoot, and did a lot of walking with a non-antalgic gate. *Id.* She noted that his activities in the video were inconsistent with the capabilities he reported to her, in that he ambulated much more hesitantly during the IME than in the surveillance video. She also noted that he was not bedridden despite back-to-back days of activity including prolonged standing and walking. (Resp. Hrg. Ex. A, p. 3). Dr. Fall also noted that Claimant's activities in the surveillance seemed to exceed the lifting, pushing and pulling of 10 pounds recommended by Dr. Rook. *Id.* at p. 8.

36. Based upon the discrepancies between Claimant's in-person presentation and his demonstrated capabilities on surveillance video, Dr. Fall opined that his "subjective presentation to providers is not reliable". (Resp. Hrg. Ex. A, p. 9). Dr. Fall also opined that work restrictions are not necessary based upon the activities demonstrated in the video. *Id*. In support, she pointed to the lack of any medical

indication for restrictions and the heightened capacity Claimant demonstrated during the 2014 FCE and in the July 2022 surveillance. *Id.* at pp. 9-10.

37. Dr. Fall agreed with Drs. Miller, Burke, Primack, McCraine and Schakaraschiwili that Claimant's levorphanol should be discontinued. (Resp. Hrg. Ex. A, p. 10). She endorsed a tapering schedule consistent with that recommended by Dr. Burke. *Id.*

38. On September 12, 2022, Claimant underwent a vocational evaluation by Cynthia Bartmann. He again reported getting worse. (Resp. Hrg. Ex. C, p. 61, 66). Claimant told Ms. Bartmann he feels comfortable only at home, which appears demonstrably inconsistent with participation in cruising, vacationing, concert going, fair going and driving. Claimant told Ms. Bartmann he cannot stand or walk for more than 10 minutes "before developing increased pain," which she noted was inconsistent with his activities depicted in the surveillance video. *Id.* at p. 69. Claimant tried convincing Ms. Bartmann he could only drive for 20 minutes, but she noted that Dr. Hawkins documented that he drives from Pueblo to Denver and the January 2023 surveillance confirms that he sometimes drives for more than 90 minutes without apparent difficulty. *Id.* Claimant told Ms. Bartmann he does outdoor work in the morning because heat bothers him. In contrast to this statement, the July 2022 video submitted into evidence shows Claimant active in the midday summer heat. Claimant also reported to Ms. Bartmann that he needs to be in bed following a day of activity, but she noted that he was active on several consecutive days in July 2022 based on the surveillance. He also tried convincing Ms. Bartmann that he has fine motor skill deficits involving the hands, but she observed that Dr. Hawkins has documented his ability to use a pen, a touchscreen, and a smartphone to timely complete MMPI-II-RF testing. *Id.* Ms. Bartmann also pointed out that Claimant handled several items in the surveillance video with no obvious issues. *Id. at 70.*

39. Claimant described several physical capabilities to Ms. Bartmann, including taking his kids to school and completing light chores such laundry and making meals. (Resp. Hrg. Ex. C, p. 66). Notably, he did not disclose owning and managing rental properties to Ms. Bartmann. He did describe being able to perform basic math and needing to do math as a roofing salesman. He told Ms. Bartmann the only modification he needed with [Redacted, hereinafter TR] after his injury, until he stopped working in 2014, was to have a co-worker carry ladders. *Id.* at p. 68. He also confirmed the ability to read, but alleged that his mind wanders after reading about half a page of information. *Id*. at p. 67.

40. Ms. Bartmann observed that all of Claimant's providers have released him to return to work with varying restrictions: Drs. Primack and Fall released him to full duty, Dr. Fillmore released him to "sedentary to light" work, and Drs. Bradley and Rook released him to sedentary duty. (Resp. Hrg. Ex. C, p. 65). Ms. Bartmann observed that Claimant could return to his salesman job within the restrictions recommended by Drs. Sparr, Primack, and Fall. *Id*. at p. 68. She expressed uncertainty regarding why Claimant did not return to work in 2015 after Dr. Sparr released him. *Id.* Ms. Bartmann explained the importance of relying upon objective information in cases like this where

Claimant's subjective reporting has been called into question by medical providers and surveillance. *Id.* at p. 69. She also noted that Dr. Fall is the only physician who reviewed the surveillance. *Id*. at p. 70.

41. As part of her vocational evaluation into whether Claimant was capable of earning wages, Ms. Bartmann performed vocational research. In performing her research, Ms. Bartmann utilized the sedentary-level restrictions recommended by Drs. Rook and Bradley to be conservative. (Resp. Hrg. Ex. C, p. 70). She concluded that Claimant has retained the capacity to earn wages despite his industrial injury. Moreover, she found several suitable jobs, including night auditor, front desk monitor, cashier, and customer service representative. *Id*. at pp. 70-72. She also found a "budtender" position with [Redacted, hereinafter DC], although noted that Claimant would need to lift up to 25 pounds (before any potential accommodations). *Id.* The night auditor position would allow Claimant to sit and stand intermittently, and the cashier position would allow him to use a stool. *Id.* The customer service, night auditor, and front desk monitor positions did not require prior experience. *Id.* Each employer had positions available immediately in Pueblo, except for [Redacted, hereinafter CS] which had an open job in Colorado Springs. *Id.* Ms. Bartmann wrote that these jobs were simply examples of opportunities available to Claimant within his skills and physical abilities as opposed to being an exhaustive list of potential employment opportunities for Claimant. *Id.*

42. On October 4, 2022, Claimant visited Dr. Bernton and described increased pain in both his hands and feet. (Resp. Hrg. Ex. F, p. 176). He reported seeing an ENT for the alleged tinnitus, who concluded there is "nothing wrong with" his ears. *Id.* Dr. Bernton again recorded alleged "slight swelling of the hands," but no discoloration or hyperalgesia. *Id.*

43. On December 1, 2022, Claimant visited Dr. Bernton and reported significant improvement following a recent session of laser therapy. He described a 50% decrease in his pain levels, better sleep, and significant functional improvement regarding the ability to stand and engage in unspecified activities outside of the house. (Clmt's. Hrg. Ex. 1, p. 5).

44. On January 12, 2023, Claimant was re-evaluated by Dr. Bernton, who noted that with additional laser therapy, Claimant enjoyed a "significant reduction in pain levels from a 7-8/10 to a 3-4/10 and that he was able to "do some raking outside with a friend", which is something he had been unable to do since his blocks had been stopped. (Clmt's. Hrg. Ex. 1, p. 9). Dr. Bernton recommended that Claimant move forward with rental or purchase of a laser unit and once Claimant had the laser in hand, he (Dr. Bernton) anticipated moving forward with a tapering of Claimant's levorphanol. *Id*.

45. Procurement of a laser for home use was authorized and on January 20, 2023, Claimant was instructed on its use.

46. Claimant was surveilled on his trip from Pueblo to Denver on January 20, 2023. (See generally, Resp. Hrg. Ex. K, M). The ALJ has reviewed this video in its entirety. In the video, Claimant is seen moving fluidly without any assistive devices or signs of pain. (Resp. Hrg. Ex. M). Claimant operated his vehicle for over 3 hours on this date. (Resp. Hrg. Ex. K, p. 227).

47. On February 23, 2023, Claimant visited Dr. Bernton and described decreased pain and increased function with use of his home laser. (Clmt's. Hrg. Ex. 1, p. 15). He also reported to Dr. Bernton that Dr. Hawkins had released him from her care as she "could not help him anymore". *Id.* In reading Dr. Hawkins note, Dr. Bernton opined that it did not seem to indicate that she was unwilling to see Claimant, but rather that he needed to utilize the coping skills she had covered with him in previous sessions and when he was willing to try this she would see him again. *Id.* at p. 15-16.

48. On February 27, 2023, Claimant reported "significant" improvement with the use of his home laser. (Clmt's. Hrg. Ex. 1, p. 17). Although his sleep pattern had improved, Claimant reported that he did not feel "a lot" better emotionally. *Id*. He continued to struggle with anxiety and he had not changed his medication regime. *Id.* Dr. Bernton recommended another referral to Dr. Moe. *Id*. He also indicated that he would not "change medications at this point". *Id.* at p. 18.

49. Claimant testified that he has tried to wean himself from his levorphanol, noting that if he does not take his medications he experiences severe pain and a decrease in his function. Claimant testified that he becomes irritable if his pain increases and he is afraid of the impact that a tapering and discontinuation of levorphanol will have on his mental state. Claimant testified that he trusts Dr. Bernton as he believes that Dr. Bernton is looking out for his best interests. Claimant testified that he is afraid that he will not be able to treat with Dr. Bernton in the future if he is tapered from levorphanol.

50. Claimant testified that his pain symptoms are unpredictable but that he always has some kind of symptoms. He estimated that he could currently perform a desk job up to 8 hours per day 3 days per week meaning that he would likely have to call off work up to a minimum of two times a week. Claimant described swelling in his hands that impairs his ability to grip and grasp items, but he reported that he is ambidextrous so he can use his left hand to write for 5-10 minutes.

51. Claimant testified that he cannot tolerate anything touching the area surrounding the location of his injury and subsequent surgeries. Consequently, Claimant testified that he wears shorts, even in the wintertime. This is confirmed by the admitted surveillance video tape. He also testified that he experiences symptoms in his feet. Consequently, he wears tennis shoes or Crocs for footwear.

52. Claimant admitted on cross-examination that he has not applied for any job positions since leaving his employment with Respondent-Employer. He also admitted that he continues to take levorphanol 3 times daily (which indicates that he is

actually taking 6 mg per day, not 4 mg as reported by Dr. Bernton) and uses marijuana daily.

53. Claimant vaguely testified that the large boxes he lifted and carried on July 24, 2022, were allegedly filled with light items like paper plates "or something like that." He had an uncertain memory of what exactly was in the box, which the ALJ finds demonstrates a general lack of concern for specific weights and lifting restrictions. He also testified that his driveway slopes away from his garage about 2 inches per 12 feet, which indicates that on one point he pushed the small pick-up truck slightly uphill by himself.

54. At the hearing, Respondents' counsel asked Claimant if he owns and manages rental property. Claimant admitted that he owes three rental properties but maintained that his involvement with these properties is limited to oversight of maintenance issues. Indeed, Claimant testified that his wife fields calls from their tenants and the oversight of their issues is his responsibility. He denied working on the properties. Instead, Claimant testified that he might assist by buying project supplies or by touching up a painted wall or sweeping a floor, or otherwise assisting a "tiny bit". Claimant testified that the last time he worked for the rental business was in October 2022, when he drove a friend to [Redacted, hereinafter HD] to purchase a thermostat. According to Claimant, his friend installed the new thermostat. Finally, Claimant admitted to overseeing a central air/furnace replacement project which he described as going by and looking at the repairs/replacement after they were completed. Claimant testified that he does not do yardwork for his rental properties, but uses a riding mower to mow his lawn, most recently 2 weeks prior to the hearing. Claimant testified that he uses his smartphone to make purchases with [Redacted, hereinafter AZ].

55. Dr. Fall testified that work restrictions should be assigned on a medical safety basis and Claimant does not need any. She also testified that Claimant has the capacity to drive, lift up to 25 pounds, and perform all of the jobs described in Ms. Bartmann's report. Dr. Fall explained that she takes subjective complaints into account, but restrictions should generally not be assigned based on subjective reports of pain or limitation. Dr. Fall testified that there is no medical reason that Claimant cannot work 8 hours per day or several days in a row.

56. Dr. Fall testified that CRPS sometimes resolves over time, which she has personally observed in several cases. Dr. Fall testified that she completed a standard physical exam of Claimant, which took longer than the 5 minutes he alleged. She further testified that Claimant's physical examination findings do not support a current diagnosis of CRPS, but she would not assign him restrictions regardless. She explained that she has experience treating CRPS and ankle injuries similar to Claimant's, and assigning work restrictions to CRPS patients goes against treatment protocol where activity and exercise is promoted, so it is often worse to assign CRPS and chronic pain patients restrictions.

57. Dr. Fall testified that levorphanol is an opioid prescribed for moderate to severe pain and can result in irritability, tolerance, dependence, and addiction. She

further testified that Claimant is likely dependent on levorphanol based on the increased symptoms he reported when his doctors attempted to taper this opioid, which she explained is an expected reaction. Dr. Fall opined that doctors do not understand how opioids interact with THC, so most physicians do not recommend them together. Dr. Fall recommended a slightly different tapering schedule than the one set forth in her report because Claimant's daily dosage had increased after her IME from 2mg twice daily to 2mg three times daily. Dr. Fall testified that she now recommends tapering Claimant from 3 doses of 2mg per day to 2 doses of 2mg per day over 2 weeks, and then moving forward with the tapering schedule in her report.

58. In the face of potential psychological overlay and Claimant's continued daily marijuana use, the ALJ finds continued prescriptions for levorphanol problematic and contraindicated. In this case, the totality of the evidence supports a finding that Claimant's need for ongoing levorphanol is no longer reasonable or necessary. Indeed, the evidence presented persuades the ALJ that Claimant has likely become dependent upon levorphanol over the course of 5 years without receiving any objectively perceivable benefit from it. Contrary to the warnings set forth in the Medical Treatment Guidelines and CROM's internal standards, the evidence presented supports a finding that Claimant has continued to receive prescriptions for opioids (levorphanol) despite his daily marijuana use and a lack of improvement in his function state. Indeed, while Claimant has reported that the levorphanol helps his pain, there has been little overall improvement in function. Consequently, it appears that Claimant's use of levorphanol is currently being prescribed solely for pain control.

59. While Claimant's fear that his treatment with Dr. Bernton will cease if he is tapered from levorphanol appears sincere, his adamant refusal to stop using marijuana while also using opioids, and doctor-swapping whenever his access to opioids is threatened, bolster the conclusion that additional prescriptions for levorphanol are inappropriate. Nearly every doctor who has treated or evaluated Claimant has recommended that the levorphanol be tapered and terminated. Indeed, Drs. Miller, Burke, Fillmore, Primack, McCraine, Basse and Schakaraschiwili all agree that levorphanol should ultimately be discontinued. Dr. Bernton has repeatedly acknowledged the validity of these colleagues' opinions, but he has failed to commandeer this goal for over 2 years while Claimant adjusted to the cessation of his blocks and more recently a trial of laser therapy. Given that Claimant has not had any injection/block treatment for a lengthy period of time (at least 7 months prior to his May 30, 2022 DIME with Dr. Rook) and has experienced "significant" symptom improvement with laser therapy, Dr. Bernton again anticipated, as recently as January 12, 2023, moving forward with tapering of Claimant's levorphanol. Nonetheless, Dr. Bernton has not initiated a tapering schedule.

60. Based upon the evidence presented, the ALJ is convinced that the anticipated tapering has probably not occurred because of Claimant's reported emotional state and anxiety (according to Dr. Bernton's February 27, 2023, report). Nonetheless, the record presented supports a finding that Claimant has failed to employ the full range of emotional coping strategies suggested by Dr. Hawkins and has failed to

follow through with his referrals to Dr. Moe. Accordingly, it does not appear that Claimant is interested in addressing his emotional dysregulation.

61. Based upon the evidence presented, the ALJ is convinced that Claimant's continued use of levorphanol is no longer reasonable and should be discontinued. Nonetheless, as Claimant has been using opioid medications for a lengthy period of time, the ALJ credits the opinions of Drs. Miller, Burke, Fillmore, Primack, McCraine, Basse and Schakaraschiwili to find that it is medically contraindicated to abruptly cut him off of this opioid altogether. Rather, per the opinions of his doctors, including Dr. Bernton, Claimant will require a reasonable period of time to wean himself from his levorphanol. The ALJ defers to the medical expertise of Dr. Bernton in setting a tapering schedule to ensure that discontinuation of this medication is accomplished safely. Nevertheless, the tapering shall commence.

62. The ALJ credits the unrebutted testimony of Ms. Bartmann to find that Claimant retains the capacity to earn wages. Ms. Bartmann was the only vocational expert to render opinions and found several suitable jobs within the most restrictive limitations assigned by Drs. Bradley and Rook, including some jobs which can be done from home. Ms. Bartmann's opinions are supported by the record evidence, including Claimant's testimony that he retains the physical capacity to work a desk job up to 8 hours per day 3 days per week. Moreover, it is difficult to reconcile Claimant's reports of balance problems, fatigue, tinnitus, and an inability to stand or walk for more than a few minutes with his observed capacity on surveillance video. Indeed, the video tape clearly demonstrates that Claimant is active and over the course of several consecutive days during which he demonstrated the capacity to push/pull a truck, power wash this vehicle, lift and carry large boxes, bags and buckets of water, stand and walk for prolonged periods, bend and drive a motor vehicle for extended periods. Based upon the evidence presented, the ALJ finds the 2014 FCE and the July 2022 and January 2023 video the most objective evidence of Claimant's capacities, which appear much greater than he admits.

63. The ALJ finds that as a result of his admitted industrial injury, Claimant was awarded $1,800.00 in disfigurement benefits by Respondents. (Resp. Ex. I, p. 180, 184). At hearing, the ALJ observed the claimed disfigurement, specifically swelling of the hands bilaterally. During visual inspection the ALJ noted a perceptible swelling about the hands/fingers bilaterally, especially over the dorsum of the hands. Although mild to moderate in nature, this swelling is noticeable and alters the appearance of Claimant's hands. Accordingly, the ALJ finds that Claimant is entitled to a disfigurement award.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado (Act) §§8-40-101, *et seq*. C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section* 8-40-102(1), C.R.S. The claimant bears the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-43-301(1), C.R.S.; *Faulker v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo.App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of a claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. A workers' compensation claim is decided on its merits. Section 8-43-201, *supra*.

B. In accordance with §8-43-215, C.R.S., this decision contains specific findings of fact, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Claimant's Entitlement to Ongoing Prescriptions for Levorphanol

C. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents still retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

D. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due

to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the ALJ credits the opinions of Drs. Miller, Burke, Fillmore, Primack, McCraine, Basse and Schakaraschiwili to find and conclude that the current open ended prescriptions for levorphanol are unreasonable. Here, there is a dearth of objective evidence to support a conclusion that Claimant's continued use of levorphanol has produced an adequate analgesic effect to improve Claimant's functional status. Consequently, Drs. Miller, Burke, Fillmore, Primack, McCraine, Basse and Schakaraschiwili make a convincing argument that Claimant should be weaned from this medication. The relief Respondents seek, a tapering schedule for levorphanol, is not unique. In *Wesley v. King Soopers, Inc.*, W. C. No. 3-883-959 (ICAO Nov. 28, 2003), the ALJ "determined the claimant should be tapered from Oxycontin," and therefore issued an order which tapered the respondent's liability for the opioid. A Panel of the Industrial Claims Appeals Office affirmed because the ALJ's order "merely determined the respondent's liability to pay for medication" pursuant to a tapering schedule rather than restricting the doctor's ability to prescribe. Similar results were reached in *Cortez v. Mostek*, W.C. No. 3-378-336 (ICAO Mar. 12, 2007) and *Freeman v. Platte Valley Medical Center*, W.C. No. 4-942-096-01 (ICAO May 4, 2016).

E. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); *See also*, *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo.App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: "All health care providers shall use the Guidelines adopted by the Division". *Hall v. Industrial Claims Appeals Office,* 74 P.3d 459 (Colo.App. 2003). "Accordingly, compliance with the Guidelines is mandatory for medical providers." *Chrysler v. Dish Network*, W.C. No. 4-951-475-002 (ICAO, July 15, 2020). In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. Section 8-43-201(3)(C.R.S. 2020). Indeed, Rule 17-4 (A) acknowledges that "reasonable medical care may include deviations from the Guidelines in individual cases." *Chrysler v. Dish Network*, *supra.* Nonetheless, the Guidelines carry substantial weight and should be adhered to unless there is evidence justifying a deviation. *See Hall v. Industrial Claim Appeals Office, supra*; *See Logiudice v. Siemans Westinghouse*, W.C. No. 4- 665-873 (ICAO, January 25, 2011).

F. The ALJ may also consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse, supra.* Guidelines concerning the assessment and treatment of complex regional pain syndrome and chronic pain have been prepared by the Colorado Department of Labor and Employment, Division of Worker's Compensation (Division) and are enforceable under the Division's Rules of Procedure. *See* 7 CCR 1101-3.

G. These Guidelines contain several warnings regarding the use opioids to treat chronic pain. The guidelines provide that opioid use should be "clearly linked to improvement of function, not just pain control," including the ability to work, remain alert for 10 hours per day, and participate in normal social activities. Rule 17, Exhibit 9, p.169; Rule 17, Exhibit 7, p. 95. Patients should usually be tapered unless reasonable levels of activity are maintained. *Id.* Reasons for termination of opioid management, referral to addiction treatment, or for tapering opioids (tapering is usually for use longer than 30 days) include, but are not limited to: "Lack of functional effect at higher doses, non-compliance with other drug use, drug screening showing use of drugs outside of the prescribed treatment or evidence of noncompliant use of prescribed medication, excessive sedation, or lack of functional gains. Rule 17, Exhibit 9, p. 103.

H. Marijuana is illegal under federal law and cannot be recommended under the Guidelines. Rule 17, Exhibit 9, p. 83. Dependence is a physiological phenomenon which is expected with continued use of opioids. *Id. at p.95.* Opioid use for over 90 days is associated with significantly increased risk of developing opioid use disorder. *Id. at p.96.* No long-term studies establish the efficacy of using opioids for more than one year. *Id. at p.95.* There is no evidence that any particular long-acting opioid is more effective than another, or more effective than other types of medications, in improving function or pain. *Id. at p.95.* Generally, tapering is accomplished by decreasing the dose by 10% per week over 6 to 12 weeks. *Id. at 105.* Crucial to this case, the Guidelines explain that a patient's dependence need not deter physicians from appropriate use of opioids. *Id.*

I. As found, Claimant continues to use marijuana daily and his increased doses of levorphanol have not been linked to an improvement in function. Moreover, the ostensible reasons for waiting to taper Claimant's continued use of levorphanol, i.e. waiting for an adjustment to the cessation of injection therapy (blocks) and the procurement and use of a laser for home treatment have been accomplished. Claimant's concern over the tapering and discontinuation of the opioid he has been taking for several years is understandable. Nonetheless, Claimant has not taken full advantage of the resources available to him to address the emotional components, including his anxiety surrounding his condition and the tapering of his opioid medication. Based upon the evidence presented, the ALJ is persuaded that tapering Claimant's levorphanol is appropriate because Claimant's use of levorphanol no longer meets the conditions for continued consumption the under the Medical Treatment Guidelines. In short, continued prescriptions for levorphanol no longer appear reasonable or proper.

Claimant's Entitlement to Permanent Total Disability Benefits

J. Under the applicable law, a claimant is permanently and totally disabled if he/she is unable to "earn any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S. The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo.App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo.App. 1995). In *McKinney*, the Court held that the ability to earn wages in "any" amount is sufficient to disqualify a claimant from

receiving permanent total disability benefits. If wages can be earned in some modified, sedentary or part-time employment, a claimant is not permanently and totally disabled for purposes of the statute. See *also, Christie v. Coors Transportation*, 933 P.2d 1330 (Colo. 1997).

K. Moreover, there is no requirement that Respondents locate a specific job for a claimant to overcome a prima facie showing of permanent total disability. *Hennenberg v. Value-Rite Drugs, Inc*., W.C. 4-148-050 (September 26, 1995); *Rencehausen v. City and County of Denver*, W.C. No. 4-110-764 (November 23, 1993); *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (December 1998); *Beavers v. Liberty Mutual Fire Ins. Co.*, W.C. No. 4-163-718 (January 13, 1996), aff'd., *Beavers v. Liberty Mutual Fire Ins. Co.*, (Colo. App. No. 96 CA0275, September 5, 1996)(not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). To the contrary, a claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that he/she is capable of earning wages. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (September 17, 1998). As long as a claimant can perform any job, even part time, he/she is not permanently totally disabled. *Vigil v. Chet's Market*, W.C. No. 4-110-565 (February 9, 1995). Nonetheless, when determining whether a claimant is capable of earning wages, the ALJ must consider the claimant's unique "human factors", including age, education, work experience, overall physical/mental condition, the labor market where claimant resides and the availability of work within claimant's restrictions, among other things. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). The crux of the test is the "existence of employment that is reasonably available to the claimant under his or her particular circumstances." *Id*. at 558. This determination must be made on a "case-by-case basis," and "will necessarily vary according to the particular abilities and surroundings of the claimant (e.g. whether and how far the claimant is able to commute)." *Id*. at 557.

L. For example, in *Duran*, the court considered various factors, including the claimant's education, work history, transferable skills, physical restrictions and level of day-to-day activities. *Duran v. MG Concrete Inc.*, *supra*. In *Duran*, the ALJ credited the respondents' vocational expert, who identified jobs available to the claimant within his restrictions, and concluded that he was capable of earning wages as a janitor or deliverer. *Id*. Therefore, the ALJ denied Claimant's claim for PTD. Similarly, in *Hazard-Ross v. HIS of Colorado Springs, W.C. Nos.* 4-2321-227 & 4-279-308 (ICAO June 6, 2005), the ALJ credited the vocational expert, who testified that numerous jobs were available to the claimant, and concluded that the claimant failed to show that she was unable to earn wages in employment reasonably available to her. Accordingly, the ALJ denied her claim for PTD benefits.

M. Considering the human factors involved in the instant case[6], the ALJ is not convinced that Claimant is incapable of earning any wages in other employment.

[6] Claimant is 44 years-old, speaks English, attended school through the 8th grade and lives in the Pueblo area, which is a large metropolitan area with a variety of employment options according to Ms. Bartmann.

Rather, while it is probably true that Claimant would need accommodation (carrying ladders and heavy materials) in returning to his former occupation and similar positions, the representative sampling of sedentary to light duty type positions identified by Ms. Bartmann as falling within Claimant's physical capabilities present a number of perspective job positions existing in the local labor market affording Claimant the opportunity to earn a wage. Furthermore, the ALJ is not persuaded that Claimant's age and education, in combination with his physical restrictions completely preclude his ability to earn a wage. Outside of a failed attempt to return to roofing work, it does not appear that Claimant has submitted any applications for employment. As such, the ALJ finds that Claimant has not attempted even a rudimentary job search. In this regard, the ALJ credits the report and unrebutted testimony of Ms. Bartmann to conclude, that while it may not be easy for Claimant to secure employment, his human factors combined with his work experience will help him compete for and secure employment as identified by Ms. Bartmann. Accordingly, Claimant has failed to demonstrate, by a preponderance of the evidence, that he is permanently totally disabled as a consequence of his September 15, 2011 work injury.

Disfigurement

N. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement", as used in the statute, contemplates that there be an "observable impairment of the natural person." In this case, the ALJ concludes that there is an observable alteration in the natural appearance of the structure and skin covering the hands bilaterally. Accordingly, the ALJ concludes that Claimant has suffered a visible disfigurement entitling him to additional benefits pursuant to Section 8-42-108 (1), C.R.S. Respondents recognized the alteration in the appearance of Claimant's hands and accounted for a $1,800.000 disfigurement award in the Final Admission of Liability (FAL) filed June 14, 2022. The ALJ concludes that this disfigurement award is reasonable and appropriately compenses Claimant for the visible disfigurement described above.

ORDER

It is therefore ordered that:

1. Additional prescriptions for levorphanol are no longer reasonable or necessary. However, Respondents shall provide and pay for continued levorphanol based on a tapering schedule to be determined by Dr. Bernton. Respondents' liability to provide and pay for such opioid medication upon completion of Claimant's tapering schedule will terminate.

2. Claimant's request for permanent total disability benefits is denied and dismissed.

3. Claimant has proven that he is entitled to a disfigurement award. The ALJ concurs with Respondents award of $1,800.00 in disfigurement benefits. If not already paid, Respondents shall pay said disfigurement award forthwith.

4. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer on June 28, 2021.

2. Whether Claimant established by a preponderance of the evidence an entitlement to reasonably necessary medical benefits to cure or relieve the effects of a compensable industrial injury.

3. Whether Claimant established by a preponderance of the evidence that cervical facet injections recommended by Dr. Sacha are reasonably necessary to cure or relieve the effects of a compensable industrial injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a PET/CT Technologist. Part of Claimant's job duties involve working in and around a mobile PET unit (essentially, a large trailer). The Mobile PET unit has a motor-driven garage-style door on one end with a lift. On June 28, 2021, Claimant was walking backward pulling a wheelchair into PET unit through the garage door from the lift when she was struck in the back of the head by the closing door. Claimant testified that she was "folded forward" by the force of the door. Claimant testified that she was immediately dizzy, disoriented, and nauseous from the incident.

2. Claimant sought treatment that day at the Swedish Medical Center emergency room, and was evaluated for head and neck pain. Claimant reported she felt her neck was hyperextended, and that she was experiencing nausea and tenderness in her neck and thoracic areas. Claimant reported a history of migraines with nausea and vomiting, and chronic pain. Imaging studies were negative for acute issues. She was diagnosed with a head injury and neck pain and advised to follow up with her primary care provider. (Ex. 4)

3. On June 30, 2021, Claimant began treatment with authorized treating provider Carol Dombro, M.D., at Concentra. At the initial visit, Claimant reported experiencing headaches, dizziness, photophobia, memory issues, neck pain and left posterior shoulder pain. Claimant reported a medical history significant for multiple prior concussions (the last being in 2009). Dr. Dombro diagnosed Claimant with a closed head injury, cervical strain, acute thoracic strain, and post-concussion syndrome. She recommended Claimant start physical therapy for her neck and upper back. (Ex. 6).

4. Over the next two to three weeks, Claimant returned to Concentra reporting improvement in her neck and upper back with physical therapy, and continued

headaches, with photophobia, nausea and vomiting. On July 13, 2021, Claimant was referred to John Sacha, M.D., for a physiatry evaluation. (Ex. 6).

5. Claimant saw Dr. Sacha on July 19, 2021, reporting headaches into the occipital and periorbital areas, intermittent dizziness, nausea and vomiting, intermittent light sensitivity, some forgetfulness and feeling "foggy." Based on his examination, Dr. Sacha diagnosed Claimant with cervical facet syndrome, whiplash associated disorder, occipital neuralgia, and adjustment disorder. He found no evidence of a closed head injury, but noted he could not rule out the possibility of a mild concussion. He recommended adjusting Claimant's medications, a trial of chiropractic treatment, and adding IMS needling to her physical therapy. He indicated that a cervical MRI should be considered if Claimant did not improve. (Ex. 8).

6. Claimant continued to see Dr. Dombro in July, August and September 2021, reporting continued post-concussion symptoms, including headaches, nausea and dizziness. Claimant reported her dizziness and neck pain had improved with treatment, and her headaches were less intense. Claimant was referred for chiropractic care on July 19, 2021. By August 24, 2021, Claimant reported dizziness only when she changed positions rapidly, and that physical therapy and chiropractic were helping her neck pain. (Ex. 6). Dr. Dombro placed Claimant on work restrictions, gradually increasing from four hours per day to six hours per day at the beginning of September 2021. (Ex. 6).

7. On September 13, 2021, Claimant saw Dr. Dombro, reporting essentially unchanged symptoms. Claimant indicated that she was "trying to get back into normal life" and wanted to restart kickboxing and kayaking. At this visit, Dr. Dombro indicated under the heading "Functional Restoration and Status of Healing" that Claimant "is approximately 50% of the way toward meeting the physical requirements of her job." She recommended continued physical therapy for Claimant's neck, and to continue treatment with chiropractic and Dr. Sacha. Dr. Dombro recommended increasing Claimant's work hours to eight hours per day at the following visit, but continued to impose work restrictions including limiting patient care to three hours per day, and remaining seated for the remainder of the day. Dr. Dombro also indicated Claimant "may not work in safety sensitive position." (Ex. O).

8. During July and August 2021, Claimant saw Dr. Sacha for telemedicine visits. Claimant reported continuing headaches, and improving with therapy. (Ex. 8).

9. On September 9, 2021, Claimant saw Dr. Sacha reporting ongoing dizziness and nausea when her neck was in extension. Dr. Sacha recommended a cervical MRI, that was performed on September 14, 2021. Dr. Sacha reviewed Claimant's MRI on September 16, 2021, and opined that it was consistent with post-traumatic cervical facet syndrome. He recommended bilateral C2-5 facet injections, which he characterized as both diagnostic and therapeutic. (Ex. 8 & 5).

10. On September 28, 2021, Insurer submitted Dr. Sacha's request for authorization for C2-5 facet injections to Edie Sassoon, M.D. Dr. Sassoon opined the requested injections were supported for Claimant's clinical presentation, and "reasonable to help

identify the pain generator and assist with a plan of care for diagnostic and therapeutic purposes." (Ex. 3). Notwithstanding Dr. Sassoon's certification of the reasonableness of the treatment, Insurer did not authorize the treatment.

11. On October 11, 2021, Claimant saw Dr. Dombro. At that time, Claimant had returned to work up to 6 hours per day, and reported "near daily headaches," feeling unsteady when she looks down, persistent nausea and dizziness when she tipped her head backward. Dr. Dombro noted that the "adjustor has directed us to close the case," and placed Claimant at MMI effective October 11, 2021, without work restrictions. Dr. Dombro opined that Claimant was "at functional goal, not end of healing," and recommended Claimant follow up with a neurologist "about her post concussive [headaches] and other symptoms." The ALJ finds Dr. Dombro's determination of MMI to be based on directive from Insurer, rather than an assessment of Claimant's condition. Her statement that Claimant was at MMI is inconsistent with Claimant's continued report of symptoms, and the recommendation that she seek further care for post-concussive headaches. (Ex. 6).

12. On November 11, 2021, Respondents filed a Notice of Contest, asserting that Claimant's injuries were not work-related. (Ex. A).

Claimant's Medical History

13. Claimant has a significant medical history for migraine headaches, Ehlers-Danlos syndrome, motor vehicle accident, and a prior worker's compensation claim after she was assaulted at work in May 2017.

14. Claimant testified that Ehlers-Danlos is a connective disorder that causes her a constant level of pain. She testified that the symptoms she experiences from flare-ups of Ehlers-Danlos are typically extra pain in one joint, lasting 2 to 3 days. She testified that she has not had Ehlers-Danlos-related symptoms in her neck. Claimant has been treated with medications and therapy for flareups, and did not have any work restrictions due to Ehlers-Danlos on June 28, 2021. Claimant testified, credibly, that following her June 28, 2021 injury, she experienced symptoms that she did not have previously, including balance and stability issues, memory and recall issue, nausea, pain in her head, neck and upper spine, photophobia, and visual hallucinations. She testified that while she does experience nausea with migraines, it is different than she experienced after June 28, 2021. With respect to her desire to kayak and kickbox, Claimant testified that she floated in a kayak and her husband towed her with a rope. She also testified that when she did attempt kickboxing, it was limited, and she did "side activities" and did not actually "kickbox." Claimant's testimony was credible.

15. From May 25, 2017 through September 7, 2017, Claimant was treated at Gonzaba Occupational Medicine & Therapy Center in San Antonio, Texas, for neck, back, shoulder and wrist pain following her work-related assault. At her final visit, September 7, 2017, the treating physician noted no tenderness or pain, and full range of motion. Claimant was released from care and released to full duty at work. (Ex. I).

16. From June 3, 2016 to January 30, 2019, Claimant received chiropractic care from Keith Taylor, D.C. and Brad Chudnik, D.C., at Pecan Valley Chiropractic in San Antonio, Texas. The chiropractic records from Pecan Valley are nearly word-for-word the same for each of the 59 visits Claimant attended, regardless of the provider. The records do not document specific subjective complaints, and the objective findings, assessment and plan are identical at nearly every visit. The ALJ finds the chiropractic records are not reliable and are not credible evidence of the symptoms Claimant reported or the treatment performed, if any. (Ex. J).

17. On May 21, 2018, Claimant saw Bernice Gonzalez, M.D., at Vital Life Wellness Center., for a minor petechial hemorrhage, back pain caused by Ehlers-Danlos syndrome and arthritis, migraines, and GERD. She did not examine or treat Claimant for neck pain. (Ex. N).

18. On May 6, 2020, Claimant began seeing Emily Aaron, M.D., at Denver Internal Medicine. At the initial visit, Claimant was seen for back pain and review of medication for her migraines. Claimant reported a history including Ehlers-Danlos, migraines, slipping on ice in April 2020, a prior car accident, and being attacked at work several years earlier. Dr. Aaron diagnosed Claimant with migraines and low back pain and referred Claimant for physical therapy. Claimant returned to Dr. Aaron on June 3, 2020 for a follow up, regarding her migraines, low back pain, and experiencing heart palpitations. Claimant's next documented visit with Dr. Aaron was January 27, 2021, where Claimant reported chronic pain and joint pain due to Ehlers-Danlos, increasing for the previous 3 months, TMJ pain, and chronic fatigue. She reported a change in her migraines (experiencing different visual sensations). Dr. Aaron adjusted Claimant's migraine medication, and prescribed Celebrex and tramadol for Claimant's chronic Ehlers-Danlos-related pain. Dr. Aaron did not diagnose complaints of neck pain at any visit. (Ex. H).

19. Claimant's most recent documented visit with Dr. Aaron was on October 14, 2021. At that visit, Dr. Aaron diagnosed claimant with intractable migraine, cervical radiculopathy, post concussive syndrome, and dizziness. Dr. Aaron referred Claimant to Dr. Sacha, and for physical therapy. (Ex. H).

Carlos Cebrian, M.D. (Record Review)

20. On October 7, 2022, Carlos Cebrian, M.D., performed a record review at Respondents' request, and issued a report. (Ex. F). Based on his review, Dr. Cebrian opined that Claimant had a work-related scalp contusion and cervical strain, but also opined that Claimant's cervical spine pain was unrelated, indicating her cervical spine pain was preexisting. He further opined that Claimant did not have a traumatic brain injury. He indicated that "[s]hort-term treatment under the 6/28/2021 claim was appropriate, however the persistence of complaints is no longer proximately related to the 6/28/2021 claim but is due to her preexisting conditions." He found Claimant was at MMI by October 11, 2021, indicating that her report of wanting to try kickboxing and kayaks "is a reflection that she was feeling better." He then opined that Claimant's ongoing complaints were "very similar to" and causally related to her preexisting conditions. He indicated that

claimant required no maintenance care and that the facet injections recommended by Dr. Sacha were not causally related to the Claimant's work injury. (Ex. F).

21. Dr. Cebrian's opinion is not persuasive or credible. Dr. Cebrian based his MMI opinion primarily on a notation in Dr. Dombro's medical record that Claimant wanted to try kickboxing and kayaking, indicating that "this desire is a reflection that she was feeling better." He also indicated Claimant's congoing complaints were "very similar" to her preexisting conditions. However, his opinion fails to account for the fact that Dr. Dombro placed Claimant at MMI because she was directed to do so by Insurer, despite also noting that Claimant "was not at end of healing" and recommended additional treatment with a neurologist about her then-existing post-concussive headaches and other symptoms. In this context, the need for ongoing medical treatment for headaches is inconsistent with MMI, and was not a medical decision by Dr. Dombro, but a decision by an insurance adjuster.

22. Dr. Cebrian's opinion that Claimant's symptoms after October 11, 2021 were "very similar" to her post-June 28, 2021 symptoms, is neither credible nor supported by credible evidence. The evidence reflects that Claimant's medical treatment in the year before June 28, 2021 with Dr. Aaron was for wrist pain, migraine treatment, evaluation of heart palpitations, weight loss counseling, and chronic joint pain due to her Ehlers-Danlos syndrome. No credible evidence was admitted that Claimant reported experiencing ongoing neck pain on June 28, 2021, or that she had reported neck pain to any provider in the three years before her injury.

23. On November 21, 2022 Dr. Dombro responded to a letter from an unidentified party, indicating that she agreed with Dr. Cebrian's assessment that Claimant had reached MMI, noting that Claimant's case was "closed" in October 2021. Dr. Dombro further opined that Claimant had no permanent impairment. No evidence was admitted indicating Dr. Dombro saw or examined Claimant at any time between October 11, 2021, and November 21, 2022. (Ex. G).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The claimant must prove his injury arose out of the course and scope of her employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, *supra*. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co, supra*; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Indus. Comm'n,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equip. Co.,* W.C. No. 4-952-153-01 (ICAO Aug. 10, 2015).

The claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990); *Jorgensen v. Air Serve Corp.,* W.C. No. 4-894-311-03, (ICAO Apr. 9, 2014).

Claimant has established by a preponderance of the evidence that she sustained a compensable work-related injury arising out of the course of her employment with Employer on June 28, 2021. Claimant was struck by the mobile unit door on June 28, 2021, and immediately reported the incident and timely sought treatment. The admitted medical records demonstrate Claimant was not actively treating for neck pain or head-injury related symptoms when she was injured, and that she had not been treated or complained of similar symptoms for more than three years. The last credible evidence of Claimant reporting and receiving treatment for neck pain was September 2017, at Gonzaba. Although Claimant has a history of migraines and Ehlers-Danlos syndrome, no credible evidence was admitted demonstrating that Claimant's post-June 28, 2021 symptoms were the same or caused by her preexisting conditions. Moreover, no physician has credibly opined that Claimant did not sustain a work-related injury.

Medical Benefits (General & Specific)

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colo. Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Claimant has established by a preponderance of the evidence and entitlement to authorized medical benefits that are reasonable and necessary to cure or relieve the effects of her industrial injury. Claimant has further established that the cervical injections recommended by Dr. Sacha are reasonable and necessary to cure or relieve the effects of her injury. Insurer's "peer reviewer," Dr. Sassoon agreed that the treatment was indicated, reasonable and necessary. As found, Dr. Cebrian's opinion is neither credible nor persuasive. The ALJ finds more persuasive the opinions of Dr. Sacha and Dr. Sassoon that the treatment is reasonable, necessary, and related to her work injury.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury arising out of the course of her employment with Employer on June 28, 2021.

2. Respondents shall pay for all authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant's injury.

3. Respondents shall pay for the C2-5 facet injections recommended by Dr. Sacha.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 23, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether the Division Independent Medical Examiner's (DIME) opinion has been overcome clear and convincing evidence regarding maximum medical improvement.

II. Whether Claimant has shown by a preponderance of the evidence that Claimant's permanent partial impairment should be converted to a whole person impairment.

III. Whether Claimant proved by a preponderance of the evidence that his average weekly wage should be increased.

IV. Whether Claimant has proven by a preponderance of the evidence that he has a disfigurement.

STIPULATIONS

The following Stipulations were approved and accepted by the Administrative Law Judge:

1. The issue of Permanent Total Disability was bifurcated and the issue preserved for a future determination.

2. The record would be held open for the parties to take the deposition of Dr. Brian Mathwich later in the day on April 6, 2023.

3. If Claimant was determined to be at MMI, the impairment rating of 21% left upper extremity determined by Cathy Smith, M.D and accepted by Dr. Mathwich, was accepted by the Respondents. However, Respondents continued to dispute that the 21% extremity impairment should be converted to the 13% whole person impairment.

4. If Claimant was determined to be at MMI, Respondents accepted liability for maintenance medical care pursuant to the recommendations of the primary authorized treating physician, Dr. Cathy Smith.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally

1. Claimant started working for Employer beginning on June 8, 2020. On July 8, 2020, when one of the cows jumped before Claimant was in position with the chain at the piston, a piece called a shackle, fell on him, specifically hitting his head, left ear, and clavicle on the left side. Claimant is left hand dominant.

2. Claimant sustained a left clavicle fracture. He received medical care including a surgery which involved a plate and six screws. He was also provided physical therapy and injections for neck pain.

3. After approximately a year, they took the plate and screws out since there was a lump causing an abscess. When they took the plate out, they filed down the protrusion in order for it to help with the pain and allow it to fuse.

4. Claimant described that he had pain from the base of his ear, down the neck, going down the curve of his shoulder and into his shoulder blade. Claimant also motioned from the shoulder joint to approximately mid bicep or halfway down between the shoulder joint to the elbow. Claimant stated that he also had pain in the upper chest area up to the height of the clavicle.

5. Claimant continued to have problems with lifting weight with the left upper extremity and he avoids doing it. He overcompensates with this right upper extremity. For example, he has to make up to four different trips to the laundromat when he goes to wash clothes, as he can lift with the right but when he is required to lift with both hands, he cannot lift very much with the left upper extremity. When doing activities of daily living, he sometimes has to push his left arm up with his right hand just to be able to reach for something, like to wash his hair. He also has limitations caused by pain in his arm and there are some parts of his back, he just cannot reach. He also explained that he had problems driving, he has to move his whole body to see if there are any vehicles on his left side in order to change lanes. He does not have the same problems moving his head to the right. He also has problems sleeping on his left side, which is the side he usually slept on, due to the pain. It has forced him to have to start sleeping on his back. He also has to put a pillow beneath his left arm to minimize the pain.

6. Claimant continued to perform his home therapy or exercise program, continued using the TENS Unit and also used a pulley system to exercise his arm. He stated that he would like to get the care recommended by Dr. Mathwich in the hopes that it would be more aggressive and help him with his upper extremity. Claimant stated he had not returned to either Dr. Smith or Dr. Bear since the last injection that they did for his neck. He recently had an incident where the pain was so bad he went to the emergency room at UCHealth in Greeley.

B. Medical Records

7. On July 8, 2020 Claimant was taken to the Greeley UCHealth emergency freestanding clinic where Claimant reported a meat hook fell on his shoulder, which caused significant pain to the left collar bone. He denied any head injury, or other associated injuries. Dr. Nicklaus Brandenhoff, a consulting physician, noted that Claimant had a left closed, minimally displaced midshaft clavicle fracture.

8. The CT taken on the same day and read by Dr. Paul Johnson, showed a minimally displaced fracture of the mid left clavicle with a distal fracture fragment displaced inferiorly by 3 mm and a small amount of adjacent soft tissue hemorrhage.

9. Dr. Brandenhoff noted that the wound overlying the clavicle was superficial and not a deep wound and it did not extended to the fracture. Claimant denied numbness, tingling, shortness of breath, hitting his head or other injuries. Dr. Brandenhoff stated

Claimant was limited to no lifting with the left upper extremity until cleared by orthopedics. Claimant was sent home with a sling and medication.

10. Claimant was first seen by Dr. Robert Bear, orthopedic surgeon, on July 10, 2020 and examined Claimant's x-rays that showed a displaced midshaft clavicle fracture. He recommended an open reduction and internal fixation surgery, which Claimant agreed to.

11. Dr. Bear performed surgery on July 21, 2020, an open reduction with internal fixation of the clavicle. The major fragments were aligned and secured anatomically with a reduction clamp. A plate was applied to the superior aspect of the clavicle and secured with multiple screws compressing across the fracture site.

12. Dr. Bear saw Claimant in follow up on August 1, 2020. Claimant reported having a lot more pain than what he anticipated, and reported diffuse numbness around the incision, and while he demonstrated fairly normal range of motion of the elbow, wrist and hand, Claimant was very guarded about moving the shoulder beyond 45° in any direction. He ordered x-rays and stated that the left clavicle showed the fracture was in anatomic alignment with no sign of hardware loosening.

13. Claimant was evaluated at the UCHealth Occupational Med Clinic on August 4, 2020. They took a history that Claimant was assigned to the "shackled position" when a shackle jammed on the chain, which caused the shackle to fall approximately 6 feet. Dr. Smith documented as follows:

> He [Claimant] reports he heard the jam in the chain and attempted to get out of the way but was struck on the left side of his hard hat, then the left ear with the shackle landing forcefully against his left clavicle.
>
> He reports he experienced immediate pain following the incident but had to "keep working" since the chain was continuing to move. This was a witnessed event and when it became obvious he was having difficulty using his left arm his supervisor was notified and he was taken to health services for further evaluation. Per the records from health services he was found to have swelling and deformity over the clavicle associated with an abrasion. At that point the arm was immobilized and he was sent for further evaluation at the UCH emergency room.…. [Claimant] reports he continues to have pain over the clavicle which she (sic.) rates as a 6/10 at best and an 8/10 at worst he is continuing to use hydrocodone 4 times per day. He has been unable to ice the area on a consistent basis due to his living situation. Pain at this point is reported to be localized over the left clavicle, left axilla, left upper anterior chest wall. Pain is reported to increase with deep breathing, motion of the shoulder greater than a few degrees. He is continuing to use the sling for comfort. [Claimant] reports he is noticing some numbness and tingling into the left hand over the index, middle and ring fingers. He also reports he has noted some discomfort and "soreness" at his left ear but specifically denies any headache or neck discomfort.

Dr. Smith noted that Claimant did not exhibit pain behavior. She documented Claimant had discomfort with palpation of the upper anterior chest wall and into the left axilla, but did not notice specific tenderness with palpation of the left shoulder however range of motion was restricted to only a few degrees in all planes due to pain over the clavicle. She provided instructions to continue his home exercise program, ice the chest/shoulder

twice a day, and use narcotics sparingly and ibuprofen for most pain. He was returned to work with restrictions of using a sling at work and no use of the left hand and arm. They also discussed return to work issues and he was specifically advised if he was asked by his supervisor to do activities that were outside of his restrictions he was to contact health services for further clarification. They also discussed Dr. Smith's request to health services to ice his left upper chest at least twice during his work shift.

14. By September 10, 2020 Dr. Smith referred Claimant to Dr. Reichhardt for a physiatric consult for possible EMG/NCV to determine whether Claimant's complaints could be due to trauma at the brachial plexus, as Claimant had continued swelling in the area of the brachial plexus in conjunction with numbness and tingling and pain in his left hand. Dr. Smith also stated that she had counsel Claimant.

> We reviewed at length continued severe complaints in the area of his clavicle fracture with increased swelling both in the supraclavicular, infraclavicular areas and in the left hand associated with numbness and tingling. We again reviewed anatomy and physiology and he was advised there may be multi-factorial reasons for his continued significant pain complaints. Due to the area of the fracture and continued swelling in the area of the brachial plexus in conjunction with numbness… significant pain and restriction in range of motion of his shoulder may not only be due to the clavicle fracture but also due to developing adhesive capsulitis which he will be more susceptible to developing due to his diabetes. We reviewed Dr. Baer's report and recommendations to begin physical therapy to improve his range of motion at the shoulder and hopefully release adhesions. If he is indeed felt to have adhesive capsulitis and therapy is not helpful in reducing the adhesions advised may require injections at the shoulder or possible manipulation under anesthesia once his clavicle fracture has healed to the point the procedure would not cause additional problems at the fracture site. Again he was advised of the importance of continuing with passive[1] range of motion exercises at home in an attempt to prevent these adhesions from worsening. We discussed his continued complaints of pain at the left ear and he was advised since his physical exam is completely normal…

15. Dr. Bear saw Claimant on October 1, 2020 noting that Claimant had a very slow recovery and far more pain that he expected or anticipated, though better than the prior month. He noted that Claimant was very sensitive to palpation, but could elevate and abduct beyond 90°. The x-rays showed a healing fracture and intact hardware. He stated that Claimant needed to be aggressive with range of motion and strengthening. He also recommended that Claimant stop using the sling and try to use his arm as normally as possible.

16. On October 5, 2020 Dr. Smith stated Claimant did feel pain and range of motion of the shoulder had improved after 6 visits of physical therapy. On exam she noted that he had no pain behavior, his alignment of the head, neck and mid back showed a slight forward chin thrust but position of the left shoulder had improved, with significantly decreased trigger points, discomfort with palpation of the upper anterior chest wall and into the left axilla, mild pain is reported over the AC joint, CC joint, subacromial space and

[1] This ALJ infers that passive range of motion is motion that is carried out with the assistance of another individual or therapist, or through use of mechanical or assistive devices. Active range of motion is that which an individual carries out on their own.

anterior lateral shoulder. Active range of motion was restricted. He continued to have restrictions and physical therapy. Claimant stated he was "very pleased with my progress." Dr. Smith noted on exam that Claimant had improved range of motion.

17. Claimant was first evaluated by Gregory Reichhardt, M.D. for a physiatric evaluation on October 8, 2020. He performed an EMG/NCV exam, which should results consistent with mild median neuropathy at the wrist without axonal involvement. The study was negative for left ulnar neuropathy at the wrist or elbow, left axon loss cervical radiculopathy or brachial plexopathy. His impressions were of left clavicular facture, left arm numbness related to mild carpal tunnel syndrome which was not likely related to the work injury and depression. He recommended a cervical MRI to rule out cord compression, considering urinary symptoms of incontinence or lack of full voiding.

18. However, by the following exam on October 29, 2020, Claimant had increasing symptoms and pain behaviors, but thought muscular spasm and tightness was decreased. He was counselled to obtain an air mattress as sleeping on a couch was not sufficiently supportive and likely the reason for increase in subjective symptoms. They reviewed his improved ROM and she continued physical therapy. He was also counselled to see his primary physician regarding his diabetes since his A1C level was at 13.

19. Dr. Smith continued to report that on exam Claimant exhibited decreased triggers on palpation of the left side of the neck, upper back and periscapular area with minimal bracing and decreased muscle tone. On November 23, 2020 Claimant continued to report symptoms over the upper anterior chest wall, but had increased ROM to approximately 120°flexion up from 90° of previous exams. Since Dr. Bear had recommended an MRI of the shoulder due to Claimant's continued unexplained complaints, and Dr. Reichhardt recommended one of the cervical spine, she ordered them. She also, again, counselled Claimant to see his primary care provider for his uncontrolled diabetes.

20. On November 11, 2020 Claimant's passive range of motion was 145° for flexion, 145° for abduction, 45° for internal rotation and 65° for external rotation.

21. On November 27, 2020 Dr. Andrew Mills at UCHealth read the MRI scan of the cervical spine as showing moderate diffuse disc bulge with superimposed right paracentral disc extrusion causing significant mass effect on the thecal sac at the C5-6 level with mild to moderate central stenosis as well as moderate to severe right-sided neural foraminal narrowing and moderate left-sided neural foraminal narrowing. He also noted mild diffuse disc ossified bulge and facet arthropathy that resulted in mild to moderate central stenosis at the C6-7 level with mild left sided and moderate right sided neural foraminal narrowing.

22. By December 15, 2020 Claimant had made some functional progress in physical therapy. Mr. Todd Smith, Claimant's physical therapist at Pro Active Physical Therapy, noted that Claimant had made progress in PT, showing active flexion at 125° and passive flexion to 150°, with passive internal rotation at 47°and external rotation at 67° (compared to the September 16, 2020 numbers of active flexion of 25°, passive flexion to 50°, passive internal rotation at 25° and external rotation of 15°).

23. By December 17, 2020 Claimant reported that the pain was not constant and on exam he had minimal discomfort with palpation of the shoulder and upper chest. By January Dr. Smith sent Claimant for a functional capacity evaluation in anticipation of maximum medical improvement and an impairment rating being performed. Around this time, Employer terminated Claimant due to having been on modified duty in excess of 180 days. Despite being off work, Claimant reported on February 10, 2021 that he was approximately 15% worse, including radiating pain into his neck and behind his ear, especially with rotating his head to the left and difficulty with colder temperatures. Dr. Smith found limitation of motion of the cervical spine and the shoulder as well as tenderness to palpation over the left clavicle tough it was not associated with any swelling. Dr. Smith noted as follows:

> It does appear he is performing his independent home exercise program as instructed by the therapist and can reproduce these exercises. We reviewed possible aggravating factors for his increased perception of pain and loss of range of motion. He was advised electrical stimulation in therapy may have been keeping the symptoms under much better control and now that he is at home and has not received his home unit may be experiencing increase in myofascial tightness. After shared decision making agreed he will continue with his independent home exercise program on a daily basis as instructed by his physical (sic.) to maintain range of motion and we will again contact his claims adjuster as to authorization for the home trial of the e-stim. We reviewed his recent follow-up evaluation with Dr. Reichhart (sic.) and recommendation for cervical spine injections by Dr. Quickert. I placed a telephone call to Dr. Reichhart (sic.) to discuss the epidural steroid injections in the cervical spine. His opinion and I agree is to determine whether his continued shoulder symptoms are related to his neck or related to his fracture at the clavicle. If he does not respond to the injections with decreased pain and increased function at the shoulder periscapular area then would determine continued dysfunction in this area is related to his clavicle fracture. I therefore agree with Dr. Reichart's (sic.) recommendations for the cervical spine injections for diagnostic as well as therapeutic clarification.

24. The December 19, 2020 MRI scan of the left shoulder was positive for mild subscapularis tendinosis, mild supraspinatus tendinosis and mild partial-thickness articular surface fraying in the infraspinatus. Dr. Joseph Carabetta noted that there was no effusion or bursitis noted and no significant osteoarthritis in the glenohumeral joint or acromioclavicular osteoarthritis.

25. Dr. Bear reevaluated Claimant on December 23, 2020 noting that Claimant continued to show a slow recovery outside the norm, with decreased sensation diffusely about the incision and even extending to the lateral shoulder. On exam he recorded Claimant had pain with abduction beyond about 115°, though passively, Dr. Bear could get up to 140° or 150° fairly well. He was also tight to internal rotation beyond about L3. He also reviewed the MRI of the shoulder that showed very mild degenerative tears in the supraspinatus and infraspinatus, but no labral tear, and no significant intraarticular pathology. He stated that Claimant's symptoms were more likely coming from his neck than the shoulder. Dr. Bear opined that "[H]e really has no reason to be limited related to his shoulder. I would recommend he obtain follow up with a spine specialist and we can see him back as needed."

26. Several of Dr. Smith's reports noted that Claimant continued working through 2020 and discussed his work restrictions. On January 20, 2021 Dr. Smith specifically mentioned that Claimant was no longer working as there was no available work for him within his work restrictions. She specifically documented that he had been "sent home" weeks ago having reached his 180 days of modified duty work. This language is repeated multiple times in reports that followed including February 10, March 10, April 7, May 12, June 17, 2021 and so on.

27. On February 8, 2021 Claimant returned to Dr. Reichhardt to discuss the MRI results. Claimant reported that Dr. Bear had discharged him and had recommended that he return to have a cervical spine evaluation. Examination of the cervical spine revealed tenderness to palpation about the cervical and periscapular area, decreased cervical range of motion, and Spurling's sign resulted in pain radiating along the upper trap into the shoulder, but not further down the arm. He had tenderness to palpation over the left shoulder, and decreased left shoulder range of motion. Dr. Reichhardt reviewed the findings of the cervical MRI and opined that they needed to rule out C5 or C7 radiculopathy and possible brachial plexopathy associated with Claimant's clavicle facture and a negative EMG. Ultimately they agreed on a cervical epidural steroid injection. Dr. Reichhardt referred Claimant to Dr. Quickert for consideration of the ESIs at multiple levels. On February 23, 2021 Dr. Reichhardt recommended a left C5-6 ESI. He stated that "[I]f this is nondiagnostic, I would recommend consideration of a left C6-7 ESI. If these are both negative, that would suggest that his left arm and hand symptoms are related to a brachial plexus injury associated with the clavicle injury."

28. Claimant was evaluated by Dr. John Raschbacher on March 5, 2021 upon Respondents' request for an independent medical evaluation. He took a history consistent with Claimant's testimony and reviewed the available medical records. Upon exam, Dr. Raschbacher noted poor effort with left shoulder internal and external rotation against resistance and a positive Tinel's. Claimant had tenderness of the AC and SC joints and ROM testing showed 160° flexion on the right and only 91° on the left, internal rotation at 53° on the left and external rotation at 29°.

29. Dr. Reichhardt attended Claimant on March 16, 2021 noting that Claimant continued to have pain over the neck and parascapular area with pain radiating down the later aspect of the upper arm. On physical exam, he noted Claimant demonstrated multiple periscapular trigger points. He noted that Claimant did not have much tenderness over the neck itself, but primarily over the periscapular area. He had significant tenderness to palpation over the clavicle. He had decreased shoulder range of motion, and positive Hawkins' impingement sign. Dr. Reichhardt proceeded with a trial of trigger point injections to see if he could help Claimant keep some of his symptoms calmed down while waiting for approval of the TF ESIs.

30. Claimant returned to Dr. Smith on April 7, 2021. He continued to have unchanging ongoing symptoms of the neck, left shoulder and chest anteriorly with increasing pain when he was sleeping, reaching with his arm and with cold weather. Claimant continued to report loss of range of motion, compared to when he was in a formal physical therapy program. However, on exam, Dr. Smith noted that his active range of motion continued to be approximately 110° flexion and 90° abduction, though painful. Dr. Smith continued to emphasize the importance of his HEP, which he seemed

to be performing as he was able to reproduce the exercises as well as applying ice and heat to the shoulder followed by stretching to relieve tightness.

31. On May 10, 2021 Dr. Reichhardt noticed on exam that Claimant had tender ness to palpation over the distal clavicle and a bony prominence just inferior to the distal clavicle. He also noted decreased range of motion of the left shoulder. Dr. Reichhardt ordered a left clavicle x-ray and stated he would have Claimant follow up with Dr. Bear.

32. The x-ray, as read by Dr. Scott Campbell at Banner Imaging Greeley on May 10, 2021, showed ORIF of left mid clavicle fracture performed chronically, with a healed fracture, mild degenerative arthrosis of the AC and CC joints and a humeral head that appeared to be aligned with the glenoid but did not find any acute osseous abnormalities.

33. Claimant was evaluated by Dr. Smith again on May 12, 2021. On exam she continued to note that Claimant had a trigger with palpation over the left stemocleidomastoid musculature from the clavicle to the posterior auricle, over the mid left cervical spine and at the tip of his left scapula. He had limitations of range of motion of the cervical spine more pronounced to the left side. Claimant had left shoulder pain with palpation over the AC joint, CC joint[2] and subacromial space with pain reported over the lateral upper arm. Active range of motion was approximately 120° flexion and 90° abduction which were reported to be painful. On this day, Dr. Smith reported that Claimant was able to shrug his shoulders, pinch his shoulder blades and rotate his shoulders with less restriction and discomfort. Dr. Smith diagnosed closed displaced fracture of shaft of left clavicle with delayed healing, adhesive capsulitis of left shoulder, numbness and tingling in left hand, contusion of auricle of left ear.

34. Dr. Smith continued to recommend alternating ice and heat to the left clavicle and periscapular area, continue exercises, medications, e-stim use, follow his restrictions and should follow up with Dr. Reichhardt. His symptoms were worse at the following visit on June 17, 2021, the day right after his hardware removal surgery.

35. Claimant was evaluated by Julie Quickert, APRN on June 2, 2021 who diagnosed cervical region radiculopathy. She noted that Claimant was referred for evaluation and consideration of left cervical ESI. On exam, she noted that Claimant had tenderness with palpation of the left cervical spine and shoulder area, generally reduced ROM of C-spine and had limited upward extension of the left shoulder, had increased pain with all movements, weakness on left upper extremity compared to right and a positive Spurling's on the left. Dr. Quickert recommended a left C5-6 TF ESI. She proceeded to administer a fluoroscopy guided transforaminal epidural steroid injection at the left C5-6 level.

36. On June 3, 2021 Dr. Reichhardt stated that Claimant continued with left infraclavicular area pain, and tenderness to palpation over the left cervical area, extending out over the left shoulder. They discussed the findings on the clavicle x-ray, which did not demonstrate concerning findings, though he was tender definitely over the area of his

[2] This ALJ infers from the medical records that AC is acromiclavicular ligament and CC is the coracoclavicular ligament which support and stabilize the acromioclavicular joint.

fracture and subsequent ORIF. He noted Claimant had hardware removal planned with Dr. Baer which he opined was reasonable in light of the exam.

37. Dr. Bear noted on June 16, 2021 at the OCR Loveland Surgery Center that Claimant's left shoulder has a well-healed incision, with some prominence of the hardware over the clavicle. Claimant had pain with passive or active motion of the shoulder beyond about 90° and even some pain with rotation with the elbow at his side. Passively, could get the shoulder almost to full elevation and abduction. There was no impingement or mechanical block of motion. At that point, Dr. Bear stated the he did not know what else to do to help Claimant other than remove the hardware, and proceeded with the left clavicle hardware removal.

38. On June 28, 2021 Dr. Bear noted that Claimant continued to have symptoms out of proportion, recommended physical therapy and discharged Claimant from his care to return only on an as needed basis.

39. One month post-op, on July 20, 2021 Dr. Smith report Claimant continued to hold his left shoulder in a very rounded position and guarded, with increased forward chin thrust. The pain was from the left side of the neck to the upper back, periscapular area and the upper anterior chest wall over the clavicle at the pectoralis and axilla. Claimant's range of motion was significantly restricted with only 45° of flexion and abduction and passive motion to 120°, though grip strength was improved from the prior visit. These numbers further deteriorated as noted by Mr. Smith, the Pro Active therapist, who was unable to get Claimant to do active ROM and passive ROM for flexion was only 45°, abduction of 55°, internal rotation of 15° and external rotation of only 10°.

40. Dr. Reichhardt evaluated Claimant on August 25, 2021 noting that Claimant reported doing about 40% better, with less pain and numbness of his left arm though he noted pain over the left shoulder primarily with overhead activities. On physical exam he noted improved range of motion, with tenderness to palpation over the lateral aspect of the left shoulder, periscapular and left clavicle. He continued to recommend the ESIs.

41. On August 31, 2021 Dr. Smith noted on exam, which was a significant improvement over the prior month's visit:

> No pain behavior is exhibited during the evaluation today. And alignment has significantly improved and he is no longer holding the left shoulder in a rounded and guarded position and has much less forward chin thrust. His gait is normal. No pain is reported today with palpation at his neck, upper back, periscapular area and the upper anterior chest wall. He does complain of discomfort with palpation over the left clavicle, but previous triggers over the pectoralis and in the axilla have resolved. Range of motion or the cervical spine is essentially full except for restriction with left rotation which is painful. Range of motion of the left shoulder is significantly improved and he now has active forward flexion to approximately 160° and abduction to approximately 140°.

Dr. Smith stated that she disagreed with Dr. Raschbacher's conclusions that Claimant sustained a "usual" injury to the clavicle. She did, however agree that typically loss of range of motion at the shoulder is not associated with clavicle fractures. However due to Claimant's underlying diabetic condition he was more prone to developing adhesive capsulitis due to immobilization of his shoulder following the surgery.

42. Dr. Reichhardt noted on September 27, 2021 that Claimant again reported improvement in symptoms, with less pain at 3/10. He noted that Claimant had roughly a normal cervical spine range of motion.

43. By September 28, 2021 Claimant had regained some motion showing passive ROM only at 180° for flexion, abduction of 180°, internal rotation of 65° and internal rotation of 86°.

44. On October 7, 2021 Dr. Smith found that Claimant's range of motion of the left shoulder was again much improved showing active forward flexion to approximately Range of motion of the left shoulder was significantly improved and he now showed active forward flexion to approximately 180° forward flexion and abduction to approximately 170°.

45. It was not until December 2, 2021 that Claimant had increased and recurrent problems with triggers over the left pectoralis and in the axilla as well as a nodule over the clavicle in the area of his previous hardware. He had more restricted range of motion of the cervical spine and less range of motion of the left shoulder with 80° forward flexion and abduction to approximately 90°. Dr. Smith reviewed at length with Claimant his independent home exercise program and it appeared he had been performing up to 60 repetitions for each of his exercises at one time. He was advised that the significant amount of repetitions may have been contributing to his escalation of myofascial pain. After shared decision making and review of his exercises they agreed he would decrease repetitions to no more than 15-20 at one time and complete more sets throughout the day to reach his 60 repetitions in 1 day.

46. Then, by January 24, 2022[3], Mr. Smith tested Claimant's ROM and the numbers again declined to 105° flexion, abduction of 90°, internal rotation of 40° and external rotation of 70°--all passive range of motion only.

47. Claimant was attended by Eric Hoffman, PA-C on February 3, 2022, who noted that Claimant had finished 4 visits with physical therapy since the last visit. His symptoms had not improved since then and noted that physical therapy had been beneficial since he reported worsening of his pain since his last visit. Upon consulting Dr. Smith, Mr. Hoffman advised Claimant to finish out his last 2 visits and then return for an impairment rating.

48. Dr. Smith conducted an impairment evaluation on April 12, 2022 noting that Claimant was at maximum medical improvement. They discussed his continued escalation of symptoms at that time with no particular aggravating factors. She determined that therapy and work hardening were not of benefit at that time. She provided a 21% extremity impairment that converted to a 13% whole person impairment rating after adjustment for the contralateral side.

49. Dr. Smith also set out that Claimant required maintenance care including alternating ice and heat, frequently, continue with the e-stim treatment and to continue his home exercise program. She provided restrictions of no lifting greater than 15 lbs. No carrying, pulling, pushing greater than 15 lbs. She also cautioned Claimant that he

[3] With a hiatus of PT for approximately four months, from September 28, 2021 to January 24, 2022.

should avoid reaching overhead, away from the body and no use of the left arm for prolonged or repetitive reach away from the body or above chest level.

50. On May 20, 2022 Respondents filed a Notice and Proposal and Application for a DIME to challenge the ATP's rating.

51. On September 21, 2022 Dr. Brian Mathwich issued a Division Independent Medical Evaluation report regarding Claimant. Claimant reported to Dr. Mathwich that he had pain in the left anterior neck along "sternocleidomastoid, the posterior left trapezius and deltoid muscle, and along the clavicle area. He also states he has numbness in the first three fingers of the left hand which he reports began immediately after the injury." He noted on exam that there was some deformity of the clavicle bone consistent with fracture, a well healed surgical scar, and mild atrophy of the supraspinatus muscle. He noted a somewhat inconsistent exam given examination and distracted pain responses. Dr. Mathwich diagnosed left clavicle status post ORIF and subsequent hardware removal left shoulder adhesive capsulitis, resolved ear contusion, and myofascial neck pain. At the time of the DIME Dr. Mathwich recommended Claimant be afforded the choice of proceeding with manipulation under anesthesia for the left shoulder adhesive capsulitis or hydrodilatation injections. He noted that, if Claimant chose to proceed with the treatment then he was not at MMI, otherwise MMI and impairment were as established by Dr. Smith, as range of motion was inconsistent.

52. Dr. Mathwich noted that Claimant had exhibited significant pain behaviors and pain avoidance throughout his treatment and cited this avoidant behavior likely caused the adhesive capsulitis. He made recommendations of work restrictions of no extended reach or overhead work with the left arm and no lifting greater than five pounds. He further recommended a maintenance program as assigned by Dr. Smith.

53. Claimant medical records were reviewed a second time by Dr. Raschbacher on January 9, 2023 specifically addressing Dr. Mathwich's DIME report. Dr. Raschbacher opined that Claimant's lack of range of motion as mentioned by Dr. Mathwich were tantamount to malingering behavior. He stated that it was not medically reasonable to expect a positive response on a subjective basis, or on a functional basis, to further intervention or treatment of the shoulder for adhesive capsulitis or any other condition.

54. On January 30, 2023 Dr. Bear stated that Claimant did not do well post operatively as he had an abnormally slow recovery and much higher than expected pain. Following work up he found there was no neuropathy or radicular nerve compression. Claimant continued to be significantly stiff despite physical therapy and release of all restrictions. He opined that manipulation under anesthesia would not offer Claimant any significant benefit as he would likely re-experience post-manipulation stiffness due to ongoing pain and lack of effort to regain motion. He further opined that much of his stiffness came from lack of effort due to low pain tolerance, though he could have had compounding neurogenic pain and nerve injury.

C. Deposition Testimony

55. Dr. Brian Mathwich testified by deposition on April 6, 2023. Dr. Mathwich was designated by the Division of Workers' Compensation as the DIME physician in this matter, which was conducted on September 21, 2022. Dr. Mathwich explained that

Claimant suffered a clavicular fracture, left comminuted.[4] Claimant underwent surgical repair with an open reduction with internal fixation with some hardware. Claimant continued to have pain after the procedure. Claimant was placed at maximum medical improvement (MMI) as of April 12, 2022 with a 21% extremity rating that converted to 13% whole person impairment. After reviewing the medical records, conducting an examination, Dr. Mathwich found Claimant not to be at MMI as he should be offered either hydrodilatation injection or manipulation under anesthesia to treat the adhesive capsulitis, but deferred to the treating orthopedist as to which procedure to offer.

56. Dr. Mathwich received supplemental record just immediately before the deposition took place, including a report from Dr. Beard stating that he recommended against any treatment of the adhesive capsulitis as he would likely re-experience postmanipulation stiffness due to ongoing pain and likely lack of effort to regain shoulder motion.

57. Following review of Dr. Bear's report, Dr. Mathwich changed his opinion as Dr. Beard knew Claimant better and since Claimant had showed significant issues with delayed recovery, lack of improvement, and pain behaviors during exam. He stated that Claimant would then be at MMI on April 12, 2022 as Dr. Smith placed him at MMI. He also agreed with Dr. Smith's rating.

58. The DIME physician explained that Dr. Bear did not specifically address the hydrodilatation, which is injecting a saline solution into the shoulder joint specifically. He noted that the recommendation was to have aggressive physical therapy immediately after the procedure. He noted that Clamant had a history of avoidance so if Claimant did not put full effort into the mobilization of the shoulder, he would be in the exact same place he was at the time of his exam, the treatment being of little benefit. He noted that physicians work under the policy of "do no harm" and sometimes that means being careful that they do not over treat.

59. When asked about Dr. Beard's note that stated Claimant might have a compounding neurologic pain and nerve injury, he questioned the diagnosis as the EMG did not show any sign of brachial plexus nerve branch injury, which are the nerves flowing just underneath the surgical site. Further, Claimant did not respond to the C5-6 transforaminal epidural steroid injection, which also indicated that it was not likely Claimant had a nerve injury.

60. Dr. Mathwich opined that because the injury was to the clavicle itself, which is connected to the trunk of the body and Claimant had neck complaints so it made sense that Claimant's rating be considered a whole person impairment.

61. He also agreed that maintenance care was appropriate as recommended by Dr. Smith, including continuing his home exercise program, e-Stim three to four times per day for two years and then just taking Ibuprofen and Tylenol for pain control.

D. Wage Records

57. Wage records provided by Respondents do not show whether the wages are gross wages or net wages paid to Claimant. Neither do they specify whether the "End

[4] Dr. Mathwich described this as fractured in pieces and displaced.

of IN period" denoted the day an employee was paid or the end of the pay period. Claimant began working on June 8, 2020, a Monday. Because wages are often paid with one week kept in arrears and neither party had a witness testify one way or the other what the appropriate wage calculation should be, this ALJ has had to analyze multiple payment methods.

58. If the wages are considered from check dated June 14, 2020 through July 5, 2020, the wages could be averaged to $686.54. Also, other holidays were paid except July 4, 2020, so this ALJ presumes that the records provided were not complete wage record.

59. If the wages are considered without that first period, as it is unusually smaller, the average wage would be $783.68.

J	K	
End of IN period	Amount	
6/14/2020	$	387.60
6/21/2020	$	637.44
6/28/2020	$	646.00
7/5/2020	$	646.00
6/21/2020	$	4.36
6/14/2020	$	3.15
6/21/2020	$	9.69
6/28/2020	$	19.38
7/5/2020	$	16.23
6/14/2020	$	4.36
6/21/2020	$	31.50
6/28/2020	$	273.07
7/5/2020	$	67.36
Total earnings	$	2,746.14
Averaged Wage	$	686.54

H	I	
End of IN period	Wages	
6/21/2020		$637.44
6/28/2020		$646.00
7/5/2020		$646.00
6/21/2020		$4.36
6/21/2020		$9.69
6/28/2020		$19.38
7/5/2020		$16.23
6/21/2020		$31.50
6/28/2020		$273.07
7/5/2020		$67.36
Total earnings	$	2,351.03
Averaged Wage	$	783.68

60. This ALJ also calculated the wages Claimant potentially earned from June 8, 2020 through the last pay period shown on the wage records of December 27, 2020. This was most likely the last pay period because there are mentions in the medical records that Claimant had exhausted his 180 days of modified work and was terminated. The cumulative wages show Claimant earned a total of $21,864.46, which divided by 202 days and multiplied by 7 days of the week would average out $757.68. However, this does not account for the days Claimant was off work due to his two surgeries, if any, and nothing in the general admission stated the time he was off or if he was off for any considerable period of time in 2020 after his work injury.

Disfigurement

61. During the hearing, Claimant showed his surgical scar, which was approximately four and one half inches long, with the scar going from the top of the clavicle midway from the neck and the glenohumeral joint, toward the upper chest area along the bottom of the clavicle. One portion of approximately two inches of the scar was raised and discolored and approximately one quarter inch wide at the widest. There was a significant indentation below the clavicle, perpendicular to the surgical scar. Lastly, comparing the left injured side to the right, there is significant muscle tone on the right and significant lack of muscle tone on the left injured shoulder.

E. Ultimate Findings

62. As found, the DIME physician's, Dr. Mathwich's, "true opinion" was that Claimant was at maximum medical improvement as of April 12, 2022. This occurred after the second surgery to remove the hardware and after he participated in two different sessions of physical therapy from July 22, 2021 through September 30, 2021 and January 24, 2022 to February 9, 2022. Dr. Mathwich agreed with Dr. Smith's opinion that Claimant's symptoms continued to escalate at that time with no particular aggravating factors. This opinion was bolstered by Dr. Smith's determination that therapy and work hardening were not of benefit at that time. While Dr. Mathwich stated originally that Claimant required treatment for the adhesive capsulitis, upon seeing Dr. Bear's report noting that Claimant would not benefit from manipulation under anesthesia and would likely re-experience post-manipulation stiffness due to ongoing pain and lack of effort to regain motion, Dr. Mathwich changed his mind and found that Claimant was at maximum medical improvement. Claimant, not Respondent, had the burden to prove by clear and convincing evidence and overcoming Dr. Mathwich's true opinion that Claimant had reached MMI as of April 12, 2022. Claimant failed in that regard.

63. Dr. Smith provided an impairment of 21% upper extremity impairment which converted to a 13% whole person impairment rating after adjustment for the contralateral side. Claimant argued that the impairment should appropriately be a whole person impairment. Respondents deny that is the case. As found, in this case, from the totality of the evidence, there is a wide variety of testimony and medical records clearly documenting that Claimant continuously complained of pain in the chest area, the clavicle area, the neck and the upper back. As also found, what was more persuasive was that Dr. Mathwich explained the physiology of the clavicle, the attachments and the location as well as stating that Claimant's impairment was appropriately located on the upper body and torso. Claimant has shown by a preponderance of the evidence that Claimant has

an impairment of the whole person and is appropriately set out as 13% of the whole person.

64. Average weekly wage is hard to calculate given the limited information provided in this matter. As found, based on the totality of the evidence, this ALJ determines that the fair approximation of the Claimant's wages is to calculate the period of June 8, 2020 through December 27, 2020, for an average weekly wage of $757.68. Claimant has proven by a preponderance of the evidence that Claimant's AWW is $757.68.

65. Claimant has a significant scar that is normally exposed to the public. His scar is on his clavicle and includes the surgical scar, a significant indentation below the clavicle and loss of muscle tone as compared to the right shoulder and upper torso. Claimant has proven by a preponderance of the evidence that he is entitled to an award for his disfigurements.

66. Testimony and evidence inconsistent with the above findings is not credible and not persuasive, or is not relevant to the issues heard.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See

Bodensieck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming the DIME

The DIME physician's findings concerning the date of MMI and the degree of permanent medical impairment are binding on the parties unless overcome by clear and convincing evidence. Sections 8-42-107(8)(b) (III) & (8)(c), C.R.S. Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. See *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo.App. 1998).

If the DIME physician offers ambiguous or conflicting opinions concerning MMI or impairment, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000); In *Fera v. Resources One, LLC, D/B/A Terra Firma,* W. C. No. 4-589-175 (May 25, 2005) aff'd, *Resources One, LLC v. Industrial Claim Appeals Office,* 148 P.3d 287 (Colo.App. 2006); *Stephens v. North & Air Package Express Services,* W. C. No. 4-492-570 (February 16, 2005); *Clark v. Hudick Excavating, Inc.,* W. C. No. 4-524-162 (November 5, 2004). In so doing, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo.App. 1998). A DIME physician's findings of MMI, permanent impairment, and causation consist not only of the initial report, but also any subsequent opinion given by the physician. See *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330-331 (Colo.App. 2005)(ALJ properly considered DIME physician's deposition testimony where he withdrew his original opinion of impairment after viewing a surveillance video); J*arosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo.App. 2002)(noting that DIME physician retracted original permanent impairment rating after viewing videotapes showing the claimant performing activities

inconsistent with the symptoms and disabilities she had reported); *In re Claim of Fabjancic*, 112118 WC 5-050-580-01, ICAO (November 21, 2018)

Once the ALJ determines the DIME physician's true opinion concerning MMI and impairment, then the party seeking to overcome that "true opinion" bears the burden of proof by clear and convincing evidence. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra; In re Claim of Jones*, WC 5-034-047-001, ICAO (August 27, 2019).

Once the ALJ determines the DIME physician's true opinion, it may be appropriate to reassign the burden of proof to overcome by clear and convincing evidence the DIME physician's finding of MMI. *Viloch v. Opus Northwest, LLC*, W. C. No. 4-514-339 (June 17, 2005); *Gurule v. Western Forge,* W. C. No. 4-351-883 (December 26, 2001); *In re Claim of Gagnon*, WC 4-971-646-03, ICAO (February 6, 2019).

Here, it is undisputed that the DIME physician had originally stated that Claimant was not at MMI as Claimant should be afforded the opportunity to have treatment for the adhesive capsulitis of the left shoulder. However, during the deposition, and after considering Dr. Bear's, the surgeon's, January 2023 assessment, Dr. Mathwich changed his opinion and stated that Claimant had reached MMI as of April 12, 2022. Dr. Bear's opinion was that manipulation under anesthesia was not an appropriate treatment for Claimant, as it would not offer Claimant any significant benefit since he would likely re-experience post-manipulation stiffness due to ongoing pain and lack of effort to regain motion. Considering this opinion and when considering his unsuccessful surgeries and his inability to progress in his functional abilities were also persuasive. Dr. Mathwich's opinion is supported by Dr. Smith's opinion that Claimant's uncontrolled diabetes made Claimant more susceptible to developing adhesive capsulitis and during treatment Claimant failed to cooperate and obtain care from his PCP for his diabetes. Beginning on October, 2020 Dr. Smith counselled Claimant to see his primary physician regarding his diabetes since his A1C level was at 13[5], and he had run out of medication. This did not promote the idea that Claimant was proactive in his care and treatment. Further, the physical therapy notes from Mr. Smith (therapist) showed that Claimant was not benefiting from care as the range of motion numbers continued to get worse. As found, Claimant's January 24, 2022 passive range of motion was significantly worse than those measurements taken over a year before on November 11, 2020. Therefore, the burden of proving by clear and convincing evidence that Dr. Mathwich was incorrect, shifted from Respondents to Claimant as the opinion provided by Dr. Mathwich at his deposition is found to be his true opinion.

Claimant continued to argue that Dr. Mathwich's original opinion was correct as Claimant continued to worsen and required further medical care including but not limited to manipulation under anesthesia or hydrodilatation injections which involves injecting saline in the injured area. It is clear here that Dr. Bear was provided the report from the DIME physician for his consideration, which he answered on January 23, 2023, specifically stating that no further treatment would alleviate Claimant's symptoms and could make it worse. The DIME physician deferred to the orthopedic surgeon's opinion, in this regard and this ALJ is not persuaded to do otherwise. It is clear from the medical

[5] An A1C of 6 or higher is considered uncontrolled.

records that whenever Claimant started a new treatment modality, that he would have significant worsening before he began getting better. As found, the single factor that has been most significant in the Claimant recovery has been time, not the treatment provided and this ALJ is not persuaded that any further formal treatment by the providers would be intended to relieve the Claimant of his injuries, but would only maintain the progress he has made thus far. This ALJ finds and concludes that Claimant was at MMI as of April 12, 2022 and continues to be at MMI. Claimant has failed to prove by clear and convincing evidence that Claimant was is not at MMI.

C. Conversion

Claimant seeks to convert his 21% left upper extremity impairment rating to a 13% whole person rating. When evaluating whether a claimant has sustained a scheduled or a whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a), C.R.S. If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under Sec. 8-42-107(8), C.R.S.

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. E.g., *Latshaw v. Baker Hughes, Inc.*, W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's,* W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius or scapular area can functionally impair an individual beyond the arm. E.g. *Steinhauser v. Azco*, Inc., W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC,* W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ's finding of whole person impairment). Limitations on overhead reaching can also constitute functional impairment beyond the arm in appropriate cases. E.g., *Brown v. City of Aurora*, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc.,* W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved he suffered functional impairment not listed on the schedule. The surgery performed by Dr. Bear was directed to anatomical structures proximal to the "arm," including the open reduction and internal fixation of the displaced midshaft clavicle fracture. Dr. Bear performed the surgery on July 21, 2020, and the major fragments of the clavicle were aligned and secured anatomically with a reduction clamp. A plate was applied to the superior aspect of the clavicle and secured with multiple screws compressing across the fracture site. Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. See, e.g., *Martinez v. Albertson's LLC*, supra at ("The [claimant's] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint"); see also *Newton v. Broadcom, Inc.*, W.C. No. 5-095-589-002 (July 8, 2021). This is supported by multiple medical records of Claimant's complaint to providers of pain and limitations of the neck, and upper back and chest muscles. More important, Claimant credibly described pain and associated functional limitation in areas proximal to his arm such as the pain in the neck that was caused by simple movements of the arm. This pain affects his ability to engage in various activities, including overhead reaching or simply sleeping on his left side and Claimant is left hand dominant. Claimant also explained that he has problems driving, he has to move his whole body to see if there are any vehicles on his left side in order to change lanes. This is a function of the neck being restricted by his injury not his upper extremity. The preponderance of persuasive evidence shows Claimant's functional impairment extends beyond his "arm at the shoulder."

Dr. Smith provided a 21% scheduled rating, which converts to a 13% whole person impairment. This opinion, with regard to impairment, is affirmed by the DIME physician as he believed that the rating provided by Dr. Smith was appropriate considering Claimant's injuries. Claimant has clearly and convincingly shown that Claimant's impairment is not a scheduled injury or impairment, and that Claimant is entitled to a whole person impairment rating. Claimant is entitled to PPD benefits based on Dr. Smiths' and Dr. Mathwich's impairment of 13% whole person rating.

D. Average weekly wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid to the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to

alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993).

The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007). An AWW calculation is designed to compensate for total wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *Sec.* 8-42-102, C.R.S.

Respondents argued that Claimant is not entitled to the increased average weekly wage as a strict view of the wage records of the four weeks prior to his work related injury would be most representative. However, this ALJ declines to view Claimant's wages in that manner. Claimant persuasively argued that the first week is not representative of his wages in the following three weeks. Neither, in this ALJ's view, is it representative of the wages Claimant earned following his injury, while Claimant was working in the break room, cleaning tables while under work restrictions for approximately 180 days until his modified work time was terminated. Considering that Claimant continued to earn wages while on modified duty at a rate that was closer to Claimant's calculation than respondents' calculation, this ALJ made the determination that the manner to fairly calculate Claimant's average weekly wage was to take the full time Claimant worked dividing that by the amount of days and multiplying it by the week for an average weekly wage of $757.68. Claimant has proven that he is entitled to an increase in the calculation of his average weekly wage to $757.68 and a temporary total disability rate of $505.12.

E. Disfigurement

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." A disfigurement is an observable impairment of the natural appearance of a person, including a limp. See *Arkin v. Industrial Commission*, 358 P.2d 879, 884, 145 Colo. 463, 472 (Colo. 1961); *Piper v. Manville Products Corp*., W.C. No. 3-745-406 (July 29, 1993); *Josefiak v. Green and Josefiak, P.C.,* W.C. No. 3-783-081 (March 12, 1987); Marcelli v. Echostar Dish Network, W.C. No. 4-776-535, ICAO (August 30, 2012); *In re Claim of Nagle,* W.C. No. 5-105-891 (July 24, 2020). Claimant has an observable disfigurement of the left shoulder caused by both the surgical scar and the deformity of the indention immediately below the clavicle bone. He further has disfigurement caused by loss of muscle tone on the left side compared to his right shoulder. Claimant testified consistent with this ALJ's observations. This ALJ finds and concludes that Claimant is entitled to compensation due to the observable disfigurements. Claimant has proven by a preponderance of the evidence that Claimant's disfigurements caused by the July 8, 2020 should be compensated and Claimant is entitled to $3,000.00 for the disfigurement.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant reached maximum medical improvement as of April 12, 2022 as opined by both Dr. Mathwich and Dr. Smith. Claimant failed to overcome Dr. Mathwich's opinion.

2. Respondents shall pay medical benefits, pursuant to the stipulation of the parties, to maintain Claimant at maximum medical improvement pursuant to Sec. 8-42-107(8)(f), C.R.S. This is a general award of benefits pursuant to *Grover*.

3. Respondents shall pay for permanent partial disability benefits based on Dr. Smith's 13% whole person impairment beginning as of April 12, 2022.

4. Claimant's average weekly wage is $757.68 and his temporary total disability benefit rate is $505.12. Respondents shall pay any retroactive TTD benefits due.

5. Respondents shall pay Claimant $3,000.00 for his disfigurement award.

6. Respondents are entitled to offset any overpayment from permanent partial disability benefits.

7. Respondents shall pay interest of eight percent (8%) on all amounts that were not pay when due.

8. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-222-305-001

ISSUES

- Did Claimant prove entitlement to Temporary Disability Benefits?
- Did Respondents prove Claimant was responsible for termination of his employment?
- The issue of Average Weekly Wage was reserved pending a potential stipulation.

FINDINGS OF FACT

1. Claimant was employed by [Redacted, hereinafter TT] for approximately seven years prior to his date of injury. He sustained admitted injuries on October 18, 2022 while prying a bearing out of a wheel. At the time of the injury he was the store manager. He sought treatment at Concentra on November 3, 2022. He reported pain in his lower back, the base of his neck, his right pectoral muscle and his left knee. He was given restrictions of clerical work only, no lift, carry, push or pull greater than 5 pounds. (Claimant's Exhibit 4, p. 16).

2. Claimant was seen at Concentra on November 8, 2022 and November 14, 2022 and his restrictions did not change. The restrictions were later change to 15 pounds, approximately on December 6, 2022. Claimant's normal job duties normally entail lifting parts that weigh more than 15 pounds. He testified that "There's not much in the store as far as selling parts that weighs under 15 pounds".

3. Following his injury, the Claimant was scheduled to go on vacation for about a week and he took the vacation at his home.

BACKGROUND

4. [Redacted, hereinafter ST] owned two auto parts stores. One in [Redacted, hereinafter RF], Colorado and one in [Redacted, hereinafter LJ] Colorado. He bought the LJ[Redacted] store from [Redacted, hereinafter CT] in October of 2004. He opened the RF[Redacted] store in January 2015.

5. Claimant was initially hired to be a counter person at the LJ[Redacted] store. He had previous experience working for [Redacted, hereinafter NA] for 15 or 16 years and also had experience working for [Redacted hereinafter CA].

6. After "not too long", ST[Redacted] approached Claimant to be the manager of the LJ[Redacted] store so he could go back and forth between the two stores. He did in fact promote him to store manager. As a manager, he oversaw personnel, made sure

the store was open and closed, checked the inventory when it came in every weekday, handled returns, and special orders. According to ST[Redacted], Claimant ". . . did a very good job, honestly."

7. Prior to Claimant's injury, ST[Redacted] had a situation at the RF[Redacted] store where he had a lot of inventory missing. Because of this missing inventory, he dismissed all of his employees at that store. He testified "I told them I was missing product, so I let them all go. I couldn't – I couldn't pinpoint any one of them. I had my suspicion, but I just let them all go". Because of this incident, ST[Redacted] had all the employees sign the form contained in Respondents' Exhibit which included the rule that "NO PRODUCT OR EQUIPMENT BELONGING TO THE STORE TO LEAVE STORE WITHOUT AN INVOICE (WILL FIRE ON SPOT)".

8. Sometime prior to his work injury, ST[Redacted] had a suspicion that Claimant was involved in a missing case of Freon. However, he could not prove it.

TERMINATION

9. When he went back into work after his vacation, he told ST[Redacted], the owner, that his work-related injuries were still hurting and he needed to go see a doctor. At that time, ST[Redacted] confronted him and asked if he had removed an item from the store. The Claimant admitted he did and ST[Redacted] said "You did it without my authorization." Claimant didn't know he had to have authorization since he was the manager. ST[Redacted] said "your penalty for taking this item out of the store without my authorization will be one-week suspension without pay." ST[Redacted] testified that when confronted about the item, which was identified as an electronic distributor, Claimant said he F-ed up and repeatedly apologized. Claimant denied that he said this during their conversation, but did admit that he took the distributor and returned it when asked.

10. Sometime after his injury, Claimant was terminated by his employer. He testified that he was unaware he had been terminated from his employment until he was notified by a representative of the insurer on November 8, 2022.

11. After he was told of his termination by the [Redacted, hereinafter TS] agent, he went in on November 9th and said "You know, you could have called me and let me know that I was terminated." According to Claimant, ST[Redacted] forgot to tell him but did confirm he was terminated. Contrary to his unverified Answers to Interrogatories, he did not voluntarily resign his employment.[1]

12. Claimant had taken a distributor home to see if it would work on a vehicle. Claimant testified that it was not uncommon to take a part home as long as the employees were honest and brought it back or put it on their bill. Prior to his termination, he was unaware of anyone being terminated for taking parts out of the store.

[1] In addition to this discrepancy between the unverified Answers to Interrogatories and Claimant's testimony is the reference to prior right shoulder surgeries which occurred 8 years ago and 12 years ago. Claimant denied any prior right shoulder surgeries.

13. Respondents' Exhibit F is a documents dated November 2, 2018 with numerous "Rules". Claimant was shown Exhibit F of Respondents' exhibits. He denied that it contained his signature.[2] He did not recall the rule contained on the exhibit that employees were not to remove items from the store. Claimant later elaborated with respect to whether this was the store policy not to take parts home without an invoice that "It had never been before". (Transcript p. 35, l. 19). When he previously took parts home, such as a water pump on one occasion and two sets of brakes on another occasion, he would write the part down on a piece of paper at his terminal. If he kept the part, he would add the cost to his bill/sales invoice and pay for the part.

14. When Claimant was asked about how inventory was handled, he said it was an ongoing process that the employees would do when they were not busy with other duties. Everybody in the store would do inventory. Sometimes there would be overages or minuses. They would adjust the inventory sheet to reflect the actual parts inventory.

15. ST[Redacted] also testified that sometimes there were discrepancies between the computer inventory and the stock on the shelf. There were multiple reasons for the discrepancies including incorrect warehouse scans, mix-ups in product numbers, delivery of incorrect totes containing product to his store, glitches in the system including product actually in Claimant's RF[Redacted] store instead of his LJ[Redacted] store, and theft.

16. Respondents' Exhibit K is a Part Ledger Report for two distributors, one that was added and one that was deleted on October 15, 2022. Although not explicit, ST[Redacted] implied that that Claimant changed the inventory information for the one distributor to the other model since it was only ST[Redacted] or the Claimant would change the inventory count. (Transcript pp. 78 - 79, ll. 24 – 22). When asked about Exhibit K, ST[Redacted] testified that his initials appear as the employee who changed the inventory for the part in question. His initials appear on every inventory change regardless of which employee made the change. I find that based on this testimony, it is impossible to determine with any probability if Claimant made the inventory change from T1845 to the T1829 distributor as implied by Respondents.

17. ST[Redacted] testified that he could have accommodated the restrictions that Claimant had of no lifting, carrying, pushing or pulling greater than 5 pounds, clerical work had he not been terminated. (Transcript pp. 100 to 101, ll. 25 – 4). ST[Redacted] did not actually offer any modified job to Claimant within these restrictions.

18. Claimant received unemployment benefits of $426 per week beginning 24 days prior to the hearing. Claimant was uncertain of the period the unemployment benefits covered.

---

[2] ST[Redacted] said this document came from Claimant's personnel file, but did not provide any testimony that the signature on the form was the Claimant's.

CONCLUSIONS OF LAW

A. Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

B. Temporary Total Disability

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability to perform their regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." A claimant's responsibility for termination not only provides a basis to terminate temporary disability benefits, but also limits the initial eligibility for TTD. Section 8-42-103(1)(g); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002); *Valle v. Precision Drilling*, W.C. No. 5-050-714-01 (July 23, 2018). The respondents must prove the claimant was terminated for cause or was responsible for the

separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to moral turpitude or culpability but merely requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

It is well established that a claimant who voluntarily resigns his job is "responsible for termination" unless the resignation was prompted by the injury. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2008); *Kiesnowski v. United Airlines*, W.C. No. 4-492-753 (May 11, 2004); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (April 24, 2002). I conclude that on Claimant's testimony, which is credible, Claimant did not voluntarily resign his job.

Claimant proved that he was unable to return to work due to his restrictions and is entitled to temporary disability beginning on November 3, 2022. Following his treatment at Concentra on November 3, 2023 he received restrictions which prevented him from performing his usual job duties. He was not offered modified job duties following the imposition of these restrictions.

Respondents have failed to sustain their burden of proof that Claimant was responsible for his termination of employment. I find the Claimant's testimony regarding the permissibility of taking parts home without first billing themselves to be credible. Due to the inaccurate inventory records and lack of persuasive direct evidence that Claimant intended to take the distributor without paying for it, I conclude that Claimant was not responsible for his termination. I also conclude that Respondents' Exhibit F is suspect since it does not contain Claimant's name on the document and Claimant denies that it contains his signature, despite the testimony from ST[Redacted] that the document came from his personnel file. It is also questionable from the perspective that it contains many rules that are unrelated to removal of product from the stores if it was intended to primarily address the missing inventory from the RF[Redacted] store, as testified by ST[Redacted]. I conclude that it does not credibly prove that Claimant was prohibited from removing any parts from the store without an invoice. Claimant's testimony regarding the routine practice of routinely taking parts home and then later returning the part or paying for it to be more credible.

ORDER

It is therefore ordered that:

1. Claimant is entitled to TTD from November 3, 2022 until terminated by law.

2. The award of TTD is subject to any applicable offset including unemployment benefits.

3. Respondents are liable for interest at the rate of 8 percent per annum on all benefits not paid when due.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

WORKERS' COMPENSATION NO. WC 5-131-773-003

ISSUE

Whether Claimant has presented substantial evidence to support a determination that future medical treatment in the form of a permanent Spinal Cord Stimulator (SCS) implant as requested by Authorized Treating Physician (ATP) Charles Sisson, M.D. will be reasonably necessary to relieve the effects of her July 18, 2019 admitted industrial injury or prevent further deterioration of her condition.

FINDINGS OF FACT

1. Claimant worked for Employer as a teacher's aide for special needs children. On July 18, 2019 Claimant was on a field trip with students. She was playing miniature golf with a seven-year-old buy. The child threw a golf ball at Claimant that struck her on the right cheek. He then punched her in the chest and right wrist. Claimant put her hands up to protect herself but was struck on the wrist five or six times. She immediately noticed pain in her face and right wrist, and later developed pain in her chest.

2. Later on July 18, 2019 Claimant visited UCHealth Urgent Care for an examination. Her right wrist was tender, swollen, and exhibited limited range of motion. X-rays of Claimant's right wrist did not show any evidence of fracture or dislocation.

3. Claimant subsequently received medications and underwent physical therapy. Although her face and chest pain resolved after approximately one month, she continued to suffer right wrist symptoms.

4. On August 19, 2019 Claimant visited Timothy Prater, M.D. at Front Range Orthopedics and Spine for an evaluation of her right wrist. Claimant reported moderate to severe right wrist pain that felt dull and achy. Although Claimant had been using a wrist splint, movement aggravated her symptoms. Dr. Prater assessed possible Complex Regional Pain Syndrome (CRPS) in the absence of objective testing. He specified that Claimant exhibited significant pain that was out of proportion to physical findings with profound hypersensitivity. Dr. Prater prescribed medications and recommended continued physical therapy.

5. After additional physical therapy and diagnostic testing, Claimant visited ATP Eric Shoemaker, D.O. at Ascent Medical Consultants on September 17, 2019. Dr. Shoemaker reviewed Claimant's medical records and conducted a physical examination. He noted that Claimant's right wrist MRI demonstrated only some soft tissue edema along the dorsum of the wrist in the region of the blunt impact. Examination demonstrated allodynia without evidence of pseudomotor changes. A triple bone scan revealed some findings consistent with CRPS. Dr. Shoemaker recommended desensitization training

exercises in addition to continued physical therapy. He also suggested QSART and objective CRPS testing.

6. Claimant was subsequently diagnosed with CRPS. She underwent stellate ganglion blocks on November 21, 2019, January 16, 2020, and March 12, 2020. Based on the success of the first two injections, there was discussion of a possible Spinal Cord Stimulator (SCS) trial.

7. Claimant received psychological care and cognitive behavioral therapy for her adjustment disorder with mixed anxiety, depressed mood and pain. She was ultimately referred to psychiatry for her Post Traumatic Stress Disorder (PTSD). An initial psychiatric evaluation was completed March 3, 2020.

8. On May 18, 2020 Claimant attended a telehealth evaluation with ATP Charles Bradley Sisson, M.D. He diagnosed Claimant with CRPS and chronic pain syndrome. Dr. Sisson recommended an SCS trial. He discussed the risks and benefits of an SCS trial with Claimant and answered her questions.

9. On May 19, 2020 Dr. Sisson requested authorization for a SCS trial. Respondents denied the request.

10. On June 23, 2020 Claimant underwent an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian determined Claimant's testing was not consistent with a diagnosis of CRPS. Furthermore, he reasoned that, even if Claimant suffers from CRPS, a SCS is not warranted. Dr. Cebrian explained that Claimant is quite functional and does not meet the clinical indications for SCS placement based on her low pain levels and good functional activities. He also commented that implantation of an SCS is a major surgery with possible complications.

11. On August 6, 2020 Claimant reached Maximum Medical Improvement (MMI) for her July 18, 2019 industrial injuries. On August 17, 2020 Claimant received a 4% psychological impairment rating from Gary Gutterman, M.D.

12. On August 13, 2020 Claimant returned to Dr. Shoemaker for an examination. After explaining that Claimant satisfied the criteria for a CRPS diagnosis under the Colorado Division of Workers' Compensation Medical Treatment Guidelines (*Guidelines*), he referenced that Robert Watson, M.D. disagreed with the diagnosis. Dr. Shoemaker then noted that the question of whether Claimant suffers from CRPS is distinct from whether a SCS trial is appropriate. He explained that Claimant "clearly has significant and functionally limiting chronic upper extremity pain that has been recalcitrant to all forms of conservative care. A spinal cord stimulator trial is appropriate and reasonable in this setting regardless of the presence or absence of CRPS."

13. On October 1, 2020 Dr. Shoemaker determined that Claimant should have received an impairment rating for her CRPS. He thus assigned an 8% whole person impairment. Claimant's maintenance medical care included medications and psychiatric follow-up with Dr. Gutterman. Dr. Shoemaker also continued to recommend a SCS trial.

14. On December 10, 2020 Claimant returned to Dr. Shoemaker for an evaluation. Dr. Shoemaker reiterated that Claimant was a candidate for a SCS trial based on her "functionally limiting chronic upper extremity pain that has been recalcitrant to all forms of conservative care." He continued to recommend a SCS trial "as has been recommended and offered by Dr. Sisson though this has apparently been denied by the insurance carrier."

15. Respondent challenged Claimant's impairment rating and sought a Division Independent Medical Examination (DIME).

16. On February 4, 2021 Claimant underwent a DIME with David Orgel, M.D. Dr. Orgel determined that she satisfied the criteria for CRPS based on a positive bone scan and a stress thermogram. He also remarked that Claimant's good response to sympathetic blocks was suggestive of CRPS. Dr. Orgel noted that Claimant's activity level was affected by her pain complaints, especially with more extensive use of her right hand such as baking or making crafts. He reasoned that Claimant reached MMI on August 6, 2020. Dr. Orgel agreed with the 8% whole person impairment rating for CRPS assigned by Dr. Shoemaker and the 4% psychological impairment rating given by Dr. Gutterman.

17. Based on Claimant's limited ability to engage in hand-intensive activities, Dr. Orgel concluded a SCS trial was reasonable. He explained that "if she is fully counseled on the pros and cons of the spinal cord stimulator a trial is reasonable. She should have significant improvement in function not pain related to this intervention for it to be placed permanently." He noted that Claimant's condition precluded hand-intensive activities. However, based on her overall improvement, he questioned "whether she would really benefit from the spinal cord stimulator."

18. On August 3, 2021 Claimant visited Dr. Sisson for an evaluation. Dr. Sisson recounted that he discussed treatment options with Claimant including a SCS trial implant for her CRPS. He then referred Claimant for a psychological evaluation prior to a SCS trial. Dr. Sisson specifically noted "[t]enatively consider SCS however need to rule out any secondary gain issues with pre op clinical psyche formal evaluation."

19. In March of 2022 Respondent approved Claimant's request for a SCS trial. Dr. Sisson subsequently placed the SCS and Claimant commenced the trial.

20. On April 15, 2022 Claimant attended a permanent SCS pre-op call with Dr. Sisson. He remarked that Claimant had obtained approximately 80-90% symptom-relief with the SCS trial. Dr. Sisson discussed the risks and benefits of a permanent SCS with Claimant. He then sought authorization for placement of a permanent SCS.

21. Claimant has presented substantial evidence to support a determination that future medical treatment in the form of a permanent SCS implant as requested by ATP Dr. Sisson is reasonably necessary to relieve the effects of her July 18, 2019 admitted industrial injury or prevent further deterioration of her condition. Initially, Claimant injured her right wrist while on a field trip with students. She received

conservative medical care that did not relieve her symptoms. Objective testing subsequently revealed Claimant suffered from CRPS.

22. On May 19, 2020 ATP Dr. Sisson sought authorization for a SCS trial but Respondents denied the request. On August 13, 2020 Dr. Shoemaker noted that the question of whether Claimant suffers from CRPS is distinct from whether a SCS trial is appropriate. He explained that Claimant "clearly has significant and functionally limiting chronic upper extremity pain that has been recalcitrant to all forms of conservative care. A spinal cord stimulator trial is appropriate and reasonable in this setting regardless of the presence or absence of CRPS." On December 10, 2020 Dr. Shoemaker continued to recommend an SCS trial "as has been recommended and offered by Dr. Sisson though this has apparently been denied by the insurance carrier." Based on Claimant's limited ability to engage in hand-intensive activities, DIME Dr. Orgel also concluded a SCS trial was reasonable. He explained that "if she is fully counseled on the pros and cons of the spinal cord stimulator a trial is reasonable. She should have significant improvement in function not pain related to this intervention for it to be placed permanently."

23. On August 3, 2021 Dr. Sisson referred Claimant for a psychological evaluation. In March of 2022 Respondents approved Claimant's request for an SCS trial and Dr. Sisson placed the device. On April 15, 2022 Dr. Sisson remarked that Claimant had obtained approximately 80-90% relief during the trial. He then sought authorization for placement of a permanent SCS.

24. In contrast to the opinions of ATP's Dr. Sisson and Dr. Shoemaker as well as DIME Dr. Orgel endorsing a SCS trial, Dr. Cebrian reasoned that, even if Claimant suffers from CRPS, a SCS is not warranted. Dr. Cebrian explained that Claimant is quite functional and does not meet the clinical indications for SCS placement based on her low pain levels and good functional activities. He also commented that implantation of an SCS is a major surgery with possible complications.

25. Despite Dr. Cebrian's opinion, the record reveals that Claimant has presented substantial evidence to support a determination that future medical treatment in the form of a permanent SCS will be reasonably necessary to relieve the effects of her industrial injury or prevent further deterioration of her condition. The record reveals that Claimant received conservative care that did not reduce her CRPS pain or improve her right arm function. Specifically, Claimant suffers functionally limiting chronic upper extremity pain that has been refractory to conservative care. As noted by Dr. Sisson, Claimant obtained approximately 80-90% relief during the SCS trial. Based on Claimant's dramatic symptom-relief, there is much less of an impediment in her functional ability to engage in hand-intensive activities. Because the SCS trial was successful, implantation of a permanent SCS is warranted. Accordingly, Claimant's request for implantation of a permanent SCS is granted.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of her condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988).

5. The *Guidelines* were propounded by the Director pursuant to an express grant of statutory authority. *See* §8-42-101(3.5)(a)(II), C.R.S. It is appropriate for an ALJ to consider the *Guidelines* in determining whether a certain medical treatment is reasonable and necessary for a claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (ICAO, Mar. 18, 2005); *see Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (ICAO, Oct. 30, 1998) (noting that the *Guidelines* are a reasonable source for identifying diagnostic criteria). The *Guidelines* are regarded as accepted professional standards of care under the Workers' Compensation Act. *Rook v. Indus. Claim Appeals*

Off., 111 P.3d 549 (Colo. App. 2005). In *Hall v. Indus. Claim Appeals Off.*, 74 P.3d 459 (Colo. App. 2003) the court noted that the *Guidelines* shall be used by health care practitioners when furnishing medical treatment under the Workers' Compensation Act. *See* §8-42-101(3)(b), C.R.S. Nevertheless, the *Guidelines* expressly acknowledge that deviation is permissible.

6. The *Guidelines* specify that a "SCS may be most effective in patients with CRPS I or II who have not achieved relief with oral medications, rehabilitation therapy, or therapeutic nerve blocks, and in whom the pain has persisted for longer than 6 months." W.C.R.P. 9(H)(1)(a). The *Guidelines* provide a list of surgical indications for a SCS. A SCS is appropriate for patients who exhibit the following:

> persistent functionally limiting radicular pain greater than axial pain who have failed conservative therapy including active and/or passive therapy, pre-stimulator trial psychiatric evaluation and treatment, medication management, and therapeutic injections.

W.C.R.P. 17 Exhibit 9(H)(1)(c). Moreover, before surgical intervention, the patient and treating physician should identify functional goals and the likelihood of improving the ability to perform activities of daily living or work duties. W.C.R.P. 17 Exhibit 9(H).

7. The *Guidelines* note that "[i]t is particularly important that patients meet all of the indications before a permanent neurostimulator is placed because several studies have shown that workers' compensation patients are less likely to gain significant relief than other patients." W.C.R.P. 17 Exhibit 9(H)(1)(a). A trial is considered successful if the patient experiences a 50% decrease in radicular or CRPS pain and "demonstrates objective functional gains or decreased utilization of pain medications." Functional improvement includes: "standing, walking, positional tolerance, upper extremity activities, increased social participation, or decreased medication use." W.C.R.P. 17 Exhibit 9(H)(1)(c)(iii).

8. As found, Claimant has presented substantial evidence to support a determination that future medical treatment in the form of a permanent SCS implant as requested by ATP Dr. Sisson is reasonably necessary to relieve the effects of her July 18, 2019 admitted industrial injury or prevent further deterioration of her condition. Initially, Claimant injured her right wrist while on a field trip with students. She received conservative medical care that did not relieve her symptoms. Objective testing subsequently revealed Claimant suffered from CRPS.

9. As found, on May 19, 2020 ATP Dr. Sisson sought authorization for a SCS trial but Respondents denied the request. On August 13, 2020 Dr. Shoemaker noted that the question of whether Claimant suffers from CRPS is distinct from whether a SCS trial is appropriate. He explained that Claimant "clearly has significant and functionally limiting chronic upper extremity pain that has been recalcitrant to all forms of conservative care. A spinal cord stimulator trial is appropriate and reasonable in this setting regardless of the presence or absence of CRPS." On December 10, 2020 Dr. Shoemaker continued to recommend an SCS trial "as has been recommended and offered by Dr. Sisson though

this has apparently been denied by the insurance carrier." Based on Claimant's limited ability to engage in hand-intensive activities, DIME Dr. Orgel also concluded a SCS trial was reasonable. He explained that "if she is fully counseled on the pros and cons of the spinal cord stimulator a trial is reasonable. She should have significant improvement in function not pain related to this intervention for it to be placed permanently."

10. As found, on August 3, 2021 Dr. Sisson referred Claimant for a psychological evaluation. In March of 2022 Respondents approved Claimant's request for an SCS trial and Dr. Sisson placed the device. On April 15, 2022 Dr. Sisson remarked that Claimant had obtained approximately 80-90% relief during the trial. He then sought authorization for placement of a permanent SCS.

11. As found, in contrast to the opinions of ATP's Dr. Sisson and Dr. Shoemaker as well as DIME Dr. Orgel endorsing a SCS trial, Dr. Cebrian reasoned that, even if Claimant suffers from CRPS, a SCS is not warranted. Dr. Cebrian explained that Claimant is quite functional and does not meet the clinical indications for SCS placement based on her low pain levels and good functional activities. He also commented that implantation of an SCS is a major surgery with possible complications.

12. As found, despite Dr. Cebrian's opinion, the record reveals that Claimant has presented substantial evidence to support a determination that future medical treatment in the form of a permanent SCS will be reasonably necessary to relieve the effects of her industrial injury or prevent further deterioration of her condition. The record reveals that Claimant received conservative care that did not reduce her CRPS pain or improve her right arm function. Specifically, Claimant suffers functionally limiting chronic upper extremity pain that has been refractory to conservative care. As noted by Dr. Sisson, Claimant obtained approximately 80-90% relief during the SCS trial. Based on Claimant's dramatic symptom-relief, there is much less of an impediment in her functional ability to engage in hand-intensive activities. Because the SCS trial was successful, implantation of a permanent SCS is warranted. Accordingly, Claimant's request for implantation of a permanent SCS is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for implantation of a permanent SCS is granted.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 24, 2023.

ISSUES

I. Whether Respondents proved by a preponderance of the evidence the General Admissions of Liability ("GALs") filed by the Respondents may be withdrawn.

II. Whether Claimant proved by a preponderance of the evidence the left hip replacement requested by the authorized treating medical providers at Panorama Orthopedics is reasonable, necessary and causally related treatment.

FINDINGS OF FACT

1. Claimant is 74 years of age. Claimant has worked for Employer for three years as a delivery specialist. Claimant's job entails driving a truck and delivering parts to customers.

2. Claimant testified that while working for Employer on November 3, 2021, he stepped out of his delivery truck, walked a few feet, and slipped on ice, which caused him to do the splits. Claimant testified he stood up and again slipped and did the splits. Claimant testified he reported the incident to his manager that same day and requested to see a doctor. He testified Employer made an appointment for him for November 8, 2021. Claimant continued to work leading up to his initial appointment.

3. Claimant presented to authorized provider AFC Urgent Care on November 8, 2021. He completed a Worker's Compensation Registration Form for AFC Urgent Care on that date. In the section titled "Specific Details of Accident" Claimant wrote "Stepped Wrong." (R. Ex. K). Claimant testified he wrote he "stepped wrong" on this document because that was what essentially happened. Claimant reported to Devin Pinaroc, NP that he "stepped wrong" at work twice last Wednesday and that his pain was gradually worsening. Claimant complained of pain in the left groin radiating to the anterior left thigh along with some pain below the left gluteus. NP Pinaroc noted there was no trauma or fall. On examination, NP Pinaroc noted decreased range of motion in the right hip with pain. His assessment was unspecified injury of the left hip. NP Pinaroc completed a Physician's Report of Worker's Compensation Injury stating that the objective findings were consistent with a history and/or work-related mechanism of injury/illness. Claimant was prescribed a muscle relaxer and released to modified duty.

4. On November 9, 2021 [Redacted, hereinafter MM] completed an Employer's First Report of Injury in which she listed the body part affected listed as "abdomen" and the nature of the injury/illness as "strain". She wrote, "TM slipped on gravel, didn't fall to the ground. TM almost did the splits, strained his L leg/upper thigh." (R. Ex. J). Claimant testified he did not provide that information to MM[R and that and the First Report of Injury is inaccurate.

5. Claimant returned to AFC Urgent Care on November 15, 2021 with continued left hip and left leg pain. On examination NP Pinaroc noted decreased range of motion to left hip and tenderness to touch of the iliac crest. Claimant underwent an intra-articular injection to his left hip. His temporary work restrictions were increased to no lifting, no crawling, and short drives. NP Pinaroc referred Claimant for a left hip MRI.

6. On November 29, 2021 NP Pinaroc noted that a recent MRI of the left hip showed degenerative changes of the hip, strains of muscles in the left hip/pelvis/glute, and 6cm aneurysm in L common iliac artery. He noted the MRI showed grade 2 and grade 1 strain of the muscle in hip/glute. Exam again demonstrated decreased range of motion in the left hip. NP Pinaroc assessed Claimant with an aneurysm of the iliac artery and strain of muscle, fascia and tendon of the left hip, and unspecified injury of the left hip. He referred Claimant to the Vascular Institute of the Rockies for evaluation of the aneurysm of the iliac artery.

7. Claimant saw Lauren Eller, PA-C at Vascular Institute of the Rockies on December 2, 2021. She noted a history of abdominal aortic aneurysm repair in May 2016. PA-C Eller noted that approximately one month ago Claimant slipped and fell onto his left leg. Claimant complained of left hip pain secondary to an iliopsoas strain during the fall. PA-C Eller's assessment was an abdominal aortic aneurysm without rupture and aneurysm of the left iliac artery. She sent Claimant for CT scan of the abdomen and pelvis for surgical disposition.

8. Claimant presented to Alan Y. Synn, M.D. at Vascular Institute of the Rockies on December 13, 2021. Dr. Synn noted that the CT scan showed a large left distal common iliac artery aneurysm, small right distal common iliac artery aneurysm and an incidental pancreatic mass. He scheduled Claimant for surgery for the aneurysm.

9. Claimant continued to report left hip and groin pain. He underwent a second intra articular injection to his left hip on January 3, 2022.

10. On February 8, 2022 Claimant underwent a bifurcated iliac endograft repair of left common iliac artery aneurysm, performed by Dr. Synn.

11. On February 16, 2022 Claimant saw Kevin Ralls, FNP at AFC Urgent Care. He complained of pain in his left hip and left knee. FNP Ralls noted a prior medical history of knee replacement. He referred Claimant to an orthopedic surgeon for evaluation of the left hip.

12. On the referral of FNP Ralls, Claimant presented to Abby Price PA-C at Panorama Orthopedics & Spine Center on February 25, 2021. PA-C Price noted Claimant's pain began in September 2021, at which time he had an aneurysm and sustained a fall at work. Claimant reported pain in his groin radiating into his buttock. He stated he had no pain prior to his work injury. PA-C Price noted that x-rays of the left hip and pelvis demonstrated severe narrowing of the femoroacetabular joint with an area of what appeared to be avascular necrosis at the rim of the acetabulum within the femoral head. Left knee x-rays demonstrated a stable left knee total arthroplasty. PA-C Price

diagnosed Claimant with primary osteoarthritis of left hip and avascular necrosis of bone of the left hip. She wrote,

> Given the patient's acute groin pain following his injury at work in September 2021, I would recommend that we proceed with left total hip arthroplasty in the future. With the acuity of his symptoms we also discussed the option of an ultrasound guided intra-articular injection into the left hip to postpone operative intervention, providing that he receives good symptom relief from this injection. He will follow up with Dr. Patel following this injection to discuss further treatment options. He will maintain his current work restrictions per his work comp provider.

(Cl. Ex. 8, p. 160).

13. On March 15, 2022 Claimant underwent an intraarticular cortisone injection of the left hip for osteoarthritis.

14. Claimant returned to PA-C Price on April 1, 2022. He reported that his groin pain had fully resolved following the injection on 3/15/2022, but that he developed a new pain in his lower back and left SI joint. Given Claimant's recent CT scan showing degenerative changes of the lumbar spine and his prevalent symptoms, PA Price recommended that Claimant follow-up with a member of spine team for evaluation of the lumbar spine. She noted, "We discussed that we can continue to perform cortisone injections into his left hip joint every 4+ months providing that he experiences symptoms relief for 4 months or longer. He will likely be a candidate for a left total hip arthroplasty in the future." (Cl. Ex. 8, p. 170).

15. On July 20, 2022 Claimant reported to FNP Ralls that physical therapy was helping a little and that he reported feeling stronger in the hip and could now stand without needing the arm rest assistance and could stretch a little bit further.

16. At a follow-up evaluation with PA-C Price on July 29, 2022, she noted that the last injection performed on 3/15/2022 provided Claimant with significant symptom relief but only for two days. Claimant had been attending physical therapy and performing home exercises without significant improvement and wanted to discuss having a left total hip arthroplasty. X-rays of left hip demonstrated end-state joint space narrowing of the femoroacetabular joint with collapse of the femoral head. PA-C Price's impression was grade IV osteoarthritis of the left hip.

17. On July 29, 2022 Claimant was scheduled to undergo a left total hip arthroplasty on October 7, 2022 with Nimesh Patel, M.D.

18. On September 30, 2022 Timothy S. O'Brien, M.D. performed an Independent Medical Evaluation ("IME") at the request of Respondents. Regarding the mechanism of injury, Dr. O'Brien noted, "on November 3, 2021, he was walking on [Employer's] icy parking lot and slipped twice. He did the splits both times and went to the ground both times. He states at the fall was witnessed not only by customers but also by fellow staff members." (R. Ex. A, p. 001). Claimant reported that he was completely pain free prior

to the incident and never had treatment for any left hip pain. Dr. O'Brien examined Claimant and reviewed medical records, including undated radiographs on Claimant's telephone of what appeared to be bone-on-bone contact and a significant area of osteolysis or bony defect in the superior femoral head on the left hip.

19. Dr. O'Brien opined that Claimant did not sustain any left hip injury and that Claimant's onset of left hip pain while at work on November 3, 2021 was a manifestation of his personal health. Dr. O'Brien explained that the work incident was minor. He wrote,

> The only type of injuries to accelerate and (*sic*) osteoarthritic hip and result in the premature need for a total hip replacement are those that cause and (*sic)* intra articular fracture or a dislocation. Merely slipping on the ice and having one leg move laterally is not an injury mechanism. There's simply not enough energy generated as the result of this incident such that its dissipation into the hip joint would overcome the injury threshold and result in new tissue breakage or yielding. Therefore, no injury could occur.

(R. Ex. A, p. 006).

20. Dr. O'Brien opined that it was expected for Claimant to experience hip pain when his left leg moved laterally after slipping, considering Claimant's significant pre-existing osteoarthritis and avascular necrosis of the left hip. Dr. O'Brien explained that it takes years for such radiographic appearance to become evident. Dr. O'Brien stated that osteoarthritis always manifest itself with gradually progressive symptoms over the course of years. He opined that, while it is possible Claimant truly did not note left hip pain until his slipping episode on November 3, 2021, it was so unlikely in his experience that it is virtually impossible. Dr. O'Brien noted that records from Panorama prove Claimant has a long-standing history of osteoarthritis of multiple musculoskeletal areas in his body, including age-appropriate degenerative spondylolisthesis of his low back, a total ankle replacement, and a total knee replacement. He opined that Claimant thus has a genetic predilection for developing arthritis in his musculoskeletal joints. Dr. O'Brien noted that it was highly likely prior medical records mentioned some history of prior left hip pain.

21. Dr. O'Brien further opined that, even if Claimant did not have hip pain until November 3, 2021, the reason for total hip replacement is due to Claimant's longstanding degenerative process and not the November 3, 2021 work incident. Dr. O'Brien opined that Claimant was an inconsistent historian, noting that at different times Claimant reported falling to the ground and not falling to the ground. He concluded that Claimant was a candidate for a left total hip replacement long prior to the work incident, which did not accelerate or aggravate Claimant's underlying arthritis or the need for surgery. Dr. O'Brien opined Claimant is a candidate for a total hip replacement but that the need for surgery is unrelated to the work incident.

22. On October 19, 2022 Claimant was evaluated by FNP Ralls at AFC Urgent Care, who still gave the opinion that Claimant's mechanism of injury was work-related, noting:

> Pt states that he received results of Independent Ortho review which suggests that he should not have his recommended THA covered by WC ins Pt was able to bring records in for copy as they were not in the chart initially. The rationale by the reviewing provider was that the pt likely had OA/DJD prior to his injury and since that is a chronic process, it is not part of his injury. Pt still doing PT. …

(Cl. Ex. 6, pp.117-119).

23. On October 27, 2022 Claimant filed an Application for Hearing requesting left hip replacement requested by ATP Abby Price at Panorama Orthopedics.

24. On November 23, 2022 Respondents filed a Response to the October 27, 2022 Application for Hearing challenging the requested surgery and moving to withdraw their previously filed GALs.

25. Respondents filed two general admissions on the claim. One was filed on March 3, 2022, and the other was filed on October 10, 2022. As reflected in these general admissions, temporary total disability and medical benefits were admitted. Respondents paid $11,584.62 in temporary total disability between the time of February 8, 2022 through the period of August 15, 2022.

26. At a physical therapy appointment with & Sport Physical Therapy on December 27, 2022, Claimant reported that he hurt his hip while playing indoor basketball with his grandson. Claimant reported that he checked his grandson with his left hip and pivoted and was very sore.

27. On February 15, 2023 Claimant saw Justin Burkhardt, PA at AFC Urgent Care reporting persistent left hip/groin symptoms. He was doing well with current work restrictions. Exam revealed mild diffuse tenderness to palpation/stiffness on range of motion and ambulation of the left hip. Claimant ambulated with the assistance of a cane. Claimant was to continue physical therapy and modified duty.

28. Claimant testified at hearing that prior to the work injury, he had no left hip complaints, limitations or treatment. Claimant testified that his 2009 work injury did not involve his hips. He testified that he has been experiencing pain since the work injury and now walks with a cane, which he did not use prior to the work injury. Claimant stated he experienced only a couple days of relief from the injections. He testified he understands the risk of the recommended surgery and wants to undergo the surgery to relieve his pain and improve his function.

29. Dr. O'Brien testified at hearing on behalf of Respondents as Level II accredited expert in orthopedic surgery. He testified consistent with his IME report and continued to opine Claimant did not sustain any injury to his left hip on November 3, 2021 and that the need for a hip replacement is not work-related. Dr. O'Brien testified that Claimant's diagnoses are avascular necrosis and severe end-stage arthritis, which he explained takes many months or years to develop and are not work-related. Dr. O'Brien testified that to confirm a work-related injury, we would need imaging obtained right before and

after the work injury to confirm any objective changes. He explained that intraarticular fractures and dislocations are the only events traumatic enough to accelerate the Claimant's condition. Dr. O'Brien testified that Claimant's initial examination did not suggest a true injury in terms of tissue breaking or yielding. He testified that prior aneurysms, multiple arthritic joints and replacements indicate a genetic predilection unrelated to Claimant's employment. Dr. O'Brien opined that there was no objective contemporaneous evidence of any injury. He testified that Claimant was a candidate for hip replacement prior to the work incident.

30. Dr. O'Brien further testified that the recommended surgery is reasonable and indicated. He acknowledged that there are no medical records indicating prior left hip complaints and that Claimant was able to perform his job prior to the work incident. Dr. O'Brien testified that the November 29, 2021 MRI was likely overread as muscle strains and, even if Claimant did sustain muscle strains as a result of the November 3, 2021 work incident, there was no evidence on MRI or CT scan of any injury to the hip joint. He explained that a strain is self-healing and would not require treatment.

31. The only prior medical records offered as evidence were an October 13, 2010 Division Independent Medical Examination ("DIME") report by Stanley Ginsburg, M.D. regarding an August 10, 2009 work injury to left shoulder and left knee, and a November 16, 2017 Colorado Heart & Vascular record. Neither record documents any prior left hip complaints, diagnoses or treatment.

32. The ALJ finds the opinions of Claimant's treating providers at AFC Urgent Care and Panorama Orthopedics, as supported by Claimant's credible testimony and the medical records, more credible and persuasive than the opinions and testimony of Dr. O'Brien.

33. Respondents failed to prove it is more probable than not Claimant did not sustain a compensable work injury entitling Respondents to withdraw their GALs.

34. Claimant proved it is more probable than not the total left hip replacement recommended by the medical providers at Panorama Orthopedics is causally related to the November 3, 2021 work injury and reasonably necessary to cure and relieve its effects.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case

must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Withdrawal of an Admission of Liability

When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School District*, WC 4-702-144 (ICAO, June 5, 2012). Section 8-43-201(1), C.R.S. provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." The amendment to §8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, WC 4-754-838-01 (ICAO, Oct. 1, 2013).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an

employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017).

Respondents argue Claimant did not sustain a compensable work injury resulting in the need for treatment. Respondents point to a "minor" mechanism of injury, inconsistencies in Claimant's reports regarding the mechanism of injury, and Claimant's significant pre-existing degenerative conditions. As found, the preponderant evidence does not establish Claimant did not sustain a compensable work injury. The ALJ is not persuaded that Claimant's description of the mechanism of injury as documented in the records and testified by Claimant is so disparate that it completely undermines his credibility. Claimant credibly testified that he did not have any prior left hip complaints, treatment or limitations. No persuasive evidence was offered to the contrary. Assuming, arguendo, Claimant did suffer from some form of prior left hip pain, he was not undergoing any treatment and able to perform his job duties without restrictions for multiple years leading up to the work injury. There is no evidence of a prior recommendation for left hip treatment or surgery.

Claimant's treating providers at AFC Urgent Care have opined that Claimant's condition and need for treatment are work-related. While Claimant has significant pre-existing left hip conditions, the totality of the evidence demonstrates it is more likely than not the work injury caused disability and the need for treatment. Accordingly, Respondents are not entitled to withdraw their GALs.

Medical Treatment

Respondents are liable for related medical treatment that is reasonable and necessary relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S.; *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found, Claimant proved it is more probably true than not the recommended total left hip replacement is causally related to the work injury and reasonably necessary to cure and relieve its effects. Claimant has undergone conservative treatment in the form of diagnostic injections and physical therapy with no significant relief. The recommended surgery is to relieve the ongoing symptoms in Claimant's left hip, which were caused by the work injury and have been present since such time. While Dr. O'Brien disagrees the surgery is causally related, he did opine that the surgery is reasonable and indicated. The opinions of Claimant's treating providers regarding the causal relatedness of Claimant's condition are more credible and persuasive than that of Respondents' IME physician Dr. O'Brien in this matter. Based on the totality of the evidence, Claimant has met his burden to prove that the recommended left hip surgery is reasonably necessary and causally related medical treatment.

ORDER

It is therefore ordered that:

1. Respondents failed to prove by a preponderance of the evidence Claimant did not sustain a compensable work injury. Respondents' request to withdraw the their General Admissions of Liability is denied and dismissed.

2. Claimant proved preponderance of the evidence that the recommended left hip replacement is reasonable, necessary and causally related to Claimant's November 3, 2021 work injury. Respondents are liable for the recommended surgery.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-150-929-002

ISSUES

- Whether Respondents have proven by a preponderance of the evidence that Claimant committed a willful violation of a safety rule pursuant to Section 8-42-112(1)(b) that resulted in his industrial injury?

FINDINGS OF FACT

1. Claimant was involved in a motor vehicle accident ("MVA") on October 14, 2020 in the course and scope of his employment with Employer. Claimant was taken from the accident scene to St. Mary's Hospital Emergency Room ("ER") via ambulance. At the ER, Claimant reported he was driving his semi-trailer on 1-70 at about 70 miles per hour and he did not remember what happened, but he went off the road, flipped and the vehicle caught on fire. Claimant was referred for a computed tomography ("CT") scan of his cervical spine and head along with a CT scan of his chest and abdomen. Claimant's urine drug screen was positive for opiates and benzodiazepines, but Claimant reported he had a prescription for these due to prior back pain from a week ago.

2. According to the police report, Claimant was the driver of the truck and lost control of the truck and raveled off the right side of the road, colliding with a guardrail and a concrete barrier along with a light pole. The trailer rolled ¼ times and became disconnected from the semi-truck before coming to a final rest on its right side on the right side of the roadway. The accident report indicates that the semi caught fire and came to a final rest facing east inside a tunnel. According to a witness report, the semi drifted to the right and struck the guard rail and concrete wall, then bounced back toward the left lane before the trailer swiped the wall causing it to slam into the side of the tunnel.

3. Claimant completed a "Driver's Statement and Exchange of Information" form from the Colorado State Patrol that stated, "No clue what happened." According to the Palisade Police Department Emergency Medical Service ("EMS") report, Claimant reported he was taking a drink from his Pepsi and then he hit the brakes and the truck crashed. The EMS report further indicated that Claimant reported that all of his medications were in his truck.

4. Claimant was taken to St. Mary's Hospital Emergency Room ("ER") where the responding Colorado State Patrol Officer, Officer [Redacted, hereinafter NN], spoke to Claimant. Claimant reported to Officer NN[Redacted] that he had not consumed any alcohol or illegal drugs, but had taken a lot of medications. Officer NN[Redacted] noted that Claimant's speech was slurred and incoherent and Claimant was falling asleep between talking to Officer NN[Redacted].

5. Officer [Redacted, hereinafter JN] secured a blood draw to test for medications at the emergency room. According to the results of the blood draw, Claimant had carisoprodol, meprobearnate, 7-Aminoclonazepam, clonazepam, alprazolam and hydrocodone in his system. No alcohol or illegal drugs were noted in Claimant's system. The blood draw was taken a bit under 2 hours after the MVA.

6. According to Claimant's medical records from Primary Care Partners, Claimant was being prescribed alprazolam, amlodinpine, clonazelpam, fluticasone, hydrocodone-acetaminophen, ibruprofen, narcan, omeprazole, rizatriptan benzoate, sumatriptan succinate, and tizanidine. Claimant was not prescribed carisoprodol by Primary Care Partners. Ms. Lintemoot, a senior forensic scientist for the Colorado Bureau of Investigation testified at hearing that she did not see a prescription in Claimant's medical records for the carisoprodol.

7. On October 15, 2020, following the MVA, Claimant's wife called Primary Care Partners and reported that all of Claimant's medications were in the cab of his truck and had caught fire and requested that the medications be refilled.

8. Testimony was presented from Ms. Lintemoot at hearing. Ms. Lintemoot testified that Claimant's levels of medications were on the upper therapeutic level according to the results of the blood draw. Ms. Lintemoot testified that based on the levels demonstrated in the blood draw, if Claimant had taken only the prescription drugs the day prior to the accident, and not the day of the accident, Claimant would have had a lethal level of Clarisoprodal in his system. Ms. Lintemoot testified she reviewed the witness statements which described Claimant's vehicle drifting out of his land as it went into the tunnel and struck a stationary object (the concrete wall). Ms. Lintemoot opined that this would be consistent with a driver operating a motor vehicle after consuming central nervous system depressants. Ms. Lintemoot testified on cross-examination that she could not testify conclusively as to what caused the accident.

9. Ms. Lintemoot testified that Claimant's report that he took the medication only at bedtime was inconsistent with the instructions for taking the prescriptions from Claimant's primary care physician.

10. The medical records from Primary Care Partners establish that Claimant's wife called July 21, 2020 and reported that Claimant's new depression medication was working fine but causing Claimant to be drowsy. Claimant was advised to decrease his medication to 10mg four times per day.

11. Claimant testified at hearing in this matter that on the date of the accident, he left his house at approximately 5:00 a.m. and drove one hour and fifteen minutes to the work site at the Rifle Airport to pick up his load. Claimant denied taking medications on the date of the MVA and testified he only took the prescription drugs while off duty. Claimant testified he did not believe he had all of his medications in the cab of his truck.

Claimant testified he did not report to the emergency room that he did not know what caused the accident.

12. Claimant testified he did not know that he was not allowed to take prescription medications while operating a tractor trailer truck. Claimant testified he did receive the Employee Personnel and Safety Program from Employer. Claimant acknowledged that it was his responsibility to know the laws pertaining to federal motor carriers.

13. Claimant testified the accident occurred when the brakes on the truck locked up due to an automated braking system. Claimant testified he had complained to the employer about the automated braking system prior to the MVA, as the braking system would be applied on any bump in the road.

14. Claimant presented the testimony of Dr. Guess, a pharmacist. Dr. Guess testified he had reviewed the hospital reports and Dr. Scott's IME report. Dr. Guess testified that based on the medication levels contained in the blood draw, he could not say when Claimant took the medications. Dr. Guess testified that the fact that Claimant's hydrocodone level was significantly his, but there was no detection of hydromorphone (which is metabolized from hydrocodone), he could not explain why Claimant's hydrocodone levels were so significantly high.

15. Dr. Guess testified that it was his opinion that the results of the blood test showed medication levels consistent with when Claimant said he had taken the medications. Dr. Guess noted that Claimant's high levels of hydrocodone were not consistent with Claimant's testimony that he took the medications the night before, but noted that he would trust the patient's report of having taken the medication the night before. Dr. Guess further testified that while the level of the other prescription drugs were not necessarily consistent with Claimant's testimony of when he consumed the drugs, he could not state that Claimant would have been impaired at the time of the MVA.

16. On cross-examination, Dr. Guess noted that based on the results of the blood draw, Claimant was not within the therapeutic level with regard to the hydrocodone. Dr. Guess testified that this did not mean that the use of hydrocodone affected Claimant's level of consciousness. Dr. Guess testified that the level of hydrocodone would most likely not be intoxicating for an opioid dependent user, but could be intoxicating for an opioid na'ive patient.

17. Dr. Guess further testified that the Carisoprodol levels were consistent with Claimant having taken the prescribed drugs within 10 hours of the accident and Claimant had these drugs in his system while driving, but that did not mean that Claimant was impaired at the time of the accident.

18. Respondents presented the testimony of [Redacted hereinafter DA], the terminal manager for Employer. DA[Redacted] testified that after Claimant was hired and passed a

drug test, Claimant was provided with a copy of Employer's safety handbook. DA[Redacted] testified that Employer's safety policy would have required Claimant to report to Employer any prescription drugs that represent a controlled substance Claimant was taking while employed with Employer. DA[Redacted] testified he was never made aware that Claimant was being prescribed controlled substances by his physician.

19. DA[Redacted] testified that under the Employer's safety policy, along with the Federal Motor Carrier Safety Association regulations, a driver is not allowed to operate a vehicle if he has taken a controlled substance identified as a non-scheduled I substance unless the substance is prescribed by a licensed medical practitioner who is familiar with the driver's medical history and has advised the driver that the substance will not adversely affect the driver's ability to safely operate a commercial motor vehicle.

20. There is no credible evidence that Claimant was ever advised by a physician with Primary Care Partners, or from anywhere else, that he could safely operate a commercial motor vehicle while taking the prescribed medications. In fact, in a follow up appointment with his primary treating physician at Primary Care Partners, Dr. Hulst noted that he was unaware that Claimant was driving a semi-truck while on the medications that were prescribed to him. On that date, Claimant reported to Dr. Hulst that Claimant never takes his medication during the day or while driving and did not believe they impact his driving or function.

21. Claimant's testimony that he was not taking the medical while operating the semi-truck is found to be not credible. The ALJ credits the testimony of Ms. lintemoot that the levels of narcotic medication in Claimant's system at the time of the blood draw was inconsistent with Claimant's report of taking the medications the previous evening.

22. Notably, Claimant reported that to the EMS immediately after the accident that his medications were inside the truck when it caught on fire. Claimant's wife contacted Primary Care Partners the day after the accident and reported that all of Claimant's medications were inside the truck that had caught on fire. Claimant's testimony that he did not believe that all of his mediations were in the truck is found to be not credible in light of the reports to Primary Care Partners and the EMS after the accident. The fact that the Claimant's medications were inside the cab of his truck at the time of the accident represents further evidence that Claimant was taking the medication while operating the semi-truck. Otherwise, there would be no logical reason that Claimant would have the medications in the cab of his truck at the time of the accident.

23. The ALJ credits the testimony of Ms. Lintemoot over the testimony of Dr. Guess and Claimant and finds that Claimant violated a safety rule by consuming schedule I medications without the instruction from a licensed medical professional that the use of the medication would not adversely affect Claimant's ability to safely operate a commercial motor vehicle.

24. Claimant also argues at hearing that there is insufficient evidence that consumption of the narcotic medication led to Claimant's MVA and subsequent injury. The ALJ is not persuaded. The ALJ notes that the police reports from Officer JN[Redacted] indicate that Claimant's speech at the hospital was slurred and incoherent. The ALJ credits the testimony of Ms. Lintemoot that Claimant's presentation at the emergency room was consistent with Claimant having consumed central nervous system depressants as being credible. The ALJ further credits the testimony of Ms. Lintemoot that the description of Claimant's accident as veering out of the lane of travel and striking a stationary object as being consistent with operating a motor vehicle after consuming central nervous system depressants as being credible and persuasive and finds that Respondents have proven by a preponderance of the evidence that Claimant violated a safety rule which resulted in Claimant sustaining the injury in this case.

25. The ALJ also credits the testimony of Ms. Lintemoot and notes that the evidence establishes that Claimant had in his system carosopridol, for which Claimant did not have a prescription. The ALJ therefore finds that in addition to the prescription medications that Claimant was being prescribed, Respondents established that it is more probable than not that Claimant had also consumed a non-prescribed prescription medication at the time of the accident. The ALJ finds that the presence of non- prescribed prescriptions in Claimant's system is further credible evidence of the willfulness of Claimant's conduct.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8- 43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado,* WC 4-559- 275 (ICAO, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimanfs conduct. *See In re Heien;* WC 5-059-799-01 (ICAO, Nov. 29, 2018). However, a safety rule that is not enforced by the employer will not be enforced by the Workers' Compensation system. *Burd v. Builder Services Group Inc.,* WC 5-085-572 (ICAO, July 9, 2019).

5. Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alverado,* WC 4-559-275 (ICAO, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately per1ormed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer,* WC 4-495-198 {ICAO, Oct. 20, 2003). 'Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez,* WC 4-561-352 (ICAO, Apr. 29, 2004). An employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric,* WC 4-418-465 (ICAO, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.; see* 2 *Larson's Workers' Compensation Law,* §35.04. Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.,* 907 P.2d at 719.

6. As found, the ALJ credits the testimony of Ms. Lintemoot and finds that Respondents have established that Claimant violated a safety rule by consuming level I controlled substance medications and operated a commercial motor vehicle which led to the MVA resulting in Claimant's injuries. As found, the medical reports and accident reports entered into evidence at hearing establish that it is more probable than not that Claimant's prescription medications were in the cab of the semi-truck when the accident occurred.

7. As found, the testimony of Ms. Lintemoot that Claimant consumed prescription medications before operating the commercial vehicle is found to be credible. As found, the testimony of Ms. Lintemoot that Claimant's actions resulting in the accident, drifting out of the lane of traffic and colliding with a stationary object, are consistent with operating a motor vehicle after consuming central nervous depressants is found to be credible and persuasive.

8. Due to the fact that Respondents have established that Claimant volitionally violated a safety rule which led to Claimant's injury, Respondents may reduce Claimant's non-medical benefits by 50% pursuant to Section 8-42-112(1)(b), C.R.S.

ORDER

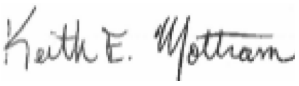
It is therefore ordered that:

1. Respondents may reduce Claimant's non-medical benefits by 50% based on Claimant's failure to follow a safety rule adopted by the employer for the saftety of the employee pursuant to Section 8-42-112(1)(b), C.R.S.request to overcome the finding of the DIME physician that Claimant is not at MMI is denied.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: May 26, 2023



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant provided clear and convincing evidence to overcome the opinion of Division Independent Medical Examination ("DIME") physician Dr. Orgel regarding maximum medical improvement ("MMI") and permanent impairment.

II. Whether Claimant proved by a preponderance of the evidence treatment of the cervical spine, thoracic spine, abdomen, vision or psychological conditions is reasonable, necessary and causally related.

III. Whether Claimant proved by a preponderance of the evidence post-MMI medical treatment he received at UC Health and with various other providers is authorized treatment.

ISSUES HELD IN ABEYANCE

Claimant endorsed permanent total disability ("PTD") as an issue on his Application for Hearing. At the start of the hearing, Claimant represented to the Court he was unprepared to proceed on the PTD issue. Over Respondents' objection, the ALJ placed the issue of PTD in abeyance.

FINDINGS OF FACT

1. Claimant is a 43-year-old male who worked for Employer as a carpenter.

2. Claimant has a prior diagnosis of bipolar disorder. On December 7, 2015, Claimant was admitted to the Medical Center of Aurora for unspecified psychosis. Marita Keeling, M.D. documented a past medical history of chronic neck pain, noting Claimant had a biking injury in 2004. She noted that, despite Claimant's chronic pain, he remained able to work as a carpenter and did not take any medication for his pain. Diagnoses included bipolar disorder, other chronic pain and cervicalgia. (*R. Ex. H*).

3. Claimant sustained an admitted industrial injury to his lumbar spine while working for Employer on November 11, 2020.

4. Claimant underwent treatment at authorized provider Concentra. On December 4, 2020 Claimant presented to Hanna Bodkin, PA-C with an injury to his lower back. Regarding the mechanism of injury, Claimant reported that while working on November 11, 2020 he leaned over, felt a pop in his lower back, and collapsed. He further reported that on December 2, 2020 he experienced another painful right lower back pop while working. No thoracic or cervical spine complaints were noted. PA Bodkin gave an

assessment of a lumbar sprain and derangement of the right sacroiliac ("SI") joint. She referred Claimant for physical therapy and an x-ray of the lumbar spine. (*R. Ex. D, Bates 25-28*).

5. Claimant underwent a lumbar x-ray on December 4, 2020, which Maximina Boutelis, M.D. interpreted. Dr. Boutelis noted findings were normal and the examination was unremarkable. (*R. Ex. I, Bates 175*).

6. Claimant began physical therapy at Concentra on December 7, 2020. Janice Scott, PT noted Claimant's chief complaint as right lumbar spine pain. PT Scott noted 20 degrees active range of motion of left thoracolumbar side bending and 15 degrees active range of motion of right thoracolumbar side bending. No thoracic or cervical spine complaints are noted. Treatment was administered to Claimant's lumbar spine. Claimant attended additional physical therapy sessions at Concentra on December 9, 11, 18, and 28, 2020, focused on Claimant's lumbar spine. (*R. Ex. D*).

7. Claimant continued to complain of low back pain to PA Bodkin at a follow-up evaluation on December 9, 2020. Claimant was worried he sustained more than just a muscle sprain. No thoracic or cervical spine complaints are noted. (*Id. at Bates 30*).

8. On December 24, 2020 Claimant presented to Carrie Burns, M.D. at Concentra with complaints of lower back pain and right SI joint pain radiating into his buttocks. Claimant reported suffering a thoracic injury with compression fractures in 2004. Exam of the thoracic spine was normal. Dr. Burns referred Claimant for a lumbar MRI and chiropractic care. (*Id. at Bates 36-38*).

9. Claimant attended another physical therapy appointment with Darwin Abrams, PT at Concentra on December 28, 2020. Claimant alleges he sustained a hernia while performing exercises during this physical therapy appointment. The record from this session contains no note of any reported abdominal issue. (*Cl. Ex. 4, PDF-1 p. 27 of 368*). Claimant testified he reported the issue to the physical therapy office after PT Abrams had already completed the session and left.

10. Claimant underwent a lumbar spine MRI on December 30, 2020. Only one page of the MRI report is located in the record. Stanislav Poliashenko, M.D. interpreted the MRI and noted trace degenerative retrolisthesis of L5 on S1 with otherwise anatomic alignment, no aggressive osseous lesions, intact vertebral body heights, mild degenerative disc height narrowing and L4-L5 and L5-S1, and not suspicious paraspinal soft tissue lesions or ligamentous edema. (*Id. at PDF-1 pg. 29 of 368*).

11. The physical therapy record from December 30, 2020 notes Claimant reported that at his last physical therapy session a leg lift exercise seemed to cause pain in his abdomen like an abdominal strain. *(Id. at PDF-1 p. 30 of 368*).

12. Claimant attended a follow-up evaluation with PA Bodkin on January 11, 2021. Claimant reported decreased back pain but that he experienced severe anxiety his first

night back on medication. He informed PA Bodkin that, on December 24, 2020, he vomited so hard it made his stomach muscles hurt. He further reported that during physical therapy on December 26, 2020 he felt a tearing and upper abdominal pain and developed a ripple in his upper stomach. Claimant's abdominal pain had since decreased. On examination PA Bodkin noted mild tenderness of the abdomen. She referred Claimant for physiatry and psychological evaluations. (*R. Ex. D, Bates 40-43*).

13. On January 15, 2021 PT Abrams noted Claimant reported slight improvement but continued complaints regarding his upper abdominal area. Claimant thought it might be a strain or a tear from stretching. PT Abrams noted he encouraged Claimant to consider going to a physician to clarify the issue but Claimant stated he did not have insurance. (*Cl. Ex. 4, PDF-1 pp. 44-45 of 368*).

14. On January 20, 2021 Claimant presented to the emergency department at the Medical Center of Aurora with complaints of insomnia, anger and anxiety. The provider noted a history of bipolar affective disorder. Claimant reported recent stressors included a back injury and work issues. He further reported that he had been undergoing physical therapy for his back injury and developed abrupt epigastric abdominal pain while doing leg lifts. On examination, Eric Hill, M.D. noted tenderness over xiphoid with no palpable hernia. Dr. Hill opined there was no evidence of hernia on exam. Dr. Hill discharged Claimant. (*Id. at PDF-1 pp. 46-62 of 368*).

15. On January 21, 2021 Claimant saw his primary authorized treating physician ("ATP") Frederic Zimmerman, D.O. at Concentra. Dr. Zimmerman noted a similar mechanism of injury as reported to PA Bodkin. Claimant reported having an abdominal strain that occurred during one of his physical therapy sessions, with some paresthesias and abnormal feeling in the abdominal region. Claimant's current symptoms were right-sided lumbosacral pain radiating to the upper buttock and perisacral region. There was no radiating pain in the lower extremity. Standing pain was greater than sitting pain. Dr. Zimmerman noted an MRI of the lumbar spine dated 12/30/2020 identified minimal disk degeneration at L4-L5 and L5-S1 level with minimal disk bulge on the left side of L4-L5 with no central or neural foraminal stenosis. Facet arthrosis was noted at L4-5 and L5-S1 levels bilaterally and mild to moderate bilateral neural foraminal stenosis was noted at the L5-S1 level. There was no spinal canal stenosis at any level. Dr. Zimmerman provided the following assessment: lumbar strain with standing extension based pain; minimal degenerative changes noted on MRI with no neurologic compromise; situational anxiety and adjustment/anger disorder with previous history of mood disorder; and acute worsening of chronic insomnia. Dr. Zimmerman referred Claimant for a right L5-S1 facet injection plus right SI joint steroid injection for diagnostic and therapeutic purposes. He also referred Claimant for psychological counseling. (*Id. at PDF-1 pp. 63-66 of 368*).

16. On January 28, 2021 Claimant presented to clinical neuropsychologist J. Edward Cotageorge, Ph.D. for a psychiatric diagnostic evaluation. Dr. Cotageorge noted Claimant reported chronic and ongoing pain in his upper back that was primarily due to an old injury. Dr. Cotageorge did not note any review of Claimant's prior records

or any history of bipolar disorder. Dr. Cotageorge gave the following presumptive diagnoses: chronic pain disorder due to trauma, and adjustment disorder with anxiety and depressed mood. He recommended Claimant undergo further psychological evaluation and begin cognitive behavioral therapy. (*Id. at PDF-1 pp. 75-80 of 368).*

17. On February 3, 2021 Claimant underwent a right L5-S1 intraarticular facet steroid injection and right SI joint steroid injection performed by Dr. Zimmerman. (*Id. at PDF-1 p. 81 of 368*).

18. On February 17, 2021 Claimant attended his third chiropractic session at Denver Sport & Spine for low back treatment. The record from this appointment indicates two prior sessions had occurred, the notes from which were not offered as evidence. Claimant complained of low back pain, neck pain, SI pain and upper back pain. Jason Gridley, D.C. noted, *inter alia*, intersegmental fixation, restricted motion, adjacent paraspinal hypertonicity, asymmetry, stiffness in right T10-11, L1, thoracolumbar region and right SI, bilateral L3-5, S1. Restricted motion was found bilateral at C5-7. There was mild restriction and discomfort with thoracic and lumbar facet load. He diagnosed Claimant with segmental and somatic dysfunction of the cervical, thoracic and lumbar regions and muscle spasm of the back. (*Id. at PDF-1 pp. 89-90 of 368*).

19. Claimant attended a follow-up evaluation with Dr. Zimmerman on February 18, 2021. Dr. Zimmerman noted Claimant had a diagnostic response to the injections as well as a greater than 50% therapeutic response to the injections. Claimant also saw PA Bodkin on February 18, 2021, reporting that he felt 60-70% better but that he now noticed constant pain on the left, with numbness and tingling down his left leg. (*Id. at PDF-1 pp. 91-95 of 368*).

20. On March 18, 2021 PA Bodkin referred Claimant to an orthopedic spine physician. (*Id. at PDF-1 p. 103 of 368*).

21. On March 31, 2021 Claimant presented to Maria Kaplan, PA at Orthopedic Centers of Colorado for low back pain with radiation into the right lateral hip as well as intermittent left lower extremity numbness and tingling. PA Kaplan reviewed x-rays and an MRI of the lumbar spine. She referred Claimant for bilateral L5-S1 translaminar lumbar epidural steroid injection to help with his back and leg pain. PA Kaplan noted that the majority of Claimant's symptoms were right-sided, however there was foraminal narrowing on the left-hand side at L4-L5 and L5-S1. (*Id. at PDF-1 pp. 106-107 of 368*).

22. Claimant attended a second psychological evaluation with Dr. Cotageorge on April 7, 2021. His report again does not note any reported history of bipolar disorder. Dr. Cotageorge noted that his screening showed no evidence of bipolar disorder symptoms at that time. He recommended Claimant attend eight sessions of cognitive behavioral therapy. (*Id. at PDF-1 pp. 110-115 of 368*).

23. At a follow-up evaluation with PA Bodkin on May 3, 2021, PA Bodkin noted Claimant's reported frustrations with his progress and what he felt was a lack of

treatment. She referred Claimant to Evalina Levina Burger, M.D. at UC Health for a second opinion regarding Claimant's lower back area and derangement of the right SI joint. (*Id. at PDF-1 pp. 114-119 of 368*).

24. Claimant continued to attend multiple physical therapy sessions at Concentra at which ongoing low back pain was noted. (*Cl. Ex. 4, PDF-1*).

25. On July 14, 2021 Claimant presented to Dr. Burger and Emily Broeseker, NP at Orthopaedic Spine Center at UC Health. The record notes NP Broeseker saw and examined Claimant with Dr. Burger. Claimant endorsed pain in his back, SI joint, hip and right leg. NP Broeseker reviewed lumbar spine x-rays obtained that same day noting no dynamic listhesis, no instability and possible mild degenerative disc disease at L4-L5 and L5-S1. She noted she was unable to review Claimant's lumbar MRI because the system was down. NP Broeseker opined Claimant's clinical picture did not indicate a nerve injury and, with his response to dry needling, it was likely muscle inflammation. She provided Claimant handouts regarding stretching and muscle strengthening and noted a referral to pain psychology may be needed. (*Id. at PDF-1 pp. 147-156 of 368*).

26. On July 14, 2021 Claimant underwent lumbar x-rays interpreted by Michael Durst, M.D. Dr. Durst's impression was lower lumbar disc degeneration with associated facet arthrosis and no sagittal listhesis or dynamic listhesis. (*R. Ex. I, Bates 179*).

27. PA Bodkin continued to note Claimant's reports of frustration with his symptoms and treatment. On August 18, 2021 she referred Claimant to a physiatrist for evaluation of his low back pain and to Dr. Disorbio for a psychological evaluation. (*Cl. Ex. 4, PDF-1*).

28. On August 18, 2021 Claimant underwent a repeat lumbar MRI at UC Health. Mary Kristen Jesse, M.D. provided the following impression: (1) slight interval worsening L4-L5 degenerative disc disease with more prominent central annular fissure and broad-based disc bulge; moderate left neural foraminal narrowing at this level; and (2) L5-S1 degenerative disc disease with posterior annular fissure and disc bulge causing moderate narrowing of the bilateral neural foramen similar to previous. (*R. Ex. I, Bates 183-184*).

29. On August 20, 2021 Stephen Pehler, M.D. at Orthopedic Centers of Colorado evaluated Claimant. He reviewed Claimant's recent lumbar MRI, noting bilateral neuroforaminal stenosis at L5-S1. Dr. Pehler gave an assessment of lumbar spondylosis with radiculopathy and lumbar degenerative disc disease. He recommended Claimant proceed with bilateral L5-S1 transforaminal epidural steroid injections. (*Cl. Ex. 4, PDF-1 pp. 184-185 of 368*).

30. On September 15, 2021 Claimant underwent a comprehensive biopsychosocial psychomedical evaluation with John Mark Disorbio, Ed.D. Dr. Disorbio issued a report dated September 18, 2021. He noted he reviewed records from PA Bodkin and Dr. Burns at Concentra. No history of bipolar disorder is documented in Dr. Disorbio's

medical note. Dr. Disorbio diagnosed Claimant with generalized anxiety disorder, pain disorder with related factors of anxiety and depression, and major depressive disorder-single episode mild. Dr. Disorbio also evaluated Claimant on September, 22, 2021 and referred Claimant to Sababa Health Group for cognitive behavioral therapy. (*Cl. Ex. 4, PDF-1*).

31. On the referral of Dr. Pehler Claimant underwent bilateral L5-S1 transforaminal epidural steroid injections on September 21, 2021, performed by Lauren McLaughlin-Abrams, D.O. at Peak Anesthesia and Pain Management. (*Id. at PDF pp. 200-201 of 368*).

32. On September 24, 2021 Claimant reported to PA Bodkin that the recent injections provided lower back relief. He continued to complain of pain in his right lateral spine and SI joint. (*Id. at PDF-1 p. 203 of 368*).

33. Claimant returned to Dr. McLaughlin-Abrams on October 5, 2021. Dr. McLaughlin-Abrams opined that the injection provided more than 85% ongoing relief to Claimant and recommended Claimant follow-up with Dr. Pehler. (*Id. at PDF-1 p. 214 of 368*).

34. Claimant attended multiple sessions of cognitive behavioral therapy at Sababa Health Group beginning on October 14, 2021. Joel Misler, LPC noted Claimant was in the depressed/distressed category. The records from these visits records do not document a reported history or diagnosis of bipolar disorder. LPC Misler's notes indicate Claimant was making progress at each session. (*Cl. Ex. 4, PDF-1*).

35. At a follow-up evaluation on October 25, 2021 Claimant reported to PA Kaplan his pain decreased from 6-8/10 to 3-4/10 following his most recent injections. PA Kaplan noted minimal lower extremity radiculopathy or tingling with some continued back pain that was currently manageable. She opined that if Claimant's symptoms returned she would refer him for a right-sided joint injection or possible consideration of a L5-S1 microdiscectomy or possibly discogram. (*Id. at PDF-1 pp. 240-242 of 368*).

36. Claimant also saw PA Bodkin on October 25, 2021, reporting that the injections helped for 2-3 weeks but his pain subsequently returned at a level 2-4/10. Claimant reported he was not working but was able to tolerate more activity for longer periods. (*Id. at PDF-1 pp. 244-247 of 368*).

37. At a return evaluation with PA Kaplan on November 24, 2021 Claimant reported continued low back pain without significant lower extremity radiculopathy. He rated his pain 4-7/10. Claimant reported he was unable to do any physical activities due to his pain. PA Kaplan referred Claimant for a lumbar discogram. She noted that they would discuss a possible lumbar disc arthroplasty should the results indicate L5-S1 as his pain generator. (*Id. at PDF-1 pp. 290-293 of 368*).

38. LPC Misler discharged Claimant from his care on November 30, 2021, noting Claimant had successfully completed the functional acceleration program at Sababa Health Group. (*Id. at PDF-1 pp. 299-302 of 368*).

39. Dr. Pehler reviewed surveillance video of Claimant obtained by Respondents and issued a letter dated December 22, 2021. Dr. Pehler stated that the activity levels, range of motion, and lifting capacity demonstrated by Claimant on the surveillance video was inconsistent with Claimant's most recent complaints in his office. He remarked that Claimant's documented activity levels were inconsistent with continued low back pain and SI joint instability affecting his quality of life and ability to work. Dr. Pehler opined that, although it is possible Claimant continues to suffer from a lumbar radiculopathy with his documented activity levels, it would be reasonable to consider his lumbar radiculopathy mild. (*R. Ex. C*).

40. Claimant returned to PA Bodkin on December 27, 2021 reporting feeling a little better. PA Bodkin continued to note Claimant's frustrations and stated loss of trust in his providers. He reported continued L4 tender pain with some radiation into the bilateral hips and thighs. Claimant further reported no numbness and tingling but numbness in the ball of his left foot. (*Cl. Ex. 4, PDF-1 pp. 315-319 of 368*).

41. On January 4, 2022 Dr. McLaughlin-Abrams noted Claimant was experiencing some "increased left knee and upper back and neck pain that is becoming more pronounced over the past month without an inciting event, he has just started to notice it more consistently." (*Id. at PDF-1 p. 320 of 368*). Dr. McLaughlin further noted Claimant mentioned that after a previous epidural injection in February 2021 he experienced ongoing vision changes a week later and has needed reading glasses. Dr. McLaughlin ordered x-rays of the left knee and neck.

42. On January 6, 2022 PA Bodkin notified Claimant via telephone that, upon Dr. Pehler's review of the surveillance footage, it was determined no further treatment was indicated. She informed Claimant that he was scheduled for an impairment rating evaluation and if he did not agree he could speak with his attorney regarding his options such as pursuing a DIME or seeking further treatment on his own. (*Id. at PDF-1 pp. 323-325 of 368*).

43. Dr. Burns also reviewed surveillance video of Claimant. In e-mail correspondence dated January 6, 2022, Dr. Burns stated that in the surveillance video, Claimant was clearly able to walk, climb stairs, carry heavy objects up and down stairs, squat for a prolonged time and kneel for a prolonged time with completely normal biomechanics. Dr. Burns remarked that the surveillance video was inconsistent with Claimant's presenting complaints when at evaluations. She opined Claimant's overall response to the January 2021 and September 2021 injections were favorable, that Claimant's current exam was benign, and that his complaints surrounded discomfort, not functional deficits. Dr. Burns further noted she corresponded with Dr. Pehler who no longer believed a discogram or disc replacement was necessary. She opined Claimant was approaching MMI. (*Id. at PDF-1 pp. 326-328 of 368*).

44. Claimant subsequently sought treatment outside of the worker's compensation system at Stride Community Health Center. Claimant first presented to Elizabeth Sabella, NP on January 7, 2022 with depression, anxiety and a significant history of back injury, including chronic bilateral low back pain without sciatica. She noted Claimant was involved in a complicated worker's compensation case and would return for further evaluation in one week for further assessment. (*Cl. Ex. 4, PDF-2 p. 38 of 516*).

45. On January 9, 2022 Brian Mathwich, M.D. performed a Physician Advisor Review regarding the causal relatedness of Claimant's left knee and neck complaints. Dr. Mathwich opined that Claimant's left knee and neck pain were not causally related to his work injury. In support of his opinion he noted Claimant's left knee and neck complaints did not begin until 1/4/2022, that there was no mechanism of injury consistent with Claimant's current complaints, and no physiologic justification for pain in the left knee and cervical spine beginning one year after the original injury. (*R. Ex. G*).

46. At a follow-up evaluation with NP Sabella on January 11, 2022 Claimant complained of back symptoms and abdominal wall discomfort that he reported began after a physical therapy session in December 2020. NP Sabella ordered an abdominal ultrasound. (*Cl. Ex. 4, PDF-2 pp. 60-82 of 516*).

47. Claimant underwent an abdominal ultrasound at UC Health on January 11, 2022. Gerald D. Dodd III, M.D. interpreted the results of what he deemed to be a negative study. He stated there was no evidence of an abdominal wall hernia. He noted 1.3cm wide linea alba in the upper abdominal wall with no protrusion of abdominal contents or accentuation of the distance with Valsalva. No underlying intra-abdominal abnormality was identified. (*Id. at PDF-2 pp. 57-58 of 516).*

48. At a follow-up examination with NP Sabella on January 13, 2022 Claimant reported upper back pain. NP Sabella noted Claimant had sustained trauma to his upper back in the form of multiple vertebrae fractures 15 years prior. She referred Claimant for an x-ray and MRI of the thoracic spine. (*Id. at PDF-2 pp. 83-98 of 516*).

49. An MRI and x-rays of the thoracic spine were performed on January 21, 2022. Michael Kershen, M.D. provided the following impression of the thoracic MRI: multilevel disc dessication and height loss with a few associated small bulges and protrusions most notable protrusion is seen centrally at the T7-T8 level with mild spinal stenosis and mild flattening of the spinal cord; no significant neural foraminal stenosis; no acute or aggressive bone lesion. Chronic Schmori's nodes noted. Kevin Wooley, M.D. provided the following impression of the thoracic x-rays: chronic T5 vertebral compression deformity similar to previous thoracic spine MRI; scoliosis and mild degenerative change. (*Id. at PDF-2 pp. 99-104 of 516*).

50. On January 22, 2022 Dr. Woolley issued addendums to his x-ray report stating that the compression deformity identified on the current examination is at the T4

vertebral level as shown on the MRI study from the same date. He noted that upon comparison with the thoracic spine x-rays, there is a chronic compression deformity of the T4 vertebra with 20% loss of the vertebral body height. (*Id. at PDF-2 pp. 105-106 of 516*).

51. On January 25, 2022 Dr. McLaughlin-Abrams noted Insurer denied authorization of the requested left knee and neck x-rays. Claimant reported right lateral and anterior hip pain, left knee pain, mid back pain, low back pain and neck pain. Dr. McLaughlin-Abrams again noted Claimant was also experiencing some increased left knee and upper back and neck pain that was becoming more pronounced over the past few months without an inciting event. (*Id. at PDF-2 pp. 331-334 of 368*).

52. On January 26, 2022 NP Sabella reviewed Claimant's thoracic x-ray and MRI and remarked that the MRI showed possible reasons for Claimant's pain. She referred Claimant to a spine specialist, noting Claimant may benefit from injections if indicated by the specialist. (*Id. at PDF-2 pp. 117-128 of 516*).

53. Authorized treating physician ("ATP") Dr. Zimmerman performed an impairment rating evaluation on January 27, 2022. Claimant reported to Dr. Zimmerman nothing had changed over the course of his treatment and that he had experienced a year of chronic pain. Claimant further reported that his low back pain returned and that he had since underwent a new MRI which Claimant claimed discovered a herniated disc. Dr. Zimmerman noted that the lumbar injections in September 2021 only provided Claimant three weeks of relief before his symptoms returned. On examination, Dr. Zimmerman noted motion and sensation were grossly intact in both lower extremities, deep tendon reflexes were 2+/4 in the bilateral lower extremities, and straight leg raise and neural tension were negative bilaterally. He performed lumbar range of motion measurements with 2 standard inclinometers, detailing his three sets of measurements and determining the measurements were valid. (*R. Ex. B*).

54. Dr. Zimmerman's final assessment was: (1) lumbar strain with extension based pain, temporary therapeutic response to facet steroid injections; (2) MRI evidence of mild-to-moderate disk degeneration and bilateral neuroforaminal stenosis at L5-S1 based on MRI dated 12/30/2020; (3) history of situational anxiety, adjustment disorder, and previous history of mood disorders. Unreliable with regard to antidepressant medication use; (4) history of insomnia; and (5) no further medical treatment offered after Dr. Pehler reviewed surveillance video. (*Id.).*

55. Dr. Zimmerman placed Claimant at MMI. Using the AMA Guides, Dr. Zimmerman assigned a combined 16% whole person impairment rating. The rating consisted of 7% rating under Table 53(II)(C) for a lumbar strain with mild-to-moderate spondylitic changes and ongoing symptoms, along with 10% impairment for deficits in lumbar range of motion. He recommended permanent restrictions as outlined by PA Bodkin, and 6-12 months of maintenance medical treatment in the form of medication. (*Id.*).

56. On January 31, 2022, Claimant saw Barry Alan Ogin M.D. at Colorado Rehabilitation & Occupational Medicine on a previous referral from Dr. Pehler for Claimant's chronic axial low back pain. Dr. Ogin noted Claimant's current main complaint was axial lower lumbar pain with some occasional radiation down the left leg. Claimant had secondary complaints of mid back pain radiating up to the upper back and lower neck region, which Dr. Ogin noted became more prominent since about mid-October when Claimant had a flareup. Dr. Ogin further noted Claimant attributed those symptoms to physical therapy and Claimant was unsure if his mid and upper back pain was related to his initial occupational injury. On examination, Dr. Ogin noted lumbar tenderness and pain with flexion and extension, mild tenderness in lower thoracic region, full cervical range of motion without pain. While supine, straight leg raise increased pain in his back and buttocks bilaterally with no pain in the hip on internal or external rotation. When seated straight leg raise was negative bilaterally with no pain with hip internal or external rotation. (*Cl. Ex. 4, PDF-1 pp. 340-344 of 368*).

57. Dr. Ogin referenced Claimant's August 18, 2021 lumbar MRI and prior psychological testing. He assessed Claimant with a lumbar disc herniation, low back pain, lumbar degenerative disc disease and a lumbar sprain. He noted a lumbosacral discography had been scheduled for 1/31/2022 but was cancelled due to the request for the discography being withdrawn by the surgeon. Dr. Ogin noted there were obvious concerns as to whether would be a good surgical candidate, including psychosocial issues, and reviewed with Claimant that a discogram would only be appropriate if he is already been deemed a surgical candidate should he have a positive discogram. He opined that, in the event Claimant had a positive discogram and Dr. Pehler determined Claimant is a good surgical candidate, he would first need to be cleared by a psychologist prior to any interventional care. Claimant was to return on an as-needed basis. (*Id.).*

58. Claimant saw PA Bodkin for a final appointment on February 1, 2022. PA Bodkin noted Claimant was not happy and disagreed with the outcome of his case and had many remaining questions along with concerns that many of the medical reports needed amending. She further noted Claimant's report that he did not trust any of his providers despite her telling him she does not work for Employer or Insurer. On examination, PA Bodkin noted no tenderness and full range of motion of the thoracic spine, mild tenderness in the left and right paraspinals of the lumbosacral spine with bilateral muscle spasms and limited range of motion. The final assessment noted was: 1) Lumbar disc herniation; 2) Derangement of right SI joint; 3) Acute stress reaction; and 4) Lumbar sprain. Claimant was placed at MMI as of February 1, 2022 with 16% whole person impairment and permanent restrictions of no lifting greater than 50 lbs. PA Bodkin recommended 12 months of maintenance medications. Dr. Burns completed a Physician's Report of Worker's Compensation Injury on February 1, 2022 consistent with the reports of PA Bodkin and Dr. Zimmerman. (*Id. at PDF-1 pp. 345-349 of 368*).

59. On the referral of NP Sabella, Claimant saw NP Broesker at UC Health Spine Center on February 14, 2022. Claimant reported experiencing three weeks of relief from injections with subsequent return of low back pain and left leg numbness. Claimant also

endorsed thoracic spine muscle spasms and discomfort, as well as an abdominal hernia that worsened in physical therapy. NP Broesker assessed Claimant with lumbar degenerative disc disease and myofascial pain syndrome of the thoracic spine. She noted that options included repeat left L4-L5 and L5-S1 injections versus obtaining an updated lumbar MRI. NP Broesker further noted that the January 2022 thoracic showed multilevel disc degeneration with no concern for instability, central stenosis or foraminal stenosis. She discussed with Claimant that there is not a surgery that would make his upper back feel better and that he likely had a muscle strain and spasm. She further discussed stretching and exercises for his upper back. (*Cl. Ex. 4, PDF-2 pp. 128-150 of 516*).

60. Upon review of surveillance video of Claimant taken in the summer of 2021, Dr. Zimmerman issued a letter dated February 18, 2022. Dr. Zimmerman agreed with Dr. Pehler's opinion dated December 22, 2021 that the video surveillance activity is inconsistent with the complaints Claimant has in office. He further agreed with Dr. Burns' January 6, 2022 opinion that the surveillance video showed physical abilities that are inconsistent with Claimant's complaints in clinic and that Claimant was MMI at the time. Nonetheless, Dr. Zimmerman opined that the surveillance video did not provide any conclusive evidence that his impairment rating should be changed. He explained that the impairment rating he assigned under Table 53(II)(C) of the AMA Guides is for Claimant's underlying lumbar spondylosis confirmed by MRI and his ongoing symptoms. Dr. Zimmerman further explained that the video surveillance did not conclusively demonstrate Claimant's ability to extend beyond what was seen on his examination. Dr. Zimmerman remarked that Claimant has established himself as a very unreliable historian and repeatedly embellished his pain symptoms in the clinic. He continued to opine Claimant is at MMI with no further medical treatments indicated other than the maintenance medications for 6 to 12 months as documented in the impairment rating evaluation. (*R. Ex. B, Bates 23*).

61. On the referral of NP Sabella, Claimant presented to Angela Bohnen, M.D. at NeurosurgeryONE Clinic on February 28, 2022. Dr. Bohnen noted that a 2005 mountain biking accident revealed a T4 compression fracture resulting in mid back pain between Claimant's shoulder blades which improved over time. Dr. Bohnen documented Claimant's report of the 11/11/2020 work injury in which he felt a pop in his back and radiating pain into his lower extremity with pain ever since. Claimant reported that the February 2021 injections resulted in significant improvement in his right lower back and buttocks pain but no change in his other pain. Dr. Bohnen noted that the lumbar injection in September 2021 may have helped Claimant's left lower extremity pain but not his back. Claimant's primary complaint was low back pain radiating up to the base of his neck. Claimant reported subjective right lower extremity weakness and also neck pain radiating down into his arms. Dr. Bohnen noted Claimant did not feel like he had gotten a definitive answer for his pain. On examination Dr. Bohnen noted no tenderness to palpation to cervical and thoracic spine. Straight leg raise, FABER's and Spurling's tests were all negative bilaterally. (*Cl. Ex. 4, PDF-2 pp. 151-155 of 516*).

62. Dr. Bohnen reviewed the January 2022 thoracic MRI and x-rays as well as the August 2021 lumbar MRI. She diagnosed Claimant with thoracic compression fracture and back pain. Dr. Bohnen remarked,

> Overall, there is no structural cause for his pain. That being said, he does have symptoms. He is quite honed in on the symptoms and is frustrated with the process that he has gone through and does not understand how he can still be in pain if all of his imaging is negative. Overall, he does have an old impression fracture and some degenerative changes in his thoracic spine. I talked to him about doing CT spectroscopy to evaluate for any 1 potential inflammatory ictus, that could be then targeted. I think we should do this in the thoracic and lumbar. Somebody has brought up to him a potential lumbar disc replacement; however, the patient has not undergone a disco gram and ultimately schedule for the end of the month but then canceled for a reason I cannot understand. At this point the patient is not a surgical candidate.

(*Id. at PDF-2 pp. 154-155 of 516*).

Dr. Bohen noted she needed to look into potential pain generators and then determine next steps. She referred Claimant for a CT spectroscopy of the thoracic and lumbar spine and a L4-L5, L5-S1 discogram.

63. Respondents filed a Final Admission of Liability ("FAL") on March 2, 2022, admitting to 16% whole person impairment and reasonable, necessary and related medical treatment and/or medications after MMI. (*R. Ex. AA*).

64. Claimant objected to the FAL and filed an Amended Notice and Proposal and Application for a DIME on March 18, 2022, requesting evaluation of the following body parts/conditions: psychological, cervical spine, thoracic spine, lumbar spine, hernia, and vision.

65. On April 4, 2022, David Orgel, M.D. was selected and confirmed as the DIME physician. A DIME appointment was scheduled for June 9, 2022.

66. Claimant appeared for the DIME appointment with Dr. Orgel on June 9, 2022 after having provided additional records to Dr. Orgel that had not been exchanged in accordance with WCRP 11. Accordingly, Dr. Orgel was unable to proceed with the DIME as scheduled on June 9, 2022.

67. The parties attended multiple prehearing conferences regarding various issues, including, inter alia, requests to terminate the DIME process, payment of DIME cancellation and rescheduling fees, documents to be provided to the DIME physician, and body parts to be examined by the DIME physician. The orders from these conferences are incorporated herein by reference. Claimant was represented by

counsel at some of these prehearings, including the prehearing most recent to the rescheduled DIME appointment. (*Cl. Ex. 4, Ex. 6*).

68. The parties negotiated additional material to be considered by the DIME physician. Ultimately, the body parts and conditions to be considered by the DIME physician were the cervical, thoracic and lumbar spine, SI joint, hernia, psychological and visual. (*R. Ex. W*).

69. Claimant underwent a bone spectroscopy/CT on March 9, 2022 that was compared to his August 2021 lumbar MRI and January 2022 thoracic MRI. Olrin Hopper, M.D. interpreted the results and provided the following impression: No scintigraphic evidence of abnormal osteoblastic tibia involving the thoracic or lumbar spine on the planar or spectroscopy or CT images. (*Cl. Ex. 4, PDF-2 pp. 166 of 516*).

70. On March 15, 2022 Claimant saw Thomas Christopher Sanders, PA-C at the Colorado Comprehensive Spine Institute. Claimant presented with diffuse spinal pain, most severe at the lumbosacral junction and base of the cervical spine. PA Sanders noted Claimant's neck became a greater issue after he was involved in a mild motor vehicle Collison ("MVC"). PA Sanders reviewed Claimant's July 2021 lumbar x-rays, August 2021 lumbar MRI, and January 2021 thoracic x-rays and MRI. He noted that x-rays obtained the day of his examination revealed focal degeneration at C5-6 with advanced disc space collapse and associated facet arthrosis. There was osteophytic spurring present along both the dorsal and ventral vertebral body at the level of the disc space. Cervical lordosis was 30 degrees. PA Sanders diagnosed Claimant with spondylosis of cervical region without myelopathy or radiculopathy; cervicalgia; spondyloarthropathy of the lumbar spine; chronic bilateral low back pain; and cervical degenerative disc disease. He recommended Claimant undergo a medial branch block at L5-S1 bilaterally and referred Claimant for a cervical spine MRI. (*Id. PDF-2 at pp. 174-181 of 516*).

71. Claimant underwent a cervical spine MRI on March 23, 2022. Benjamin Aronovitz, M.D. interpreted the results and provided the following impression: moderate degenerative changes including multilevel severe neural foraminal narrowing. (*Id. at PDF-2 pp. 224-225 of 516*).

72. On March 29, 2022 PA Sanders noted that the clinical reviewer with Claimant's primary health insurance provider, Bright HealthCare, denied his request for a medial branch block/facet procedure because Claimant's pain was too diffuse. PA Sanders disagreed with the denial, noting Claimant had focal pain at the lumbosacral junction consistent with facet mediated pain. (*Id. at PDF-2 p. 252 of 516*).

73. On April 5, 2022 Claimant saw Audrey Beth Sindic, PA-C at the Colorado Comprehensive Spine Institute. Claimant's chief complaint was gradually worsening neck pain with bilateral upper extremity numbness. PA Sindic reviewed Claimant's cervical x-rays and MRI, which she noted demonstrated degenerative disc disease and bilateral facet arthropathy. Given Claimant's ongoing complaints of neck pain, she

concluded it was reasonable to begin with a potent anti-inflammatory and physical therapy. Surgical intervention for cervical spine was not recommended at that time. PA Sindic noted Claimant also vocalized concern for his lumbar spine pain. She encouraged him to gather his medical records for her review to determine next steps. (*Id. at PDF-2 pp. 257-262 of 516*).

74. On the referral of PA Sindic, Claimant began physical therapy for his cervical spine at Accelerate Physical Therapy on April 8, 2022. The record of this session documents that Claimant began to note the onset of neck pain in May 2021. Claimant reported he underwent injections for his low back in September 2021 and noted increased complaints of neck pain two weeks later. The physical therapist noted Claimant was involved in a MVC on 10/8/2021 in which he was the third car involved in a rear-end collision on the highway. Claimant underwent approximately 27 sessions of physical therapy at Accelerate Physical Therapy from April 8, 2022 through August 23, 2022. (*Cl. Ex. 4, PDF-2*).

75. On April 13, 2022 Claimant requested that NP Sabella provide a referral to the Colorado Comprehensive Spine Institute for evaluation of his lumbar spine. (*Id. at PDF-2, p. 282 of 516*).

76. On May 17, 2022 PA Sindic noted Claimant's continued neck and back complaints. She remarked that x-rays obtained on the day of this examination demonstrated mild evidence of osteoarthritis in the bilateral hips, well-maintained vertebral disc height spaces in the lumbar and thoracic spine, and evidence of degenerative disc disease mild at C3-C4 and moderate at C4-C5 and C5-C6. There was also mild degenerative disc disease at L5-S1. PA Sindic referred Claimant to Kevin Schmidt, M.D. for cervical facet injections at C4-C5 and C5-C6. (*Id. at PDF-2 pp. 322-337 of 516*).

77. On May 19, 2022 PA Sindic recommended proceeding with a right L5-S1 intra-articular facet steroid injection given Claimant's complaints of axial low back pain and his positive response to previous lumbar injections. She noted Claimant's lumbar MRI demonstrated evidence of facet arthropathy at L4-L5 and L5-S1 in addition to mild to moderate foraminal narrowing noted on the left at L5-S1. (*Id. at PDF-2 pp. 341-343 of 516*).

78. On May 22, 2022 Claimant wrote a note to PA Sindic in his online health record at Colorado Comprehensive Spine Institute. He wrote, "I verbally stated and from all past medical history that I have pain in my SI joint, numbness in my foot, sharp pains in my SI joint and L5-S1 since 11/20, pain in spine above L5-S1 feels catering to injury, upper back and neck bothersome since 3/21." (*Id. at PDF-2 p. 346 of 516*).

79. On May 23, 2022 PA Sindic issued an addendum to a May 17, 2022 lumbar x-ray noting retrolisthesis appreciated at L5-S1 with dynamic instability appreciated on flexion-extension views. There was subtle retrolisthesis at L4-L5 with no dynamic instability. (*Id. at PDF-2 p. 346 of 516*).

80. At a follow-up evaluation with PA Sindic on June 2, 2022 Claimant's chief complaint was a decreased ability to tolerate a standing position secondary to back pain. PA Sindic placed an order for injections. (*Id. at PDF-2 pp. 352-358 of 516*).

81. On June 14, 2022 Claimant underwent bilateral C4-C5 and C5-C6 facet injections performed by Dr. Schmidt. During a follow-up telephone call with Dr. Schmidt's office on June 15, 2022, Claimant reported improvement in his pain following the injections. He rated his pain at level 2-3/10. (*Id. at PDF-2 pp. 366 & 425 of 516*).

82. On June 17, 2022 [Redacted, hereinafter LG] at Colorado Comprehensive Spine Institute noted Claimant called the clinic asking why he was escorted off the hospital site the day prior. Claimant stated he wanted someone to be held accountable for the situation. (*Id. at PDF-2 p. 428 of 516*).

83. On June 20, 2022 NP Sabella referred Claimant to the pain clinic for evaluation of his back and to general surgery for evaluation of an abdominal wall bulge. (*Id. at PDF-2 pp. 433-436 of 516*).

84. On June 21, 2022 Farah L. Broomandi at the Colorado Comprehensive Spine Institute noted she spoke with Claimant and informed him that he would be allowed into Dr. Schmidt's clinic for care, but that he would need to sign a behavior plan with set expectations. (*Id. at PDF-2 p. 439 of 516*).

85. On June 28, 2022 Ms. Broomandi noted that a discharge letter would be sent to Claimant due to changes in the June 21, 2022 decision regarding allowing Claimant's care at Dr. Schmidt's clinic. (*Id*.).

86. Claimant returned to NP Broesker on July 11, 2022. He was scheduled to undergo L5-S1 right facet and right SI joint injections that day for diagnostic purposes. (*Id. at PDF-2 pp. 447-463 of 516*).

87. On the referral of NP Sabella, Claimant presented to Kevin Bradley Rothschild, M.D. at University of Colorado Medicine Surgery Department on August 8, 2022. Claimant complained of left upper quadrant abdominal pain. Claimant reported that approximately 1.5 years prior he was in the process of performing a core exercise in physical therapy and felt something pop. He further reported that he lived for a year and a half with something bulging and flopping out of his abdomen, and then over the last year or six months or so it improved. Dr. Rothschild noted a January 2022 abdominal ultrasound showed essentially a small rectus diastases with just a very modest separation of the rectus musculature without any hernia. On examination, Dr. Rothschild noted that with Valsalva he could appreciate a very small rectus diastases without any appreciable bulge. He did not feel a hernia. Dr. Rothschild further noted that Claimant pointed several times to the left costal margin just off the midline of his abdomen indicating there was a bulge, but after repeating the examination for a total of three

times, Dr. Rothschild did not appreciate a bulge and in fact felt normal rectus musculature with no sign at all of any hernia. (*Id. at PDF-2 pp. 485-492 of 516*).

88. Dr. Rothschild provided an assessment: of rectus diastases. He wrote,

> I spent about 10 minutes talking to the patient about the fact that I do not appreciate a hernia in that area that I have never really found any hernia in that area in my practice and that it's not an area that I am familiar with for someone to develop a defect. I talked to him about the nature of her (*sic*) rectus diastasis and that this is not a true hernia and in his case he has a very small one that is actually is (*sic*) not even bulging with Valsalva. After this he insisted that he had a defect and asked me on several occasions to repeat his exam and after several request I refused and told him that the visit was over as I did not see any surgical indication here. Patient absolutely refused to leave his clinic visit at this point insisting that both the MAs or anyone in the area repeat his exam for a quote 'second opinion'. I explained again my opinion and asked him to please leave and he refused. Sitting the (*sic)* exam room and demanding that he get a second opinion and another ultrasound. I eventually asked for security to escort the patient out (he asked the security guard to examine his abdomen).

(*Id. at PDF-2 p. 488 of 516*).

89. Claimant returned to NP Sabella on August 22, 2022. NP Sabella noted she deferred examination because Claimant was recording the appointment without her consent or prior notice. She noted a diagnosis of a strain of the rectus abdominis muscle. Claimant requested that NP Sabella order another abdominal ultrasound. (*Id. at PDF pp. 505-507 of 516*).

90. On August 31, 2022 Claimant underwent a x-rays of his cervical spine, ordered by Dr. Burger. MK Jesse, M.D. interpreted the results and gave the following impression: degenerative disc disease greatest at C5-C6 with no pathologic listhesis. (*Id. at PDF-2 pp. 513-514 of 516*).

91. On August 31, 2022 Claimant also saw Lisa Allison Malyak, M.D. at the Orthopaedic Spine Center. Claimant reported being frustrated with different opinions from different physicians. He further reported that he could not stand for more than 10 minutes without experiencing significant pain. Dr. Malyak noted she had extensive discussion with Claimant and Dr. Burger regarding Claimant's old prior thoracic disc herniation. She noted that the prior thoracic disc herniation had since healed but still appeared abnormal on imaging, which is to be expected. She further noted that Claimant does not have any pathology on his cervical or lumbar spine MRIs concerning for cord compression or abnormal signal changes. Dr. Malyak opined no surgical intervention was indicated at that time. Dr. Burger noted she saw and evaluated

Claimant and discussed the case with Dr. Malyak and agreed with the findings and plan as documented. (*Id. at PDF-2 pp. 498-501 of 516*).

92. On September 8, 2022 Claimant presented to Mile High Spine and Pain Center with complaints of low back pain radiating down his left side for the past two years. Claimant reported that the pain wrapped around the front of his groin on the left. Claimant also reported neck pain that began the same time two years ago with radiation down both sides of his neck and shoulders. Diagnoses included other low back pain, muscle spasm of the back, right and left side sciatica, lumbar radiculopathy, right and left leg pain, cervicalgia, cervical radiculopathy, other cervical disc degeneration, other lumbar disc degeneration, and thoracic spine pain. Courtney Williams, M.D. recommended Claimant undergo lumbar and SI trigger point injections, physical therapy, chiropractic treatment, platelet rich plasma injections, and a lumbar decompression. (*Cl. Ex. 7*).

93. Dr. Orgel conducted the DIME on October 20, 2022, noting the scope of his exam as the cervical, thoracic, and lumbar spine, sacroiliac joint, hernia, psychological and visual. Dr. Orgel spent two hours and six minutes with Claimant reviewing his history and performing a physical examination and impairment rating. Dr. Orgel reviewed over 360 pages of records in the initial DIME packet, along with 516 pages in the supplemental DIME packet. Dr. Orgel issued a report using Division form WC201 in which he detailed his records review, his physical examination, and Claimant's reported subjective history. He further identified and discussed several issues he deemed pertinent to his analysis, providing explanations for his conclusions. (*R. Ex. A*).

94. Dr. Orgel noted Claimant's reported dissatisfaction and frustration with his course of treatment. Claimant complained of chronic pain in his axial low back, left lateral hip and leg, and left upper quadrant. Claimant also complained of midthoracic back pain, which Dr. Orgel noted Claimant,

> [a]dmits to having pain in this area before this injury, but he states that this midthoracic pain and cervical pain began sometime in mid February or March, he's not sure why but there was no incident, he feels this may be related to his ongoing low back complaints and lack of treatment for the back pain or his posture."

(*Id. at Bates 9*).

Claimant further reported experiencing changes in his vision after receiving a back injection on February 3, 2021.

95. On examination, Dr. Orgel noted palpation of the abdominal wall did not reveal significant diastases recti or ventral hernias. Claimant pointed to his upper lateral rectus abdominis as the area of the original swelling and reported that it was not currently present and had improved. There was limited range of motion of the neck in all planes without axial cervical spine tenderness or significant trigger points or spasm.

Compression test was negative. Dr. Orgel noted scoliosis in the thoracic spine without tenderness, and full range of motion of the thoracic back without pain and trigger points. There was flattened lumbar lordosis with bilateral paraspinal muscle spasms, without sacroiliac discomfort or swelling, and no axial lumbar spine tenderness. Babinski, straight leg raising and Faber tests were negative. There was no weakness noted in either extremity. He documented three sets of lumbar range of motion measurements, which he noted were valid. (*R. Ex. A*).

96. Dr. Orgel detailed the findings of Claimant's multiple diagnostic tests in his records review. In a separate section of his report he specifically noted that the August 18, 2021 lumbar spine MRI "indicated some worsening of the degenerative disc disease at L4 5 with a more prominent central annular fissure and moderate left neuroforaminal narrowing. At L5 S1 there was a posterior annular fissure and disk bulging causing moderate bilateral neuroforaminal narrowing similar to the prior MRI." (*Id. at Bates 11*). He further noted that diagnostic testing revealed moderate bilateral cervical facet arthritis as well as bilateral foraminal narrowing throughout the cervical spine. Regarding the January 21, 2022 thoracic MRI, he remarked that it showed:

> [m]ultilevel disc desiccation and height loss with a few associated small bulges in protrusions most notable T7 T8 with mild spinal stenosis and mild flattening of the spinal cord. A compression deformity is noted at T4 with 20% loss of vertebral height characterizes a chronic depression deformity. There is no significant foraminal stenosis. There are chronic Scmorl's nodes noted. An x-ray of the thoracic spine suggest a mild compression deformity of the T5 vertebrae was 20% loss of height.

(*Id*.)

97. Dr. Orgel noted that a biopsychosocial psychomedical evaluation on September 18, 2021 did not document a history of bipolar disorder and deemed Claimant's condition work-related. He opined, however, that recurrent behavioral issues were noted in the record and appeared to be long-standing and stable, consistent with a personality disorder, as well as Claimant's diagnosed bipolar disease. Dr. Orgel therefore concluded that Claimant's psychological assessment was based on insufficient and incomplete information and was not correct. (R. Ex. A).

98. Dr. Orgel provided the following clinical diagnoses:

> Work-related lumbar strain
>
> Non-work-related cervical and thoracic pain, presbycusis and diastases recti
>
> Significant pre-existing psychological condition. He apparently was placed on an involuntary one week hold in the past. In addition, the behaviors as outlined in the record and in the office on my 1st meeting with him suggest

> some element of thought disorder, delusion, or more likely personality disorder. This is not work-related.

(*Id. at Bates 12*).

99. Dr. Orgel opined Claimant reached MMI on January 27, 2022. Using the AMA Guides, Dr. Orgel assigned Claimant a combined 20% whole person impairment, consisting of 7% impairment under Table 53(II)(C) and 14% impairment for lumbar range of motion deficits. Dr. Orgel explained that the record supported a work-related back injury, and despite his lack of improvement and expanding complaints, his exam of Claimant was consistent with ongoing back pain. He opined there was no separate impairment for the sacroiliac joint, as Claimant's primary complaint is related to the lumbar spine and the results of the Faber test on his examination was negative. Dr. Orgel explained there was no impairment for the cervical or thoracic spine for reasons discussed in his reports, noting Claimant had a prior thoracic injury, there was a lack of mechanism of injury, there no temporal relation, and there was an intervening cervical event in terms of the MVC. He noted he did not assign any abdominal or visual impairment as those conditions were not work-related. He further opined Claimant did not have any psychological impairment as his current psychological condition was preexisting and non-work related. (*R. Ex. A).*

100. As medical maintenance care Dr. Orgel recommended one year of follow-up with a physiatrist for medication management and as needed injections. He did not recommend any permanent restrictions. (*Id.*).

101. On October 26, 2022 Claimant presented as a new patient to Dallas Melvin Bogner, M.D. at Centura Health. Claimant reported that on November 11, 2020 he was smashing concrete with a sledgehammer and experienced back issues in which he felt a pop in his low back that radiated to his buttock and SI joint. Dr. Bogner noted Claimant underwent injection therapy to his low back in February 2021 and had an "odd complaint of vision issues, blurred." (*Cl. Ex. 7*). Claimant further reported cervical and thoracic pain and alleged an injury on the left rectus abdominal muscle from physical therapy. Dr. Bogner noted Claimant had been evaluated by the surgery department, who found mild rectus diastasis, but no hernia. He further noted an ultrasound did not reveal a hernia. Dr. Bogner provided an assessment of chronic midline low back pain without sciatica and referred Claimant for physical therapy and pain management.

102. On October 25, 2022 the DOWC issued a notice to the parties stating the DIME Unit was in receipt of Dr. Orgel's sufficient DIME report and the DIME process had thus concluded. (*R. Ex. Q*).

103. Respondents filed a FAL on October 26, 2022 consistent with Dr. Orgel's DIME report, admitting for 20% whole person impairment and reasonable, necessary and related medical treatment and/or medications after MMI. (*R. Ex. R*).

104. Claimant attended multiple physical therapy sessions at Select Physical Therapy between November 4, 2022 and February 13, 2023, reporting back and leg pain. (*Cl. Ex. 7*).

105. On November 8, 2022 Claimant filed an Objection to the FAL and an Application for Hearing challenging Dr. Orgel's DIME report and endorsing the issue of maintenance medical benefits. (*R. Ex. O, Ex. P*).

106. On November 22, 2022 Claimant saw Erin Colleen Zahradnik, M.D. at Centura Health on the referral of Dr. Bogner. Claimant reported mid and low back pain, as well as neck pain, left greater than right, with numbness in the left index finger and bilateral shoulders. Dr. Zahradnik requested to review of all of Claimant's records before determining if he would benefit from any further procedures, including additional cervical injections. (*Cl. Ex. 7*).

107. On December 29, 2022 Claimant presented to Todd F Vanderheiden, M.D. at Panorama Orthopedics & Spine Center for evaluation of his neck and back pain. Claimant reported that his symptoms began in November 2020 while slamming concrete with a sledge hammer at work, and that he then exacerbated his lower back symptoms three weeks later while working on a different project. Claimant complained of ongoing neck, mid back and low back pain and slight pain radiating down the legs mainly on the right. Dr. Vanderheiden noted that a March 23, 2022 cervical MRI demonstrated multilevel degenerative disc disease, a January 21, 2022 thoracic MRI demonstrated multilevel thoracic degenerative disc disease with evidence of Schmorl's nodes and Scheuermann's discs without kyphosis, and a December 30, 2020 lumbar spine MRI demonstrated degenerative changes from L4-S1. Dr. Vanderheiden's primary diagnoses were cervicalgia and cervical degenerative disc disease; his secondary diagnoses were thoracalgia, thoracic degenerative disc disease, multiple thoracic Schmorl's nodes, thoracic Scheuemann's discs without kyphosis; his tertiary diagnoses were L4-S1 degenerative disc disease and lumbago; and his quaternary diagnosis was work injury 11/2020. He opined there were no surgical indications, noting there was no malalignment, instability, or significant neurological compression. He recommended Claimant consult with a nonoperative spine specialist. (*Id.*).

108. Claimant returned to Dr. Zahradnik on January 4, 2023. Claimant reported experiencing relief from the right SI joint injection and right L5-S1 facet injections with Dr. Zimmerman in February 2021. He further reported experiencing 60% relief of his pain for three months after undergoing cervical injections in June 2022. Dr. Zahradnik noted Claimant's pain on her examination was consistent with both facet mediated pain and right SI joint mediated pain. She recommended starting with L4-5 and L5-S1 medical branch blocks for consideration of radiofrequency ablation, and then considering a right SI joint injection. (*Id.*).

109. On January 19, 2023 Claimant underwent bilateral L3, L4 and L5 medial branch blocks performed by Bryan Gary Wernick, M.D. at Centura Health. Claimant

reported significant alleviation of his pain for several hours after the medical branch blocks. (*Id.*).

110. Claimant's Exhibit 3 contains portions of audio recording of his evaluations with Dr. Zimmerman on January 27, 2022, PA Bodkin on February 1, 2022, NP Broesker on February 14, 2022 and Dr. Orgel on June 9, 2022. Claimant recorded and edited the recordings. Claimant is heard on the recordings vocalizing continued symptoms and concerns that his conditions were not fully addressed or resolved.

111. Claimant testified at hearing regarding his frustrations and dissatisfaction with his injury, course of treatment, providers, Employer, Insurer, counsel, the workers' compensation system and his personal physicians. Claimant testified that some of the medical records do not accurately reflect his reports to his providers or the true nature of his symptoms and condition. Claimant testified there are missing medical reports, which he identified as an x-ray from his December 4, 2020 evaluation, an incomplete MRI report from December 30, 2020, and two chiropractic reports from February 2021 in which the provider noted back and neck issues. Claimant alleges Respondents destroyed some other records, which he did not identify. He further testified that on March 31, 2021 he completed a written intake form indicating neck issues but that it was deleted by a third party and replaced with a digital copy that does not reflect his reported neck and other issues. Claimant testified Respondents delayed in, but ultimately provided, other records. Claimant stated he has been seeking real answers to, and resolutions for, his symptoms and he feels he has been written off.

112. Claimant further testified that, despite his prior thoracic spine injury in 2004 or 2005, he has worked ever since. He stated the symptoms he developed after the November 11, 2020 work injury were not present prior to the work injury. Claimant denies a history of bipolar disorder or psychological problems. He testified that Dr. Cotageorge, Dr. Disorbio, LPC Misler did not note any diagnosis of bipolar disorder in their notes. Claimant testified Dr. Orgel "distorted" everything and erred in his DIME opinion by placing him at MMI. He testified Dr. Orgel attributed everything to pre-existing conditions and failed to give an impairment rating for his cervical spine, thoracic spine, vision issues and abdomen. Claimant further testified Dr. Orgel referenced a December 2020 physical therapy record, but did not note the included findings and diagnoses regarding his cervical and thoracic spine. He testified that he is entitled to an impairment rating for his cervical spine based on having objective evidence of pathology on his imaging and over six months of treatment to his neck. Claimant testified that the October 2021 MVC in which he was involved was very minor and did not result in any neck issues. Claimant additionally testified that the medical records support a diagnosis of rectus diastases, which he believes is related to the work injury. He further stated that he suffered from vision issues which were not documented when he reported them to his providers, and that physicians subsequently incorrectly attributed the vision issues to old age. Claimant testified he is immobile and continues to experience symptoms and require treatment.

113. The ALJ finds the opinions of DIME physician Dr. Orgel and treating physicians Drs. Zimmerman, Burns, and Pehler, as supported by the medical records as well as the opinions of Claimant's multiple personal physicians, more credible and persuasive than Claimant's testimony and any other conflicting opinions.

114. Dr. Orgel properly applied the AMA Guides in his determination of MMI and permanent impairment.

115. Claimant failed to provide clear and convincing evidence demonstrating Dr. Orgel erred in his DIME opinions on MMI and permanent impairment.

116. Claimant failed to prove by a preponderance of the evidence treatment of the cervical spine, thoracic spine, SI joint, abdomen, vision or psychological condition is reasonable, necessary and causally related.

117. Claimant failed to establish by a preponderance of the evidence the post-MMI treatment Claimant sought with various providers outside of his ATPs and specific referrals from ATPs for maintenance care was authorized medical treatment.

118. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance*

Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

The party seeking to overcome the DIME physician's finding regarding MMI and permanent whole person impairment bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S.

A determination of MMI and permanent medical impairment requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury and the losses resulting from that injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017); *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services*, W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016).

Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Offic*e, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation, and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

A DIME physician is required to rate a claimant's impairment in accordance with the AMA Guides. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the AMA Guides do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* WC 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the AMA Guides in determining the weight to be accorded the DIME physician's findings. Deviations from the AMA Guides constitute evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *See Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Vuksic v. Lockheed Martin Corporation* WC 4-956-741-02 (ICAO, Aug. 4, 2016). Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In re Goffinett,* WC 4-677-750 (ICAO, Apr. 16, 2008).

Claimant contends Dr. Orgel erred in determining Claimant reached MMI, finding that only his lumbar spine work-related, and failing to give permanent impairment ratings for his other conditions. As found, Claimant failed to prove it is highly probable Dr. Orgel's DIME opinions on MMI and permanent impairment are incorrect.

Dr. Orgel opined Claimant reached MMI on January 27, 2022 with a 20% whole person impairment rating. As part of his determination regarding MMI and impairment, Dr. Orgel specifically addressed each of the following body parts/conditions as agreed upon by the parties: cervical, thoracic and lumbar spine, SI joint, hernia, as well as psychological and visual conditions. He ultimately concluded that only Claimant's lumbar spine condition is related to the November 11, 2020 work injury.

Each body part/condition addressed by Dr. Orgel is discussed below.

<u>Cervical and Thoracic Spine</u>

Dr. Orgel found Claimant's cervical and thoracic pain unrelated to the work injury, noting a history of a prior thoracic injury, a lack of mechanism of injury and temporal relation to the thoracic spine, and an intervening cervical spine event. Dr. Orgel's conclusion is consistent with the medical records.

Dr. Orgel specifically noted that, per the history Claimant provided at his evaluation, as well as his review of the medical records, Claimant's thoracic and cervical spine complaints began occurring several months after the initial injury. Initial medical records do not document any mechanism of injury to the cervical or thoracic spine, nor any cervical or thoracic spine complaints or findings. Claimant argues that a December 7, 2020 physical therapy note documents limited range of motion with thoracolumbar side bending. This is not dispositive of a work-related cervical or thoracic injury. The first documentation in the medical records of reported upper back pain is in Dr. Cotageorge's January 28, 2021 note, in which Claimant reported chronic and ongoing upper back pain that was primarily due to an old injury. A February 17, 2021 chiropractic note does reference neck complaints as well as findings of segmental and somatic dysfunction of the cervical and thoracic regions. Even assuming, arguendo, that the two prior missing chiropractic notes referenced in the February 17, 2021 chiropractic note also document cervical/thoracic complaints and findings, such documentation would have occurred several weeks after the initial injury and is not dispositive, in light of the totality of the evidence, of any causal relationship to the work injury.

Evidence demonstrates Claimant's differing reports to providers regarding the onset of his neck and upper back pain. On January 4, 2022, Claimant reported to Dr. McLaughlin-Abrams increased upper back and neck pain that became more pronounced over the past month without an inciting event. On January 31, 2022, Dr. Ogin noted Claimant's secondary complaints of mid back pain radiating to Claimant's upper back and lower neck region which had become more prominent since about mid-October 2021. On March 15, 2022, PA Sanders noted that Claimant's neck became a greater issue after involvement in a MVC. An April 8, 2022 physical therapy record documents an onset of neck pain in May 2021. On May 22, 2022, Claimant himself wrote in his online records at the Colorado Comprehensive Spine Institute that his upper back and neck had been bothersome since March 2021. As noted by Dr. Orgel, Claimant reported to him that his cervical and thoracic pain began in mid-February or March 2021 without incident.

It is undisputed Claimant suffered a prior injury to his thoracic spine that resulted in compression fractures. Dr. Malyak credibly explained that Claimant's prior thoracic disc herniation had since healed but still appeared abnormal on imaging, which she stated is to be expected. Claimant underwent extensive workup of his cervical and thoracic spine, including thoracic x-rays and an MRI prior to MMI, as well as multiple cervical x-rays, MRIs, and a bone spectroscopy/CT post-MMI. Multiple providers in this matter, including the workers' compensation providers and Claimant's personal physicians, have opined that the imaging and testing demonstrated chronic and degenerative findings. While Claimant was able to perform his job as a carpenter prior to the November 11 2020 work injury despite his previous thoracic injury, there is insufficient objective evidence of any acute injury, aggravation, acceleration or exacerbation to Claimant's cervical or thoracic spine related to the work injury. There is no clear and convincing evidence establishing Dr. Orgel erred in finding Claimant's cervical spine and thoracic spine unrelated to the work injury, and thus concluding

Claimant does not require further work-related treatment or permanent impairment to such body parts.

Abdomen/Hernia

Claimant contends he sustained a work-related hernia during a physical therapy session for the work injury and that his providers ignored his complaints and failed to provide proper evaluation and treatment. Claimant's allegation he sustained a hernia during a December 28, 2020 physical therapy session is documented on December 30, 2020 and in various records thereafter. Dr. Orgel concluded Claimant suffered from non-work related diastases recti. Dr. Orgel's opinion is corroborated by the medical records and the opinions of other physicians. On January 20, 2021, an emergency room physician specifically noted Claimant's abdominal complaints, examined Claimant, and found no evidence of a hernia. This examination took place a few weeks after Claimant's reports of the onset of abdominal pain that he relates to the physical therapy session. Claimant also underwent an abdominal ultrasound on January 11, 2022, which was negative without evidence of an abdominal wall hernia.

Subsequently, Dr. Rothschild, a physician outside of the workers' compensation system, specifically evaluated Claimant for his abdominal condition. He reviewed the abdominal ultrasound, interviewed Claimant and performed a physical examination. Dr. Rothschild agreed there was no hernia and diagnosed Claimant with rectus diastases. Dr. Orgel's physical examination did not reveal significant diastases recti or ventral hernias. That Claimant felt abdominal pain during a physical therapy session and believes he sustained a hernia is insufficient, in light of the totality of the evidence, to establish that he sustained a work-related abdominal injury that caused disability or necessitated medical treatment. Accordingly, the evidence does not show that Dr. Orgel's opinion on the relatedness of Claimant's abdominal condition, MMI and impairment is highly probably incorrect.

Vision

Claimant argues he suffered vision problems as a result of the work injury. Dr. Orgel opined Claimant suffers from non-work related presbycusis. Dr. Orgel's opinion is consistent with the medical records. Vision complaints are not documented in the records until January 4, 2022, when Claimant reported to Dr. McLaughlin-Abrams that he experienced ongoing vision changes after undergoing an injection in February 2021. On October 26, 2022 Dr. Bogner referred to Claimant's complaints of vision issues after a February 2021 as "odd". No provider, whether an authorized provider or one of Claimant's personal physicians, has opined that Claimant's purported vision changes are the result of the work injury. No objective evidence was offered to even suggest a causal relationship between Claimant's purported vision issues and the work injury. That Claimant experienced changes to his vision during a period of time while he was also treating for a work injury is not dispositive of the fact the work injury caused his vision issues. The evidence, therefore, does not establish that Dr. Orgel's opinion on the

relatedness of Claimant's vision issues, MMI and impairment is highly probably incorrect.

Psychological

Claimant disagrees he had any prior history of bipolar disorder or psychological disorder and effectively argues that Dr. Orgel's references in his DIME report to psychological and behavioral problems represent bias against Claimant and are in error. There is not clear and convincing evidence Dr. Orgel's opinion regarding Claimant's psychological condition is highly probably incorrect.

A 2015 medical record documents Claimant was admitted to the hospital for psychosis and the record clearly notes a diagnosis of bipolar disorder. A January 20, 2021 medical record again documents a history of bipolar disorder. That Drs. Cotageorge and Disorbio and LPC Misler did not document a prior history or current diagnosis of bipolar disorder does not render Dr. Orgel's opinion highly probably incorrect. There is no indication those providers reviewed Claimant's prior medical records or were otherwise aware of his prior diagnosis. The ALJ is not persuaded Dr. Orgel's references to Claimant's recent behavioral episodes he either personally witnessed or reviewed in the medical records are biased or inappropriate, as Dr. Orgel was specifically asked to evaluate Claimant's psychological condition as part of his DIME. Additionally, per the AMA Guides, the DIME physician is to consider the current clinical status of the individual along with the findings of previous clinical evaluations in reaching their conclusions.

Prior to being placed at MMI, Claimant underwent authorized psychological evaluation and treatment. Drs. Cotageorge and Disorbio recommended Claimant undergo cognitive behavioral therapy for his work-related psychological conditions. Claimant participated in multiple CBT sessions with LPC Misler, who noted Claimant's progression at each session. LPC Misler ultimately discharged Claimant from his care, noting Claimant had successfully completed his program. Claimant's treating providers did not recommend additional work-related psychological treatment. Accordingly, the totality of the evidence does not establish that Dr. Orgel's opinion Claimant is at MMI with no psychological impairment or need for further work-related psychological treatment is highly probably incorrect.

Lumbar Spine and SI Joint

Dr. Orgel diagnosed Claimant with a work-related lumbar strain, for which Claimant reached MMI on January 27, 2022 with a 20% whole person impairment. Dr. Orgel's opinion is consistent with the medical records and the opinions of multiple treating physicians. On December 22, 2021 Dr. Pehler concluded that Claimant's documented activity levels were inconsistent with continued low back pain and SI joint instability affecting his quality of life and ability to work. He opined that, while it was possible Claimant had lumbar radiculopathy, it was mild, based on Claimant's demonstrated activity levels. Dr. Pehler no longer recommended that Claimant undergo

a discogram or disc replacement. On January 6, 2022, Dr. Burns opined that Claimant's current exam was benign, his complaints surrounded discomfort and not functional deficits, and that Claimant was approaching MMI. Dr. Zimmerman opined Claimant reached MMI at an evaluation on January 27, 2022. His final diagnoses included a lumbar strain, for which he gave Claimant 16% whole person impairment. Dr. Burns completed a Physician's Report of Worker's Compensation Injury on February 1, 2022 consistent with the reports of PA Bodkin and Dr. Zimmerman.

Prior to being placed at MMI, Claimant underwent a thorough workup of his lumbar spine, including multiple x-rays and MRIs, which revealed degenerative changes with minimal disc bulging and no neurologic compromise. Claimant also underwent treatment to his lumbar spine and SI joint, including physical therapy, chiropractic treatment and injections. That Claimant continued to experience lumbar complaints at the time he was placed at MMI does not negate the finding of MMI. A finding of MMI does not mean complete resolution of an individual's condition and symptoms, but that the physical or mental impairment as a result of injury has become stable and no further treatment is reasonably expected to improve the condition. See §8-40-201(11.5), C.R.S. An authorized treating physician shall make a determination as to when the injured employee reaches MMI. §8-42-107(8)(b)(I), C.R.S.

None of Claimant's authorized treating physicians recommended further diagnostic or curative treatment for Claimant's lumbar condition. Several of Claimant's personal physicians have opined that there are no surgical indications. Dr. Orgel's opinion that Claimant reached MMI for his work-related lumbar condition is consistent with the medical records and opinions of Claimant's authorized treating physicians that Claimant's condition was stable with no further treatment reasonably expected to improve his condition.

Moreover, as found, Dr. Orgel properly applied the AMA Guides when determining impairment. Using the AMA Guides, Dr. Orgel assigned Claimant a combined 20% whole person impairment, consisting of 7% impairment under Table 53(II)(C) and 14% impairment for lumbar range of motion deficits. Table 53(II)(C) of the AMA Guides provides for 7% permanent impairment of the lumbar spine for an "Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with moderate to severe degenerative changes on structural test; includes an operated herniated nucleus pulposus with or without radiculopathy." Here, Claimant had an unoperated, medically documented lumbar strain with a minimum of six months of medically documented pain, and moderate to severe degenerative changes on structural tests. Accordingly, Dr. Orgel's lumbar spine rating under Table 53(II)(C) was appropriate. Dr. Orgel's Table 53(II)(C) rating is also consistent with that of Dr. Zimmerman, who credibly explained that the impairment rating he assigned under Table 53(II)(C) of the AMA Guides is for Claimant's underlying lumbar spondylosis confirmed by MRI and ongoing symptoms.

There is no allegation of or evidence indicating Dr. Orgel did not properly perform or calculate his lumbar range of motion measurements. Dr. Orgel documented three sets of lumbar range of measurements, which he deemed valid. He properly calculated the corresponding impairment rating for Claimant's decreased lumbar range of motion under the AMA Guides. Dr. Orgel's range of motion measurements are consistent with findings documented in prior medical records and his impairment rating for lumbar range of motion deficits is even higher than that of Dr. Zimmerman. Dr. Orgel specifically explained he provided no separate impairment for the SI joint because Claimant's primary complaint is related to the lumbar spine and the results of the Faber test on his examination was negative. This is also largely consistent with prior examinations and the opinions of treating physicians. As such, there is not clear and convincing evidence Dr. Orgel's opinion on Claimant's lumbar spine impairment and MMI is incorrect.

Generally

In summation, Claimant has expressed substantial frustration with his course of treatment and various aspects of the workers' compensation system, including the DIME procedure. He continues to experience multiple symptoms and continues to seek medical treatment. The record reflects that Claimant's treating physicians, as well as Dr. Orgel, were aware of Claimant's continued reported complaints, that they assessed his conditions, and ultimately determined Claimant reached MMI for his work injury with impairment to his lumbar spine. Claimant essentially contends that any pathology documented in the medical records and any symptoms he experienced subsequent to the work injury are the direct result of the work injury. The existence of pathology and symptoms by itself is not dispositive of a causal relationship with the work injury. There must be a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). That Claimant has continued to seek and undergo treatment for his lumbar spine as well as other non-work related conditions subsequent to being placed at MMI does not disprove Dr. Orgel's opinion that Claimant has reached MMI for his work-related condition.

To the extent Claimant contends there are missing records, the ALJ is not persuaded, based on the totality of the evidence, including Claimant's own testimony, that the identified missing records, or other purported unidentified missing records, renders Dr. Orgel's opinion highly probably incorrect. Dr. Orgel performed a thorough review of the records he was provided, including not only the initial DIME packet of 316 pages, but an additional packet of 516 pages Claimant specifically requested be reviewed. Dr. Orgel took an extensive subjective history from Claimant, analyzed the history and course of Claimant's medical condition, assessed the clinical and diagnostic findings, and physically examined Claimant, addressing each body part identified by the parties to be within the scope of his evaluation. Dr. Orgel's findings and opinions were largely consistent with the findings of prior and subsequent evaluations as well as the opinions of multiple other treating physicians and Claimant's personal physicians. Dr. Orgel provided an accurate report including a thorough explanation of his review, impressions and ultimate opinions. The totality of the evidence demonstrates Dr. Orgel

followed proper DIME protocol and procedure pursuant to the Act, WCRP, AMA Guides and Impairment Rating Tips.

Based on the totality of the evidence, Claimant failed to prove it is highly probable Dr. Orgel's opinions on MMI and impairment are incorrect. Claimant's opinion and any medical opinions that could be deemed conflicting represent mere differences of opinion that do not rise to the level of clear and convincing evidence to overcome the DIME.

Maintenance Medical Treatment

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003).

Respondents filed a FAL admitting for reasonable, necessary and related medical treatment and/or medications after MMI. There are no recommendations from claimant's authorized treating physicians for specific maintenance medical treatment, other than 6-12 months of medication for the lumbar spine after January 27, 2022. Post-MMI, Claimant elected to continue to seek evaluation and treatment from UC Health and various other personal providers through his private insurance including multiple evaluations, injections, physical therapy, and diagnostic tests, for body parts and conditions other than the lumbar spine. As discussed above, Claimant's need for continued medical treatment to the cervical spine, thoracic spine, abdomen, vision and psychological conditions/body parts are not causally related to the work injury. Claimant failed to prove by a preponderance of the evidence that medical treatment for these conditions was reasonable, necessary and causally related treatment for the work injury.

Authorized Treatment

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the

claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020) (reasoning that the surgery performed by an unauthorized provider was not compensable because the employer had furnished medical treatment after receiving knowledge of the injury).

Subsequent to being placed at MMI, Claimant continued to treat at UC Health on his own accord, as well as with various other personal providers. As found, the post-MMI treatment Claimant sought with various providers outside of his ATPs and referrals from ATPs for maintenance treatment was unauthorized treatment. As such, Respondents are not required to pay for such treatment.

ORDER

1. Claimant failed overcome Dr. Orgel's DIME opinion on MMI and permanent impairment by clear and convincing evidence. Claimant is at MMI as of January 27, 2022 with a 20% whole person impairment of the lumbar spine.

2. Claimant failed to prove by a preponderance of the evidence he is entitled to medical benefits for the cervical spine, thoracic spine, abdomen, vision, or psychological conditions. Claimant's claim for benefits associated with those body parts and conditions is denied and dismissed.

3. Claimant failed to prove by a preponderance of the evidence the post-MMI medical treatment he received by others than his ATPs or referrals of his ATPs for maintenance treatment was authorized. Respondents are not liable for the unauthorized medical treatment.

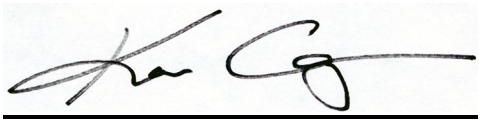
4. Claimant shall file an Application for Hearing on the issue of PTD benefits within 30 days of the final order in this matter, including any appeals.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 26, 2023



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he is entitled to maintenance medical treatment to cure or alleviate the ongoing effects of his October 9, 2019 admitted industrial injury and/or prevent deterioration of his current condition.

II. Whether Claimant established, by a preponderance of the evidence, that he is entitled to a disfigurement award and if so, the amount of said disfigurement benefit.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant injured his left shoulder on October 9, 2019, when his arm became tangled in a building truss moving down a conveyor belt. According to Claimant, his arm was bent awkwardly and caught between the truss and the rollers of the assembly line causing immediate pain.

2. Claimant initiated treatment at Concentra Medical Centers (Concentra) and was referred to physical therapy. (See generally, Ex. A). Therapy and modified work duties failed to resolve Claimant's persistent pain or improve his range of motion loss. Accordingly, Claimant was referred for an MRI.

3. An MRI of the left shoulder was obtained on December 27, 2019. This MRI demonstrated a rotator cuff tendinosis, high grade partial thickness tear of the anterior supraspinatus footplate and probable partial thickness tearing of the bands of the subscapularis tendon along with a suspected longitudinal split tear of the interarticular long head of the biceps and effusion and hypertrophic osteoarthritic changes of the left AC joint. (Ex. A, bates 10).

4. Claimant was referred to Dr. Michael Simpson for a surgical consultation. Dr. Simpson concluded that Claimant required surgical intervention. Thus, on February 6, 2020, Dr. Simpson performed an arthroscopic assisted left rotator cuff repair, a left biceps tenodesis and a subacromial decompression to address what was discovered to be a longitudinal tear of the mid subscapularis tendon, a full thickness and retracted tear of the supraspinatus tendon, a longitudinal split tear of the biceps tendon and subacromial impingement. (Ex. A, bates 23).

5. Claimant experienced significant post-surgical shoulder pain and dysfunction. Consequently, he underwent additional injection therapy to include an interarticular subacromial steroid injection and two platelet rich plasma (PRP) injections.[1] (Ex. A, bates, 76, 102, 112). Unfortunately, this supplementary injection therapy seemingly worsened Claimant's symptoms prompting a referral for a repeat MRI. *Id.* at bates 116.

6. A repeat MRI of the left shoulder completed September 30, 2020, demonstrated "probable high-grade bursal and articular surface fibrillation [and] fraying of the proximal supraspinatus tendon". While no recurrent tearing was visualized distally in the area of the preoperative abnormality, there was a "[s]mall volume of fluid within the subacromial bursa" along with "moderate hypertrophic osteoarthritic change in the AC joint". (Ex. A, bates 129).

7. Dr. Simpson recommended a second operative procedure. He took Claimant to the operating room on November 10, 2020 for completion of a left shoulder "[a]rthroscopic-assisted revision rotator cuff repair with Regeneten augmentation", an [a]rthroscopic distal clavicle excision", and an arthroscopy with "extensive" debridement of the "anterior rotator interval, anterior subscapularis tendon, and bursal-sided adhesions" followed by a "manipulation under anesthesia". (Ex. A, bates 145).

8. Claimant experienced slow post-surgical progress following this procedure. After some initial confusion regarding his participation in physical therapy (PT), Claimant started PT on February 25, 2021. (EX. A, bates 248). By March 23, 2021, Claimant was noted to be "doing well". *Id*. at bates 270. While he had made significant improvement with respect to his left shoulder strength and was "increasing his job duties", Claimant reported persistent 7/10 left shoulder pain. *Id*.

9. Claimant continued to make progress over the next several weeks. Nonetheless, he had persistent pain and impaired range of motion. Ultimately, Claimant was released from care by Dr. Simpson's practice on April 21, 2021.

10. Claimant returned to Concentra for a follow up appointment with his authorized treating physician (ATP), Dr. Daniel Peterson on April 30, 2021. (EX. A, bates 306). Claimant was evaluated by Physician Assistant (PA) Wendi Kleppinger in lieu of Dr. Peterson at this appointment. PA Kleppinger noted that Claimant had made substantial improvement and had been released from "ortho" on April 21, 2021 and from PT "after meeting [his] goals". (Ex. A, bates 318). Claimant was returned to modified duty work with restrictions of no lifting over 50 pounds, carrying 30 pounds, pushing/pulling 100 pounds and a repetitive lifting restriction of 30 pounds. PA Kleppinger anticipated that maximum medical improvement (MMI) would be reached on May 10, 2021, with maintenance treatment needs. *Id*. at bates 322.

---

[1] Although a medical record signed by Physician Assistant Kimberly Shenuk reflects that Claimant "tired" three PRP injections, the record evidence supports a finding that only two PRP injections were administered. (See, Ex. A, bates 116, 102, 112).

11. Claimant returned to Concentra on May 10, 2021, where he was evaluated by PA Michael Gottus. PA Gottus noted that Claimant reported feeling as though he was performing regular duty work but that he was still having "residual weakness with abduction". (Ex. A, bates 325). A return appointment was set for Claimant to be evaluated by Dr. Peterson. Dr. Peterson would not evaluate Claimant until May 25, 2021.

12. During the May 25, 2021, follow-up appointment, Dr. Peterson noted that Claimant was "as good as he is going to get". (Ex. A, bates 334). Examination of the left shoulder revealed "[t]enderness in the bicipital groove" and the anterior portion of the shoulder, but not in the AC joint. *Id*. at bates 338. Claimant also demonstrated reduced range of motion in the left shoulder but provocative testing maneuvers were reportedly negative. *Id*. at bates 338-339. Dr. Peterson opined that Claimant had reached "functional goal" and was ready for discharge. *Id*. at bates 339. He placed Claimant at MMI with 19% upper extremity impairment. *Id*. at bates 333, 339. According to Dr. Peterson, Claimant had "no need [for] medical maintenance care". *Id.*

13. Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Peterson's opinions regarding impairment and maintenance care on June 10, 2021. (Ex. 1, bates 1-8).

14. Claimant objected to Respondents FAL and requested a Division Independent Medical Examination (DIME). Dr. William Watson was designated as the DIME doctor and he completed his independent medical examination on January 25, 2022. (Ex. A; Ex 4).

15. Dr. Watson agreed with Dr. Peterson that Claimant reached MMI on May 25, 2021. After obtaining range of motion measurements, Dr. Watson also agreed that, as a consequence of his October 9, 2019, work-injury, Claimant had sustained 19% scheduled impairment of the left upper extremity, which, converts to 11% whole person impairment. (Ex. A, bates 15).

16. Although he opined that Claimant reached MMI on May 25, 2021, Dr. Watson raised concern that Claimant continued to present with signs of adhesive capsulitis. (Ex. A, bates 15, ¶ L). Accordingly, Dr. Watson documented the following with regard to maintenance care:

> As noted above, [Claimant] has had decreased range of motion since his final date of MMI as outlined by Dr. Peterson. I feel as part of maintenance care he should return to see his surgeon Dr. Michael Simpson and be reevaluated. Dr. Simpson can make a decision of whether he feels another MRI is indicated. I believe Dr. Simpson's recommendation should be followed. If he feels no more care is indicated he would continue to be at maximum medical improvement.

(Ex. A, bates 16, ¶ N).

17. Insurer filed an Amended Final Admission of Liability admitting to Dr. Watson's opinions concerning MMI and impairment on February 23, 2022. (Ex. 2). Although in agreement with Dr. Watson's opinions regarding MMI and impairment, Insurer elected to deny maintenance care after MMI "per the treating physician's original MMI report". *Id*. at bates 9 (emphasis added). Despite indicating in the remarks section of the February 23, 2022 FAL that the denial of maintenance care was based on Dr. Peterson's May 25, 2021 report of MMI/impairment, the claims representative, Lori Watson noted that maintenance treatment was being denied "pursuant to Dr. Watson's medical report dated 1/25/2022. *Id*. (emphasis added). As noted at ¶ 16 above, Dr. Watson recommended maintenance care in the form of a return appointment to Dr. Simpson for a follow-up evaluation in light of the evidence of persistent adhesive capsulitis. Based upon the evidence presented, the ALJ finds the denial of maintenance treatment predicated on Dr. Watson's January 25, 2022 DIME report inconsistent with the statement contained at ¶ N of the DIME report itself.

18. Claimant underwent a third MRI of the shoulder on January 17, 2023 for what is documented as "[w]orsening left shoulder pain with limited ability to lift and carry heavy objects". (Ex. 5). This MRI revealed the possibility of a "tiny interstitial tear" of the supraspinatus tendon along with subacromial and subdeltoid bursitis. *Id*. at bates 39. On January 18, 2023 Dr. Simpson commented on the MRI as follows:

> The MRI shows the rotator cuff repair is intact. There may be a very small interstitial tear but nothing that would require surgery. There is a little subacromial bursitis but in all the repair looks very good. When we see him back I think [it] would be reasonable to do a corticosteroid injection.

(Ex. 5, bates 38).

19. Claimant testified that he had undergone an injection with Dr. Simpson one day before his hearing. According to Claimant, the injection provided some pain relief, most importantly it was enough for him to finally get a good night's sleep. *Id*. at p. 17, ll. 12-14. Claimant also indicated he was scheduled for a follow-up visit with Dr. Simpson on March 15, 2023. Id. at ll. 15-23.

20. Claimant also testified that once he had completed his post-surgical care following his second surgery he returned to work for Employer. According to Claimant, he was placed at the "heaviest" work station and had to carry materials weighing 100 pounds. ([Redacted, hereinafter AP] Hrg. Trans. p. 15, ll. 14-16). Claimant testified that within a week and a half of returning to work his shoulder "popped". *Id.* at ll. 17-21. Claimant experienced swelling and was dropping things so he reported this to the "office". *Id.* at ll. 21-23. Per Claimant, he was told there was nothing more they could do for his shoulder. *Id*. at l. 24.

21. During cross-examination, Claimant clarified that shortly after he had returned to work following his second surgery, he went to Employer's office and reported his swelling and increased pain at which time he was told by the "manager" that he had been released from care and that Employer could not send him to a doctor "any more to get checked for your shoulder". (AP[Redacted] Hrg. Trans. p. 19, ll. 4-9. Claimant conceded that he abruptly left his employment but could not recall when this occurred. *Id*. at ll. 1-9. Rather, he testified that his niece encouraged him to apply for a different position with a temporary agency. *Id*. at ll. 10-18.

22. Claimant secured a position through the temporary agency running a machine that spray coats vitamins with color and/or wax. (AP[Redacted] Hrg. Trans. p. 20, l. 1). He commenced this work around August 2021 and testified at hearing that he continues to work in this capacity eight hours per day.[2] *Id*. at p. 19, ll. 21-24. According to Claimant, his job involves having to move barrels that weigh 55-70 kilograms. He moves the barrels by using a floor jack and rolling them into position using his right arm only. *Id*. at pp. 20-21, ll. 1-7. Additional duties associated with Claimant's current work as a pill coater include cleaning the spray guns, scooping pills into the machine, monitoring the machine and temperatures and documenting outcomes. *Id*.

23. Claimant testified that he continues to experience pain similar to that he had when he was placed at maximum medical improvement, both in intensity and location. He has popping and locking in the left shoulder. (AP[Redacted]Aapex Legal Services, LLC Hrg. Trans. p. 23, ll. 1-12).

24. As noted, Dr. Simpson testified by deposition on April 25, 2023. Dr. Simpson testified as a board certified orthopedic surgeon. (Depo. Dr. Simpson, p. 5, ll. 14-25). Dr. Simpson testified that Claimant did well after his second surgery with improved range of motion, despite the delay in getting him in for post-operative therapy. *Id*. at p. 8, ll. 20-23. Dr. Simpson saw Claimant on December 15, 2022, more than 1.5 years after being placed at MMI, and more than a year after Dr. Watson made the recommendation for Claimant to return to Dr. Simpson. *Id.* at p. 9, ll. 6-11. Dr. Simpson's note from the visit reflected Claimant reported his shoulder started bothering him shortly after returning to work moving trusses for the Employer. *Id*. Dr. Simpson had no record or knowledge of the work Claimant performed after he left his employment with the Employer. *Id*. at p. 10, ll. 9-14. He did recall that Claimant returned for follow-up appointments partly because he was in pain and partly because it was standard clinical procedure for his medical practice. *Id*. at p. 14, ll. 8-13.

---

[2] Although Respondents indicate that Claimant's testimony regarding his permanent hire date by [Redacted, hereinafter NN] and other information about his job duties was lost due to a "break" in the audio recording, the ALJ has listened to the entire audio recording of the January 26, 2023 hearing and finds no break in the soundtrack. Details surrounding the asserted break in the audio as asserted by [Redacted, hereinafter LR], the Court Reporter hired by Respondents, are unknown. Perhaps she received a defective copy of the audio recording or she experienced a glitch in the recording while transcribing the record. Nonetheless, the Courts audio recording and the transcript of that recording as prepared by [Redacted, hereinafter CS] of AP[Redacted] appear complete and consistent with each other. Accordingly, the ALJ finds and concludes that the transcript prepared by LR[Redacted] is not an accurate record of the proceedings recorded on January 26, 2023.

25. Dr. Simpson testified that as of May 25, 2021, Claimant would have had osteoarthritis of his left acromioclavicular (AC) joint. (Depo. Dr. Simpson, p. 13, ll. 6-16). However, he added that the distal clavicle resection performed as part of Claimant's revision (second) surgery, would have mitigated that arthritis and it "no longer existed after the excision of the distal clavicle. *Id.* at ll. 17-25, p. 14, ll. 1-4.

26. Dr. Simpson testified that he recommended that Claimant undergo an MRI as part of the December 15, 2022 appointment. (Depo. Dr. Simpson, p. 14, ll. 14-17). Dr. Simpson testified that the results of that MRI demonstrated, some "subacromial subdeltoid bursitis, that the rotator cuff repairs were essentially intact, and that his biceps tenodesis was intact". *Id*. at ll. 20-22. He added that Claimant had a "small" interstitial tear, which could cause pain but was not significant enough to warrant additional surgery. *Id.* at p. 15, ll. 4-8. Given the MRI findings, Dr. Simpson recommended a subacromial injection. *Id*. at ll. 9-12.

27. Dr. Simpson testified that a cause of bursitis is overuse and he "assumed" that the cause of Claimant's bursitis was overuse and "probably somewhat related to his underlying rotator cuff kind of tendonitis, tendinopathy . . ." (Depo. Dr. Simpson, p. 15, ll. 15-25).

28. Dr. Simpson generally agreed that the job duties Claimant was performing after June 2021, could affect whether Claimant's condition, and need for treatment, is related to the original injury or an aggravation from his new employment. (Depo. Dr. Simpson, p. 16, ll. 6-14). Nonetheless, it is clear from the content of Dr. Simpson's deposition testimony that he did not take a work history from the Claimant at the appointment on December 15, 2022. Rather, it was his assumption the Claimant had gone back to full duty for Employer and was involved in heavy lifting of trusses and that was giving him issues. *Id*. at p. 9, ll. 12-23. Accordingly, the ALJ finds it unlikely that Dr. Simpsons is fully aware of the exact nature of Claimant's job duties with NN[Redacted] or how he performs those duties. Indeed, in response to the question of whether the condition he was treating was still related to Claimant's underlying work injury or an aggravation of that condition by subsequent employment, Dr. Simpson testified: "Probably without seeing Dr. Peterson's report, and . . . without having that complete work history, and the timeline of [the] job change, and development of symptoms, and whether symptoms persisted up to that point [it] is hard to say. So it is kind of indeterminate at this point". *Id.* at p. 18, ll. 14-25; p. 19, l. 1. Nonetheless, Dr. Simpson testified that there is "treatment we have to offer him, whether that is compensable under the original injury or whether that might be compensable as an overuse injury", adding "I guess that - - perhaps that's why we're here." *Id.* at p. 17, ll. 9-12. Dr. Simpson then discussed potentially performing additional corticosteroid injections or attempting PRP injections for Claimant's condition. *Id*. at ll. 16-25.

29. Based upon the content of Dr. Simpson's deposition testimony, the ALJ is not convinced he definitively answered the question of whether Claimant current need for treatment is related to Claimant's October 9, 2019 industrial injury. Nonetheless, the

totality of the evidence presented, persuades the ALJ that, more probably than not, Claimant's October 9, 2019 industrial injury is the proximate cause of his persistent symptoms and need for probable maintenance care, including additional corticosteroid or PRP injections, rather than a subsequent intervening cause.

30. Visual inspection of Claimant's left shoulder reveals the following disfigurement: Four (4) arthroscopic surgical scars located about the left shoulder, i.e. the front, side, top and back aspect of the shoulder. These scars are all semi-circular in shape and approximately ⅜ of an inch in diameter. The scar located on the posterior aspect of the shoulder is light pink in color while the remaining three scars located on the front, side and top of the shoulder all appear lighter than the surrounding skin. The scars on the front, side and top of the shoulder also appear to be the same contour as the surrounding skin, while the scar located on the upper back aspect of the left shoulder is slightly depressed resulting in a pock like appearance when compared to the contour of the adjacent skin.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo.App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or

unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo.App. 1990). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo.App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Claimant's Entitlement to Maintenance Medical Treatment

D. A claimant's need for medical treatment may extend beyond the point of maximum medical improvement (MMI) where he/she requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*."

E. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra.* Indeed, a claimant is only entitled to such future benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); C.R.S. § 8-41-301(1)(c). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those, which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

F. The question of whether Claimant's symptoms and need for treatment are the natural and proximate result of his prior industrial injury, or the result of an efficient

intervening cause is one of fact for determination by the ALJ. See *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *F. R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). In this case, there is scant evidence to support Respondents' suggestion that Claimant's current need for treatment may related to possible repetitive activities associated with his current employment. Although Dr. Simpson opined that the cause of Claimant's current need for treatment is "kind of indeterminate", he did indicate that Claimant's bursitis was "probably somewhat related to his underlying rotator cuff kind of tendonitis, tendinopathy." This, combined with the stated cause for the January 17, 2023, i.e. "[w]orsening left shoulder pain with limited ability to lift and carry heavy objects", persuades the ALJ that the condition of Claimant's left shoulder has deteriorated with the passage of time and that his current pain/symptoms are probably related to the original October 9, 2019 industrial injury and subsequent surgery.

G. The ALJ credits Claimant's testimony to find that his present condition will likely deteriorate further and he will experience greater functional decline without maintenance care, including additional injection therapies. Accordingly, the ALJ concludes that Claimant has proven, by a preponderance of the evidence, that he is entitled to a general award of maintenance medical care. Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for future medical treatment is reasonable, necessary and related to Claimant's industrial injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

Claimant's Entitlement to Disfigurement Benefits

H. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement", as used in the statute, contemplates that there be an "observable impairment of the natural appearance of [the] person." In this case, the ALJ finds and concludes that as a result of his August 26, 2020 work injury, Claimant has visible disfigurement to the body consisting of surgical scarring as described in Finding of Fact, paragraph 30 above.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for reasonably necessary post-MMI medical treatment, including additional corticosteroid or PRP injections from authorized providers to relieve Claimant from the ongoing effects of his industrial injuries and/or prevent deterioration of his condition.

2. Respondents retain the right to challenge future requests for maintenance treatment on the grounds that such care is not reasonable, necessary or related to Claimant's October 9, 2019 industrial injury. *See generally*, *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,*

916 P.2d 609 (Colo.App. 1995); Section 8-42-101 (1) (a), C.R.S.; *Hanna v. Print Expediters Inc., supra.*

3. Respondents shall pay Claimant $1,200.00 in disfigurement benefits.

4. All matters not determined herein are reserved for future determination.

DATED: May 26, 2023

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-130-124-001

ISSUES

- Whether Claimant has overcome the findings of the Division-sponsored Independent Medical Examination ("DIME") physician that Claimant is at maximum medical improvement ("MMI") for his November 26, 2019 work injury?

- Whether Claimant is entitled to an award for disfigurement related to his compensable work injury pursuant to Section 8-42-108, C.R.S.?

FINDINGS OF FACT

1. Claimant was employed by Employer as an acting supervisor building townhomes for Employer. Claimant testified that on November 26, 2019 he was headed up a ladder while working on a roof of a townhome when the ladder slipped and Claimant began to fall. Claimant testified he put his left arm on another ladder that was set up to the roof of the townhome in an attempt to catch himself, but still fell to the ground landing on his wrist and hip. On the employee accident report dated November 27, 2019, Claimant reported landing on his stomach on the ground.

2. Claimant testified he stayed at work to meet with a building inspector who was scheduled to arrive that day and after meeting with the building inspector, went to Mercy Medical Center Emergency Room ("ER"). At the ER, Claimant reported falling from a ladder just prior to arrival. X-rays taken at the ER showed a minimally displaced distal radius fracture. Claimant reported pain in the left shoulder and right forearm. Claimant reported a little bleeding from his nose that had since resolved. Claimant was provided with a sling and instructed to follow up with orthopedics.

3. Claimant was examined by Dr. Furry on December 2, 2019 with regard to his fractured distal radius. Dr. Furry recommended surgery which could include a bridging plate. Dr. Furry also noted Claimant had impingement syndrome of his left shoulder.

4. Claimant was evaluated at Animas Surgical Hospital on December 4, 2019 for follow up of his right wrist fracture. Claimant reported that he had minimal pain to his right forearm and only slight pain to his left shoulder with movement that he believed was improving. Claimant also reported some left hip pain which was not present until the past few days which Claimant attributed to increased sitting. The medical report was later corrected to note that Claimant was complaining of right hip pain.

5. Surgery consisting of open reduction and internal fixation ("ORIF") of Claimant's right distal radius fracture eventually took place on December 16, 2019 under the auspices of Dr. Furry.

6. Following surgery on his right arm, focus of Claimant's treatment switched to his left shoulder. Claimant was examined by Dr. Furry on December 27, 2019 and Claimant was diagnosed with traumatic incomplete tear of the left rotator cuff. Dr. Furry recommended a magnetic resonance image ("MRI") of his left shoulder.

7. Claimant was examined by Dr. Furry on January 24, 2020. Dr. Furry was performing a follow up examination from Claimant's surgery. Dr. Furry noted Claimant also complained of right hip pain in the area proximal to his greater trochanter in the region of his gluteus medius as the area of his greatest pain.

8. The MRI of Claimant's left shoulder was eventually performed on February 3, 2020. The MRI showed predominantly full-thickness irregular degenerative tearing of the supraspinatus and interior infraspinatus; full-thickness tear of the subscapularis with associated medial subluxation of the long head of the biceps; tendinosis with interstitial tearing involving the infraspinatus; intermediate grade tearing of the intra-articular long head of the biceps; anterior inferior labral tear involving the inferior labrum with more complex degenerative tearing seen at the posterior superior labrum; moderate glenohumeral joint osteoarthritis and moderate acromioclavicular ("AC") joint degeneration.

9. Claimant underwent surgery of the left shoulder on March 12, 2020. The left shoulder surgery included an arthroscopy with arthroscopic biceps tenodesis and repair of the subscapularis; arthroscopic repair of the supraspinatus and infraspinatus; subacromial decompression and extensive glenohumeral debridement.

10. Claimant was eventually referred to Dr. Smith for treatment of the hip. Claimant underwent an MRI of the hip on May 7, 2020 which showed a complex tear of the right anterior superior labrum. Based on the MRI results, Claimant underwent a right hip injection on May 27, 2020. Claimant testified that after injections and physical therapy did not provide him with relief of his hip pain, he was referred to Spine of Colorado for further evaluation.

11. Claimant underwent an x-ray of the lumbar spine on July 16, 2020 which showed L4-5 and L5-S1 moderated degenerative disc disease, L3-4, 3 mm listehesis, and mild retrolistheses at the L4-5 level. No instability was noted.

12. Claimant underwent an MRI of the lumbar spine on July 29, 2020 which showed moderate to large right paracentral dis extrusion at L4-5, moderate multilevel facet arthropathy, and foraminal stenosis at L3-4, L4-5 and L5-S1.

13. Claimant was examined at Spine of Colorado by Dr. Orndorff and was diagnosed with lumbar radiculopathy. Dr. Orndorff noted Claimant had significant L4-5 and L5-S1 lumbar spondylosis with retrolisthesis of L4-5 and L5-S1. Dr. Bohachevsky

provided Claimant with a series of transforaminal steroid injections ("TFSI"). Dr. Orndorff noted that Claimant reported good transient relief from the injection.

14. Respondents obtained an independent medical examination ("IME") with Dr. Rauzzino on October 14, 2021. Dr. Rauzzino reviewed Claimant's medical records, obtained a medical history and pertormed a physical examination in connection with his IME. Dr. Rauzzino opined that Claimant's July 28, 2020 MRI showed a clear acute disc herniation at L4-L5 with marked impingement of the exiting nerve root. Dr. Rauzzino opined based on his review of the medical records that the Claimant did not develop right lower extremity pain and radiculopathy until at least seven months after the injury.

15. From a causation analysis, Dr. Rauzzino opined that the disc herniation at L4-L5 and the radiculopathy and back pain that came later would not be occupationally related. Dr. Rauzzino noted that Dr. Orndorff had recommended a two-level fusion surgery and opined that absent a clearly defined pain generator or severe radiculopathy, the surgery would not be an ideal situation. Dr. Rauzzino also opined that based on Claimant's failure to respond to the injections, and the lack of overt instability along with the fact that Claimant's symptoms were getting better, the surgery would not be consistent with the Medical Treatment Guidelines.

16. Dr. Rauzzino opined that Claimant was at MMI for the shoulder and wrist injuries and based on his opinion that the lumbar spine was not related to the work injury, Claimant was at maximum medical improvement for his claim.

17. Dr. Rauzzino testified by deposition in this matter consistent with his IME report.

18. Respondents sought a 24 month Division-sponsored Independent Medical Examination ("DIME") of Claimant which was pertormed by Dr. Green on September 28, 2022. Dr. Green reviewed Claimant's medical records, obtained a medical history and pertormed a physical examination in connection with his DIME. Dr. Green noted that Claimant was scheduled for spine surgery this upcoming December that was to be covered by his personal insurance. Dr. Green noted that Claimant's "Hip surgeon concerned that his spine/surgery/back pain may be causing his hip pain (radicular pain)". Dr. Green noted Claimant reported it was difficult to bend over, secondary to right buttock and lower back discomfort.

19. Dr. Green diagnosed Claimant with (1) status post ORIF right wrist for right wrist fracture, work related; (2) status post left rotator cuff tear and operative repair, work related; (3) right hip labral tear, more likely than not, work related; (4) multiple-level lumbosacral degenerative changes, with resolving right L4-5 disc herniation, not clearly work-related; and (5) right L5 radiculitis, not clearly work-related. Dr. Green agreed in his opinion with Dr. Rauzzino's October 1, 2020 date of MMI and provided Claimant with an impairment rating of 6% of the upper extremity for the right wrist (converted to a 4% whole person impairment), 16% of the upper extremity for the left shoulder (converted to a 10% whole person impairment) and 10% range of motion impairment of the right hip

(which converts to a 4% whole person impairment). Dr. Green combined the impairments to equal a 16% whole person impairment.

20. Dr. Green further noted that based on his review of the medical records, it was not definitively clear that the clinical presentation, including review of pertinent records, location or distribution of hip pain complaints immediately following the reported work-related fall can more likely than not be attributed to the subsequently diagnosed L4-5 disc herniation seen on MRI, or reported right L5 radiculitis noted approximately 8 months following the date of injury. Dr. Green opined that there did not appear to be a clear documentation of ongoing radicular symptoms within the first one to two months following the reported fall, or clear documentation to support an isolated lumbar disc herniation clinical presentation. Dr. Green further noted that Claimant did not report the onset of radiating leg pain immediately following the fall and on examination, there appeared to be inconsistencies with provocation of pain that are not typical of Claimant's pain that Dr. Green would usually associate with lumbar discogenic pain. Dr. Green noted that based on his review of the records, he believed the onset of radiating right leg pain appeared to be in July 2020. Dr. Green provided Claimant with a 20 pound lift/carry restriction.

21. Respondents filed a final admission of liability ("FAL") based on the 24 month DIME report from Dr. Green admitting for the scheduled impairment benefits.

22. Claimant subsequently filed an application for hearing contesting the finding of MMI along with disfigurement.

23. At hearing, Claimant testified that immediately after the accident, he knew he had injured his wrist and shoulder and sought treatment for this from the ER on the date of the injury. Claimant testified that he then developed pain in his right hip and reported this to his treating physicians in early December 2019. Claimant noted that the medical provider initially recorded the wrong side of his complaints of pain, mentioning the left hip instead of the right hip which was subsequently corrected.

24. Claimant testified that his right hip pain was minor at that time and the focus of his medical providers was initially on the wrist and shoulder injuries. Claimant testified he underwent an MRI of the hip which showed the torn labrum which was treated with injections and physical therapy.

25. Claimant testified that he was eventually referred to Dr. Orndorff who recommended an MRI of his back. Claimant testified that after treating with Dr. Orndorff, Claimant believed that the hip pain was coming from his lumbar spine issues. Claimant testified that he continued to treat with Dr. Orndorff and eventually underwent lumbar fusion surgery on December 6, 2022. Claimant testified that after surgery, his hip pain that developed after his work injury resolved. Claimant's testimony regarding the onset of his pain complaints and the resolution of his hip issues following the lumbar fusion surgery is found to be credible and persuasive by the ALJ.

26. Claimant testified that he sought the medical treatment with Dr. Orndorff under his personal health insurance due to the fact that the surgery was not covered by his workers' compensation claim.

27. The ALJ credits Claimant's testimony at hearing and finds that Claimant has overcome the opinion of Dr. Green that his lumbar spine injury is not related to the work injury by clear and convincing evidence. The ALJ notes that the medical documentation shows that Claimant first complained of hip pain to a medical provider 8 days after his November 26, 2019 injury (December 4, 2019). The ALJ further finds Claimant's testimony that his hip pain that developed in connection with his November 26, 2019 fall was resolved by the lumbar surgery performed by Dr. Orndorff on December 6, 2022 to be credible and persuasive.

28. The ALJ finds that Claimant has demonstrated that it is highly probable and free from substantial doubt that the fall on November 26, 2019 resulted in an injury to his lumbar spine that necessitated the need for treatment including the surgery performed by Dr. Orndorff on December 6, 2022.

29. The ALJ credits Claimant's testimony at hearing and finds that the opinion of Dr. Green that the lumbar spine injury was not related to Claimant's fall on November 26, 2019 to have been overcome by clear and convincing evidence. Because the ALJ finds that the lumbar spine injury is a compensable component to the November 26, 2019 injury, Claimant has established that it is highly probable and free from substantial doubt that he was not at MMI as of October 1, 2020, as Claimant was still under active treatment for the lumbar spine component of his injury.

30. Because Claimant is not at MMI for the November 19, 2019 injury and due to the fact that Claimant had a lumbar surgery that is related to the November 19, 2019 injury, the issue of disfigurement is not yet ripe for adjudication and will be reserved for later determination. Claimant's eventual disfigurement in this case will need to take in any potential disfigurement resulting from Claimant's lumbar surgery.

31. Because the ALJ finds that Claimant's lumbar spine condition was causally related to the November 26, 2019 work injury, Respondents are liable for reasonable medical treatment necessary to cure and relieve Claimant from the effects of his industrial injury related to the lumbar spine.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-

43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving* & *Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado,* W.C. No. 4-350-356 (March 22, 2000).

5. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

6. As found, the ALJ credits the testimony of Claimant at hearing along with the records from Dr. Orndorff and finds that Claimant has overcome the finding that he was at MMI as of October 1, 2020 by clear and convincing evidence. Specifically, the ALJ credits the testimony of Claimant regarding the onset of his symptoms in his hip and back as being related to the November 26, 2019 fall. The ALJ further credits Claimant's testimony that his symptoms that developed shortly after his November 26, 2019 fall resolved after the lumbar spine fusion performed by Dr. Orndorff on December 6, 2022. The ALJ determines that Claimant's testimony was supported by the medical records entered into evidence at hearing, including the records of Dr. Furry, Dr. Smith and Dr. Orndorff.

ORDER

It is therefore ordered that:

1. Claimant has overcome the finding that he was at MMI for the November 26, 2019 work injury as of October 1, 2020 by clear and convincing evidence.

2. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of his industrial injury, including the medical treatment for Claimant's lumbar spine provided by physicians that are authorized to treat Claimant for his work injury, including, but not limited to, the medical treatment provided by Dr. Orndorff, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-110-083-003

ISSUES

I. Whether Claimant overcame the opinion of Division Independent Medical Examination ("DIME") physician Douglas Scott M.D. on permanent impairment.

II. Whether Claimant is entitled to an award of disfigurement benefits.

III. Medical maintenance benefits.

FINDINGS OF FACT

1. Claimant is a 41-year-old who works for Employer as a teacher's assistant.

2. Claimant sustained an admitted industrial injury while working for Employer on February 21, 2019. Claimant's right knee landed on a small wooden toy on the floor while she was crawling to attend to a child. When Claimant stood she felt a pop in her right knee, her knee gave way and she twisted her right ankle.

3. On February 25, 2019 Claimant sought treatment at the emergency department of Denver Health with complaints of swelling, bruising, and pain in the right knee. Candace Daughtery, PA noted Claimant also had "mild pain in the right lateral ankle but is far less concerned about this" (Cl. Ex. 4, p. 31). On examination PA Daughtery noted mild ecchymosis over the anteromedial right knee. Regarding the right ankle, there was tenderness to palpation over and immediately anterior to the lateral malleolus, no joint effusion, and near full active range of motion. X-rays of the right knee and right ankle revealed no definite acute fractures. Claimant was diagnosed with a right knee injury and right ankle sprain. PA Daughtery noted there was no evidence of fracture, traumatic malalignment or neurovascular compromise of the ankle. She recommended Claimant wear a knee sleeve and ankle splint, rest, ice and elevate her right extremity, and treat with NSAIDs.

4. On March 6, 2019 Claimant established care with authorized provider Concentra. Claimant initially presented to Janelle Tittalfitz, PA-C and Jerald Solot, D.O. Examination of the right knee revealed tenderness and limited range of motion. Appearance of the right ankle was normal. There was tenderness in the ATFL and CFL and deltoid ligament along with limited range of motion. Claimant was assessed with a right knee strain and right ankle sprain and referred for physical therapy for the right knee.

5. Claimant attended approximately 33 physical therapy sessions at Concentra from March 6, 2019 to October 1, 2019. All but three physical therapy records from these appointments reference right ankle findings or complaints. On March 6, 2019, Claimant

reported right knee pain and numbness down to her ankle. On March 8, 2019, full right ankle range of motion is noted. A May 2, 2019 note documents Claimant's reports of a little pain on the outside of the right ankle. No ankle findings are documented at this appointment.

6. On March 8, 2019 Claimant reported right knee and ankle pain. On examination of the right ankle, Dr. Solot noted mild pain with range of motion and no swelling or ecchymosis. He prescribed Claimant an ankle double strap.

7. On March 21, 2019 Claimant saw authorized treating physician ("ATP") Amanda Cava, M.D. at Concentra with complaints of pain in the right knee, right ankle and back. On examination of the right ankle, Dr. Cava noted mild tenderness to palpation over the anterior ankle/dorsal mid foot and mildly limited painful range of motion. There was no ecchymosis, swelling, or crepitus Dr. Cava's assessment was right ankle sprain, right knee strain and muscle spasm. She prescribed Claimant Medral for the ankle and knee, and other medications for muscle spasms.

8. On April 1, 2019 Dr. Cava noted mild tenderness over the anterior tibialis tendon on examination of the right ankle.

9. On April 12, 2019 Claimant reported to Dr. Cava that her ankle pain was improving and now occurred just with certain movements. On examination of the right ankle Dr. Cava noted no tenderness with full range of motion and normal strength. She remarked that Claimant's right ankle symptoms were resolving. Dr. Cava ordered an MRI of the right knee and referred Claimant to a chiropractor.

10. Claimant underwent six chiropractic sessions at Concentra with Richard Mobus, D.C. from April 15, 2019 through May 13, 2019. Dr. Mobus' treatment focused on reported symptoms in the low back, sacroiliac joint, hip, gluteal and hamstring. No ankle symptoms, findings or treatment are documented in his notes.

11. On April 26 and May 10, 2019, Dr. Cava noted Claimant's reports of continued back and right knee pain but improving ankle pain. No ankle exam is documented. Dr. Cava referred Claimant to an orthopedic specialist for evaluation of her right knee.

12. Claimant underwent an orthopedic evaluation of the right knee by Cary Motz, M.D. on May 21, 2019. Dr. Motz noted that a right knee MRI demonstrated grade 4 chondral defect in the lateral femoral condyle posteriorly as well as some grade 3 changes of the lateral patellar cartilage. There was no evidence of a loose body and no meniscal tear. The impression was right knee posterior lateral femoral condyle grade 4 defect and patellofemoral chondromalacia. Dr. Motz noted that Claimant had some degenerative changes per the MRI report and that she suspected Claimant aggravated this with the twisting injury at work. Dr. Motz administered a steroid injection to Claimant's right knee and recommended Claimant continue physical therapy. Dr. Motz did not address the right ankle.

13. At a follow-up evaluation on May 28, 2019 Claimant reported to Dr. Cava that her right knee pain was unchanged since undergoing the injection. She complained of hip and low back pain as well as issues with her left knee. Ankle complaints and exam are not documented. Dr. Cava's assessment was chondromalacia, right knee strain and low back strain.

14. On June 11, 2019 Dr. Motz noted Claimant had persistent symptoms despite chiropractic treatment, physical therapy and injections. She discussed proceeding with surgery of the right knee.

15. On June 14, 2019 Claimant complained of back pain radiating to her right buttock, right thigh, right calf and right lateral foot. No ankle complaints or exam are documented. Dr. Cava assessed Claimant with back pain of the lumbosacral region with sciatica and a right knee strain. She referred Claimant for a lumbar MRI.

16. On July 1, 2019 Claimant underwent a right knee arthroscopy with osteochondral plug placement and chondroplasty of medial femoral condyle and patella, performed by Dr. Motz. Dr. Motz' preoperative diagnosis was right knee chondral defect, lateral femoral condyle. Her postoperative diagnoses were right knee chondral defect, lateral femoral condyle and grade III chondromalacia of the patella and medial femoral condyle.

17. Claimant continued to see Dr. Cava and Dr. Motz postoperatively. On August 13, 2019 Claimant reported 7/10 right knee pain and no pain of the right ankle. Dr. Motz subsequently ordered a repeat right knee MRI and referred Claimant to John D. Papilion, M.D. for concern that the osteochondral plug failed.

18. Claimant presented to Dr. Papilion on November 5, 2019. Dr. Papilion assessed Claimant with right knee pain and chondromalacia and recommended proceeding with a mini open fresh osteochondral allograft. Dr. Papilion performed a right knee scope with osteochondral graft to lateral femoral condyle on December 16, 2019.

19. Claimant attended approximately 32 sessions of physical therapy at Lowry Now from January 16, 2020 through June 9, 2020. The notes from these appointments contain no right ankle complaints or findings with the exception of a February 6, 2020 note documenting tenderness across the midfoot and distal to the lateral malleolus with no pain with passive range of motion and a May 12, 2020 note documenting Claimant's report that she also twisted her ankle on the day of injury. nothing else documented re: ankle.

20. On January 28, 2020 Claimant reported to Dr. Cava experiencing pain in the right anterior-lateral ankle with weight bearing, as well as continued knee pain and swelling. No ankle exam is documented. Dr. Cava's assessment was chondromalacia and s/p right knee surgery.

21. On April 28, 2020 Dr. Papilion noted that a repeat right knee MRI revealed intact osteochondral graft with incorporation, normal cartilage surface and joint space with some patellar chondromalacia.

22. Claimant continued to complain of right knee pain. On May 22, 2020 Claimant reported 7/10 right knee pain with pain radiating to the right lower leg and occasional pain shooting down her right lateral lower leg to the ankle and dorsal foot. No ankle exam is documented.

23. On June 9, 2020 Claimant reported to Dr. Papilion experiencing no relief from a steroid injection. She complained of sciatic-type pain radiating from her right buttock down to her lateral foot and ankle.

24. On June 15, 2020 Claimant saw Dr. Cava with complaints of back pain radiating to her right lower leg and foot since undergoing an injection. No ankle complaints or findings are noted. Dr. Cava referred Claimant for massage therapy for her back and to an orthopedic specialist for her back and right knee.

25. On July 6, 2020 Dr. Cava noted Claimant's complaints of worsening back pain and increased pain and swelling in the right knee radiating to the lateral right lower leg and foot. No ankle examination is documented.

26. On July 16, 2020 Claimant presented to orthopedic surgeon Rachel Frank, M.D. at UC Health for a third opinion on her right knee pain. Claimant reported 7-8/10 knee pain and swelling and lower back and sciatic nerve discomfort radiating from her buttock down the posterior aspect of her leg with paresethesias in the middle toe. Examination of the right knee revealed tenderness and range of motion 0 to 130 symmetric to the left knee. She noted the appearance of femoral external rotation and ankle mortis varus changes compared to the left side. Dr. Frank reviewed a May 2020 MRI and opined that much of Claimant's pain may be coming from her lateral and patellofemoral cartilage wear and prior cartilage graft, which had significant edema on MRI suggestive of having not appropriately incorporated. She considered a CT of the hip and knee to assess for femoral rotation and recommend a series of hyaluronic acid injections. No ankle exam or complaints are documented.

27. On August 13, 2020 Kevin Shinsako, PA-C at UC Health noted Claimant's reports of significant anterior lateral and lateral-sided knee pain walking with a significant antalgic gait. Claimant underwent third hyaluronic injection of the right knee.

28. As of September 1, 2020 Dr. Cava's assessment was chondromalacia, S/P right knee surgery, and back pain of lumbosacral region with sciatica. No ankle findings or complaints were noted.

29. At a follow-up evaluation with Dr. Frank on September 10, 2020, Claimant reported experiencing no significant change after undergoing the knee injections. Claimant complained of knee pain radiating down to the foot. Dr. Frank noted that

Claimant also reported ankle complaints relating back to the original injury. No ankle exam is documented. Dr. Frank recommended that Claimant undergo a CT scanogram to assess for bilateral hip anatomy and knee anatomy. She referred Claimant to foot and ankle specialist Dr. Moon for evaluation of her ankle complaints and also referred Claimant for pain management.

30. On September 28, 2020 Claimant complained to Dr. Cava that she never had any evaluation or treatment of her right ankle complaints. Dr. Cava noted that the record from Claimant's initial emergency room visit documented a normal ankle x-ray and mild findings on ankle exam. She wrote,

> Per my early notes, her ankle strain was continually improving in the first few months, she had a normal ankle exam on 4/12/19, and her symptom complaints were nearly resolved by May 2019. Symptoms are unchanged. Symptoms are located in the right lateral ankle. Associated symptoms include tingling lateral ankle to lat and dorsal foot, but no instability.

(Cl. Ex. 5, p. 43).

31. On examination, Dr. Cava noted antalgia on the right and limping on the right. She did not document any examination of the ankles. Her assessment now included right ankle sprain. Dr. Cava referred Claimant for an MRI of the right ankle.

32. Claimant presented to Daniel Kyeongtaek Moon, M.D. on September 30, 2020. Clamant reported that she twisted her ankle at work and had some continued right ankle pain with activities. She reported that her pain increased after undergoing a knee injection in Spring 2020. Claimant complained of pain radiating down the side of her leg to her foot as well as pain when lying down. Her pain was perifibular in the dorsal lateral foot. On examination, Dr. Moon noted that Claimant had an altered gait where her right knee and foot seemed somewhat externally rotated. There was decreased sensation and positive Tinel's. Dr. Moon did not document ankle range of motion. X-rays of the right ankle obtained that day demonstrated posterior enthesophyte in the calcansus and small rounded ossific body at the medial malleolus tip. There were some minimal degenerative changes and OS peroneum. Dr. Moon's impression was peroneal nerve sensitivity and swelling. He recommended that Claimant wear a compression stocking and undergo physical therapy focusing on the ankle.

33. Dr. Frank reevaluated Claimant on October 8, 2020. Dr. Frank opined, "At this point I do not think her knee is the primary source of her pain. She is having more radiating lower leg pain down into the ankle. Pain also appears to be more nervelike in nature. No additional knee surgery are injections warranted at this time. May continue to use knee brace." (Cl. Ex. 9, p. 732). On examination, Dr. Frank noted "gross genu valgum appearance of right compared to left with external rotation of the entire right lower extremity that seems to be coming from the hip." (Id). She did not document specific measurements of the degree of gross genu valgum appearance.

34. On October 26, 2020 Dr. Cava noted Claimant had a normal ankle MRI and saw Dr. Moon, who ordered physical therapy. Claimant reported pain and swelling in the right foot with difficulty wearing shoes other than sandals. She reported no change in her ankle and foot symptoms. Claimant complained of right knee pain, swelling, clicking and instability. On examination, Dr. Cava noted diffuse tenderness of the right knee with limited range of motion. Claimant's foot/ankle was not tender. Dr. Cava did not document ankle range of motion.

35. Claimant attended approximately nine physical therapy sessions at CACC Physical Therapy from November 2, 2020 through July 13, 2021. On November 2, 2020, Claimant presented with pain in the right lateral ankle with limitations in range of motion, flexibility and endurance. On December 4, 2020 and February 19, 2021 the physical therapist noted slight improvement in ankle range of motion, pain and strength measurements. On May 26, 2021 Claimant reported a burning pain in her right ankle. The physical therapist noted decreased ankle and knee range of motion and an antalgic gait pattern on the right. Claimant continued to report right ankle pain at each subsequent session through July 13, 2021. The physical therapist recommended Claimant return to her physician before continuing with physical therapy as Claimant's gains had been very slow.

36. On December 29, 2020 Claimant reported to Dr. Cava pain up and down her leg with no improvement. Dr. Cava assessed Claimant with numbness of the right lower extremity. No knee or ankle exam is documented. Dr. Cava referred Claimant for an EMG of the right lower extremity and physical therapy for her chondromalacia, right ankle sprain and right knee.

37. Claimant underwent an EMG of the right lower extremity on January 18, 2021, performed by Kathy McCranie, M.D. The EMG was mildly abnormal with findings of a mild right sural neuropathy. Dr. McCranie opined that the mild right sural neuropathy did not explain the more diffuse nature of Claimant's complaints.

38. On January 26, 2021 Dr. Cava referred Claimant for continued physical therapy as well as massage therapy for her lumbar spine. On examination Dr. Cava noted swelling, diffuse tenderness and limited range of motion of the right knee. She further noted no tenderness or crepitus on palpation of the right ankle, with limited range of motion in all planes. Specific range of motion measurements were not specified.

39. On February 10, 2021 Kathleen D'Angelo, M.D. performed an Independent Medical Examination ("IME") at the request of Respondent. Claimant reported low back, right knee, sciatica and foot complaints. On examination of the right knee Dr. D'Angelo noted no tenderness over the knee anteriorly or to the quadriceps tendons distally and that range of motion was "actually very good." There was some atrophy of the VMO. On examination of the right ankle she noted range of motion was almost full in inversion, eversion and plantar flexion, but limited in dorsiflexion. There was no tenderness over the Achilles Tendon or the medial and lateral malleolus. Dr. D'Angelo remarked that Claimant's post-injury course was one of metastasizing and expanding complaints and

that Claimant's claims were inconsistent with her presentation in Dr. D'Angelo's office where she was observed sitting comfortably without display of pain behaviors. Dr. D'Angelo opined that all diagnostic and therapeutic interventions should be stopped until Claimant completes a forensic psychological evaluation. She concluded that Claimant would require an impairment rating only for her right knee, as there was no other objective evidence of work-related abnormalities to her lumbar spine, right ankle, hips, contralateral knee or ankle, and her head. She explained that the only reason to provide an impairment rating for the right knee was for the surgical interventions performed as Claimant's findings of chondromalacia were not causally related to the work injury.

40. On February 26, 2021 Claimant reported continued pain in her back, right knee and right ankle. Dr. Cava noted antalgia on the right and limping on the right, with no specific knee or ankle findings documented. She referred Claimant to an orthopedic specialist for the numbness of the right lower extremity and right ankle sprain and to a physiatrist for back pain. She also referred Claimant for additional physical therapy for her back and knee as well as a psychological evaluation.

41. Claimant underwent a neuropsychological evaluation with Kevin J. Reilly, Psy.D. on March 17, 2021. Dr. Reilly opined that Claimant's clinical presentation was consistent with a chronic pain syndrome, noting that her clinical history was one of increasing pain complaints and decreasing functional abilities. Dr. Reilly noted that Claimant's psychological testing was invalid due to minimization and inconsistencies in responding. He diagnosed Claimant with pain disorder with related psychological factors and adjustment disorder with depressed mood. He recommended Claimant undergo eight sessions of psychological and biofeedback therapies which were to be discontinued if Claimant did not report benefit after four sessions.

42. Walter J. Torres, Ph.D. performed a psychological evaluation of Claimant on March 18, March 23 and April 1, 2021. He issued a report dated April 6, 2021. Dr. Torres noted Claimant's testing was largely invalid due to a mixture of underreporting and insufficient completion of items; however, there were no indications of overreporting of symptomatology. Claimant attended teletherapy sessions with Dr. Torres on April 15, May 13, June 3, and July 21, 2021. As of last session, Dr. Torres noted that Claimant presented with no significant psychological impairment stemming from her situation.

43. Dr. D'Angelo reviewed Dr. Reilly's report and issued an addendum to her IME report on April 19, 2021. She opined Claimant was at maximum medical improvement ("MMI") if she did not show any subjective improvement in pain complaints from her psychological sessions.

44. Claimant returned to Dr. Moon on April 21, 2021. On examination he noted Claimant's right foot and right knee were externally rotated. There was tenderness to palpation of the peroneal tendons. He did not document ankle range of motion. Dr. Moon's impression was right peroneal tendinitis and superficial peroneal nerve sensitivity. He recommended Claimant restart physical therapy to work on her peroneal

tendon strength and gait and gave Claimant an ankle brace. Dr. Moon advised Claimant to focus on walking with the knee and foot in a straight position instead of externally rotated.

45. On April 22, 2021 Claimant complained to Dr. Cava of constant knee pain. Dr. Cava noted Claimant had seen Dr. Moon for her right foot/ankle. No examination of the ankle was noted. Dr. Cava remarked that Claimant's symptoms continued to worsen and migrate throughout her course of treatment and that Claimant did not seem to have a realistic understanding or expectation of Dr. Moon's recommendation for her treatment for her ankle/knee.

46. On May 18, 2021 Claimant continued to complain of pain in the right knee, back, hips and right ankle, along with pain in her left knee. On exam of the right knee Dr. Cava noted no apparent swelling of the right knee compared to the left, diffuse tenderness over the anterior knee, and limited range of motion with pain. Exam of the right lower leg was normal with the exception of increased sensitivity to light touch over the lateral lower leg to anterior-lateral ankle. The right ankle appeared normal. There was tenderness in the peroneal tendons and anterior ankle but full range of motion. Dr. Cava noted antalgia on the right with limping. Her assessment was chondromalacia, numbness of right lower extremity, emotional stress reaction and right ankle sprain. She referred Claimant for a repeat right knee MRI. Under the Discussion/Summary section of her medical note she remarked,

> [r]ight knee injury (and initially right ankle sprain that resolved) with persistently worsening/migrating symptoms and subjective complaints more than objective findings…Gait training/practice is important for her, as she has been frequently positioning her right lower extremity (and sometimes left) in external rotation and abduction for more than a year now.

(Cl. Ex. 5, p. 90).

47. On June 17, 2021 Dr. Cava noted on examination diffuse tenderness, weakness and limited range of motion of the right knee. There was increased/abnormal sensitivity to light touch over the lateral lower leg to anterior-lateral ankle. No ankle exam findings are documented. Claimant demonstrated antalgia on the right. Dr. Cava noted that a recent right knee MRI of right demonstrated a well-incorporated osteochondral graft and unchanged arthritis changes in the knee compared to a prior exam. She remarked that, despite Claimant completing an extensive course of physical therapy, as well as six chiropractic sessions and massage therapy, her symptoms and function had not improved but instead migrated and worsened. She referred Claimant to Dr. Frank for a maintenance visit for the right knee.

48. On July 16, 2021 Dr. Cava placed Claimant at MMI. On examination of the right knee, Dr. Cava noted no swelling, diffuse medial tenderness and tenderness to palpation inferior to the patella with no tenderness over the patella, mild lateral

tenderness, and no crepitus with passive knee motion but a small click/catch with the patella moved distally. Active right knee range of motion was 130 degrees flexion and 0 degrees extension. Left knee active range of motion was 135 degrees flexion and 0 degrees extension. Dr. Cava made no findings of any valgus deformity at the time of her examination. No examination of the right ankle is documented.

49. Dr. Cava's final assessment was right knee strain and s/p right knee surgery. Using the AMA Guides, she assigned Claimant 13% combined lower extremity impairment. The total combined impairment rating consisted of 2% lower extremity impairment for range of motion deficits in the right knee (using the left knee as a baseline), 10% lower extremity impairment for chondromalacia under Table 40 of the AMA Guides, and 1% lower impairment for mild right sural neuropathy that developed postoperatively. Dr. Cava referred Claimant for a functional capacity evaluation ("FCE") for the right knee and released Claimant to modified duty with permanent restrictions as determined by a valid FCE. Regarding maintenance treatment, Dr. Cava recommended Claimant complete her eight total visits with Dr. Torres, and one maintenance visit with Dr. Frank for the right knee in the next eight weeks.

50. Dr. Scott performed a DIME on November 30, 2021, taking Claimant's subjective history, reviewing medical records and performing a physical examination. The parties requested Dr. Scott evaluate Claimant's right ankle, right knee, right hip, lumbar spine and digestive issues. On examination of the right knee, Dr. Scott noted no swelling, popping or crepitus. Ligaments of the knee were stressed and stable with good patellar tracking. There was no MCL or LCL gapping with varus and valgus stress at 0 and 30 degrees. McMurray's testing was negative. Active range of motion of the right knee was measured by goniometer to 119 degrees of flexion and limited to -30 degrees in extension while sitting. Claimant was able to place her right knee in 0 degrees of extension or neutral position. There was no right calf tenderness. Claimant reported decreased sensation to light touch over the right lateral leg. Examination of the right ankle showed no swelling and no tenderness over the lateral or medial malleolus. Regarding right ankle range of motion Dr. Scott noted Claimant had "good passive range of motion without resistance she noted some Achilles tendon tightness with dorsiflexion of the foot." (R. Ex. E, p. 109). There was no pain with inversion or eversion stress and no ligamentous instability with inversion or eversion stress. There was negative anterior posterior drawer sign of the right ankle. Dr. Scott did not note any valgus deformity of the right knee.

51. Dr. Scott provided the following clinical diagnoses: (1) Contusions of the right knee resolved; (2) Twist of the right ankle with mild strain/sprain, resolved; (3) Aggravation of pre-existing chondromalacia of the patella and femoral condyle, with two arthroscopic surgeries and cartilage allograft placement; (4) Claimed low back pain due to altered gait from pain in the right knee; and (5) Possible mild sural nerve neuropathy due to regional block at time of second knee surgery on 12/16/2019. He agreed with Dr. Cava that Claimant reached MMI as of July 16, 2021.

52. Dr. Scott opined that the medical record and structural testing clearly demonstrated Claimant probably had pre-existing right knee chondromalacia that was aggravated by the February 21, 2019 work injury. Using the AMA Guides and the Impairment Rating Tips, Dr. Scott assigned Claimant combined 16% lower extremity impairment for the right knee. The rating consisted of 11% lower extremity impairment for range of motion deficits in the right knee under Section 3.2c and Table 39 of the AMA Guides, 5% lower extremity impairment under Section 5 of Table 40 of the AMA Guides for chondromalacia, and 1% lower extremity impairment for mild sural nerve impairment. Dr. Scott did not assign any impairment of the right ankle or right hip, stating the following: "By my examination [Claimant] has no permanent dysfunction of her right ankle for her presumed mild sprain of the right ankle on 2/21/2019. [Claimant] did not report an injury to her right hip nor did she report to me problems with her right hip." (R. Ex. E, p. 111). Dr. Scott explained that his impairment rating differed from Dr. Cava's as Claimant's right knee active range of motion was less on his examination. He further explained that he chose a 5% rating for chondromalacia versus 10% because of his belief that the work injury aggravated Claimant's chondromalacia.

53. Dr. Scott did not assign any permanent impairment for the lumbar spine, opining that there was no evidence Claimant suffered any work-related structural injury to her lumbar spine. He also did not assign any permanent impairment for any digestive issues, concluding that Claimant presented no evidence she suffered a permanent structural or physiologic impairment of the digestive system as a result of the work injury. Regarding maintenance care, Dr. Scott recommended Claimant continue wearing the unloader knee brace, take Tylenol for and ice/heat the knee as needed, and continue a strengthening program for the muscles surrounding the knee.

54. It is undisputed Respondent filed a Final Admission of Liability consistent with Dr. Scott's DIME report. Respondent admitted for reasonable, necessary and related medical maintenance treatment. Claimant did not offer evidence as to any specific maintenance medical treatment Claimant has requested and Respondent has failed to authorize or denied.

55. On October 20, 2022 Caroline Gellrick, M.D. performed an IME at the request of Claimant. Dr. Gellrick's record review did not include Dr. Scott's DIME report. On examination Dr. Gellrick noted Claimant walked with her right foot outward. There was mild positive McMurray's testing medially and laterally on the right and tenderness medially and laterally on the right knee. Right knee active range of motion using goniometer was 131 degrees flexion and -5 degrees extension. Claimant was intolerant of range of motion measurements of the left knee due to cramping in her left leg. Dr. Gellrick noted the following right ankle range of motion measurements: 10 degrees dorsiflexion, 40 degrees plantar, 30 degrees inversion and 20 degrees eversion. No measurements of the valgus deformity are documented.

56. Dr. Gellrick agreed with the MMI date assigned by Dr. Cava of July 16, 2021. She noted she agreed in part with Dr. D'Angelo's notation that Claimant symptoms of pain in the number of body parts kept spreading from the initial encounter of a right

knee sprain and ankle sprain. Dr. Gellrick opined that there was no surgical indication for further surgery of the right knee or surgery of the right ankle.

57. Using the AMA Guides Dr. Gellrick assigned a combined lower extremity impairment of 29%. Her rating consisted of:

a. 21% impairment for the right knee, comprised of: (1) 2% lower extremity impairment for range of motion deficits of the right knee, using Dr. Cava's left knee measurements for normalization, as Claimant was intolerant of left knee measurements during her exam; (2) 10% impairment for chondromalacia under Table 40 of the AMA Guides; and (3) 10% impairment for posttraumatic valgus deformity;

b. 9% impairment of the right ankle for range of motion deficits; and

c. 1% impairment for damage to the sural nerve under Table 51 of the AMA Guides.

58. Regarding maintenance care, Dr. Gellrick recommended further neuropsychological testing with a bilingual neuropsychologist, orthotics to correct Claimant's leg length discrepancy, aquatic and land physical therapy, and knee brace replacements.

59. Dr. Gellrick testified at a deposition as Level II accredited expert in family medicine and addiction medicine. Dr. Gellrick testified consistent with her IME report. She confirmed that, at the time of issuing her IME report she had not reviewed Dr. Scott's DIME report. Dr. Gellrick explained that she provided 10% impairment for chondromalacia because the two surgeries resulting from Claimant's work injury aggravated the condition. She testified that she assigned 10% impairment for posttraumatic valgus deformity, which she explained is a deformity of the leg in which Claimant's right knee bent inward. Dr. Gellrick opined that the valgus deformity most likely developed after Claimant's work-related surgeries, noting that the initial medical records did not document any valgus deformity. She did not address measurements of the degree of valgus deformity. Dr. Gellrick testified she assigned 2% impairment for range of motion deficits of the right knee after normalization, as well as 1% impairment for mild right sural neuropathy that was likely caused by Claimant's knee surgeries. Dr. Gellrick testified that Claimant's ankle was part of her original work injury and that she assigned 9% impairment of the right ankle after normalization compared to the left ankle.

60. Dr. Gellrick continued to recommend the maintenance care detailed in her IME report, including a follow-up with Dr. Torres, an evaluation with a neuropsychologist like Dr. Rieffel who speaks Spanish, orthotics, a knee brace as well as possibly a brace for her right ankle. On cross-examination Dr. Gellrick acknowledged that, by the time she examined Claimant approximately 13 months post-MMI, Claimant's range of motion could have worsened with the passage of time, body habitus and inactivity.

61. Claimant testified at hearing that she did not have any prior right knee or right ankle injuries. She testified that after undergoing the right knee surgeries her right foot began to turn outward and she experienced numbness from her hip down to her foot. Claimant testified she developed a limp after sustaining the injury in March 2019 and has had the limp since such time. She testified her right knee currently feels like it will give out 2-3 times per day, and has 9/10 pain. She wears a knee brace prescribed by Dr. Frank and an ankle brace that was prescribed by Dr. Moon. She testified that since being placed at MMI by Dr. Cava almost two years ago her condition has worsened, with more pain and stiffness.

62. The ALJ finds the opinions of Drs. Scott and Cava, as supported by the medical records, more credible and persuasive than the opinion of Dr. Gellrick and Claimant's testimony.

63. The ALJ finds Dr. Scott properly applied the AMA Guides. Claimant failed to prove by a preponderance of the evidence Dr. Scott's DIME opinion on permanent impairment is incorrect.

64. As a result of Claimant's February 24, 2019 work injury and related surgeries, Claimant has a visible disfigurement to the body and is entitled to award for disfigurement. The disfigurement consists of the following:

a. A noticeable limp on the right side.

b. A scar on the front of Claimant's right knee measuring approximately 2 inches in length and ½ inch in width. The scar is discolored and textured.

c. A knee brace Claimant testified she wears almost daily but not in the house.

d. An ankle brace Claimant testified she wears when driving and standing for a long period of time.

e. Two arthroscopic scars on Claimant's inner right knee which are slightly discolored.

f. An arthroscopic scar on Claimant's out right knee that is slightly discolored.

65. Claimant's disfigurement does not entail extensive facial scars or facial burn scars, extensive body scars or burn scars; or stumps due to loss or partial loss of limbs.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

The party seeking to overcome the DIME physician's finding regarding MMI and whole person impairment bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP,

Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The Court of Appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of §8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* WC 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indeminity Care ESIS Inc*., WC 4-777-882 (ICAO, Nov. 5, 2010); *see Morris v. Olson Heating & Plumbing Co.,* WC 4-980-171 (ICAO, May 20, 2019) (whether the claimant sustained a whole person or extremity impairment is one of fact for the ALJ and the DIME opinion on the issue is not entitled to any enhanced weight).

If a party has carried the initial burden of overcoming the DIME physician's impairment rating, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When applying the preponderance of the evidence standard the ALJ is "not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence." *Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, WC 4-561-848 (ICAO, Mar. 19, 2004). An ALJ's statutory power to render evidentiary decisions does not disappear merely because the ATP and the DIME doctor agree that a claimant has not reached MMI. An ALJ may thus determine whether a claimant has reached MMI and assign an impairment rating as a question of fact. *Destination Maternity and Liberty Mutual Insurance Company v. Burren*, 19SC298 (Colo. May 18, 2020); *see Niedzielski v.*

Target Corporation, WC 5-036-773-001 (ICAO, Mar. 9, 2020) (when an ALJ determines that a DIME opinion has been overcome, the issue of the claimant's correct impairment rating becomes a question of fact and the ALJ may calculate the impairment based upon a preponderance of the evidence).

A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* WC 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. Deviations from the *AMA Guides* constitute evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *See Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Vuksic v. Lockheed Martin Corporation* WC 4-956-741-02 (ICAO, Aug. 4, 2016). Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In re Goffinett,* WC 4-677-750 (ICAO, Apr. 16, 2008).

Claimant argues Dr. Scott erred in his DIME opinion by failing to assign impairment of the right ankle and failing to assign a higher lower extremity impairment rating for the right knee. As part of his work-related diagnoses, Dr. Scott opined that Claimant sustained resolved contusions of the right knee, a resolved mild right ankle strain/sprain, and aggravation of pre-existing chondromalacia of the patella and femoral condyle. Dr. Scott included the right ankle as part of his work-related diagnoses and specifically determined Claimant did not sustain any permanent impairment of the right ankle. As Claimant is attempting to challenge the DIME physician's opinion on scheduled impairment of body parts Dr. Scott deemed related to the work injury (the right knee and right ankle), the correct burden of proof to overcome the DIME is a preponderance of the evidence.

As found, Claimant failed to prove it is more probably true than not Dr. Scott's DIME opinion was incorrect. Dr. Scott determined Claimant sustained a combined 16% lower extremity impairment, consisting of 11% impairment for right knee range of motion deficits, 5% for right knee chondromalacia under Table 40 of the AMA Guides, and 1% for mild sural nerve impairment. Claimant does not argue that Dr. Scott's 1% rating for sural nerve impairment is incorrect. Dr. Scott's 1% impairment for sural nerve impairment is consistent with the impairment assigned by Drs. Cava and Gellrick and is supported by the medical records. The crux of Claimant's challenge to the DIME - the impairment ratings of the right knee and right ankle - is discussed below.

<u>Right Knee</u>

Claimant does not allege Dr. Scott erred in his right knee range of motion measurements or calculations. Claimant argues Dr. Scott erred by assigning 5% impairment instead of 10% impairment for Claimant's chondromalacia and that he

provided no basis for doing so. Claimant further argues Dr. Scott erred by failing to rate Claimant's valgus deformity. Claimant contends she is entitled to 21% lower extremity impairment for her right knee, as determined by Dr. Gellrick.

Claimant's argument that Dr. Scott did not explain the basis for his rating for chondromalacia is inaccurate. Dr. Scott specifically stated in his DIME report that he assigned 5% impairment instead of 10% impairment because he believed Claimant aggravated a condition of chondromalacia. That Dr. Scott did not provide a more extensive explanation of his reasoning does not render his opinion probably incorrect in light of the totality of the circumstances. The preponderant evidence demonstrates Dr. Scott's impairment rating for chondromalacia was discretionary and within the parameters established by the AMA Guides. Section 5 of Table 40 of the AMA Guides provides for 0-20% impairment of the lower extremity for arthritis due to any cause including trauma. Neither the AMA Guides nor the Impairment Rating Tips specify that a physician is required to give a particular rating between 0-20%. The AMA Guides only note that the impairment of 0-20% under Section 5 of Table 40 is "according to deformity." (AMA Guides, p. 68).

Claimant relies on the fact that Dr. Gellrick's 10% impairment for chondromalacia is the same as Dr. Cava's. While Dr. Gellrick's 10% impairment for chondromalacia is consistent with that of Dr. Cava, the preponderant evidence does not demonstrate Dr. Scott's opinion was probably in error. Drs. Scott, Cava and Gellrick all opine Claimant had pre-existing chondromalacia that was aggravated by the work injury. Claimant's imaging confirms what was likely pre-existing chondromalacia. A right knee MRI obtained prior to Claimant's first right knee surgery noted grade III chondromalacia, while those obtained after her two surgeries demonstrated grade III and grade IV chondromalacia. Dr. Scott determined that the extent of work-related aggravation and deformity qualified for a 5% rating instead of 10%, which was within his discretion and within the parameters of the AMA Guides.

Similarly, the preponderant evidence does not establish Dr. Scott erred in failing to assign impairment for valgus deformity. On October 8, 2020, Dr. Frank did note the appearance of right gross genu valgum as compared to the left. Nonetheless, neither Dr. Cava, who treated Claimant for more than two years, Dr. D'Angelo, or Dr. Scott noted any valgus deformity related to the work injury or gave any impairment for such condition. Section 10 of Table 40 of the AMA Guides provides for 10% lower extremity impairment for posttraumatic valgus deformity *if over 20 degrees*. (Emphasis added). The medical records, including Dr. Gellrick's IME report, do not document measurements with respect to the degree of valgus deformity. Dr. Gellrick testified that she attributes the valgus deformity to the work injury, but did not address any degree of deformity. The existence of a valgus deformity is not dispositive that Dr. Scott likely erred in not assigning permanent impairment for such condition under the totality of the circumstances.

<u>Right Ankle</u>

Claimant further contends Dr. Scott erred in failing to assign permanent impairment for the right ankle, based on documentation in the records of limited ankle range of motion and right ankle pain, as well as failure by Drs. Cava and Scott to take specific range of motion measurements of the right ankle. Claimant argues she is entitled to 9% impairment of the right ankle due to range of motion deficits as determined by Dr. Gellrick.

The preponderant evidence does not demonstrate Dr. Scott erred in failing to assign permanent impairment for the right ankle. Documentation of ankle range of motion and complaints are present in the record, although somewhat inconsistently. While there are references to limited or decreased ankle range of motion at certain points throughout Claimant's evaluation and treatment, specific ankle range of motion measurements are not documented. Dr. Scott performed an examination of the right ankle noting "good" passive range of motion. He specifically explained that his exam revealed no permanent dysfunction of the right ankle. Dr. Scott's clinical diagnoses included a mild right ankle strain/sprain that had resolved.

His opinion that Claimant did not sustain any impairment to her ankle is consistent with that of Dr. D'Angelo, as well as ATP Dr. Cava. On September 28, 2020, Dr. Cava specifically addressed Claimant's complaint that her right ankle had gone untreated, noting that initial emergency room records documented mild ankle findings and a normal x-ray. Dr. Cava further noted that Claimant's ankle strain was continually improving in the first few months, she had a normal ankle exam on April 12, 2019, and that the strain nearly resolved by May 2019. On May 18, 2021, two months prior to being placed at MMI, Dr. Cava noted full right ankle range of motion on examination. Her final assessment was right knee strain and s/p right knee surgery.

Dr. Gellrick assigned an impairment for the right ankle based on deficits in range of motion obtained 13 months subsequent to Claimant being placed at MMI. Claimant testified that, since MMI she has experienced more pain and stiffness. Dr. Gellrick acknowledged during her testimony that, by the time she examined Claimant, Claimant's range of motion could have worsened with the passage of time, body habitus and inactivity. With respect to impairment of the right ankle, Dr. Scott's opinion, as corroborated by Drs. Cava and D'Angelo and the medical records, is more credible and persuasive than that of Dr. Gellrick. To the extent Dr. Scott was required under the AMA Guides to document specific ankle range of motion measurements and did not do so, such deviation did not materially impact his rating, in light of his ultimate conclusions that Claimant's right ankle sprain/strain resolved without permanent dysfunction.

Based on the totality of the evidence, the preponderant evidence does not demonstrate Dr. Scott erred in his DIME opinion on permanent impairment.

Maintenance Medical Treatment

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further

deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003).

As found, Respondent admitted liability for reasonable, necessary and related medical benefits. Claimant does not contend, nor was any evidence offered, that Respondent denied or otherwise failed to authorize a specific medical maintenance benefit requested by Claimant. Accordingly, any determination of whether specific medical treatment is reasonable, necessary and related maintenance treatment is premature. The issue shall be reserved for future determination as applicable.

Disfigurement

Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

As found, as a result of the work injury and related surgeries, Claimant sustained a serious permanent disfigurement in an area of the body normally exposed to public view. Based on Claimant's disfigurement, that ALJ concludes she is entitled to the disfigurement maximum for her date of injury, $5,229.68.

ORDER

1. Claimant failed overcome Dr. Scott's DIME opinion permanent impairment by a preponderance of the evidence.

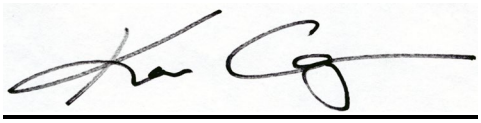
2. Respondent shall pay Claimant $5,229.68 for her disfigurement. Respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 30, 2023



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-183-740-003

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive an accounting demonstrating proof of reimbursement of medical expenses.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is permitted to receive interest on her Workers' Compensation indemnity benefits.

3. Whether Claimant has established by a preponderance of the evidence that she is eligible for reimbursement of mileage and other expenses.

4. Whether Claimant has proven by a preponderance of the evidence that she is entitled to recover penalties.

FINDINGS OF FACT

1. On August 19, 2021 Claimant sustained a work-related injury to her right shoulder during the course and scope of her employment with Employer.

2. A First Report of Injury was filed on September 29, 2021. Respondents filed a Notice of Contest on October 4, 2021.

3. On October 25, 2021 Claimant filed an Application for Hearing regarding compensability, medical benefits and Temporary Total Disability (TTD) benefits.

4. On December 16, 2021 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged Claimant was entitled to receive medical benefits and TTD benefits.

5. On April 21, 2022 John J. Raschbacher, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI). Respondents filed a Final Admission of Liability (FAL) on May 24, 2022.

6. Claimant objected to the FAL and sought a Division Independent Medical Examination (DIME). On June 6, 2022 Claimant filed an Application for Indigent Determination with the Office of Administrative Courts. On June 29, 2022 ALJ Nemechek determined Claimant's liquid assets totaled $22,100.00 and thus exceeded the $1,500.00 limit. He concluded Claimant was not indigent pursuant to WCRP 18-10(A)(1). Claimant thus paid the $1000 DIME fee.

7. On October 10, 2022 DIME physician John D. Douthit, M.D. determined Claimant had reached Maximum Medical Improvement (MMI) on April 21, 2022 and assigned a 13% right upper extremity impairment rating. On October 27, 2022 Respondents filed a FAL consistent with Dr. Douthit's MMI and impairment determinations. The FAL also acknowledged that Claimant was permitted to receive medical maintenance benefits in the form of pain management including a second opinion on her right shoulder with an orthopedic surgeon.

8. On November 3, 2022 Respondents filed an Amended FAL. The Amended FAL reiterated that Claimant was authorized to receive medical maintenance benefits in the form of pain management including a second opinion on her right shoulder with an orthopedic surgeon. The document specified that Respondents had paid $4349.40 in medical benefits The FAL noted that it had been amended to include the payment of TTD benefits for the period April 21, 2022 through October 9, 2022 based on Dr. Douthit's DIME opinion. The FAL stated that Claimant had received TTD benefits totaling $18,799.04 for the period August 20, 2021 through October 9, 2022. Claimant also received Temporary Partial Disability (TPD) benefits for the period October 10, 2022 through April 16, 2023 totaling $9,834.45. The FAL reveals that Respondents did not make any interest payments to Claimant.

9. Claimant objected to the FAL and filed an Application for Hearing regarding multiple issues, including the following:

> [a]ccurate accounting showing proof of reimbursement of all medical expenses, maintenance care and treatment as recommended by DIME physician, penalties for requiring me, as well as, all Colorado instructors, to perform tasks "off the clock" without pay and then using the argument that I wasn't on the clock to justify denial of a Workers' Comp claim, penalties for handling my claim incorrectly and violating workers' compensation rules/deadlines, interest on TTD for four months of non-payment while waiting for court date, interest on PPD for six months of non-payment while waiting for DIME, reimbursement for $1000 DIME since their first doctor was wrong, reimbursement for mileage, reimbursement for paper, ink, postage, etc. required to fight the denial, PTO and holiday pay that I used up when wasn't receiving TTD but should have been, unpaid wages for 100s of times loading and unloading equipment from my vehicle. They have admitted this was done 'off the clock.' If submitted this time on my timesheets it brought down my "efficiency rating" which prompted discipline at performance reviews.

10. Claimant testified at the hearing in this matter. She recounted that she reported her August 19, 2021 injury to Employer but was not apprised that the claim might involve Workers' Compensation. She thus went to an emergency room and later underwent physical therapy under private insurance. Claimant noted Employer did not

timely file a First Report of Injury or supply a designated provider list. Respondents initially denied liability, but eventually accepted the claim and filed a GAL.

11. Claimant explained that, after Respondents accepted liability, she was required to attend additional medical appointments through Workers' Compensation providers but never received mileage reimbursement. Because she initially reached MMI with a 0% impairment rating, she was required to pay for a DIME and received a 13% upper extremity rating. Claimant remarked that she still suffers right arm limitations as a result of her August 19, 2021 work injury.

12. Claimant seeks an "accounting showing proof of reimbursement of all medical expenses, maintenance care and treatment" as recommended by DIME Dr. Douthit. However, Respondents' counsel has stated that a copy of the medical payment log has been provided to Claimant. Moreover, on November 3, 2022 Respondents filed an Amended FAL reiterating that Claimant was entitled to receive medical maintenance benefits in the form of pain management including a second opinion on her right shoulder with an orthopedic surgeon. The document specified that Respondents had paid $4349.40 in medical benefits for Claimant's injury.

13. Importantly, the record reflects that Respondents have requested medical provider SCL Health to cease billing Claimant and submit their bills to Insurer for payment. Specifically, on January 27, 2022 Respondents' counsel authored a letter advising medical providers SCL Health Saint Joseph Hospital and Western Orthopaedics and Sports Medicine that a FAL had been filed "which indicates that all medical costs incurred for treatment of the claimant's work-related injuries are the sole responsibility of the employer. As such, any attempt to collect against the claimant will be in direct violation of Colorado law." The letter also specified that an injured worker is never required "to directly pay for admitted or ordered medical benefits covered under the Workers' Compensation Act." Notably, if the injured worker has directly paid for medical treatment that is later admitted, "the payer shall reimburse the injured worker for the amounts actually paid for authorized treatment within 30 days of receipt of the bill." On June 27, 2022 Respondents authored an identical letter to SCL Health Saint Joseph Hospital.

14. The preceding documentation reflects that Respondents have admitted liability for and paid Claimant's reasonable, necessary and related medical benefits. To the extent that medical providers seek payment directly from Claimant, Respondents have advised the providers that their requests violate Colorado law. Instead, Respondents have acknowledged that they are required to reimburse Claimant for the amounts actually paid for authorized treatment within 30 days of receipt of the bill. Finally, there is no evidence in the record that Respondents have denied any requested maintenance medical treatment. Because Respondents have acknowledged liability for medical benefits and advised providers they are responsible for payment, Claimant's request for an accounting and reimbursement of medical expenses is denied and dismissed.

15. Claimant seeks four months of interest payments on TTD benefits while awaiting a court date. Claimant also requests six months of PPD benefits while waiting for a DIME. The FAL reveals that Respondents did not make any interest payments to Claimant. However, the indemnity benefits for which Claimant seeks interest were not due and owing until after Dr. Douthit's DIME opinion was issued on October 10, 2022. Respondents then timely issued an Amended FAL on November 3, 2022 based on Dr. Douthit's determination. The Amended FAL noted that it had been revised to include the payment of TTD benefits for the period April 21, 2022 through October 9, 2022. The Amended FAL detailed that Claimant had received TTD benefits totaling $18,799.04 for the period August 20, 2021 through October 9, 2022. Claimant also received TPD benefits for the period October 10, 2022 through April 16, 2023 totaling $9,834.45. Because the record reveals that Respondents timely filed an Amended FAL and did not delay indemnity benefit payments to Claimant, no interest is due. Claimant's request for interest payments is thus denied and dismissed.

16. In Claimant's Application for Hearing she sought reimbursement for mileage expenses. DOWC Rule of Procedure 18-7(E) specifies that "the injured worker shall submit a request to the Payer showing the date(s) of travel and mileage, and explain any other reasonable and necessary travel expenses incurred or anticipated." However, the record is devoid of evidence that Claimant requested mileage reimbursement for medical expenses from Respondents. Accordingly, Claimant's request for mileage reimbursement is denied as unripe.

17. Claimant also seeks reimbursement for expenses in the form of paper, ink, and postage to challenge the denial of her claim for benefits. However, there is no evidence in the record regarding the amount Claimant seeks. Furthermore, there is no provision in the Workers' Compensation Act for reimbursement of expenses for paper, ink and postage incurred in challenging a denied claim. Accordingly, Claimant's request for reimbursement of costs for paper, ink and postage is denied and dismissed.

18. Claimant requests "reimbursement for $1000 DIME since their first doctor was wrong." However, the record reflects that Claimant was responsible for the DIME fees. Initially, Claimant objected to the FAL and sought a DIME. On June 6, 2022 Claimant filed an Application for Indigent Determination with the Office of Administrative Courts. On June 29, 2022 ALJ Nemechek determined that Claimant's liquid assets totaled $22,100.00 and exceeded the $1,500.00 limit. He thus concluded that Claimant was not indigent pursuant to WCRP 18-10(A)(1). Claimant then paid the $1000 DIME fee. Pursuant to WCRP 11-5(B) the requesting party is liable for payment of DIME fees absent a finding of indigence. Accordingly, Claimant's request for reimbursement of the DIME fee is denied and dismissed.

19. In her Application for Hearing, Claimant sought penalties for "handling my claim incorrectly and violating workers' compensation rules/deadlines." The Application did not state with specificity the grounds on which Claimant was seeking penalties. Although Claimant testified that Employer did not timely file a First Report of Injury or

supply a designated provider list, Respondents did not receive adequate notice of the factual or legal bases for her penalty claims.

20. Regardless of Claimant's testimony at hearing, the Application for Hearing simply identified that Respondents had failed to correctly handle her claim and violated deadlines. However, Respondents were entitled to reasonable notice of the specific legal and factual bases of the penalty claims so they had a fair opportunity to prepare appropriate defenses. Based on a review of the record, Respondents did not receive a fair opportunity to present contrary evidence at the time of the hearing or receive sufficient notice of the bases of the claims for penalties to satisfy standards of due process. Accordingly, Claimant's request for penalties is denied and dismissed.

21. Claimant also seeks penalties for work performed "off the clock" and unpaid wages for loading equipment. The preceding issues seek compensation for employment duties and do not involve work injuries. Because requests exceed the jurisdiction of the Office of Administrative Courts they will not be addressed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Reimbursement for Medical Expenses

4. Section 8-43-203(2)(b)(II), C.R.S. provides that a claim will automatically close after the date of the FAL unless the claimant contests the FAL in writing and requests a hearing on any disputed issues that are ripe for hearing. *See Stefanski v. Indus. Claim Appeals Off.,* 128 P.3d 282 (Colo. App. 2006). One purpose of the procedures enumerated in §8-43-203(2)(b)(II) is to provide the claimant with formal notice of the issues admitted and denied by the respondents as well as the bases for those actions. The claimant may then make an informed decision regarding whether to contest the FAL. The purpose of procedures surrounding the filing of FAL is for the respondents to notify the claimant regarding admitted and denied issues and for the claimant to determine whether the claim should close or be contested. *Olguin v. Rent a Center*, W.C. No. 4-714-364 (ICAO, Apr. 13, 2010). The statutory automatic closure provisions are designed to "promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy." *Dyrkopp v. Indus. Claim Appeals Off.,* 30 P.3d 821, 822 (Colo. App. 2001).

5. As found, Claimant seeks an "accounting showing proof of reimbursement of all medical expenses, maintenance care and treatment" as recommended by DIME Dr. Douthit. However, Respondents' counsel has stated that a copy of the medical payment log has been provided to Claimant. Moreover, on November 3, 2022 Respondents filed an Amended FAL reiterating that Claimant was entitled to receive medical maintenance benefits in the form of pain management including a second opinion on her right shoulder with an orthopedic surgeon. The document specified that Respondents had paid $4349.40 in medical benefits for Claimant's injury.

6. As found, importantly, the record reflects that Respondents have requested medical provider SCL Health to cease billing Claimant and submit their bills to Insurer for payment. Specifically, on January 27, 2022 Respondents' counsel authored a letter advising medical providers SCL Health Saint Joseph Hospital and Western Orthopaedics and Sports Medicine that a FAL had been filed "which indicates that all medical costs incurred for treatment of the claimant's work-related injuries are the sole responsibility of the employer. As such, any attempt to collect against the claimant will be in direct violation of Colorado law." The letter also specified that an injured worker is never required "to directly pay for admitted or ordered medical benefits covered under the Workers' Compensation Act." Notably, if the injured worker has directly paid for medical treatment that is later admitted, "the payer shall reimburse the injured worker for the amounts actually paid for authorized treatment within 30 days of receipt of the bill." On June 27, 2022 Respondents authored an identical letter to SCL Health Saint Joseph Hospital.

7. As found the preceding documentation reflects that Respondents have admitted liability for and paid Claimant's reasonable, necessary and related medical benefits. To the extent that medical providers seek payment directly from Claimant, Respondents have advised the providers that their requests violate Colorado law. Instead, Respondents have acknowledged that they are required to reimburse Claimant for the amounts actually paid for authorized treatment within 30 days of receipt of the bill.

Finally, there is no evidence in the record that Respondents have denied any requested maintenance medical treatment. Because Respondents have acknowledged liability for medical benefits and advised providers they are responsible for payment, Claimant's request for an accounting and reimbursement of medical expenses is denied and dismissed.

8. As found, Claimant seeks four months of interest payments on TTD benefits while awaiting a court date. Claimant also requests six months of PPD benefits while waiting for a DIME. The FAL reveals that Respondents did not make any interest payments to Claimant. However, the indemnity benefits for which Claimant seeks interest were not due and owing until after Dr. Douthit's DIME opinion was issued on October 10, 2022. Respondents then timely issued an Amended FAL on November 3, 2022 based on Dr. Douthit's determination. The Amended FAL noted that it had been revised to include the payment of TTD benefits for the period April 21, 2022 through October 9, 2022. The Amended FAL detailed that Claimant had received TTD benefits totaling $18,799.04 for the period August 20, 2021 through October 9, 2022. Claimant also received TPD benefits for the period October 10, 2022 through April 16, 2023 totaling $9,834.45. Because the record reveals that Respondents timely filed an Amended FAL and did not delay indemnity benefit payments to Claimant, no interest is due. Claimant's request for interest payments is thus denied and dismissed.

Reimbursement for Mileage and other Expenses

9. Section 8-42-101(1)(a), C.R.S. requires the respondents to pay for expenses that are incidental to obtaining reasonable and necessary medical treatment. Specifically, mileage expenses are compensable if "incidental" to obtaining medical treatment. *Country Squire Kennels v. Tarshsis*, 899 P.2d 362 (Colo. App. 1995); *Sigman Meat Co. v. Indus. Claim Appeals Off.*, 761 P.2d 265 (Colo. App. 1988). Similarly, Colorado Division of Workers' Compensation (DOWC) Rule of Procedure 16-10(G) specifies that "payers shall reimburse injured workers for mileage expenses as required by statute or provide written notice of the reason(s) for denying reimbursement within 30 days of receipt." Finally, DOWC Rule of Procedure 18-7(E) provides that "[t]he Payer shall reimburse the injured worker for reasonable and necessary mileage expenses for travel to and from medical appointments.

10. As found, in Claimant's Application for Hearing she sought reimbursement for mileage expenses. DOWC Rule of Procedure 18-7(E) specifies that "the injured worker shall submit a request to the Payer showing the date(s) of travel and mileage, and explain any other reasonable and necessary travel expenses incurred or anticipated." However, the record is devoid of evidence that Claimant requested mileage reimbursement for medical expenses from Respondents. Accordingly, Claimant's request for mileage reimbursement is denied as unripe.

11. As found, Claimant also seeks reimbursement for expenses in the form of paper, ink, and postage to challenge the denial of her claim for benefits. However, there is no evidence in the record regarding the amount Claimant seeks. Furthermore, there is no provision in the Workers' Compensation Act for reimbursement of expenses for paper,

ink and postage incurred in challenging a denied claim. Accordingly, Claimant's request for reimbursement of costs for paper, ink and postage is denied and dismissed.

12. As found, Claimant requests "reimbursement for $1000 DIME since their first doctor was wrong." However, the record reflects that Claimant was responsible for the DIME fees. Initially, Claimant objected to the FAL and sought a DIME. On June 6, 2022 Claimant filed an Application for Indigent Determination with the Office of Administrative Courts. On June 29, 2022 ALJ Nemechek determined that Claimant's liquid assets totaled $22,100.00 and exceeded the $1,500.00 limit. He thus concluded that Claimant was not indigent pursuant to WCRP 18-10(A)(1). Claimant then paid the $1000 DIME fee. Pursuant to WCRP 11-5(B) the requesting party is liable for payment of DIME fees absent a finding of indigence. Accordingly, Claimant's request for reimbursement of the DIME fee is denied and dismissed.

Penalties

13. Section 8-43-304(4), C.R.S., provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The failure to state the grounds for penalties with specificity may result in dismissal of the penalty claims. *In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015). The purposes of the specificity requirement are to both: (1) provide notice of the basis of the alleged violation so the putative violator can have an opportunity to cure the violation and (2) provide notice of the legal and factual bases of the claim for penalties so that the violator can prepare its defense. *See Major Medical Insurance Fund v. Indus. Claim Appeals Off.*, 77 P.3d 867 (Colo. App. 2003). The notice aspect of the specificity requirement is designed to protect the fundamental due process rights of the alleged violator to be "apprised of the evidence to be considered, and afforded a reasonable opportunity to present evidence and argument in support of" its position. *In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015). Nevertheless, the statute does not prescribe a precise form for pleading penalties and an ALJ may consider the circumstances of the individual case to ascertain whether the application for hearing was sufficiently precise to satisfy the statute. *See Davis v. K Mart*, WC 4-493-641 (ICAO Apr. 28, 2004).

14. The fundamental requirements of due process are notice and an opportunity to be heard. Due process contemplates that the parties will be apprised of the evidence to be considered and afforded a reasonable opportunity to present evidence and argument in support of their positions. Inherent in these requirements is the rule that parties will receive adequate notice of both the factual and legal bases of the claims and defenses to be adjudicated. *See Hendricks v. Indus Claim Appeals Off,* 809 P.2d 1076, 1077 (Colo. App. 1990); *In Re Claim of Campbell*, W.C. No. 5-050-078-02 (ICAO, Dec. 18, 2018).

15. As found, in her Application for Hearing, Claimant sought penalties for "handling my claim incorrectly and violating workers' compensation rules/deadlines." The Application did not state with specificity the grounds on which Claimant was seeking penalties. Although Claimant testified that Employer did not timely file a First Report of

Injury or supply a designated provider list, Respondents did not receive adequate notice of the factual or legal bases for her penalty claims.

16. As found, regardless of Claimant's testimony at hearing, the Application for Hearing simply identified that Respondents had failed to correctly handle her claim and violated deadlines. However, Respondents were entitled to reasonable notice of the specific legal and factual bases of the penalty claims so they had a fair opportunity to prepare appropriate defenses. Based on a review of the record, Respondents did not receive a fair opportunity to present contrary evidence at the time of the hearing or receive sufficient notice of the bases of the claims for penalties to satisfy standards of due process. Accordingly, Claimant's request for penalties is denied and dismissed. *See In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015) (setting aside ALJ's order assessing penalties because claimant's application for hearing did not sufficiently notify the respondents of the legal or factual bases of the claims for penalties ultimately imposed).

17. As found, Claimant also seeks penalties for work performed "off the clock" and unpaid wages for loading equipment. The preceding issues seek compensation for employment duties and do not involve work injuries. Because requests exceed the jurisdiction of the Office of Administrative Courts they will not be addressed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for an accounting and reimbursement of medical expenses is denied and dismissed.

2. Claimant's request for interest payments is denied and dismissed.

3. Claimant request for reimbursement of mileage is denied as unripe and her request for other expenses is denied and dismissed.

4. Claimant's request for penalties is denied and dismissed.

5. Claimant's other issues will not be addressed because they exceed the jurisdiction of the Office of Administrative Courts.

6. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2)

That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

WORKERS' COMPENSATION NO. WC 4-997-495-004

ISSUES

1. Whether Claimant established by a preponderance of the evidence that [Redacted, hereinafter KO] is authorized to provide Claimant massage therapy and homecare services.

2. Whether Respondents established by a preponderance of the evidence that the care ordered by ALJ Martinez Tenreiro is no longer reasonable, necessary, and related to Claimant's work injury.

FINDINGS OF FACT

1. Claimant sustained injuries arising out of the course of his employment with Employer on October 23, 2015. Claimant's injuries were previously found compensable by ALJ Margot Jones on September 21, 2016. On February 21, 2018, ALJ Edwin Felter issued a Final Order granting Claimant permanent total disability benefits. On June 9, 2022, ALJ Elsa Martinez Tenreiro issued a Final Order ("June 2022 Order") requiring Respondents to pay for home health services to assist Claimant with activities of daily living up to 8 hours a day that are reasonable, necessary, and related to his work injury, including "both therapy and attendant care services to relieve him from the effects of the October 23, 2015 work related injury." (Ex. 7). In the June 2022 Order, ALJ Martinez Tenreiro found that "Claimant's partner or an outside provider should be providing for at least 5 hours a day seven days a week of attendant care service, which is found to be reasonably necessary and related to the injury. In addition, Claimant should be attended by a professional massage therapist up to twice a day for up to one and one-half hours per session, which is also found to be reasonably necessary and related to the injury. This would provide for approximately eight total hours of care per day." The June 2022 Order further provides that "continuing home health care should include attendant care services, and deep tissue massage services, if available. If they are not available, Respondents shall pay Claimant's life partner [*i.e.*, KO[Redacted]] for the services she is currently providing." (Ex. 7).

2. Although the June 2022 Order does not specifically define the term "attendant care service," the Order indicates that Claimant requires assistance getting "to into the tub, bathing his lower extremities, dressing his lower body, travel to his medical appointments, and performing most activities of daily living, including shopping, making meals other than simple fare, washing his clothes and bedding." The ALJ infers that "attendant care services" is intended to encompass these tasks.

3. Claimant's domestic partner, KO[Redacted], assists Claimant by massaging areas of his body in their home and as he requests. Claimant testified that KO[Redacted]

massages various parts of his body between 8 to 12 times per day, and that her assistance provides him relief. He further testified that no one other than KO[Redacted] has performed massages since he previously received massage from physical therapist Rachel Moore, P.T. Claimant testified that Ms. Moore instructed KO[Redacted] on how to perform massage on Claimant. Claimant further testified that because he experiences spasms in his groin area, he prefers that KO[Redacted] attend to these areas to avoid embarrassment. He also testified that he believes KO[Redacted] knows the locations on his body to the massages, and that she is caring and compassionate.

4. In February 2019, Claimant's physician, Bennett Machanic, M.D., recommended that Claimant receive a massage table for his home for relief. (Ex. 4). Insurer authorized the purchase of the massage table, which Claimant testified KO[Redacted] uses to perform massages in their home.

5. Claimant testified that KO[Redacted] has assisted him with activities around his house, such as assistance using the bathroom, assisting in getting into the bathtub or shower, and bathing him. He further testified that no other person has assisted him in this fashion. KO[Redacted] also assists Claimant with dressing, preparing his meals, washing his clothes, cleaning, child care "and basically all the chores he used to do around the house." (Ex. 7).

6. Claimant requests that KO[Redacted] be deemed an "authorized treating provider" and that Respondents' compensate KO[Redacted] for performing massages and "attendant care" services, such as assisting Claimant with bathing, using the restroom, and performing other activities of daily living and household chores.

7. Allison Fall, M.D. testified at hearing and was admitted as an expert in her specialty -- physical medicine and rehabilitation. On February 3, 2022, Dr. Fall performed an independent medical examination (IME) and medical record review at Respondents' request, and issued a written report. (Ex. H). Dr. Fall testified at Claimant's March 31, 2022 hearing before ALJ Martinez Tenreiro. In that hearing, Dr. Fall opined that Claimant did not require massage therapy or home health attended care services, because Claimant needed to learn and use self- management techniques. She further opined that she saw no evidence that massage therapy relieved or alleviated Claimant's spasms from his injury. ALJ Martinez Tenreiro found Dr. Fall's opinion's unpersuasive and issued her order as described above. (Ex. 7).

8. On February 25, 2022, Dr. Fall reviewed additional records regarding Claimant and issued a report. (Ex. I). Dr. Fall's report indicates she reviewed a report from Craig Hospital dated January 27, 2023. Dr. Fall opined that the findings from Craig Hospital supported her previous opinion that Claimant did not require maintenance care, and that no ongoing medical care was needed. She also indicated that the updated record did not change her previously-expressed opinions.

9. At hearing, Dr. Fall testified consistent with the opinions expressed in her reports. Dr. Fall testified that no medical reason exists for Claimant to receive assistance with activities of daily living, and that he does not require attendant care. She described

"attendant care" as including both assistance with activities of daily living and assistance with medical-related services, such as monitoring medical conditions, wound management, safety issues, bathing, grooming, dressing, feeding and household chores. She opined that there is no medical reason for Claimant to receive these types of services. This is because Claimant does not need assistance with medication management, blood pressure or wound care, and he is able to bathe himself, ambulate throughout his home, drive a vehicle, and has no cognitive impairment. Dr. Fall's opinions were not persuasive.

10. [Redacted, hereinafter AA] was a "resolution manager" for [Redacted, hereinafter GB], until March 28, 2023. In this role, AA[Redacted] handled workers' compensation claims, including Claimant's claim for a period of time. AA[Redacted] testified that after the June 2022 Order was issued, Insurer identified a provider to provide attendant home services for Claimant five hours daily. AA[Redacted] testified that Claimant was offered this care on November 30, 2022. This offer was conveyed to Claimant's counsel by a letter dated November 30, 2022. (Ex. L). Claimant has not accepted that offer.

11. AA[Redacted] also testified that Insurer identified multiple providers who could provide Claimant professional massage therapy, and that this service was offered to Claimant on January 17, 2023. This offer was conveyed to Claimant's counsel by a letter dated January 17, 2023, indicating that Respondents had found five professional massage therapy services who could massage therapy at Claimant's home consistent with the June 2022 Order. (Ex. N). No evidence was admitted indicating Claimant has accepted this offer. Claimant testified that he was not aware the services had been offered.

12. No credible evidence was admitted indicating KO[Redacted] is a licensed massage therapist, or has received any formal training in massage therapy.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it

is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

KO[Redacted] as an "Authorized Provider"

Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Indus. Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer (*i.e.*, the authorized treating physician or ATP), as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Indus. Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Providers within this chain of referrals from the ATP are not limited to physicians, and may include other non-physician medical providers. *See e.g.*, *In re Claim of Petrich*, W.C. No. 4-766-673-02 (ICAO May 3, 2013). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO Oct. 16, 2018).

Massage Therapy

Claimant requests that KO[Redacted] be "authorized" to provide to Claimant the massage therapy ordered in the June 2022 Order. Claimant has failed to establish that KO[Redacted] should be authorized to perform massage therapy. No credible evidence was admitted that any of Claimant's physicians referred Claimant specifically to KO[Redacted] for massage therapy. Thus, she is not within the chain of referrals. Notwithstanding, even if an ATP had referred Claimant to KO[Redacted], such a referral would not be permissible.

First, the June 2022 Order directs that Claimant receive massage therapy from a "professional massage therapist." No evidence was admitted indicating KO[Redacted] is a professional massage therapist. Thus, she does not meet the criteria required by the June 2022 Order.

Second, although KO[Redacted] has provided Claimant with "massages,"[1] she is statutorily prohibited from performing massage therapy without a license. The Massage Therapy Practice Act, § 12-235-101, *et seq.*, ("MTPA") and regulations enacted by the Office of Massage Therapy Licensure govern the practice of massage therapy in Colorado. § 12-235-107, C.R.S. The MTPA and associated regulations require that any person who practices massage therapy in Colorado possess a valid license, which may be granted if one meets the education and training requirements set forth in 3 CCR 722-1. The MTPA also provides that "a person who practices or offers or attempt to practice massage therapy without an active license" is subject to penalties under section 12-20-407 (1)(b), which makes the unlicensed practice of massage therapy a class 2 misdemeanor. § 12-235-115, C.R.S. Because no credible evidence was admitted establishing that KO[Redacted] is a licensed massage therapist, or that any exception to the statutory requirements exist, KO[Redacted] cannot legally provide massage therapy, and therefore cannot be an "authorized provider" for the treatment Claimant requires.

Claimant's contention that Respondents have waived of any objection to KO[Redacted] providing massage therapy services is not persuasive. The present case is not analogous to *Wielgosz v. Denver Post Corp., W.C. No. 4-285-153 Dec. 3, 1998)* as Claimant contends. In *Wielgosz*, the insurer paid for initial treatment an injured worker obtained from a provider who was not authorized at the time. Based on Insurer's payment, the injured worker continued to see the provider. Later, the insurer denied payment for additional treatment. The ALJ found the insurer's payment for the unauthorized physician's initial services induced the injured worker to rely on the insurer's conduct and obtain further treatment from the physician. Thus, the ALJ concluded, the insurer had waived any objection to payment of the provider's bills.

The circumstances here are different. Claimant contends that by authorizing and paying for a massage table, with knowledge that KO[Redacted] was providing massages, Insurer is now obligated to pay KO[Redacted] for providing massages. Although Insurer authorized and paid for a massage table, no credible evidence was admitted indicating that the authorization induced Claimant to utilize KO[Redacted] for massages with the expectation that she would be compensated. No credible evidence was presented that KO[Redacted] has previously sought compensation for massaging Claimant, that Insurer has ever paid or agreed to pay KO[Redacted]. Claimant has failed to establish that Insurer implicitly consented to paying KO[Redacted] for massage therapy services. Regardless, even if Insurer's conduct could be deemed as a waiver of the right to object to KO[Redacted] as a provider, the ALJ cannot order such relief as KO[Redacted] is

[1] The ALJ's use of the term "massage" colloquially to describe the actions Claimant has described KO[Redacted] performing. The ALJ makes no findings as to whether the "massages" KO[Redacted] has performed to date constitute the practice of "massage therapy" as defined under Colorado law.

statutorily prohibited from providing massage therapy without a license, which she does not possess.

For these reasons, Claimant's request to have KO[Redacted] deemed an authorized provider to perform massage therapy for Claimant is denied.

Attendant Care

The June 2022 Order found Claimant was entitled to "attendant care services" for five hours per day, which consist primarily of assistance with activities of daily living. "Attendant care" services "may encompass assisting the claimant with activities of daily living, including matters of personal hygiene." *Cross v. Microglide, Inc.*, WC No. 4-355-764 (ICAO Sep. 9, 2003), *citing Suetrack v. Indus. Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995). The June 2022 Order demonstrates that ALJ Martinez Tenreiro considered the many household tasks and other assistance KO[Redacted] provides for Claimant when issuing the order. The June 2022 Order provides that these services should be provided by either Claimant's partner (KO[Redacted]) or an outside provider, and that Respondents' should pay KO[Redacted] for the services if not available from an outside provider. Specifically, the June 2022 Order states: "continuing home health care should include attendant care services, and deep tissue massage services, if available. If they are not available, Respondents shall pay Claimant's life partner [*i.e.*, KO[Redacted]] for the services she is currently providing." (Ex. 7, p. 12). By its terms, the June 2022 Order requires Respondents to pay KO[Redacted] for attendant care services only if they are not otherwise available from an outside service.

The evidence establishes that, in November 2022, Insurer identified an "attendant care services" provider who is able to perform the services Claimant requires. Respondents offered this service to Claimant, through counsel in November 2022. Thus, the services are "available" to Claimant at Insurer's expense. Claimant has not presented any credible evidence that attendant care services cannot be provided by an outside service or that KO[Redacted] is the only person capable of performing the ordered attendant care services. Accordingly, the ALJ finds and concludes Respondents are not obligated to pay KO[Redacted] for "attendant care services" and that she is not an "authorized provider" for such services.

CLAIMANT'S CONTINUED CARE

Respondents have failed to establish by a preponderance of the evidence that the care awarded Claimant in the June 2022 Order is no longer reasonable, necessary, or related to his industrial injury. Claimant credibly testified that he continues to require massage to function properly and assistance with "attendant care services." No credible evidence was admitted indicating Claimant's physical condition has improved since the June 2022 Order, or that the services are no longer reasonable, necessary, or related to his industrial injury. Respondents rely on Dr. Fall's opinion that Claimant does not require these services. However, Dr. Fall merely restated the opinions she previously offered, and which were rejected by ALJ Martinez Tenreiro. Dr. Fall has not personally examined Claimant since her initial IME in February 2022, and the only new information she has

reviewed was a single treatment visit from January 2023. She offered no credible testimony or opinions establishing that the treatment and care Ordered by ALJ Tenreiro is no longer reasonable, necessary, or related to his industrial injury. Respondents' request to terminate the care authorized by ALJ Martinez Tenreiro's June 2022 Order is denied.

ORDER

It is therefore ordered that:

1. Claimant's request to deem KO[Redacted] an "authorized" provider for massage therapy and attendant care services is denied.

2. Respondents request to terminate the care ordered in the June 2022 Order is denied.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 30, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Respondent has proven by a preponderance of the evidence that they are entitled to penalties against Claimant of up to $1,000 per day pursuant to Sec. 8-43-304(1), C.R.S. from December 9, 2022 to May 11, 2023 for Claimant's violation of WCRP 5-4(C) for failing to provide requested signed releases, medical provider list, and employer list within 15 days of Respondent's November 23, 2022 request, with each day to be considered a separate offense pursuant to Sec. 8-43-305, C.R.S.

II. Whether Respondent has proven by a preponderance of the evidence that they are entitled to penalties against Claimant of up to $1,000 per day pursuant to Sec.8-43-304(1), C.R.S. from January 10, 2023 to May 11, 2023 for Claimant's failure to obey the December 30, 2022 Order of PALJ Zarlengo which ordered Claimant to provide Respondent with the requested signed releases and lists of medical providers and employers within 5 business days or by January 9, 2023 with each day to be considered a separate offense pursuant to Sec. 8-43-305, C.R.S.

III. Whether Respondent has proven by a preponderance of the evidence that they are entitled to penalties against Claimant of up to $1,000 per day pursuant to Sec. 8-43-304(1), C.R.S. from January 6, 2023 and ongoing for Claimant's failure to comply with the Workers' Compensation Rule of Procedure (W.C.R.P.) Rule 9-1(B)(2) for failing to provide responses to interrogatories within 20 days of the December 16, 2022 date of service, with each day to be considered a separate offense pursuant to Sec. 8-43-305, C.R.S.

IV. Whether Respondent has proven by a preponderance of the evidence that they are entitled to penalties against Claimant of up to $1,000 per day pursuant to Sec. 8-43-304(1), C.R.S. from February 24, 2023 and ongoing for Claimant's failure to obey the February 16, 2023 order of PALJ Zarlengo which ordered Claimant to provide Respondent with verified responses to its discovery request within seven days of the February 16, 2023 order, with each day to be considered a separate offense pursuant to Sec. 8-43-305, C.R.S.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. This is an admitted claim for date of injury of October 13, 2020. Claimant lived in Gran Lake, CO and was 61 years old at the time of the hearing.

2. Claimant was initially evaluated for an impairment rating by Dr. John Sacha on July 13, 2022. Dr. Sacha concluded that Claimant had an impairment of the cervical spine, with 11% for specific disorder of the spine per Table 53IIB and 8% for loss of range

of motion of the cervical spine for a combined rating of 18% whole person. He also assessed a 28% upper extremity rating for the left shoulder which converted to a 17% whole person rating. Both ratings combined to a 32% whole person impairment rating.

3. Claimant was placed at maximum medical improvement on August 3, 2022 by Hanna Bodkin PA-C of Concentra. At that time she made multiple referrals to massage therapy to continue in Kremmling, Colorado, which is close to Claimant's home, a follow up with Dr. John Sacha for an EMG, and stated that they were awaiting authorization for a follow up MRI of the cervical spine as well as a follow up with Ortho Steamboat. Claimant was provided with work restrictions of lifting 15 lbs. maximum, no climbing, no overhead activity with the left arm, and maintenance medical benefits to continue with Dr. Sacha. She adopted Dr. Sacha's rating.

4. Multiple Final Admissions of Liability were filed by Respondent, including on October 20, 2022 for an 18% whole person impairment related to the cervical spine and 32% upper extremity impairment related to the left shoulder injury, which was later amended on November 9, 2022 pursuant to Dr. Sacha's rating from July 13, 2022 for 28% upper extremity rating, and 18% whole person impairment related to the cervical spine.

5. Claimant filed an Objection to the FAL and a Notice and Proposal and Application for a Division Independent Medical Examination (DIME).

6. On November 23, 2022 Respondent sent Claimant's counsel a letter pursuant to Rule 5-4(C) & (D), enclosing several releases for Claimant to execute and requested that Claimant provide a list of all medical providers and employers. This request was sent by email to Claimant's counsel directly attaching the authorizations, including a two page release for medical information, an employment information release, an insurance authorization, a release to Standard Insurance, an unemployment authorization, a Unum authorization, a social security authorization, a PERA authorization, and lastly, a form to obtain the list of providers and employers. The releases and lists of providers and employers were due on or before December 8, 2022.

7. On November 30, 2022 Claimant was seen by Dr. Sacha for a bilateral C7 transforaminal epidural injection.

8. On December 9, 2022, Respondent's counsel contacted Claimant's counsel requesting Claimant provide the signed releases and the lists of medical providers and employers by December 14, 2022 or Respondent would move forward with the filing of a motion to compel the production. (See Exhibit B).

9. On December 9, 2022 Respondent followed up by email requesting the status of the releases and list of medical providers

10. On December 16, 2022, Respondent sent Claimant, through counsel, Interrogatories and Requests for Production of Documents.

11. On December 16, 2022 Respondent filed a Motion to Compel Executed Releases and list of Medical Providers and employers.

12. Claimant followed up with Dr. Sacha on December 19, 2022. Dr. Sacha noted that Claimant had a diagnostic response and quite good lasting relief. He discussed

doing trigger point injections for the continuing headaches and neck symptoms. He continued prescribing medications including narcotic and was under a narcotic agreement. Dr. Sacha prescribed eight sessions of massage therapy at Spine Fix.

13. Claimant returned to see Dr. Sacha for trigger point injections on December 30, 2022. He noted that Claimant's massage therapy had still not been authorized.

14. On December 30, 2022 Prehearing Administrative Law Judge (PALJ) Marcus Zarlengo issued an order stating that Claimant had five business days to comply and provide the executed medical and employer releases as well as the list of medical providers.

15. On January 6, 2023, Respondent's counsel sent an email to Claimant's counsel inquiring as to the status of Claimant's Interrogatory responses and to confer regarding the filing of a motion to compel, if responses were not received within five days.

16. On January 11, 2023 Respondent's counsel reached out to Claimant's counsel that the order signed by PALJ Zarlengo had been issues and that Respondent still did not have the releases or the provider list. Respondent explained that Claimant's failure prevented Respondent from obtaining the necessary medical records to send to the DIME physician. Respondent specifically stated:

> Please provide the requested information as soon as possible, and no later than 1/18/23. If not received by 1/18/23, Respondent will have no choice but to seek an order holding the DIME process in abeyance until medical records can be obtained.

17. Claimant sent Respondent an email on January 18, 2023 purportedly attaching some medical releases and requesting that any records received should be sent to Claimant. Claimant mentioned a prehearing conference scheduled on the issue of holding the DIME in abeyance, to which Claimant did not object. It further made demands for authorization of medical care recommended by authorized treating providers including a CT of the spine as well as physical therapy and massage therapy.

18. On January 18, 2023 Respondent advised that they could not open the attached authorizations, requesting that they be sent as PDF documents.

19. Again on January 18, 2023 Claimant sent Respondent another attachment but did not specify what it was.

20. Respondent's counsel again advised Claimant on January 23, 2023 that they could not open the attached releases and to resend them as PDF documents.

21. Claimant's counsel immediately responded stating that he was attaching the releases in pdf format. He confirmed that he was aware that Claimant had not provided the list of providers but that his client was outside the state attending a funeral. The authorizations provided were a release for employment information, a release for standard insurance, an unemployment insurance release, an illegible PERA benefits authorization, an illegible medical release, what seems to be the signature page of the social security authorization, which was also illegible.

22. On January 24, 2023 Respondent informed Claimant that the releases were not legible and requested they be resubmitted.

23. On January 25, 2023 Claimant acknowledged that the authorizations were not usable by stating that counsel would have Claimant come into his office and resign them.

24. On February 2, 2023 Respondent sent Claimant a Motion to Compel Claimant's Responses to Interrogatories and Request for Production of Documents. The motion indicated that a Final Admission of Liability was most recently filed on December 14, 2022, Claimant timely filed an objection, and the claim was currently in the DIME process. Respondent reminded Claimant that per WCRP Rule 9-1(B)(2), discovery responses were due within 20 days of mailing, on or before January 5, 2023.

25. Respondent, again, followed up on February 3, 2023 to inquire regarding the status of claimant's releases, provider list (5 yrs. prior to DOI to present), and employer list.

26. Claimant was seen by Dr. Sacha on February 3, 2023. He remarked that Claimant's surgeon had recommended a CT to be assured that the hardware had not failed, which had not been authorized. Dr. Sacha noted that the massage therapy had not yet been authorized either as the parties were still awaiting a DIME evaluation. Dr. Sacha refilled Claimant's medications, performed trigger point injections and noted Claimant was to follow up in a month.

27. Again, on February 8, 2023 Respondent followed up. This time Respondent provided the next step, stating as follows:

> What is the status of providing signed releases, provider list, and employer list? Per order, this information was supposed to have been provided by 1/9/23. As Respondent has not received this information, it would appear that claimant is in violation of the court order.
>
> Please provide this information as soon as possible, and no later than Monday, February 13, 2023. If the information is not provided by close of business on Monday, February 13th, Respondent will have no choice but to seek penalties against claimant for failure to comply with the order. Please consider this Respondent's attempt to confer should that become necessary.

28. Respondent filed the Application for Hearing on the issue of multiple penalties on February 15, 2023 listing as issue penalties as follows:

> 1) Respondent seeks penalties against Claimant of up to $1,000 per day pursuant to §8-43-304(1), C.R.S. from 12/9/22 and ongoing for Claimant's violation of WCRP 5-4(C) for failing to provide requested signed releases, medical provider list, and employer list within 15 days of Respondent's 11/23/22 request for same. Each day to be considered a separate offense pursuant to §8-43-305, C.R.S.
>
> 2) Respondent seeks penalties of up to $1,000 per day pursuant to §8-43-304(1), C.R.S. from 1/10/23 to ongoing for Claimant's failure to obey the 12/30/22 lawful Order of PALJ Zarlengo which ordered Claimant to provide Respondent with the requested signed releases and lists of medical providers and employers within 5 business days or by 1/9/23. Each day to be considered a separate offense pursuant to §8-43-305, C.R.S.

29. On February 16, 2023 PALJ Zarlengo issued an Order Granting Respondent's Presumed Opposed Motion to Compel Claimant's Responses to Interrogatories and Request for Production of Documents. The order specifically stated that "Claimant shall provide Respondent with *verified responses* to its Interrogatories and Requests for Production of Documents within seven (7) days of the date this Order is served on Claimant." (*Emphasis added*.)

30. On March 3, 2023 Claimant was attended by Dr. Sacha in Greenwood Village, CO. He noted that Claimant had two or more conditions that were chronic. He proceeded with trigger point injections into the neck and shoulder that had given at least four weeks of relief previously.

31. Respondent's counsel reached out to Claimant on March 6, 2023 advising that the responses to discovery were due on February 23, 2023 pursuant to the order, had not been received and that it was Respondent's intention to add the issue of penalties for violation of the rule as well as violation of the order.

32. On March 7, 2023 Respondent filed a formal notice with regard to the addition of the penalty issues stating as follows:

> Pursuant to Office of Administrative Courts Rule of Procedure (O.A.C.R.P.) 12, "issues for hearing shall be listed on the Application for Hearing, the Response to Application for Hearing, or may be added before the hearing date is confirmed by written notice to the OAC and the opposing party."
>
> …
>
> 3. The hearing date in this matter has not yet been confirmed.
>
> 4. Respondent hereby provides Notice of endorsement of additional issues to be addressed at the upcoming hearing in the interest of judicial economy.
>
> 5. Respondent hereby also seeks penalties against Claimant of up to $1,000 per day pursuant to §8-43-304(1), C.R.S. from January 6, 2023 and ongoing for Claimant's failure to comply with the Workers' Compensation Rule of Procedure (W.C.R.P.) 9-1(B)(2) for failing to provide responses to interrogatories within 20 days of the December 16, 2022 date of service.
>
> 6. Additionally, Respondent seeks penalties against Claimant of up to $1,000 per day pursuant to §8-43-304(1), C.R.S. from February 24, 2023 and ongoing for Claimant's failure to obey the February 16, 2023 lawful order of PALJ Zarlengo which ordered Claimant to provide Respondent with responses to its discovery request within seven days of the February 16, 2023 order.

33. Claimant was seen by Dr. Sacha on March 31, 2023 for a maintenance visit in Greenwood Village, CO. He proceeded to provide trigger point injections and continued to diagnose cervical facet syndrome, cervical discectomy, radiculopathy, post-laminectomy syndrome, and total shoulder replacement.

34. Finally, on April 1, 2023, Claimant emailed Respondent stating that the authorizations and interrogatory responses were attached but that the interrogatory responses were unsigned. The medical release was signed on March 30, 2023, as well as the employment release, the insurance releases, the UI release, the Unum release, the social security release, and the PERA release. The form requesting medical providers

was completed by stating that Claimant had not seen any providers regarding Claimant's injured body parts in the claim.

35. On April 11, 2023 Respondent followed up, again requesting the corrected list of providers.

36. Respondent sent a follow up on April 18, 2023 stating as follows:

> In reviewing the information you provided, it appears claimant did not provide a list of all medical providers he has seen in 5 years prior to the date of injury to the present. The list says "N/A" and he gave us blank releases which does not help us determine from whom medical records are needed.
>
> Claimant would appear to still be in violation of the court order which required him to provide signed releases and a medical provider list.
>
> Please provide the provider list ASAP.

37. Claimant's counsel responded on April 21, 2023 noting that Claimant had seen Dr. Kenneth Allen at Injury Solutions.

38. On May 5, 2023 PALJ Zarlengo issued a third prehearing order. He specifically found as follows:

> Claimant sustained compensable work injuries on 10/13/20. Respondents filed an Amended Final Admission of Liability (FAL) most recently on 12/14/22. Claimant timely objected and applied for a DIME. Dr. Matthew Brodie was selected as the DIME physician. On 1/20/23, Respondents asked to hold the DIME process in abeyance to allow additional time to gather medical records. Judge Sandberg granted the motion and held the DIME in abeyance for 60 days.
>
> Additionally, Respondents applied for a hearing with the OAC on 2/15/23 endorsing the issue of statutory penalties against Claimant for discovery and other violations. That hearing is set to commence on 5/17/23.
>
> Respondents now request that Claimant schedule the DIME with Dr. Brodie. The parties agree the necessary records or releases have now been received and the DIME is ready to proceed.

39. PALJ Zarlengo ordered Claimant to schedule the DIME with Dr. Brodie to take place 45-75 days of the date of the order.

40. Respondent stated at the time of the hearing that the medical records were not received until May 11, 2023 and that should be the end date of penalties.

41. The parties disclosed that the DIME was currently set to proceed on June 21, 2023.

42. Respondents asserted that Claimant had still not provided the verified response to discovery as of the date of the hearing. Claimant's counsel disclosed that would be provided within the week.

43. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v.*

Industrial Claim Appeals Office, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Penalties generally

Whether statutory penalties may be imposed under Sec. 8-43-304(1) C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1,000.00 per day where the employee "does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel." Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo. App. 1995).

Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of a parties' action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). Whether the violator's actions were objectively unreasonable, is a question of fact based on rational argument. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995); *Diversified Veterans Corporate Center v. Hewuse,* 942 P.2d 1312 (Colo. App. 1997*); Dean v. NGL Energy Partners*, WC 5-095-928, ICAO (September, 8, 2022); *Housley v. Circle K Stores Inc.*, WC, 5-143-923, ICAO (February 27, 2023). There is no requirement that the violating party know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the Claimant's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that Claimant violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If Respondent makes a prima facie showing the burden of persuasion shifts to Claimant to prove their conduct was reasonable under the circumstances. *Pioneers Hosp. v. Indus. Claim Appeals Office, (supra); Human Res. Co. v. Indus. Claim Appeals Office, 984 P.2d 1194 (Colo. App. 1999).*

Once a violation of a statute or rule is established, penalties are mandatory, whether or not actual damages are established. See *Martinez v. Flying J., Inc.,* W.C. No. 4-374-856 (June 22, 2000)(insurer may be penalized for failing to comply with a Rule when it unilaterally terminated benefits even if it is ultimately determined that no benefits were due; the unreasonableness of insurer's actions is not dependent on relative harm to claimant).

Damage to the non-violating party is not an element of penalties under Sec. 8-43-304(1). The reasonableness of the violator's actions depends on whether the actions were predicated on rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). In *Associated Business Products v.*

Indus. Claim Appeals Office, 126 P.3d 323, 326 (Colo. 2005), the Supreme Court held that imposition of penalties did not violate the excessive fines clause even though "the financial harm suffered by this one claimant may have been relatively small."

An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital,* WC 4-619-954 (ICAO, May 5, 2006). However, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Business Products v. Industrial Claim Appeals* Office, 126 P.3d 323 (Colo. App. 2005); *Espinoza v. Baker Concrete Construction*, WC 5-066-313 (ICAO, Jan. 31, 2020). When determining the penalty the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products*, 126 P.3d at 324. When an ALJ assesses a penalty, the Excessive Fines Clause of the Eighth Amendment to the U.S. Constitution requires the ALJ to consider whether the gravity of the offense is proportional to the severity of the penalty, whether the fine is harsher than fines for comparable offenses in this or other jurisdictions and the ability of the offender to pay the fines. The proportionality analysis applies to the fine for each offense rather than the total of fines for all offenses. *Conger v. Johnson Controls Inc*., WC 4-981-806 (ICAO, July 1, 2019).

The gross disproportionality test was clarified by the Colorado Supreme Court in *Colorado Dep't of Labor & Empl. v. Dami Hospitality, LLC,* 442 P.3d 94 (Colo. 2019) when determining whether the penalty imposed under Sec. 8-43-304(1), C.R.S. violated the Excessive Fines Clause. See *Gallego v. Wizbang Solutions*, WC 5-026-699-003, ICAO (April 13, 2022). The burden of proof in applying the gross disproportionality test is properly placed on the party being assessed the fine. *Associated Bus. Prods. v. Indus. Claim Appeals Office, (supra.)* ("Once the right to impose a fine has been proved, the party upon whom the fine is levied has the burden of proving the fine is 'grossly disproportionate'"). See also *United States v. Bajakajian*, 524 U.S. 321, 334, 118 S.Ct. 2028, 141 L.Ed.2d 314 (1998) (overruled by statute on other grounds); *Gallego v. Wizbang Solutions, (supra).*

C. Curing a Violation

Section 8-43-304(4), C.R.S. permits an alleged violator 20 days from the date of mailing of an Application for Hearing that asserts penalties to cure the violation. If the violator cures the violation within the 20 day period "and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed." The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo.App. 2003). Section 8-43-304(4), C.R.S. modifies the rule and adds an extra element of proof when a cure has been effected. Specifically, the party seeking penalties

must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *see In re Tadlock*, WC 4-200-716, ICAO (May 16, 2007).

D. Penalty for failure to comply with WCRP Rule 5-4(C).

W.C.R.P. Rule 5-4(C) specifically states as follows:

> A party shall have 15 days from the date of mailing to complete, sign, and return a release of medical and/or other relevant information. If a written request for names and addresses of health care providers accompanies the medical release(s), a claimant shall also provide a list of names and addresses of health care providers reasonably necessary to evaluate/adjust the claim along with the completed and signed release(s). Medical information from health care providers who have treated the part(s) of the body or conditions(s) alleged by the claimant to be related to the claim, during the period five years before the date of injury and thereafter through the date of the request, will be presumed reasonable. Any request for information in excess of the presumption contained in this rule shall include a notice that the insurer is requesting information in excess of what is presumed reasonable and that providing the information is not required. If a party disputes that a request within the presumption is reasonable or that information sought is reasonably necessary, that party may file a motion with the Office of Administrative Courts or schedule a prehearing conference. Requests for release of medical information as well as informal disclosures necessary to evaluate/adjust the claim are not considered discovery.

Respondent seeks penalties from December 9, 2022 through May 11, 2023 for Claimant's failure to comply with W.C.R.P. Rule 5-4(C) to provide the releases and list of medical providers. It is undisputed that Respondent sent the releases and request for providers to Claimant on November 23, 2022. Respondent's followed up on December 9, 2023. Since they did not receive a response, they filed a motion to compel on December 16, 2022, which was granted on December 30, 2022 by PALJ Zarlengo. On January 11, 2023 Respondent again contacted Claimant stating that Claimant's failure to provide the releases and information was hampering their ability to obtain records needed for the DIME packet. On January 18, 2023 Claimant sent Respondent a document with releases but no medical provider list. Respondents advised that they were insufficient as they were unable to open the document. On the same day Claimant sent the document again. On January 24, 2023 Respondents informed Claimant that the releases were unusable, requesting that they be resubmitted. On February 3, 2023 Respondents followed up again. Respondents filed the AFH on February 15, 2023. This provided Claimant a 20 day window to cure. Claimant failed to cure. Finally, Claimant complied with providing the list of providers and releases on April 1, 2023, which was supplemented on April 21, 2023. Respondent argues that the delay, caused the DIME process delay, holding the DIME process in abeyance until Claimant complied.

Claimant argued that Claimant was unable to travel from Grand Lake, Colorado to Denver, in order to sign the releases considering his multiple physical problems related to the claim and the cost of travel. Claimant also argued that they provided the releases by January 18, 2023. Further, Claimant argued that there was no harm to Respondent as they were not paying temporary total disability benefits only permanent partial disability

and had received a favorable order from PALJ Sandberg in response to their January 20, 2023 Motion to Hold the DIME Process in Abeyance.

As found, holding the DIME process in abeyance was a contemplated non-monetary and appropriate penalty for Claimant's failure to comply with the rule requiring the provision of the releases and the list of providers and employers.

E. Penalty for failure to comply with December 30, 2022 Order

Respondent next argued that Claimant's failure to comply with PALJ Zarlengo's December 30, 2022 order requiring Claimant to provide, within five business days of the order, the executed medical and employer releases as well as the list of medical providers should be the subject of another penalty. It has already been established that there was a violation of the order as laid out above. The issue is not whether the claimant had a reasonable explanation for his actions. Instead, the issue is whether the claimant's failure to comply with the PALJ order was predicated on a rational argument in law or fact that he was not required to comply with the PALJ order. See *Porras v. World Service Co., Inc*., W.C. No. 155-161 (October 12, 1995); *Dean v. NGL Energy Partners*, (*supra*).

The legislative intent of the Workers' Compensation Act is "to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation." This goes both ways. Claimant's actions as listed above, in not responding to Respondents inquiries until it forces them to resort to an ALJ and then disregarding the order itself is not promoting the quick and efficient delivery of disability benefits to Claimant. In this case, Claimant's benefits were being delayed by Claimant's failure to act so that Respondent could obtain records that might have been pertinent to the claim. In fact, Respondent argued that they were relevant medical records as they had to do with prior injuries to his neck/cervical spine, which is the same body part injured in this claim. Claimant did not object to this argument or state that it was incorrect. Claimant's statements that counsel was trying to have claimant avoid driving to the Denver area to sign the releases is also not a persuasive argument as Claimant had attended multiple medical appointments after November 23, 2022 through the January 18, 2023 date when Claimant attempted to provide releases to Respondent, specifically was in the Denver area to see Dr. Sacha on November 30, December 19, and December 30, 2022. And after realizing on January 25, 2023 that the releases were not usable, Claimant was seen in the Denver area by Dr. Sacha on February 3, March 3, and March 31, 2023.

Because this is a violation of a specific judicial order, the gravity of the offense is enlarged exponentially. A reasonable Claimant would have obtained Respondent's agreement to enlarge the time to respond or scheduled a prehearing conference before a PALJ on the issue of obtaining more time to comply. Claimant did not provide evidence that would persuade this ALJ to not penalize Claimant for the failure to comply with the order. Further, Claimant did not provide any information that would lead this ALJ to conclude that Claimant would not have the ability to pay the penalty fine. Therefore, this ALJ determines that Claimant failed to comply with PALJ Zarlengo's order of December 30, 2022. The order provided for five business days to comply. As January 2, 2023 was the observed state holiday, Claimant had until January 9, 2023 to comply. Claimant

attempted to comply with the order on January 18, 2023, a period of 9 days. Then Claimant realized that the information was not legible as of January 25, 2023. Therefore, Claimant was in clear violation of the order from January 25, 2023 through April 1, 2023, when the list and releases were produced. That is another 66 days of non-compliance for a total of 75 days.

While Respondent's argued that penalties for failure to comply was due and owing through May 11, 2023, this ALJ reviewed little evidence to support that position. There were arguments of Respondent regarding whether the records from Injury Solutions were or not relevant, but none of the records were submitted in evidence for this ALJ's consideration to determine the relevance in this case, and this ALJ offered to allow the record to remain open for further submissions. In fact, the record was left open and Claimant submitted Exhibits 1 and 2 and Respondents submitted Exhibits G and H, which this ALJ considered. Neither did Respondent's specifically request to make an offer of proof.

In comparing this matter to others of similarly situated parties, a penalty of $10.00 per day is found reasonable. Claimant provided little information regarding his ability to pay other than counsel's arguments that Claimant was having financial difficulties. Claimant did not indicate that he would have a difficult time paying a penalty award other than general allegations. As found, Respondent showed that they are entitled to a penalty for failure to comply with ALJ Zarlengo's December 16, 2022 order from January 9, 2023 through January 18, 2023 and January 25, 2023 through April 1, 2023 a period of 75 days.

F. Penalty for failure to comply with WCRP Rule 9-1

Respondent next argued that Claimant violated W.C.R.P. Rule 9-1(B)(2), which states as follows:

> (B) Interrogatories and requests for production
>
> (2) The responses to the interrogatories and production of documents shall be provided to all opposing parties within 20 days of mailing of the interrogatories and requests.

Respondents propounded three interrogatories to Claimant on December 16, 2022. Discovery responses were due on January 5, 2023. Respondent requested a status of the discovery on January 6, 2023, stating that they would seek an order compelling the discovery if they were not received within five days, providing through January 11, 2023 to provide them.[1] Respondent acknowledge that they had received discovery on responses on April 1, 2023, when they also received the releases and list of providers/employers form. Claimant's counsel indicated that the responses were unsigned.

Sec. 8-43-207(e), C.R.S. (Cum. Supp. 2022) states that "[T]he director or administrative law judge may rule on discovery matters and impose the sanctions

[1] This is taken as Respondent's offer to extend the deadline.

provided in the rules of civil procedure in the district courts for *willful* failure to comply with permitted discovery." (*Emphasis added.)*

Trial courts have broad discretion to manage the discovery process, including the ability to impose sanctions. *Warden v. Exempla, Inc*., 2012 CO 74, ¶ 32, 291 P.3d 30 (Colo. App. 2012); *Reed v. Industrial Claim Appeals Office*, 13 P.3d 810, 813 (Colo. App. 2000). In order for a discovery violation to be considered "willful" the ALJ must determine that the conduct was deliberate or exhibited "either a flagrant disregard of discovery obligations or constitutes a substantial deviation from reasonable care in complying with discovery obligations." C.R.C.P. 37 governs sanctions for a party's failure to cooperate in discovery. The trial court may impose a variety of sanctions under that rule, including "orders requiring payment of attorneys' fees and costs, orders staying proceedings until discovery orders are complied with, orders prohibiting a disobedient party from introducing designated matters into evidence, orders striking pleadings, and orders entering default judgment." See 8-43-207(1)(p), C.R.S.; *Sheid v. Hewlett Packard,* 826 P.2d 396 (Colo. App. 1991); *Anderson v. Anderson Distributing,* WC 4-722-115 (April 8, 2008).

The ALJ has wide discretion in determining whether a discovery violation has occurred and, if so, the appropriate sanction to be imposed. *Pinkstaff v. Black & Decker (U.S.) Inc*., 211 P.3d 698, 702 (Colo. 2009). Whether to impose sanctions and the nature of the sanctions to be imposed are matters for the sound exercise of the trial court's discretion, and the courts are given flexibility in choosing the appropriate sanction." *Nagy v. Dist. Court*, 762 P.2d 158, 160 (Colo. 1988). A trial court abuses its discretion if its decision is manifestly arbitrary, unreasonable, or unfair, *Pinkstaff* @ 702 and the trial court's broad discretion is not without limits. *Id.* at 703. The Supreme Court has outlined the following guidelines for determining which sanction are appropriate. Generally, sanctions under C.R.C.P. 37 "should be applied in a manner that effectuates proportionality between the sanction imposed and the culpability of the disobedient party." If Rule 37 sanctions are warranted in a case, "the trial judge must craft an appropriate sanction by considering the complete range of sanctions and weighing the sanction in light of the full record in the case." When discovery abuses are alleged, courts should carefully examine whether there is any basis for the allegation and, if sanctions are warranted, impose the least severe sanction that will ensure there is full compliance with a court's discovery orders and is commensurate with the prejudice caused to the opposing party. *Id .* at 702 (citations omitted); *Kallas v. Spinozzi*, 2014 COA 164, 342 P.3d 607 (Colo. App. 2014).

The Supreme Court has generally disfavored litigation-ending sanctions, emphasizing that "litigation should be determined on the merits and not on formulistic application of [procedural] rules." *Id.* at 703. The Supreme Court has not altogether foreclosed the possibility of and need for litigation-ending sanctions, but has cautioned that such harsh sanctions should be imposed "only in extreme circumstances." *Nagy*, 762 P.2d at 161 ; see also *Pinkstaff* at 702; *Cornelius v. River Ridge Ranch Landowners Ass'n,* 202 P.3d 564, 571 (Colo. 2009); *Prefer v. PharmNetRx, LLC*, 18 P.3d 844, 850 (Colo. App. 2000) (Dismissal may be imposed as a sanction "for willful or deliberate disobedience of discovery rules, flagrant disregard of a party's discovery obligations, or a substantial deviation from reasonable care in complying with those obligations.")...

Respondents sent Claimant interrogatories on December 16, 2022. The interrogatories are were either appropriate or tangentially relevant to the issues set for hearing. Claimant had an obligation to provide the information requested by Respondents. On January 6, 2023, Respondent's counsel sent an email to Claimant's counsel inquiring as to the status of Claimant's Interrogatory responses and to confer regarding the filing of a motion to compel, if responses were not received within five days. On February 2, 2023 Respondents filed a motion to compel discovery, which was granted by PALJ Zarlengo on February 16, 2023 stating that verified responses were due within seven days. The purpose of verification of discovery is in order to cross examine Claimant and potentially impeach Claimant if he does not respond in the same manner as he provided responses to discovery.

Respondent did not subpoena Claimant to attend the hearing so was not intending to utilize the responses to question and challenge Claimant's testimony in any manner. The penalty here is Respondent's subsequent act of moving to compel claimant to respond to the discovery which was a reasonable next step to take when discovery violations neither affected Claimant nor Respondent in any significant manner. It did not delay the process or the timeline in which Respondent's prosecuted the case. Neither did Respondent's prove that the failure to complete discovery was willful.

G. Penalty for failure to comply with Order of February 16, 2023

W.C.R.P. Rule 9-1(G) states that "Once an order to compel has been issued and properly served upon the parties, failure to comply with the order to compel shall be presumed willful." Therefore, once Respondent's filed the Motion to Compel and an order was issued by PALJ Zarlengo on February 16, 2023 to be provided within 7 days.[2] This deadline was February 23, 2023. Claimant failed to provide responses to discovery until April 1, 2023 a 37 day period. Respondents have shown that Claimant willfully disregarded to his discovery obligations in this matter. Therefore, the penalty, when considering other similar cases, is $25.00 per day beginning as of February 23, 2023 and ending as of April 1, 2023 when Claimant provided responses to discovery. This is a period of 37 days.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant shall pay $10.00 per day beginning January 9, 2023 through January 18 and January 25, 2023 through April 1, 2023 a period of 75, in the amount of 750.00

2. Claimant shall pay Respondent $25.00 per day from February 23, 2023 to April 1, 2023, a period of 37 days, in the amount of $925.00.

---

[2] This ALJ considered the fact that Respondents did not file to provide notice of their pursuit of penalties for failure to respond to discovery until February 15, 2023, which would entitle Claimant to a 20 days to cure. That deadline was March 7, 2023 and Claimant failed to avail himself of this relief.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that neuropsychological testing with Dr. Treihaft is reasonable medical treatment necessary to maintain Claimant at maximum medical improvement?

- At the commencement of the hearing, Respondent noted that they had previously agreed to pay for Claimant's return to Dr. Stakiw, the audiologist, as maintenance medical treatment.

- Claimant raised issues at the commencement of the hearing that included penalties against Respondent that were not endorsed on Claimant's application for hearing. The ALJ sustained Respondent's objection to the issues being addressed at hearing. While Claimant has again raised those issues in her post-hearing submissions, the ALJ will not address those issues as they were not properly before the court.

FINDINGS OF FACT

1. Claimant sustained a compensable work related injury on April 1, 2013 when she fell at work. The medical records indicate Claimant lost consciousness and woke up on the ground. Claimant underwent a course of medical treatment for various issues related to the fall including persistent headache and loss of hearing.

2. On June 13, 2013, Claimant was examined by Dr. Treihaft for a neurological evaluation. Dr. Treihaft noted Claimant reported a history of head injuries and concussions predating her work injury. Dr. Treihaft noted that Claimant was evaluated by a neurologist for episodes associated with right-sided numbness and complicated migraines that pre-dated her work injury.

3. Dr. Treihaft reviewed Claimant's brain MRI which showed several nonspecific frontal white matter lesions. Dr. Treihaft opined that these may relate to the Claimant's prior concussion or may represent age-related microvascular change. Dr. Treihaft opined that the brain MRI did not explain Claimant's current presentation.

4. Dr. Treihaft diagnosed Claimant with multiple neurologic symptoms, including memory loss, imbalance, panic attacks, anxiety and difficulty sleeping that Dr. Treihaft noted appeared to be related to Claimant's underlying depression. Dr. Treihaft noted that these were being addressed by medications and psychiatric evaluation. Dr. Treihaft opined that from a neurological standpoint, these represent a pseudodementia

rather than a neurologically related cognitive disorder. Dr. Treihaft noted that no further evaluation was recommended related to Claimant's work injury.

5. Claimant returned to Dr. Treihaft on April 2, 2018 for a neurological evaluation. According to the note, Claimant was referred to Dr. Treihaft by Dr. Strahan. Dr. Treihaft noted that Claimant had previously been evaluated in 2013 for a possible concussion secondary to traumatic brain injury. Dr. Treihaft noted that her neuro behavioral symtpoms included headaches and cognitive difficulties and had resolved over the next several months, but she continued to be followed by Dr. Strahan for tinnitus and hearing loss.

6. Dr. Treihaft noted that Claimant was complaining of increased memory loss and diminished cognitive dysfunction over 2 years, greatest over the past 6 months. Claimant reported slow processing at work; writing, researching and analyzing. Claimant reported individuals tell her she does not understand what they are saying and writing. Claimant also reported she doesn't transition well from "up to down". Claimant reported falling a lot for indeterminate reasons, but denied losing consciousness or tripping over objects. Dr. Treihaft also noted that Claimant occasionally experiences migraines, but could not quantify or identify the most recent migraine.

7. Dr. Treihaft noted his prior examination on June 14, 2013 along with a review of Claimant's medical records from June 2013 up to the present time. On physical examination, Dr. Treihaft noted Claimant was in no apparent distress and oriented to time, place and person. Dr. Treihaft reported Claimant's attention and concentration were normal and Claimant's recent and remote memory were intact to conversation. Dr. Treihaft noted Claimant's recurrent neurobehavioral symptoms had developed over the past 2 years, greatest over the past six months, and noted the etiology and relationship to the April 1, 2013 work injury was underdetermined.

8. Dr. Treihaft recommended neuropsycholgical battery tests, but noted that the work relatedness of this evaluation needed to be determined.

9. Dr. Treihaft issued a letter dated April 3, 2018 noting that Claimant's original fall appeared to be from a syncopal spell or fall, the cause of which was never identified, but Claimant experienced no further spells. Dr. Treihaft noted that during the June 14, 2013 evaluation, Claimant focused the neurological evaluation on a 2 year history of multiple neurological and psychological symptoms "on the setting of a divorce, anteceding the presumed head injury." Dr. Treihaft noted that the recurrance of symptoms in 2016-2017 does not fit the typical course of a post-concussive syndrome. Dr. Treihaft reported that post-concussive symptoms may remain the same or more commonly improve. Dr. Treihaft opined that recurrence or deterioration of symptoms reflects alterative medical or psychological problems. Dr. Treihaft opined that Claimant's current symptoms do not appear related to the 2013 accident. Or. Treihaft noted that there was a possibility of a cumulative trauma encephalopathy which would require clarification with the neuropsychological battery and additional medical and work history. Dr. Treihaft opined that if the symptoms are considered work related, Claimant

would require additional treatment for a mild traumatic brain injury including cognitive and behavioral therapy, counseling and social service intervention.

10. Claimant underwent a Division-sponsored Independent Medical Evaluation ("DIME") on May 29, 2019 with Dr. McLaughlin. Dr. McLaughlin reviewed Claimant's medical records, obtained a medical history and pertormed a physical examination in connection with the DIME. Dr. McLaughlin noted Claimant's medical treatment with Dr. Strahan and Dr. Treihaft documenting Claimant's symptoms from her concussion, including ongoing memory problems, tinnitus, sensorineural hearing loss in both ears and health problems.

11. Dr. McLaughlin noted that Claimant did report a history of migraines. Claimant also reported ongoing tinnitus. Claimant reported the hearing aids she received in 2016 had helped somewhat but she still has difficulty hearing background noises and understanding people.

12. Dr. McLaughlin noted Claimant's past audiograms and performed an audiogram on the day of the DIME appointment. Dr. McLaughlin noted that the audiogram did show consistent high frequency hearing loss, left greater than right, without significant change from the date of injury.

13. Claimant reported to Dr. McLaughlin that she had one prior concussion at age 25 when she was riding a bicycle and fell. Claimant reported to Dr. McLaughlin that she did not think she was even treated for the concussion and had no symptoms the next day. Dr. McLaughlin reviewed Claimant's April 3, 2013 MRI and noted that it showed no evidence for an acute intracranial abnormality such as recent infarct, hemorrhage, mass or hydrocephalus. With regard to the small foci of white matter signal abnormality in the frontal lobe, Dr. McLaughlin noted that this was nonspecific but most likely represented minimal chronic small vessel ischemic disease or the sequelae of prior migraine headaches or remote head trauma. Dr. McLaughlin explained later in his report that MRI showed some preexisting change not attributable to the fall and may be leading to neurological issues.

14. Dr. McLaughlin noted that Claimant was put at MMI on August 22, 2013 and opined in his report that this was the correct date of MMI. Dr. McLaughlin performed audiology testing and determined that the medical records were consistent with Claimant developing tinnitus since the reported April 1, 2013 injury. Dr. McLaughlin provided Claimant with a permanent impairment rating of 5% for the hearing loss. Dr. McLaughlin noted that this hearing loss rating converted to a whole person rating of 2%.

15. Dr. McLaughlin further opined that it would be prudent under post-MMI maintenance care to have a neuropsychological battery of testing performed to see if the testing indicates that there are cognitive issues that are sequelae from the reported April 1, 2013 injury. Dr. McLaughlin opined that if there were cognitive issues, they should be treated per the Division guidelines for traumatic brain injuries.

16. Respondents filed a final admission of liability ("FAL") on June 28, 2019 admitting for the impairment rating provided by Dr. McLaughlin and post-MMI maintenance medical treatment.

17. The ALJ credits the medical reports and opinions expressed by Dr. Treihaft in his reports and finds that Claimant has failed to establish that the neuropsychological testing is reasonable medical treatment related to Claimant's April 1, 2013 work injury. Additionally, Claimant has failed to establish that the neuropsychological testing is necessary to maintain Claimant at MMI.

18. Notably, in Dr. Treihaft's reports, Dr. Treihaft does not opine that the neuropsychological testing is related to Claimant's work injury. As noted by Dr. Treihaft, Claimant's neuro behavioral symptoms following her work injury resolved by the June 13, 2013 examination. Claimant then had an additional onset of reported neuro behavioral symptoms she reported in the April 2, 2018 evaluation that had developed two years prior. As noted by Dr. Treihaft, this is not the typical course of a post- concussive syndrome and the record contains no credible evidence that the recurrence of symptoms was related to the April 1, 2013 fall.

19. Likewise, Dr. McLaughlin while noting that neuropsychological testing would be appropriate, Dr. McLaughlin at no time relates the need for the neuropsychological testing to the April 1, 2013 work injury.

20. Notably, Claimant testified at hearing that she had concussions at age 6, age 24, age 43 and age 48. However, Claimant only reported to Dr. McLaughlin a concussion she had at age 25. Both Dr. McLaughlin and Dr. Treihaft opined that the abnormalities shown on the MRI of Claimant's brain were not related to the work injury and could be causing Claimant's current need for medical treatment. Neither Dr. McLaughlin nor Dr. Treihaft provided an opinion that indicated that Claimant's neuro behavioral symptoms for which Dr. Treihaft evaluated Claimant for in April 2018 were related to her work injury. As noted by Dr. Treihaft, Claimant's initial neuro behavioral symptoms had resolved shortly after her April 1, 2013 injury. Dr. Treihaft also opined that the development of symptoms years after the injury does not fit the typical course of post-concussive syndrome.

21. Claimant argued at hearing that the Colorado Treatment Guidelines Rule 17 involving traumatic brain injuries establish that she is entitled to the medical treatment referenced by Dr. Treihaft. However, those guidelines only come into play if Claimant has proven that it is more likely than not that the medical treatment is related to Claimant's work injury. In this case, the ALJ credits the reports of Dr. Treihaft and finds that Claimant has failed to establish that the medical treatment is related to her April 1, 2013 work injury.

22. The ALJ would further note that Claimant's testimony at hearing regarding her prior concussions was inconsistent with the report of prior concussions Claimant provided to Dr. McLaughlin. The ALJ notes that Dr. McLaughlin appeared to be only

aware of one prior concussion as opposed to the multiple concussions Claimant testified to at hearing.

23. Based on the credible evidence that was presented at hearing in this case, the ALJ finds that Claimant has failed to prove that it is more likely than not that the neuropsychological testing referenced by Dr. Treihaft in his April 2, 2018 report and by Dr. McLaughlin in his May 29, 2019 DIME report, is reasonable medical treatment related to Claimant's April 1, 2013 work injury. Moreover, Claimant has failed to establish that it is more probable than not that the neuropsychological treatment is necessary to maintain Claimant at MMI.

CONCLUSIONS OF LAW

1. The purpose of the 'Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App**.** 1990).

4. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an

order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

5. As found, Claimant has failed to establish by a preponderance of the evidence that the neuropsychological testing is reasonable medical treatment related to Claimant's industrial injury and necessary to maintain Claimant at MMI. As found, the ALJ credits the reports of Dr. Treihaft regarding the cause of Claimant's neuro behavioral symptoms and the recurrence of the symptoms in 2016-2017 and finds that Claimant has failed to establish that her symptoms are causally related to the April 1, 2013 work injury. Therefore, Claimant's request for an order requiring Respondent to pay for neuropsychological testing is denied and dismissed.

ORDER

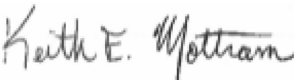
It is therefore ordered that:

1. Claimant's request for a return evaluation with Dr. Stakiw, the audiologist, is GRANTED pursuant to the agreement of the parties.

2. Claimant's request for an Order requiring Respondent to pay for neuropsychological testing is denied and dismissed.

NOTE: If you are dissatisfied with the **ALJ's** order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@ state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: May 31, 2023



Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

ISSUES

I. Whether Claimant proved Respondents failed to pay Claimant permanent partial disability (PPD) benefits pursuant to a settlement agreement.

PROCEDURAL MATTERS

Claimant's Application for Hearing ("AFH") dated October 11, 2022 and Case Information Sheet ("CIS") dated March 30 2023 endorse, inter alia, penalties under section 8-43-204(7), C.R.S. for Respondents' failure to timely pay benefits in accordance with the settlement agreement signed on August 31, 2022 and approved on September 1, 2022. At the commencement of the hearing in this matter, the ALJ asked the parties to identify the issues. Claimant's counsel stated that, as of the day prior, he and opposing counsel had "narrowed down the issue" and Claimant no longer sought to "negate or cancel" the settlement agreement. He stated that the dispute had been narrowed to a dispute of the amount of the PPD award that should have been issued and that he was seeking to enforce the settlement agreement as Claimant believed the full amount of PPD was not paid pursuant to the settlement agreement. Respondents' counsel agreed as to the issue identified. Neither party identified any other issues, including penalties. The parties did not call witnesses and rested their respective cases on exhibits admitted into the record.

Both parties submitted post-hearing position statements. Claimant identified the following issues in her position statement: (1) Remaining PPD owed to Claimant by Respondents pursuant to the June 22, 2022 FAL and September 1, 2022 Settlement Agreement; (2) Penalties pursuant to 8-43-204(7) and 8-43-304(1); and (3) Interest pursuant to C.R.S. 8-43-410(2). Respondents did not address penalties in their position statement.

Despite endorsing penalties in her AFH and CIS, Claimant did not identify penalties as an issue at hearing nor did Claimant argue the issue at hearing. Respondents did not try to the issue by consent. Accordingly, the issue of penalties is reserved for future determination.

FINDINGS OF FACT

1. Claimant is a 47-year-old banquet server who was employed with Employer since December 5, 2017.

2. Claimant sustained a work injury to her right knee while working for Employer on September 12, 2019.

3. Respondents filed a General Admission of Liability ("GAL") dated April 3, 2020 admitting for medical benefits and temporary total disability ("TTD") benefits at a rate of $562.51 per week, commencing on March 16, 2020.

4. On May 20, 2022 authorized treating physician ("ATP") Carrie Burns, M.D. placed at maximum medical improvement ("MMI") with 31% lower extremity impairment rating.

5. Dr. Burns' report placing Claimant at MMI was faxed to Insurer on June 21, 2022.

6. As Claimant was paid TTD every two weeks, on May 26, 2022, Insurer issued Clamant a check for $1,125.02 in TTD for the period of May 14 – 27, 2022 and another check on June 9, 2022 in the amount of $1,125.02 in TTD for the period of May 28 – June 10, 2022.

7. Insurer filed a Final Admission of Liability ("FAL") on June 22, 2022 consistent with Dr. Burn's report placing Claimant at MMI on May 20, 2022. The FAL admits for 31% scheduled impairment and reasonable, necessary and related post-MMI medical treatment. The FAL admitted for a total of $63,885.06 in TTD benefits for the period of 3/16/2020 through 5/19/2022, a total of $20,691.63 in permanent partial disability ("PPD") benefits for the period of 5/20/2022 through 8/13/2023, and disfigurement benefits in the amount of $1,000.00. The "Amount Overpaid" section states "$0.00". (R. Ex. B, p. 5). The FAL further states, "Insurer reserves the right to claim any and all offsets, recover any and all overpayments, and recover all advances made on account of the claimants indigency, whether specifically referenced in this admission or not". (Id. at p.7).

8. Claimant filed an Objection to FAL and Notice and Proposal and Application for Division Independent Medical Examination ("DIME") on June 28, 2023.

9. Prior to the DIME, the parties engaged in settlement negotiations. On August 10, 2022, the claims adjuster for Insurer, [Redacted, hereinafter AS], responded to a settlement demand from Claimant. In his response, AS[Redacted] stated,

> Thank you for your settlement demand in this case. Which I understand is $60,000 total, inclusive of the PPD amount owed. Please correct me if I am wrong. I show the remaining PPD balance as $15,348.00. At this time I can make an offer of $15,000 plus the remaining PPD due to settle the claim fully and finally.

10. As of August 10, 2022, Claimant had been paid $3,575.74 in PPD benefits ($1,650.34 on June 22, 2022 for the period of 5/20/2022 through 6/24/2022, plus $641.80 on July 5, 2022, $641.80 on July 19, 2022, and $641.80 on August 2, 2022). Claimant was also paid $1,000.00 in disfigurement benefits on June 22, 2022.

11. Claimant was also paid $641.80 in PPD on August 16, 2022 and $641.80 in PPD on August 30, 2022.

12. On August 31, 2022 the parties entered into a settlement agreement (the "Settlement Agreement"). Paragraph 2 of the Settlement Agreement provides,

> In full and final settlement of all benefits, compensation, penalties and interest to which Claimant is or might be entitled to as a result of these alleged injuries or occupational diseases, Respondents agree to pay and Claimant agrees to accept the following **Twenty Five Thousand Dollars and No Cents ($25,000.00)**, and payment of any remaining unpaid permanent partial disability benefits in one lump sum without discount, in addition to all benefits that have previously been paid to or behalf of the Claimant.

(R. Ex. H, p. 49).

13. The Settlement Agreement does not specify the amount of remaining unpaid PPD benefits, specifically refer to the amount of PPD identified in the FAL, nor otherwise reference the FAL. The parties stipulated and agreed that the claim would never be reopened except on the grounds of fraud or mutual mistake of material fact. The Director of the Division of Workers' Compensation approved the Settlement Agreement on September 1, 2022.

14. On September 2, 2022 Insurer issued Claimant a settlement check for $25,000.00 as well as a check for $14,064.40 lump sum remaining unpaid PPD benefits pursuant to the Settlement Agreement.

15. On September 19, 2022 Claimant's counsel contacted AS[Redacted] regarding a "missing" $1,767.89 in payments. AS[Redacted] responded that Insurer's payout log reflected Claimant was fully paid. On September 20, 2022, Claimant's counsel stated, "The FAL shows benefits totaling $21,691.63, and then we have the $25,000 settlement, totaling $46,691.63. It looks like the ledger only shows $44,923.74 as paid out for PPD + settlement. The difference is the $1,767.89 I listed below. Are we able to get those funds issued?" (Cl. Ex. 8, p. 54).

16. On September 22, 2022 AS[Redacted] informed Claimant's counsel that the "missing" amount referred to by Claimant was the amount paid in TTD past the date of MMI. He wrote,

> Date of MMI was 5/20/22. We paid TTD through 6/10/22. Which you can verify in the ledger. That overpayment for 22 days of TTD (until the FA was filed) = $1,767.89. When the FA is filed it reconciles the balances due and payable and credits any overpayments. That, plus the benefits paid (balance) in PPD and the settlement equal out.

(Id. at p. 52).

17. Claimant alleges Respondents owe her $1,767.89 in remaining unpaid PPD benefits under the Settlement Agreement, as Respondents admitted to $20,691.63 in PPD benefits on the FAL and have only paid $18,923.74 in PPD benefits.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Enforcement of a Settlement Agreement

Section 8-43-201, C.R.S. authorizes the ALJ to hear and decide all matters arising under the Workers' Compensation Act. This includes the authority to interpret a settlement agreement entered into and approved pursuant to the Act. *See* §8-42-101(1)(a), C.R.S.; *McCord v. Nabors Drilling U.S.A. Inc.,* WC 4-347-186 (ICAO, Feb. 7, 2000).

A settlement agreement may only be reopened upon a showing of fraud or mutual mistake of material fact. § 8-43-204(1) and § 8-43-303(2)(a) & (b) C.R.S.

Claimant does not seek to reopen the Settlement Agreement but, rather, requests that the ALJ enforce the terms of the Settlement Agreement. Claimant argues she was not paid the entirety of remaining unpaid PPD benefits pursuant to the Settlement Agreement and is owed $1,767.89 in PPD benefits, representing the difference between $20,691.63 in PPD listed in the FAL and $18,923.74 in PPD benefits she has received. Claimant contends that any credit Respondents may have been entitled to for overpayment of TTD was waived by their failure to indicate the credit on the FAL. Claimant relies on Cibola Construction v. ICAO, 971 P.2d 666 (Colo.App.1998).

In *Cibola*, the claimant received an award of $25,869.84 in PPD benefits. The claimant's condition later worsened, requiring additional surgery. The employer voluntarily reopened the claim and filed a GAL notifying the claimant of its intent to apply the PPD benefits already paid against any future award of permanent benefits. After reaching MMI for his worsened condition, the claimant received a whole person impairment rating of 16%, equivalent to PPD benefits in the amount of $36,568.90. The employer subsequently filed a FAL for PPD benefits in the amount of $36,568.90, stating that benefits had been or would be paid in that amount. The employer paid the claimant only $8,222.10, representing the difference between the earlier award of PPD and the total amount of benefits due. The Court of Appeals concluded that, in accordance with the requirements of § 8-43-203(2)(b)(I), C.R.S., the employer was obligated expressly to inform claimant of any credit or set off in the final admission. The Court of Appeals reasoned that notification of the credit in the previously filed general admission did not adequately preserve the employer's right to a reduction because it is the final admission which dispositively settles an employer's liability when uncontested. The Court of Appeals held that the final admission was legally insufficient to preserve the claimed credit and that the employer was bound to pay benefits in accordance with the amount represented in that document.

Cibola is distinguishable in that it involved the disposition of a case pursuant to a closed FAL whereas the case at bench involves the disposition of a case pursuant to an enforceable settlement agreement. The Settlement Agreement does not specify a particular amount of remaining unpaid PPD benefits nor does it specifically reference or incorporate the FAL. The terms of the Settlement Agreement provides for "payment of any remaining unpaid permanent partial disability benefits."

It is undisputed Claimant was paid TTD benefits beyond the date of MMI. WCRP Rule 5-6(D) provides "an insurer shall receive credit against permanent disability benefits for any temporary disability benefits paid beyond the date of maximum medical improvement." Accordingly, Respondents were entitled under WCRP Rule 5-6(D) to take a credit of $1,767.89. of overpaid TTD against Claimant's PPD. Additionally, Respondents preserved the right to claim any and all offsets and recover any and all overpayments specifically referenced in the FAL or not.

Prior to entering into the Settlement Agreement, Claimant was made aware of Respondents' calculations regarding the amount of unpaid remaining PPD benefits, which took into account the credit of TTD against PPD. The Settlement Agreement required Claimant to pay $25,000 and payment of any remaining unpaid PPD benefits. At the time of entering into the Settlement Agreement, the amount of remaining unpaid PPD benefits was $14,064.40 ($18,923.74 minus $4,859.34 paid prior to August 31, 2022). Claimant was paid $25,000 and a lump sum of $14,064.40 in remaining unpaid PPD benefits. Accordingly, Claimant was paid all remaining unpaid PPD benefits pursuant to the Settlement Agreement.

ORDER

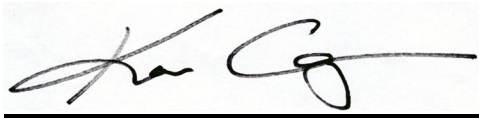
It is therefore ordered that:

1. Claimant's claim for $1,767.89 in unpaid PPD benefits pursuant to the Settlement Agreement is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, insurOACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 31, 2023



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she sustained a compensable work injury on June 23, 2022.

II. Whether Claimant proved by a preponderance of the evidence she is entitled to temporary total disability ("TTD") benefits.

III. Determination of long-term disability benefit offsets against any TTD to which Claimant is entitled.

IV. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant is a 60-year-old woman who has worked for Employer for approximately six years as an Institution Food Stewart. Claimant is responsible for preparing and serving food to [Redacted, hereinafter IE]. Claimant's job description indicates her position requires the ability to lift no more than 50 lbs., and includes standing, walking, carrying, pulling, pushing, and performing repetitive motions.

2. Claimant alleges she sustained a work injury on June 23, 2022. While performing her regular work duties, Claimant picked up a heavy pan, turned and felt a sharp pain in her right shoulder. She finished the food service and reported the incident to her supervisor and Employer's "Ouchline."

3. Claimant presented to the emergency department at Presbyterian St. Luke's Medical Center on June 23, 2022 with complaints of right-sided neck and shoulder pain radiating down her right arm and into her right chest. A chest x-ray was normal. A cervical spine x-ray revealed moderate degenerative disc disease at C5-C6, mild degenerative disc disease at C6-C7 and mild diffuse facet arthritis. There was no evidence of fracture or dislocation.

4. On June 24, 2022 Claimant presented to Cynthia Rubio, M.D. at Concentra. She reported feeling a sharp pain in her right shoulder while turning with a 20-30 lb. pan at work. Claimant further reported she experienced a needle sensation in her arm and pain in her chest, and later developed a headache and pain in her right lateral neck, as well as numbness in her fingers. Dr. Rubio assessed Claimant with a cervical strain and referred her for physical therapy. She released Claimant to modified duty. The medical note admitted into the record does not specify the specific restrictions imposed on this date.

5. On June 28, 2022 Dr. Rubio placed Claimant on modified duty restrictions of lifting/carrying/pushing/pulling no more than 20 lbs., no repetitive lifting, and no repetitive activity with the right arm more than five times per hour. Objective findings were noted to be consistent with history and/or work-related mechanism of injury.

6. Claimant spoke to Eric Chau, M.D. at Concentra by telephone on July 5, 2022. Claimant reported that she had been unable to work July 3-4, 2022 due to headaches, dizziness and pain. Dr. Chau removed Claimant from work July 3-5, 2022. Objective findings were noted to be consistent with history and/or work-related mechanism of injury.

7. Claimant presented to Nancy Strain, D.O. at Concentra on July 8, 2022 for a recheck of her right shoulder and neck. Claimant complained of stiffness in her neck and shoulder, with sharp shooting pain into her right arm and intermittent numbness into the 4th and 5th digits of her right hand. Claimant also complained of headaches and dizziness. Claimant reported that she saw Jason Gridley, D.C. for her knee and he did some acupuncture on her neck and it helped. Dr. Strain noted, "They put her on night duty which she has never done since working there for 5 yrs. She feels uncomfortable to drive at night with her stiff neck and dizziness." (Cl. Ex. 4, p. 31). She diagnosed Claimant with a cervical strain and right shoulder strain. She released Claimant to modified duty with restrictions of lifting no more than 20 lbs., pushing and pulling no more than 40 lbs., and 50% seated duty with no night shift work. Objective findings were noted to be consistent with history and/or work-related mechanism of injury.

8. Respondent filed a Notice of Contest on July 11, 2022.

9. On July 15, 2022 Claimant underwent MRIs of the cervical spine and right shoulder. The impression of the cervical spine MRI was, in relevant part: multilevel degenerative changes with no high-grade spinal canal stenosis and mild left neural foraminal stenosis at C3-C4. The findings noted small disc protrusions at C2-C3 and C3-C4 and C4-C5, C5-C6, C6-C7. The right shoulder MRI demonstrated a partial thickness tear of the distal supraspinatus and mild to moderate degenerative joint changes of the AC joint.

10. On July 26, 2022 Claimant saw Dr. Chau, who reviewed the neck and shoulder MRIs. He noted the results indicated tendinosis, a partial tear of the supraspinatus with degenerative changes, degenerative changes of the neck, and mild foraminal narrowing. He continued Claimant on modified work restrictions.

11. Claimant returned to Dr. Chau on September 27, 2022. Dr. Chau's assessment was right shoulder strain and cervical strain. Dr. Chau renewed Claimant's medications and referred her for acupuncture, massage therapy and evaluation by an orthopedic specialist. Claimant's work restrictions were lifting no more than 20 lbs., pushing and pulling no more than 40 lbs., and no reaching overhead.

12. A Concentra massage therapy note dated October 11, 2022 documents that Claimant was under prior treatment for a different, unrelated injury to her low back and knee.

13. On October 18, 2022 Claimant presented Cary Motz, M.D. at Concentra for an orthopedic evaluation of her right shoulder. Dr. Motz noted that the July 15, 2022 right shoulder MRI showed a small partial thickness interstitial tear of the supraspinatus tendon with some AC joint degenerative changes and subacromial bursitis. On examination, Dr. Motz noted full range of motion of the neck, tenderness about the trapezius and parascapular muscles, mild AC joint tenderness, limited right shoulder range of motion, and positive impingement and Hawkins tests. Her impression was: right shoulder impingement, partial thickness interstitial supraspinatus tear and acromioclavicular joint arthritis. Dr. Motz opined that it was reasonable to consider a steroid injection.

14. On November 29, 2022, J. Tashof Bernton, M.D. performed an independent medical examination ("IME") at the request of Respondent. Claimant reported being about 40% better with continued complaints of right shoulder pain radiating into the right neck and down the right arm, with numbness into all five fingers on the right hand. He noted, "The patient states that she tried to return to work and asked to move 'back to [Redacted, hereinafter DJ],' which has fewer IE[Redacted] than the other position she had previously been in and thus was, by her report, lighter work." (R. Ex. B, p. 9). On examination, Dr. Bernton noted fairly marked decreased range of motion and marked weakness on rotator cuff testing, with some collapse characteristic consistent with potential poor effort. There was non-dermatomal decreased sensation throughout the entire right upper extremity and generalized weakness on testing of the right upper extremity which Dr. Bernton noted was likely non-physiologic. Claimant had diffuse tenderness over the anterior shoulder without specific focal anatomic landmark tenderness.

15. Dr. Bernton opined that Claimant clearly had a significant functional overlay to her persistent symptoms. He remarked,

> There is no objective basis that would explain the patient's reports of decreased sensation for the entire right arm, certainly no objective physiologic basis that could explain such a finding on a work-related basis. The differential for non-dermatomal numbness of the entire right upper extremity is either neuropathy (which appears unlikely and in any case would not be a work-related issue), central nervous system issues (for which there is no evidence in the history or examination, or functional (nonphysically based) symptoms. While there is some remote possibility of a non-work related issue such as Parsonage-Turner resulting in this type of sensory distribution and weakness, it is most likely that this represents functional overlay.
>
> The patient's persistent decrease in range of motion and apparent weakness on multiple muscle testings in the upper extremity again could

> be consistent with an idiopathic acute-onset plexopathy such as Parsonage-Turner (which would be non-work related). The weakness that the patient has is not really consistent with a partial tear of the rotator cuff such as was noted on MRI, but if there was progression to a complete rotator cuff tear, the patient's decreased range of motion and weakness could be understandable on that basis. (Id. at p. 11).

16. Dr. Bernton concluded that the cervical spine MRI demonstrated no findings of nerve root compression that explain Claimant's symptoms and there is no evidence of a cervical injury that is responsible for her persistent symptoms. He recommended that Claimant undergo a repeat right shoulder MRI to rule out a complete rotator cuff tear as well as an EMG to rule out acute idiopathic plexopathy, which would be non-work related. Dr. Bernton noted that, if the EMG results are normal and the repeat MRI showed only the presence of the partial tear of the rotator cuff previously noted, Claimant's diagnosis is a partial rotator cuff tear and associated symptoms magnification. In that event, Dr. Bernton recommend PRP injection of the partial tear and a period of up to a maximum of six weeks of further physical therapy, at which point he opined Claimant would be at maximum medical improvement ("MMI").

17. On January 30, 2023 Dr. Bernton issued an addendum to his IME report after reviewing a repeat right shoulder MRI performed on January 24, 2023. Dr. Bernton noted that the repeat MRI did not demonstrate the presence of a complete rotator cuff tear and essentially revealed the same findings from the previous MRI, including some mild tendinitis and AC joint arthritis and a small partial tear of the distal supraspinatus tendon. He opined that the MRI findings, including the small partial tear, are degenerative and do not explain Claimant's reported symptoms including sudden severe right-sided neck pain radiating down her right arm to her right fingers and into her right chest. He reiterated that if EMG results were negative, a single PRP injection and brief period of physical therapy may be appropriate.

18. Claimant returned to Dr. Chau on February 1, 2023, who noted he was awaiting Claimant's decision regarding undergoing a right shoulder injection. He continued Claimant's work restrictions.

19. On February 24, 2023 Claimant presented to John Sacha, M.D. at Concentra for evaluation and EMG/NCV testing. The EMG/NCV was normal with no evidence of radiculopathy, plexopathy or neuropathy. Dr. Sacha's impression was rotator cuff tendinitis with no evidence of cervical radiculopathy or brachial plexopathy. He remarked that Claimant's testing, history, mechanism of injury and examination demonstrated no evidence of neuropathic process. Dr. Sacha recommended that Claimant undergo a corticosteroid injection of the shoulder and some strengthening and conditioning.

20. Claimant testified she continues to undergo massage therapy, for which she pays. Claimant testified she has not been placed at MMI.

21. Claimant has continued on modified work restrictions. Claimant remains employed by, but is not currently working for Employer. As of the date of injury, Claimant had concurrent employment as a caregiver with [Redacted, hereinafter SC]. Claimant has worked for SC[Redacted] for approximately 10 years. The work injury did not affect Claimant's concurrent employment. Subsequent to the injury Claimant continued to work her concurrent employment with SC[Redacted] and did not incur any lost wages from such employment.

22. Claimant testified she earns $24.25 per hour from Employer, plus overtime, and works an average of 40 hours per week. Claimant testified Employer also provided her one free meal a day, which she values at $8.00 per meal. Claimant calculates her AWW for Employer to be $1,010.00, including meals. Claimant calculates her AWW with SC[Redacted] as $332.40.

23. Claimant's pay records from Employer reflect that, at the time of the injury, she earned $24.62 per hour. Claimant's wage records indicate Claimant's total earnings per pay period varied based on hours worked. From June 6, 2021 to June 18, 2022 Claimant earned an average of $2,220.10 per biweekly pay period, corresponding with average weekly earnings of $1,110.05.

24. Claimant submitted three paystubs from SC[Redacted], indicating she earned gross pay of $2,513.52 from October 1, 2022 to October 31, 2022; $2,325.38 from November 1, 2022 to November 30, 2022; and $2,501.60 from December 1, 2022 through December 31, 2022.

25. Claimant is receiving long-term disability benefits in the amount of $2,556.56 per month ($589.74 per week) through [Redacted, hereinafter SI] under a disability insurance policy. Claimant's pay records demonstrate the insurance premiums under the policy were contributed to 100 percent by Respondent. Claimant did not make any contributions to the SI[Redacted]. SI[Redacted] specified a date of disability of July 2, 2022.

26. The ALJ credits the opinions of Drs. Rubio, Chau, Strain, Motz, Sacha and Bernton, as supported by the medical records and Claimant's credible testimony, and finds Claimant proved it is more probably true than not she sustained a compensable work injury to her right shoulder and neck on June 23, 2022. Claimant is entitled to reasonable necessary, and related medical treatment to cure and relieve the effects of the June 23, 2022 work injury.

27. Claimant proved it is more probably true than not she is entitled to TTD benefits from July 3, 2022 and ongoing, until terminated by operation of law.

28. Based on Claimant's pay records, an AWW of $1,110.05 (with a TTD rate of $740.03) represents a fair approximation of Claimant's wage loss and diminished earning capacity.

29. Respondents are entitled to offset Claimant's TTD award by $589.74 per week for long-term disability payments.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant

demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

As found, Claimant proved it is more probably true than not she sustained a compensable work injury to her right shoulder and neck on June 23, 2022. Claimant was in the course of her employment performing her regular work duties when she experienced an onset of symptoms. Each of Claimant's providers at Concentra have diagnosed Claimant with a work-related right shoulder condition and opined Claimant requires right shoulder treatment. Even Respondent's IME physician, Dr. Bernton, opined Claimant sustained a work-related partial rotator cuff tear, for which he recommended a PRP injection and some physical therapy prior to being placed at MMI. Additionally, Drs. Chau, Rubio and Strain credibly diagnosed Claimant with a work-related cervical strain. To the extent the record references lumbar or bilateral knee conditions, the preponderant evidence does not establish any causal nexus between such claimed disability and the June 23, 2022 work injury.

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As Claimant met her burden to prove she sustained a compensable work injury to her right shoulder and neck, Claimant is entitled to reasonable and necessary treatment to cure and relieve the effects of such injury.

TTD

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

Claimant testified she is not currently working for Employer, but offered no evidence regarding what date she specifically stopped working for Employer and began incurring lost wages. Claimant's position statement states Claimant ceased working for Employer on June 25, 2023. In its position statement, Respondent alleges Claimant worked modified duty until July 2, 2023 and then subsequently elected to "keep herself off" of work for Employer because she wanted to go back to the DJ[Redacted] with fewer IE[Redacted] and lighter work. SI[Redacted] determined a date of disability of July 2, 2022.

The medical records indicate Claimant was released to modified duty on June 24, 2022 and returned to working modified duty for Employer on a night shift until July 3, 2022. Dr. Chau subsequently removed Claimant from work from July 3-5, 2022 due to symptoms associated with her June 23, 2023 work injury. Subsequently, on July 8, 2022, Dr. Strain released Claimant to modified duty but restricted her from working night shifts. The totality of the evidence demonstrates Claimant ceased working for Employer on July 3, 2022 due to a disability caused by the June 23, 2022 work injury, resulting in lost wages. Claimant has missed more than three work shifts due to her disability. Accordingly, Claimant is entitled to TTD benefits from July 3, 2022 and ongoing, until terminated by operation of law. The reference in Dr. Bernton's IME report to Claimant asking to move back to the DJ[Redacted] for lighter work does not, in light of the totality of the evidence, establish Claimant is not entitled to TTD.

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc.*, WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

Claimant asserts an AWW of $1,342.40, consisting of an AWW for Employer of $1,010.00 and SC[Redacted] of $332.40. Subsequent to the work injury, Claimant continued working her concurrent employment and did not sustain any lost wages from SC[Redacted]. Accordingly, including wages from such concurrent employment would not be a fair approximation of Claimant's wage loss and diminished earning capacity. As found, Claimant's AWW is $1,110.05, based on her employment for Employer.

Offsets

Section 8-42-103(1)(d)(I), C.R.S. provides,

In cases where it is determined that periodic disability benefits are payable to an employee under a pension or disability plan financed in whole or in part by the employer, hereinafter called "employer pension or disability plan", the aggregate benefits payable for temporary total disability, temporary partial disability, and permanent total disability pursuant to this section shall be reduced, but not below zero, by an amount equal as nearly as practical to the employer pension or disability plan benefits, with the following limitations:

(A) Where the employee has contributed to the employer pension or disability plan, benefits shall be reduced under this section only in an amount proportional to the employer's percentage of total contributions to the employer pension or disability plan.

(B) Where the employer pension or disability plan provides by its terms that benefits are precluded thereunder in whole or in part if benefits are awarded under articles 40 to 47 of this title, the reduction provided in this paragraph (d) shall not be applicable to the extent of the amount so precluded.

As found, the record demonstrates Respondent paid 100 percent of total contributions to Claimant's SI[Redacted] disability plan. The pay records do not indicate Claimant made any contributions to the disability premiums. Claimant is receiving disability benefits from SI[Redacted] in the amount of $2,556.56 per month, or $589.74 per week. Respondent is thus entitled to offset Claimant's TTD award by $589.74 per week.

ORDER

It is therefore ordered that:

1. Claimant proved by a preponderance of the evidence she suffered a compensable work injury within the course and scope of employment on June 23, 2022.

2. Respondent shall pay for reasonable, necessary and causally related medical care from authorized providers.

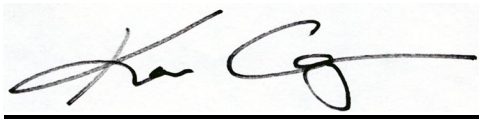
3. Claimant's AWW is $1,110.05, with a corresponding TTD rate of $740.03.

4. Respondent shall pay Claimant TTD benefits beginning July 2, 2022 and ongoing, until terminated by operation of law, subject to applicable offsets, including an offset of $589.74 per week for benefits paid through SI's[Redacted] long-term disability plan.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 26, 2023



Kara R. Cayce
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-176-476-001

ISSUES

I. Whether Claimant is entitled to a change of physician to Dr. Dupper.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On June 17, 2021, the claimant suffered a compensable back injury while working for the employer.
2. The next day, June 18, 2021, the caimant presented to the University of Colorado Health Emergency Department. He complained of low back pain that radiated down his left leg and down to his foot. He also complained of some numbness in his left foot and upper thigh. Based on his symptoms, an MRI was performed. The MRI demonstrated disc pathology at the L2-L3 level with a 1.7 cm free disc fragment that appeared to be from the L2-L3 disc. Based on the findings and the claimant's symptoms, the emergency room physician discussed the case with the on-call neurosurgeon.
3. On approximately June 18th or 19th, Physician Assistant Nicois, who appears to be from Dr. Tracey Stefanon's office, called the emergency department to discuss the case and arrange for a follow-up appointment for the claimant.
4. On June 21, 2021, the claimant was evaluated Dr. Stefanon. Based on her findings, Dr. Stefanon consulted a neurosurgeon and then referred the claimant to be seen by a neurosurgeon within the next few days.
5. On June 25, 2021, the claimant was seen by Sheree Bower, M.D., a neurosurgeon. Based on the MRI, Dr. Bower concluded that the claimant had an extruded disc fragment at the L2-L3 level. Therefore, based on the claimant's symptoms and the MRI findings, Dr. Bower recommended a microdiscectomy to reduce and decompress the disc, which was causing nerve root impingement. The claimant was agreeable to undergoing surgery. As a result, surgery was tentatively scheduled for July 20, 2021.
6. On June 28, 2021, the claimant followed up with Dr. Stefanon. At this appointment, he still had weakness, numbness, and tingling in his left leg. It was noted that he had seen a neurosurgeon and they discussed surgery. Dr. Stefanon stated that the plan was to proceed with surgery by July 20, 2021. There is no indication Dr. Stefanon was against the surgery recommended by Dr. Bower.
7. On July 20, 2021, the claimant underwent back surgery, with Dr. Bower. Dr. Bower performed a left microdiscectomy at the L2-L3 level.

8. On August 10, 2021, the claimant returned to see Dr. Bower. At this visit, the claimant stated that he initially had some improvement, but over the last week he started to develop worsening left-sided low back pain and left lower extremity pain. Dr. Bower noted that if there was no improvement, she would get a new MRI.

~~9.~~ On August 16, 2021, the claimant saw Dr. Stefanon and complained of continuing pain and radicular symptoms in his left leg. Therefore, a new MRI was ordered. ~~The claimant did not appear to report symptoms in his right leg at this time.~~

10. On August 28, 2021, about two months after his work injury and the first MRI, the claimant underwent the second MRI. The second MRI demonstrated:

    i. Interval discectomy at L2-3 with decreased left lateral recess stenosis compared with the June 18, 2021 MRI, and

    ii. New right central disc extrusion with superior migration at L3-L4 with worsened right-sided spinal canal and right lateral recess stenosis compared with the June 18, 2021, MRI.

    Thus, the claimant appeared to have new, or progressive, findings at the L3-L4 level, in the form of an extrusion or herniation, that developed over 2 months.

11. On September 7, 2021, the claimant returned to Dr. Bower. Dr. Bower reviewed the second MRI and compared it to Claimant's preoperative MRI. Dr. Bower noted that the most recent MRI showed that the prior L2-3 disc herniation was gone, with the lateral recess decompressed, but yet showed a new right sided disc herniation at the L3-4 level causing right lateral recess stenosis. She also noted that the nerve appears to be just past the disc and may not be fully compressed by the disc. Dr. Bower then noted that the claimant did not get any relief from the prior surgery-microdiscectomy. Because the claimant did not get any pain relief from the surgery, Dr. Bower concluded that the claimant's pain might be coming from his sacroiliac joint or his hip. She also stated that pain from the sacroiliac would overlap with the pain expected from the L2-3 disc. And while she did not think Claimant's pain complaints were coming from the L3-4 disc herniation, she could not say for sure. Thus, she recommended physical therapy and a referral to a pain specialist for another opinion about the pain generator as well as the provision of diagnostic and therapeutic injections.

12. On September 8, 2021, the claimant returned to Dr. Stefanon. At this visit, the claimant stated that his symptoms had still not improved after the surgery. Thus, the claimant was directed to follow up with Dr. Bower to determine whether she had any other recommendations.

13. On October 12, 2021, after attending several physical therapy appointments, the claimant returned to Dr. Stefanon. At this appointment, the claimant stated that his symptoms were stable. Dr. Stefanon did, however, note objective improvement.

14. On October 26, 2021, Dr. Stefanon notes indicate that the claimant has "left lower extremity weakness in the right side." The ALJ finds that this finding relates to the right side of the left leg, and not the right leg.

15. On November 9, 2021, the claimant returned to Dr. Stefanon. At this appointment, it was noted that the claimant had been consistent with his home exercises and

demonstrated improvement, but yet he still had left lower extremity weakness in the right side.

16. On November 23, 2021, the claimant reported to Dr. Stefanon that his left lower extremity was about 10% worse and that he still had pain in his thigh, leg, and knee.

17. On December 14, 2021, the claimant returned to Dr. Stefanon. At this visit, it was noted that he continued to improve functionally, and she thought the claimant would reach MMI by the next visit.

18. On January 25, 2022, Dr. Stefanon placed the claimant at MMI, even though Dr. Bower had recommended Claimant consult a pain management physician for possible injections and Claimant had not consulted one yet.

19. On June 10, 2022, the claimant underwent an IME with Anjmun Sharma. Dr. Sharma evaluated the claimant and determined that he was not at MMI. Dr. Sharma concluded that the new disc herniation/extrusion at the L3-L4 level was a direct result of the first surgery. Dr. Sharma was clear that the new herniation/extrusion was not due to any error on behalf of the surgeon, Dr. Bower, but that it was merely a common complication from surgery.

20. On August 24, 2022, Claimant underwent a Division Independent Medical Examination with Alicia Feldman, M.D. Dr. Feldman addressed the claimant's new L2-3 disk herniation and left sided complaints. She noted that after Dr. Stefanon placed claimant at MMI on January 25, 2021, the claimant continued to have pain and functional limitations. She also noted that his neurosurgeon, Dr. Bower, recommended that the claimant should consult a pain management specialist and possibly undergo some injections. After evaluating the claimant, she concluded that he was not at MMI for his left sided complaints. It was her opinion that the claimant would benefit from a consultation with a pain management specialist for evaluation for possible injections to locate the source of the claimant's pain and symptoms. Lastly, she concluded that if the claimant did not improve, he should return to his surgeon for further evaluation before being placed at MMI. While Dr. Feldman did note the claimant's new right sided disc herniation at the L3-4 level, and right sided symptoms, she did not address the cause of the herniation and his right sided symptoms.

21. On October 4, 2022, after the DIME physician determined the claimant was not at MMI, the claimant returned to Dr. Stefanon. At this appointment Dr. Stefanon reviewed the DIME report of Dr. Feldman as well as the IME from Dr. Sharma. Dr. Stefanon concluded that the claimant's ongoing back tightness and left leg symptoms were related to his June 17, 2021, work injury. She also noted that the claimant's ongoing symptoms could be sciatica, SI involvement, facet involvement, piriformis syndrome, or a combination of those conditions. Therefore, she agreed with the DIME physician that the claimant was not at MMI and required additional treatment. As a result, Dr. Stefanon recommended physical therapy, an MRI, and a referral to a pain management specialist to determine whether injections might be appropriate.

22. At the October 4, 2022, evaluation, Dr. Stefanon also evaluated the claimant's new disc herniation at the L3-4 level and his right sided leg complaints. She did not think the new disc herniation, and associated symptoms, were related to his June 17, 2021,

work injury because the herniation and symptoms occurred after (or "remote" from) his work injury. She stated that "the patient did not develop any right-sided symptoms throughout the course of his treatment for his work-related condition and not until 3-4 months after MMI determination."

23. On October 12, 2022, the claimant underwent a third MRI. Interestingly, the MRI demonstrated that at the L3-4 level there was resorption or resection of the small disc herniation at that level seen on the second MRI. But there was now a disc protrusion at the L5-S1 level that had become more prominent. Thus, there appeared to be improvement at the L3-L4 level and worsening, or more degeneration, at the L5-S1 level.

24. On October 14, 2022, the claimant started the physical therapy that had been recommended.

25. On October 25, 2022, Dr. Stefanon evaluated the claimant and went over his most recent-third-MRI findings with him. She noted that the MRI demonstrated multilevel degenerative changes and that the findings seemed to be unchanged since the second MRI, except for the interval progression of a central and right disc protrusion at the L5-S1 level. She again concluded that the claimant's right-side leg problems were unrelated to his work injury. She stated that:

> I did review the MRI results with the patient using an anatomical model. He has multilevel degenerative changes which are mild to moderate in nature and appear to be unchanged since the prior MRI with the exception of interval progression of central and RIGHT central disc protrusion at L5-S1. We did discuss how this may be contributing to his current, new onset, right leg symptoms. I did again discuss with the patient that I do not feel that his right leg symptoms are related to his work injury of 6/17/2021. Please refer to discussion at prior evaluation on 10/4/2022. I do feel that this is likely the natural progression of his chronic underlying condition with multilevel degenerative changes. I did discuss with the patient that any further evaluation and/or treatment should be pursued through his primary insurance/primary care manager for this new abnormality and right leg symptoms as again my opinion is that it is not related to his work injury of 6/1 7/2021.

26. On January 19, 2023, the claimant was seen by a pain management specialist, Dr. Pouliot, and underwent an L5-S1 transforaminal epidural steroid injection. Based on Dr. Pouliot performing an epidural steroid injection at the L5-S1 level, it appears that he thinks the claimant's right sided symptoms are coming from the L5-S1 level, which was not seen until the third MRI taken on October 12, 2022.

27. The claimant contends that he does not believe Dr. Stefanon has his best interests in mind. He also contends that it is his opinion Dr. Stefanon's attitude towards him changed after the DIME physician reversed Dr. Stefanon's MMI finding. As a result, the claimant contends that it is his opinion that Dr. Stefanon merely wants to get him off workers' compensation.

28. While Dr. Stefanon did place the claimant at MMI before he was evaluated by a pain specialist, which was recommended by Dr. Bower, based on the totality of the evidence submitted at hearing, the ALJ finds that Dr. Stefanon is providing the claimant adequate as well as reasonable and necessary medical treatment. This is based on the following factors. First, based on Dr. Stefanon's evaluation of the claimant and reviewing his MRI findings, she immediately referred the claimant to a neurosurgeon, Dr. Bower, who saw the claimant within about a week of his accident. Second, after Dr. Bower recommended surgery, Dr. Stefanon did not disagree with the surgical recommendation made by Dr. Bower. Third, although Dr. Stefanon prematurely placed the claimant at MMI, she reviewed the findings of the DIME physician and has followed many of the recommendations of the DIME physician by restarting physical therapy and referring claimant to a pain specialist. Fourth, Dr. Stefanon ordered a third MRI, even though that was not recommended by the DIME physician. Fifth, while the second MRI demonstrated findings at the L3-L4 level, the claimant did not have the onset of right sided symptoms at the time of the MRI, but according to Dr. Stefanon, he developed the right sided symptoms after being placed at MMI. Based on the timing of the onset of the claimant's right-sided symptoms, Dr. Stefanon's opinion seems reasonable. Thus, Dr. Stefanon has not restricted the claimant from receiving the care that she thinks is reasonably necessary to treat the conditions she thinks are work related.

29. The ALJ finds that the primary reason the claimant wants to change physicians is because he disagrees and is dissatisfied with Dr. Stefanon's opinion that the new MRI findings and his right sided pain complaints are unrelated to his work injury. The ALJ, however, finds that this is a reasonable conclusion by Dr. Stefanon under the facts and circumstance of this case.

30. The ALJ finds that the claimant's disagreement with Dr. Stefanon's conclusion about causation, and thus his dissatisfaction with her, under the facts and circumstances of this case, does not support a finding that the claimant is entitled to a change of physician at this time.

31. The ALJ further finds and concludes that this disagreement of causation has not resulted in the breakdown of the relationship between the claimant and the treating physician to warrant a change of physician.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers'

compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant is entitled to a change of physician to Dr. Dupper.[1]

Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* WC 4-597-412 (ICAO, July 24, 2008). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary

[1] In his proposed order, the claimant also contends that because he believes the subsequent disc herniation(s) are related and because Dr. Stefanon does not believe they are related, she is refusing to treat for non-medical reasons and therefore the right to select a physician has passed to the Claimant. However, it appears that the claimant is putting the cart before the horse. Before the claimant can request a change of physician under those circumstances, the claimant has to establish the subsequent disc herniation(s) and right leg symptoms are related. But the compensable nature of the subsequent disc herniation(s) and need for treatment is not before this ALJ. The only issue before this ALJ is the claimant's request to change physicians based on his contention that he does not think Dr. Stefanon has his best interests in mind and is trying limit his workers' compensation benefits by prematurely placing him at MMI because she does not think the claimant's subsequent disc herniation(s) and right sided leg symptoms are related to his industrial injury. Therefore, a change of physician based on the claimant's contention that Dr. Stefanon refused to treat a related condition for non-medical reasons is not before this ALJ.

medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.*

Moreover, an ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, WC 4-570-904 (ICAO, June 19, 2006). On the other hand, the claimant can be entitled to a change of physician based on the breakdown of the relationship between the claimant and the treating physician. *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 16, 1995).

But because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretion to determine whether the circumstances justify a change of physician. *Gutierrez Lopez v. Scott Contractors*, WC 4-872-923-01, (ICAO Nov. 19, 2014).

The ALJ finds that Dr. Stefanon is providing the claimant adequate, reasonable and necessary medical treatment for his work injury. This is based on the following factors. First, based on Dr. Stefanon's initial evaluation of the claimant and reviewing his MRI findings, she immediately referred the claimant to a neurosurgeon, Dr. Bower, who saw the claimant within about a week of his accident. Second, after Dr. Bower recommended surgery, Dr. Stefanon did not disagree with the surgical recommendation made by Dr. Bower, and claimant underwent surgery. Third, although Dr. Stefanon prematurely placed the claimant at MMI, she reviewed the findings of the DIME physician and has followed many of the recommendations of the DIME physician by restarting physical therapy and referring claimant to a pain specialist. Fourth, Dr. Stefanon ordered a third MRI, even though that was not recommended by the DIME physician. Fifth, while the second MRI demonstrated findings at the L3-L4 level, the claimant did not have the onset of right sided symptoms at the time of the MRI, but appears to have developed those symptoms after being placed at MMI. Thus, it is found and concluded that Dr. Stefanon has provided adequate as well as reasonably necessary medical treatment for the conditions she thinks are work related.

As found, the primary reason the claimant wants to change physicians is because he disagrees and is dissatisfied with Dr. Stefanon's opinion that the new MRI findings and his new right sided pain complaints are unrelated to his work injury. A disagreement regarding causation between a physician and claimant can support a change of physician. (*See Clark v. Excel*, WC 4-437-891, (ICAO June 23, 1999),(Change of physician allowed when claimant disagreed with physician regarding the cause of the osteoarthritis and the close relationship between the physician and employer). But a disagreement regarding causation between a claimant and their physician does not automatically warrant a change of physician.

The ALJ finds and concludes that the disagreement and dissatisfaction, under the facts and circumstances of this case, does not support a finding that the claimant is entitled to a change of physician. The ALJ further finds and concludes that this disagreement of causation has not resulted in the breakdown of the relationship between the claimant and the treating physician to warrant a change of physician.

As a result, the ALJ finds and concludes that the claimant has failed to establish by a preponderance of the evidence that he is entitled to a change of physician.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The claimant's request for a change of physician is denied.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 4, 2023.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-199-498-001

ISSUES

I. Whether the Claimant established, by a preponderance of the evidence, that he suffered a compensable injury.

II. Whether Claimant established, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical treatment, including treatment provided by Parker Adventist Hospital, Sky Ridge Medical Center, and Wake Forest Baptist Medical Center.

III. Whether the Claimant established, by a preponderance of the evidence, that he is entitled to an award of TTD/TPD benefits from February 17, 2021, and ongoing.

IV. Whether the Respondents established, by a preponderance of the evidence, that the Claimant was responsible for the termination of his employment.

STIPULATIONS

- In their position statements the parties stipulated that if the claim is deemed compensable the Claimant's average weekly wage is $1,082.32.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. The Claimant is a 41-year-old man with a June 16, 1981, date of birth. The Claimant was hired by the Respondent Employer on November 10, 2020, to work as a coax splicer foreman. **RHE B, Bates 2.**

2. After being hired by the Employer, the Claimant underwent an onboarding process with a company provided laptop. As a part of the Employer's onboarding process, the Claimant reviewed the Employer's employee handbook and electronically acknowledged receipt and review of the same. **December 9, 2022, Tr. 38, 9-22.** The Employer's employee handbook includes the Employer's policies and procedures relating to reporting a workplace injury. **December 9, 2022, Tr. 38, ll. 23-25, Tr. 39, l. 1.** The Employer's accident and injury reporting policy includes six bullet point topics, the first of which requires the employee to immediately report the accident to their supervisor. **December 9, 2022, Tr. 39, ll. 21-25, Tr. 40, ll. 1-15.** The Claimant's direct supervisor, splicing manager, [Redacted, hereinafter DS], testified at the December 9, 2022, continuation

hearing. DS[Redacted] credibly testified the Claimant would not have been permitted to work in the field if he had not completed the Employer's onboarding process, including acknowledging review of the employee handbook. **December 9, 2022, Tr. 40, ll. 16-22.** The Employer also has posted in the Employee breakroom, Colorado's required poster advising workers of their obligation to report any work injury, in writing, within four business days.[1] **December 9, 2022, Tr. 41, l.25, Tr. 42, ll. 1-6.**

3. On May 7, 2022, the Claimant filed his Worker's Claim for Compensation, alleging a January 6, 2021, date of injury. The Claimant described the injury as occurring when, "[H]e went to work hit the ground on [his] knees and a little lump appeared on his abdomen." **RHE A, Bates 2.**

4. The Claimant testified to his work duties at the Employer as splicing coax, carrying tools back and forth from [electrical] pedestal to pedestal, putting in taps, using drills, corers, hand tools, bolts and nuts. The Claimant described using a 30 to 40 pound tool belt in his work, as well as carrying buckets full of taps and other items, with the bucket weighing up to 30 pounds. **September 8, 2022, Tr. 34, ll. 21-23, Tr. 35, ll. 11-21, Tr. 36, ll. 1-18.**

5. At 10:44 a.m., on January 6, 2021, the Claimant presented to Parker Adventist Hospital Emergency Room complaining of bilateral flank pain at a level 10/10, which started "about an hour ago while at work". The Claimant gave a history of multiple prior kidney stones. **RHE D, Bates 84.** The Claimant was treated with IV fluids, IV Toradol, and IV Dilaudid. The treating provider noted the Claimant had been seen at the Parker Adventist ER eight times in the last year for various complaints, including flank pain. **RHE D, Bates 104.** The discharge diagnosis was flank pain. The Claimant's labs and ultrasound were read as normal. There was no evidence of an obstructing kidney stone. **RHE D, Bates 96.**

6. At the time of hearing, the Claimant testified he was confused about the date of injury when completing his Worker's Claim for Compensation. According to his testimony, the Claimant remembered, "all too well," the February 17, 2021, date of injury, and could easily distinguish the pain of kidneys stones from hernia pain. **September 8, 2022, Tr. 39, ll. 18-20, Tr. 40, ll. 22-25, Tr. 41, l 1.** In his testimony, the Claimant reiterated the injury occurred when he was "hitting the ground in front of a pedestal, on [his] knees . . . and [he] felt a pain in [his] right lower abdominal area. And when [he] stuck [his] hand underneath the tool belt, it felt like a little egg had popped out of [his] ab." **September 8, 2022, Tr. 42, ll. 14-21.** After the alleged injury, the Claimant went back to work and finished the four to five hours remaining in his shift. **September 8, 2022, Tr. 45, ll. 11-13.** The Claimant testified the next day, he showed DS[Redacted] the hernia. However, he "couldn't recollect" whether he told DS[Redacted] the hernia was work-related. **September 8, 2022, Tr. 46, ll. 14-19.** After February 17, 2022, the Claimant kept working his regular job.

7. The Claimant returned to the Parker Adventist ER on February 21, 2021, with three complaints, pain in his left thumb, with mild numbness, right inguinal pain, and right lower quadrant abdominal pain at a level 6/10. The Claimant reported the inguinal pain began

[1] On February 17, 2021, the statute, which was subsequently amended, included the four-business day reporting requirement.

a week prior and was intermittent. He felt a bulge and was concerned he had a hernia. The evaluating provider noted, "Potentially there is a mild reducible hernia on palpation. CT scan of the abdomen was notable for a small, reducible fat-containing hernia. The CT scan was discussed with radiology over the telephone. The radiologists believed there was a very mild to minimal fat containing hernia, that they would not have commented on unless they were aware of the doctor's concern. **RHE D, Bates 107.** The final CT result was read as, "No acute CT abnormality…small bilateral fat containing hernias, nonobstructing left renal stones measure up to 0.4 in diameter." **RHE D, Bates 110.** No mechanism of injury is included in the February 21, 2021, treatment note. The Claimant testified that his "pain was too excruciating" on February 21, 2021, to give the providers a mechanism of injury. **September 8, 2022, Tr. 48, ll. 24-25, Tr. 49, ll. 1-2.** After leaving the ER on February 21, 2021, the Claimant returned to work, as the pain "wasn't that bad that [he] couldn't continue working". **September 8, 2022, Tr. 49, ll. 3-10.**

8. The Claimant again presented at the Parker Adventist ER on March 2, 2021. The evaluating physician noted, "This is a 39-year-old male who presents to the Emergency Department for evaluation of continued right groin pain. Patient has had intermittent pain in his groin ***for some time*** and was last seen one week ago at which point in time he had an ultrasound that showed a fat-containing right inguinal hernia. . . ." The Claimant reported his pain was worse with urinating and sometimes with bowel movements. The Claimant presented for "further evaluation and in hopes of having surgery to have this fixed. Patient has not seen surgery in follow-up, yet he did see his primary care physician". **RHE D, Bates 139.** The March 2, 2021, discharge instructions were provided by Allison W. Stroh, PA-C. PA Stroh noted the Claimant was evaluated for recurrence reducible right fat-containing inguinal hernia. Regarding the Claimant's bloody stools, PA Stroh believed they were coming from the Claimant's hemorrhoids, caused by constipation." **RHE D, Bates 148-149.** RN Allyson R. Agerton also educated the Claimant on discharge instructions and the need to consult with surgery to help alleviate the hernia discomfort. She inquired of the Claimant whether he had any further questions regarding discharge instructions. The Claimant responded, "So she's not going to give me any prescriptions for pain?" RN Agerton responded that the PA had instructed the Claimant to take over-the-counter Tylenol and Ibuprofen, as needed. The Claimant responded, "Well, what the hell am I supposed to do? I don't have any insurance. I can't go to my job with this pain. I'm gonna *(sic)* lose my job and then my kid because I won't be able to pay my child support". The Claimant then leapt up from the bed, "with ease and proceeded to get dressed easily without any signs of discomfort nor difficulty moving around as he said, 'So, great! I'm just gonna *(sic)* die from this, I guess! That's a great solution!'" **RHE D, Bates 148.** There is no mechanism of injury documented in the March 2, 2021, treatment note. However, Dr. Nathan Scherer provided the Claimant with a note restricting the Claimant from working from March 2, 2021, through March 8, 2021, and limiting him to light duty, avoiding heavy lifting. **RHE D, Bates 147.** When the Claimant returned to work on March 9, 2021, the Employer accommodated the Claimant's restrictions imposed by Dr. Scherer. **September 8, 2022, Tr. 52, ll. 13-16.**

10. The Claimant returned to Parker Adventist Hospital on March 18, 2021, for the same complaints reported on March 2, 2021, when he had "unremarkable imaging studies", an indirect fat-containing hernia was appreciated, the Claimant was referred to

Denver Health. The physician opined emergent imaging studies were not warranted as the Claimant had a nonsurgical abdomen. Control of constipation was discussed. The provider declined to complete the requested form outlining the Claimant's work restrictions and advised the Claimant he must follow-up with a surgical provider or PCP for completion of the form. **RHE D, Bates 154.** No mechanism of injury is given in the March 18, 2021, treatment note.

11. On March 30, 2021, the Claimant sought treatment at the Sky Ridge Hospital Emergency Room for a worsening right inguinal hernia. The Claimant expressed concern that he would lose his job because he cannot work secondary to pain. **RHE E, Bates 163, 164.** The provider noted the Claimant would eventually need a surgical consult, but he did not then have any insurance. The Claimant was put in the process for Medicaid. **RHE E, Bates 166.** There is no mechanism of injury documented in the March 30, 2021, Sky Ridge treatment note.

12. DS[Redacted], the Claimant's supervisor, credibly testified that the Claimant did show him a lump on his abdomen. Shortly after being shown the lump, DS[Redacted] pulled the Claimant aside and asked him whether it was work related. The Claimant did not say it was work related. The Claimant did not tell DS[Redacted] that he injured himself at work in either January or February 2021 and that he needed medical treatment. DS[Redacted] credibly testified he specifically asked the Claimant if his hernia was work-related, on more than one occasion, and the Claimant did not say it was work-related. **December 9, 2022, Tr. 32, ll. 3-21, Tr. 33, ll. 4-11.** DS[Redacted] credibly testified that, had the Claimant related his hernia to his work activities, he would have:

- Immediately had the Claimant fill out an employee injury report, which is in each employee's vehicle, to provide him the details of the accident/injury.
- Immediately call his manager, the safety manager, and the HR manager to advise them of the injury.
- Taken the Claimant to Concentra for a urinalysis.
- Visited the site of the accident and performed his own investigation.
- Provided his investigative report to the safety manager.

December 9, 2022, Tr. 33, ll. 12-25.

13. The extent of the Employer's procedure for handling work injuries, as described by DS[Redacted], which indicates the actions that would have been taken had the Claimant reported a work injury, are credible. Thus, had the Claimant reported a work-related injury, the Employer would have followed the procedure outlined by DS[Redacted] and there would be documentation of the Claimant's alleged injury consistent with the Employer's procedure for handling work injuries. As a result, the ALJ finds that the Claimant did not report a work injury to DS[Redacted].

14. The Claimant was provided work restrictions due to his hernia. DS[Redacted] credibly testified that the Employer was able to accommodate the Claimant's work restrictions, and modified employment was offered to the Claimant within those restrictions. **December 9, 2022, Tr. 34, ll. 12-25.** The Claimant initially accepted the modified employment offered to him by the Employer.

However, after two days of modified work, the Claimant stopped presenting for work. When the Claimant stopped presenting to work, he was in possession of Employer property including a company bucket truck, a company laptop, a company phone, and company tools. Once the Claimant stopped appearing for work, the Employer made multiple attempts to contact him. **December 9, 2022, Tr. 35, ll. 1-25.** The Employer's Human Resources Manager was finally able to contact the Claimant. On April 9, 2021, the Claimant returned the Employer's property and advised DS[Redacted]he was leaving for North Carolina to be with his parents. **December 9, 2022, Tr. 36, ll. 10-22.** Although the Employer never advised the Claimant his employment was terminated, the Employer had moved to terminate the Claimant's employment on April 5, 2021, for no call/no show. DS[Redacted] credibly testified that had the Claimant returned to work before April 5, 2021, the Employer would have continued to accommodate the Claimant's work restrictions. **December 9, 2022, Tr. 37, ll. 1-14.**

15. After returning to North Carolina, the Claimant sought treatment at the Wake Forest Medical Center on April 14, 2021, with a complaint of right lower abdominal pain worsening over the past five days, after being diagnosed with a hernia in Colorado, "about one month ago". On physical exam, the provider noted swelling and tenderness to the right pelvis, but no appreciable hernia. **RHE F, Bates 182, 183.** The April 14, 2021, treatment note does not set forth any alleged mechanism of injury.

16. The Claimant again presented to Wake Forest Medical Center on March 29, 2022. On physical exam, the Claimant had a large right inguinal hernia descending into the scrotum. CT of the abdomen showed a right inguinal hernia containing minimal fat but appearing mildly inflamed. No herniated bowel was detected. **RHE F, Bates 190, 195.** The Claimant was referred for a surgical consult. Dr. Chandler Cox took a history of the Claimant's injury, documenting the Claimant was a 40-year-old male with a past medical history of kidney stones and IV drug use on suboxone. The Claimant stated he had a known inguinal hernia for the past two years, which is normally easily reducible. The Claimant provided no mechanism of the development of the hernia. **RHE F, Bates 199.** The Claimant was taken to surgery at 8:15 p.m., March 29, 2022, for an open right hernia repair with mesh. Surgical findings included right inguinal hernia with no contents and moderate size cord lipoma. **RHE F, Bates 203.** The surgeon dictated her operative report and subsequently signed the transcribed report at 9:59 p.m., March 29, 2022. **RHE F, Bates 204.**

17. Dr. J. Carlos Cebrian performed a review of the Claimant's pre- and post-accident medical records and prepared a July 15, 2022, report, at the Respondents' request included in the record as **RHE G**. In his report, he concluded that the Claimant's contention that he suffered a work-related hernia on January 6, 2021, was not supported by the medical records he reviewed. Dr. Cebrian also indicated that the fact that a hernia was not diagnosed until February 21, 2021, is contrary to a finding that the Claimant suffered a hernia at work on January 6, 2021. Dr. Cebrian also concluded that the medical records do not support a work-related hernia because the Claimant's medical records he reviewed from January 6, 2021, forward do not mention a work-related mechanism of injury. The ALJ finds Dr. Cebrian's opinions and conclusions, as set forth in his July 15,

2022, report, to be credible and persuasive. The judge is most persuaded by the fact that the Claimant's medical records do not document that the Claimant injured himself at work.

18. Dr. Cebrian subsequently prepared a December 16, 2022, supplemental report included in the record as **Deposition Exhibit 1.** In his report, he addressed the fact that the Claimant changed the date of injury from January 6, 2021, to February 18, 2021. **Deposition Exhibit 1**. In light of the Claimant changing the date of injury, Dr. Cebrian issued additional opinions as to whether the Claimant's work caused his hernia. In his report, he concluded the following:

- The mechanism of injury is not consistent with a work-related hernia.
- The wearing of a tool belt does not affect the intraabdominal pressure. A tool belt is worn on the hips, which takes the pressure off of the abdomen.
- Although [Redacted, hereinafter MF] did some lifting of buckets of tools/supplies, this lifting was not done constantly, and although he may have carried his supplies to the different job areas, the primary work that he was doing was splicing and using tools at the pedestals between houses.
- The mechanism of going down on his knees would not cause or aggravate a hernia.
- MF[Redacted] indicated that as soon as he went down on his knees on the ground, he felt a lump in his right groin area. Hernias do not present immediately, as once the weakness in the abdominal wall and inguinal canal has developed, the passage of the abdominal contents can take several weeks to be obvious as a lump.
- Hernias develop due to congenital weakness in the abdominal wall muscles. Although problems may present early in life, it may take many decades for the hernia to develop. There was nothing particularly strenuous about the lifting that MF[Redacted] engaged in, the frequent up and down, or going down onto his knees. The mechanisms as described would not cause a hernia.

Deposition Exhibit 1.

19. Dr. Cebrian also discussed medical literature that he contends supports his opinion that a single lifting event is unlikely to cause a hernia. Dr. Cebrian stated that:

> Medical literature has reviewed whether the frequent patient claim of a single lift or event resulting in a hernia is accurate. Patterson et al in 2018 performed a systematic review of multiple studies to determine whether there was an association between a single strenuous event and the development of an inguinal hernia. They indicated that evidence for causation regarding occupational and physical exposures is limited. They determined that only 4% of patients who reported an acute inguinal hernia actually had an inguinal hernia which could be attributed to a strenuous event. They concluded that although patients associate hernias to a single episode, upon application of stringent criteria, a much smaller

percentage are deemed to be actually attributable to a single strenuous event.

Deposition Exhibit 1.

20. Dr. Cebrian also testified at both hearings and in a February 17, 2023, post-hearing evidentiary deposition. Dr. Cebrian testified that the Claimant's described mechanism of injury, hitting the ground on his knees with the immediate onset of pain, and an egg-shaped lump appearing on his abdomen, is inconsistent with a traumatically induced inguinal hernia. Dr. Cebrian testified the reason a lump does not present immediately, or within a very short period of time, is because when there is a traumatically induced hernia, you have to tear through abdominal wall layers, fascia layers, and go through the inguinal canal. That process is "essentially impossible" to happen in an immediate situation if there has been a traumatically induced hernia. The ALJ finds this testimony to be persuasive. **Dr. Cebrian Depo. Tr. 4, ll. 14-25, Tr. 5, ll. 1-5.**

21. Dr. Sander Orent reviewed the Claimant's medical records and issued a report on January 27, 2023. In his report, Dr. Orent addressed Dr. Cebrian's opinions set forth in his December 16, 2022, report. Dr. Orent provided literature that was allegedly contrary to the literature cited by Dr. Cebrian. For example, Dr. Orent stated that he found an article from 2007 by Sanjay that concluded that "this study supports the hypothesis that the appearance of inguinal herniation may be attributed to a single strenuous event. Indirect hernias are more likely to present following such an event." Dr. Orent also cited another article. In his report he stated that "In addition, from the European Journal of Epidemiology in 1992, they discuss the risk factors that physical effort is "closely related to the appearance of inguinal hernias. A person whose work involves lifting or other strenuous exertion is at a higher risk than those whose jobs are less strenuous." In the end, Dr. Orent concluded that the most likely cause of the Claimant's hernia was either the repetitive lifting of his job or what occurred right before the single event described by the Claimant, which Dr. Orent described as when the Claimant was lifting and suspending the bucket just before he dropped to his knees. **CHE 19, Bates 665-669; Dr. Cebrian Depo. Tr. 16,17.**

22. In his testimony, Dr. Cebrian relied on the fact that on October 19, 2020, the Claimant was diagnosed with small bilateral hydroceles and a small left varicocele. **RHE D, Bates 41.** Dr. Cebrian testified that hydroceles are known risk factors for the development of hernias. Dr. Orent did not dispute Dr. Cebrian's opinion that hydroceles are a risk factor for hernias as the hernia travels down the same location that the fluid travels in a hydrocele. **Dr. Cebrian Depo. Tr. 10, ll. 12-25, Tr. 11, ll. 1-10.** Dr. Cebrian and Dr. Orent agree that increased intra-abdominal pressure is a risk factor for the development of hernia. Dr. Cebrian testified that straining to defecate or urinate causes increased intra-abdominal pressure. **Dr. Cebrian Depo. Tr. 14, ll. 1-22.** Dr. Cebrian testified it is not medically probable the Claimant's inguinal hernia was caused by his work activities on February 17, 2021. **Dr. Cebrian Depo. Tr. 18, ll. 6-9.**

23. Dr. Cebrian also commented on the Sanjay article relied upon by Dr. Orent. Dr. Orent relied on the Sanjay article to support his opinion that the appearance of inguinal hernias may be attributed to a single traumatic event. However, Dr. Cebrian testified that the findings of the study were based on the self-reports of the patients. In other words,

the patients were asked whether they thought their hernias were caused by a single traumatic event and then their opinions were used to conclude that they were. On the other hand, Dr. Cebrian relied on a 2018 study where they did a systematic review of the literature for single strenuous events leading to hernias and such study determined only 4% of hernias are due to an acute traumatic event. **Dr. Cebrian Depo. Tr. 16,17.**

24. Both doctors provide opinions that are reasonably supported by their interpretation of the record, which includes the statements of the claimant, the medical records, and the medical literature. That said, in the end, the ALJ finds Dr. Cebrian's opinions and conclusions to be more persuasive based on the underlying facts of this case and the articles he cites.

25. A co-worker, [Redacted, hereinafter WW] also testified at the hearing. He did remember the Claimant stating at work that he had abdominal pain and that he had a bulge in his abdomen. He did not, however, recall the Claimant telling him it happened at work and that it was due to work on the day of the alleged accident. On the other hand, he did remember the Claimant calling him just before he spoke with the Claimant's attorney. During this conversation, which occurred on July 5, 2022, WW[Redacted] remembers the Claimant telling him during this phone call that he injured himself at work. Therefore, WW[Redacted] told the Claimant's attorney on July 5, 2022, after the phone call with the Claimant, that the Claimant said he injured himself at work. As a result, the ALJ finds that the Claimant called WW[Redacted] to get him to tell his attorney that the Claimant said he hurt himself at work-insinuating the Claimant said it on the day of the alleged accident. In essence, the Claimant was telling WW[Redacted] what to tell the Claimant's attorney, regardless of what happened or what WW[Redacted] remembered. The ALJ credits WW's[Redacted] testimony regarding the call that he received from the Claimant and finds that the Claimant tried to get WW[Redacted] to testify that an incident happened at work and that the Claimant hurt himself at work, even though WW[Redacted] does not remember the Claimant stating that he got hurt at work while they were working together. In other words, the ALJ finds that the Claimant was trying to shape WW's[Redacted] testimony in his favor. **September 8, 2022, Tr. 76-79.**

26. Overall, the ALJ does not find the Claimant's testimony to be credible, reliable, or persuasive for several reasons. First, the ALJ finds that the Claimant called WW[Redacted] to get him to testify that the Claimant injured himself at work, even though WW[Redacted] did not remember the Claimant injuring himself at work. Second, the Claimant previously had a workers' compensation claim in North Carolina and admitted that he knew he had to file a workers' compensation claim to receive benefits. But even though he knew he had to file a claim, the claimant did not file his claim until March 7, 2022, which is over a year after his injury and after seeking medical treatment, including surgery, for his alleged work injury. **RHE A, Bates 2.** Third, the initial medical records from the emergency departments do not document the Claimant stating that he injured himself at work. The ALJ finds that the lack of such information reflects that the Claimant did not believe he injured himself at work when he was seeking treatment and therefore did not mention such to his medical providers. Fourth, the Claimant testified that DS[Redacted] did not ask him if his hernia was work related. But DS[Redacted] credibly testified that he pulled the Claimant aside and asked him if it was work related and the Claimant did not say it was work related.

27. Based on the totality of the evidence, the ALJ finds insufficient evidence to establish that it is more likely than not Claimant suffered a right inguinal hernia due to his work activities.

28. Claimant failed to prove by a preponderance of the evidence that he suffered a right inguinal hernia due to his employment.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the Claimant established, by a preponderance of the evidence, that he suffered a compensable injury.

A compensable injury is one which requires medical treatment or causes a disability. It is well established that it is the claimant's initial burden to prove a compensable injury. *City of Boulder v. Payne, supra; Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). The determination of whether the claimant proved an injury which required medical treatment or resulted in disability is one of fact for the ALJ. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Moreover, the ALJ's findings may be based on reasonable inferences from circumstantial evidence. *Ackerman v. Hilton's Mechanical Men, Inc.*, 914 P.2d 524 (Colo. App. 1996).

It is the claimant's burden to prove a causal connection between his employment and the resulting condition for which medical treatment and indemnity benefits are sought. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The determination of whether the claimant sustained that burden of proof is factual in nature. The claimant bears the burden of proof, by a preponderance of the evidence, to establish that an injury arising out of, and in the course of the employment, was the cause of the disability and need for treatment.

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this claim, the Claimant alleges he developed a right inguinal hernia from very specific work activities performed on February 17, 2021 (initially reported as January 6, 2021). At hearing, the Claimant testified:

> Q. [By [Redacted, hereinafter MP]: At any point, was there ever a doubt in your mind as when this hernia first occurred? And I don't mean the specific date, but I mean when you first noticed it and what caused it?
>
> A. [By Claimant]: There's no doubt in my mind what caused it.
>
> Q. And what was that?
>
> A. When I hit the ground to go to work.

As found, Dr. Cebrian credibly and persuasively testified it is not medically probable the Claimant developed a traumatically induced inguinal hernia when the Claimant dropped to his knees at work, felt the immediate onset of pain, and noted an egg-shaped lump in his abdomen.

Dr. Orent's report does not challenge Dr. Cebrian's opinion that the described mechanism is inconsistent with causation of a traumatically induced hernia. Instead, Dr. Orent offers other potential mechanisms of injury, such as the repetitive nature of his work or carrying the buckets. Moreover, some of the medical literature relied upon by Dr. Orent to support his contention that hernias are caused by single events seems to be of questionable quality since the findings and conclusions appear to rely on the opinions of the patients. Thus, the ALJ does not find the opinions of Dr. Orent to be persuasive.

Lastly, and most importantly, the ALJ does not find the Claimant's testimony to be credible, reliable, or persuasive. As addressed above, the Claimant called WW[Redacted] to get him to testify that the Claimant injured himself at work, even though WW[Redacted] did not remember the Claimant injuring himself at work. In addition, the Claimant previously had a workers' compensation claim in North Carolina and admitted that he knew he had to file a workers' compensation claim to receive benefits. But even though he knew he had to file a claim, the claimant did not file his claim until March 7, 2022, which is over a year after his injury and after seeking medical treatment, including surgery, for his alleged work injury. Furthermore, the initial medical records from the emergency departments do not document the Claimant stating that he injured himself at work. The ALJ finds that the lack of such information reflects that the Claimant did not believe he injured himself at work when he was seeking treatment and therefore did not mention such to his medical providers. Lastly, the Claimant testified that DS[Redacted] did not ask him if his hernia was work related. However, DS[Redacted] credibly testified that he pulled the Claimant aside and asked him if it was work related and the Claimant did not say it was work related. The ALJ finds the testimony of DS[Redacted], that he asked the Claimant on multiple occasions if his injury was work-related, without receiving a direct response, credible and persuasive. DS's[Redacted] testimony is bolstered by the Claimant's own testimony that he "could not recollect" if he told DS[Redacted] his injury happened at work. Thus, the ALJ finds and concludes that the Claimant did not report a work-related injury to DS[Redacted] because he did not think his hernia was caused by his work activities.

An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to *causation*. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

In this case, the ALJ finds and concludes that the Claimant has failed to prove, by a preponderance of the evidence, that he suffered a hernia as a result of his work activities with this Employer.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 10, 2023

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-064-370-003

ISSUES

I. Whether the claimant overcame the opinion of the Division Examiner and established by clear and convincing evidence that she is not at maximum medical improvement.

II. Whether the respondents are responsible for the CRPS testing, consisting of a QSART and thermogram, that was performed by Dr. Reinhard.

III. Whether the respondents are responsible for stellate ganglion blocks.

IV. Temporary total disability benefits if the claimant is not at maximum medical improvement.

V. Whether the respondents may offset previously paid permanent partial disability benefits against temporary disability benefits if the claimant is not at MMI. (See stipulation)

VI. If the claimant is at maximum medical improvement, whether her scheduled impairment rating should be converted to a whole person impairment rating.

VII. Disfigurement benefits.

STIPULATION

1. Following the hearing, and as set forth in the claimant's proposed order, the respondents' counsel advised claimant's counsel that they would not be seeking an order compelling claimant to pay the alleged overpayment. The parties further agreed that any alleged overpayment would act as a credit against future indemnity benefits and the parties would be able to properly calculate and apply the claimed overpayment or credit.[1]

[1] As set forth in the claimant's proposed order, any overpayment will be offset or credited against future indemnity benefits. Therefore, the ALJ has not addressed the overpayment, offset, or credit issue against any indemnity benefits awarded under this order since the parties will calculate such. If for some reason the parties cannot resolve the issue, either party may file an application for hearing to resolve the matter.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. The claimant suffered an admitted work-related injury to her right upper extremity on July 13, 2017.
2. The claimant was injured while repetitively using an iron press at work. At the time of the injury, the claimant developed pain in her right biceps, right shoulder, and neck. (Resp. Ex., p. 249)
3. On July 31, 2017, the claimant was evaluated by Michael Dietz, PAC. At this appointment, she complained of pain in her right biceps, right shoulder, and the right side of her neck. Based on his assessment, Mr. Dietz assessed the claimant as suffering from a right shoulder strain, with a possible rotator cuff tear, and a biceps strain, with a possible full tear. Therefore, Mr. Dietz recommended an MRI of the claimant's right biceps and shoulder. (Resp. Ex., pp. 249-253)
4. On August 4, 2017, the claimant underwent an MRI. The MRI revealed the presence of mild insertional supraspinatus tendinosis, a small amount of fluid in the subacromial region, and a non-displaced tear of the labrum. Thus, the claimant's pain complaints were supported by objective findings on the MRI.
5. On September 8, 2017, the claimant was evaluated by Dr. James Rafferty. During this visit, she stated that her pain was about 50% better. But she still had pain over the anterolateral portion of her shoulder that radiated into her arm and sometimes her forearm. Based on her presentation, the claimant was referred to Dr. Snyder for a subacromial injection, which she had on September 15, 2017. (Resp. Ex., p. 272)
6. On November 7, 2017, the claimant returned to Dr. Rafferty. The subacromial injection reduced her symptoms by about 50%. She had also undergone about 15 physical therapy appointments. That said, the claimant still had mild to moderate shoulder pain over the anterolateral shoulder when she elevated her arm. (Resp. Ex., p. 272)
7. On December 19, 2017, the claimant returned to Dr. Rafferty. At this appointment, his assessment included right sided shoulder impingement syndrome and a right sided labrum tear. Since the claimant failed to improve, Dr. Rafferty referred her back to the surgeon, Dr. Snyder. Dr. Snyder ultimately concluded that the claimant was a surgical candidate.
8. On January 22, 2018, and due to ongoing pain and symptoms, the claimant underwent surgery with Dr. Snyder. He performed a biceps tenotomy with superior labral debridement and subacromial decompression. (Resp. Ex., p. 284)
9. On March 13, 2018, the claimant was seen by Dr. Rafferty. At this appointment, the claimant stated that her condition had improved since the surgery and that she was very happy with her overall progress. (Resp. Ex., p. 288)
10. In any event, on June 12, 2018, the claimant went to Dr. Rafferty and still had shoulder pain with some cramping over the anterior aspect of her shoulder, the biceps region, and her AC joint. Due to her ongoing symptoms, the claimant wanted to see Dr. Snyder one

last time for further evaluation and consideration of an AC joint steroid injection. (Resp. Ex., pp. 297-298)

11. On July 10, 2018, the claimant was seen by Dr. Snyder for her ongoing symptoms. At that appointment, the claimant received a steroid injection into the bicipital groove and the subacromial space. Although the claimant did well for two days, her symptoms returned. (Resp. Ex., p. 301)

12. On July 24, 2018, the claimant returned to Dr. Rafferty. At this time, her symptoms persisted, and she also had right sided pain over the base of her neck. Therefore, Dr. Rafferty referred her to have another MRI. (Resp. Ex., pp. 301, 306)

13. On August 16, 2018, the claimant saw Dr. Snyder. At that time, the only additional treatment he recommended was a PRP injection. (Resp. Ex., p. 309)

14. The claimant returned to see Dr. Rafferty on August 28, 2018. Dr. Rafferty noted that based on her new MRI, the claimant suffered from a high-grade bursal surface tear as well as a longitudinal split tear of the biceps tendon. He noted that the claimant would proceed with the PRP injection recommended by Dr. Snyder. Thus, the PRP injection was scheduled for September 5, 2018. (Resp. Ex., pp. 309-312)

15. On September 19, 2018, the claimant saw Dr. Sanders. At this appointment, Dr. Sanders noted that the due to ongoing shoulder complaints and the MRI findings, it was recommended that the claimant undergo another orthopedic evaluation for surgery, but that the claimant wanted to try to avoid undergoing a second surgery. It was also noted that the PRP injection was denied. Based on the denial of the PRP injection, and the claimant's desire to avoid a second surgery, Dr. Sanders appealed the denial of the PRP injection. (Resp. Ex., pp. 314, 315, 324, 325)

16. On October 22, 2018, the claimant returned to Dr. Sanders. Because of ongoing shoulder pain, the claimant decided that she would consider undergoing another surgery. Therefore, Dr. Sanders referred the claimant to Dr. Hatzadakis for a second opinion about possible surgery. (Resp. Ex., p. 331)

17. On December 13, 2018, Dr. Hatzadakis stated that additional diagnostic testing was needed to determine the etiology of the claimant's shoulder pain. This included an advanced MRI to evaluate the claimant's labrum, lab work, and an EMG to evaluate the claimant's suprascapular and axillary nerves. (Resp. Ex., pp. 359, 360)

18. On January 29, 2019, the claimant was evaluated by Dr. Hatzidakis for her ongoing shoulder pain. At this appointment, the claimant had sensitivity to very light touch across the superior, posterolateral, and anterior regions of her shoulder, paraspinal muscles, and her neck. She also had tenderness over the greater tuberosity and intertubercular groove. The claimant did, however, have full active range of motion and full strength, but with diffuse pain in all planes. Based on his evaluation, he assessed the claimant with possible complex regional pain syndrome (CRPS) and a possible low-grade infection. Therefore, he referred claimant to Dr. "Checa or Brone" (most likely Dr. Brown) for a CRPS consultation. (Clamant Ex. 1, p. 3)

19. On March 6, 2019, the claimant was evaluated by Robert Brown, M.D. at Rocky Mountain Pain Solutions for her chronic shoulder pain. At this appointment, the claimant rated her pain at 8/10. Dr. Brown evaluated the claimant and diagnosed her with CRPS 1 of the

right upper extremity. He prescribed Lyrica and recommended additional testing that included a triple phase bone scan and a QSART. He also considered a stellate ganglion block depending on the test results of the bone scan and QSART testing. (Resp. Ex., pp. 32-33)

20. On March 25, 2019, the claimant returned to Dr. Sanders. At this visit, it was noted that Dr. Brown was concerned that the claimant suffered a nerve injury secondary the interscalene nerve block she received during shoulder surgery. (Resp. Ex., p. 395)

21. On April 30, 2019, the claimant returned to Dr. Hatzidakis. At this appointment she rated her shoulder as being 20% of normal. He noted that the EMG performed by Dr. Feldman was normal. His assessment at that time was persistent right shoulder pain, post-surgery, with recent diagnosis of CRPS, and a possible low-grade infection. At this point, he recommended an MRI and aspiration of her right shoulder, which might result in debridement or actual biopsies and cultures to assess for infection. He also concluded that she might need a distal clavicle resection. (Claimant's Ex. 1, pp. 4-5)

22. On June 19, 2019, an MRI of the claimant's right shoulder was taken. It showed a "New large focal intermediate lesion – mass - as the axillary recess within the glenohumeral joint that could relate to focal nodular synovitis or possibly secondary to other debris, including hemorrhage." The radiologist also concluded that the lesion – mass - was most likely new because it was not present in the July 2018 study.

23. On August 15, 2019, the claimant returned to Dr. Hatzidakis. At this appointment he noted that the claimant had undergone an MRI and it demonstrated a supraspinatus tendinopathy without tear but yet a possible full-thickness tear in the biceps tendon, as well as synovitis within the glenohumeral joint. He also noted that he could not assess her shoulder strength due to pain. His assessment at that time was persistent right shoulder pain, post-surgery, with recent diagnosis of CRPS with tendinosis. He recommended either continuing with conservative treatment or proceeding with surgery, which included an arthroscopic debridement, possible subacromial decompression with biopsies for cultures, a distal clavicle resection with possible long head biceps tenodesis, and a synovectomy. At the appointment, the claimant stated that she wanted to proceed with surgery. Thus, authorization for surgery was requested.

24. On September 6, 2019, Dr. Erickson reviewed the request for surgery. Based on his review, the surgery recommended by Dr. Hatzidakis was denied, pending a psychological evaluation. As a result, the claimant was referred to Health Psychology Associates for a psychological evaluation. Soon after, the claimant was evaluated by Dr. Bruns, a psychologist. (Resp. Ex., pp. 427-437)

25. On September 21, 2019, Dr. Bruns' diagnostic impression was adjustment disorder with depression and a chronic pain disorder that were attributable to the claimant's work injury. (Resp. Ex., p. 611)

26. On October 1, 2019, the claimant returned to see Dr. Brown. However, rather than seeing Dr. Brown, she saw Shannon Bock, PA-C. At this visit, the claimant rated her pain at 4/10. Ms. Bock noted that the claimant's shoulder range of motion was limited in all planes due to pain. She also noted that the claimant had significant pain complaints and behaviors upon inspection and to very light touch of her right upper extremity. At this appointment,

Ms. Bock could not tell if the triple phase bone scan and QSART had been performed. Regardless, she diagnosed the claimant with CRPS and recommended the claimant proceed with a stellate ganglion block. (Claimant's Ex. 3, pp. 34-36)

27. On February 21, 2020, Dr. Erickson performed an internal review for the respondents of Dr. Hatzidakis' authorization request for surgery. Dr. Erickson concluded that the surgery recommended by Dr. Hatzidakis was not indicated at this time given the reported findings noted on the claimant's psychological evaluation by Dr. Bruns. It was noted that Dr. Hatzidakis' primary concern was regarding a potential occult infection and as a result, Dr. Erickson recommended the claimant only undergo additional aspiration cultures of the shoulder joint at this time. (Resp. Ex., p. 467)

28. On May 7, 2020, Dr. Hatzidakis evaluated the claimant and noted that she had been diagnosed with CRPS and recommended repeating the evaluation for a potential low-grade infection with repeat lab work. He also recommended proceeding with another MRI, which was scheduled for June 2, 2020. (Resp. Ex., p. 468) Claimant underwent another MRI. The new MRI showed a chronic full-thickness intra-articular long head biceps tear, mild tendinosis of the supraspinatus and subscapular without tearing, plus some other findings that were uncertain. (Resp. Ex., p. 476)

29. On September 9, 2020, the claimant underwent an independent medical examination with Dr. Erickson where he physically evaluated the claimant. In essence, he was asked to address several questions, which included the claimant's current work-related diagnoses, the actual pain generator(s), and whether additional treatment was reasonable and necessary to treat the claimant from the effects of her work injury. Dr. Erickson concluded the following:

    a. There did not appear to be any objective findings in the medical records to support claimant's ongoing pain complaints.

    b. A specific pain generator has not been identified.

    c. The claimant does not have an infection in her shoulder.

    d. There is no basis to support another MRI.

    e. Referral to a specialist to perform an excisional biopsy of the axillary lesion is appropriate and related at this time, until proven otherwise.

    f. There is not a chronic full thickness tear of the long head of the biceps. Instead, the finding is the result of the surgery performed by Dr. Snyder.

    g. Claimant's ongoing shoulder pain is likely due to her underlying psychological condition, which Dr. Erickson described as a "factitious pain disorder." Thus, he stated that he agreed with Dr. Bruns that any surgical procedures should be undertaken with caution, especially to address subjective pain complaints.

    (Resp. Ex., pp. 201-224)

30. In the end, Dr. Erickson used the psychological report from Dr. Bruns to characterize the claimant's pain complaints as being unreliable and being psychologically based instead of physically based.

31. On October 13, 202, Dr. Kelly evaluated the claimant for assessment of the lesion-mass - in her right shoulder. She did state that after reviewing the MRI the claimant had a soft tissue mass in the inferior recess of the glenohumeral joint that appeared to be synovial based. She did not, however, indicate that the mass was related to the claimant's work injury or shoulder surgery. (Resp, Ex., p. 74)

32. On November 13, 2020, the claimant underwent surgical resection of the mass in her shoulder with Dr. Kelly. The biopsy was unremarkable. (Resp. Ex., p. 508)

33. On February 15, 2021, the claimant saw Dr. Sanders. At this appointment, Dr. Sanders explained that the surgery performed by Dr. Kelly was to remove a fatty mass and that it had no histopathologic abnormalities. He also stated that although Dr. Hatzidakis has recommended a repeat arthroscopy, the procedure has been denied by the insurer. Thus, he concluded that the claimant was approaching MMI. Dr. Sanders did not discuss the cause of the fatty mass that was removed. (Resp. Ex., p. 520)

34. On April 19, 2021, Dr. Sanders evaluated the claimant and stated that he was concerned the claimant may have developed CRPS. At this visit, he noted the claimant's persistent symptomatology that included hypersensitivity, decreased range of motion, and numbness. Based on the claimant's symptoms, and his evaluation, he referred her to Dr. Reichhardt. He also noted that the claimant had developed dysesthesias of the right hand that may be secondary to carpal tunnel syndrome. (Resp. Ex., p. 526)

35. On April 26, 2021, Dr. Erickson performed a medical record review. Dr. Erickson was asked to supplement his prior opinion that the lesion, or mass, in the claimant's shoulder was unrelated to her work injury. In his report, he concluded that since the mass has been removed and it has been identified as a benign mass, the mass is unrelated to her work injury. (Resp, Ex., p. 229)

36. On May 3, 2021, per a referral from Dr. Sanders, the claimant was evaluated by Dr. Reichhardt. Dr. Reichhardt evaluated the claimant. He noted the claimant had allodynia throughout the right upper extremity. Based on his examination of the claimant, he was concerned that the claimant might have CRPS. In order to rule out CRPS, he recommended bilateral shoulder x-rays, QSART, and a thermogram. He added that if the tests were negative, it was unclear whether it would be medically advisable for the claimant to have a stellate ganglion block or a bone scan. Thus, he wrote a prescription, and sought authorization, for the claimant to undergo a QSART and thermogram with Dr. Schakaraschwili (Resp. Ex., pp. 91-98)

37. On May 28, 2021, Dr. Reichhardt reevaluated the claimant. He noted that his request for a QSART and thermogram were denied. He also noted that the claimant did meet the Budapest criteria set forth in the Colorado Medical Treatment Guidelines and was therefore a candidate for additional diagnostic testing for CRPS - a QSART and thermogram. (Resp. Ex., p. 100).

38. The Complex Regional Pain Syndrome / Reflex Sympathetic Dystrophy Medical Treatment Guideline, (Guidelines), is set forth in Rule 17, Exhibit 7. The Guidelines indicate that the diagnosis of CRPS continues to be controversial. (Guidelines, p.18) Regardless, the Guidelines set forth a framework to help diagnose and treat CRPS. The first part of the framework contains the Budapest criteria. If the claimant meets the

Budapest criteria, then it is presumed that the claimant meets the clinical components of CRPS. Once the clinical components of CRPS are met, the Guidelines set forth testing that can be done to help confirm a diagnosis of CRPS. The additional testing that can be done to confirm a diagnosis of CRPS includes, but is not limited to, a QSART and a thermogram. Under the Guidelines, if the claimant meets the Budapest criteria, and also has a positive QSART and thermogram, then the claimant has a confirmed diagnosis of CRPS under the Guidelines. Then, once the claimant has a confirmed diagnosis of CRPS, additional treatment can be provided. The additional treatment can include a sympathetic block such as a stellate ganglion block-which can also be diagnostic. (Guidelines, p. 24)

39. On June 24, 2021, Dr. Reichhardt evaluated the claimant and performed another physical examination. He noted on physical examination that the claimant had a tremor of her right upper extremity. He also noted mild swelling of her right hand, which was not noted in a prior examination, but he did not find any color changes that day. He also did not notice any sweat, hair, or nail trophic changes. Dr. Reichhardt stated that, despite his findings, the QSART and thermogram were still being denied based on the opinion of Dr. Fillmore, a [Redacted, hereinafter PL] Advisor. According to Dr. Reichhardt, the primary reason the testing was denied was based on Dr. Fillmore's interpretation of Dr. Bruns' psychological assessment, which purportedly indicated that the claimant is at significant risk for poor treatment response. Thus, Dr. Reichhardt called Dr. Bruns to discuss whether there would be any psychological contraindications to proceeding with the QSART and thermogram. (Resp. Ex., pp. 104, 105)

40. On August 12, 2021, Dr. Reichhardt evaluated the claimant and again noted swelling in her right hand as well as an intermittent tremor of her right arm. He also noted that the QSART and thermogram continued to be denied. (Resp. Ex., pp. 117, 118)

41. On August 23, 2021, Dr. Reichhardt discussed the matter with Dr. Bruns and Dr. Bruns said that there were no psychological contraindications to proceeding with the QSART and thermogram and workup for CRPS. (Resp. Ex., p. 121). Then, on September 1, 2021, Dr. Reichhardt again requested authorization for the QSART and thermogram based on his conversation with Dr. Bruns.

42. On September 9, 2021, Dr. Reichhardt evaluated the claimant. At this visit he noted that he discussed the claimant's case with Dr. Bruns and Dr. Bruns did not think her psychological condition is a contraindication for the QSART and thermogram and also indicated that a referral had been put in for it. (Resp. Ex., p.125)

43. On September 21, 2021, Dr. Bruns issued a report indicating that his initial evaluation has been taken out of context and misused to deny the claimant medical treatment. Dr. Bruns rebuked Dr. Erickson's conclusion that Dr. Bruns diagnosed claimant with a factitious pain disorder. In his report, Dr. Bruns stated that he has never diagnosed claimant with a factitious pain disorder. He specifically noted that factitious disorders are severe characterological disturbances, characterized by "primary gain" of being a patient and that there is no indication the claimant is suffering from a factitious disorder. (Resp. Ex., p. 611)

44. On October 6, 2021, the claimant was evaluated by Dr. Primack. Dr. Primack physically evaluated the claimant and reviewed her medical records. Based on his assessment, he stated and concluded that:

> There is no need whatsoever for a thermogram and QSART. The patient does not meet Budapest criteria. In fact, her tremor would go away with easy distraction. There are also profound nonphysiologic findings. Her perceptions of her shoulder pain are such that if there is pressure on her right leg, she has referred pain to the shoulder. When one pushed on her left shoulder, causing no encroachment to the right shoulder, she would have "right shoulder pain." In fact, when touching the top of her ears, she would have referred pain going into the trapezius muscles. There is also some diffuse pain at the level of the right scapula. This can be seen with cervical spondylosis, which again is not work related.

Dr. Primack also stated in his report that:

> The patient has been through 2 EMGs. The 2nd EMG did demonstrate components of carpal tunnel syndrome. This would not be considered work related. This in and of itself can give numbness, tingling, and pain ascending to the shoulder. It can also be the etiology of the periodic "tremor." However, as [Redacted, hereinafter MH] points out, she has good range of motion. She just has "pain." She has reached a stable and stationary level of functioning where further [treatment] will not alter her outcome. Therefore, her MMI status is reasonable and appropriate.

(Resp. Ex., pp. 67-82)

45. In his October 6, 2021, report. Dr. Primack also addressed the cause of the mass in the claimant's shoulder. He concluded that the mass was not work-related because the biopsy demonstrated mature adipose tissue and synovial tissue with no histopathologic abnormalities. It was one of synovial proliferation. Thus, Dr. Primack concluded that the mass was unrelated to the claimant's work injury.

46. On October 8, 2021, the claimant returned to Dr. Reichhardt. At this visit, the claimant's right hand was not swollen, as in prior visits, but yet she still had a tremor. She also had tenderness to palpation of the hand, but no true allodynia. Still, Dr. Reichhardt still recommended the QSART and thermogram, but did not think additional diagnostic testing for CRPS would be warranted if those tests were negative. (Resp. Ex., pp. 131,132)

47. On November 23, 2021, the claimant returned to Dr. Reichhardt. At this appointment, the claimant stated that her condition seems to have gotten worse. She reported intermittent swelling of her hand, tremors, and increased warmth. She also noted intermittent increased sensitivity to light touch of her hand and forearm. Dr. Reichhardt examined the claimant and noted a tremor, right hand swelling, and mild allodynia of the right upper extremity. (Resp. Ex., pp. 134-136)

48. On January 9, 2022, Dr. Erickson again reviewed the request for the QSART and thermogram testing. In his report, he relied on Dr. Bruns' psychological report which he concluded demonstrated that the claimant's pain is somatic, and thus psychologically based. He therefore concluded that the claimant's complaints, which could support a finding of CRPS, were not supported by any pathology. (Resp. Ex., pp. 234, 235).

49. On February 1, 2022, the claimant was evaluated by Dr. Sanders. At this visit, he mentioned the claimant's ongoing hypersensitivity and swelling. Based on his assessment, he continued to conclude that the claimant should undergo the CRPS testing recommended by Dr. Reichhardt and that she was not at MMI because she still required the CRPS testing. (Resp. Ex., pp. 657, 664)

50. On February 24, 2022, the claimant underwent a Division of Workers' Compensation Independent Medical Examination, which was performed by Brian Mathwich, M.D. On physical examination Dr. Mathwich noted that due to the claimant's inconsistent behaviors, he could not adequately evaluate the claimant. For example, he stated that on initial palpation of the anterior of her shoulder, the claimant jerked her shoulder away crying out in pain. At the same time, once he talked with her and distracted her, he could palpate more deeply and touch/rub her entire shoulder and arm without any reaction from her. He also noted that every test he tried to perform resulted in the claimant crying out in pain and pulling away. However, again, with distraction, he stated that he could elicit 5/5 strength in all shoulder muscle groups as well as the biceps and triceps. Dr. Mathwich also indicated that on physical examination he did not notice any color changes in her right upper extremity when compared to the left. Nor did he see any skin changes, temperature differential, nail changes, or hair changes.

51. Dr. Mathwich also applied the Budapest criteria set forth in the Colorado Medical Treatment Guidelines. The Budapest criteria is basically broken down into two categories. The first category involves primarily the subjective symptoms of the claimant, and the second category involves primarily objective findings or signs noted by the examiner. Dr. Mathwich concluded that the symptoms reported by the claimant were not reliable, therefore, he rejected the claimant's self-reported symptoms in determining whether the claimant met the Budapest criteria. He also concluded that the claimant did not have CRPS and was at MMI as of October 6, 2021.

52. On March 16, 2022, after the claimant was placed at MMI by Dr. Mathwich as of October 6, 2021, the respondents filed a Final Admission of Liability (FAL). The respondents admitted for temporary total disability (TTD) benefits from January 20, 2018, through October 5, 2021. The respondents also admitted for $3,094.62 for the claimant's 5% scheduled impairment rating. The respondents also asserted an overpayment of $4,319.59.

53. On April 14, 2022, the claimant returned to Dr. Reichhardt. At this appointment he noted that the claimant had undergone a Division IME with Dr. Mathwich and that Dr. Mathwich did not think the claimant met the Budapest criteria and concluded that the claimant was at MMI. Based on Dr. Reichhardt's assessment, he again concluded that the claimant met the Budapest criteria based on her subjective complaints and his examination and that the QSART and thermogram were still reasonably necessary. He also noted that

since the tests continued to be denied, the claimant said she would pursue those tests on her own. (Resp. Ex., pp. 138, 139)

54. On May 2, 2022, Dr. Sanders continued to recommend the claimant undergo the QSART and thermogram to rule out CRPS. (Resp. Ex., p. 714.)

55. On May 18, 2022, Dr. Reichhardt again evaluated the claimant and again concluded that she met the Budapest criteria and that the QSART and thermogram were still appropriate. (Resp. Ex., pp. 141, 142)

56. On May 27, 2022, Dr. Sanders referred the claimant to Dr. Schakaraschwili for QSART and thermogram testing.

57. On June 21, 2022, the claimant saw Dr. Reichhardt. At this appointment, Dr. Reichhardt noted that Dr. Schakaraschwili would not perform the QSART and thermogram for the claimant because she would be paying for it herself, a self-pay patient, since it appears the respondents denied the testing. Therefore, Dr. Reichhardt referred her to CROM for the testing. (Resp. Ex., pp. 145,146; Resp. Ex., p. 20)

58. On July 21, 2022, and pursuant to a referral from Dr. Reichhardt, the claimant underwent a QSART and thermogram testing with David Reinhard, M.D., at CROM. Because the respondents would not pay for this testing, the claimant paid for this testing. Dr. Reinhard performed the thermogram. The thermogram demonstrated significant thermal asymmetry involving the lateral arm, dorsal and volar forearm, dorsal wrist and hand, and dorsal aspect of digits 2, 3, and 4. Thus, he concluded that the thermogram demonstrated diffuse thermal asymmetry that was present in a non-dermatomal distribution and was consistent with CRPS. According to Dr. Reinhard, this was "a positive thermogram for CRPS type 1." (Resp. Ex., pp. 20-25)

59. Dr. Reinhard also performed the QSART – Autonomic Testing Battery. He examined the claimant, performed the test, and found the following:

    a. Moderate swelling in the distal right upper extremity that was unexplained.

    b. Visible asymmetry of skin coloration.

    c. Asymmetrical sweat output with the use of acetylcholine. He found that there was a 141% asymmetry measured at the proximal sensors and a 60% asymmetry at the distal sensors.

60. Based on his examination and testing, Dr. Reinhard concluded that both the autonomic testing battery (QSART) and the cold stress test thermography were positive for CRPS. Therefore, he also concluded that the claimant was a candidate for additional medications as well as a sympathetic blockade with a right stellate ganglion block. (Resp. Ex., pp. 20-26)

61. The ALJ finds that the QSART and thermogram results from the tests performed by Dr. Reinhard provide highly persuasive objective evidence that the claimant might have CRPS and that the testing was reasonably necessary to determine the extent of the claimant's work injuries and to define the need for future diagnostic treatment, and therapeutic treatment, such as a stellate ganglion block. The ALJ further finds that the

tests and results, which support a stellate ganglion block, are inconsistent with a finding that the claimant is at MMI.

62. On July 27, 2022, Dr. Reichhardt evaluated the claimant after she underwent her QSART and thermogram with Dr. Reinhard at CROM. He noted that the testing was positive, and that the claimant has a diagnosis of "probably complex regional pain syndrome." Thus, he prescribed additional medication and referred claimant to UC Health Pain Medicine for a stellate ganglion block. (Resp. Ex., pp. 149,150)

63. On July 29, 2022, Dr. Orent issued a short report. In his report, he concluded that based on his review of some of the claimant's medical records, he disagreed with Dr. Mathwich, the DIME physician, that the claimant was at MMI and did not have CRPS. Dr. Orent concluded that the claimant did meet the Budapest criteria and has CRPS.

64. On August 1, 2022, Dr. Sanders also recommended the claimant have a stellate ganglion block. (Resp. Ex., p. 725)

65. On September 13, 2022, after the positive results of the QSART and thermogram performed by Dr. Reinhard, the respondents requested the claimant to undergo the same testing with Dr. Schakaraschwili. Thus, Dr. Schakaraschwili examined the claimant and performed the QSART and thermogram testing. His physical examination did not find any swelling, skin discoloration, trophic, skin, hair, or nail changes. The thermogram found mild relative hypothermia at the lateral shoulder, but otherwise no significant areas of temperature asymmetry. Thus, he concluded that there were no diffuse temperature asymmetries consistent with a diagnosis of CRPS. He also concluded that while the autonomic QSART testing indicated that there was greater than 50% stimulated sweat output symmetry at the proximal site, overall findings were low for the presence of CRPS. In his assessment, he also stated that based on his examination, the clinical findings were not consistent with the Budapest criteria. In the end, he concluded that the test results were consistent with a "low probability" of CRPS. Thus, the testing could not rule out the claimant did not have CRPS. He could only state that there was a low probability of CRPS. (Resp. Ex., pp. 4-8)

66. Dr. Schakaraschwili also testified at the hearing. Although he testified consistently with his report, he did indicate that CRPS can wax and wane and that people can look different on different days. Thus, the fact that Dr. Reichhardt and Reinhard saw swelling and/or skin color differences when others did not, and that the claimant met the Budapest criteria when they evaluated the claimant is consistent with a diagnosis of CRPS and provides highly persuasive evidence that the claimant met the Budapest criteria and had positive test results with Dr. Reinhard that supports a diagnosis of CRPS. In other words, the findings of Dr. Schakaraschwili are not inconsistent with a finding or CRPS since the symptoms can vary from day to day.

67. On September 26, 2022, Dr. McCranie performed a medical records review to determine whether the request for a stellate ganglion block was reasonably necessary. Based on her review of some of the medical records, which included the QSART and thermogram findings of Dr. Schakaraschwili, which only found a low probability of CRPS, and doctor Mathwich's findings that the claimant did not meet the Budapest criteria, she concluded that the claimant "clearly does not have CRPS" and because "CRPS has been definitely been ruled out, a stellate ganglion block is not indicated." Dr. McCranie did not, however,

adequately address the positive QSART and thermogram findings of Dr. Reinhard, nor the findings that the claimant did meet the Budapest criteria when evaluated by Drs. Reichhardt and Reinhard. Thus, she did not consider all of the relevant data when rendering her opinion. As a result, the ALJ does not find her opinion to be persuasive. (Resp. Ex., pp. 182, 183)

68. On October 3, 2022, Dr. Reichhardt reviewed the findings of the QSART and thermogram that were performed by Dr. Schakaraschwili. He noted that Dr. Schakaraschwili's testing revealed a low probability of CRPS. Despite Dr. Schakaraschwili's findings, Dr. Reichhardt still concluded that the claimant probably had CRPS. He also concluded that even if the claimant did not meet the criteria for CRPS under the testing, he still thought, and recommended, the stellate ganglion block for diagnostic and therapeutic purposes. (Resp. Ex., pp. 160, 161) As a result, the ALJ finds that the stellate ganglion block is reasonably necessary to continue to help diagnose whether the claimant has CRPS and provide therapeutic relief of the claimant's chronic pain.

69. On November 8, 2022, the claimant returned to see Dr. Reichhardt. At this appointment, he noted that the stellate ganglion block had been denied. But he again noted that the claimant still met the Budapest criteria for CRPS and that she also met the Division of Workers' Compensation Criteria (Guidelines) for CRPS as she had two positive tests. While he noted that some of her symptoms have partially normalized, he still recommended the stellate ganglion block as another diagnostic, and possibly therapeutic, procedure. The ALJ finds that the waxing and waning of the claimant's symptoms aligns with the testimony of Dr. Schakaraschwili and Dr. Orent - that the findings and symptoms of CRPS can vary. (Resp. Ex., p. 165, 166)

Testimony of Dr. Schakaraschwili:

70. Dr. Schakaraschwili testified at the hearing. His testimony tracked with his report. That said, he did add that the signs and symptoms of CRPS can wax and wane and look different on different days. The ALJ finds his testimony to be credible and reliable. The ALJ finds that he honestly reported his findings and provided an honest opinion about his conclusion. But his opinion that the signs and symptoms of CRPS can wax and wane supports Dr. Reinhard's findings-which include the claimant's physical signs of CRPS and the positive QSART and thermogram test results that were performed by Dr. Reinhard. Thus, Dr. Schakaraschwili's testimony provides the missing link that explains why Dr. Reinhard's testing for CRPS was positive and his was not. It also explains why some doctors, such as Dr. Erickson, did not see objective signs of CRPS, but yet others, like Drs. Reichhardt and Reinhard did.

Testimony of Dr. Primack:

71. Dr. Primack also testified at the hearing and testified consistent with his report. Dr. Primack testified that he does not think you can have two diametrically different QSART and thermograms. But in this case, the claimant did.

72. The ALJ has considered Dr. Primack's report and testimony. On the one hand, Dr. Primack says in his report that the claimant's responses to his physical examination are nonphysiologic and therefore the claimant's subjective complaints should not be taken into consideration when determining whether the claimant meets the Budapest criteria,

whether she might have CRPS, and whether additional testing in the form of the QSART or thermogram were reasonable and necessary. Yet on the other hand, he states that many of the claimant's symptoms could be due to carpal tunnel syndrome, which he concludes is an unrelated condition. Thus, the ALJ finds that Dr. Primack has concluded that some of the claimant's symptoms are not physiologically based, but yet some are physiologically based. Moreover, Dr. Primack failed to consider that even if the claimant might be overstating her symptoms, she could still have CRPS. In other words, they are not mutually exclusive. Both can be true. As a result, the ALJ does not find Dr. Primack's opinions to be persuasive as it relates to whether the QSART and thermogram were reasonable and necessary to treat the claimant from the effects of her work injury and whether she has CRPS. But the ALJ does credit his opinion that the lesion/mass that was removed is unrelated to her industrial injury.

Testimony of Dr. Orent:

73. Dr. Orent was qualified as an expert in internal medicine as well as occupational and environmental medicine. He is also Level II accredited. During his deposition, Dr. Orent was asked several questions about CRPS. Based on his answers to several questions, the ALJ finds that Dr. Orent is familiar with the assessment, diagnosis, and treatment of CRPS. Dr. Orent also testified that diagnosing CRPS can be difficult based on the transient nature of the symptoms. He stated that:

> [T]he trouble with CRPS is it's an extremely variable disease in its manifestations. On one day, a patient can be extremely symptomatic with profound allodynia, hyperpathia, swelling, and color changes. And another day, it might be much calmer and not manifest in that way. So, it is often a serial kind of clinical diagnosis, because these change literally hour to hour, even minute to minute sometimes, the swelling. CRPS can change, so it is a serial kind of diagnosis.
>
> I think it's real important, and I think one of the things that I encourage patients to do with CRPS is I want to see them in the middle of a flare. I want to know what they look like. I want to see what their hand or foot looks like when they are flaring because CRPS calms and it flares. And so it's very instructional to see a patient who is having a CRPS flare. You will see both the subjective and objective findings of CRPS frequently in those situations.
>
> (Deposition, p. 11)

74. The ALJ finds Dr. Orent's testimony to be highly persuasive. Dr. Orent's testimony about the transient nature of CRPS persuasively explains, and also provides the necessary link, to explain why the QSART and thermogram testing performed by Dr. Reinhard was positive for CRPS, but yet the same testing performed by Dr. Schakaraschwili was not. Plus, his testimony about the transient nature of CRPS symptoms is consistent with Dr. Schakaraschwili, who also stated that CRPS symptoms can wax and wane.

Whether Claimant is at MMI:

75. Before Dr. Mathwich, the DIME physician, placed the claimant at MMI, as of October 6, 2021, numerous medical providers thought the claimant had CRPS due to her work injury.

76. Before being placed at MMI by Dr. Mathwich, Dr. Reichhardt concluded that the claimant needed diagnostic treatment, in the form of a QSART, thermogram, and possibly a stellate ganglion block, to help determine whether she has CRPS and therefore needed additional treatment to cure and relieve her from the effects of her work injury.

77. The QSART and thermogram are objective diagnostic procedures that offered a reasonable prospect for defining the claimant's condition – whether she has CRPS - as well as suggesting further diagnostics and/or treatment, such as a stellate ganglion block, to cure and relieve the claimant from the effects of her work injury.

78. At the time Dr. Mathwich placed the claimant at MMI - on October 6, 2021 - the QSART and thermogram – which had not been provided - were reasonable and necessary medical treatment to help define the scope of the claimant's work injury and to suggest future medical treatment to cure and relieve the claimant from the effects of her work injury.

79. The need for diagnostic treatment that is intended to define the scope of a work injury and help determine future medical treatment to cure and relieve the claimant from the effects of the work injury is inconsistent with a finding of MMI.

80. The positive QSART and thermogram provides a quality of evidence that makes it highly probable and free from serious or substantial doubt that the claimant was not at MMI on October 6, 2021, which is before the testing was performed. As a result, the positive test results further establish that it is highly probable the DIME physician's finding concerning MMI is incorrect.

81. After the claimant was placed at MMI by Dr. Mathwich, the claimant underwent the QSART and thermogram with Dr. Reinhard. The QSART and thermogram were positive. The positive findings of the QSART and thermogram that were performed after the claimant was placed at MMI by Dr. Mathwich provide clear and convincing evidence that the claimant was not at MMI as of October 6, 2021. Again, the QSART and thermogram were tests to determine the extent of the claimant's work injury and also help define future treatment to cure and relieve the claimant from the effects of her work injury. Thus, Dr. Mathwich was mistaken about the claimant's MMI status and erred when he placed the claimant at MMI as of October 6, 2021.

82. As a result, the ALJ finds and concludes that the Claimant has established by clear and convincing evidence that Dr. Mathwich, the DIME physician, erred by placing the claimant at MMI on October 6, 2021, before the QSART and thermogram were performed.

Whether the QSART and thermogram are reasonable and necessary.

83. The ALJ credits the opinions of Drs. Reichhardt and Reinhard as explained in their reports that the claimant may have CRPS and that the QSART and thermogram were needed to help provide a diagnosis and guide future treatment for the claimant's chronic shoulder pain and upper extremity symptoms. The ALJ also credits their opinions that the claimant met the Budapest criteria for a clinical diagnosis of CRPS under the Guidelines.

84. The Guidelines indicate that if a claimant meets the Budapest criteria, then a QSART and thermogram are reasonable tests that can be used to determine whether a claimant has CRPS. The ALJ finds that based on the opinions of Dr. Reichhardt, and the findings of Dr. Reinhard, the thermogram and QSART were reasonable and necessary medical

treatment meant to diagnose the extent of the claimant's work injuries and determine future treatment to cure and relieve the claimant from the effects of her work injury. As a result, the ALJ finds that the QSART and thermogram are reasonably necessary and related to the claimant's work injury.

85. Moreover, even if the claimant did not meet the Budapest criteria, the ALJ still finds that the QSART and thermogram were reasonable and necessary to treat the claimant from the effects of her work injury based on the positive findings obtained by Dr. Reinhard.

Whether the stellate ganglion block is reasonable and necessary.

86. Dr. Reichhardt referred the claimant for a stellate ganglion block for diagnostic and therapeutic purposes. The Guidelines also provide that a stellate ganglion block can also assist in the diagnosis and treatment of CRPS. Based on the disagreement as to whether the claimant has CRPS, the ALJ finds that the stellate ganglion block is reasonably necessary to diagnose the extent of the claimant's work injury - whether she has CRPS – and may also be therapeutic. Therefore, the stellate ganglion block is reasonable and necessary as well as related to the claimant's work injury.

Disfigurement benefits.

87. The ALJ finds that the claimant failed to establish that the lesion/mass that was surgically removed by Dr. Kelly is related to her work injury, or that the surgery was ancillary care that was reasonably necessary to treat her work injury or was required to achieve optimum treatment of her compensable work injury. As a result, the surgery to remove the lesion/mass was not reasonably necessary to treat the claimant from the effects of her work injury. The fact that the respondents paid for this surgery does not make the lesion/mass a compensable and related condition or procedure for which the respondents are liable for the scar from the surgery.

88. The ALJ credits Drs. Primack and Erickson's opinion that the lesion/mass is unrelated to the claimant's work injury. Thus, the surgery that was performed, and paid for by the respondents, was for an unrelated condition and was not ancillary to treating the work injury. As a result, the scar from the surgery to remove the lesion/mass is unrelated to the work injury and is not a compensable consequence of the work injury. Thus, the claimant is not entitled to a disfigurement award for the scar, which is approximately 2 inches long and ¼ of an inch wide, associated with that surgery.

89. The claimant did, however, undergo surgery for her work-related shoulder injury. As a result of that surgery, the claimant has sustained scarring, a visible disfigurement to the body, on her right shoulder that consists of three arthroscopic surgical port scars. Each scar is approximately ¼ inch in diameter.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the claimant overcame the opinion of the Division Examiner and established by clear and convincing evidence that she is not at maximum medical improvement.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties

unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found, before Dr. Mathwich, the DIME physician, placed the claimant at MMI, on October 6, 2021, numerous medical providers thought the claimant had CRPS due to her work injury and needed additional medical treatment in the form of additional diagnostic testing for CRPS. For example, Dr. Reichhardt concluded that the claimant needed diagnostic treatment in the form of a QSART, thermogram, and possibly a stellate ganglion block, to help determine whether the claimant had CRPS and needed additional treatment to cure and relieve her from the effects of her work injury.

As found, the QSART and thermogram are objective diagnostic procedures that offered a reasonable prospect for defining the claimant's condition – whether she had CRPS - as well as suggesting further diagnostics and/or treatment, such as a stellate ganglion block, to cure and relieve the claimant from the effects of her work injury.

At the time Dr. Mathwich placed the claimant at MMI - on October 6, 2021 - the QSART and thermogram – which had not been provided - were reasonable and necessary medical treatment to help define the scope of the claimant's work injury and determine future medical treatment to cure and relieve the claimant from the effects of her work injury. The need for diagnostic treatment that is intended to define the scope of a work injury and is reasonably expected to help determine future medical treatment to cure and relieve the claimant from the effects of the work injury is inconsistent with a finding of MMI.

After the claimant was placed at MMI by Dr. Mathwich, the claimant underwent the QSART and thermogram with Dr. Reinhard. The QSART and thermogram were positive. The positive findings of the QSART and thermogram that were performed after the claimant was placed at MMI by Dr. Mathwich provide clear and convincing evidence that the claimant was not at MMI as of October 6, 2021. Again, the QSART and thermogram were tests to determine the extent of the claimant's work injury and were reasonably expected to help define future treatment to cure and relieve the claimant from the effects of her work injury. Thus, Dr. Mathwich was mistaken about the claimant's MMI status and erred when he placed the claimant at MMI as of October 6, 2021.

The ALJ has considered the opinion of Dr. Primack that the claimant did not meet the Budapest criteria and does not have CRPS. The ALJ has also considered the findings by Dr. Schakaraschwili in which the claimant did not have a positive QSART or thermogram test results. That said, this conflict is resolved based on the testimony of Dr. Schakaraschwili and Dr. Orent in which they both said the signs and symptoms of CRPS can wax and wane. Thus, the waxing and waning nature of CRPS explains the different findings of the various physicians involved here.

Thus, the ALJ finds and concludes that the positive QSART and thermogram provides a quality of evidence that makes it highly probable and free from serious or substantial doubt that the claimant was not at MMI on October 6, 2021, which is before the testing was performed. As a result, the positive test results establish that it is highly probable the DIME physician's finding concerning MMI is incorrect.

As a result, the ALJ finds and concludes that the claimant has established by clear and convincing evidence that Dr. Mathwich erred when he placed the claimant at MMI as of October 6, 2021.

II. Whether the respondents are responsible for the CRPS testing, consisting of a QSART and thermogram, that was performed by Dr. Reinhard on July 21, 2022.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation

cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). *See also*: Section 8-43-201(3), C.R.S.

The ALJ credits the opinions of Drs. Reichhardt and Reinhard as stated in their reports that the claimant met the Budapest criteria for a clinical diagnosis of CRPS under the Guidelines. In essence, the Guidelines indicate that if a claimant meets the Budapest criteria, then a QSART and thermogram are reasonable tests that can be used to help determine whether a claimant has CRPS. The ALJ finds that based on the opinions of Dr. Reichhardt, and the findings of Dr. Reinhard, the thermogram and QSART were reasonable and necessary medical treatment meant to diagnose the extent of the claimant's work injuries and determine future treatment to cure and relieve the claimant from the effects of her work injury. Even if the claimant did not meet the Budapest criteria, the ALJ finds and concludes that the fact that the tests were positive independently establishes that the tests were reasonably necessary to treat claimant from the effects of her work injury in order to cure and relieve the claimant from the effects of her work injury.

As a result, the ALJ finds and concludes that the claimant established by a preponderance of the evidence that the QSART and thermogram were reasonable and necessary and related and that the respondents are responsible for paying for the tests the claimant underwent with Dr. Reinhard.

III. Whether the respondents are responsible for a stellate ganglion block.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008). *See also*: Section 8-43-201(3), C.R.S.

In this case, Dr. Reichhardt has recommended the claimant undergo a stellate ganglion block to help confirm whether the claimant has CRPS as well as for therapeutic purposes. Such treatment is also supported by the Guidelines which specify that such blocks are generally accepted procedures to aid in the diagnosis and treatment of CRPS. Therefore, since it is still not clear whether the claimant has CRPS, the block is found to be reasonable and necessary treatment to cure and relieve her from the effects of her injury. Thus, the ALJ finds and concludes that the claimant has established by a preponderance of the evidence that the stellate ganglion block is reasonably necessary and related to treat the claimant from the effects of her work injury.

IV. Temporary total disability benefits if the claimant is not at maximum medical improvement.

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. § 8-42-105(3)(a)-(d), C.R.S.

In this case, the claimant's TTD benefits were terminated on October 6, 2021, because she was placed at MMI by the DIME physician. However, because the claimant has overcome the DIME opinion, and is thus not at MMI, the claimant is entitled to TTD until terminated by law. Thus, the claimant's TTD shall be reinstated as of October 6, 2021.

V. Disfigurement benefits.

A respondent can be required to provide ancillary treatment for non-industrial conditions if the evidence establishes that such ancillary care is a reasonably necessary prerequisite to achieve optimum treatment of the compensable injury. *Public Service Co. v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999).

The claimant failed to establish by a preponderance of the evidence that the lesion/mass that was surgically removed by Dr. Kelly is related to her work injury, or that the surgery was ancillary care that was reasonably necessary to treat her work injury or was required to achieve optimum treatment of her compensable shoulder injury.

As found, the claimant's larger scar is due to the removal of the unrelated lesion/mass that was in her shoulder. The ALJ finds and concludes that the claimant is not entitled to a disfigurement award due to scarring from a surgery done for an unrelated condition – even if the respondents paid for the surgery.

As further found, the claimant underwent surgery for her work-related shoulder injury. As a result of that surgery, the claimant has sustained scarring, a visible disfigurement to the body, on her right shoulder that consists of three faint arthroscopic surgical port scars. Each scar is approximately ¼ inch in diameter.

Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles claimant to additional compensation under Section 8-42-108 (1), C.R.S., in the amount of $375.00.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The claimant is not at MMI.

2. The respondents shall reimburse the claimant for the cost of the QSART and thermogram testing performed by Dr. Reinhard.

3. Respondents shall pay for claimant to undergo the stellate ganglion block.

4. The respondents shall reinstate the claimant's TTD benefits as of October 6, 2021.

5. The respondents shall pay the claimant $375.00 for her disfigurement.

6. All issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 11, 2023

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-201-294-001

ISSUES

1. Whether Claimant established by a preponderance of evidence that a C5-6 transforaminal epidural steroid injection recommended by Dr. Pehler is reasonable and necessary to cure or relieve the effects of Claimant's March 9, 2022 industrial injury.

FINDINGS OF FACT

1. Claimant was employed by Employer for approximately three years. On March 9, 2022, Claimant slipped and fell on a snow and ice-covered bridge while leaving Employer's facility and walking into the parking lot.

2. Claimant testified that he has a history of lumbar and cervical conditions, and underwent surgery on his cervical spine in March 2020. Claimant credibly testified that he was not experiencing active cervical symptoms before March 9, 2022. He testified that he had no recent treatment for his neck, was not taking pain medications for his neck and felt good. He credibly testified that following the injury, he experienced pain in his neck and into his shoulder blades and left arm. He further testified, credibly, that he is currently experiencing pain in his neck, shoulder blades and numbness and tingling into his left arm and thumb, that he was not experiencing immediately prior to March 9, 2022. Claimant's testimony was credible.

Claimant's Medical History Before March 9, 2022

3. Claimant has a significant medical history, including prior injuries to his neck and lower back, dating to at least 1998, including an automobile accident in October 2019 which necessitated surgery on his lower back in March 2020.

4. For several years prior to his March 9, 2022 fall, Claimant was under the treatment of John Serak, M.D., at CarePoint for chronic lower back and cervical pain. On or before February 2020, Claimant was diagnosed with cervical radiculopathy and cervical disc disorder following a motor vehicle accident. A January 7, 2020 MRI demonstrated C5-6 foraminal stenosis due to a disc herniation compressing the C6 nerve root, and causing left-sided cervical radiculopathy. Claimant underwent a C5-6 left foraminotomy in March 2020, which resulted in significant improvement of pain, but some continued tingling and numbness. (Ex. C).

5. After surgery, Claimant had multiple follow-ups with Dr. Serak during 2020. During these visits, Claimant reported his left-sided radiculopathy had improved significantly. From August through November 2020, Claimant had no documented complaints of neck or cervical pain.

6. In December 2020, Claimant suffered a fall, and his neck pain and radicular symptoms returned. (Ex. C). An MRI performed on December 29, 2020 showed no new changes in the cervical spine compared to the January 7, 2020 MRI. (Ex. E). Claimant underwent a cervical epidural steroid injection on January 21, 2021 at Mountain View Pain Specialists (MVPS), which temporarily relieved his cervical pain. (Ex. F).

7. On February 26, 2021, Dr. Serak performed an L5-S1 decompression and foraminotomy for Claimant's lower back pain and lumbar radiculopathy. (Ex. G). Claimant received physical therapy and follow-up evaluations with Dr. Serak over the following two months, and did not report cervical pain during this time. (Ex. C & D).

8. Claimant's next documented report of cervical pain was on May 5, 2021, at MVPS when he reported minimal (1-2/10) cervical pain radiating into his left arm. (Ex. F).

9. On May 20, 2021, Claimant underwent a sacroiliac radiofrequency ablation procedure at MVPS. He followed up with MVPS on June 2, 2021, when he reported minimal (1-2 out of 10) cervical pain at MVPS, and improved lumbar pain at 3-4/10. (Ex. F).

10. Claimant's next documented medical visit was on October 26, 2021, when he saw Larry Lee, M.D., a neurosurgeon at CarePoint, who had assumed Claimant's care from Dr. Serak. At that visit, Claimant reported sacroiliac joint pain, and had no current neck or upper extremity complaints. Dr. Lee documented Claimant's prior history of neck pain and C5-6 foraminotomy, and his previous fall. He documented Claimant's neck range of motion, and included diagnoses of cervical radiculopathy, neck pain, and cervical disc disorder. However, he did not recommend treatment for Claimant's cervical spine. (Ex. C).

11. Over the following month, Claimant received hip and sacroiliac injections at MVPS, and underwent a lumbar MRI. During this time, no complaints of cervical or neck pain were documented. (Ex. F &E).

12. Claimant returned to Dr. Lee on December 1, 2021 for follow up on his lower back pain. No active complaints of cervical symptoms were documented. Dr. Lee's documentation of Claimant's neck and cervical symptoms on December 1, 2021 is a verbatim repetition of his documented exam on October 26, 2021. Dr. Lee recommended a right SI joint fusion, and made no treatment recommendations for Claimant's cervical spine. (Ex. C).

13. On February 4, 2022, Claimant saw Larry Lee, M.D., for a post-surgical evaluation following a right SI joint fusion surgery.[1] Claimant did not report active cervical symptoms, and Dr. Lee's documented neck examination was a verbatim repetition of his neck examinations on October 26, 2021 and December 1, 2021. Although Dr. Lee's record included within his assessment "cervical radiculopathy," neck pain and cervical disc disorder, the record does not indicate these were then-active diagnoses. (Ex. C).

[1] No surgical report of the Claimant's right SI joint fusion surgery was offered into evidence.

Claimant's Medical Treatment After March 9, 2022

14. On March 11, 2022, Claimant returned to Dr. Lee who noted Claimant had fallen backward and landed with his rear end on his left foot two days earlier. Claimant reported tailbone pain, but did not report cervical pain. Dr. Lee's documented neck evaluation was identical to his previous three examinations. (Ex. C).

15. Claimant's next evaluation was at Concentra on March 25, 2022, when he saw Michael Pete, P.A. Claimant reported a burning sensation into his right posterior leg and discomfort in the tail bone area. Examination of Claimant's cervical spine was normal, with the exception of tenderness in the left trapezius muscle. He was diagnosed with a neck strain, coccyx injury, and lumbar back pain with radiculopathy, and referred for physical therapy. (Ex. H).

16. Claimant began physical therapy at Concentra on March 25, 2022. Claimant reported increased radicular symptoms in his right leg, pain in his back and neck, and tingling into his left thumb. (Ex. I). Claimant continued physical therapy through April 6, 2022. (Ex. I & 2).

17. On March 28, 2022, Claimant saw Kathryn Bird, D.O., at Concentra. Claimant reported pain radiating from his tailbone to lateral right thigh, and a left shoulder strain with some tingling into his left thumb. On exam, Dr. Bird noted left trapezius tenderness, with muscle spasms, and slight altered mechanics when flexing and extending. She diagnosed Claimant with a neck strain, and lumbar back pain with radiculopathy. (Ex. H).

18. On April 14, 2022, Claimant saw Hanna Bodkin, PA-C at Concentra and reported his neck had "flared" since his March 9, 2022 fall, and that he was continuing to experience numbness and tingling into the radial forearm and thumb. On exam, Ms. Bodkin noted tenderness and spasms in the left paraspinal and trapezius muscles, but not the cervical spine. She also noted that flexion increased the numbness and tingling into the left arm. Ms. Bodkin referred Claimant for a physiatry consultation. (Ex .H).

19. On April 20, 2022, Claimant saw John Sacha, M.D., at Concentra for a physiatry evaluation. Dr. Sacha indicated that Claimant reported his cervical symptoms had resolved. He also noted that Claimant had cervical pain with Spurlings' testing[2] and some limited range of motion bilaterally. Dr. Sacha noted that Claimant's prior injuries and surgeries increased the risk of further injuries, and referred Claimant for a cervical MRI. (Ex. H).

20. Claimant also saw Dr. Lee on April 20, 2022, however, Dr. Lee's evaluation focused on Claimant's lumbosacral spine, and his neck evaluation was identical to his previous documented examinations. (Ex. C).

[2] Spurlings' test is a test for possible radiculopathy. See W.C.R.P. Rule 17, Ex. 8, p. 11.

21. Claimant returned to Dr. Bird on April 26, 2022. Dr. Bird did not document any complaints of neck or upper extremity pain, and her diagnosis included only lumbar back pain with radiculopathy. (Ex. H).

22. On May 5, 2022, Claimant had a cervical MRI, which showed "multilevel chronic degenerative disc disease and degenerative facet arthropathy resulting in multilevel foraminal narrowing at C3-C4, C4-C5, C5-C6 levels." (Ex. E).

23. On May 11, 2022, Claimant saw Dr. Sacha again. On examination of Claimant's cervical spine, Dr. Sacha noted cervical paraspinal spasms, segmental dysfunction, and pain with extension and extension rotation. He diagnosed Claimant with cervical facet syndrome, but did not recommend any specific cervical spine treatment. He did recommend a right L5-S1 transforaminal epidural injection for Claimant's continued lumbosacral pain, which was performed on June 9, 2022. (Ex. H).

24. Claimant returned to Dr. Sacha on June 22, 2022, reporting ongoing neck and left arm pain. Dr. Sacha documented that he "felt this was a preexisting problem and not work-related and not compensable." He indicated Claimant felt his neck pain was work-related, and Dr. Sacha decided to perform EMG testing of the neck and left arm to assist in determining causality. Dr. Sacha documented his thought process as follows: "With the fall, usually this will cause a cervical facet syndrome, not a cervical radiculopathy, so we will do the EMP of the left upper extremity too and then I will comment on what I think is going on with this gentleman and also compensability, but at this point, does not appear to be compensable." (Ex. H).

25. On July 29, 2022, Dr. Sacha performed an EMG of Claimant's left upper extremity, which he interpreted as showing chronic changes in the left C6 distribution, and no evidence of acute or subacute findings. Dr. Sacha concluded that Claimant's cervical radiculopathy was not work-related, stating "patient has pre-existing cervical spine surgery with ongoing symptoms up to the time of the injury." (Ex. K). Dr. Sacha also referred Claimant for an orthopedic spine evaluation for his lower back condition, which he deemed work-related. Dr. Sacha's opinion on causation of Claimant's spine condition is not persuasive. No credible evidence was admitted that Claimant was having ongoing cervical spine symptoms at the time of his injury. Claimant's medical records indicate his last report of active neck pain prior to his March 9, 2022 injury was on June 2, 2022 when he was seen at MVPS, and was not "ongoing" at the time of his injury.

26. On August 19, 2022, Claimant saw orthopedic spine surgeon Stephen Pehler, M.D., at Concentra. Dr. Pehler is an authorized treating physician within the chain of referral. Dr. Pehler evaluated Claimant's lumbar and cervical spine. As relevant to the present issues, Dr. Pehler noted Claimant had decreased sensation in the left C-6 distribution, and a positive Spurlings' test. Dr. Pehler indicated it was reasonable to perform a left-sided C5-6 transforaminal epidural steroid injection (TFESI) for diagnostic and therapeutic purposes. He indicated that Claimant has "very real and significant foraminal stenosis on his left-hand side at the C5-6 level. The patient is adamant that his symptoms did increase and change following his work-related injury in March 2022." Dr. Pehler further noted that the "EMT that shows chronic left-sided radiculopathy does not

make him immune from having a potential aggravation of a pre-existing degenerative condition after his work-related injury in March 2022." Dr. Pehler referred Claimant for a C5-6 TFESI to be performed by Robert Kawasaki, M.D. (Ex. M & N).

27. Alicia Feldman, M.D., performed a review of Claimant's medical records at Respondents' request and issued a report dated September 2, 2022, in which she addressed the reasonableness, necessity and relatedness of the request for cervical epidural injections. Dr. Feldman was admitted as an expert in physical medicine and rehabilitation, and epidural steroid injections, and testified at hearing. Dr. Feldman opined that while the C5-6 TFESI may be reasonable and necessary, she did not believe it was related to his March 9, 2022 injury. Dr. Feldman reasoned that Claimant had nearly identical symptoms on May 5, 2021, when he saw Ms. Bailey, and that he had received a cervical epidural steroid injection in January 2021 for this condition. She further stated in her report that "Should he need ongoing epidurals for his cervical spine, this would be related to his pre-existing condition for which he was actively treating prior to the work-related injury and not the work-related injury." Dr. Feldman's opinions are not persuasive.

28. While Dr. Feldman is accurate that Claimant reported similar symptoms from his cervical spine in May 2021, the medical records indicate Claimant was not actively treating for his cervical spine at the time of his March 9, 2022 injury. Claimant's last documented report of active neck pain prior to March 9, 2022 was on June 2, 2021. However, after June 2, 2021 Claimant saw multiple health care providers and did not report cervical or neck pain again until being seen at Concentra on March 25, 2022.

29. Dr. Feldman's testimony that Dr. Lee's records demonstrate an active cervical spine condition is not credible or supported by the medical records. She testified that Dr. Lee's February 4, 2022 medical record, which included diagnoses of cervical radiculopathy, neck pain, and cervical disc disorder was evidence Claimant had active neck pain, at that time, and that the diagnoses would not be included in the medical record if Claimant was not having neck pain. However, she also testified that Claimant's medical records from Dr. Lee for March 11, 2022, and April 20, 2022 did not demonstrate any evidence of neck pain, despite the fact that both records contain identical references to Claimant's cervical condition, including identical range of motion findings, and including cervical radiculopathy, neck pain, and cervical disc disorder in the assessment section of the record. No explanation was offered to explain this inconsistency in her testimony.

30. Claimant credibly testified that he was not experiencing active cervical symptoms before March 9, 2022. He testified that he had no recent treatment for his neck, was not taking pain medications for his neck and felt good. He credibly testified that following the injury, he experienced pain in his neck and into his shoulder blades and left arm.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. Page v. Clark, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. University Park Care Center v. Industrial Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. Id. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. Prudential Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); Bodensieck v. Industrial Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. Cordova v. Industrial Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Specific Medical Benefits (TFESI Recommended by Dr. Pehler)

The Act imposes upon respondents the duty to furnish medical treatment "as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury." § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App.

2002). *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Claimant has established by a preponderance of the evidence that the C5-6 cervical transforaminal epidural steroid injection recommended by Dr. Pehler is reasonably necessary to cure, or relieve the effects of Claimant's industrial injury. Although Claimant has a significant history of cervical pain and radicular symptoms, Claimant had no documented report of active cervical symptoms in the nine months preceding his March 9, 2022 work injury. Claimant's last documented report of cervical pain was on June 2, 2021 when he reported minimal (1-2/20) pain at MVPS. During the intervening nine months, Claimant saw multiple health care providers for lumbosacral issues, but did not report active cervical symptoms. The admitted medical records are consistent with Claimant's testimony that he was not experiencing cervical symptoms prior to March 9, 2022. Although Dr. Lee included neck pain and cervical radiculopathy in his medical records, there is no documentation of active cervical complaints, and the documentation of cervical symptoms is listed under the heading "Previous Complaints Include," Dr. Lee's documented cervical examinations (if actually performed), are each identical and do not document active problems.

As found, both Dr. Sacha and Dr. Feldman based their opinions on the incorrect notion that Claimant was actively experiencing cervical radicular symptoms as of March 9, 2022, or was in active treatment for those symptoms at that time. The ALJ finds more persuasive Dr. Pehler's opinion that a C5-6 TFESI is reasonable, and related to Claimant's March 9, 2022 work injury. The ALJ concludes it is more likely than not that the TFESI recommended by Dr. Pehler is causally related to Claimant's March 9, 2022 injury, and that such treatment is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of the left C5-6 transforaminal epidural steroid injection recommended by Dr. Pehler is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 27, 2023

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-126-362-001 & 5-165-280-001

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she is entitled to a general award of maintenance treatment after maximum medical improvement (MMI) under W.C. 5-126-362-001 and/or W.C. 5-165-280-001.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of [Redacted, hereinafter ERL], the ALJ enters the following findings of fact:

Workers' Compensation Claim No. 5-126-362

1. On October 28, 2019, Claimant was working for Respondent-Employer as a Correctional Officer when she injured her neck during a training exercise. According to Claimant, she was participating in defensive tactics training when an instructor, who was demonstrating a takedown technique forcefully slammed her onto a training mat. The incident was reported and assigned Workers' Compensation Claim No. 5-126-362.

2. Claimant initiated treatment with Dr. Thomas Centi at the Southern Colorado Clinic (Clinic) on November 5, 2019. During her initial visit on this date, Claimant reported a chief complaint of "pain in [her] neck, shoulder and spine" along with numbness in her arm and hand. (Ex. 9, p. 74). Claimant was diagnosed with a "[s]prain of ligaments of cervical spine, given a prescription for Naproxen and Flexeril, referred to physical therapy (PT) and returned to modified work duty with a 5 pound weight restriction, no management of inmates/offenders and no lifting overhead. *Id.* at p. 73, 75. A Comprehensive Outcome Management Technologies (COMT) assessment, to include psychological testing, was completed and demonstrated Claimant to have "good function" and no need for psychological counseling. *Id*. at p. 77. Nonetheless, Claimant's Distress Risk Assessment Method (DRAM) testing placed her in the "At risk" psychological category regarding the Modified Zung Depression Index and the Modified Somatic Pain Questionnaire. *Id.*

3. Claimant returned to the Clinic on December 19, 2019 where she was evaluated by Nurse Practitioner Valerie Joyce. During this encounter, Claimant reported a worsening of her symptoms which she attributed to "looking up at monitors frequently and repetitively for modified duties". (Ex. 9, p. 80). She also reported back pain with radiation into the leg and feeling as though her shoulders were "dislocated" in addition to "lots" of neck pain. *Id*. An MRI of the cervical spine had been completed and the results were noted as "pending". *Id.* at p. 80-81. Claimant was noted to have a "negative" attitude towards the provider's recommendation for continued PT and was

"difficult" with staff and the PT scheduler when attempting to schedule future appointments. *Id*. at p. 82.

4. The results of Claimant's December 18, 2019 MRI revealed "mild reversal of the normal cervical lordosis" but otherwise normal vertebral body and disc height space, anatomic posterior alignment and normal signal intensity in the cervical spinal cord. (Ex. 9, p. 84).

5. Claimant was seen in follow-up by Dr. Centi on January 9, 2020 during which appointment, Dr. Centi documented that Claimant continued to report neck and low back pain without improvement from medications; however, she did note some improvement with PT. Dr. Centi commented further that Claimant's MRI was normal and that she felt her problem was "stable". (Ex. 9, p. 88). Claimant was placed at maximum medical improvement without impairment on this date and released to full duty work. *Id*. at p. 87, 89. Dr. Centi recommended that Claimant "continue her physical therapy to completion" and continue her home exercise program. *Id.* at p. 89. He did not recommend additional maintenance care after MMI. *Id*. at p. 87.

6. On February 4, 2020, Claimant presented to the Emergency Room (ER) at Evans Army Medical Center requesting a second opinion regarding her chronic neck pain and paresthesias. (Ex. 12, p. 193). Claimant was evaluated by Dr. Jessica Walsh. During this encounter, Claimant reported that since she was taken down forcefully on October 28, 2019, she had "neck pain, bilateral shoulder pain and intermittent paresthesias to both arms". *Id.* She also reported that for the three days prior to her presentation to the ER, she had a warm sensation to the lateral aspect of her right hand which she informed Dr. Walsh felt "swollen". She complained that her right shoulder had been "rotated in and dropped for over a month". *Id*. According to Dr. Walsh's ER note, Claimant advised Dr. Walsh that she notified her workman's compensation physician (Dr. Centi) about these problems, but "nothing was done". *Id*. Claimant stated she was requesting a second opinion regarding her condition "because she [did] not feel like she should be cleared to return to work as a corrections officer. *Id.*

7. Claimant's February 4, 2020, physical examination revealed "no evidence of weakness to the fingers, hand, wrist, elbow or shoulder. (Ex. 12, p. 195). Dr. Walsh could not explain the posture of Claimant right arm/shoulder noting: "As far as holding her right shoulder in a slightly internally rotated, dropped position, it is unclear if this is a position of comfort versus intentional positioning". *Id.* According to Dr. Walsh, [w]ith pure shoulder extension, [Claimant] appeared to have significant difficulty [with] both arms, right greater than left and was very tremulous". *Id*. However, when asked by Dr. Walsh to "reach over her head as though she were scratching her back, [Claimant] was easily able to do this with each hand and had a fully extended shoulder during this maneuver". *Id.* Claimant was discharged in stable condition with instructions to follow-up with her primary care physician and/or her workers' compensation doctor. *Id.*

8. Claimant requested a Division Independent Medical Examination (DIME) and was evaluated by Dr. Dwight Caughfield on June 23, 2020. (Ex. 13). Physical

examination revealed diffuse guarding of the cervical paraspinal musculature but no localized spasms. *Id*. at p. 204. Active trigger points were present in the trapezius muscles extending into the neck and outward to the shoulder and Claimant demonstrated "very guarded" cervical range of motion during observation and range of motion testing. *Id.* Shoulder examination was positive for soft tissue tenderness and Hawkins testing revealed "some anterior shoulder pain bilaterally but no subacrominal pain. *Id.* Active range of motion of the shoulders was limited and passive range of motion was constrained by guarding. *Id.*

9. Dr. Caughfield provided a clinical diagnosis of "cervicalgia with myofascial pain. (Ex. 13, p. 205). He did not feel that Claimant's low back, thoracic and shoulder pain were injury related. *Id*. Noting that Claimant's initial COMT assessment scores placed her in the "at-risk" category and that her January 9, 2020 COMT anxiety/depression score suggested worsening anxiety/depression (Ex. 9, p. 90), Dr. Caughfield opined that Claimant had not reached MMI. (Ex. 13, p. 205). He recommended formal psychological testing/treatment before consideration of MMI. Indeed, Dr. Caughfield noted:

> Cervical treatment guidelines section E.2.c state "Formal psychological or psychosocial evaluation should be performed on patients not making progress within 6 to 12 weeks following injury and whose subjective symptoms do not correlate with objective signs and tests." [Claimant's] increasing pain complaints, escalating anxiety scores, as well as conflict with PT noted in the record suggests potential underlying psychosocial issues that need evaluation and potential treatment if deemed related to her injury. The presence of anxiety/depression and potential somatization may explain her escalating pain complaints and reports of functional impairments. I recommend formal psychosocial testing be completed and any injury related treatment be addressed before placement at MMI. I do not feel any further imaging studies, analgesics, or physical therapy is appropriate based upon her past responses.

(Ex. 13, p. 205).

10. Approximately one year after being evaluated in the ER on February 4, 2020, Claimant followed up with her personal physician, Samantha Uriguen-Ashby on February 10, 2021. (Ex. G, p. 73). During this visit, Claimant reported that her symptoms had continued since the time of her 2019 on the job injury and that she wanted to "pursue [an] evaluation for pain that radiates in both upper extremities and causes numbness and tingling (beginning in shoulders and radiating down to hands). *Id*. Claimant reported 7/10 pain in both arms and her upper neck. Physical examination revealed tenderness and an abnormally anteriorly rotated right shoulder. There was pain on movement of the arms/shoulder bilaterally but no tenderness of the left shoulder. *Id.* Bilateral shoulder strength was documented as normal as was strength of

the forearms. *Id*. Claimant was assessed with "cervicalgia". *Id*. A discussion was had about "anatomy and potential actions that may have caused pain. Id. Claimant was "[e]ncouraged to keep a symptom journal – with symptoms and potential triggers". *Id.* Moreover, "[a]larm signs/symptoms" were discussed with Claimant and she verbalizing her understanding to obtain immediate re-evaluation if such signs/symptoms became apparent. *Id*. Finally, Claimant was instructed to follow up with her PCM as needed. *Id*. at p. 76. There is no reference in the treatment record from this visit that Claimant was informed that she could not treat with her primary care manager (PCM) or that future care would be denied because Claimant's symptoms were associated with a work-related injury. This record appears to contain the last reference to Claimant seeking assistance from her primary care physician to evaluate/treat the symptoms she associated with her October 28, 2019 work injury.

11. Claimant returned to Dr. Centi's care on February 16, 2021. (Ex. 9, pp. 95-105). Dr. Centi referred Claimant for mental health counseling. *Id*.

12. Before she could initiate counseling, Claimant sustained injuries to her low back on February 20, 2021, after falling from a chair when the seat back unexpectedly broke off causing the chair to roll forward and Claimant to fall to the floor. The incident was reported and assigned Workers' Compensation Claim No. 5-165-280. The details surrounding this claim number are outlined below.

13. Claimant initiated counseling with SABABA Health Group on March 16, 2021. She was felt to have "some emotionality associated with her pain". (Ex. 11, p. 116). A treatment program to develop "concrete skills to reduce intensity and frequency of reported pain and distress" related to her injuries was proposed as a means to help Claimant's ability to relax and reduce stress and improve her physical functioning. *Id*.

14. Claimant completed 12 counseling sessions and was discharged from care on June 1, 2021 after "successfully" completing her treatment program. (Ex. 11, p. 184). At discharge, Claimant recognized that she had made improvement and was able to "identify areas that would require continual time and attention". Id. at p. 188. Moreover, Claimant was able to "discuss tools and techniques she learned and those she would continue to use as need". *Id.*

15. Upon completion of her counseling program, Claimant returned to Dr. Caughfield for a follow-up DIME on August 30, 2022. Dr. Caughfield noted that Claimant had been discharged from her psychological counseling program with a diagnosis of "mood disorder with known physiological condition with improvement across all scales". (Ex. 14, p. 212). Nonetheless, he did not find any support for a "functionally impairing mood disorder". *Id.* He placed Claimant at MMI noting that the final therapy session documented that Claimant had been "trained in appropriate self management skills and did not recommend further active treatment". *Id.* at p. 213. He did not recommend maintenance counseling. Indeed, Dr. Caughfield did not recommend any maintence care. *Id.* Rather, he simply noted: Having completed the appropriate diagnostic studies and treatment [Claimant] is at MMI but with persisting

neck pain and referred paraesthesia meriting impairment. Accordingly, Dr. Caughfield assigned a 19% whole person impairment for Claimant's cervical spine condition. Id. at pp. 214-215.

16. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Caughfield's opinions concerning MMI and impairment on October 4, 2022. (Ex. 1) The FAL specifically denied liability for maintenance care after MMI pursuant to Dr. Caughfield's August 30, 2022 DIME report. *Id*. at p. 2.

17. Claimant objected to the October 4, 2022 FAL and requested a hearing to adjudicate her entitlement to maintenance care after MMI. The objection and Application for Hearing were filed on November 2, 2022. (Ex's. 3 & 5).

Workers' Compensation Claim No. 5-165-280

18. As noted at ¶ 11 above, Claimant suffered injuries to her low back on February 20, 2021, when the back of a chair she was sitting in failed and she was cast to the floor. Following this incident, Claimant proceeded to the ER at St. May Corwin Hospital where she was evaluated by Physician Assistant (PA-C) Andrew James Kretovic. Upon presentation, the following history was obtained from Claimant:

> Patient is a 31 year old female that presents with injuries from a fall. She reports today she went to sit on a chair at work and the back broke, causing her to fall backwards. She reports she hit the middle of her back on the ground and on a screw. She reports she somehow hit the front her (sic) of (sic) forehead but denies significant headache and denies LOC, nausea, vomiting, neck pain or speech/vision changes. She reports back [pain] that radiates up into shoulder blade area. She denies bowel/bladder incontinence/retention, saddle paresthesias, weakness in legs or difficulty ambulating.

(Ex. 10, p. 108).

19. X-rays of the lumbar spine were obtained and revealed "[n]o definite acute fractures". (Ex. 10, p. 112). Claimant was subsequently discharged home in stable condition. *Id*. at p. 107.

20. Following her ER visit, Claimant established care with Concentra Medical Centers (Concentra) on February 22, 2021. While a significant portion of the medical reports outlining Claimant's early care at/through Concentra for this incident are missing from the record, the available records support the following:

- Claimant established care at Concentra on February 22, 2021 when she was evaluated by PA Michael Gottus.

- Claimant was evaluated by Dr. Daniel Peterson on February 24, 2021. Dr. Peterson noted that Claimant was hurting across her low back and while she had bruising on her back, there was no evidence of a puncture wound. Dr. Peterson also noted a large bruise on the medial side of the right elbow.

- On March 1, 2021, PA Gottus noted that Claimant was reporting persistent low back pain with radiation into the left leg.

- Dr. Peterson evaluated Claimant on March 8, 2021 during which appointment he noted that Claimant had seen Dr. Finn who recommended an MRI of the lumbar spine to rule out a lumbar transverse process fracture. The MRI was ordered.

- Claimant returned to Dr. Peterson for reevaluation on March 24, 2021. Dr. Peterson noted that Claimant had her first chiropractic appointment and that her MRI was "totally" normal.

(Ex. 8, pp. 62-63).

21. Claimant was seen by her chiropractor on April 20, 2021. Dr. Knoche noted that Claimant demonstrated essentially "full" range of motion during thoracolumbar movements, lateral bending, bilateral rotation and extension and forward flexion. (Ex. 8, p. 58). While Claimant was mildly tender to the left of midline at T7 and T10 and in the quadratus lumborum musculature, her thoracolumbar flank pain had resolved and as noted, she exhibited full range of motion in the lumbar spine. Moreover, Claimant had a negative Kemps and straight leg raising test result. *Id.* Dr. Knoche discharged Claimant from treatment noting that she had reached MMI. *Id.*

22. On April 28, 2021, Claimant was examined by Dr. Leah Johansen at Concentra. (Ex. D, pp. 37-43). During this encounter, Claimant reported that her back was "doing awesome." *Id.* at pp. 37, 38. She denied any pain or radiculopathy, and reported that she was "[r]eady to go back to work full time." *Id.* at p. 38.

23. Dr. Johansen's physical examination of Claimant was unremarkable. (Ex. D, pp. 40-41). Claimant's cervical, thoracic, and lumbosacral spine all presented as normal with full range of motion. *Id.* at p. 41.

24. Dr. Johansen determined that Claimant was at her functional goal but not yet at the end of healing. (Ex. D, p. 41). Accordingly, Dr. Johansen instructed Claimant to follow up in one week, but released her to return to work full-duty without restriction as of April 28, 2021. Dr. Johansen opined that Claimant would be at MMI one-week later *without need for maintenance care*. *Id.* at p. 42 (emphasis added).

25. Claimant failed to follow up with her authorized treating physicians after her April 28, 2021 appointment with Dr. Johansen. Consequently, Claimant was

returned to Concentra on February 22, 2022 for a demand appointment with Dr. Peterson. (Ex. D, pp. 32, 44).

26. Included in the note from the demand appointment is a notation by Dr. Peterson that Claimant had failed to follow-up on her injury after her April 28, 2021 visit with Dr. Johansen. Dr. Peterson noted further that Claimant was "working full duty with no issues". (Ex. 8, p. 67). He also documented that Claimant reported that her back felt "fine" and that her MRI was "normal". *Id*. Dr. Peterson deemed Claimant to be at MMI as of February 22, 2022. *Id*. at p. 66. He released Claimant from care without impairment and without maintenance care needs. *Id.*

27. Following her placement at MMI without impairment by Dr. Peterson, Claimant requested a DIME and the same was performed by Dr. John Tyler on August 19, 2022. Dr. Tyler issued his DIME report on August 22, 2022. As part of his DIME, Dr. Tyler obtained and documented the following history regarding Claimant's February 20, 2021 injury: "On the date of injury, [Claimant] was sitting in a swivel chair that had no arm rests. [Claimant] states that when she leaned backwards, the back support broke off and she fell backwards and landed on her lower and mid back regions". (Ex. 15, p. 218).

28. Dr. Tyler recognized the lengthy gap between Claimant's last documented appointment from April 28, 2021 and the February 22, 2022 demand appointment. He asked Claimant why there had been a long gap in the continuum of care to which Claimant reportedly responded that she had contacted Concentra prior to her scheduled follow-up appointment (to occur one week after her April 28, 2021 visit) and reported that she was symptom free with regard to the injuries she sustained on February 20, 2021. According to Dr. Tyler's report, Claimant was then informed by Concentra that it was not then necessary to follow-up with them. (Ex. 15, p. 218).

29. Following his physical examination, Dr. Tyler concluded that Claimant had reached MMI as of February 22, 2022, without impairment or maintenance treatment needs. (Ex. 15, pp. 219-220).

30. Respondents filed a FAL consistent with Dr. Tyler's opinions concerning MMI and impairment on October 4, 2022. (Ex. 2) The FAL specifically denied liability for maintenance care after MMI pursuant to Dr. Tyler's August 22, 2022 DIME report. *Id*. at p. 21.

31. Claimant objected to the October 4, 2022 FAL and requested a hearing to adjudicate, her entitlement to maintenance care after MMI. Claimant's objection and her Application for Hearing were filed on November 2, 2022. (Ex's. 4 & 6).

The Deposition Testimony of ERL[Redacted]

32. ERL[Redacted] testified as a long time Correctional Officer for Employer. She has worked for the [Redacted, hereinafter DC] for approximately 12 years.

(ERL[Redacted] Depo. Tr., p. 5, ll. 24-25, p. 6, line 1). ERL[Redacted] testified that she and Claimant met while they were working the swing shift. (ERL[Redacted] Depo. Tr., p. 6, ll. 8-12). While they have worked together, ERL[Redacted]l testified that Claimant is currently working in "visiting" while she works in security so they don't currently see each other or work together, unless Claimant is assigned to work a security post. (ERL[Redacted] Depo. Tr., p. 6, ll. 19-24).

33. ERL[Redacted] testified that she was present during both of the incidents leading to Claimant's injuries. (ERL[Redacted] Depo. Tr., p. 9, ll. 7-13). According to ERL[Redacted], Claimant's first injury occurred when they were partners during PPCT class (defensive tactics) and were not getting a maneuver right. (ERL[Redacted] Depo. Tr., p. 9, ll. 16-20). ERL[Redacted] testified that the PPCT instructor then demonstrated the maneuver on Claimant causing her injury. *Id.* Regarding Claimant's second injury, ERL[Redacted] testified that she was with Claimant in a conference room when Claimant fell off a chair. *Id*. at p. 9, ll. 21-22.

34. ERL[Redacted] testified that she has not witnessed any conduct to suggest that Claimant is having difficulty performing her job duties since her October 28, 2019 or February 20, 2022 injuries. (ERL[Redacted] Depo., p. 11, ll. 16-23). Nonetheless, ERL[Redacted] admitted during cross examination that Claimant's current position with Employer is less strenuous. *Id*. at p. 26, l. 25; p. 27, ll. 1-2.

Claimant's Hearing Testimony

35. Claimant testified that on October 28, 2019, she and Officer ERL[Redacted] were partners during defensive tactics training. According to Claimant, Officer ERL[Redacted] was having trouble understanding a particular defensive maneuver so the instructor demonstrated the movement on her. Claimant testified that the instructor grabbed her by the back of the neck, pulled her into his chest and forcibly "slammed" her down to the floor mat.

36. Claimant testified that she developed bruising and pain in her neck on the evening of October 28, 2019. She also testified that her right shoulder "fell and rolled inwards." Despite her condition, Claimant testified that she did not miss much time from work after this injury. Moreover, she continued to work in her regular capacity as a Corrections Officer.

37. Claimant testified that she subsequently developed shoulder pain and has constant "numbing" through her arms and has recently developed sharp pain on the left side of her neck radiating up into her skull similar to her right sided neck pain.

38. Claimant testified that at the time she last saw Dr. Caughfield, i.e. during her follow-up DIME she was experiencing continued symptoms including "severe" neck and shoulder pain. She testified that her persistent neck pain and numbness in her arms combined with the apprehension she had about her ability to use a shotgun or handle use of force situations lead to her decision to change positions from a security

officer to a housing officer. According to Claimant, her current housing office position is mostly clerical in nature and has helped "control" her pain.

39. Concerning the February 20, 2021 injury, Claimant testified that as she leaned backward in a chair the seat back fell off causing her to fall backwards and hit her head on another chair and land on the left side of her low back.

40. Claimant testified that she proceeded through treatment for the injuries she sustained as a consequence of falling from the chair. She testified that she was ultimately seen by Dr. Tyler who spent approximately 10 minutes with her. Accordingly to Claimant, Dr. Tyler palpated her low back which caused "discomfort". She testified that he also showed her some stretches to help correct some postural distortion in her low back. Claimant testified that she did not tell Dr. Tyler that she was having ongoing pain/problems with her low back.

41. Claimant testified that the symptoms related to the injuries she sustained in the October 28, 2019 incident have worsened with the passage of time; however, she did not quantify how or to what extent her symptoms have worsened. Instead, she simply testified that it was her "desire" to seek additional treatment for her ongoing symptoms. Claimant conceded that she has not sought treatment for her work related injuries/symptoms at Concentra in the past year. She also confirmed that her primary care provider ("PCP") is Evans Army Medical Center/Hospital (Evans) and that she has not secured treatment for her neck through Evans in the past year. Accordingly, Claimant admitted that she has not seen any provider, i.e. either her PCP or her authorized treating providers under her work related neck injury for the past year. Finally, Claimant confessed that she has not sought treatment for her low back through Evans.

42. During redirect, Claimant clarified that she attempted to secure treatment for her neck at Evans but was denied because the injuries arose out of an open workers' compensation case. While Claimant testified that she tried to get treatment for her neck complaints at Evans, she did not specify when she made such attempt. Instead, she simply testified that she "initially" attempted to obtain treatment at Evans, but was refused because her injuries/symptoms were related to an open workers' compensation claim. In this case, the only evidence suggesting that Claimant tried to obtain treatment through Evans for her neck complaints is contained in the reports from Claimant's February 4, 2020 and February 10, 2021 visits through Evans when she requested a second opinion and an evaluation concerning the condition of her neck/shoulders after being placed at MMI by Dr. Centi on January 9, 2020. Outside of these reports, there is a dearth of persuasive evidence to support any suggestion that Claimant attempted to secure additional treatment for her neck complaints through Evans in the months following her February 10, 2021 appointment/evaluation with Dr. Uriguena-Smith, even though she was instructed during her February 10, 2021 appointment that she should follow-up with her PCM on an as needed basis. (See Ex. G, p. 76).

43. Careful review of the Evans records reveals that after Claimant's February 10, 2021, appointment, she was seen at Evans on the following dates, for the following conditions/reasons:

- Claimant visited her the Evans emergency room on June 19, 2022 after being involved in a high-speed motor vehicle collision. (Ex. G, pp. 57-63). While traveling at 75 miles per hour, Claimant swerved to avoid hitting a deer on the highway and instead struck the guardrail. *Id.* at p. 57. Although the vehicle's airbags deployed, Claimant was able to extricate herself from the vehicle and get to the ER. *Id.* Upon arriving in the emergency department, Claimant reported that she was sore all over but "had no particular neck pain . . . ." *Id.* Physical examination revealed that her neck was "supple and without particular pain. *Id*. at pp. 57-58. Claimant reported history of a great toe fracture which occurred while she was "working out" otherwise she reported taking no medications on a daily basis and "no underlying medical issues", specifically denying asthma, hypertension [and] diabetes. Based upon the content of the record, the ALJ finds that outside of her toe fracture, Claimant probably did not mention neck, shoulder or low back injuries related to the present claims, or other underlying medical issues. (*See id.*).

- Claimant was seen by her PCP for a "well women exam" on September 22, 2022, during which it was discovered that she had an elevated blood-pressure reading without having a diagnosis of hypertension. Claimant was advised to limit her dietary sodium and caffeine and monitor her blood-pressure outside of the clinic. Despite her current complaints of persistent and worsening neck symptoms, the record from this encounter notes that Claimant had "no other concerns" and "no complaints were offered". (Ex. G, p. 66). Careful review of the noted from this date of visit reveals that Claimant had no reports of headache or back pain. *Id*. at p. 67. Physical examination revealed a "Well-appearing" individual with a normal appearing neck without tenderness. *Id.*

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence

is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In accordance with C.R.S. § 8-43-215, this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant's current pain complaints are likely emanating from both an injury to the rotator cuff and an aggravation of a pre-existing cervical spine condition caused directly by Claimant's fall to a concrete floor on August 6, 2020 after slipping in a puddle of water.

Claimant's Entitlement to Maintenance Medical Care

D. A claimant's need for medical treatment may extend beyond the point of maximum medical improvement where he/she requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). An award for maintenance medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo.App. 1999); *Hastings v. Excel Electric*, W.C. No. 4-471-818 (ICAO, May 16,

2002). Rather, in *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra.* The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the Claimant reaches this threshold, the Court in *Milco* stated that the ALJ should then, as a second step, enter a "general order similar to that described in Grover." Thus, while a claimant does not have to prove the need for a specific medical benefit, he/she must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, *supra*. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for future medical treatment is reasonable, necessary and related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

E. In this case, the record evidence persuades the ALJ that Claimant has failed to prove she needs/requires maintenance care. Here, none of Claimant's authorized treating physicians, under either claim, have indicated that she requires further care to relieve her from the effects of her injuries or prevent deterioration of her condition. Moreover, both Dr. Caughfield and Dr. Tyler specifically opined that Claimant does not require maintenance care. Claimant's contrary testimony that she requires ongoing care for persistent and worsening neck and back symptoms is unpersuasive. Indeed, Claimant's testimony that her symptoms have worsened is uncorroborated and her claim that she needs treatment is largely contradicted by the content of her medical records and her actions. Indeed, there is a lack of evidence indicating that Claimant has attempted to secure treatment with her PCP since February 10, 2021. Finally, the record is replete with admissions from Claimant which support a finding that any back or neck pain related to her work injuries has resolved. In fact, Claimant has been evaluated by her PCP at least twice since her most recent date of MMI (2/22/22), but she *never* during either appointment reported pain or ongoing complaints related to either of her work injuries (neck or low back), despite having no treatment for her work injuries in the years since being discharged by Dr. Centi and evaluation by Dr. Johansen on 4/28/21. (*See* Ex. G). Even after enduring a car crash on June 19, 2022, while traveling 75 miles per hour, Claimant's ER records from Evans noted, "[n]o particular neck pain (sic) back pain (sic) rib pain (sic) arm pain with the exception of the left distal forearm." *Id.* at p. 57. In addition, when Claimant visited her PCP on September 22, 2022, a review of her musculoskeletal system indicated neither back pain nor neck tenderness. *Id.* at p. 67. This supports a reasonable inference that Claimant's work-related neck and low back injuries are stable, despite not having any treatment for years. Claimant has presented no evidence that any physician, including her PCP, has recommended future or ongoing treatment for her neck strain or low back

strain injuries. Accordingly, the ALJ concludes that Claimant has failed to establish a need for future or ongoing medical treatment related to either her October 28, 2019 or February 20, 2021 work injuries.

F. Although Claimant testified at hearing that she began to experience numbing in her arms sometime after the first 10/28/19 injury, Dr. Caughfield, repeatedly found no evidence to connect Claimant's reported shoulder pain to her admitted neck injury and twice opined it was not work-related. Section 8-42-107(8), C.R.S. provides that a DIME's findings concerning MMI are binding unless overcome by clear and convincing evidence. The determination of MMI inherently requires a DIME to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are causally related to the work injury. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo.App. 1998). As such, a DIME's opinions regarding causation are entitled to presumptive weight. *See Laprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482 (Colo.App. 2005); *see also Egan v. Indus. Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998). Absent a timely objection to the DIME physician's findings, an ALJ lacks jurisdiction to resolve a dispute as to those findings. *Leprino Foods Co. v. Indus. Claim Appeals Office*, *supra.*; *see also Schneider Nat'l Carriers, Inc. v. Indus. Claim Appeals Office*, 969 P.2d 817 (Colo.App. 1998).

G. To the extent that Claimant seeks maintenance care for injuries/conditions that have been determined to be unrelated by a DIME, and considering that Claimant has not timely challenged Dr. Caughfield's MMI/causality opinions, the Court views Claimant's position as an unripe, constructive challenge to the DIME's binding opinion. Since the Court lacks jurisdiction to resolve such disputes, this order does not address Claimant's entitlement to continued treatment for her shoulders/arms.

ORDER

It is therefore ordered that:

1. Claimant's request for additional maintenance medical in both WC 5-126-362 and WC 5-165-280 is denied and dismissed.

2. All matters not determined herein are reserved for future determination

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is

emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-177-356-001

ISSUES

1. Did Claimant prove by a preponderance of the evidence that specific maintenance treatment in the form of vestibular therapy and visual therapy is reasonable, necessary and related to her admitted work injury?

2. What is Claimant's average weekly wage (AWW)?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 29 year-old woman who worked part-time for Employer, which was her mother's company. Claimant testified she cleaned and painted properties after a tenant moved out.

2. Claimant was paid $18.00 per hour, and $27.00 per hour, for overtime. (Ex. J). Claimant testified she only worked a few days a week. There is no objective evidence in the record as to what constituted overtime work for Claimant.

3. On July 13, 2021, Claimant suffered an admitted work injury. Claimant credibly testified she was seated on the floor painting floor boards. When she stood up, she hit her head on an open cabinet door. Claimant did not lose consciousness, did not fall, and she had no immediate nausea or vomiting, but felt dazed and foggy. Claimant reported that she cleaned her paint brushes, as she would always do, and then drove home. (Ex. A).

4. Later that day, Claimant went to CareNow Urgent Care (CareNow) and presented with a chief complaint of a headache. Claimant reported having light sensitivity and nausea. Claimant did not present with vomiting, dizziness, syncope, slurred speech, weakness, muscle pains, numbness or tingling. Claimant was diagnosed with a mild concussion without loss of consciousness. She was to follow up in three days for a recheck, but she was to return sooner if she suffered new or worsening symptoms. (Ex. H).

5. Claimant returned to CareNow on July 16, 2021 for a follow-up visit. She reported no longer having nausea, but having ringing in her ears. (Ex. H). On July 21, 2021, Claimant had a CT scan of her brain. The impression was "normal CT of the head." (Ex. G).

6. Jennifer Tetrault, PA-C, referred Claimant to Yusuke Wakeshima, M.D., for a comprehensive physiatric consultation. Dr. Wakeshima evaluated Claimant on August 4,

2021. Claimant reported suffering a closed head injury on July 13, 2021. She further reported experiencing intermittent headaches, dizziness with mild balance issues, sensitivity to bright lights and noise, photophobia, phonophobia, emotional lability and forgetfulness. She was not reporting any tinnitus. Dr. Wakeshima explained he would refer Claimant for a neuropsychological assessment if she continued to have cognitive issues. He also told Claimant she should proceed with the vestibular rehabilitation arranged by the providers at CareNow. (Ex. F).

7. Claimant returned for a follow-up appointment with Dr. Wakeshima on August 13, 2023. According to Dr. Wakeshima's medical records, Claimant found vestibular therapy beneficial. She reported having continued issues with focusing and concentrating, so Dr. Wakeshima referred Claimant to Suzanne Kenneally, M.D., for a neuropsychological assessment. (Ex. F).

8. On or about, August 19, 2021, Claimant suffered a second head injury, and she sought emergency treatment three days later, on August 22, 2021. Claimant told the medical providers she slightly lost her balance, and struck the right side of her head on a wooden post. She reported experiencing a slight worsening of her symptoms and had some new symptoms. The ER triage notes state Claimant complained of "tingling all over after hitting her head 72 hours ago." Claimant was concerned because her sister noted her left pupil looked slightly larger than the right. According to the medical records, Claimant's "pupils are unequal (very subtle but left pupil is < 1mm larger than right, but both reactive and round). (Ex. E).

9. On September 29, 2021, Dr. Kenneally conducted testing on Claimant to determine if she suffered a traumatic brain injury on July 13, 2021. Dr. Kenneally concluded, based on the testing, that there was "no residual brain-based cognitive impairment association with the 07/13/2021 work-related injury." (Ex. D).

10. On October 22, 2021, Dr. Wakeshima discharged Claimant due to a "breakdown in doctor patient relationship." (Ex. F).

11. Brian Mathwich, M.D., conducted an IME on behalf of Respondents on November 23, 2021. He obtained a history from Claimant and reviewed her CT scan and neuropsychological testing results. He noted that Claimant's CT scan was normal, and her neuropsychological results indicated she had no cognitive impairment. Dr. Mathwich also noted that Claimant's injury did not include loss of consciousness, retrograde or anterograde amnesia. He concluded Claimant was at MMI as of August 13, 2021, and no further medical treatment was medically reasonable or necessary to cure and relieve the effects of the work injury. He believed that the mechanism of injury was not consistent with Claimant's ongoing subjective complains or with the diagnosis of mild traumatic brain injury/concussion. In his opinion, Claimant did not meet the diagnostic criteria for mild traumatic brain injury within the Colorado Division of Workers' Compensation Traumatic Brain Injury Medical Treatment Guidelines. (Ex. C).

12. Elizabeth Rosenberg, M.D., was Claimant's ATP. Dr. Rosenberg evaluated Claimant on December 3, 2021, and recorded Claimant's diagnoses as a concussion

without loss of consciousness and bilateral tinnitus. Dr. Rosenberg noted in Claimant's medical record that she disagreed with Dr. Mathwich's conclusion that Claimant had no objective findings of impairments. She noted Claimant's objective deficits in eye and vision function. Dr. Rosenberg, however, described Claimant's injury as minimal, and of a very mild nature. She further explained Claimant was "slowly but steadily" improving with vestibular and visual therapy, and Claimant was to "continue vestibular and vision therapy as scheduled for now." On the December 3, 2021, M164 Form, Dr. Rosenberg marked "therapy" in the treatment plan, and specifically listed vestibular and vision therapy. (Ex. 2).

13. Claimant saw Dr. Rosenberg a few weeks later, on December 16, 2021, for a follow-up appointment. According to the medical record, Claimant was "doing really well [with] lots of improvement." Dr. Rosenberg placed Claimant at MMI as of December 16, 2021. She also opined Claimant had no permanent impairment. In the medical record, Dr. Rosenberg stated "[f]rom my medical standpoint, you are still benefitting objectively from visual and vestibular therapy, I would recommend you continue with these therapies." Dr. Rosenberg completed another M164 form. Unlike the prior M164, Dr. Rosenberg did not mark that therapy was necessary. Further, she marked "no" for maintenance care, and wrote nothing in the section "if yes, specify care." (Ex. H).

14. The ALJ finds that while Dr. Rosenberg ***recommended*** Claimant continue with vestibular and vision therapy, Dr. Rosenberg did not opine Claimant needed this therapy to remain at MMI, and she found that no maintenance care was necessary.

15. On January 3, 2022, Respondents filed a Final Admission of Liability (FAL) based upon Dr. Rosenberg's December 16, 2021, evaluation of Claimant and the completed M164 Form. Respondents did not admit to medical treatment and/or medications after MMI. (Ex. P).

16. Claimant objected to the FAL and requested a DIME. The specific regions to be evaluated in the DIME were "Traumatic Brain Injury, Hearing, Vestibular Disorder and Visuals". Thomas Higgenbotham, M.D., conducted a DIME evaluation of Claimant on May 12, 2022. (Ex. A).

17. Dr. Higgenbotham agreed with Dr. Rosenberg that Claimant reached MMI on December 16, 2021. He provided an 8% whole person impairment rating based upon a 5% rating for a traumatic brain injury manifesting as persistent headaches, and a 3% rating for tinnitus. With respect to a vestibular disorder, Dr. Higgenbotham noted he could not objectively assess disturbances of equilibrium. Claimant had no abnormality of gait, and her balance was reasonable on examination. He did not give Claimant a rating for a vestibular disorder. Similarly, Dr. Higgenbotham did not give Claimant a rating for a visual impairment. According to his report, he could not objectively assess disturbances of the vision system for impairment purposes from the medical records. Claimant's pupils were of equal size and reactivity, extraocular muscles were intact and there were no visual midline deficits. (Ex. A).

18. Even though Dr. Higgenbotham did not give Claimant impairment ratings for vestibular or visual disorders, under maintenance care he wrote "[t]he vestibular and visual therapies since the date of MMI are considered maintenance care. The vestibular and visual therapies are to continue for another 4 sessions each, whereby a self-directed care program should be undertaken." (Ex. A).

19. Respondents filed another FAL on June 14, 2022, based upon Dr. Higgenbotham's DIME opinion. Respondents admitted to the December 16, 2021 MMI date and a whole person impairment rating of 8%. Respondents denied maintenance treatment based upon the M164 form completed by Dr. Rosenberg. (Ex. O).

20. Claimant testified she received about 31 vestibular therapy treatment sessions before December 16, 2021, and she still receives occasional vestibular therapy.

21. Claimant testified she received multiple visual therapy treatment from Alexandra Talaber, O.D., before December 16, 2021. Claimant testified she completed her visual therapy with Dr. Talaber. Claimant had a six month evaluation pending.

22. Claimant further testified she finds the vestibular and visual therapy helpful and does not feel like she has fully recovered. The ALJ finds Claimant's testimony to be credible, but not persuasive.

23. Dr. Mathwich credibly testified that neither vestibular therapy nor visual therapy are reasonable or necessary for Claimant to maintain maximum medical improvement. Dr. Mathwich's opinion is consistent with Dr. Rosenberg's opinion that maintenance treatment was not reasonable or necessary. The ALJ finds this testimony of Dr. Mathwich to be credible and persuasive.

24. Based on the totality of the evidence, the ALJ finds that vestibular therapy is not reasonable nor necessary for Claimant to maintain MMI. The ALJ also finds that visual therapy is not reasonable nor necessary for Claimant to maintain MMI.

25. Respondents admitted to an AWW of $94.57. (Ex. O). But in 2021, Claimant's gross wages between January 7, 2021 and to July 8, 2021 (a 27-week period), were $2,842.20. This equates to an average weekly wage of $105.27 ($2,842.20 / 27 = $105.27).

26. Claimant seeks an increase in her average weekly wage based upon other income, outside of her work with Employer. Claimant credibly testified that she is a self-published author, selling her books on [Redacted, hereinafter AN], and she spends 25-30 hours per week writing.

27. Claimant received royalties from AN[Redacted] in the amount of $2,418.99 in 2020, and $2,977.42 in 2021. (Ex. 4). But according to Claimant's tax records, she claimed negative income from her writing in 2020 of <$2,656.00> and in 2021 of <$1,598.00>. (Ex. K). There is no objective evidence in the record to increase Claimant's AWW based upon Claimant's self-published books during the relevant periods of time.

28. The ALJ finds that Claimant's AWW was $105.27.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Maintenance Treatment

Claimant has the burden of proving entitlement to medical treatment after MMI by a preponderance of the evidence. Claimant must prove that maintenance benefits are related to her work injury and that they are reasonable and necessary to maintain MMI. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Claimant seeks specific maintenance treatment of eight additional visual and

vestibular therapy appointments.[1] Claimant testified she finds vestibular and visual therapy helpful, and does not feel she has fully recovered. Claimant also testified she has completed visual therapy.

Claimant relies upon the DIME physician, Dr. Higginbotham, to support her claim for maintenance benefits. In his May 20, 2022 DIME report, Dr. Higginbotham concluded that vestibular and visual therapy should continue for another four sessions each. A DIME physician's opinions concerning MMI and permanent medical impairment are binding unless overcome by clear and convincing evidence. § 8-42-107(8), C.R.S. There are no disputes regarding Claimant's date of MMI or her impairment ratings. But a DIME physician's opinion regarding what medical treatment is reasonable, necessary, or related does not carry additional weight. *Yeutter v. ICAO,* 487 P.3d 1007 (Colo. App. 2019). When a party is not challenging a DIME physician's MMI determination or impairment rating, the Courts have held that the heightened burden of proof does not apply. *See Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002) (where issue was cause of worsened condition on reopening, DIME physician's opinion not entitled to presumptive effect); *Wilkinson v. Walmart Stores*, W.C. No. 4-674-582 (October 26, 2007)(DIME physician's causation opinion has no presumptive weight on the issue of *Grover* medical benefits); *Moore v. American Furniture Warehouse*, W.C. No. 4-665-024, (June 27, 2007)(the increased burden required by the DIME report did not apply to the claimant's entitlement to a particular medical treatment).

Dr. Higginbotham agreed with Claimant's ATP that Claimant reached MMI on December 16, 2021. He opined Claimant had 3% impairment rating for hearing (binaural tinnitus) and a 5% impairment rating related to persistent headaches. Dr. Higginbotham specifically found Claimant had no abnormality of gait, and her balance was reasonable, so he did not give her an impairment rating for a vestibular disorder. Similarly, Dr. Higgenbotham did not give Claimant a rating for a visual impairment. Despite these findings, Dr. Higgenbotham recommended vestibular and visual therapy on a very limited basis (four sessions each). Dr. Higginbotham's opinion regarding the need for limited additional therapy is credible, but not persuasive.

Claimant's ATP, Dr. Rosenberg, concluded Claimant was at MMI as of December 16, 2021, and that Claimant did not require maintenance medical care. This is evidenced by the December 16, 2021, M164 form, where Dr. Rosenberg specifically noted that maintenance medical care after MMI was ***not*** necessary. As found, Dr. Rosenberg's recommendation that Claimant continue with vestibular and visual therapy was simply that, a recommendation. (Findings of Fact § 14). The ALJ finds Dr. Rosenberg's opinion that maintenance treatment in not necessary to maintain MMI, to be credible and persuasive. Dr. Mathwich also opined that no maintenance treatment is reasonable or necessary to maintain MMI. The ALJ finds Dr. Mathwich's opinion regarding maintenance treatment to be credible and persuasive. Based on the totality of the evidence, neither vestibular nor visual therapy are reasonable or necessary for Claimant to maintain MMI.

[1] It is unclear from Claimant's position statement whether Claimant is seeking eight total treatments, or eight visual treatments and eight vestibular therapy treatments.

AWW

Respondents admitted to an AWW of $94.57. (Ex. O). As found, Claimant earned $2,842.20 between the dates of January 7, 2021 to July 8, 2021 (a 27-week period). This equates to an AWW of $105.27 ($2,842.20 / 27 = $105.27). Claimant's AWW with Employer was $105.27.

Claimant seeks to increase her AWW based upon her assertion that book sales from her self-published books should be included for a fair calculation of AWW. Section 8-42-102(2) of the Colorado Revised Statutes sets forth the method for calculating the average weekly wage. This section states that AWW shall be calculated upon the monthly, weekly, daily, hourly or other remuneration that the claimant was receiving at the time of the injury. The overall purpose of the statutory scheme is to calculate "a fair approximation of the claimant's wage loss and diminished earning capacity."

Section 8-42-102(3) of the Colorado Revised Statutes allows the ALJ to use discretion when the usual methods of calculating AWW "will not fairly compute the average weekly wage." If separate self-employment income is to be considered to increase AWW, the case law requires that the net income be the basis used in those calculations. In *Elliott v. El Paso Cnty*, 860 P.2d 1363 (Colo. 1993), the court held that depreciation claimed on a self-employed truck driver's tax return could be considered in calculating the driver's AWW. The court reasoned that the "cost of earnings must be considered in measuring those earnings." *Id.* at 1366; *see also Osman v. Colo. Cab Co.,* W.C. 4-905-869-01 (ICAO October 30, 2014) (a cab driver's net revenue after deductions for expenses should be the basis for his AWW calculation); *Hunterson v. Colo. Horseracing Assoc*., W.C. Nos. 4-552-585, 4-576-683 (Sept. 29, 2004) (if the ALJ determined the claimant was self-employed, then the ALJ may consider the claimant's expenses and include that reduction in calculating AWW).

A review of the decisions issued in other states are in conjunction with *Elliot, Osman,* and *Hunterson*. The cases consistently hold that a self-employed individual's average weekly wage should be based on gross income and the individual's business expenses, or "the cost of earnings." *See Vite v. Vite*, 377 S.W.3d 453 (Ark. App. 2010); *Appeal of Carnahan*, 821 A.2d 1122 (N.H. 2003); *Hull v. Aetna Ins.*, 541 N.W.2d 631 (Neb. 1996); *State ex rel. Richards v. Indus. Comm*., 673 N.E.2d 667 (Ohio App. 1996); *Meredith Construction Co. v. Holcombe*, 466 S.E.2d 108 (Va. App. 1996) *Christian v. Riddle & Mendenhall*, 450 S.E.2d 510 (N.C. App. 1994).

Here, Claimant received royalties in 2020 and 2021 from AN[Redacted] for her self-authored books, but claimed a negative income on her tax returns from this endeavor of <$2,656.00> in 2020, and <$1,598.00>, in 2021. (Ex. K). There is no objective evidence in the record to increase Claimant's AWW based upon her self-published books during the relevant periods of time. As found, Claimant's AWW is $105.27.

ORDER

It is therefore ordered that:

1. Claimant's claim for maintenance treatment in the form of vestibular therapy is denied and dismissed.

2. Claimant's claim for maintenance treatment in the form of visual therapy is denied and dismissed.

3. Claimant's AWW is $105.27.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-162-468-004

PROCEDURAL HISTORY

The parties were provided through November 29, 2022 to submit post hearing positions statements, briefs or proposed orders. Respondents' Position Statement was timely filed. Claimant's brief was not available at the time this ALJ issued the Findings of Fact, Conclusions of Law and Order dated December 7, 2022 and was not considered.

Respondents timely filed a Petition to Review on December 27, 2022. The Transcript of the hearing was lodged with the OAC on February 10, 2023 and a Notice and Briefing Schedule was issued by the OAC on February 16, 2023. Respondents filed a Brief in Support of Petition to Review on March 8, 2023. Respondents' March 8, 2023 Brief in Support of Petition to Review presented two questions for determination, as follows:

> 1. Whether the determinations made in ALJ Tenreiro's (sic.) December 7, 2022 Findings of Fact, Conclusion of Law, and Order were supported by substantial evidence, and specifically, whether the "actual date of incident" of April 30, 2020 is supported by substantial evidence.
>
> 2. Whether ALJ Tenreiro erred as a matter of law in finding that Respondents were responsible for medical treatment obtained by Claimant in 2020, given that Claimant did not report a potential claim until February of 2021.

Claimant filed Claimant's Response to Respondents' March 8, 2023 Brief in Support of Petition to Review on March 28, 2023. This Supplemental Findings of Fact, Conclusions of Law and Order follows:

ISSUES

Issued heard for hearing on September 12, 2022 were as follows:

I. Whether Claimant has shown by a preponderance of the evidence he sustained a work related injury in the course and scope of his employment with Employer on April 30, 2020.

IF COMPENSABAILITY IS PROVEN, THEN:

II. Whether Claimant has shown by a preponderance of the evidence that Claimant is entitled to medical benefits that are reasonably necessary and related to the injury.

III. Whether Claimant has shown by a preponderance of the evidence who is the authorized treating physician.

IV. Whether Claimant has shown by a preponderance of the evidence he is entitled to a change of physician.

V. Whether Claimant has shown what is his average weekly wage.

VI. Whether Claimant has shown by a preponderance of the evidence that he is entitled to temporary disability benefits from May 27, 2020.

STIPULATION

The parties stipulated that Claimant's average weekly wage was $1,041.40. The stipulation of the parties was approved and incorporated in the Order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 68 years old at the time of the hearing. Claimant was the head of public works for Employer and started working there in 2019. He would care for the grounds, performing maintenance of machinery, and road and park maintenance with the machines he maintained. He had multiple different duties including maintenance of equipment and machinery, including a tractor, street sweeper (which was the biggest piece of equipment), dump truck, motor grader, and pickup with a plow. He was the only public works employee for Employer and used all of the machinery.

2. On or about April 30, 2020, it was springtime in the area and Claimant had to sweep the streets, to get rid of the sand and debris that had accumulated on the streets during the winter months. He was not certain of the exact day the incident occurred, but within a day or so on either side of April 30, 2020 is when the accident happened. He stated that, to the best of his recollection, April 30, 2020 was the correct date of his injury. The sweeper picked up the sand and dirt left over from the winter snow treatment of the roads. He had to do maintenance checks and adjust each machine before use and had to make sure the sweeper was ready to do the street sweeping. He had to perform preventative maintenance on the sweeper, including on the chains that held up the attachment, or hopper. Several parts needed lubrication because it had dried up over the winter, which was caused by the sand and dirt in the hopper (stores the sand and dirt). He also had to spray water on it to clear the filter of the clogged hoses. The sweeper would barely fit through the shop 12 foot doors. He would have to get on the ground to get under it. He had to sit on the ground because the machine was too big to use a mechanical lift to get to the underside.

3. On April 30, 2020, right before lunch when he was getting up from servicing the chain, he struck his head. He was on his side under the machine, he had just fastened the chain, and he tried to get up, from underneath. He struck his head on the metal bar of the car lift just proximal to the sweeper, about one foot away from the sweeper. It was a very solid strike, as he immediately had a headache, felt goofy, and dizzy. When he stood up, he was wobbly and could not walk in a straight line, feeling the pain. He was not paying attention to how he was walking. He sat for one or two minutes. But he had a lot of work on his schedule to do, so he pushed forward to get everything done despite the headache. At the time he said some curse words, but no one was in the shop to hear him. He worked alone.

4. He struck his head on the right temple, above his right ear. He thought he was wearing regular glasses, not his protective goggles, because they were bifocal, and he could not see without them. The glasses did not fall off of him. The area on his head felt bruised for one to two (1-2) days following the incident. While he continued working the full day, because he had a long list of machinery maintenance to complete, he had problems completing the work due to how he was feeling.

5. Following this accident, he started to have cognitive issues, difficulty with memory, word search problems. He did not notice right away, as he was by himself most of the time. At the end of day he would go into the office around quitting time. He did not recall reporting the injury to anyone that day, but did mention it to his wife who worked for Employer. After this accident, he would get dizzy and feel fuzzy, and had memory problems. The medical records mentioned cognitive issues, problems with cognition and memory. He first noticed the cognition problems because he was told by family members. Then he started seeing small things that he would normally do but he did not recall doing them.[1]

6. In the days following the accident Claimant noticed he had continual problems remembering things at work and at home. For example, he had to perform a sprinkler system job and could not work out how to get it done, though it was something he was very familiar with completing. He knew the controller wiring was off. He was also very frustrated that he could not get to the wires he needed to work on because his hands would tremble excessively. This was also after the accident.

7. Claimant ended up going to the hospital on May 26, 2020. That day, the office manager and Town Administrator[2] had sent Claimant home because of the memory problems and the shaking as well as dragging his foot. He remembered he had only wanted to go to his primary care provider at Franktown Family Health, but his wife took him to the emergency room (ER) at Parker Adventist instead.

8. Claimant knows he had a craniotomy. Now he cannot drive safely anymore, anywhere. He lives in a community of approximately 600 people, and few residents drive the roads. He had been driving to the store, but he had the shakes, sometimes severely, though some days were better than others. A lot of the time he simply went with his wife everywhere. His symptoms were multiple, such as his limbs shaking, right hand worse than the left; balance issues, would drag his left foot; serious attention issues, it was hard to focus and to stay focused; memory issues, he would forget what he would be doing on a regular basis and fail to complete tasks. Claimant emphasized that there was no way that he could return to work. He continued working after April 30, 2020, but from May 26, 2020 he stayed at home after his surgery. He did not recall what happened for some months following the surgery. He was frequently fatigued and would sleep a lot. He has not returned to work.

9. Claimant confirmed that either he or his wife likely reported to the emergency room personnel that there were three potential incidents that involved his head, though he did not specifically recall giving the information but they were

[1] The ALJ infers from this that he would complete everyday tasks and have no recollection of actually performing the tasks.

[2] The title of Town Administrator is noted on the unsigned designated provider list, Exhibit K.

documented in the medical records. In fact, he did not recall any of the conversations that happened that day at the emergency room on May 26, 2020. The first incident documented in the records was at work (Work incident) the month prior.[3]

10. The second one was approximately one week before going to the hospital, when he scraped his head on the door frame of his shed, which was approximately one inch shorter than he was. It scrapped his forehead at about the hair line. He had had the shed for 20 years and never hit or scraped his head before that time. The scrape on his head was not very serious as it did not cause any bleeding, it was just surprising. He did not recall exclaiming in pain, cursing or bleeding from the scrape but he did mention it to his wife. (Shed incident).

11. The third incident occurred the day before he was hospitalized. He was in the boat, in the process of getting out. He had one foot over the rail, or side of the boat, and felt very weak, he could barely get the other foot over. He recalled he was holding onto the side of the boat, could not push himself up, so he got kind of stuck. He had a grip on the edge of the boat and as he had a foot on the ground and could not stay up, though he thought he had a firm grip on the side of the boat. He did not recall hitting his head. (Boat incident).

12. Of the three incidents, the injury at work was a lot more serious by far. He had never had shaky hands before the April work incident. He had not suffered from any cognitive issues before, and had no prior problems with memory issues, loss of focus or attention.

13. There were no other significant incidents that he could recall. He stated that he had hit his head a work before as he had worked around heavy machinery in his early career, but it was a long time ago, long before he started working for Employer. There was certainly nothing in the last 5 years before this work incident. He had never been diagnosed with a hematoma before May 26, 2020.

14. Claimant did not recall immediately reporting the incident to Employer. If he did, he certainly did not complete any formal report himself. He did mention the incident to the Town Administrator but never received a list of doctors to see. His wife also worked for Employer and may have also mention the incident to the Town Administrator.

15. Claimant stated that he was foggy when he was admitted to the hospital, and he noted that his wife likely answered a good portion of the questions he was asked. He was having problems with thought process. He went to look for a bathroom in the hallway and was disoriented and urinated on himself. He was dragging his left foot too.

16. Claimant's wife (Wife) testified at the hearing. She noted that she and Claimant had been married for 33 years. She was employed by Employer as a Utility Clerk at the Town Hall, working part time, and part time as a realtor. Outside of work she would spend a significant amount of time with Claimant, and occasionally had lunch with

[3] There was mention of a fourth incident at work, three months prior to admission, which occurred when Claimant hit his head on the mirror of the motor grader as he was getting into the motor grater. Claimant had been using the motor grater to pop ice. This ALJ determines that this incident is inconsequential to the facts of the accident of April 30, 2020.

Claimant, while at work. She stated that she did not recall that Claimant reported the incident to Employer or when exactly Claimant told her about the incident. Around the beginning of May, 2020, she noted that Claimant was having shaking in his left arm. She noted that other strange things were happening to Claimant, such as he could not open a bag of chips. This ALJ infers that he did not have any problems doing that activity before. He could not find the light switch in his bedroom, and he was doing everyday things in a slow-motion kind of way. He was very tired and things just started progressively getting worse after that point. She kept telling Claimant he needed to go to a doctor as he was acting weird, but he insisted that he was fine. Claimant's wife stated that Claimant, prior to the injury at work, was very strong, and had a very high work ethic.

17. Claimant's wife stated that they had to remove their windmill, as Claimant was unable to pound the stakes into the ground, and she had to do it for him. This ALJ infers that it was an activity that he would perform frequently before. She journaled everything and put a timeline together of things that Claimant would not remember. She became very alarmed by what was happening to her husband as he had problems remembering things he had done or said. He had weakness of his limbs. On one occasion, they were out to breakfast with one of their daughters and his arm kept shaking so hard that it caused him to slam a glass full of juice on the table and it splashed everywhere.

18. On the day that Claimant went to the emergency room, May 26, 2020, Claimant's wife spoke with the Town Administrator as well as another coworker who did the financial matters for the town. The Town Administrator advised the wife Claimant had been sent home because the Town Administrator had noticed Claimant not doing well, was dragging his left foot, and was alarmed by the symptoms he was displaying. Claimant's wife told the Town Administrator that she was taking Claimant into the hospital emergency room. Wife thought that Claimant was having a stroke or something because his speech was impaired. She stated that she read the clinical notes from that day but did not think they were accurate. She personally witnessed the boat incident and denied that Claimant hit his head that day, stating that any clinical notes or medical records to the contrary were incorrect. She was aware of the four different incidents, but not when they happened. The work incident with the grader she may have been told while working in the Town Hall.

19. The day Claimant was admitted to the hospital on May 26, 2020, Wife spoke with several people at Employer about the hospital admission. She recalled that she did not formally report the claim in writing until January 28, 2021, including to the Town Manager and the Town Attorney. Wife understood from that conversation that she should consider filing a workers' compensation claim on behalf of Claimant.

20. She did not see any designated provider list and she did all the paperwork for Claimant as he was dealing with memory loss problems. Claimant continued to see his personal providers and the providers referred by the emergency room providers. She stated that Claimant attempted to return to work, but it was not successful and was against provider instructions. He was prohibited from driving, and she had to spend all her time with Claimant as he needed supervision. She had to quit her job because of Claimant's impairments and need for help.

21. Wife noted that she now had to go behind Claimant and finish his tasks because he was unable to focus and complete tasks. Even simple things like, flushing the toilet after going to the bathroom. She stated that Claimant was very good with math and now could not do math without help. She testified that Claimant, after the surgeries, would sleep a lot and was advised that it was because his brain was trying to heal. She also stated she took Claimant to all his medical appointments and none of the providers had suggested that alcohol had anything to do with the SDH.

22. When questioned about the date of injury, Claimant's wife explained that April 30, 2020 was probably a very accurate date. She noted that the Town offices were only open four days a week, and that maintenance ran on a schedule. It was a Thursday and the following week Claimant would probably have started the street sweeping.

23. Wife also started taking down notes in from early May 2020 on her phone when she started noticing things like Claimant's memory loss, physical weakness, walking slow, talking slow. Then, when they were in the hospital on May 26, 2020 she also started journaling a timeline. Further, Claimant's wife denied that Claimant was dependent on alcohol or that he drank every day prior to the SDH.

24. Claimant assumed that there would be a time of recovery, that would allow an occasional drink, but he had not had any alcohol since the hospitalization and brain surgery. Claimant stated he did not continue having his evening drinks after the initial admission to the hospital. This was confirmed by Claimant's wife.

25. The parties submitted over 2,200 pages of records in this matter, which are summarized below only in pertinent part, addressing only those records that might be relevant to the issues to be addressed in this matter.

26. Employer issued a First Report of Injury (FROI) completed by an administrative assistant for Employer on January 28, 2021. The FROI specifically noted that Claimant had reported the incident on April 30, 2020. It also noted that Claimant was inspecting the brushes of the street sweeper. He was getting up off the floor when he stood up, striking the right temple against the "A frame" steel dual post car lift.

27. Claimant stated that he was working for Employer as a salaried employee. He thought he was earning around $50,000.00 per year. The FROI indicated that Claimant was earning an average weekly wage of $1,014.40 and Claimant agreed that it was probably accurate.

28. Claimant filed a Workers' Claim for Compensation on February 4, 2021. It noted that, as he was standing up after leaning over to repair a chain, he hit his head on a car lift and reported it to the Town Administrator. It noted that Claimant was being treated at Franktown Family Medicine.

29. Employer issued a February 9, 2021 document entitled Employer's First Report of Injury.[4] This document also stated that Employer was notified on April 30, 2020 and that Claimant's disability began on May 26, 2020. This form also lists Insurer's information and notes that Insurer received notice of the claim from Employer on January 28, 2021.

[4] Not a Division of Workers' Compensation standard form.

30. Employer submitted Exhibit K, with a designated provider list (DPL), and a cover letter dated February 11, 2021 from Respondents' counsel to Claimant's counsel. The DPL was undated and unsigned.

31. Insurer filed a Notice of Contest on February 11, 2021, denying that Claimant's injuries were work related.

32. Claimant was attended by Reiner Kremer, PA-C of Franktown Family Medicine, LLC, (supervised by Paula Castro, M.D.) beginning October 14, 2015 for multiple conditions including cardiology issues, cervical spine issues, dizziness, myalgias and cervicalgia. On April 2, 2020 Claimant was seen for a regular follow-up. PA Kremer assessed hypercholesterolemia, hypertension, lumbalgia, hip pain, coronary arteriosclerosis, and aortic arteriosclerosis. Other prior records indicate maintenance and cardiology concerns as well as lifestyle concerns such as weight, regular exercise, diet and proper sleep.[5]

33. Claimant was admitted to Parker Adventist emergency room on May 26, 2020 with a history of headaches for the last week in the right parietal and base of his neck. The medical records highlighted that Claimant's wife noted that Claimant had bilateral arm weakness that was fairly equivalent and left leg weakness which was most prominent. She noted that over the last 3 days he would be dragging his left foot toward the end of the day though seems to be better in the morning. He had had some difficulty walking because of this. She noted that his speech was slow, and he seemed to be moving in "slow motion." Claimant denied vertigo or imbalance, but his wife reported his complaints of a sensation of lightheadedness and his tendency to fall towards the left.

34. The discharge notes noted that Claimant reported that he would drink two beers and one shot of whiskey daily before the hospital admission, but denied any withdrawal symptoms or seizures, and upon discharge, medical providers noted that there was no evidence of alcohol withdrawal. Claimant and his wife were cautioned with the risk of alcohol withdrawal which could dramatically complicate the course of his SDH. As found, no records after discharge, nor persuasive evidentiary testimony, showed any evidence of alcohol withdrawal.

35. The discharge records noted that "[I]n hindsight," Claimant and wife noted that Claimant had an injury at work "3 months ago" but did not make anything of it. Then a week ago "he had (sic.)[6] his forehead on the door of the shed." Symptoms may have started shortly thereafter. Then the day prior to admission, he rolled out of their boat, falling, one foot to the ground and hit the left side of his head but denied associated loss of consciousness (LOC). As found, Dr. Rauzzino's opinion that the history obtained by the emergency medical providers on May 26, 2020 while Claimant was under the influence of the severe SDH was not reliable. Following the surgery, Claimant had regained some of his cognitive function and explained a timeline to Dr. Rauzzino that made medical sense and this is more persuasive.

---

[5] There was no mention of dizziness or other cognitive issues on April 2, 2020.

[6] There are several possibilities regarding this mistake, it could mean that a word was missing like "he had scrapped/hit/struck his forehead" or that that there was a typo as in "he hit his forehead." This ALJ declines to make any assumptions in this regard like Dr. Morgenstern in his report.

36. Dr. Michael Rauzzino performed a right craniotomy for evacuation of a subdural hematoma with microscopic technique on May 26, 2020. He stated that indications for the surgery were Claimant's right sided headaches and altered mental status. He noted that diagnostics showed a large right sided holohemispheric subdural hematoma with significant mass effect and midline shift without any unresolved problems. Claimant also had a speech and language evaluation as Claimant reported confusion when he awoke from a brief nap, not knowing where he was. He was able to reorient himself after a couple minutes. His wife noted slower processing than normal. Upon assessment of the Montreal Cognitive Assessment (MoCA) screening, Claimant had mild cognitive deficiencies overall with most significant deficits noted with immediate and delayed recall, verbal fluency, and calculations. During his stay, therapists noted that Claimant demonstrated decreased insight into deficits and mild impulsivity.

37. Claimant was discharged from Parker Adventist on May 29, 2020. The primary diagnosis was acute on chronic intracranial subdural hematoma, daily consumption of alcohol, coronary artery disease, tobacco use disorder, Class 1 obesity with a body mass index (BMI) over 32, benign prostatic hyperplasia and prediabetes. The discharge addressed in-hospital care, including physical therapy and occupational therapy evaluations with gait training and lower extremity strengthening, range of motion exercises and neuromuscular reeducation. As found, upon discharge on May 29. 2020, considering all the records from admission through discharge, there was no persuasive evidence of alcohol withdrawal and three days had passed from the May 26, 2020 admission.

38. The discharge note described the findings of the at least five CT scans performed while in the care of Parker Adventist. The comparison from the CT performed on May 26, 2020, which showed a large mixed attenuation nearly holohemispheric right convexity SDH with areas that may reflect acute on chronic hemorrhage. Near the cranial vertex it measured 3.2 cm. Substantial mass-effect and right hemisphere with sulci that were effaced, right lateral ventricle was effaced, approximately 1.2 cm right greater than left midline shift (MLS). While the CT post craniotomy and evacuation of the SDH on May 26, 2020 showed smaller than on prior diagnostics, measuring 15 mm, there was increased acute hemorrhage within the collection anteriorly. The May 29, 2020 CT showed a decreased mass-effect with left MLS down to 7 mm with residual mixed density right hemispheric subdural collection measuring 1.3 cm in thickness with 7 mm subfalcine midline shift, which was an improvement from the prior day's head CT, with no new intracranial hemorrhage, cortical infarct, mass or other new or acute intracranial pathology. He was discharged with multiple recommendations for outpatient PT/OT/SLP, and medications.

39. Claimant returned to the emergency room on May 29, 2020 and was readmitted on May 30, 2020 with left arm movement suspicious for secondary focal seizure. The CT on readmission showed a recurrent SDH with new loculation of acute SD blood along the anterior and superior margins of the prior craniotomy, with a 13 mm defect. Overall, the size of the residual mixed right SDH was unchanged, measuring 14 mm. There was no change in the 9 mm MLS. They assessed that Claimant had a "recurrent subdural hematoma for which he had craniotomy 4 days ago by Dr. Rauzzino." Dr. Rauzzino was consulted, and he wanted Claimant to be admitted to the hospital. After

he reviewed the CT scan, Dr. Rauzzino would see him in the morning to decide if any other interventions were needed.

40. On June 2, 2020 Claimant was prepped for surgery as following the prior procedure he had done well but after a week, he had worsening symptoms. Diagnostics indicated that Claimant had a recurrent subdural and epidural[7] hematoma. Dr. Rauzzino proceeded with a revision right craniotomy with evacuation of epidural hematoma and recurrent subdural hematoma. The head CT postoperatively on June 3, 2020 showed a right mixed density smaller SDH with maximum thickness 0.7 cm (compared to 1.4 cm), showed less mass-effect, decreased leftward MLS, now only 0.5 cm (compared to 0.9 cm) and a decreased overall size of right posterior falx SDH with maximum thickness 0.4 cm.

41. By discharge, on June 5, 2020, Claimant was showing cognitive linguistic skills within functional limits. In the Discharge Summary Claimant had instructions to schedule a follow up with Dr. Rauzzino within one week and with Reiner Kremer, PA-C as soon as possible (within 1 week). The discharge records did no mention that Claimant had alcohol withdrawal symptoms after spending another week in the hospital. As found, this ALJ gives no credence to the argument that the Claimant was alcohol dependent or a serious alcoholic or that alcohol caused Claimant's SDH.

42. Claimant was evaluated by Derrick Winckler, PA-C from Dr. Rauzzino's office, on June 8, 2020 at Front Range Spine and Neurosurgery. PA Winckler took a history and noted that Claimant continued to have tingling in the fingertips of his left hand, but otherwise improved since the June 2, 2020 craniotomy. He had some drainage at the site of a staple. It was replaced and the drainage stopped. He was advised to return the following week for a wound check.

43. On June 11, 2020 PA Kremer of Franktown Family Medical noted Claimant's recent release from the hospital with subdural bleed that was repaired twice by Dr. Rauzzino. PA Kremer noted Claimant's use of a cane and that he was on short term disability (STD). It noted a referral to neurology for further evaluation. Claimant's physical exam was unremarkable.

44. Claimant started physical therapy with Fyzical Therapy & Balance Centers on June 16, 2020 pursuant to Dr. Rauzzino's referral. They noted complaints of balance and residual left sided strength deficits, with limited ambulation outside the home and with an assistive device. He was discharged on November 24, 2020 due to Claimant's inability to get to his appointments as he was having increased cognitive therapy visits.

45. He returned to Dr. Rauzzino's office on June 17, 2020. Claimant no longer had issues with tingling extremity sensations but continued to ambulate with a cane and continued with his seizure medications. On July 16, 2020 Claimant reported to PA Winckler that he had taken a turn for the worse with worsening headaches and problems with confusion and lethargy. PA Winkler noted that the July 2, 2020 CT scan showed no recurrent hemorrhage and only a small residual subdural hygroma.[8]

---

[7] Epidural hematoma is a blood accumulation between the dura and the skull, while subdural hematoma means a bleed between the dura and brain matter.

[8] A hygroma is a collection of spinal fluid without blood.

46. Pamela Kinder, M.D., a neurologist, first saw Claimant on August 4, 2020 for evaluation and continued seizure medications management, which were increased after his June 2, 2020 admission. The headaches had abated but he continued having fatigue and increased symptoms with stress. Dr. Kinder noted that Claimant would frequently drink nightly except that since his first hospitalization, he had stopped that altogether. Neurological exam was essentially within normal limits except for gait, as Claimant had a tendency to sway to the left. Dr. Kinder noted that Claimant would not be able to drive for approximately one year, recommended a change in medication and gradual exposure to aggravating factors. On August 24, 2020 Claimant indicated to Dr. Kinder that he had almost immediate change in mood with the new medication. She diagnosed localization-related (focal) (partial) idiopathic epilepsy and epileptic syndromes with seizures of localized onset without status epilepticus and traumatic subdural hemorrhage without loss of consciousness.

47. At a follow-up on September 21, 2020 PA Stephen Ladd of Dr. Rauzzino's office, noted that Claimant was recovering fairly well still with complaints of fatigue and shakiness towards the end of the day, but improving strength. Claimant also reported that towards the end of the day he had increasing speech difficulties. PA Ladd recommended continued follow up with the neurologist for control of seizure medications and continued physical therapy. He also reviewed the last CT scan.

48. On October 29, 2020 Dr. Kathryn Polovitz, M.D. conducted an EEG with a finding of persistence of amplitude asymmetry with overlying frequencies appreciated throughout the right frontoparietal region consistent with a breath rhythm, seen in the setting of skull manipulation or underlying skull defect, as well as mild intermittent focal slowing appreciated in the right frontoparietal region suggestive of a mild focal dysfunction in the region. Claimant followed up with Dr. Kinder who noted that Claimant suffered a significant injury to his brain, his studies were still reflecting ongoing impairment at his right frontal/parietal area that could cause confusion, risk of accident and could impair his judgement.

49. The CT of the head and brain from December 31, 2020, as read by David Solsberg, M.D., showed a nearly isodense subdural fluid collection deep to the craniotomy site, that measured 4 mm. There were no mass effects or acute hemorrhage or progression of the hemorrhage since the prior study. Dr. Solsberg noted, at this time, some cerebral atrophy.[9]

50. On January 25, 2021 Claimant was readmitted to Parker Adventist after suspicion of a seizure. EEG and EKG were normal without indication of continued seizures. CT showed an acute 4 mm right frontoparietal subdural hemorrhage with no midline shift. Dr. Rauzzino, from neurosurgery, was notified, he reviewed the films then called back and stated that he felt this was likely old. However, after discussion with the patient's family and wife, they were more comfortable with Claimant staying overnight for evaluation, therefore he was admitted to the medicine service unit. He was discharged and was recommended further neurologist evaluation with Dr. Kinder as well as continued with antiseizure medications.

[9] This was the first CT report to document any atrophy of the brain.

51. Dr. Kinder reevaluated Claimant on February 1, 2021 noting he was alert but could not recall recent events, had a slightly ataxic gait and immediately lost his balance with eye closure. Dr. Kinder again explained to both Claimant and his wife the extent of the brain injury, that blood had "clotted", but remained an irritant to his brain, noting that both Claimant and his wife only now comprehended the extent of the Claimant's disability, finally realizing Claimant would not be fit to drive or work for some time. Dr. Kinder also stated that Claimant should be on long-term disability as he was not able to meet the demands of his job.

52. On February 24, 2021 Claimant followed up with PA Kremer who noted that Claimant continued to follow up with neurology and was disabled as a result of the brain hemorrhage. He was enrolled in a cognitive rehabilitation program in Parker, Colorado. He complained of left sided shoulder problems as well as right sided headaches. PA Kremer ordered a new CT to evaluate whether there were any new brain bleeds. In addition to his prior diagnosis, he was diagnosed with shoulder pain and right sided headaches. Prior exams were also similar and provided no other insightful notations other than Claimant had frequent lab workups.

53. Dr. Bruce L. Morgenstern performed a medical records review independent medical evaluation (IME) at Respondents' request on April 28, 2021. He did not examine Claimant. The records provided to Dr. Morgenstern included Dr. Rauzzino's at Front Range Spine, Franktown Family Medicine, Neurology of the Rockies, Parker Adventist and the FROI. Dr. Morgenstern specifically associated use of alcohol as a possible cause of the subdural hematoma in Claimant as alcohol consumption or abuse leads to both atrophy of the brain, which stretches the bridging cerebral vein tissue and may lead to increased risk of SDHs, and risks of falls due to intoxication. Dr. Morgenstern heavily relied on discrepancies regarding whether the work incident occurred one month or three months prior to the May 26, 2020 admission. He, erroneously, assumed that Claimant filled out the FROI instead of Employer's representative. Dr. Morgenstern stated that "[I]n summary, significant discrepancies exist both in the documented time course as well as the severity of any associated work-related injury," questioning Claimant's credibility as a historian in his final analysis and opinion.

54. Dr. Rauzzino wrote a letter dated January 31, 2022. He stated as follows:

> I treated Mr. [Claimant] directly including having performed surgery and having assessed the hematoma. I have also looked at the images at length. This was a large hematoma, mostly chronic and likely present for at least one month. It is not something that would have occurred from an injury five days earlier. The vast majority of the hematoma, or perhaps all of it, was relatable to the event that occurred one month earlier. There were chronic membranes found at the time of surgery; these membranes take time to develop over the course of weeks, not a few days. It is therefore my opinion as a level II accredited physician that the etiology of his hematoma and the need for surgery had to have been caused by an event that had occurred at least one month prior to his presentation. If he struck his head at work and if this can be documented, it would be my opinion that this was an occupational injury and not related to the minor trauma that may have occurred one week prior to his presentation.

55. Dr. Michael Rauzzino testified as an expert in neurosurgery and as a Level II accredited physician by deposition on October 17, 2022 on behalf of Claimant, as a treating provider. Dr. Rauzzino was Claimant treating neurosurgeon since his first admission in May 2020, when he treated Claimant at Parker Adventist Hospital. Dr. Rauzzino first evaluated Claimant in the emergency room at Parker Adventist, where Claimant was complaining of headaches, left sided weakness, trouble with thinking, and diagnosed Claimant with an "acute on chronic subdural hematoma." This was based on the CT study of Claimant's head. The CT showed a large fluid collection on the right side of his head compromising or compressing the right side of the brain down. Dr. Rauzzino explained that a subdural hematoma is a blood clot or an area of bleeding between the skull and the dura, and the brain. He could tell that it was acute on chronic because of the size of the hematoma. The brain would not have been able to tolerate an acute hematoma the size Claimant had, because it was several centimeters, comprised of the whole side of the brain. The radiologist measured it at 3 centimeters and noted that the brain had shifted approximately one centimeter pushing the brain to the middle. All of which lead Claimant to have neurologic deficits.

56. Dr. Rauzzino testified that Claimant's symptoms were consistent with a subdural hematoma, he recommended surgery and performed the surgery on May 26, 2020. Claimant then had recurrence of blood clotting, so Dr. Rauzzino performed a second surgery on June 2, 2020 to clean out the recurrent clot. Dr. Rauzzino noted that most (greater than 90%, nearly 100%) subdural hematomas are caused by trauma to the head. To assess the causality of the hematoma, he would normally take a history, generally traumatic, viewed the imaging, looking for color and size of the hematoma, and reviewed past records.

57. In this case, Dr. Rauzzino took a history from Claimant that he struck his head at work, which was consistent with the history Claimant provided at hearing, of an incident where he was getting up after working on the sweeper and had a solid hit on his head on a car lift bar. Dr. Rauzzino stated that this type of hit was more than sufficient to have caused the subdural hematoma, even if Claimant had been wearing a helmet. He stated of the three incidents Claimant had, the one the day before had no probability of causing the hematoma of the size Claimant had because not enough time had transpired. The one where Claimant scrapped his head on the frame of the shed, could not have caused it either, because the type of hematoma noted was older than a week prior. Dr. Rauzzino stated that "the only of those three incidents, the only one that had the potential to have caused this was the one that occurred about a month prior." He went on to state:

> Having an injury about a month prior would have been enough time for the bleeding to occur, the hematoma to expand, and the blood to have lysed. So while I try -- you know, very rare in life you can say absolutely, a hundred percent, I can actually say a hundred percent that the injury didn't occur a week prior, and it didn't occur a day prior.
>
> The analogy that I would give you is if you took an oyster and you dropped it to the ground and the pearl rolled out, we know that that pearl didn't develop just from hitting the ground, and it didn't develop a week prior. It takes time for a pearl to develop. It starts with a grain of sand, it grows, and you know, that sort of thing.

> The hematoma he had was like that. That is something that took weeks to develop, you know, to occur. So I can say with surety that of those three incidents, the one that is most plausible is -- or the only one that is plausible would be the injury he described at work.

58. Dr. Rauzzino noted that it takes time for a subdural hematoma to grow and individuals don't always present with symptoms right away because it takes time for the blood clot to form, to a point where the brain can no longer tolerate the change. At the beginning, right after the head trauma, Claimant could not have expected to have any symptoms other than the fact that he hit his head.

59. Dr. Rauzzino opined that individuals, generally, that abuse alcohol, have a tendency to fall and suffer trauma to the head, but Claimant did not provide a history of alcohol abuse to Dr. Rauzzino or any other history separate from the three instances, the shed, the boat and the work incident. Dr. Rauzzino noted that alcohol can cause the brain to shrink and atrophy but not to create a subdural hematoma. Further, in this case, Claimant's brain showed no signs of shrinkage. As found, there was no shrinkage of the brain at the time Claimant had his craniotomies in May and June 2020.

60. When performing the brain surgery to remove the clot, Dr. Rauzzino noted a chronic membrane which had encased the blood and stated that chronic membranes take several weeks to form, not just a week or days.

61. Dr. Rauzzino also noted that the color of the blood on CT showed that most of the blood was isodense, meaning that it had already broken down after clotting and showed as a gray color. He noted that there was only very little blood that showed any acute findings, as a very white color. He explained that:

> …someone with a chronic subdural hematoma, they can have bleeds into it and, you know, sometimes it happens spontaneously. That is how a subdural hematoma develops. You have a little bit of bleeding.
>
> I don't know if Dr. Morgenstern went through this. But there are veins on the surface of the brain that connect to the dura. And if you have an injury and you shear one of those veins, blood will start to ooze out. And as the blood oozes out, it presses against the brain, and since it can't push the skull out, it pushes the brain down, and as the brain gets pressed down, other veins can stretch and they can tear and they can bleed.
>
> So sometimes you can catch it right after one of the other veins has gone, started the bleed, you will see acute blood on top of the other blood, which is more chronic in nature.

62. Dr. Rauzzino stated that within a week after the head trauma, an individual could show signs of weakness, confusion. But as time passes, the symptoms become more pronounced as the subdural hematoma continues to grow over the next weeks. "People hit their head, they don't realize how hard they hit it, they shake it off, they just go about things, and they didn't realize they started a process which is going to lead, you know, to potential death, which is what happens if these things aren't treated."

63. Dr. Rauzzino testified that while the patient was suffering from symptoms of the SDH that his mind could be cloudy but once he had been treated, his mind would have cleared from the effects of the SDH and may have been able to provide a more

detailed or accurate history of the trauma. He stated that "it is hard to get an accurate history when your brain is under so much pressure."

64. Dr. Rauzzino stated that Claimant "almost died. His brain was so compressed that he was having neurologic symptoms, and to ask him to give an accurate history is difficult in that situation." Dr. Rauzzino noted that following the surgery, when Claimant was recovering, he obtained a history of the three incidents and that of the three, his opinion was that Claimant's injury at work more likely than not, caused the initial bleed, which started the hematoma and that it continued to bleed up until he was seen in the hospital emergency room. At that time, the hospital called him in as they had detected a large, acute on chronic intracranial subdural hematoma.

65. On November 7, 2022 Respondents deposed Dr. Bruce L. Morgenstern, a Board-Certified expert in neurology who conducted a record review. Dr. Morgenstern noted that most SH are caused by trauma and that it was rare for a SH to be spontaneous or not have a history of trauma. He explained as follows:

> The -- the blood forms, as we said, between the inter table of the skull below a membrane called the dura and the brain. So it basically squeezes the brain between the skull and the brain. When one leads (sic.) acutely certainly into the brain, or around the brain, blood has iron in it. And on a CAT scan, iron is white. So acute blood looks hyperdense or white.
>
> After about three days, the blood begins to deteriorate. So it goes from bright to kind of gray, which we call isodense. It's about the same color -- same shade of the brain itself. And then beginning about a week or so after that, the blood further deteriorates and becomes hypodense or dark. So we have acute blood, which is white; subacute blood, which is isodense, so sort of gray; and chronic blood, which is dark.
>
> Mr. -- on his CAT scan, Mr. [Claimant] had a combination of -- of hypodense, that is, dark blood, which was chronic, but also areas of acute blood, which were bright white. So it was interpreted as acute superimposed upon chronic.

66. Dr. Morgenstern testified that there were multiple possible causes for Claimant's SH, including excessive alcohol consumption which could have caused a fall, such as the "shed incident:" and the "boat incident" or shrinking of the brain which could have sheered the blood vessels leading to the skull. He also noted that three months as noted in the ER visit report was the outside limit for symptoms to occur from a SDH. He also criticized Claimant's change in reports from the ER visit of three months to the FROI report of approximately one month. Lastly, he noted that because Claimant was wearing a helmet, it was less likely the cause of the SDH, that "it would blunt the injury." The ALJ infers from this statement that it was also his opinion that it could occur.

67. Dr. Morgenstern questioned Claimant's credibility because of the three-month notation taken during the May 26, 2020 emergency room visit. He stated that individuals with SHs can suffer or develop cognitive difficulties as a result of the SDHs and that Claimant was reporting cognitive issues, and that he had presented to the ER with a history of headaches for the last week in the right parietal side.

68. As found, Dr. Rauzzino's opinions are more credible and persuasive than the opinions of Dr. Morgenstern. Dr. Rauzzino was the one to perform the craniotomies in this case and *found that there was no brain atrophy* present at the time of the craniotomies. He studied the CT imaging, not just the reports from the radiologists, both prior to surgery and after surgery and Dr. Rauzzino *found no shrinkage* of the brain, which was Dr. Morganster's explanation for the bleeds causing the SDH.

69. Dr. Rauzzino credibly explained that Claimant was under the influence of the SDH, that showed a midline brain shift, which caused brain damage, affecting cognitive awareness, memory, and speech. He noted specifically that the SDH could not have been caused by the boat incident because the imaging showed isodense, hypodense and hyperdense material. This combination of blood deterioration indicated to Dr. Rauzzino that the shed incident, which occurred approximately one week before the May 26, 2020 admission was not the cause of the SDH.

70. Lastly, Dr. Rauzzino credibly opined that whether the work accident was one month or three, that the CT scan indicated that it was greater than two weeks old but certainly could have been up to three months old due to the isodense blood (degradation of the blood).

71. Dr. Rauzzino's opinion persuasively established that the head trauma was probably caused by the work injury on April 30, 2020. Dr. Rauzzino's opinions are more persuasive over the contrary opinion of Dr. Morgenstern. As found, the fact that Dr. Rauzzino viewed the actual CT scans, not just the reports, as well as performed the surgeries on Claimant's brain and viewed firsthand the condition of the SDH and the surrounding brain tissue showed that it was more likely than not that the SDH was caused by an incident greater than one week before the admission, any time around three weeks to three months. Lastly, Dr. Rauzzino spoke with Claimant in person and obtained a history from Claimant after the surgeries took place, consistent with Claimant's testimony at hearing, noting that any history of present illness taken on the date of admission, would have likely not been fully reliable, not because Claimant was not credible, but because Claimant had a large SDH deforming his brain matter, which was causing brain injury, and causing both physical and cognitive deficits.

72. Further, as found, Claimant's testimony was credible and persuasive. Claimant described the incident which occurred on or about April 30, 2020, where he was getting up after working on the sweeper's chains and hitting his head on the car lift that was immediately adjacent to the sweeper and described it as a "very solid hit." The incident was so traumatic that he immediately had a headache, felt goofy, and dizzy. When he stood up, he was wobbly and could not walk in a straight line, feeling the pain. He sat there for one or two minutes. But he had a full schedule so pushed forward to get everything done. At the time he said some curse words, but no one was in the shop to hear him. While the medical records documented that Claimant "did not think anything of it," as found, Claimant did not have the experience or expertise to recognize that the significant hit to the head would or could cause trauma or injury to his blood vessels sufficient enough to cause bleeding in his brain and eventually causing the midline shifting of the brain on the right.

73. Dr. Rauzzino credibly explained that the slow bleed would have caused symptoms to be gradual. As found, Claimant's detailed description of the work incident was not casual or transient or fleeting but was very memorable, which in and of itself was very persuasive. Claimant has proven by a preponderance of the evidence that it was more likely than not that the traumatic event at work on April 30, 2020 caused the SDH and brain injury. This is in conjunction with Dr. Rauzzino's opinion that the SDH, which was isodense upon admission to the ER, was probably caused by the trauma at work which was approximately four weeks prior to admission.

74. The fact that Claimant did not specifically take notice of or write down the particular date of the injury was not unexpected, as, while he had a solid hit to his head, he was able to continue working, though with some difficulty. As stated previously in this analysis, Claimant did not have the expertise to know that there was a cerebral brain vein that was bleeding in his head. Claimant was persuasive in explaining that the accident at work would have been on or about April 30, 2020 because it was springtime and he needed to do maintenance on the sweeper in order to be able to use it to pick up all the debris on the roads from the winter road maintenance. It is less likely that the documented medical record on admission on May 26, 2020 of a work incident "three months" prior to admission was correct, as Dr. Rauzzino explained Claimant would have been cognitively impaired. Therefore, as found the date of injury is determined to be April 30, 2020.

75. As found, Respondents had notice of the work injury, as the FROI established that Claimant advised his employer of the work incident on April 30, 2020. There was no credible testimony to contradict this as Claimant suffered a SDH and could not remember what he told his Employer. Further, Claimant's wife testified that, the day Claimant was admitted to the hospital on May 26, 2020, she spoke with several people at work about Claimant's admission, including the Town Manager who is the same individual he had notified on April 30, 2020. From those conversations, Claimant's wife proceeded to subsequently report the injury on January 28, 2021. A written Workers' Compensation Claim was filed on behalf of Claimant by his counsel.

76. As found, Respondents failed to designate a medical provider in a timely manner in this matter and Claimant selected his provider, Franktown Family Medicine, and PA Kremer as his authorized treating physician. By the time a DPL was issued on February 11, 2021, Claimant had already selected his ATP and had been in treatment for many months. Further, any provider within the chain of referral were also authorized. PA Kremer referred Claimant to the neurologist, Dr. Kinder, as well as to the neurosurgeon, Dr. Rauzzino, that performed the June 2, 2020 craniotomy for follow up. PA Kremer also made referrals to multiple other providers, including physical therapy and speech therapy. As found, these providers are authorized. Further, as found Claimant was attended on both May 26, 2020 and again on May 29, 2020 in an emergency situation at Parker Adventist Hospital due to severe symptoms due to the SDHs which resulted in admissions and emergency surgeries and are found to be reasonably necessary and related to the April 30, 2020 work related injury.

77. Claimant received appropriate care in this matter. Claimant sought treatment, after the initial emergency care, with Franktown Family Medicine. They referred Claimant to multiple other providers, back to his neurosurgeon, Dr. Rauzzino, for neurologic consultation with Dr. Kinder, for physical therapy with Fyzical Therapy, and to

a speech therapist. All these are reasonably needed care to address the work-related subdural hematoma and the sequelae of the SDH, including possible seizure disorder and care. Claimant has shown that the medical treatment was authorized, reasonably necessary and related to the injury. Claimant has failed to show that a change of provider is proper in this matter as no persuasive testimony was tendered on this issue, a new physician identified or a plausible reason for requesting a change of physician.

78. Lastly, Claimant has shown by a preponderance of the evidence that he was disabled due to the work-related injury, SDH and the diagnosed seizure disorder and was unable to return to work from May 26, 2020 to the present. Claimant is entitled to temporary disability benefits. This is supported by Dr. Rauzzino, Dr. Kinder and PA Kremer's opinions as set forth above.

79. Any evidence or possible inferences contrary to the above findings, were specifically found not persuasive or not relevant.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See

Bodensieck v. ICAO, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Sec. 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Apps. Office*, 905 P.2d 6 (Colo. App. 199f5). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." Sec. 8-41-301, C.R.S.

As found, based on the totality of the evidence, the medical records, Claimant's testimony, and the opinions of Dr. Rauzzino, Dr. Kinder, and PA Kremer are more persuasive than the contrary opinions of Dr. Morgenstern. The record shows that Claimant clearly was at work on April 30, 2020, within the course and scope of his

employment, when he hit his head on the metal bar of the car lift, which was immediately adjacent to the large industrial sweeper. As found, Claimant was not positive that the event took place on April 30, 2020, a day earlier or a day later. But the fact that Employer noted they were notified of the incident on April 30, 2020 is persuasive and the date of injury is found to be April 30, 2020.

Regardless of whether Claimant had a helmet on or not, the hit was sufficient to cause the trauma and the damage to a vein in his brain, which in turn caused a slow bleeding and the eventual severe subdural hematoma and the right midline shift of the brain, necessitating surgery. Claimant and his wife started to notice the effects and symptoms of the SDH shortly after this incident, including changes in speech, slowness of reactions or actions, memory loss and loss of function in his upper extremities. Clearly, even the Town Administrator noticed that something was not right as she was the one to send Claimant home the day he was admitted to the emergency room at Parker Adventist on May 26, 2020. It was not until a CT of his head was performed at the ER that anyone realized that Claimant had a SDH causing midline shift of the brain, which was significant and life threatening.

Dr. Rauzzino was also persuasive and credible in stating that the two incidents one week before being admitted to the ER and one day before (shed incident and boat incident respectively) were probably not the cause of the SDH. Dr. Rauzzino's testimony that because most of the blood was not bright white (hyperdense), it was actually isodense and some that was hypodense was extraordinarily persuasive. Dr. Rauzzino's opinions were credible and persuasive. Dr. Rauzzino convincingly opined that the incident at work approximately four weeks before his admission, whether he was using a helmet or not, was the probable cause of the trauma to Claimant's head and the proximate cause of the subdural hematoma and subsequent seizure disorder and this ALJ agrees.

Claimant credibly testified that he was immediately dizzy after the April 30, 2020 event and had an immediate headache. The fact that he continued working was only a sign that he had a great work ethic, as his wife testified. Claimant has shown that the proximate cause of Claimant's injuries to his head and brain was the work-related accident of April 30, 2020. Claimant's injuries arose from the accident at work in the course and scope of his employment on April 30, 2020.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951).

A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). As found, the emergent treatment Claimant received on May 26, 2020 and May 29, 2020 as the immediate admissions into Parker Adventist Hospital as well as the subsequent brain surgeries performed by Dr. Rauzzino on May 26, 2020 and June 2, 2020 were "bona fide emergencies" in this case as therefore authorized pursuant to statute.

Pursuant to Section 8-43-404(5) (a) (I) (A) the employer or insurer must provide "a list of at least four physicians or four corporate medical providers …**in the first instance**, from which list an injured employee may select the physician who attends the injured employee." Section 8-43-404(5)(a)(I)(A), C.R.S. allows the employer to choose the claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

Pursuant to W.C.R.P. Rule 8-2 (A) "[w]hen an employer has notice of an on-the-job injury, the employer or insurer shall provide the injured worker with a written list of designated providers from which the injured worker may select a physician or corporate medical provider." Further, pursuant to Rule 8-2(A)(1) "[a] copy of the written designated provider list must be *given to the injured* worker in a verifiable manner within seven (7) business days following the date the employer had notice of the injury." (*Emphasis added*.) Pursuant to Rule 8-2(E) "[I]f the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing." Both *Bunch v. Industrial Claim Appeals Office of State of Colorado*, 148 P.3d 381 (Colo. App. 2006) and *Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984) are instructive because they deal with the issue of failure of the employer to designate a physician "in the first instance." See also *Ries v. Subway Of Cherry Creek, Inc*., W.C. 4-674-408, I.C.A.O. (August 4, 2011). These cases are instructive on the Respondents' duty to designate a medical provider when triggered by knowledge of facts that would lead a reasonably conscientious person to believe that the claimant would require medical treatment. Here, Claimant clearly required treatment beginning May 26, 2020.

An employer is deemed notified of an injury when employer has "some knowledge of accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." See 3 A. Larson, Workmen's Compensation Law § 78.31(a) at 15-105 (1983); *Jones v. Adolph Coors Co., supra*. Also, verbal notice to a company

superintendent has been held sufficient to inform an employer of an injury. See Frank v. Industrial Commission, 96 Colo. 364, 43 P.2d 158 (1935). As Respondents acknowledged in their FROI they were provided notice as early as April 30, 2020 and subsequently on May 26, 2020 when he was in the hospital, this triggered Respondents' duty to provide a designated provider list. As Respondents failed to do so, selection passed to Claimant and after he was released from Parker Adventist on June 5, 2020, Claimant was free to select a provider of his own choosing, which he did, in choosing Franktown Family Medicine and its referrals.

Respondents argue that they did not issue the FROI until January 28, 2021, that Claimant did not file a formal Workers' Claim for Compensation until February 4, 2021 and that Respondents had the right to designate a provider at that time. However the FROI notes that Respondents' had notice as of April 30, 2020, which this ALJ finds credible. They also noted in the subsequent FROI file by employer, on a non-Division form, that Claimant's disability began on May 26, 2020. This form lists Insurer's information and notes that Insurer received notice of the claim from Employer. All of these facts, lead this ALJ to conclude and find that Employer knew about the injury and knew when Claimant became disabled and needed medical treatment, which triggered their obligation to file a designated provider list. As found, Respondent failed to do so on May 26, 2020 or immediately subsequent to that date, or within seven business days. Respondents knew Claimant had been seen at the hospital for a serious condition and failed to send the DPL.

Claimant had follow ups with his providers immediately after he was released from the hospital on June 5, 2020 and Respondents knew or should have known he continued to have a disability and needed medical treatment as he did not return to work after having brain surgery. Further, Claimant's wife worked for Employer in the Administration office and this ALJ makes the reasonable inference that she was in communication with Employer regarding her inability to work as well as Claimant's inability to work. All of this information should have lead a reasonably conscientious person to believe that the claimant would require medical treatment. A reasonable administrator knew or should have known that Claimant required medical care and that a DPL should have been sent out or that they had an obligation to designate a medical provider willing to treat Claimant in the first instance. This did not occur until February 11, 2021, over eight months after Claimant became disabled during which time Claimant had continued care by his providers. As found, Claimant proved that it was more likely than not, by a preponderance of the evidence that the right of selection passed to Claimant.

Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical care related to the injuries. As found, Respondents had notice of the accident on April 30, 2020 as established by the completed Division form, the Employer's First Report of Injury issued by Respondents. Also, the Town Administrator and Town Attorney had notice at least by May 26, 2020 when Claimant's wife contacted them to advise Claimant was he was at the hospital and would be undergoing brain surgery for the SDH. The Town Attorney actually mentioned to Claimant's wife that Claimant could file a workers' compensation claim to that effect. Further, Employer failed to designate any medical providers within a reasonable time as Claimant clearly required immediate medical care. Both Claimant and his wife credibly

testified that they had never received a designated provider list. This ALJ infers this to mean that they did not receive one until one was sent to Claimant's counsel on February 11, 2021. Lastly, the DPL that was in evidence failed to show that it was sent to Claimant within seven day following notice to Employer of the work injury or potential work injury either following the April 30, 2020 work related injury nor following the May 26, 2020 admission. Therefore, as found, Employer failed to refer Claimant to a provider in a verifiable manner in order for Claimant to choose a provider at the time he required medical care in by June 2020. The right to select a provider passed to Claimant and Claimant chose Franktown Family Medicine.

D. Change of Physician

A claimant can obtain a change of physician "upon the proper showing to the division." Section 8-43-404(5)(a)(VI)(A); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). Section 8-43-404(5)(a)(VI)(A) does not define a "proper showing," and the ALJ has broad discretion to decide if the circumstances justify a change of physician. *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant receives reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider many factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g*., *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ need not approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007). On the other hand, the ALJ is not precluded from considering the claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688-075 (December 18, 2008).

As found, Claimant failed to establish a basis for a change of physician. Franktown Family Medicine and PA Kremer were authorized treating providers when Claimant initially selected the providers and by choosing to continue to receive treatment through them. Now Claimant is requesting a change in medical provider but provided no persuasive testimony to support a change in provider nor provided an alternative medical provider. Claimant's request for a change of provider is denied.

E. Temporary Total Disability benefits

To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he

left work as a result of the disability, and the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Sec. 8-42-105(3)(a)-(d), C.R.S.

Claimant alleges impaired earning capacity from May 26, 2020 through the present. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive temporary disability benefits. Claimant credibly testified that he would be unable to drive to and from work or drive the equipment needed to perform his work. Further, PA Kremer and Dr. Kinder have both addressed that Claimant continues to be disable from work as he would not be capable of engaging in work activities. Dr. Kinder specifically stated that Claimant should be on long-term disability as he was not able to meet the demands of his job. Claimant was first disabled when he was admitted at Parker Adventist and was not able to return to work beginning May 27, 2020 to the present.

There is some mention in the medical records that Claimant volunteered to assist training the new head of public works for Employer and Claimant's wife also mentioned that Claimant attempted to return to work without success. Therefore, Respondents may take credit for any money paid by Employer to Claimant from May 27, 2020 to the present. Further, there is mention of short-term and long-term disability benefits. If Claimant received either type of benefit or Respondents paid for any portion of the disability benefits policies, they are entitled to an offset in the appropriate proportion.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant sustained a work-related injury to his head on April 30, 2020 in the course and scope of his employment.

2. Respondents shall pay for all authorized, reasonably necessary, and related medical benefits including but not limited to treatment at Parker Adventist, Dr. Rauzzino, Front Range Spine and Neurosurgery, Franktown Family Medicine, Fyzical Therapy & Balance Centers, Centura Health Center for Therapy Parker Adventist, Neurology of the Rockies and Dr. Kinder as well as any other provider within the chain of referral to treat the SDH and seizure disorder, and in accordance with the Colorado Medical Fee Schedule.

3. Claimant has failed to show he is entitled to a change of physician.

4. The stipulation of the parties is approved and granted. Claimant's average weekly wage is $1014.40.

5. Respondents shall pay temporary total disability benefits beginning May 27, 2020 until terminated by law. Respondents are entitled to offset any benefits paid, in accordance with the law.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Claimant has a permanent partial disability of the whole person for his left shoulder injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 57 years old at the time of the admitted work related injury of February 15, 2022. He worked as an 18 wheeler semi-truck trailer driver doing deliveries. He had been doing this type of job for approximately 16 years, but with this employer approximately 4 years. He denied any prior work injuries affecting the low back and left shoulder.

2. Claimant was seen by Anthony de Mooy, MS, BSN for an On-site First Aid Evaluation on February 15, 2022. Claimant reported that he felt pain and a pinch as a result of lifting a semi-trailer door that was sticking and hard to lift. Claimant complained of left shoulder pain and left lateral lower back pain in T-12 region. Upon exam, Mr. Mooy found pain, loss of range of motion, decreased both in the lumbar spine and the left shoulder. He recommended warm/cold packs, rest and elevation of the shoulder as well as over the counter ibuprofen.

3. On February 18, 2022 Mr. Mooy noted that Claimant was having difficulty taking off his sweatshirt and t-shirt, appearing to be unable to lift his left arm and splinting his left arm with his right hand. He observed that Claimant could not lift his left arm past 90 degrees. Mr. Mooy referred Claimant to Dr. Irish for further evaluation.

4. On the same day, February 18, 2022, Margaret Irish, DO of Injury Care Associates evaluated Claimant. Claimant reported to Dr. Irish that he felt a crack in his left shoulder when he opened the trailer door and another crack when he slid a dock plate across the floor. Claimant complained of a "pinch" feeling in his back and stated it was below the shoulder blade and into the low back. On exam, Dr. Irish noted that palpation throughout the neck and back and left shoulder/upper arm showed moderate muscle tightness in the lower left thoracic paraspinal muscles and mild tightness in the left lumbar paraspinal muscles. There was mild muscle tightness in the left upper trapezius area. Active range of motion of the left shoulder was to approximately 90 degrees abduction and forward flexion. There was a positive Neer's, Hawkins, drop arm, speeds and O'Brien's tests in the left shoulder. Dr. Irish diagnosed left shoulder rotator cuff tear and rupture, left shoulder pain, muscle and tendon strain of the muscle and tendon of back wall of thorax, and muscle, fascia and tendon strain of the lower back. Dr. Irish ordered a left shoulder MRI with arthrogram, and physical therapy. She recommended taking ibuprofen, light duty restrictions and follow up.

5. Thomas Robinson, P.T. evaluated Claimant on February 21, 2022 and Claimant was tender on palpation over the supraspinatus and infraspinatus muscles. On the pain diagram for that day, Claimant showed pain in the upper back in the trapezius areas as well as in the chest area but changed to only the trapezius, upper back area of the shoulder blade by February 23, 2022. Claimant was not working at that time. Claimant continued to have tenderness in the supraspinatus and infraspinatus muscles on multiple subsequent days as documented during treatment with Mr. Robinson.

6. By February 24, 2022 Claimant reported to Dr. Irish that the low back pain was almost completely gone, but continued to have pain of the left shoulder and left upper back/upper trapezius area. Claimant reported that physical therapy was helping, especially with range of motion and strength. On exam, Dr. Irish continued to find positive Neer's, Hawkins, drop arm, speeds and O'Brien's tests on the left. Dr. Irish noted that the objective findings were consistent with the work-related mechanism of injury. This ALJ noted that on the pain diagram for this visit, Claimant marked pain in his shoulder blade, trapezius muscle area down the scapula on the left side, proximal to the glenohumeral joint and affecting the infraspinatus, supraspinatus and subacromial muscle areas.

7. The March 1, 2022 MRI arthrogram of the left shoulder showed full-thickness tear through the anterior half of the supraspinatus tendon with medial tendon retraction estimated at 12 mm and resultant extravasation of contrast into the subacromial subdeltoid bursa, with an estimated 9mm tear and no significant muscle atrophy. Dr. Ross of Health Images read the films to show a high-grade partial-thickness tear of the subscapularis tendon with medial delamination of the posterior fibers approximately 17 mm. This resulted in medial subluxation and partial-thickness tearing of the proximal biceps tendon. There were also findings of severe osteoarthrosis of the acromioclavicular joint with minimal undersurface acromial spur formation and subchondral cystic changes along the lateral margin of the humeral head.

8. On March 2, 2022, Dr. Irish referred Claimant out for a surgical evaluation with Dr. Schnell.

9. On March 28, 2022 Claimant was evaluated by Sophie Schmitz, PA-C. Claimant reported slight improvement in the left shoulder pain but continued limited range of motion. Claimant reported he saw Dr. Schnell on March 23, 2022, discussed treatment options and findings of the MRI. Dr. Schnell recommended surgery and Claimant reported he would proceed with the recommend treatment. Ms. Schmitz proceeded to conduct the pre-op laboratory testing. On exam of the left upper extremity, Ms. Schmitz found tenderness to palpation diffusely along the posterior aspect of the left shoulder and upper trapezius region, limited range of motion of the left shoulder when compared to the right, abduction to roughly 60 degrees, limited strength against resistance of the left shoulder when compared to the right, positive Neer's, Hawkins, empty can, and teres minor/infraspinatus tests. Ms. Schmitz assessed Claimant with a QPOP test. Claimant reported, on the pain diagram, pain along the shoulder blade and trapezius as well as into the shoulder joint. On the “QuickDash” assessment, Claimant reported having moderate difficulty with social and family activities with the arm and shoulder, as well as moderate difficulty sleeping due to the pain. He also reported very limited ability to work other than daily living activities.

10. Claimant proceeded with surgical repair under Dr. Luke Schnell on April 7 2022 for a left shoulder arthroscopic supraspinatus, infraspinatus and subscapularis tendon repair, arthroscopic subacromial decompression, left shoulder open long head biceps tenodesis and extensive arthroscopic debridement.

11. On April 19, 2022 Ms. Schmitz noted that Claimant had pain of 6-8/10 located across the superior and posterior of the left shoulder. She noted tenderness along the same area, though Claimant continued to be in an immobilizer due to the surgery. Ms. Schmitz referred Claimant back to physical therapy for post op PT. The pain diagrams continued to show pain in the trapezius and scapula areas.

12. By May 5, 2022 Claimant continued to report pain in the upper back, shoulder blade area. This pattern on the pain diagrams continued throughout his treatment. Claimant reported he could not open jars, wash his back, use a knife, stated that his shoulder pain caused extreme difficulties with daily activities and socializing, and caused so much difficulty that he was having problems sleeping.

13. On May 23, 2022 Ms. Schmitz noted Claimant continued in an immobilizer arm sling, had tenderness to palpation diffusely along the posterior aspect of the left shoulder, limited range of motion of the left shoulder when compared to the right, flexion and abduction to roughly 80 degrees though she did not perform special tests of the shoulder due to Claimant being 7 weeks postop.

14. Claimant attended an appointment at Dr. Schnell's office, where PA Jane Gustafson saw Claimant on June 8, 2022 and took a history. After examination, Dr. Schell noted that there were no post-operative complications. Dr. Schnell recommended continued physical therapy, advancing to phase 2 arthroscopic rotator cuff repair protocols but below shoulder level with the left arm, discontinuing the sling and sleeping in a recliner, and reassessment in 6 weeks.

15. Claimant also followed up at Injury Care with Sophie Schmitz on June 15, 2022 and July 12, 2022. She advanced Claimant's PT regime pursuant to Dr. Schnell's instructions. This ALJ noted that on the pain diagram for this visit, Claimant marked pain in his shoulder blade, trapezius muscle area down the scapula on the left side, above the shoulder joint on the trunk and affecting the infraspinatus, supraspinatus and subacromial muscle areas. The QuickDash form noted Claimant continued to have severe difficulty sleeping due to the shoulder pain, which also interfered with opening jars, carrying bags, and engaging in activities of daily living.

16. By July 19, 2022 Dr. Schnell advanced Claimant to protocol phase 3 twice a week for six weeks, recommending no pushing, pulling, or lifting greater than 10 lbs. with the left arm until the follow up appointment.

17. Claimant followed up with PA Schmitz on August 8, 2022 who noted improvement of the left shoulder motion but still noted Claimant's slight difficulty with flexion, abduction and external rotation. Claimant still reported pain, at the time of exam, but only up to 3/10 at its worst. This ALJ noted the pain diagram for this visit, where Claimant marked pain in his shoulder blade, trapezius muscle area down the scapula on the left side.

18. Claimant's last appointment with Dr. Schell was August 26, 2022. He noted Claimant had good improvement following surgery at 4 ½ months post-operatively. He reported Claimant had returned to work, should continue with physical therapy and a home exercise program for another 3 months, as well as restrictions of pushing, pulling and lifting to 20 lbs. for another 2 weeks with the left arm, then progress to full duty, stating Claimant was at MMI and should return to consult as needed basis.

19. Dr. Richard Pompei evaluated Claimant for the first time on September 2, 2022. He noted Claimant continued to progress with treatment. Claimant was concerned with the 20 lbs. lifting restrictions because his employment required him to lift up to 90 lbs. from 6 inches to 60 inches. Dr. Pompei ordered two more weeks of physical therapy consistent with Dr. Schnell's recommendations. This ALJ noted that the pain diagram for this visit, Claimant marked pain in his shoulder blade, trapezius muscle area down the scapula on the left side, and affecting the infraspinatus, supraspinatus and subacromial muscle areas.

20. On September 16, 2022 Dr. Pompei contacted Employer to determine whether Claimant would be required to lift 90 lbs. from 6 inches to 60 and was advised this was not a requirement of the job. Claimant noted that he was approximately 90% better following the surgery and physical therapy. Dr. Pompei released Claimant to work full time on "a trial basis" and stated, if it went well, he would likely place Claimant at MMI and conduct an impairment rating due to the surgery. Claimant was advised he had a couple more sessions of physical therapy he could attend. This ALJ noted that the pain diagram Claimant had pain in his shoulder blade, trapezius muscle area down the scapula on the left side.

21. Claimant returned to physical therapy on September 21, 2022 with Robyn Ignatowski, P.T. Claimant reported he continued to see improvement with this left shoulder pain, rating it at worst 2/10 on a pain scale. Ms. Ignatowski reported Claimant had returned to work full duty with good tolerance. She documented that Claimant had progressed very well with post-op rehab to date, recommend he finish the next week's scheduled therapy visits and then be discharged. The pain diagram for this visit showed Claimant reporting pain in his shoulder blade, trapezius muscle area down the scapula on the left side.

22. On September 28, 2022 Claimant again was evaluated by Ms. Ignatowski. She documented that Claimant had continued improvement in his left shoulder and rated his pain 3/10 at its worst. She documented Claimant was complying with his independent home exercise program (IHEP) and was ready to continue independently. He demonstrate minor deficits in AROM at end ranges secondary to stiffness. Otherwise he has had excellent recovery, had demonstrated ability to lift 50 lbs. and push/pull 145 lbs. on the sled without provocation of his familiar pain. He met all established goals for therapy and was discharged. Claimant continued to note pain in his shoulder blade, trapezius muscle area down the scapula on the left side, proximal to the glenohumeral joint and affecting the infraspinatus, supraspinatus and subacromial muscle areas on the pain diagram.

23. Dr. Pompei released Claimant at MMI on September 30, 2022. Claimant reported that he was working full duty without issue, had been taking over-the-counter

medications for pain control on rare occasions, had no acute complaints and was ready for case closure. Claimant continued to note pain in his shoulder blade, trapezius muscle area down the scapula on the left side, proximal to the glenohumeral joint and affecting the infraspinatus, supraspinatus and subacromial muscle areas on the pain diagram.

24. On October 4, 2022 Dr. Pompei conducted the impairment evaluation. On that day Claimant reported to Dr. Pompei that he had been diligent with his home exercises, had been swimming, which helped, and he had returned to full duty at work. Dr. Pompei evaluated Claimant's residual impairment in accordance with the *AMA Guides to the Evaluation of Permanent Impairment,* Third Edition (*Revised*). He determined that Claimant had an 8% upper extremity impairment due to loss of range of motion of the upper extremity, which converted to a 5% whole person impairment.

25. Respondents filed a Final Admission of Liability on October 21, 2022 admitting to the 8% extremity impairment, as a scheduled impairment. The FAL noted that Claimant's average weekly wage was $2,499.42 qualifying him for the maximum temporary total disability rate of $1,158.92 based on his February 15, 2022 date of injury. Claimant was 58 years old at the time he was placed at MMI.

26. Claimant timely objected and filed an Application for Hearing on November 18, 2022 on the issue of conversion of the upper extremity impairment to a whole person impairment based on the situs of the functional impairment. Claimant specifically accepted the admission on maintenance medical benefits under *Grover*.

27. Dr. Richard J. Pompei testified by deposition dated March 9, 2023 as a Board Certified expert in occupational medicine and as a Level II accredited physician. He took over Claimant's care when he started at Injury Care Associates, becoming Claimant's authorized treating physician. He reviewed the medical records including history of a lifting mechanism of injury while performing his essential job functions injuring his left shoulder and left low back. Dr. Pompei noted that, after starting physical therapy, Claimant's low back pain resolved but he continued to have left shoulder pain. They obtained an MRI, which showed rotator cuff pathology and warranted a referral to a surgeon. He noted that Dr. Schnell performed a rotator cuff repair, specifically a left shoulder arthroscopic supraspinatus, infraspinatus and subscapularis tendon repair, subacromial decompression, left shoulder open long head biceps tenodesis and extensive debridement.

28. Dr. Pompei explained that after the surgery, Claimant had a normal course of physical therapy. He clarified that every patient is different but it was typical to run PT for approximately four to six weeks postoperatively. He noted that Claimant remained with some motion deficits once he placed Claimant at maximum medical improvement (MMI) on September 30, 2022. He performed an impairment rating examination, which showed Claimant had an 8% scheduled impairment, which converted to a 5% whole person impairment, without apportionment. He explained that each of the tendons and corresponding musculature had a role in the associated loss of function, including the supraspinatus and infraspinatus in abduction and flexion. Dr. Pompei highlighted that the muscles going from proximal to the shoulder joint (proximal and behind his shirt seam), beyond from the scapula to the subscapularis assisted in the rotation of the arm. Further, the infraspinatus and supraspinatus assisted in the raising of the arm and simply raising

of the left shoulder would involve the infraspinatus and supraspinatus as well as crossing the arm in front of the body. He noted that the infraspinatus, supraspinatus and arthroscopic subacromial decompression repairs were proximal to the glenohumeral joint.

29. Claimant had reported to his providers that he was having difficulty sleeping. Dr. Pompei testified that this is an associated symptom and common for patients with post-surgical symptoms, like Claimant, because it put pressure on the surgical site, impinging the joint and the structures of the rotator cuff muscles. Claimant was using a TENS[1] Unit with electrodes that were likely placed along the upper back of the shoulder blade. Claimant noted on September 16, 2022 that he was having severe difficulty with sleeping due to the left shoulder pain, which did not surprise Dr. Pompei. He agreed that the shoulder was the scaffold upon which the arm sits. Dr. Pompei noted that the surgical sites took place in the glenohumeral joint and superior or above to the glenohumeral joint. This ALJ infers this to mean proximal to the joint.

30. Claimant testified at hearing that he had returned to full duty work but that he avoided overhead work with the left arm. He stated that he continued to have tightness in the neck and shoulder, with pain and discomfort, despite having returned to full duty work. Claimant stated he continued to have pain and discomfort over the top of the left shoulder, along the trapezius, including tenderness in the area. He stated that he had never had problems with the left shoulder before this work related injury. While the surgery relieved a great majority of the symptoms, he continued with pain while using his left upper extremity. The pain was also along the shoulder blade and trapezius muscle. He had problems with lifting weight, lifting overhead, and anxiety, though less following surgery. He especially had problems when he slept.

31. Prior to this injury, Claimant was a stomach sleeper and he had to change his habits, but while sleeping he still may turn on to the left shoulder or onto his back and has a lighting pain sensation that will invariably wake him during the night. He testified he had problems using the left arm for many things, including driving. While the TENS Unit does help, he continued to have difficulties with moving the left shoulder, including to do exercises like pull ups. Before this accident, pull ups were a normal part of Claimant's exercise routine but Dr. Schnell advised him to not perform any repetitive overhead work with the left arm. He would place the electrodes for the TENS along the muscles on the upper back, shoulder blade and the biceps. Claimant avoids lift over his head any longer, but rather, if boxes fall off of pallets, he puts the boxes on a 10-wheeler cart so he does not have to place them back on top of the tall pallets. He had to change how he dresses and puts on a shirt and how he buttons up his shirt to avoid putting his arm straight out or overhead. Reaching out and away from his body hurts the left side of his neck.

32. Claimant has difficulty changing lanes when driving as he has difficulty looking over his left shoulder to make sure he is safe to change lanes. He has to turn his whole body in order to see properly. The pain has continued to affect him in the neck, the left shoulder, along the shoulder blade and scapular region, which is commonly called the shoulder blade.

---

[1] Transcutaneous electrical nerve stimulation (TENS), which produces mild electrical current to treat ongoing pain.

33. Claimant reviewed the last pain diagrams he completed on September 6 and September 12, 2020 during his last physical therapy sessions and September 16, 2020 during his visit with Dr. Pompei. He noted that he continued to have pain up to a 3/10, depending on activity levels, and the pain was mainly located on the upper back along the shoulder blade and trapezius muscles up to the shoulder joint or glenohumeral joint. Claimant stated that he had to rely on his right upper extremity to compensate for the left shoulder injury and continued to have pain when lifting with both upper extremities. He also has had problems pushing and pulling pallets full of boxes, especially when the pallets were not properly wrapped and the boxes on the pallet shift or fall, and he has to move the heavy cases.

34. Ronald Swarsen, M.D. testified on behalf of Claimant as an expert in occupational medicine, family medicine and as a Level II accredited physician. While Dr. Swarsen did not examine Claimant, he testified regarding the structures and anatomy of the shoulder, upper extremity and arm articulation. He noted that the shoulder girdle was the scaffold upon which the arm sits and functions, specifically that the arm could not articulate without the muscles and ligaments proximal to the glenohumeral joint. Dr. Swarsen explained that Claimant had tears of the subscapularis, supraspinatus and infraspinatus muscles, which attached to the head of the humerus and were torn off. The surgery performed by Dr. Schnell included reattaching the torn ligaments. He noted that three of the four major muscles were repaired during the surgery.[2] Dr. Swarsen explained that the sack that the muscles glided upon is a cushion of fluid but because there was impingement, Dr. Schnell removed the cushion to enlarge the acromion space. Dr. Swarsen further explained the surgical procedure where the anchors were placed by drilling the bone and securing the torn tendons. There was also extensive debridement and noted that Dr. Schnell caused bleeding to occur as that was a method of irrigating the site of the surgery to promote healing.

35. Dr. Swarsen reviewed the medical records in this case and explained that three of the surgical procedures occurred proximal to the glenohumeral joint. The fourth procedure occurred partly within the joint and distal to the joint humeral head. He noted that the trapezius had three portions which start at the base of the neck on the side of the spine, traverses and attaches to the spine of the scapula and function to help stabilize the scapula and pull it upward. The mid-portion pulls the scapula into the middle of the body. Dr. Swarsen explained that Claimant continues to have an irritated trapezius and supraspinatus, which are proximal to the glenohumeral joint.

36. Dr. Swarsen reviewed Dr. Pompei's impairment rating report and agreed that Claimant has a whole person impairment rating because his continuing loss of function as well as his injury were all proximal to the glenohumeral joint, located in and around the shoulder blade and on the trunk of the body. Dr. Swarsen noted that the range of motion would not be possible without the structures of the shoulder blade and therefore all of the loss of ROM should be considered as a whole person. Dr. Swarsen explained that Claimant's symptoms involved the neck and trapezius muscles. He remarked that Claimant suffered recruitment of the muscles surrounding his left shoulder because of the pain from his work-related injury.

---

[2] The fourth muscle that was not affected was the teres muscle.

37. Dr. Swarsen expounded that during the hearing Claimant would point to his neck and upper back to explain where he was continuing to have pain and discomfort, including the trapezius muscle, which was not uncommon for the kind of injury Claimant had. Claimant's loss of range of motion originated in the scapula with complex movements of the muscle tissue of the muscles attached to the trunk of the body in order to accomplish any movement of the upper extremity. In essence, the loss of function as demonstrated by Claimant continued to be in the trapezius muscle, causing the situs of functional impairment to be to the muscle tissue that is proximal to the shoulder joint.

38. As found, Claimant established that it is more probably true than not that his left upper extremity rating should be converted to a whole person impairment. As found, medical records reflect that throughout the course of Claimant's medical care, all treatment involved the shoulder and not the arm. As found, Claimant continues to experience issues with sleep and left shoulder pain that is located proximal to the glenohumeral joint and specifically over the trapezius area on the upper back. Claimant continues to modify how he performs his current job duties so that he protects his left shoulder and is overcompensating with his right upper extremity. He credibly testified that he has pain at the base of the trapezius into the scapula running along the top and at the front of his left shoulder. Claimant remarked that when he changes lanes in traffic, he needs to turn his whole body to see oncoming traffic as he has difficulty looking over his shoulder. He also now puts on shirts with his left arm first. Finally, Claimant noted that rolling onto his left shoulder interrupts his sleep.

39. Dr. Swarsen persuasively explained that Claimant suffered a functional impairment proximal to the glenohumeral joint, the scheduled rating issued by Dr. Pompei should be converted into a whole person impairment, and Claimant's symptoms involved the neck, trapezius, and rhomboid muscles, which are proximal to the glenohumeral joint. Dr. Swarsen credibly opined that most of the Claimant's surgical procedures on April 7, 2022 (three of the four procedures) occurred above the plane of the glenohumeral joint in the left shoulder. He persuasively explained that the Claimant suffered recruitment of muscles surrounding his left shoulder because of the pain from his work-related injury, and that it was common for injured workers undergoing surgery of the shoulder to suffer dysfunction and pain in the area of the trapezius muscles. He explained that the trapezius muscle is above both the glenohumeral joint and arm, on the trunk of the body. As found, Dr. Swarsen credibly and persuasively opined that the situs of Claimant's functional impairment was above the arm at the shoulder in the area of the trapezius and the Claimant's impairment should be converted to a whole person impairment.

40. Claimant's authorized treating provider's, Dr. Pompei's, credible testimony corroborated Dr. Swarsen's opinion that the majority of the surgeries occurred above the glenohumeral joint. Dr. Pompei also agreed that Claimant's left arm sustained no anatomical disruption to account for the loss of motion, but that Claimant's impairment was to the Claimant's whole person upper extremity, which was a 5 % whole person impairment in accordance with the *AMA Guides* due to diminished motion from the anatomical disruption of the tissues of the rotator cuff tendons and the attached muscles in the torso. As Dr. Swarsen remarked, Claimant suffered recruitment of the muscles surrounding his left shoulder because of the pain from his industrial injury. Dr. Swarsen also persuasively opined that it was common for injured workers undergoing surgery of

the shoulder to suffer dysfunction and pain in the area of the trapezius muscle. As found and concluded, based on the medical records, Claimant's credible testimony and the persuasive opinions of Dr. Swarsen and Dr. Pompei, Claimant suffered a functional impairment above the glenohumeral joint in his left shoulder as a result of his February 15, 2022 admitted work related injury. Accordingly, Claimant has established by a preponderance of the evidence that the 8% scheduled left upper extremity impairment rating issued by Dr. Pompei should be converted into a 5% whole person rating.

41. Testimony and evidence inconsistent with the above findings is either not relevant, credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay

witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Conversion of the impairment

If Claimant sustains an injury not found on the schedule of injuries, Sec. 8-42-107(1)(b), C.R.S. provides Claimant shall "be limited to medical impairment benefits as specified in subsection (8)," or whole person medical impairment benefits. As used in these statutes, the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996).

The "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. 4-240-315 (ICAO, June 11, 1998). If the claimant has a functional impairment to part(s) of his body other than the "arm," he has sustained a whole person impairment and must be compensated under Sec. 8-42-107(8), C.R.S. Whether a claimant has suffered the loss of an arm at the shoulder under Sec. 8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under Sec. 8-42-107(8)(c), C.R.S. is determined on a case-by-case basis. *See Delaney v. ICAO*, 30 P.3d 691 (Colo. App. 2000).

Under this test, an ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment'" and constitute a functional impairment for purposes of assigning a whole person impairment rating. *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002). Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled

or whole person impairment. *See, e.g., Martinez v. Albertson's LLC, supra.* ("The [claimant's] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint"). The mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc.*, W.C. No. 5-095-589-002 (July 8, 2021). However, pain affecting the trapezius, difficulty sleeping on the injured side or limitations on overhead reaching can constitute functional impairment beyond the arm at the shoulder and be appropriate for conversion to a whole person impairment. *Martinez v. Albertson's LLC*, *supra; Brown v. City of Aurora*, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004).

As found, Claimant met his burden of proof and established by a preponderance of the evidence he was entitled to permanent partial disability benefits based upon a whole person medical impairment rating. The medical evidence in the form of treatment records provided objective evidence that anatomical structures beyond the shoulder joint were involved. Dr. Schnell performed surgery on structures that were proximal to the glenohumeral joint and arm. Dr. Pompei's and Dr. Swarsen's opinions also supported this conclusion. In addition, Dr. Swarsen's expert testimony was persuasive on this subject, as well, that the surgery took place in anatomical areas of the body that were proximal to the shoulder joint. Dr. Swarsen was also persuasive that the majority of Claimant's impediments arise from Claimant's dysfunction caused by pain in the trapezius, and supraspinatus areas, which activate when using the upper extremity.[3] Multiple providers, including ATPs and therapists noted that Claimant had pain and tenderness in the trapezius and the pain diagrams consistently showed pain along the trapezius.

More importantly, Claimant credibly described pain and associated functional limitation in areas proximal to his arm such as the scapula and trapezius. This pain affected his ability to engage in various activities, including overhead reaching, looking over his shoulder while driving, protecting his left upper extremity while working, overcompensating with his right upper extremity, and interruption of his sleep due to pain in the left trapezius. Claimant's testimony regarding the injury to his left shoulder and its sequelae provided the factual support for this ALJ to find that Claimant has a functional impairment to parts of the body located on his truck/upper back along the trapezius muscle and support the determination that the situs of the functional impairment should entitle Claimant to a whole person rating. The ALJ also finds that Respondent presented no credible evidence to contravene the finding that structures beyond the shoulder joint were implicated. Based upon the totality of evidence presented at hearing, the ALJ determines, finds, and concludes Claimant showed he sustained a functional impairment that extends beyond the "arm at shoulder."

---

[3] This ALJ declines to read the *AMA Guides* in the manner that Respondents propose (that the arm at the shoulder is equivalent to the upper extremity and therefore the structures of the shoulder girdle are part of the arm, not the trunk.) In fact, this ALJ reads the statutory provision of the "arm at the shoulder" to mean that the arm ends at the shoulder junction of the ball and socket or the glenohumeral joint.

Dr. Pompei provided an 8% scheduled rating, which converted to 5% whole person. Neither party requested a DIME, so Dr. Pompei's rating is binding under Sec. 8-42-107.2(b), C.R.S. Claimant is entitled to PPD benefits based on Dr. Pompei's 5% whole person rating. Claimant was 58 years old when he was placed at MMI on September 30, 2022. His TTD rate was $1.158.92. Therefore, 5% whole person provides PPD in the amount of $24,105.54.

ORDER

IT IS THEREFORE ORDERED:

1. Insurer shall pay Claimant PPD benefits based on Dr. Pompei's 5% whole person rating in the amount of $24,105.54.

2. Insurer may take credit for any PPD benefits previously paid to Claimant in connection with this claim.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-147-151-004

PROCEDURAL HISTORY

On July 19, 2022 Respondent filed an Application for Hearing on issues which included overcoming the DIME physician's opinions by clear and convincing evidence, causation, failure to comply with modified job offer and unauthorized medical care, as well as offsets, overpayment and credits.

Claimant filed a Response to Application for Hearing on August 18, 2022 listing the issues of medical benefits that were authorized, reasonable and necessary, temporary total and temporary partial disability benefits, and defense of the DIME physician's opinion and defense to failure to comply with modified job offer.

The parties submitted the Stipulation of Facts on March 29, 2023. The Stipulation of Facts are accepted and approved. The Stipulation of Facts are the official transcript for the November 15, 2022 hearing.

ISSUES

I. Whether Respondent proved by clear and convincing evidence that the Division of Workers' Compensation Independent Medical Examination (DIME) physician, Dr. Ranee Shenoi, was incorrect in her findings of causation, maximum medical improvement (MMI), and permanent partial impairment.

II. What were Claimant's permanent partial impairments related to the work injury, if any.

III. Whether Claimant has shown by a preponderance of the evidence that she sustained a loss of wages from March 29, 2021 through MMI.

IV. Whether Respondent has shown by a preponderance of the evidence that Claimant was responsible for her wage loss and Respondent entitled to recoup an overpayment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Generally:

1. Claimant worked for Employer as a bus driver since approximately 2018. As part of her job, she conducted a pre-trip inspections of the bus. She had to open the hood of the bus, check oil and everything under the hood to make sure it was in working order. She had to do a break test, check windows and seats, check the First Aid kits, the tires, bolts, lights, dings or damage to the bus. The pre-trip inspection allotted time was

12 minutes but sometimes it took more time to complete it. Then she would be ready to proceed with her route. She would pick up elementary, middle school and high school children on her route. The preschoolers had paraprofessionals sometimes ride with them during the noon time. She never really had any problems with the kids, and she did not normally have do much lifting other than the heavy bus hood. The job required her to lift 50 lbs. minimum to qualify for the job. Claimant did not have any problems doing her day to day activities related to the job before her accident. She stated that she liked the summers off because it gave her time to recoup and recharge.

2. On a snowy day, on November 11, 2019, she slipped on ice when stepping up onto a curb. She had a bag in her left hand and a purse in her other hand. She slipped in a split with each leg going opposite ways. Another coworker went to grab her on her way down. She fell onto her big bag and her left leg, hitting the ground, but not all of her body fell to the ground. She did not specifically hit her head or her shoulder. One of her hands did hit the ground. She jarred her body but she did finish her bus route. She reported it to her supervisor and was seen by Dr. Matus on the date of her accident.

3. Claimant stated that she had no prior problems or injuries prior to the November 11, 2019 event. This ALJ does not find this particularly credible since Claimant injured her left lower extremity, specifically had a bone spur in her left heel in 2000, including a surgery to her left heel,[1] and had a neck whiplash injury in the 1980s, as documented in the medical records.

B. <u>Medical records</u>:

4. Claimant was evaluated by Dr. Brenden Matus at WorkWell on March 10, 2020.[2] Dr. Matus noted the patient was feeling a bit better. She had a flare with a particular stretch. Claimant had pain present in the mid-to-low back and left foot. Her pain rating was 7/10. She had "upper back neck tension and paresthesias in the right ulnar nerve distribution since her last massage." Dr. Matus stated he would monitor this problem. He further stated that if she continued to have left foot pain, he would order an MRI of the left foot and ankle as well as refer her to Dr. Myers.

5. On May 15, 2020 Claimant was evaluated by Dr. Bruce Cazden at WorkWell. He noted the mechanism of injury of November 11, 2019 when Claimant slipped on ice while stepping up on a curb with her left leg. She reported right mid to low back pain from slipping and left foot and ankle pain. He specifically noted that "[S]he has new symptoms of neck pain with numbness and tingling in both upper extremities. It does not appear that this is related to her work comp claim." He did not diagnose the neck condition as work related.

---

[1] See Dr. McCranie's, Dr. Chan's and Dr. Shenoi's past medical history and surgery sections on Exhibit F, bate 031; Exh. M, bate 90, and Exh. N. bate 99.

[2] Records between November 11, 2019 and March 10, 2020, where not in evidence, only other providers' summaries of the visits, including physical therapy and massage therapy visits. This ALJ chose to rely on the descriptions from those records.

6. An MRI[3] of the cervical spine from July 14, 2020 showed degenerative disc and joint changes with mild dural sac indentation and multilevel bilateral foraminal narrowing.

7. Samuel Chan, M.D. evaluated Claimant on July 24, 2020. He took a history consistent with that described by Claimant and other providers. He specifically noted that claimant had landed on her left foot and continued to have problems with the left foot, low back, interscapular area and cervical spine. Claimant reported that her treatment plan was somewhat interrupted because of the COVID pandemic. He documented that Dr. Myers was treating her for the left foot pain and recommended she obtain HOKA shoes. He reviewed all of Dr. Matus' records. He reviewed both the x-rays of the foot and the MRI of the ankle and foot. They showed moderate anterior talofibular and mild deltoid ligament sprains as well as suspected hammertoe deformities but were otherwise normal. Dr. Chan documented that Dr. Matus continued to cite to Claimant's ongoing cervical spine complaints. On exam he noted that Claimant was tender to palpation of right greater and lesser occipital nerve insertion areas. There was also tenderness to palpation of right trapezius, levator scapulae, and splenius capitis muscles, with active trigger points noted. Tenderness to the bilateral AC joints but otherwise a normal cervical spine exam. He noted negative lumbar spine exam but tenderness to palpation of the calcaneus, sinus tarsi and downgoing toes bilaterally. He diagnosed bilateral occipital neuralgia, migraine syndrome and myalgia. He recommended trigger point injections for the occipital neuralgia, which he proceeded to perform.

8. The initial visit with Dr. Barry Ogin was on November 9, 2020 when Dr. Ogin took a fairly long history. Claimant was referred to Dr. Ogin by Dr. Matus with ongoing complaints of neck and cervicogenic headaches. He noted that Claimant had a comprehensive course of conservative care including physical therapy, massage therapy, dry needling and trigger point injections, and medications. Claimant reported that her low back pain only gave her occasional problems. He noted that Claimant's chief complaint was her neck, including aching and stiffness centrally but worse on the left hand than on the right side. She reported daily headaches and radiation into her shoulders and upper back centrally. Claimant had full shoulder range of motion without pain, scapular retraction and protraction was symmetric, she had full active range of motion of the cervical spine including with flexion, extension, right and left rotation, right and left lateral flexion. She was not reporting any numbness and tingling at that time. Dr. Ogin recommended medial branch block to the cervical spine given the MRI indications and, per the guidelines p. 28, physical examination findings consistent with facet origin pain, at least 3 months of pain, unresponsive to conservative care, including manual therapy, and has a positive psychosocial screen without aberrant concerns.

9. Dr. Ogin also documented that on December 10, 2020 she had a 100% relief following a cervical facet injection at the C2-5 bilateral MBB.

10. Dr. Ogin's report noted responses for December 18, 2020 that Claimant was three days post medial branch block (MMB) and her neck and headaches were feeling better with a good diagnostic response though the pain was gradually returning.

[3] Description taken from multiple medical records, including Dr. Ogin's March 11, 2021 report, as the original report was not in evidence.

She also complained of tingling and numbness down her left arm and into her left fourth and fifth fingers of the left hand.

11. On March 11, 2021 Dr. Ogin took a history that Claimant had increasing pain along her parascapular region, with severe pain in her right upper shoulder, down her medial arm to her hand, along the ulnar distribution. She also complained of pain in her sternum. She denied any new injuries other that the fact that she had returned to driving and had to hold out her arms to hold the steering wheel. His diagnosis and assessment was sprain of the ligaments of the cervical spine, including cervical facet joint syndrome, cervical pain, myalgia, cervical stenosis and cervical disc disorder with radiculopathy of mid-cervical region. He noted that the upper neck and headaches had responded to treatment but that, following performing an EMG which revealed a right C8-T1 radiculopathy. After a re-review of the MRI, the multi-level degenerative disc with spinal stenosis was more prevalent in the C5-C7. With that in mind, he recommended a C7-T1 epidural steroid injection.

12. On April 11, 2021, Dr. Paul Ogden responded to a request to approve a modified job offer, which included assembling and bagging hoagie sandwiches, assisting administrative personnel, and watching videos. Dr. Ogden added that "[B]ased on the restrictions of March 29, 2021 of avoiding reaching out or overhead" as well as allowing "position changes sit/stand/walk every 20-30 minutes" that Claimant was able to perform the tasks listed.

13. Respondent scheduled Claimant for an Independent Medical Evaluation (IME) with Dr. Kathy McCranie which took place on June 15, 2021. She took a history, which included the event of November 11, 2019 as well as an incident where she was cleaning out a closet and had an immediate onset of symptoms into her upper extremities and neck. She noted Claimant's recall of her medical treatment including that she did not have any benefit from the trigger point injections but had 100% immediate relief from the epidural steroid injections, though they lasted for a fairly short time before symptoms started to return. She also reviewed the medical records. Dr. McCranie opined that Claimant sustained both a lumbar strain and a strain of the foot and ankle, both of which resolved. She opined that Claimant's continuing complaints involving the cervical spine and the right greater than left upper extremity paresthesias, which were not documented until March 10, 2020, were not work related conditions. Lastly, Dr. McCranie opined that the right shoulder labral tear was not related to the November 11, 2019, injury, as an acute labral tear would cause immediate, severe pain in the shoulder and Claimant did not report shoulder pain for approximately seven months post-accident. Dr. McCranie further stated that, while the treatment for the cervical spine and shoulder were reasonably necessary, they were not causally related to the November 11, 2019 work injury.

14. Dr. McCranie stated as follows:

> [Claimant] has reached MMI for her work-related lumbar and left foot injury. She would have reached maximum medical improvement by July 6, 2020. At that time, her back symptoms had resolved and her left ankle symptoms were very minimal. Considering complete resolution of her lumbar symptomatology, normal examination of the lumbar spine, and full lumbar range of motion; there is no

> permanent impairment of the lumbar spine. Similarly in the left ankle, she has had complete resolution at this time of her left ankle pain with full range of motion. Therefore, there is no impairment of the left ankle.
>
> It is my impression that the cervical spine is not accident related, making an impairment rating non-applicable. If, however, this condition is deemed to be accident related for administrative purposes, an impairment rating was performed as it is my opinion that she is at MMI for the cervical spine regardless of causality. For degenerative changes in the cervical spine, she would receive a 6% impairment with a 4% impairment for range of motion as her sensory examination was normal. Motor examination revealed some weakness in the ulnar distribution, more likely related to findings of peripheral neuropathy. If the cervical spine is deemed to be accident related, impairment would be 10% whole person. As noted previously, it is my opinion, however, that this impairment is not accident related. Regarding the right shoulder, it is my opinion that this impairment is not accident related. She is currently involved in ongoing workup of the right shoulder and if this is deemed accident related, this is not yet at MMI. However, it is my opinion, this should be treated outside of the worker's compensation arena for the reasons outlined above.

15. On June 21, 2021 Dr. Matus issued a report which included a description of Claimant's treatment to date. He noted his diagnosis as a work related fall injury with a strain of the low back and other muscle spasms, and strain of the muscles and tendons of the ankle and foot and the objective findings of those injuries were consistent with the history and mechanism of injury.[4] His physical exam revealed full range of motion of the cervical spine though Claimant reported tenderness on palpation of the right paraspinous muscles and trapezius muscles on the right, but no midline cervical spine tenderness. Back pain was causing minimal to some difficulty in daily life and left ankle had very minimal pain. Dr. Matus provided restrictions of limited use of the right upper extremity, avoid repetitive reaching out or overhead; limited lift, push and pull of 5 pounds maximum, and should be allowed to change positions regularly between sit/stand/walk at least every 20-30 minutes; and referred her to Dr. Primack for a final evaluation and impairment rating.[5]

16. Claimant was placed at maximum medical improvement on July 9, 2021 by Dr. Matus without restrictions or impairment. Dr. Matus agreed with the IME examiner, Dr. McCranie that the cervical spine, headaches and shoulder conditions were not work related injuries and should be treated by Claimant's PCP, if Claimant continued to have ongoing complaints regarding those problems. He did not provide a diagnosis for the neck, nor did he show in his report that he performed an impairment rating for the related low back or left lower extremity. Yet he continued to document that back pain was causing minimal to some difficulty in daily life and left ankle had very minimal pain. Dr. Matus stated "[W]e have agreed to target Maximum medical improvement status, Injury related symptoms resolved, ongoing non related symptoms." As found, Dr. Matus placed

---

[4] As found, the section in Dr. Matus' June 21, 2021 and July 9, 2021 reports under "Case Summary" (Exh. H, bates 054-055; Exh. I, bate 065-066) are summaries of other providers' diagnosis, opinions and recommendations for treatment and were not necessarily adopted by Dr. Matus.

[5] The evaluation with Dr. Primack did not take place, according to the medical records and the parties statements at hearing.

Claimant at MMI as of July 9, 2021 noting that only the low back and left lower extremity injuries were related to the November 11, 2019 work injury. As further found, he did not perform an impairment rating with regard to either condition but considered them resolved.

17. On July 22, 2021 Respondent filed a Final Admission of Liability. Claimant objected and requested a Division Independent Medical Evaluation (DIME).

18. Dr. Ranee Shenoi was selected as the DIME physician. She evaluated Claimant on October 12, 2021 and issued her report on October 21, 2022. She opined that Claimant reached MMI on July 9, 2021 and had a 7% whole person impairment related to the cervical spine, including 4% for specific disorder of the spine (Table 53 IIB), a 2% for loss of range of motion, and 1% for neurologic system (loss of strength). Dr. Shenoi stated that she was asked to evaluate the cervical, thoracic and lumbar spine as well as the left foot. She stated "[A]s the DIME Examiner, I will address MMI and impairment. I will not address causation."

19. Dr. Shenoi opined that Claimant had reached MMI on July 9, 2021. She stated that the DIME application did not request she address the bilateral shoulder problems and she believed that the thoracic spine issues were coming directly from the shoulder pathology. Based on the *AMA Guides* she opined that the left foot injury provided a 1.25% impairment of the lower extremity which converted to 0% whole person impairment of the foot based on the peroneal nerve injury for altered sensation.

20. Dr. Shenoi asked Claimant what complaints were related to the work injury and she related sleep problems, pain in her right shoulder, arm, elbow and hand, including burning in the right axillary line and that her hand would get cold. She reported multiple neck complaints, going across her shoulders, which radiated into her chest and sternum as well as the right upper extremity. She reported headaches that were only intermittent. She also reported low back and left foot pain as well as ringing in her ears. As found, Dr. Shenoi only provided an impairment rating for the neck and foot, without providing a causation analysis of the body parts for which she was providing an impairment ratings. Further, she did not rate the lumbar spine or go through the process to assess the lumbar spine range of motion.

21. Dr. McCranie issued a supplemental report on November 5, 2021. Dr. McCranie specifically commented regarding the DIME physician's report. She noted that Dr. Shenoi had specifically erred by failing to perform a causation analysis. She noted as follows:

> A causation analysis is necessary in order to determine if the body part to be rated is applicable for a work-related impairment rating. By stating that she made no causation analysis, Dr. Shenoi is indicating that she is not making an opinion as to whether the rating provided is applicable to the work injury. The rating itself was otherwise technically correct. However, without any causation analysis, there is no indication that the impairment rating is applicable to the work injury of November 11, 2019. According to Desk Aid 11 impairment rating tips number 7, division independent medical examiner may declare that a condition is not work related. This may occur despite the fact the payer has accepted a body part or a diagnosis as part of the claim. In [Claimant]'s case, treatment has occurred and MMI has

been declared by an authorized provider. Considering the late onset of [Claimant]'s cervical symptoms, and a new non-accident-related event that caused the onset of these symptoms in April of 2020, it was essential that Dr. Shenoi perform a causation analysis in order to opine as to the relatedness of the cervical impairment.

C. <u>Dr. McCranie's Deposition:</u>

22. Dr. McCranie testified by deposition on June 1, 2022 as a board certified physiatrist and pain medicine specialist, with a Level II accreditation. She noted that she continued to see both private patients, including at Concentra twice a week, and patients for medicolegal evaluations with approximately 30 years of experience. Dr. McCranie indicated she was familiar with the *AMA Guides to the Evaluation of Permanent Impairment,* Third Edition (*Revised*), WCRP and the Impairment Rating Tips of the Colorado Division of Workers Compensation.[6] She specifically noted that Rule 11-3(K) required that each DIME physician make "all relevant findings regarding MMI, permanent impairment, and apportionment of impairment, unless otherwise ordered by an ALJ." Dr. McCranie stated that a causation analysis was an integral part of conducting a determination of permanent impairment. She specified that physician were required to comply with the Rules, the Division materials and Level II accreditation coursework.

23. Dr. McCranie testified that following the review of the medical records and consideration of the history provided by Claimant, March 10, 2020 was the first medically documented problem, including some tension in her neck and some right upper extremity paresthesias. The first documented pain in her cervical spine/neck was on May 15, 2020. Dr. McCranie explained that in order to link a cervical injury to the original date of injury, there needed to be a temporal relationship between the onset of symptoms and the initial accident, which was not present in this case. What was significant here is that Claimant reported to Dr. McCranie that she was cleaning out her closet in April of 2020, and she was reaching, lifting and moving some hair products, towels and sheets from her closet, and had an acute onset of neck pain and right shoulder pain at the point that brought on a lot of these symptoms, which was a more probable cause of Claimant's neck and shoulder pain.

24. Dr. McCranie specifically noted that Dr. Shenoi was aware that the medical records indicated Claimant had not reported any problems until the March 10, 2020 date when she reported tension in her upper back and neck, that Dr. Shenoi was aware of the "closet" incident, but that Claimant had stated that she had felt a pop in physical therapy as an explanation of when she started to have problems in her neck and upper back. Dr. McCranie explained that it was incorrect to simply rely on a Claimant's claim that any particular injured body part was caused by the injury but it was up to the DIME physician to make and explain the causation analysis. As a DIME physician, it is up to that physician to determine the injuries or body parts that are causally related to the work injury in question and the DIME physician cannot rely on the items check off on the Application for

[6] Division's Desk Aid No. 11, Impairment Rating Tips, Division of Workers Compensation Rules of Procedure.

a DIME. Finally, Dr. McCranie opined that Dr. Shenoi committed a clear error in addressing MMI and impairment and declining to address causation of the particular body parts, which rendered her opinions on impairment clearly incorrect under the *AMA Guides*, Third Edition, and the Division training material. Dr. McCranie stated that based on the Division's Rules of Procedures specifically dealing with DIMEs and Level II accreditation, the Division's Impairment Ratings Tips, the training for recertification, the requirement that physicians utilize the methodology in the *AMA Guides*, Third Edition, it is absolutely incumbent on a DIME physician to do a causation analysis.[7] Dr. McCranie also suggested that Dr. Shenoi relied on the fact that the ATPs had provided treatment which was paid for by Respondents. This ALJ agrees with Dr. McCranie's inference that in relying on the fact that Respondent paid for the treatment for the cervical spine that it justifies addressing impairment to that body part as related to the November 11, 2019 work injury, which is clearly incorrect.

25. Dr. McCranie cited to the Impairment Rating Tips. The Section on DIME Panel Physician Notes, under Section 7, the tips emphasize as follows:

> Declaring Condition is Not Related to Injury: Division Independent Medical Examiners may declare a condition is not work-related. This may occur despite the fact a payer has accepted a body part or diagnosis as part of the claim, treatment has occurred, and MMI has been declared by the authorized provider. If this situation arises, an impairment rating must be provided in the report or as an addendum to the DIME report. This information will often be used by the parties for further negotiations and/or settlement of the claim. However, only the work-related impairment ratings are to be recorded on the DIME Examiner's Summary Sheet.

D. Dr. McCranie's Hearing Testimony:

26. Dr. McCranie's testimony at hearing was consistent with her testimony during the deposition and her reports. She opined that, considering the degenerative disc disease in the spine as verified by the MRI report of the cervical spine and the evidence of acute injury sometime in April or May 2020, when she reported excruciating pain, the incident of the closet was the more likely cause of the neck injury. Further, Dr. McCranie did explain, that sometimes, ATPs take time to make a final causation analysis, which Dr. Matus provided in his MMI report. She opined that the fact that Claimant was sent to multiple providers, including Drs. Chan, Ogin, and Castro, for the neck injuries, was not a *de facto* determination of causation.

27. Dr. McCranie opined that Dr. Shenoi's failure to specifically address causation in her DIME report was clearly incorrect. She explained that, based upon her understanding of the Division of Worker's Compensation Rating Tips, the *AMA Guides to the Evaluation of Permanent Impairment*, Third Ed. (*Revised*), and other medical publications that the failure to perform or provide a causation analysis to support her cervical impairment rating rendered her opinion on medical impairment clearly incorrect

[7] At hearing Dr. McCranie explained that the *AMA Guides to the Evaluation of Disease and Injury Causation* explains a somewhat different and more expansive methodology of causation determinations. However, This ALJ will only rely on the law and rules applicable in this matter.

because a DIME physician must do a causation analysis for every body part that is rated and that it is insufficient and contrary to the impairment rating tips simply because the claimant had received treatment for the body part to provide a rating. Dr. McCranie also explained that the causation analysis required both an explanation of the temporal relationship of when the symptoms manifested as well as an analysis of the mechanism of injury. Dr. McCranie opined that without this analysis regarding the initial causation, the entire rating process was defective.

E. <u>Risk Manager's Testimony:</u>

28. The Risk Manager for Employer (Redacted, hereinafter JO) testified at hearing in this matter. She stated that she handled the workers' compensation claims until the excess policy carrier was activated by large expenses. As the Risk Manager she managed, monitored, reviewed, and made decisions with regard to workers' compensation claims and liability. She was generally involved from day one of a claim. She was the one that issued the First Reports of Injury (FROI) and made sure she was getting the M-164 forms to determine a worker's work status. She commented that she stayed involved in a case until the end of the claim.

29. The Risk Manager explained that Employer saw claims from the perspective of getting workers back to work, so they may authorize medical care that may not necessarily be related to the particular work accident. Employer would frequently request that providers conduct diagnostic testing early on in the case instead of delaying the process, in the hope that conservative care would work and the worker would get back to work sooner.

30. JO[Redacted] was involved in the case, however, a younger adjuster through the third party administrator, who may not have felt confident enough to question the ATP's causation analysis, was handling the day to day issues. JO[Redacted] testified she might have handled this case differently but she had a wealth of approximately 30 years' experience. It was clear that the adjuster continued to authorize care despite a lack of a good causation analysis, until she, as the Employer's Risk Manager, requested the IME with Dr. McCranie.

31. The Risk Manager was very familiar with the modified job offers made to Claimant and was involved in the process. The February 9, 2021 offer was for Claimant to perform some office work and watch safety videos (approximately 50 of them) in order to keep Claimant busy and engaged in work activities. Dr. Matus authorized this modified job offer on the same day and Employer sent the offer of modified work for Claimant to start on February 15, 2021. On March 28, 2021 Claimant advised her supervisor that she had completed the safety videos so modified duty was terminated.

32. Based on the FAL of July 22, 2021, Claimant was originally paid regular salary through December 12, 2019 (pursuant to Sec. 8-42-124, C.R.S.) at which time the Third Party Administrator paid TTD benefits beginning December 13, 2019 through January 27, 2021. Then Claimant was paid temporary partial disability (TPD) on January

28 for one day and TTD resumed as of February 1, 2021 through February 15, 2021. As of February 18, 2021[8] Claimant was paid TPD until March 28, 2021.

33. Then JO[Redacted] worked with Nutrition Services because they were frequently understaffed. At that time they were making sandwiches for the lunch truck that was provided to the children and community. They were to have Claimant sitting at a conference room table, where other workers would bring the ingredients and Claimant could make the sandwiches.

34. JO[Redacted] stated that Claimant never went back and that Dr. Matus had said that the job was within her restrictions. The Risk Manager stated that Claimant was not placed back on temporary total disability because Claimant was the one to violate the April 9, 2021 Rule 6 offer of modified employment and that the job was still available. Then school ended on May 27, 2021, and because the bus drivers were paid on a twelve month cycle despite summer time off, they restarted to pay regular wages, despite Claimant not working.

35. JO[Redacted] stated that while the pay check periods showed payment at the end of the month, the period of payment was not correct because Employer's pay period was really from the middle of the month through the middle of the following month. This ALJ infers from this testimony that, for example, the March 31, 2021 pay check actually paid from February 15 through March 14, 2021. This was confirmed by Claimant.

36. JO[Redacted] was on vacation through April 26, 2021 and prepared a letter to Dr. Matus, which was sent on May 13, 2021 with a job description of assembling and bagging hoagie sandwiches. On May 14, 2021 Dr. Matus answered stating that the prior restrictions provided by Dr. Ogden were still applicable, as long as the job did not require any work lifting greater than 10 lbs. and that Claimant be able to keep her arm close to her side. As found, this is a new restriction as of May 14, 2021.

37. Respondent argued that Employer should be entitled to a reimbursement for overpayment to Employer of the 24 hours paid to Claimant at the rate of $20.75 per hour for a total of $498.00, if Claimant was entitled to temporary disability benefits. JO[Redacted] stated that this was for the period of April 27, 2021 through April 30, 2021 paid by Employer.

38. JO[Redacted] testified that Claimant returned to work at full wages as of March 29, 2021 and temporary partial disability benefits stopped per the Final Admission of Liability (FAL) dated July 22, 2021.

39. The statement of earnings showed that in March[9] 2021 Claimant was paid $2,033.49,[10] in April 2021 she was paid $1,523.67, in May she was not paid any wages, in June she was paid $814.44 and in July she was paid $814.44 as well.

---

[8] There was no explanation as to why Claimant was not paid for February 16 and 17, 2021, but it does show on the time log that she worked 6 hours a day for both days and it is to be assumed that those hours were paid by Employer.

[9] Pay periods were calculated on a monthly bases from the first to the last day of any given month and paid generally on the last day of the month.

[10] This ALJ was unable to reach the same calculation by Employer, at least with the March 31, 2021 Employee Statement of Earnings. Claimant's rate of pay was $20.75. The accrual wages showed 108

40. The hours worked print out showed Claimant working from March 29, 2021 through April 9 2021. This is consistent with what the Risk Manager testified, with the exception that it did not seem that Claimant worked her full hours all days following March 29, 2021. In fact, there were some periods that were listed as "Leave Without Pay."

F. Other Evidence:

41. On May 21, 2021 Claimant secured the signature of the supervisor approving the note stating that Claimant had showed up for work on April 26, 2021 but spoke with both the Nutrition Services Manager (supervisor) and her assistant (JC), that she was unable to make the sandwiches because of the repetitive nature of the job. The supervisor confirmed that she took down Claimant's phone number and advised Claimant to go home. The Manager further confirmed that she would call Claimant "when she found out what they should do." Claimant's testimony in this matter is found credible and supported by the supervisor's signature on the note.

42. The note further stated that Claimant worked on April 22, 2021[11] and could punch the clock at Nutrition Services but the "Oracle" system would not take her badge number. The time clock report at Exhibit Q, bate 134 seems to indicate that Claimant did, in fact, work on April 22 as it reports "5 Trans_Bus Cleaning" and provides a rate of pay. It is also clear from this print out that Claimant's work was not logged into this system after April 22, 2021. However, Claimant reported working May 24, 25, and 27, 2021 and on June 1, 2021 she received instructions from the Risk Manager to enter May 28, 2021 as work injury leave.[12] Therefore the hourly payroll print out is clearly erroneous. Also, no payroll was paid in May and the June payroll earnings statement does not include any hours worked.[13]

43. A second note dated May 24, 2021 stated that on April 23, 2021 Claimant showed up for her work shift but was in pain, feeling she needed to see her doctor, so she would not be working. The front desk receptionist agreed and noted that she would let "them" know.

44. The third note dated May 27, 2021 stated Claimant worked hours for May 24, 25, and 27, 2021. It noted Claimant was working without breaks, took May 26, 2021 off as a personal day, and on May 28, 2021, pursuant to the Assistant, JC, that she should not go into work. Claimant stated this document was signed by another supervisor (JCS-D). These dates and times were also sent to the Risk Manager, who confirmed that May 28, 2021 should be entered as work injury leave.[14]

G. Claimant's Testimony:

---

hours were paid at $1,960.88. However, 108 hours multiplied by $20.75 equals $2,241.00 not $1,960.88. Even if we deduct the leave without pay of 11.50 hours from the 108 hours, that would total 96.5 hours times $20.75 for $2,002.37. There may be something this ALJ is not aware of and certainly was not clarified during JO[Redacted] testimony or Claimant's testimony.

[11] The note showed the year 2020 but given the time line of work and when work was offered, this ALJ infers that the correct year was 2021.

[12] Exh. 8.

[13] Exh. P, bates 111-112.

[14] Exh. 8.

45. Claimant testified that she continued to suffer from the effects of the injury at the time of the hearing. She stated that the treatment she received, including physical therapy, massage therapy, and the different injections helped her, but when she returned to her job of injury, she continued to have the symptoms. She also stated that treatment was delayed during some period because of the COVID pandemic and most of 2020 she was off work. Treatment was also delayed because she was struck with pneumonia and was out for multiple weeks without the ability to attend any medical appointments.

46. Claimant stated that she was initially seen at the original WorkWell for her physical therapy but because of how busy they were, she changed over to get PT at the Parker WorkWell. Claimant testified that they treated her neck symptoms in PT from the beginning as well.

47. Claimant testified that she reported the neck complaints from the beginning of her injury to her providers. As found, this was not documented in the medical records provided as evidence in the matter, though there was a dearth of records from the time period of November 11, 2019 through March 9, 2020.

48. Claimant stated that when she returned to work on January 28, 2021, she spoke with the coordinator about having problems driving the bus. She was taken back off work and WC started paying her again. Eventually she receiving the modified duty offer.

49. The offer went to Claimant on April 9, 2021 to start as of April 15, 2021. Claimant testified she started with Nutrition Services on April 22, 2021. Claimant reported that she had concerns that the work was outside her restrictions and was too repetitive. On the following day, April 23, 2021 Claimant showed up to work but left work that day to go to the doctor. On April 26, 2021 she advised her supervisor that the work was violating her restrictions. Nutrition Services did not know what to do so they sent her home. As found, Claimant is credible in this matter.

50. When she went to Nutrition Services she would have to reach for the items she needed, which was causing increased symptoms and problems for her. At one point she was delegated to just opening bags, and she had to open over two thousand baggies in one day and was in so much pain, she could not tolerate that work. She testified that she called the Risk Manager and she called Dr. Ogden without response. Claimant was frustrated by the fact that she could not clock in and out of Nutrition Services because officially, she was not one of their employees. Claimant testified that she went to WorkWell and was seen Dr. Ogden's PA on April 23, 2021.

51. She testified that she went to work on April 26, 2021. This was confirmed by signature of the supervisor. She reported that the work was outside of her restrictions. She stated that she never told the Manager or the supervisor that she could not do any of the work, only that she could not do the baggies all day, opening them. Nutrition Services did not know what to do with her. She was willing to do something other than opening the hoagies bags. Dr. Matus never took her off work completely but provided restrictions.

52. Claimant was then sent home by the Nutrition Services supervisor and was told by the supervisor that she would call Claimant when she knew something. Claimant

testified that she never received any calls after April 26, 2021 from Nutrition Services, HR or from the Risk Manager. She stated that it really was not her choice to leave. She had, at one point been making cookies from boxes of frozen ones and put them on trays to bake them, something she could do. It was really not her choice to leave but the work of opening baggies repetitively, was too much.

53. She stated that she prepared, typed and took the note dated May 21, 2023 to the Nutrition Services Manager and had her sign it to confirm the statements. Claimant did confirm she did not work in either June or July, as school was out. She did work at the end of May, 2021, after which she was again sent home. Claimant stated that she had worked some days in April and in May, 2021 but did not recall which ones exactly, other than the ones mentioned on the notes that the supervisors signed.

H. <u>Ultimate Findings:</u>

54. As found, Respondents have shown by clear and convincing evidence that Dr. Shenoi was incorrect in her final assessment of Claimant's impairment for the cervical spine being caused to the work accident. Dr. Shenoi failed to accomplish one of the integral requirement of a DIME physician in that she declined to make causation assessments in this matter. While she issued an impairment rating for the cervical spine and the left lower extremity, this does not equate to a determination of causation. A determination of causation cannot be declined or evaded. It is a requirement established by the Act, case law, the AMA Guides, the WCRP, the Level II accreditation materials as well as the Division's Impairment Rating Tips.

55. As found, the lumbar spine and left lower extremities are causally related to the November 11, 2019 work related injury.

56. As found, Claimant reached MMI with regard to the work related medical conditions on July 9, 2021, as opined by both the ATP, Dr. Matus, and Dr. Shenoi.

57. As found, the cervical spine injury was not causally related to the November 11, 2019 work injury and, despite Dr. McCranie's and Dr. Shenoi's rating of the cervical spine, no benefits are indicated in this matter.

58. However, also as found, all providers who address the condition of the left lower extremity indicated that the left lower extremity injury was causally related. This is persuasive. The ATP provided no rating nor did he take any range of motion measurements as required by the *AMA Guides to the Evaluation of Permanent Impairment*. Dr. McCranie, while she mentions that Claimant had full range of motion testing, she did not provide a worksheets upon which to rely, nor did she address the Claimant's loss of sensation. Therefore, as found, Dr. Shenoi's lower extremity impairment is found to be persuasive in this matter. Claimant is entitled to a 1.25% impairment of the lower extremity related to the peroneal nerve loss of sensation.[15]

59. As found, Claimant was under restrictions from March 29, 2021 through July 8, 2021, after which she was placed at MMI by the ATP. Claimant has shown she was

[15] As this is an ankle and foot injury, the scheduled impairment is appropriate.

entitled to temporary disability benefits from March 29, 2021 through April 9, 2021 and April 22, 2021through July 8, 2021.

60. As found, Respondents failed to show Claimant was responsible for her wage loss. Dr. Ogden's restrictions were "avoiding reaching out or overhead" as well as allowing "position changes sit/stand/walk every 20-30 minutes." Dr. Matus agreed with these restrictions and added that as long as the job did not require any work lifting greater than 10 lbs. and that Claimant should keep her arm close to her side. Dr. Matus again confirmed these restrictions on June 21, 2021 stating Claimant should "Limit use right upper extremity, avoid repetitive reaching out or overhead. Limit lift, push and pull 5 pounds max. Must be able to change positions regularly between sit/stand/walk, recommend at least every 20-30 minutes."

61. As specifically found, Claimant never received a call between April 26, 2021 through the time she returned to work in May, 2021 due to poor communication between the assigned Manager of Nutrition Services and the Risk Manager or HR. Claimant was found to be credible in this matter. As found she was provided instructions to go home and await a phone call. The Manager of Nutrition Services specifically took down Claimant's phone number down and it was reasonable to assume, if Employer wanted Claimant to return to work that the Manager of Nutrition Services or another of Employer's delegated individual would call Claimant or communicate with her in some manner. This was confirmed in the note signed by the Manager on May 21, 2021. Even the note of May 27, 2021, when Claimant was working, showed that Claimant was not provided the required breaks pursuant to Dr. Ogden's and Dr. Matus' recommendations.

62. As, found, Claimant is entitled to temporary disability from March 29, 2021 through April 14, 2021, when Claimant should have started work pursuant to the modified job offer dated April 9, 2021. This ALJ infers that Claimant did not stop working as of March 28, 2021 but April 9, 2021, as shown by the wage records, when she was working irregular hours. Claimant showed up for work on April 22, 2021 instead of April 15, 2021. Claimant is not entitled to indemnity benefits from April 15, 2021 through April 21, 2021.

63. As found, Claimant is entitled to temporary disability benefits from April 22, 2021 through July 8, 2021, after which Claimant was placed at MMI without restrictions. Claimant credibly testified that she believed the work was not within her restrictions as she was working without breaks and in a repetitive manner. On April 26, 2021 her supervisor at Nutrition Services sent Claimant home, advising Claimant that the supervisor of Nutrition Services would call her when she found out what to do. At no time was any credible evidence provided that Nutrition Services called Claimant back to report to work. Claimant returned to work on May 24, 2021, and worked the 24th, 25th and 27th, the last day the school was open. Claimant was instructed that she should not go into work on May 28, 2021 by the Nutrition Services assistant supervisor (JC). This was confirmed by another supervisor (JCS-D). He also confirmed that Claimant had no breaks, despite the restrictions imposed by Dr. Ogden for breaks every 20-30 minutes.

64. As further found, the wage records are insufficient to determine what periods were paid by employer as the wage records and time record are not clear, nor do they show which days and hours were paid by Employer. Therefore, the parties need to

exchange this information and agree on the TTD and TPD to be paid or provide it to this ALJ for further determination of the exact amounts to be paid by Respondent, if anything.

65. Testimony and evidence inconsistent with the above findings are either not credible, significantly relevant and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Overcoming the DIME Physician's determination of MMI and Impairment

Respondent argues that the DIME physician, Dr. Shenoi, was incorrect in multiple manners with regard to Claimant's MMI status and work related impairment ratings. The party challenging a DIME physician's opinions must prove that the DIME physician's determinations were incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003); *In re Claim of Lopez*, 102721 COWC, 5-118-981 (Colorado Workers' Compensation Decisions, 2021). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the determination is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-Med*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician's opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. See *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 2002). Consequently, when a party challenges the DIME physician's opinion, the Colorado Court of Appeals has recognized that a DIME physician's determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning her opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the *AMA Guides* do not mandate that the DIME physician's opinion is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to reach a particular determine is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008); *In re Claim of Pulliam*, 071221 COWC, 5-078-454-001 (Colorado Workers' Compensation Decisions, 2021). Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME

physician's true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

The Act requires a DIME physician to comply with the *AMA Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the *AMA Guides.* A determination of MMI requires the DIME physician to asses, as a matter of diagnosis, whether various components of the claimant's medical condition are casually related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). In determining whether the physician's rating is correct, the ALJ must consider whether the physician correctly applied the *AMA Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician correctly applied the *AMA Guides* is a factual issue reserved for the ALJ. *McLane W., Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, *supra*. The question of whether the DIME physician's rating has been overcome is a question of fact for the ALJ to determine, including whether the physician correctly applied the *AMA Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *In re Claim of Lopez*, *supra*. Lastly, where an ALJ finds a claimant's description of her present symptoms credible, this is sufficient to overcome the DIME physician's opinion. *In re Claim of Conger*, 100521 COWC, 4-981-806-001 (Colorado Workers' Compensation Decisions, 2021).

It is clear from the evidence that Dr. Shenoi's true opinion is that, as a DIME physician, she need not address the issue of causality with regard to the different components of Claimant complaints of work related injuries. This is inconsistent with the law as established by the Act, the *AMA Guides*, the WCRP, the Division's teachings under Level II accreditation and the Impairment rating tips. Dr. McCranie is persuasive in this matter that the issue of causality is an integral part of the DIME process as well as the medical process of any physician in the workers' compensation system. She persuasively testified that a failure of a DIME physician to conduct a causation analysis before assigning an impairment rating violates the *AMA Guides* as to causation, multiple DOL rules of procedure as well as recognized standards among level II physicians for performing impairment ratings.

Dr. McCranie's opinion that Dr. Shenoi's impairment rating is "clearly incorrect" is unrebutted in the medical records or in the hearing testimony. Unlike other situations wherein a Court has to interpret multiple or even conflicting opinions from a DIME; in this case there are no such conflicting opinions with regard to causation. In fact, there are no opinions from Dr. Shenoi on causation because she failed to provide one and specifically stated she declined to do so.

Claimant argues that since Dr. Shenoi provided a diagnosis for the neck, that it is to be assumed that it was related to the November 11, 2019 incident. However, Dr. Shenoi also lists upper extremity paresthesias as well as shoulder pain and did not perform an impairment evaluation on those body parts or explain sufficiently why she did not provide ratings for the shoulder injuries. Claimant also argued that it can be assume that Dr. Shenoi adopted a causation analysis because she was aware from the medical records that Claimant had received extensive authorized medical treatment for her cervical spine under this workers compensation claim. However, as testified to by Dr. McCranie, and as set out the Division's Impairment Rating Tips, Division has made it clear to Level II physicians and DIME physicians that simply because a specific condition is identified on a DIME application and/or simply because medical treatment has been voluntarily provided for a specific body part, causation is not to be assumed.

Here, as found, Dr. Shenoi made the assumption that, since treatment was authorized for the cervical spine, that Respondent was liable and therefore rated the cervical spine. As found, Dr. Shenoi was in error. This is further supported by the fact that she discussed Claimant's shoulder issues. She stated that, since the shoulder was not checked off on the Application for a DIME, that she need not address it. This is another assumption that is incorrect. A DIME physician has an obligation to consider all body parts and make causation determinations with regard to those body parts, whether they are or not related to the injury in question, and only then can a DIME physician make determinations whether Claimant has reached MMI for those related conditions and/or if the related conditions justify an impairment rating. Dr. McCranie's testimony in this regard is credible and persuasive. Respondents have shown by clear and convincing evidence that Dr. Shenoi was clearly incorrect and have overcome the DIME physician's opinions by clear and convincing evidence.

C. Maximum Medical Improvement

Where a party has carried the initial burden of overcoming the DIME physician's opinion by clear and convincing evidence, the ALJ's determination of the correct MMI determination or rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When applying the preponderance of the evidence standard the ALJ is "not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence." *Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When the ALJ determines that the DIME has been overcome, the ALJ may independently determine the correct rating or date of MMI. *Lungu v. North Residence Inn*, WC 4-561-848 (ICAO, Mar. 19, 2004). An ALJ may thus determine whether a claimant has reached MMI and assign an impairment rating as a question of fact. *Destination Maternity and Liberty Mutual Insurance Company v. Burren*, 19SC298 (Colo. May 18,

2020); *see Niedzielski v. Target Corporation*, WC 5-036-773-001 (ICAO, Mar. 9, 2020) (when an ALJ determines that a DIME opinion has been overcome, the issue of the claimant's correct impairment rating becomes a question of fact and the ALJ may calculate the impairment based upon a preponderance of the evidence).

In this matter, Claimant's ATP, Dr. Matus, determined that Claimant was at MMI as of July 9, 2021. Claimant continued to have treatment, including therapy for the work related condition until that time. While Dr. McCranie identified an earlier date, based on her review of the medical records, this is only considered speculation as Dr. McCranie did not evaluate Claimant at that point in time. Once Dr. McCranie did evaluate Claimant and the report was provided to the ATP, the ATP had the option to make a determination of when Claimant reached MMI, and he did so by stating Claimant had reached MMI with regard to her lumbar spine and lower extremity injury on July 9, 2021. This opinion is more credible and persuasive than Dr. McCranie's speculative choice. Claimant has proven that she reached MMI as of July 9, 2021.

D. Permanent Impairment Ratings

Here, the parties must show by a preponderance of the evidence what the proper determination of impairment with regard to the work related conditions should be. But before this can be address, it is essential to have a determination of which injuries are causally related to the November 11, 2019 accident.

In this matter, it is found that the cervical spine is not a work related injury caused by the November 11, 2019 work related event. The medical records in evidence, supported the opinion of Dr. Cazden and Dr. McCranie, that Claimant did not have the cervical spine and shoulder complaints until sometime in March or April 2020, well over four months from the date of injury. While Claimant did state that the "closet" incident was not the cause of the neck and shoulder conditions, this was not persuasive. Dr. McCranie persuasively testified that it was more likely that the closet incident was the cause of those conditions and that, in order to link a cervical injury to the original date of injury, there needed to be a temporal relationship between the onset of symptoms and the initial accident, which was not present in this case. This is also true of the Claimant's continuing bilateral upper extremity symptoms. Dr. McCranie credibly opined that Claimant's continuing complaints involving the cervical spine and the right greater than left upper extremity paresthesias, which were not documented until March 10, 2020, were not work related conditions.

Lastly, Dr. McCranie credibly opined that the right shoulder labral tear was not related to the November 11, 2019, injury, as an acute labral tear would cause immediate, severe pain in the shoulder and Claimant did not report shoulder pain for approximately seven months post-accident. Dr. McCranie credibly explained that what was significant here is that Claimant reported to Dr. McCranie (and to Dr. Shenoi) that she was cleaning out her closet in April of 2020, and she was reaching, lifting and moving some hair products, towels and sheets from her closet, and had an acute onset of neck pain and right shoulder pain at that point that brought on a lot of these symptoms, which was a more probable cause of Claimant's neck and shoulder pain. Respondents have shown that it was more likely than not that the cervical spine condition and the bilateral shoulder conditions are not related to the November 11, 2019 work related accident.

It is further found that Claimant has shown that the lumbar spine and the left lower extremity conditions are related to the claim by a preponderance of the evidence. This determination is supported by the medical records of Claimant's initial treatment records that are available. None of the rating physicians have provided a lumbar spine rating in this matter. Therefore, Claimant's lumbar spine rating is 0%.

Claimant has shown that the lower extremity condition continues to have an impairment cause by loss of sensation due to damage to the peroneal nerve. Dr. Shenoi persuasively rated Claimant's lower extremity impairment at 1.25% of the lower extremity in accordance with the *AMA Guides* to the Evaluation of Permanent Impairment, Third Edition (*Revised*). This was not addressed at all by Dr. McCranie. Therefore, Dr. Shenoi's determination of permanent impairment of the lower extremity cause by the damage to the peroneal nerve is more persuasive than any contrary determination. Claimant has shown by a preponderance of the evidence that it was more likely than not she has a 1.25% lower extremity impairment rating.

E. Temporary Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Sec. 8-42-105(3)(a)-(d), C.R.S.

As found, Claimant was under restrictions from March 29, 2021 through July 8, 2021, after which she was placed at MMI by the ATP. Here, Claimant was paid TTD through March 28, 2021. Claimant credibly testified that, when she completed watching the videos, she advised her supervisor that she had completed her assigned tasks. No further offers of employment were made by Employer between March 29, 2021 until April 9, 2021. As found, Claimant was not responsible for her wage loss. Claimant continued

to be under restrictions due to the work related injury at this time. As found, Claimant has shown by a preponderance of the evidence that she was entitled to temporary disability benefits between March 29, 2021 through April 14, 2021.[16]

On April 9, 2021 Employer sent Claimant an offer of modified duty to begin April 15, 2021. This job offer was approved on April 11, 2021 by one of Claimant's ATPs, Dr. Paul Ogden. The job was to report to Nutrition Services by April 15, 2021. Claimant failed to report until April 22, 2021. Therefore, as found, Claimant was not entitled to temporary disability benefits from April 15, 2021 through April 21, 2021.

Claimant started work on April 22, 2021. On April 23, 2021 Claimant reported to work but was in significant pain due to the repetitive nature of the tasks assigned and went to her provider. On April 26, 2021 Claimant advised her supervisor that the work was violating her restrictions due to the repetitive nature of the job. Nutrition Services did not know what to do so they sent her home. As found, Claimant was credible in this matter and, as found, she was not responsible for her wage loss. While Employer consulted with Claimant's treating provider, Dr. Matus on May 13, 2021 to determine if Claimant's job with Nutrition Services complied with Claimant's restrictions. He stated that "presuming she can keep her arm close to her side this should not preclude assembling sandwiches and placing them in bags." However, Nutrition Services nor the HR manager communicated that new restriction to Claimant nor that they would accept Claimant back to work under those terms. Claimant was credible in this regard. As found, Claimant was no responsible for her wage loss and Claimant has shown by a preponderance of the evidence that she was entitled to temporary disability benefits from April 26, 2021 through May 23, 2021 and May 28, 2021 through July 8, 2021.[17]

The exact amount of temporary disability benefits is not determined at this time as the wage records, Employer payments as well as the third party administrator's payments are incomplete. Neither can it be determined whether the temporary benefits are temporary total or temporary partial that are due and owing. Respondents shall provide Claimant an accounting of the wages paid to Claimant and the exact dates paid. Should the parties be unable to calculate the amount, the parties may provide the information within 10 days of this order and this ALJ may issue a Supplemental Order.

ORDER

IT IS THEREFORE ORDERED:

---

[16] The wage records at Respondent's Exhibit Q are specifically found not to be accurate or credible, because we know that Claimant worked on May 24, 25 and 27 and these records fail to show the hours worked. This was confirmed by a supervisor at Exhibit 7 bate 45, and Exhibit 8 email from the Risk Manager.

[17] Employer argued that Employer's payment of $498.00 for wages paid from April 27, 2021 through April 30, 2021 should be credited or offset from any benefits paid. However, this is beyond this ALJ's purview and jurisdiction to address. Only benefits under the Act may be determined in this venue.

1. The Stipulation of Facts signed by the parties on March 29, 2023 are approved. The Stipulation of Facts is the official transcript of the November 15, 2022 hearing.

2. Respondent overcame Dr. Ranee Shenoi's DIME opinion by clear and convincing evidence.

3. Claimant was at MMI as of July 9, 2021.

4. Respondents shall pay permanent partial disability of 1.25% extremity impairment in accordance with Dr. Shenoi's impairment of the lower extremity for the peroneal nerve injury.

5. Respondents shall pay temporary disability benefits from March 29, 2021 through July 8, 2021.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-218-738-001

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he suffered a compensable left knee injury in the course and scope of his employment on August 10, 2022.

IF THE CLAIM WAS DETERMINED TO BE A COMPENSABLE INJURY, THEN:

II. Whether Claimant proved by a preponderance of the evidence that the left total knee replacement recommended by authorized treating provider ("ATP") Lucas G. Schnell, D.O. is reasonable, necessary, and related to the August 10, 2022 work injury.

III. Whether Claimant established by a preponderance of the evidence an average weekly wage ("AWW") of $1,808.24 a week, based upon his 52 weeks of earnings prior to his date of injury, which wage comports to a temporary total disability ("TTD") rate of $1,205.49.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on December 2, 2022 on the issues of compensability, medical benefits that are reasonable, necessary and related to the injury, causation of the injury, average weekly wage, and entitlement to TTD benefits. At hearing, Claimant withdrew the issue of TTD benefits.

On December 30, 2022, Respondent filed a Response to Claimant's December 2, 2022 Application for Hearing citing issues of relatedness, pre-existing condition, reasonable and necessary medical benefits, and average weekly wage.

Claimant testified on his own behalf in this matter.

At the commencement of the hearing, Claimant offered to stipulate that Claimant's average weekly wage ("AWW") was $1,808.24, based upon 52 weeks of earnings prior to his date of injury. Respondent conceded that Claimant's average weekly wage was $1,808.24 in Employer's position statement. The stipulation of the parties is approved and incorporated in this order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was a 55-year-old corrections security officer who has worked for Employer for 25 years. On August 10, 2022, Claimant was serving the position of a night

shift supervisor at one of Employer's youth services center. The center is for "at risk" youths and he and a staff of 10 performed nightly rounds and responded to any situations that arose, which included handling physical management and would respond to medical situations.

2. Claimant had a prior history of left knee injuries. On April 20, 2007[1], Dr. Mark Failinger examined Claimant and noted a tear of the cartilage or meniscus of the knee, negative Lachman's, some joint line pain and minimal effusion with good motion. He noted that the cortisone injection had "helped tremendously" and he was very happy with the results. Dr. Failinger noted that "[U]nfortunately he knows he has significant arthritis and unfortunately there is not "any cure" for that, but we are trying to manage to progress him, doing as many things as possible without making his symptoms worse." At that time, Dr. Failinger recommended conservative care but not an unloader brace.

3. On August 10, 2022, prior to Claimant's work related aggravation, he attended an appointment with his primary care provider at Kaiser, Tracy Frombach, D.O. for issues regarding his left knee. At that evaluation, it was Dr. Frombach's assessment that Claimant had "osteoarthritis of the left knee … left knee instability," and Dr. Frombach stated:

> We did discuss operative and non operative (sic.) options of knee arthritis. The patient does not want to consider knee replacement surgery at this time he wants to consider repeat steroid injection to see how well this does
> Unloader brace was also offered to the patient due to his instability. He wants to avoid bracing at this [2]

4. On exam, Dr. Frombach noted some left knee tenderness palpation over the lateral joint line but not the medial joint line, range of motion from 0° to approximately 130 without any pain, varus stress with LCL[3] mild laxity, valgus negative, and a negative McMurray. Dr. Frombach ordered x-rays, which showed no acute osseous abnormality but the prior left ACL repair changes were seen with severe lateral compartment osteoarthritis and a moderate suprapatellar joint effusion and noted prepatellar soft tissue swelling. Dr. Frombach performed a steroid injection and ordered physical therapy.

5. Following the visit with Dr. Frombach, Claimant reported to work for the evening shift of August 10, 2022. Claimant was involved in physical management training with other employees and was injured during one of the training exercises. He was involved with inserting himself between two other employees to show a technique when avoiding stepping on them, he twisted his left knee and it immediately gave out, causing swelling and severe pain.

6. Claimant testified that while his knee was somewhat sore while going up steps before, now it dislocates going up and down steps and he has to use a knee brace every day. Further his pain is only tolerable with medications. This has also caused

---

[1] The April 20, 2007 visit with Dr. Failinger was for a date of injury of September 21, 2003.

[2] There are two versions of this note. The first stated "patient does want want (sic.) to consider knee replacement" and the other stated "patient does not want to consider knee replacement." This ALJ made the logical determination and inference that the provider realized the grammatical error and corrected his record.

[3] LCL is assumed to be lateral collateral ligament.

further mental health issues and is currently taking medication for that as well due to the pain and adjustment disorder.

7. On August 12, 2022, Claimant presented at the Employer's designated medical provider "Injury Care Associates of Thornton" where he was evaluated by James Fox, M.D., an authorized treating physician (ATP) who took a Report of Injury as setting forth:

> Patient is employed as a corrections officer and was injured on 8/10/22 during a training exercise inadvertently stepped in between 2 participants and twisted his left knee. Of note, pt has a history of ACL reconstruction in 1989. He denies any significant knee problems in the past 20 years but states that he had arthroscopic evaluation of his knee twice in the "2000s". Patient is still having quite a bit of pain in his knee which is increased with weightbearing, twisting and pivoting.

8. It was ATP Fox's opinion at that first visit that Claimant's injury was "consistent with history and/or work-related mechanism of injury," and he did not assign any restrictions. Dr. Fox ordered an MRI of the left knee and requested Claimant follow up after the diagnostic evaluation.

9. Claimant credibly testified that he requested no restrictions following his August 10, 2022 medical appointment because his Employer would accommodate any temporary limitations Claimant had due to his workplace injury. Claimant stated he was able to do most of his activities, with the exception of the training and responding to emergencies as he could not handle the stairs.

10. The MRI performed on August 15, 2022 at Health Images Diamond Hill and read by Steven Ross, M.D. showed a previous ACL reconstruction with evidence of re-tear of the intra-articular portion of the graft, previous partial meniscectomy and/or complex tears of both the medial and lateral menisci, moderate to severe tricompartment osteoarthrosis and chondromalacia, postsurgical changes of the patellar tendon, and knee joint effusion.

11. Also on August 15, 2022 Employer completed an Employer's First Report of Injury (FROI) noting that on August 10, 2022 Claimant sustained an injury to his left knee during PSI training close to midnight. His left knee swelled up throughout the shift and caused stiffness and was reported to his supervisor later in the shift the following morning.

12. On August 18, 2022, Claimant again reported to Injury Care Associates of Thornton, where ATP Fox was replaced by ATP Richard J. Pompei, D.O. It was Dr. Pompei's assessment at the second visit that:

> 54-year-old male with history of left ACL reconstruction with acute on chronic left knee pain occurring after a work-related incident. Discussed MRI results with the patient today. Results listed below. Suspect these are chronic and degenerative in nature. However plan to refer to orthopedic surgery for further MRI review and further causation analysis.
> * * *
> **Causality Statement WORK RELATED**: Based on the clinical exam findings and information provided to me by the patient, the incident is likely related to

> the occupational events, if the history provided to me is accurate. This incident is likely work-related.

13. Claimant filled out a pain diagram at the August 18, 2022 visit indicating that the pain in his left knee was an 8 out of 10 and that he was "most of the time" concerned that his "knee might suddenly give way or let [him] down." He also reported that most nights he had difficulty with his knee.

14. On August 24, 2022, Claimant presented at the offices of Front Range Orthopedics & Spine where he was evaluated by referral from ATP Fox by Lucas Schnell, D.O. who made an assessment in current plan as follows:

> This is a 54-year-old male who sustained an acute injury to his left knee at work on 8/10/2022. He works as a corrections officer and was doing skills exercise when he got his left foot caught and had a pivoting injury. He has had sharp pain globally in the knee ever since.
>
> * * *
>
> I discussed with the patient that unfortunately he had a pre-existing condition of a complete ACL rupture as well as arthritis. With multidirectional meniscus tears I feel that there is some chronicity to these tears as well. I cannot delineate whether there was exacerbation or progression of tears with his work-related injury however. It is reasonable to correlate an exacerbation of his pre-existing conditions with the work injury that he describes. At this time I do not think he would be a good candidate for an additional arthroscopic procedure due to his history and the amount of arthrosis of his knee.

15. On September 2, 2022 Claimant returned to ATP Pompei, who noted the following:

> Patient states he saw Dr. Schnell on 8/24/2020 [sic 8/24/2022] where he received a corticosteroid injection in his left knee. . . . He notes they were considering possibly doing a knee arthroscopy, and the subject of knee replacement was brought up, ... He states he is having trouble with stairs, getting up from a seated position.

16. At the September 2, 2022 medical appointment with ATP Pompei, Claimant was still concerned that his knee might suddenly give way, and the pain diagram documented that he was having "trouble with stairs, getting up from a seated position, popping and dislocating." He was managing his pain with Mobic with some benefit and requested pain medication refills. On exam, Dr. Pompei noted joint effusion, difficulty with range of motion in terms of flexion and extension of his knee, as well as tenderness to palpation along the medial and lateral joint lines. He had a positive McMurray's, an equivocal Lachman's, varus and valgus stress testing with significant crepitation of the knee, a positive patellar grind and an antalgic gait.

17. Claimant reported working full duty. He complained of moderate to severe pain. He had difficulties with his activities of daily living, including bathing, getting into a vehicle, doing household chores, problems standing or getting up because of his knee. He noted he would have extreme difficulty getting up if he were to kneel down. He was limping most of the time, having the knee give way all of the time, and trouble sleeping because of the knee.

18. Claimant was seen by Dr. Schnell on September 30, 2022 who noted that the steroid injection only provided two days of relief. He was still attending physical therapy and had both pain and apprehension of his left knee. Claimant reported that his knee was actually subluxing when he pivoted, squatted, twisted or rolled over in bed. Dr. Schnell noted that Claimant had:

> …failed conservative management. He has a pre-existing condition of arthritis and likely a chronic ACL rupture. I cannot delineate the acuity of his meniscus tears. He is not a candidate for arthroscopic intervention due to severe arthrosis. A knee replacement would address all of the issues in his knee at this point. He is (sic.) likely exacerbated pre-existing condition and potentially made the problem worse with his work-related injury regarding his meniscus tears. We reviewed the recovery time and expectations with a knee replacement. He would like to proceed with this.

19. On September 30, 2022, Claimant followed up with ATP Pompei, who noted that:

> Patient rates his pain is 7 out of 10 today. He states he has seen Dr. Schnell on 9/21/2022 and 9/30/2022 … He notes Dr. Schnell is recommending total knee arthroplasty of his left knee because at this point the patient is increasingly functionally limited with pain and apprehension with subluxation of his knee.

Dr. Pompei assessed that Claimant had a sprain of unspecified site of the left knee and noted:

> Also I agree that he has exacerbated his pre-existing condition and made the problem worse at his work-related injury given the fact that his pain has significantly increased along with now subluxation of his knee following his work-related injury without much improvement in physical therapy. I agree that the next definitive step is left total knee arthroplasty with Dr. Schnell (sic.) patient is to follow-up with our clinic letting us know the date of surgery so we can appropriately adjust his M1 64 (sic.) and follow-ups accordingly.

Claimant reported similar symptoms on the Oxford Knee Assessment, including difficulties with giveaway of the left knee most of the time. Dr. Pompei recommended Claimant ice the knee as needed and follow up with Dr. Schnell for the surgery.

20. On October 3, 2022, ATP Schnell put in a "Surgery Authorization Request" for Claimant to undergo a "left total knee arthroplasty" (TKA).

21. On October 13, 2022, Respondent timely denied ATP Schnell's request for surgery, indicating "compensability had not been established."

22. When Claimant's surgery was denied he obtained his records from Kaiser and noted that the report issued by Tracy Frombach, D.O. on August 10, 2022 prior to his injury that evening was in error. Claimant testified he reached out to Kaiser, who issued a corrected medical record for the August 10, 2022 visit which set forth that Claimant did **"**not want to consider knee replacement surgery" at that time but wished to consider repeat steroid injection to see how well he did.

23. On October 14, 2022, Claimant returned to ATP Pompei, who noted:

> Patient's pain is an 8 out of 10 today. He continues with sensations of instability, popping, clicking, locking. … He continues with physical therapy at Injury Care Associates. He notes that he received a call from his insurance company and stating that the surgery was denied, however he is going to get records from his previous work-related surgery from Concentra to be reviewed.

Dr. Pompei agreed with Dr. Schnell that Claimant was not a candidate for an arthroscopic intervention due to the severe arthrosis. He further emphasized as follows:

> Also agree that he exacerbated his pre-existing condition and made the problem worse at his work-related injury given the fact that his pain has significantly increased along with now subluxation of his knee following his work-related injury without much improvement in physical therapy. I agree that the next definitive step is left total knee arthroplasty with Dr. Schnell.

24. Claimant's pain diagrams following his injury consistently indicated that he was concerned most of the time or all of the time that his knee might give out.

25. On October 21, 2022 Respondent filed a Notice of Contest stating that it was for further investigation of prior medical records.

26. Claimant credibly testified that prior to his injury he did not have clicking, popping, or locking in his knee. Claimant testified that he had some instability, but that his knee was not dislocating as it was following his injury, nor was he having any significant pain prior to the injury. Following his August 10, 2022 accident the pain was constant, and he was having problems negotiating the stairs or even getting out of a seated position, especially when he would twist and pivot.

27. On November 1, 2022, Claimant presented again to ATP Pompei who noted that Claimant's pain continued to be a 7 out of 10, he felt unsafe at work at this point as he could not mitigate any circumstances that would need de-escalation with the knee the way it was. He continues to have knee stability issues and felt there was a safety issue as he could not intervene in any situations that might need de-escalating without significant risks of harm to himself. Dr. Pompei continued to state that Claimant had an exacerbation of his pre-existing condition and the August 10, 2022 accident made the problems worse.

28. On November 29, 2022, Claimant presented to ATP Pompei, who provided Claimant with a "hinged knee brace to aid instability while he is at work in case he has to restrain someone." On exam, Dr. Pompei noted that claimant had progressed from having a small effusion up to a moderate effusion, a positive Lachman, positive AP drawer, valgus and varus stress with significant crepitation on exam, positive pivot shift, positive for subluxation, positive McMurray's and difficulty squatting due to sensation of instability. At that visit it was ATP Pompei's opinion that Claimant needed to have his knee aspirated due to increased effusion. His Oxford Knee Assessment and pain diagram remained consistent with prior reports.

29. All of Claimant's pain diagrams since his date of injury reflected that Claimant's pain complaints were in the range of 7 to 8 out of 10.

30. Claimant credibly testified that his pain levels in his knees have remained at an increased level since the date of injury and not returned to baseline.

31. On January 10, 2023, Claimant continued his treatment with ATP Pompei, who noted that Claimant's reported pain complaint continued to be about 7 out of 10**.** Claimant was getting good effect with his visits with Dr. Reilly and he felt the Prozac was helping. Claimant reported that his knee had been "dislocating more often" despite being in physical therapy and trying to strengthen the muscles around his knee is much as possible. On exam, Dr. Pompei found only minimal effusion but Claimant continued with a positive Lachman, positive AP drawer, positive valgus and varus stress with significant crepitus on examination, positive pivot shift, positive subluxation, which was more prolonged than previous, positive McMurray's and difficulty with squatting due to sensation of instability.

32. Claimant testified at the time of his injury he was not receiving mental healthcare, but as a result of the anxiety and problems sleeping from his knee pain, he was referred by ATP Pompei to Kevin Reilly, PSY, and had been prescribed Prozac, which was helping Claimant with his mental health condition related to his workplace injury.

33. Claimant underwent an independent medical evaluation with Dr. Failinger on January 13, 2023. Dr. Failinger took a history that Claimant was doing relatively well prior to the August 10, 2022 incident when he was participating in a Physical Management Training session. He stated he was performing a V-Man maneuver, and he was getting down to place his knees between another coworker's leg to perform the maneuver, but his left shoe got caught on the pants leg of the person he was working with. He believed he was falling as he was trying to step between the other coworker's legs. In an attempt to not step on her, he stepped "over her," and his weight shifted to his left knee. He noticed sharp pain in the left knee. He stated the knee hurt right away, and he had increasing pain in his knee. He reported the incident to his supervisor.

34. Claimant provided Dr. Failinger with a history of prior injuries to his left knee while in high school, for which he underwent surgery, while in the military, for which he also underwent surgery, for a work-related injury to the left knee, which required two surgeries before he was placed at maximum medical improvement with a 20% lower extremity impairment rating. Claimant told Dr. Failinger that his knee was never great after the 2003 work related injury and that after injections and other surgeries, he was told he would likely develop degenerative joint disease. Claimant reported that prior to the injury on August 10, 2022, he would have flare-ups that would settle down after occasional cortisone injections. Claimant reported to Dr. Failinger that he had popping and noises by the knee, and had difficulty going up stairs now. He stated that the knee dislocated now, which was not something that happened to him before the incident of August 10, 2022.

35. Dr. Failinger diagnosed Claimant with a left knee sprain. Dr. Failinger opined that Claimant had a flare-up of his pre-existing arthritis on August 10, 2022, not a new injury. Dr. Failinger explained that it was not medically probable that Claimant sustained any significant appreciable acceleration or permanent aggravation of his pre-existing medial and lateral meniscus tears, both of which appeared to have undergone prior surgeries and both of which had significant degeneration prior to August 10, 2022. Dr. Failinger went on to explain that of greatest importance is the MRI scan which noted severe osteoarthritis that was tricompartmental. Dr. Failinger opined that the MRI findings

were pre-existing and not due to or accelerated by anything that occurred on August 10, 2022. However, Dr. Failinger admitted that "[N]o imaging is provided" for his review, so he did not review the actual imaging, just the report.

36. Claimant's primary complaint to Dr. Failinger was about instability and the frequent dislocation of their knee. Dr. Failinger opined that the instability could not have been worsened by the mechanism of injury described by Claimant. Dr. Failinger explained that once the anterior cruciate ligament was gone, and Claimant's had been for many months to years prior to August 10, 2022, one cannot make the instability worse unless other ligaments were torn and Claimant did not sustain any ligamentous injury on August 10, 2022.

37. Mark Failinger, M.D., opined that the surgery recommended by Dr. Schnell was necessary, but that it was not causally related to the work injury, giving the opinion that:

> It appears, with high medical probability, that his next step in treatment to avoid his instability and his pain would be to undergo a total knee replacement, as an arthroscopy and ACL reconstruction would only make him worse, as Dr. Schnell appropriately counseled the patient. However, the need for a total knee replacement would not be reasonably performed to treat any pathology created in the work incident of 08-10-2022. Rather, a knee replacement is necessary to treat pathology and symptoms due to the pre-existing arthritis.

38. On January 24, 2023, Claimant returned to ATP Pompei, who noted Claimant had had his independent medical exam performed and was awaiting the results. He stated his hearing was scheduled for March, he had been working full duty and continued to utilize his hinged knee brace for stability. On exam, Dr. Pompei again found Claimant was wearing the hinged brace, which he removed for the exam, and noted continued positive pivot shift and positive Lachman's. He found that the knee did sublux again on exam and noted a slight antalgic gait.

39. On February 7, 2023, Claimant returned to ATP Pompei, who noted Claimant had the **"**sensation of increasing instability and more frequent subluxations." Claimant had been diligent with physical therapy and home exercises and had been wearing the brace full-time as opposed to just wearing it at work and that he continued on modified duty.

40. Claimant stated that he had never used a brace until ATP Pompei prescribed the knee brace, and Claimant agreed to use it because his knee condition was substantially and permanently aggravated by the injury on August 10, 2022. Claimant focused on the clicking, popping, and locking that was not present prior to his injury of August 10, 2022, and the fact that no doctor prior to Dr. Schnell had requested a knee replacement.

41. Claimant stated that the problems with the clicking, popping and subluxations or dislocations had not happened prior to the incident on August 10, 2022. He also explained that he now had difficulty going down the stairs, which he did not have prior to the work injury. Going up and down the stairs was an important part of his job in order to respond to emergencies that happened at the youth center. While he stated that the pain is somewhat controlled with medications, it has not returned to baseline since

the work incident, neither has the anxiety and mental health issues. He continues to take medications for both. Prior to this, he did not have any restrictions and was able to perform the full duties of his job. Further, prior to the work injury he was able to work out and keep fit. He has not been able to reengage in the same kind of physical fitness program as prior to his injury.

42. Claimant stated that the findings of his ATPs, specifically Dr. Pompei's opinion on at least two occasions, that "he exacerbated his pre-existing condition and made the problems worse at work" support his claim that the injury which occurred on August 10, 2022 was a substantial and permanent aggravation.

43. As found, Claimant is found to be credible and his testimony reliable.

44. As found, Dr. Failinger's opinions have been considered, to the extent they focus on pathology, not symptoms, and the request for surgery is based upon Claimant's current symptoms, which include dislocating or subluxation of the left knee, popping and clicking, all of which were not present prior to the August 10, 2022 work injury.

45. As found, Dr. Pompei's and Dr. Schnell's opinions are more credible and persuasive than the contrary opinion of Dr. Failinger. As found, Claimant's testimony is in direct contradiction to Dr. Failinger's findings in that the pain diagrams reflect higher pain than prior to injury, reflect the knee giving out, which it was not doing prior to August 10, 2022, including the clicking, locking and popping.

46. As found, Dr. Failinger's opinion that Claimant "sustained a knee strain at most," is not found as credible as the opinion of Dr. Pompei, Claimant's ATP, who found Claimant had sustained an aggravation of the preexisting underlying degenerative condition, and by inference Dr. Schnell, who has put in an authorization request for the left total knee arthroplasty.

47. As found, Claimant continues to work for Employer who has modified his position so that he is not placed in a position that will further injure the left knee.

48. As found, the parties' stipulation of AWW of $1,808.24 is approved and incorporated into this order.

49. Testimony and evidence inconsistent with the above findings is found to not be relevant, not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*,

33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

A pre-existing condition does not preclude a claim for compensation and an injury is compensable if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc.*, W.C. No. 4-989-682-01 (August 17, 2016). Compensable medical treatment includes evaluations or diagnostic evaluations.

Causation may be established entirely through circumstantial evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). Medical evidence is neither required nor determinative of causation. A claimant's testimony, if credited, may alone constitute substantial evidence to support the ALJ's determination concerning the cause of the claimant's condition. *See Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986) (claimant's testimony was substantial evidence that his employment caused his heart attack); *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); see also *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997) (lay testimony sufficient to establish disability).

As found, Claimant has shown by a preponderance of the evidence that it is more likely than not that he suffered an injury arising out of and in the course of employment while demonstrating a training movement at work and stepped over a coworker, trying to

avoid stepping on her, and he injured his left knee, including causing severe pain and knee dislocation. As found, Claimant's accident directly and proximately caused the injury to his left knee which included substantial and findings of the permanent aggravation of his preexisting condition, the ongoing knee dislocations or subluxation as opined by Dr. Pompei, all conditions for which benefits are sought. Dr. Pompei's and Dr. Schnell's opinions are persuasive and support the claim that it is more likely than not that Claimant had an aggravation of the underlying degenerative condition.

As found, on August 10, 2022 Dr. Frombach noted some left knee tenderness to palpation over the lateral joint line but not the medial joint line, range of motion from 0° to approximately 130 without any pain, varus stress with LCL[4] mild laxity, valgus negative, and a negative McMurray. Dr. Frombach performed a steroid injection as part of Claimant's maintenance program prior to the injury. However, as further found, following the incident and accident of August 10, 2022, Dr. Pompei noted on September 2, 2022 that Claimant had joint effusion, difficulty with range of motion in terms of flexion and extension of his knee, as well as tenderness to palpation along the medial and lateral joint lines. He found that Claimant had a positive McMurray's, an equivocal Lachman's, varus and valgus stress testing with significant crepitation of the knee, a positive patellar grind and an antalgic gait. As found, Dr. Pompei credibly and persuasively documented Claimant's increase in physical findings and Claimant credibly and persuasively testified to this increasing symptom of pain, instability, clicking and popping of his left knee, were triggered by the August 10, 2022 accident and consequently triggered the Claimant's need for medical treatment. As found, Claimant's need for treatment and disability (as Claimant has had to modify his job duties) were the proximate result of the August 10, 2022 work related injury and not just the natural consequence of the pre-existing condition. As concluded, had the injury not occurred Claimant would have likely continued to require injections when he had flare-ups and but for the accident of August 10, 2022, Claimant may have continue to maintain his symptoms under control without requiring further care. As further concluded, but for the accident of August 10, 2022 Claimant would not have required the treatment currently being recommended. As found and concluded, Claimant has shown by a preponderance of the evidence that that it is more likely than not that he suffered a compensable permanent aggravation of his preexisting condition when he was involved in the training exercise while in the course and scope of his employment on August 10, 2022 which caused a need for medical care and disability.

C. Reasonably necessary and related medical benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial*

[4] LCL is assumed to be lateral collateral ligament.

Claim Apps. Office, 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Respondents argued that all the way back in 2007 Dr. Failinger advised Claimant that he would eventually need the left knee replacement, and that despite the accident of August 10, 2022, as supported by Dr. Failinger opinion, that the time was now, not because of any aggravation but because it was inevitable due to the arthritic and degenerative process cause by the prior injuries. This ALJ disagrees. An arthritic knee alone does not cause the need for the left knee replacement. The exponential increase in symptoms is what caused the need for the surgery. And this is well supported by Claimant's testimony that while he had some pain and discomfort prior to the August 10, 2022 accident, those symptoms were controlled by exercise, maintaining himself in shape, the occasional steroid injections that really helped his symptom control and some medications. As found, following the work injury of August 10, 2022 the symptoms were not just occasional pain and discomfort, they were the frequent subluxation of the knee, the clicking and popping of the knee, the swelling of the knee, the positive findings on exam as established by Dr. Pompei and noted above. All these new symptoms and serious instability are the cause for the need for the total knee arthroplasty (TKA) recommended by Dr. Schnell. All of these new symptoms were proximally cause and aggravation of the underlying preexisting condition, which are found to be caused by the compensable work related injury of August 10, 2022. Even Dr. Failinger stated that the TKA was reasonably necessary at this point in time. As found, Claimant has shown by a preponderance of the evidence that it was more likely than not that the TKA is reasonably needed and related to the August 10, 2022 work related injury.

D. Average Weekly wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid &*

Waldron v. Vigil, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

Here, the parties agreed that Claimant's average weekly wage was appropriately $1,808.24 and the stipulation of the parties was approved in this order.

ORDER

IT IS THEREFORE ORDERED:

1. The Claimant proved by a preponderance of the evidence that he suffered an aggravation of his underlying degenerative condition of his left knee on August 10, 2022 within the course and scope of his employment.

2. Respondents shall pay for reasonably necessary and related medical care cause by the August 10, 2022 aggravation, including the total knee arthroplasty recommended by Dr. Schnell.

3. The stipulation of the parties is approved and ordered. Claimant's average weekly wage is $1,808.24 and the temporary total disability rate is $1,205.49.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that the closed claim of March 11, 2019 should be reopened due to a worsening of condition.

II. If the claim is reopened, then whether Claimant has proven by a preponderance of the evidence he is entitled to further medical care to cure and relieve him of the effects of the admitted work injury, including surgery recommended by the authorized treating physician (ATP), John D. Papilion, M.D.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was a right handed, 82 years old at the time of the hearing in this matter. Claimant originally injured his right shoulder on March 11, 2019 while working for Employer as a shuttle driver. This was an admitted claim.

2. Claimant would pick up customers and their luggage at Employer's place of business and drop them off at the airport and vice versa. He would pick up customer's luggage and place the luggage on the rack, which had three levels. He would also assist customers with their luggage and place the luggage in customers' car trunks. Claimant worked for Employer for nine years without problems before his March 11, 2019 work injury.

3. On June 20, 2019 Claimant was initially evaluated by Dr. John Papilion with regard to his March 11, 2019 work injury. Dr. Papilion took a history that Claimant was carrying out his duties as a shuttle driver and was swinging a heavy 20 to 25-pound bag up overhead, felt a pop in his right shoulder and had immediate pain and drop arm. Since then, he had significant difficulty with raising his right arm, lifting away from his body and overhead. He had a history of rotator cuff repair in 1987. On exam he noted a markedly positive drop arm test with weakness in the supraspinatus and infraspinatus, a positive lag test, positive belly press test and positive impingement sign. Following review of the diagnostic testing, he assessed Claimant had a massive acute on chronic rotator cuff tear of the right shoulder and medial dislocation of the biceps tendon. He noted that the rotator cuff was irreparable and recommended proceeding with a total reverse shoulder arthroplasty.

4. Claimant last worked for Employer of injury in January 2020. Claimant testified he was laid off and did not seek further employment until two years later.

5. The surgery did not take place until February 5, 2020 and it is not clear from the evidence what was the cause of the significant delay. Dr. Papilion proceeded with the reverse total right shoulder arthroplasty, which included a Tornier size 29 mm glenoid

plate with a 39 mm glenosphere, a size 8 press-fit Aequalis Flex stem with a high-offset reverse tray and a +6 mm polyethylene humeral cup. Dr. Papilion also performed an in-situ biceps tenodesis.

6. By March 19, 2020, Dr. Papilion noted that Claimant was doing exceedingly well with minimal to no complaints of pain. He was very pleased with Claimant's progress. By April 30, 2020 Dr. Papilion continued to be effusive over Claimant's progress, recommended work hardening and released Claimant to work as a commercial driver with lifting limited to 10 lbs. away from the body or overhead.

7. On August 5, 2020 Dr. John Sacha performed an impairment rating noting that Claimant merited only an impairment for loss of range of motion of the right shoulder of 9% upper extremity impairment, which converted to a 5% whole person impairment. He recommended that Claimant be placed at maximum medical improvement (MMI), with light duty as recommended by Dr. Papilion and be allowed maintenance medical care.

8. Claimant saw Dr. Papilion on February 11, 2021 for a routine follow-up. Overall, he was doing very well. He had a functional capacity evaluation 6 months previously and fell into the medium work category. He had not yet returned to work as he had not been called back by Employer. His biggest complaint was weakness in external rotation. He was having little to no complaints of pain and good strength in the deltoid with a negative drop-arm test. Dr. Papilion stated that Claimant was doing well overall and placed him at MMI at that time with permanent restrictions of 40 lbs. lifting and push/pull up to 100 lbs. He recommended maintenance visits.

9. Claimant was placed at MMI on February 18, 2021 by Dr. Amanda Cava of Concentra with the same restrictions imposed by Dr. Papilion, with the exception that she added no overhead reaching. Claimant felt good at the time. While he was able to use his right arm, he could not do so fully. He stated he did not have the same strength, range of motion and felt weaker than prior to his work injury.

10. Claimant recalled he had a functional capacity evaluation performed. His permanent restrictions were lifting 40 lbs., no overhead lifting and pushing/pulling up to 100 lbs. Claimant credibly stated that he never violated those restrictions.

11. Respondents filed a Final Admission of Liability on April 19, 2021 and the claim was closed, except that medical benefits remained open for maintenance care.

12. On February 10, 2022 Claimant returned to Dr. Papilion for a follow-up maintenance visit, two years post reverse shoulder arthropathy for his massive irreparable rotator cuff arthropathy. On exam, Dr. Papilion noted that Claimant's wound was well healed, he could actively flex and abduct to about 120 degrees, with external rotation of 60, internal rotation of 60, good strength and manual testing in the deltoid with a negative drop-arm test. Dr. Papillion documented finding some calcification in the lateral deltoid adjacent to the acromion. At the time Dr. Papilion stated that Claimant remained at MMI. He had not regained any motion and had some limited function. He had few complaints of pain. He stated that he did review Dr. Sasha's impairment rating and it was apparent that Dr. Sasha did not take into consideration additional impairment for Claimant's total shoulder arthroplasty. Under the Table 19, he should have been awarded

an additional 30% impairment of the upper extremity which should have been combined to his loss of motion.

13. Claimant stated he returned to consult with Dr. John Papilion in February 2022 for a routine visit only, at which time he was doing fine. He stated he had no pain in the right shoulder, despite the limited strength and range of motion. He stated that his shoulder was functioning well enough for what he would do on a daily basis.

14. Claimant returned to work for another employer as an auto parts delivery driver (hub driver) in February 2022 to work part time, starting with two days a week. He was working one and one half days a week after August 2022. He serviced two stores, one in Sterling and the other in Fort Morgan. He would regularly do two round trips per day. He would push a cart, loaded with parts, from the dock to his van and load the parts, which were generally small, like windshield wipers, spark plugs, short exhaust pipes, fuel pumps, nuts and bolts. During his tenure with this employer he had only taken large engine blocks only twice. These were loaded onto the van for him with a forklift and taken off with a forklift. He did not touch them. In fact, Claimant credibly testified that he did not touch anything that was heavy or exceeding his restrictions. Claimant continued to work for this subsequent employer part time.

15. The first week of August, he was at his part time job. He went to get his cart that had been loaded with items for delivery. He started pushing it out to his van. He stated that the cart was no more than 20 lbs. and the items on it weighed no more than 10 to 15 lbs. total. The cart had a handle which he used to push the cart. When the cart went over the sill of the doorway, the cart was jarred, jogging the packages and one of the packages started to fall off to the right of the cart no more than two feet away from Claimant. The package was approximately two inches by eight inches and approximately twelve inches long, and was approximately on the cart at shoulder height on top of other packages. Claimant went to reached out, but as he was extending his right hand, he felt a sliding sensation in his right shoulder, like it was going to dislocate, so he stopped the movement immediately. He never made contact with the box that fell to the ground. Claimant had never felt that sensation before. He continued with his duties and felt fine for the remainder of the day. By this time Claimant had been working for this employer for approximately six months without problems.

16. A couple of weeks after the first incident, he was again at work, and after he had loaded his van, he went to close the sliding door of the van, when again, felt the sliding sensation, as if his shoulder was going to dislocate. He pulled back, tightened his shoulder and the joint seemed to slide back into place. Claimant was outside of the van on the passenger side, when he attempted to slide the door closed with his right upper extremity. He had not more problems with finishing his work but he was careful with his right arm.

17. Approximately one week later, the third incident happened the last Saturday in August[1], when he was lying on his couch. He went to cross his arms and his arm slipped off his chest and fell to the floor. He experienced an extremely painful sensation where his shoulder popped out. Claimant looked down and noticed that his shoulder had

[1] This ALJ infers that this was on August 27, 2022.

just popped out, and there was a big bulge. He fought the pain to get his shoulder to go back into place by pulling back with the muscles of his shoulder until it popped back into place. Claimant determined he should schedule an appointment with Dr. Papillion. He was able to secure an appointment for September 15, 2022.

18. Approximately the following Monday, which would have been September 12, 2022, when he was working, Claimant was turning the wheel of his van to make a right-hand turn and as he turned the wheel, his shoulder went out again. It was very painful and was very difficult to push and pull his shoulder joint (ball) back into the socket. This subluxation was the most painful of the incidents.

19. Claimant stated that he did not file a claim against the current employer because the incidents above were just normal everyday movements and not injuries in and of themselves. He felt that there was something wrong with the shoulder replacement and that was part of his March 11, 2019 claim. He explained that because the arm socket just fell away from the ball when he made certain movements he felt that there was something wrong with the shoulder replacement. Claimant has changed the way he uses his right arm after the fourth episode and now he uses his left arm when he must reach for anything.

20. On September 15, 2022 Claimant was evaluated by Dr. Papilion. Claimant reported that he was trying to catch a small box and reached forward and felt as though his shoulder came out of place. He was able to self-reduce.[2] This occurred about 6 weeks prior to his follow up with Dr. Papilion. He had a total of 4 similar episodes. These were quite painful for him. There was little activity, just reaching forward. He had to compress the shoulder and was able to reduce it and then symptoms resolved. On exam, Dr. Papilion noted some muscular atrophy and deformity about the shoulder as expected. He could flex and abduct to about 150 degrees, external rotate of 80, internal rotate of 70. There was good strength to manual testing of the deltoid and negative drop-arm test. He did have a positive apprehension test and Dr. Papilion was able to manually sublux the right shoulder anteriorly. Dr. Papilion recommended proceeding with a revision arthroplasty with poly[3] exchange but did not believe there was need to change any of the other components. He provided Claimant with work restriction of 5-pound lift and no overhead lifting. Dr. Papilion sent the request for authorization of the revision surgery on September 29, 2022 to Respondents.

21. On November 8, 2022 Dr. Papilion stated that it remained his opinion that the additional revision surgery was related to the original March 11, 2019 work related injury and not to any minor incidents where Claimant was simply reaching forward.

22. Respondents had Claimant evaluated by Dr. William Ciccone for an independent medical examination on December 21, 2022. Dr. Ciccone took a history as follows:

---

[2] Both Dr. Papilion and Dr. Ciccone noted that the use of the words “self-reduced” was a medical term that means to put the socket of the humerus bone up onto the metal ball, and was a term likely interpreted and used by the physician, not claimant.

[3] This ALJ infers that poly is the polyethylene humeral cup, which was part of the prosthesis of the shoulder replacement.

> In September 2022 he was loading a van and as a box fell off of a cart. He reached out quickly to grab the box and felt a shift in his shoulder. There was no pop, or clunk and had very minimal pain at the time. Approximately one week later, this occurred again when he was reaching back for the van door and felt it slip.
>
> A more recent event was while lying down his arm fell off the couch into extension and had a significant dislocation and clunked when putting it back into joint. Overall, this has happened four times. Since that time, he has been restricting use of the arm, restricting any abduction or external rotation due to feelings of instability. He started at Concentra and eventually saw orthopedics again to discuss possible surgery to stabilize the shoulder. He reapplied to have his case reopened.

23. Dr. Ciccone performed a record review going back to 2014 summarizing only key complaints. Multiple records were incorrect. For example, he stated that Dr. Papilion documented an episode in March 2022. In fact, Dr. Papilion stated that the reaching for the box incident was only six weeks prior to his evaluation on September 15, 2022.

24. Dr. Ciccone opined that revision shoulder surgery was needed to stabilize Claimant's shoulder replacement. He disagreed that the March 11, 2019 work injury should be reopened because he felt that the incident of reaching for a falling box at work was the cause of the current instability and that Claimant needed to open another workers' compensation claim with the current employer as the surgery was reasonably necessary and related to the new incident at work.

25. At the time of the hearing Claimant stated that he avoided using his right arm because when he tried, if felt like it would slip out. Claimant would like to proceed with the surgery proposed by Dr. Papilion because he has no confidence in being able to use the right arm without it subluxing or dislocating, which is generally very painful.

26. Dr. William Ciccone testified by deposition on March 22, 2023 as an expert orthopedic surgeon and noted that he was Level II accredited. He had conducted an independent medical evaluation on December 21, 2022. He reviewed the medical records, examined Claimant, and provided his opinion. Dr. Ciccone noted that the incidents at work and the incident at home where Claimant reported subluxation of his shoulder, are all consistent and could explain the subsequent positive apprehension tests. He further stated as follows:

> A … His instability events began specifically after the event at work for [current employer] in September of 2022. And after that, it became much more persistent and restrictive.
>
> So from a causal analysis, you would relate the second injury to the instability, not the first injury.
>
> Q And the second injury being --
>
> A The one at [current employer].
>
> Q Okay. And then the third incident with the van, was that a subsequent injury event as well?
>
> A Yeah, I think these are all subsequent events with shoulder instability. Once that creates itself, you have multiple subluxation events. It can happen from any type

of activity. It may not -- it could be individual injuries but it's because of the initial event.

27. Dr. Ciccone explained that the initial inciting event is the one where Claimant reached out to catch the box while at work. Dr. Ciccone opined that the objective medical evidence did not support that Claimant's shoulder condition worsened as a natural progression of the original 2019 work related injury. He went on to state that three things could cause instability. The first being wearing out the plastic, an infection or having a subsequent injury. Dr. Ciccone opined that it was too early to have wear and concluded that the instability was caused by a subsequent event. However, when questioned, it is clear that Dr. Ciccone did not fully enquire about how the incidents happened. He was unaware that Claimant had not fully extended his arm or that he did not catch the falling box. He confirmed a quoted statement from his report that Claimant had reached back for the van door and felt the shoulder joint slip. But Claimant did not "reach back" for the van door. When asked about how painful the third subluxation was, he stated "I don't have it there. I - I - I don't - I don't think he mentioned whether it was painful or not. At least I don't have it in my note."

28. Dr. Ciccone opined that the revision arthroplasty was reasonably needed to repair the instability of Claimant's shoulder. He further stated that he believe the activity of reaching out probably loosened some scar tissue and some other constraints that can happen from surgery that now makes the shoulder unstable. Lastly, he stated that "My *assumption is that he had an event when he caught a box* and he dislocated his shoulder. That is the primary event" (*emphasis added*). When asked whether there was evidence that the replacement failed, Dr. Ciccone stated "So I would say that instability is a failed replacement."

29. John D. Papilion, M.D. testified at hearing and was accepted as an expert in medicine generally and as an orthopedic surgeon specializing in shoulder surgeries as well as a Level II accredited physician accredited by the Division of Workers' Compensation. Dr. Papilion explained reverse arthroplasty surgery of the shoulder as a shoulder replacement where the ball and socket are reversed, which caused the deltoid muscle to be the major muscle to articulate the arm, substituting for the rotator cuff, when it was so damaged that it could not be repaired. So the metal ball was fixed to the socket and the plastic cup was fixed to the upper end of the humerus. Dr. Papilion explained that like most patients, Claimant was able to get improved motion, strength and function following the surgery but never back to normal, and was unable to return to his regular job with Employer lifting heavy bags.

30. Dr. Papilion confirmed that he had seen Claimant in February 2022 for a routine maintenance visit only, which had been set up when Claimant was placed at MMI. Dr. Papilion noted that on exam at the September 15, 2022 visit, Claimant provided the history of what was happening with his shoulder. Dr. Papilion noted atrophy and wasting of the musculature surrounding the shoulder, which was expected since the rotator cuff tendons and muscles were no longer attached to the bone and there was nothing stimulating them to keep them toned or functioning. It also showed a different appearance because the socket was where the ball was and vice versa. He credibly testified that the atrophy was expected because "everybody that has a reverse shoulder replacement has

atrophy around the – the musculature in the shoulder girdle…" Dr. Papilion explained a reverse total shoulder arthroplasty as follows:

> This is a salvage procedure that we do in patients that have massive irreparable rotator cuff tears, rotator cuffs that we cannot repair. So this procedure is basically a shoulder replacement. It's an open surgery where we dislocate the shoulder, take the ball off, and replace the ball and socket with metal and plastic. And we reverse those, meaning that we put a ball where the socket was and a stem down the inside of the bone that has a socket attached inside the humerus that has a plastic socket. And it's a bit technical, but it basically changes the biomechanics of the shoulder and it pushes – it pushes the center of rotation that way and that way, and it puts the deltoid muscle under tension, and that's what the patient uses to raise their arm up.

31. Dr. Papilion noted that patients do not get back full motion or strength with the procedure. Following taking a history and examining Claimant, Dr. Papilion opined that Claimant's claim needed to be reopened for purposes of proceeding with a revision arthroplasty surgery.

32. Dr. Papilion opined that Claimant did not have an injury that aggravated his shoulder condition, only that it was a progressive condition, expected with total reverse arthroplasty patients. Claimant only had incidents caused by the natural progression of the expected consequence following a total reverse shoulder arthroplasty. Dr. Papillion opined that simply reaching for the box did not damage the components he wants to replace or that Claimant did not tear anything in his shoulder at that time. Dr. Papilion stated:

> my feeling that either - either his capsule had stretched out or he tore - tore his subscapularis, which is one of the restraining muscles that were reattached, but it wasn't -- it wasn't an injury that caused his shoulder to -- to dislocate.
>
> …
>
> I don't think that with the history that he was giving to me that he had an injury. He had an incident where the shoulder just happened to come out of place just merely reaching forward, which I don't think was a traumatic episode, and I don't think it was enough to tear anything.
>
> So my - that's - that's the big reason why I think this is related to his reverse shoulder arthroplasty. Sometimes we just get unstable. Sometimes the capsule can stretch out or the muscles are not strong enough. That would give this shoulder its stability, is the muscle that -- the deltoid muscle pulling on the humerus bone into that -- into that ball, and if you don't have that muscle tone, then the shoulder can become unstable.

18. Dr. Papilion further stated that he did not think that simply reaching out did any damage to the components that he replaced. He opined that the capsule had just stretched out, which gave him the initial subluxation, which in turn put tension on the capsule and that with each subluxations there was more laxity. He stated that:

> I just think that his shoulder is unstable, and when I examined him, I could sublux it. I could push it out of place.

> So the typical treatment for that is to - unfortunately, you have to go back in and open the shoulder up, and you pop out the little plastic cup that we put on the humerus bone, and it comes in all different thicknesses, and I would..
>
> Would involve opening up the shoulder, taking that little plastic liner out and putting a thicker one in that's either 3 or 6 millimeters thicker, and then I also would probably - his cuff that he has now is not terribly constrained, and I would put another constrained cup that has deeper - a deeper dish in it to - to restore that stability to the shoulder.
>
> And I -- and every shoulder dislocation I've seen after a reverse replacement, that subscapularis tendon is - the one in the front of the shoulder is usually torn off when the shoulder dislocates.
>
> So we would either try to reattach that or if not, then just - just deal with it. But those are the actions that I would do to restore the stability intraoperatively.

33. As found, Claimant was credible in his testimony. Claimant clearly explained that he was not doing anything out of the ordinary or outside his restrictions either at work or at home when his shoulder slipped out of place. The movements were not quick, fast and were ordinary activities he performed every day. Claimant credibly explained that he believed that something went wrong with his shoulder replacement when it slipped out and that he had done nothing that would be the responsibility of his current employer. He expressed his belief that it was all part of the original claim and injury of March 11, 2019.

34. As found, Dr. Papilion's explanation of the progression of the cup or capsule stretching out and the muscles not being strong enough to keep the cup on the metal ball was credible and persuasive. He further credibly explained that stretched cup and the lack of muscle tone of the shoulder joint caused it to become unstable and caused the subluxations or dislocations.

35. As found, it is more probable than not that the condition of the artificial joint was no longer stable and supported by the atrophying muscles and caused the subluxations and instability. As found, Claimant's condition has changed significantly because the instability of the joint changed how Claimant carries out activities of daily living and work, where he has to continuously protect the right upper extremity from movement.

36. Dr. Papilion's opinions are more persuasive that Dr. Ciccone's opinions. Especially since Dr. Ciccone failed to get a complete history and correct mechanism of actions that Claimant described above. Dr. Ciccone noted that Claimant had made a "quick" motion to catch the box that was falling. When, in fact, Claimant was merely beginning to reach out when he felt his shoulder slip and stopped the motion immediately. He did not reach out to catch the falling box. In fact, the box fell to the ground. Dr. Ciccone noted that Claimant was "reaching back for the van door and felt it slip," when, in fact, Claimant was outside of the van on the passenger side, sliding the door closed. He made mistakes such as not noting the time line, first stating these incidents occurred in March and then in September. As found, Dr. Ciccone did not have all the correct facts to make a credible causation analysis.

37. Furthermore, Dr. Ciccone noted that one of the possibilities was that the instrumentation of the joint replacement had failed or stretched. He recognized that movement could probably loosen some scar tissue and some other constraints that can happen from surgery that could make the shoulder unstable.

38. Claimant has proven by a preponderance by a preponderance of the evidence that he has had a change in condition that is proximally related to the original surgery and joint replacement due to the March 11, 2019 work related injury. Claimant has proven that it is more likely than not that the instability of his shoulder and need for further surgical repair is sufficient to establish the need to reopen the March 11, 2019 claim. As found, Claimant's credible testimony regarding the "incidents" cited above were merely functions of inconsequential movements that did not amount to injuries or aggravations or intervening events, movements well within his restrictions and activities he performed daily without consequence.

39. As found, Both Dr. Papilion and Dr. Ciccone did agree that the revision surgery was reasonably necessary. Dr. Papilion was more credible than the contrary opinions of Dr. Ciccone with regard to the proposed surgical revision of the total reverse shoulder arthroplasty being related to conditions proximately caused by the original work injury.

40. As also found, Claimant's March 11, 2019 industrial injury left Claimant's body in a weakened condition that played a causative role in producing additional disability or the need for additional medical treatment. As a result, Claimant's disability and need for medical treatment represent compensable consequences of the industrial injury. As a result, the ALJ finds and concludes that Claimant has establish by a preponderance of the evidence that his condition proximately caused by the March 11, 2019, industrial accident has worsened since being placed at MMI and that his claim should be reopened.

41. Thus, the ALJ further finds and concludes that Claimant has established by a preponderance of the evidence that the need for medical treatment is causally related to his March 11, 2019, work injury. Claimant has proven by a preponderance of the evidence that the revision surgery is reasonably necessary and related to the March 11, 2019 work injury.

42. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (2021). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. This decision does not specifically address every item contained in the record and the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion. The ALJ has specifically rejected evidence contrary to the above findings as not credible or unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence, including the causal relationship between the work related injury and the medical condition for which Claimant is seeking benefits. Sec. 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). Claimant is not required to prove causation by medical certainty. Rather it is sufficient if the claimant presents evidence of circumstances indicating with reasonable probability that the condition for which they seeks medical treatment resulted from or was precipitated by the industrial injury, so that the ALJ may infer a causal relationship between the injury and need for treatment. See *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Petition to Reopen for Further Medical Benefits

The issue of medical benefits is integrally intertwined with the issue of the petition to reopen the claim. A Claimant cannot reopen a claim without claimant a specific benefits

such as temporary disability or medical benefits that are reasonably needed and related to the claim in question. Therefore, both issues will be addressed at the same time.

Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. When a claim is closed, the claimant is precluded from receiving further benefits unless there is an order reopening the claim on the grounds of error, mistake or change of condition. *See Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), (a claim may be reopened for further medical treatment when the claimant experiences an "unexpected and unforeseeable" change in condition); *Brown and Root, Inc. v. Indus. Claim Appeals Off.*, 833 P.2d 780 (Colo. App. 1991).

Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Off.,* 996 P.2d 756 (Colo. App. 2000); *Brickell v. Business Machines, Inc.*, 817 P.2d 536 (Colo. App. 1990); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988). There is no basis to reopen a claim if the reopening does not lead to the award of additional benefits. *Richards v. ICAO*, *supra.*

In seeking to reopen a claim, Claimant shoulders the burden of proving his condition changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Off.,* 128 P.3d 270 (Colo. App. 2005); *Cordova v. Industrial Claim Appeals Office, supra*; *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986); *El Paso County Department of Social Services v. Donn*, 865 P.2d 887, (Colo. App. 1983); *Barker v. Poudre School Dist.,* W.C. No. 4-750-735 (ICAO, Mar. 7, 2012). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998).

Respondents are liable to provide medical treatment that is reasonably necessary to cure or relieve the employee from the effects of the injury or prevent further deterioration of the claimant's condition. Sec. 8-42-101, C.R.S.; *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609, 611 (Colo.App.1995). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Sec. 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The mere occurrence of a compensable injury does not require an ALJ to find that the need for subsequent medical treatment was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those, which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); Sec. 8-41-301(1)(c), C.R.S. (2022).

A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Off., supra*; *Jarosinski v. Indus. Claim Appeals Off.,* 62 P.3d 1082, 1084 (Colo. App. 2002); *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). A change in condition pertains to changes that occur after a claim is closed (after a Claimant was determined

to be at maximum medical improvement). *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006); *El Paso County Department of Social Services v. Donn*, *supra*. The pertinent and necessary inquiry in this case is whether Claimant has suffered any deterioration in his work related condition that justifies additional benefits. *Cordova v. Indus. Claim Appeals Office, supra*.

The question of whether Claimant has proven a change in condition of the original compensable injury or a change in physical or mental condition which can be causally connected to the original compensable injury is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, *supra*; *City of Durango v. Dunagan, 939 P.2d 496 (Colo. App. 1997); Faulkner v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

The reopening authority is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ. *Renz v. Larimer County Sch. Dist. Poudre R-1,* 924 P.2d 1177 (Colo.App.1996). See *Berg v. Ind. Claim Appeals Off. of Colorado*, *supra*. The ALJ is vested with authority to address whether a claimant met their burden of proof under a preponderance of the evidence standard. See *Renz. V. Larimer County Sch. Dst. Poudre R-1, supra*. Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball, supra*; *Jarosinski v. Industrial Claim Appeals Office, supra*; *City of Durango v. Dunagan*, *supra*. However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). If a new intervening cause results in the need for care then reopening is improper. See *Owens v. ICAO*, *supra*. "If the worsening is the result of an intervening cause, including an intervening industrial injury, the worsened condition is not a compensable consequence of the original industrial injury, but a new injury." *Edwards v. Wal-Mart Stores, Inc.*, W.C. No. 4-478-405 (ICAO, December 13, 2002). The question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

An ALJ must determine, based on the totality of the circumstances if the causal link is present. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). In this case, both surgeons, Dr. Papilion and Dr. Ciccone, have agreed that the revision of the reverse total shoulder surgery is reasonable and necessary and this ALJ agrees. The only issue is whether the worsening of Claimant's condition was related to the March 11, 2019 work injury.

As found, this ALJ credits the opinions of Dr. Papilion, the original surgeon that performed the total reverse right shoulder arthroscopy, to reach the conclusion that Claimant's need for revision surgery was, more likely than not, probably caused by the

natural stretching or deterioration of the plastic cup portion of the prosthesis which was implanted as a consequence of the March 11, 2019 work related injury. Dr. Papilion's opinions are more credible and persuasive that the contrary opinions of Dr. Ciccone, who based his causation analysis on faulty assumptions.

Moreover, this ALJ is not even remotely persuaded that the described "incidents" while Claimant was carrying out employment related duties aggravated, accelerated or combined with this pre-existing condition to give rise to an intervening event. These incidents were, in fact, non-events, as Claimant was simply moving his body in a manner that was natural and not outside his restrictions. Claimant's disability and need for treatment, rather, were caused by the instability of the shoulder replacement and the atrophied muscles caused by the original shoulder replacement. In February 2022, before Claimant began his current position, Dr. Papilion documented finding some calcification in the lateral deltoid adjacent to the acromion. As found, this likely started the deteriorating process.

As Dr. Papilion noted in his September 15, 2022 report, Claimant provided the history of what was happening with his shoulder. Dr. Papilion noted atrophy and wasting of the musculature surrounding the shoulder, which was expected since the rotator cuff tendons and muscles were no longer attached to the bone and there was nothing stimulating them to keep them toned or functioning. The atrophy of the muscles combined with either the calcification or loosening scar tissue is what caused the instability as the muscle were having a difficult time holding the stretched out polyethylene humeral cup onto the metal ball implanted during the reverse arthroplasty. Dr. Papilion persuasively and convincingly opined that an incident where the shoulder just happened to come out of place just merely reaching forward, was not a traumatic episode, and was not enough to tear anything. The persuasive evidence presented supports a conclusion that Claimant's need for treatment, including surgery is more probable than not related to the natural deterioration of the prosthesis and scar tissue that simply released causing the subluxations or dislocations, which in turn caused the instability of the right shoulder. From the totality of the evidence, Claimant's need for the surgery was proximately caused by the progression of atrophy of Claimant's muscles caused by the joint replacement. Further, the joint replacement was proximately caused by the March 11, 2019 work injury. Therefore, the need for the revision surgery flows naturally and proximately from the March 11, 2019 work injury.

Based upon the totality of the evidence presented, Respondent are liable for medical treatment which is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. (2022); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents are liable for the revision surgery proposed by Dr. Papilion as well as any medical care or rehabilitation associated with that surgery.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant has shown by a preponderance of the evidence that he had a worsening of condition to justify a reopening of the March 11, 2019 claim.

2. Respondents shall pay for the revision surgery under Dr. Papilion and for any associated medical care related that surgery.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he her average weekly wage ("AWW") should be increased above what was admitted to in the general admission of liability ("GAL")?

- Whether Claimant is entitled to additional temporary disability benefits, including temporary partial disability benefits, based on the increased **AWW?**

- The parties stipulated prior to the hearing that if Claimant was to be found to have earned less than her AWW for any given period of time in which she was on restrictions after her injury, Claimant's loss of earning was attributable to the effects of the work injury.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on September 6, 2021 while working for Employer. Claimant testified she went to pick up a bag of dog food that weighed forty-seven (47) pounds and injured her lower back. Claimant had begun working for Employer on June 2021. Claimant testified she was initially earning $12.75 per hour. Claimant testified at hearing that prior to her work injury she had received a raise to $14 per hour. Claimant testified she worked overtime prior to her date of injury.

2. Claimant testified she received two raises after her injury, one to earning over $15 per hour, and a second raise that increased her hourly rate to over $16 per hour. According to the wage records entered into evidence, Claimant received a raise from $12.75 per hour to $14 per hour on August 8, 2020. According to the wage records entered into evidence, Claimant received a raise from $14 per hour to $15.81 per hour on or about February 20, 2022. According to the wage records, Claimant received a second raise up to $16.48 per hour on or about May 1, 2022.

3. In addition to Claimant's job with Employer, Claimant had another job with working information technology ("IT") for a law firm owned by her family. Claimant testified she began working for her family's law firm while she was teenager. Claimant testified she earns $500 twice per month plus bonuses.

4. Claimant testified she stopped working for Employer on May 28, 2022. Claimant testified that after her injury she was not able to maintain a full time schedule. Claimant testified she was not paid temporary disability benefits from her Employer.

5. Claimant testified she has not missed time from work with her concurrent Employer working IT since her injury.

6. Respondents filed a general admission of liability ("GAL") admitting for an AWW of $453.46. The GAL admitted for TTD benefits beginning May 28, 2022 at a TTD rate of $302.31. According to the GAL, the AWW was calculated based on Claimant's earnings from June 14, 2021 through September 4, 2021.

7. Claimant argues at hearing that the ALJ should consider post injury raises in calculating Claimant's AWW. The ALJ is not persuaded. The ALJ notes that while Claimant received post-injury raises, those raises were provided to Claimant over five months after the injury. Under these circumstances, the ALJ does not believe that using Claimant's post-injury earnings is the appropriate method for calculating Claimant's AWW.

8. Respondents argue that it is improper to use Claimant's earnings from her concurrent employment with the law firm due to the fact that Claimant has not missed time from her concurrent employment. Respondents argue that this may become relevant to readdress if Claimant is provided a permanent impairment rating in the future, but should not be included in the AWW calculation at the present time.

9. The ALJ is not persuaded. Claimant should not have to seek a new hearing in the future to increase her AWW once she is provided a permanent impairment rating. Claimant's AWW is to be calculated based on her earnings at the time of her injury, which includes her concurrent employment. There is no requirement that Claimant miss time from her concurrent employment or receive a permanent impairment rating to have her earnings from her concurrent be included in calculating her AWW.

10. While Claimant's temporary disability benefits will not include her concurrent employment, it does not negate the fact that Claimant's AWW is intended to include earnings from any concurrent employment Claimant had at the time of the injury.

11. According to the wage records, Claimant worked 29.22 hours her first week of employment (June 14 through June 19, 2021), but worked 42.58 hours the next week. The ALJ notes that there were only two weeks prior to Claimant's injury in which she worked less than $30 hours for employer, the first week of employment and the week of August 1, 2021 through August 7, 2021 when Claimant took leave without pay. The ALJ has determined that these two weeks should not be included in calculating Claimant's AWW as she was voluntarily off of work for a period of time during one week and the first week of Claimant's employment may not have included all days within the pay period. In the remaining ten (10) weeks of employment, Claimant averaged 34.583 hours of work per week, not including overtime. Claimant also worked 2.58 hours of overtime that was paid at a rate of time and a half during the week of June 20 through June 26, 2021.

12. Based on Claimant earning $14 per hour at the time of the injury, the ALJ determines Claimant's AWW should be based off of her hourly rate at the time of the injury. The ALJ further notes that Claimant received two $75 vaccination stipends

during her employment with Employer prior to her injury. The ALJ finds that the vaccination stipends should likewise be used in calculating Claimant's AWW.

13. Using Claimant's hourly rate of $14 per hour and considering Claimant's average hours per week, plus the 2.58 hours of overtime, the ALJ determines Claimant's AWW from her work with Employer to be $504.58 (345.83 hours worked x $14 = $4,841.62 + $54.18 (2.48 x $14 x 1.5) = $4,895.80 + $150.00 ($75 x 2 vaccination stipends)= $5,045.80 divided by 10 weeks= $504.58).

14. Claimant's AWW should also include her earnings from her concurrent employment, even Claimant did not miss time from work with her concurrent employment. Claimant testified that she was paid $1000 per month ($500 twice per month) for her concurrent employment. This equates to an increase in the AWW of $230.77 ($12,000 divided by 52= $230.77).

15. Therefore Claimant's AWW for this injury is determined to be $735.85.

16. Claimant's temporary partial disability ("TPD") benefits for the period of September 7, 2021 through May 27, 2021 are based only off of Claimant's AWW related to her employment with Employer as Claimant was not losing wages from her concurrent employment. For purposes of TPD benefits, Respondents shall pay Claimant TPD benefits for each week she did not earn $504.58 for the period of September 7, 2021 through May 27, 2022 pursuant to W.C.R.P. 5-6(E).

17. For purposes of temporary partial disability ("TPD") benefits after May 28, 2022, Respondents shall pay Claimant TPD benefits at a TPD rate of $338.39 ($504.58 x 2/3 = $338.39) based on Claimant's earnings of $504.58 with Employer beginning May 28, 2022 and continuing until terminated by law or statute.

18. The ALJ notes that the GAL admitted for TTD benefits effective May 28, 2022, however these would technically be TPD benefits as Claimant continued to maintain her concurrent employment without any wage loss.

CONCLUSIONS OF LAW

1. The purpose of the 'Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8- 43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995).

5. As found, claimant's AWW for her September 6, 2021 injury is properly calculated at $735.85.

6. Based on the stipulation of the parties, Respondents are liable for TPD benefits for each week Claimant was not earning her AWW as calculated by her earnings with Employer to be $504.58 while employed with Employer up through May 27, 2022 after which time, Claimant is entitled to TPD benefits at a rate of $338.39.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant weekly TPD benefits based on Claimant's earnings of $504.58 for the period of September 7, 2021 through May 27, 2022.

2. Respondents shall pay Claimant TPD benefits at a rate of $338.39 for the period of May 28, 2022 until terminated by law of statute.

3. Claimant's AWW for her September 6, 2021 injury is $735.85.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. In **addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Respondent prove Claimant received an overpayment of $2,563.19?
- If the ALJ finds Claimant received an overpayment, the amount or rate of repayment.

FINDINGS OF FACT

1. Claimant works for employer as a Correctional Officer.

2. Claimant suffered an admitted injury to her left side, including her left knee and left breast when she fell at work during drill instruction exercises. The date of injury was October 8, 2010.

3. Following a Division Sponsored IME with Dr. Larson, the Claimant was placed at MMI. However, the Claimant successfully challenged that determination at hearing and the MMI determination was set aside by Order of ALJ Lamphere, dated February 2, 2021.

4. The Claimant underwent further treatment after that Order and again was placed at MMI on November 12, 2021.

5. Respondent filed a Final Admission (FAL)) on December 8, 2021. (Respondent's Exhibit B). In that Final Admission, the Respondent asserted an overpayment of $2,563.19. Claimant objected to the FAL and requested a hearing. Claimant's Application for Hearing dated January 4, 2022 did not endorse overpayment. Although not an exhibit, Respondent states in its proposed order that it filed a Response to the Application for hearing listing the overpayment asserted under the FAL. No hearing was held on this Application for Hearing.

6. Respondent filed an application for hearing dated December 21, 2022 alleging overpayment. (Claimant Exhibit 4). Claimant filed a Response to the Application dated December 28, 2022. (Claimant Exhibit 5).

7. [Redacted, hereinafter SW] is a claim adjuster at [Redacted, hereinafter CV]. She testified that CV[Redacted] is the Employer's third-party administrator. She handled the Claimant's workers' compensation claim at CV[Redacted] and oversaw the indemnity payments to the Claimant. She was familiar with the payment logs in Exhibit E of Respondent's Exhibits. The logs included payments that were made by CV[Redacted], as well as payments made by the prior third-party administrator. She was familiar with the payments made after MMI. She testified that the overpayment was due to temporary disability benefits paid after MMI. The indemnity payment log submitted into evidence shows two TTD checks issued on November 18, 2021 and November 25, 2021, each in

the amount of $1,329.06. The first check includes the day before MMI. After subtracting that day of TTD, the overpayment for TTD paid after MMI is the amount claimed by Respondent.

8. Respondent's Exhibit D shows wage records from checks issued beginning on February 28, 2022 through January 31, 2023. These records establish a pay raise that occurred in January 2022, associated with a promotion. They also establish various incentive pay and a bonus paid at various times in 2022.

9. Claimant testified that she exhausted her paid time off, sick pay, comp time and vacation time for time she spent away from work for medical treatment and was never reimbursed for those hours. However, Claimant did not provide any credible specific evidence concerning these hours and the ALJ is left to speculate as to the specifics of these allegations and whether this information would have any effect on the specific overpayment asserted in this hearing. In any event the issue of unpaid temporary disability benefits was not endorsed as an issue for hearing in Claimant's Response to Application for Hearing and is not an issue before the ALJ in this hearing. The only issue listed by Claimant in her Response was "Overpayment". (Claimant's Exhibit 5). As such, the ALJ cannot consider any alleged unpaid temporary disability benefits as a reduction to the overpayment asserted.

10. With respect to funds available to satisfy the overpayment, Claimant was asked questions concerning accounts shared between Claimant and her Spouse. Claimant maintains a separate banking account for her income, separate and apart from her husbands' banking account. Respondent provided no evidence that Claimant's husband's income is relevant to the repayment issue.

CONCLUSIONS OF LAW

A. Respondent's Assertion that Claimant is bound by the existence and amount of Overpayment

Respondent asserts that because Claimant did not endorse any challenge to the overpayment in her January 4, 2022 Application for hearing that she is bound by the existence and amount of overpayment as set forth in the FAL. This argument is without merit. Respondent provides no legal authority for this argument. The issue of overpayment continues to be the burden of proof of the Respondent to be established at a hearing. The notation regarding "overpayment" in the FAL simply provides notice to the claimant that an overpayment is asserted. See, *Peoples v. Industrial Claim Appeals Office*, 457 P.3d 143 (Colo. App. 2019). The notice of overpayment does not relieve the Respondent establishing the amount of overpayment at an evidentiary hearing.

B. Overpayment

Section 8-40-201(15.5) defines an overpayment as:

> [M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results

> in duplicate benefits because of offsets that reduce disability or death benefits payable . . . . For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits . . . .[1]

The statute creates three categories of overpayments. The first category is for overpayments created when a claimant receives money "that exceeds the amount that should have been paid. . ." Only the first category of overpayment is involved in this case.

Respondent has the burden to prove Claimant received an overpayment. *City and County of Denver v. Industrial Claim Appeals Office*, 58 P.3d 1162 (Colo. App. 2002).

The Claimant was paid TTD after the date of MMI of November 12, 2022 and that constitutes an overpayment which the Respondent is entitled to recover.

C. Repayment

C.R.S. §8-43-207(1)(q) provides that an ALJ is empowered to order a repayment of overpayment in connection with a hearing. After consideration of the evidence, including the receipt of a raise in pay, a bonus and incentive pay, the ALJ concludes that a reasonable amount for repayment of the overpayment is $200 per month until the overpayment is repaid.

[1] This statute was amended in HB 21-1207, effective on January 1, 2022. The Industrial Claims Appeals office recently decided that the definition of overpayment does not apply to injuries that occurred prior to this effective date. *Barnes v. City and County of Denver*, WC 5-063-493. (ICAO March 27, 2023).

ORDER

It is therefore ordered that:

1. Respondent's claim for an overpayment of $2,563.19 is granted.

2. Claimant shall repay Respondent the TTD overpayment of $2,563.19 at the rate of $200 per month until the overpayment is repaid.

3. Any issue not addressed herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Michael A. Perales
Michael A. Perales
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-153-633-004

ISSUES

- Did Claimant prove that Claimant is subject to a penalty pursuant to C.R.S. §8-43-304 for violation of the Order of Judge Lamphere dated April 13, 2022.

- Claimant's request for attorney fees for Respondent's alleged pursuit of an unripe issue.

PROCEDURAL HISTORY

A hearing was previously held in this claim on March 10, 2022 before ALJ Lamphere in which the parties stipulated Claimant was overpaid benefits in the amount of $4,458.99. In his April 13, 2022 order, ALJ Lamphere ordered Claimant to repay the overpayment in monthly payments of $300 starting the first of the month after the order became final. (Respondent's Exhibit A). Claimant timely appealed ALJ Lamphere's order to the Industrial Claim Appeals Office ("ICAO'). The ICAO decision issued on August 15, 2022 affirmed ALJ Lamphere's order. (Respondent's Exhibit B). Claimant did not appeal the ICAO decision, thus, ALJ Lamphere's order became final 22 days after the ICAO decision, or on September 6, 2022.

Claimant subsequently filed another Application for Hearing in this claim with issues of reopening and medical benefits. The Claimant did not identify Judge Lamphere's order for repayment as an issue on this Application for hearing. This case was consolidated with the claim for compensability in W.C. 5-202-731.The hearing on that Application was held before ALJ Perales on September 29, 2022. ALJ Perales' order denying and dismissing Claimant's petition to reopen was issued on November 18, 2022. That order also denied and dismissed the claim for compensability in WC 5-202.731. That Order was affirmed by the Industrial Claim Appeals Office on April 4, 2023. Claimant is currently appealing that order to the Colorado Court of Appeals.

STIPULATED FACTS

The parties have stipulated that Claimant has not made any payments in any amount towards the $4,458.99 overpayment.[1]

FINDINGS OF FACT

1. Claimant worked for Employer as a correctional officer. Claimant sustained an admitted injury on October 23, 2020 to his right shoulder. The claim was previously closed by Final Admission. (Respondent's Exhibit A, p.3).

2. Claimant applied for a hearing to reopen this claim and the reopening was denied by order of Judge Lamphere dated April 13, 2022. That order also ordered repayment of the stipulated overpayment of $4,458.99 at the rate of $300 per month payable at the first of the month. That Order became final on September 6, 2022 when all appeals were exhausted.

3. Claimant also filed another application for hearing on this claim on the issues of petition to reopen and medical benefits. The hearing was consolidated with W.C. 5-202-731 on the primary issue of compensability. The hearing on that application was held before ALJ Perales on September 29, 2022. ALJ Perales denied and dismissed the Claimant's petition to reopen and claimed medical benefits in an order issued on November 18, 2022. The order also denied compensability in the consolidated case. As noted in footnote 1, Claimant has stated that he has filed an appeal of this order to the Colorado Court of Appeals and the Order is not final.

4. Claimant testified that the last day he worked was April 7, 2022 when he was restricted from work when he claims to have sustained a new injury to his right arm.[2]

5. Claimant testified that he is has been receiving disability benefits from [Redacted, hereinafter UM] since the Lamphere Order was issued. On December 24, 2022, Claimant received $15,107.14 in disability benefits from UM[Redacted] followed by $9,377.85 on January 25, 2023. (Respondent's Exhibit E, pp. 34 – 35). Additionally, Claimant testified that he continues to receive monthly long-term benefit checks from UM[Redacted] in the amount of $3,124.95). Claimant receives no other income.

CONCLUSIONS OF LAW

A. Stay of Proceedings

[1] Claimant provided this stipulation during the telephone testimony of [Redacted, hereinafter TC] and TC's[Redacted] testimony is therefore not included in the Findings of Fact since it was unnecessary to the disposition of the matter.

[2] This claimed injury is the subject matter of WC 5-202-731 where compensability was denied as part of the order issued by Judge Perales on November 18, 2022.

Claimant argues that the issue of penalties should be stayed pending a final order of Judge Perales' Order dated November 18, 2022. Claimant's argument ignores the fundamental fact that the Order of Judge Lamphere is the Order that imposes the obligation to repay the overpayment of $4,458.99 at the rate of $300 is a final order and is not subject to any further appeal. Moreover, the amount of the overpayment was stipulated by the parties and that is not subject to dispute. The current order on appeal by Judge Perales does not affect the Claimant's obligations owed on the Lamphere order to repay the overpayment, irrespective of the outcome to the Perales order on appeal. Claimant argues that if the Perales order is reversed or set-aside then potentially no overpayment would exist. This argument ignores the current legal obligation to repay the overpayment as ordered under a final order. It also relies on speculation as to what may happen in future court proceedings that may or may not eliminate the overpayment. Such speculation does not provide a basis for a stay of this proceeding. As such, the request for stay of this hearing on penalties, for violation of the Lamphere order is denied. Claimant has provided no legal authority in support of his request for stay and the Judge in this case is unable to find any legal authority that applies to this specific situation in an administrative proceeding that would require that a stay of this proceeding be imposed.

B. Ripeness and Attorney Fees

Claimant contends that the penalty claim, which is the subject matter of this hearing, is not ripe for consideration because of an ongoing appeal of a prior order in this claim. C.R.S. §8-43-211(3) provides that an attorney who requests a hearing or files a notice to set a hearing on an issue not ripe for adjudication may be assessed reasonable attorney fees for the expenses of the opposite party. An issue is ripe when it is real, immediate and fit for adjudication. *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178, 1180 (Colo. App 2006). The term "fit for adjudication" refers to a disputed issue for which there is no legal impediment to immediate adjudication. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which never occur. Olivas-Soto v. ICAO, supra. (Citations omitted). *See also McMeekin v. Memorial Gardens*, W.C. 4-384-910 (ICAO 9/30/2014). There is nothing speculative or contingent with respect to the determination of penalties for violation of Judge Lamphere's order. The Order contains a stipulation of the amount of overpayment. It contains the rate of repayment and it is final. The status of the appeal of a subsequent order of Judge Perales on the issues of reopening of this claim and compensability of a consolidated claim does not affect whether there has been a violation of the order issued by Judge Lamphere. As such, the issue of penalties is ripe.[3]

C. Penalty

Section 8-43-304(1) provides that an employee who "fails, neglects, or refuses to obey any lawful order made by the director or panel. . . shall be punished by a fine of not more than one thousand dollars per day for each such offense. . ." Further, C.R.S. §8-43-

[3] Even if that were not the case, attorneys fees and costs may not be awarded absent a request by the requesting party to have the unripe issue stricken by a prehearing administrative law judge. C.R.S. §8-43-211(3). Claimant did not present evidence of compliance with this statutory requirement.

305 provides that 'Every day during which any . . employee . . . fails to comply with any lawful order of an administrative law judge . . . shall constitute a separate and distinct violation thereof."

The assessment of penalties is governed by an objective standard of negligence and involves a two-step analysis. First, the ALJ must determine whether the employee violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003).

There is no question that the Claimant in this case violated the final order of Judge Lamphere ordering repayment of the overpayment. The order is very clear that the overpayment amount was stipulated to by the parties and the rate of repayment was not appealed or otherwise disputed. Claimant also stipulated in this hearing that he has made no payments pursuant to Judge Lamphere's Order. Further, Claimant did not make any argument that the order was not final. As to reasonableness, the argument provided by Claimant is that this proceeding should be stayed pending appeal of a subsequent order that denied reopening of this case based on worsening of condition. In his position statement, the Claimant argues that he is unable to pay and the money since he has been on short term and long-term disability and that money is not considered income. However, Claimant provided no testimony of his inability to pay the overpayment at hearing. I am therefore left with argument without persuasive supporting testimony or other evidence on Claimant's alleged inability to repay the overpayment. The only testimony Claimant provided as to this allegation was his inclusion of testimony that the disability payments received from UM[Redacted] were used to pay his bills from the previous months. No further testimony or evidence was offered as to why he could not repay the overpayment based on his financial circumstances. I conclude that based on the preponderance of the evidence that the violation of Judge Lamphere's order based on this argument is not objectively reasonable. Claimant has been in violation of the April of the final order of Judge Lamphere for 187 days from October 1, 2022, the first full month following the date the Lamphere order became final, until the date of this hearing.

As to the amount of penalties, in order to assess an appropriate penalty, this ALJ is mindful of the analysis in Associated Business Products v. Industrial Claim Appeals Office, 126 P.3d 323 (Colo. App. 2005) which includes as factors the reprehensibility or culpability of the party, the relationship between the penalty and the harm to the victim caused by the other party's actions and the sanctions imposed in other cases for comparable misconduct. I conclude that based on the evidence, Claimant is culpable for payment of the undisputed overpayment and failed to provide any persuasive evidence as to why he failed to pay the required amounts. As to other comparable penalties, I have considered the facts and holding in the case of Lange v. Kern, W.C. 4-907-620-002 (ICAO January 18, 2019) that imposed penalties of $2 per day for failing repay an overpayment pursuant to an order. After consideration of that case as well as the facts in this case, and considering the amount of the overpayment in dispute as well as the Claimant's financial situation, based on the evidence presented at the hearing, the ALJ determines that the

appropriate penalty for violation of Judge Lamphere's order is $5 per day. The ALJ has considered the holding in Colorado Department of Labor v. Dami Hospitality, L.L.C. 442 P.3d 94 (Colo. 2019) regarding gross disproportionality. Based on the disability payments received from UM[Redacted], the amount of penalty imposed is not excessive and serves the purpose of compliance with a valid order without unduly burdening the Claimant's financial situation. Even though the harm to the Respondent in this case may be considered minimal, the Claimant's failure to comply with a lawful order is serious and must result in a meaningful consequence so that Claimant understands that he may not ignore a valid order.

ORDER

It is therefore ordered that:

1. Claimant's request for a stay of this proceeding to determine the issue of penalties is denied.

2. Respondent's request for imposition of penalties against the Claimant is granted. Claimant shall pay penalties of $935.00. The amount apportioned to Respondent shall be 25% of the penalty and the remaining 75% is apportioned to the Colorado uninsured employer fund as set forth in C.R.S. §8-43-304(1).

3. Claimant's request for attorney fees is denied and dismissed.

4. Any issue not resolved by this order is reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-208-340-002

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on March 12, 2022 he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment he has received for his right hip is reasonable and necessary medical treatment to cure and relieve the effects of the March 12, 2022 injury.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment he has received for his right knee is reasonable and necessary medical treatment to cure and relieve the effects of the March 12, 2022 injury.

4. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) and/or temporary partial disability (TPD) benefits.

5. If the claim is found compensable, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant shall be assessed a late reporting penalty pursuant to Section 8-43-102(1)(a), C.R.S.

FINDINGS OF FACT

1. The employer operates a construction equipment rental business. In addition to renting large construction equipment, the employer also rents, sells, and repairs small equipment such as lawn mowers and chainsaws. [Redacted, hereinafter JS] and his spouse, [Redacted, hereinafter MC], own and operate the business.
2. In November 2021, the claimant was hired to work for the employer as a driver and small engine mechanic. The claimant's driver job duties included pickup and delivery of rented equipment at customer locations.

3. On Saturday, March 12, 2022, the claimant was tasked with delivering a bobcat/skid steer with a snow bucket attachment from the employer's location in Glenwood Springs, Colorado to a customer in Snowmass, Colorado. The claimant was accompanied by another employee, the owners' 16 year old son, WS[1]. The piece of equipment was delivered to the requested location in Snowmass without incident. The

[1] The ALJ identifies WS by initials only because WS was a minor on March 12, 2022, and remained a

minor on the date of the hearing.

claimant and WS were then tasked with picking up the equipment later the same day. When the claimant and WS arrived at the designated pick up time, they learned that the equipment was essentially buried in snow. The claimant and WS assisted the customer with shoveling snow to remove the equipment.

4. JS[Redacted] was aware of all of the above details related to the equipment delivery and pick up.

5. The claimant provided detailed testimony regarding the loading of the March 12, 2022 equipment upon pick up. The claimant testified that as he began to drive the bobcat onto the trailer, the trailer became unhitched from the ball of the trailer hitch. The claimant further testified that this resulted in the trailer going up into the air creating a space between the trailer and the truck. The claimant testified that WS ran in between the raised trailer and the truck. The claimant testified that he was concerned that if he continued forward with the bobcat onto the trailer, or reversed off of the trailer, this would cause the trailer to crash toward the ground, injuring WS. The claimant testified that he opted to leap from the bobcat to tell WS why it was unsafe to stand in that location. The claimant further testified that while in the act of jumping up and out of the bobcat, his right foot became caught in the "foot pocket". The claimant testified that he immediately felt pain in his right hip.

6. JS[Redacted] was not informed of these details described in paragraph 5 above regarding the Snowmass equipment on March 12, 2022.

7. Subsequently, the trailer was secured and the bobcat loaded. The claimant and WS traveled back to Glenwood Springs from Snowmass. The claimant drove on the return trip.

8. The claimant testified that while driving back to Glenwood Springs, he began to experience pain in his right knee. The claimant believes that while exiting the bobcat he may have struck his knee on the snow bucket.

9. Thereafter, the claimant returned the bobcat to the employer's location and then drove WS to his home. The claimant did not communicate with JS[Redacted] or MC[Redacted] upon arrival at their home.

10. The following day, Sunday, March 13, 2022, the claimant was not scheduled to work. The claimant testified that on that date he had pain in his right hip with pain and swelling in his right knee.

11. The claimant reported to work as scheduled on Monday, March 14, 2022. Upon his arrival the claimant and JS[Redacted] interacted. The claimant reported that the delivery and pick up in Snowmass went well. The claimant did not provide any information regarding the unhitched trailer and related incident. JS[Redacted] did notice that the claimant appeared "stiff' in his movements and he inquired about it. The claimant responded that he tweaked his knee in the snow. The claimant did not indicate that the "tweak" occurred as a work related incident. The claimant did not make any

statements regarding his right hip. JS[Redacted] asked if the claimant needed to see a doctor for his knee and the claimant declined.

12. MC[Redacted] testified via deposition. MC[Redacted] provided testimony regarding the employer's process for handling employee injuries. MC[Redacted] testified that if an employee is injured that they would be expected to report that injury to either JS[Redacted] or MC[Redacted]. Once that reporting occurred steps would be taken to obtain medical treatment and file a claim. that it is the employer's

13. The claimant did not provide the employer with a verbal or written statement regarding the unhitched trailer and "near miss" incident involving WS. The only information relayed to the employer was that he tweaked his knee in the snow.

14. MC[Redacted] first became aware of the claimant's right knee issues on April 29, 2022. MC[Redacted] testified regarding a conversation she had with the claimant on that date regarding JS[Redacted] own medical treatment. During that conversation, the claimant stated that he receives medical treatment at Steadman clinic. The claimant also stated to MC[Redacted] that he might have to seek treatment for his right knee because he had slipped on the snow in March. The claimant did not indicate to MC[Redacted] that his slip on ice occurred at work. The claimant did not indicate that he wanted to pursue a workers' compensation claim during the April 29, 2022 conversation.

15. On May 23, 2022, the claimant was seen by his primary care physician (PCP) Dr. Kelli Konst-Skwiot with Grand River Clinic Rifle. The purpose of that appointment was a normally scheduled follow-up regarding the claimant's pain medications. The claimant has taken pain medications for many years to treat chronic lumbar back pain. The claimant began seeing Dr. Konst-Skwiot on January 14, 2020.

16. Dr. Konst-Skwiot's January 4, 2020 medical record refers to the claimant's use of Vicodin for approximately 10 years. The claimant reported to Dr. Konst-Skwiot that he had used Vicodin since undergoing surgery and injections years prior. Medical records entered into evidence demonstrate that the claimant had extensive low back treatment with Steadman Clinic beginning in 2013. Since beginning treatment with Dr. Konst-Skwiot in 2020, the claimant has regularly occurring follow-up appointments to discuss his pain medications.

17. The claimant testified that on March 12, 2022 he was using Vicodin, as was his practice. The claimant also testified that as of the day of hearing he continues to use Vicodin on a daily basis.

18. While at such a follow-up appointment with Dr. Konst-Skwiot on May 23, 2022, the claimant described any incident that occurred in March involving his right knee. Dr. Konst-Skwiot noted "He states he was getting out of bobcat and there are pockets for his feet. His leg got caught in bucket and it was really sore[.] It happened in [M]arch and it is still painful[.] He said it happened at work. He has not yet started a

case through his job." At the May 23, 2022 appointment with Dr. Konst-Skwiot, the claimant did not report injuring any other body part.

19. During the May 23, 2022 appointment, Dr. Konst-Skwiot provided the claimant with forms for pursuing a workers' compensation claim. The claimant understood that he was to provide these documents to the employer.

20. On May 23, 2022, the claimant presented MC[Redacted] with the paperwork provided to him by Dr. Konst-Skwiot. At that time, the claimant informed MC[Redacted] that he wished to pursue a workers' compensation claim related to his right knee and an incident that occurred on March 12, 2022. MC[Redacted] testified that she did not immediately initiate a claim because she understood that any injury was to be reported within four days.

21. After communications with the insurer, on June 13, 2022, MC[Redacted] prepared a First Report on Injury or Illness regarding a March 12, 2022 incident. The body part identified in that report is the claimant's right knee. The report also states that the claimant "tweaked knee on snow" while "loading a machine on trailer". MC[Redacted] testified that the information provided in that First Report was directly from the claimant. The claimant did not provide any additional information regarding the mechanism of his injury to MC[Redacted]. The claimant did not report injury to any other body.

22. On that same date, MC[Redacted] provided the claimant with a list of designated medical providers. The claimant selected Glenwood Medical Associates (GMA).

23. The claimant was seen at GMA on June 15, 2022 by Dr. Emily Zerba. At that time, the claimant reported right hip pain, right knee pain, and left foot pain. With regard to the March 12, 2022 mechanism of injury Dr. Zerba recorded:

> He was loading jumped out of skid-[steer] to help a co[-]worker and when he landed his right foot was at an angle (no pain in the knee) but then started to have right hip pain. The right hip pain started when he tried to pull his leg out. Pain on the anterior portion of the hip. . . Later that day he started to have right knee pain on the inside (medial aspect).

24. In the June 15, 2022 medical record, Dr. Zerba ordered magnetic resonance imaging (MRI) of the claimant's right hip and right knee. The purpose of the MRIs was to ascertain if the claimant had suffered a labral tear in his right hip and/or a meniscus tear in his right knee. The claimant denied prior right hip and right knee injuries. Dr. Zerba opined that the claimant's right hip and right knee condition were work related. She assessed work conditions that included a 15 pound lifting restriction, and no crawling, kneeling, squatting, or climbing.

25. On June 15, 2022, the claimant provided MC[Redacted] with the work restrictions assigned by Dr. Zerba. Due to the claimant's work restrictions the employer was unable to provide the claimant with continuing work. June 17, 2022 was the claimant's last day working for the employer.

26. JS[Redacted] testified that between March 12, 2022 and June 15, 2022, the claimant continued to perform all of his normal jobs duties without issue. The claimant did not communicate to JS[Redacted] that he could not perform his job duties because of an injury.

27. MC[Redacted] also testified that the claimant continued to work "full pace" until he was seen by Dr. Zerba on June 15, 2022.

28. On June 23, 2022, the claimant underwent MRIs of both his right hip and right knee. Dr. Elizabeth Kulwiec authored reports for both of the June 23, 2022 MRIs.

29. With regard to the right hip MRI, Dr. Kulwiec noted, *inter alia,* that cam-type morphology of the right hip with extensive degenerative changes and tears of the anterosuperior and posterosuperior labrum; mild osteoarthritis of the hip with grade 3 chondromalacia of the superior joint; a small joint effusion; mild bilateral greater trochanteric bursitis; and lumbar degenerative disc disease.

30. For the claimant's right knee, Dr. Kulwiec noted that, *inter alia,* a tear of the body and posterior horn of the medial meniscus; quadriceps enthesopathy; grade 2 chondromalacia of the patella and medial femoral condyle; strain or tendinosis of the semimembranosus tendon; a small joint effusion; and mildly thickened medial patellar plica.

31. On July 2, 2022, the respondents filed a Notice of Contest regarding the March 12, 2022 incident. The document indicates the respondents contested the claimant's claim pending a doctor's report.

32. On July 13, 2022, the claimant returned to Dr. Zerba to discuss the MRI results. Dr. Zerba noted that the right knee MRI showed a posterior horn meniscus tear and the right hip MRI showed a cam deformity with an anterior posterior labral tear. Dr. Zerba referred the claimant for an orthopedic consultation and increased the claimant's lifting restriction to 30 pounds.

33. On July 19, 2022, physician advisor Dr. Albert Hattem issued a report in which he opined that the claimant did not suffer an injury on March 12, 2022. In support of this opinion, Dr. Hattem noted that the claimant did not seek treatment related to the March 12, 2022 event until he was seen by Dr. Zerba on June 15, 2022. Dr. Hattem also noted that if the claimant had experienced a significant injury to his right hip and/or right knee "one would have expected him to seek treatment for these injuries at that time or within weeks of the injury, not more than three months later." Finally, Dr. Hattem opined

that a medial meniscus tear and a labral tear are both "likely age-related degenerative findings and not due to an acute injury."

34. On August 17, 2022, the claimant returned to Dr. Zerba and reported that his claim was denied and he had not seen an orthopedic specialist.

35. At the request of the respondents, on October 25, 2022, the claimant attended an independent medical examination (IME) with Dr. Robert Messenbaugh. In connection with the IME, Dr. Messenbaugh reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. At the IME, the claimant described a mechanism of injury virtually identical to the one he described in his testimony regarding the bobcat and WS. The claimant denied prior treatment and injuries to his right hip and right knee. The claimant disclosed to Dr. Messenbaugh that he has consistently taken Vicodin since undergoing a lumbar spine fusion. On examination, Dr. Messenbaugh noted a "slight catch" within the right hip. On examination of the claimant's right knee, Dr. Messenbauth noted full extension and full flexion of his right knee.

36. During his review of the claimant's medical records, Dr. Messenbaugh noted that on August 2, 2017, the claimant underwent a right hip MRI. In his IME report, Dr. Messenbaugh noted that the 2017 MRI shows severe and advanced pathology involving his right hip with labral tearing and degeneration, chondral damage, and evidence of impingement.

37. The August 2, 2017 MRI report was admitted into evidence at hearing. That report was issued by Dr. Charles Ho. In this report, Dr. Ho found, *inter alia,* a partial detachment of the articular margin of anterior to lateral labrum, with severe central labral degeneration and swelling hypertrophy; chondral degeneration thinning grade 2 to 3 along the peripheral anterior lateral aspect of the acetabulum; mild greater trochanteric bursitis, scarring, and edema.

38. In the October 25, 2022 IME report, Dr. Messenbaugh opined that the claimant did not suffer injuries to his right knee or his right hip on March 12, 2022. Dr. Messenbaugh noted that it was improbable that the right meniscus tear was caused by the events of March 12, 2022. Dr. Messenbaugh explained that a contusion to the knee would not result in a meniscus tear. With regard to the claimant's right hip, Dr. Messenbaugh noted that the pathology in the claimant's right hip was present "well before" March 12, 2022.

39. After reviewing additional medical records, on December 6, 2022, Dr. Messenbaugh issued an addendum to his IME report. In that addendum, Dr. Messenbaugh noted his review of records from Steadman clinic from February 18, 2011 through November 16, 2017. Dr. Messenenbaun noted that on August 2, 2017, Dr. Thos Evans performed a right hip intraarticular steroid injection. In that same August 2, 2017 medical record Dr. Evans noted that if the injection did not provide the claimant with relief, a referral to Dr. Philippon for right hip arthroscopy would be appropriate. In the IME addendum, Dr. Messenbaugh opined that the claimant had "quite severe and

symptomatic right hip pathology years prior to any event on March 12, 2022." Dr. Messenbaugh noted that his opinions expressed in his October 25, 2022 IME report were unchanged. Dr. Messenbaugh's testimony was consistent with his written reports.

40. At the request of the claimant, Dr. Kulwiec compared the 2017 and 2022 right hip MRIs. On February 16, 2023, Dr. Kulwiec issued an addendum to her June 23, 2022 report. In that addendum, Dr. Kulwiec noted that this comparison showed that the mild asphericity of the femoral head was unchanged; that abnormal signal and blunting of the glenoid labrum was similar on both exams; a small joint effusion was unchanged; and the signal in the quadratus femoris muscle remained normal.

41. The ALJ finds the claimant's testimony about the event involving the trailer coming unhitched and his dramatic exit from the bobcat to be neither credible nor persuasive. At no time did the claimant report the emergent nature of this incident to the employer. The ALJ finds that the claimant simply stated that he tweaked his knee on the snow.

42. The ALJ credits the testimony of JS[Redacted] and MC[Redacted] regarding the sequence of events in this case. The ALJ credits the medical records, particularly the comparisons of the two hip MRIs that demonstrate no change to the claimant's right hip. In addition, the ALJ credits the opinions of Drs. Hattem and Messenbaugh over the contrary opinions of Dr. Zerba. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that on March 12, 2022 he suffered an injury arising out of and in the course and scope of his employment with the employer. The ALJ further finds that the claimant has failed to demonstrate that it is more likely than not that the events of March 12, 2022 aggravated or accelerated any preexisting condition in his right hip and/or right knee to necessitate medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). The ALJ's factual findings concern only evidence that is dispositive of the issues involved.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *see* a/so *Subsequent Injury Fund v. Thompson,* 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on March 12, 2022, he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the events of March 12, 2022, accelerated or aggravated any preexisting condition to necessitate medical treatment. As found, the medical records, the testimony of [Redacted JS] and MC[Redacted], and the opinions of Drs. Hattem and Messenbaugh are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim related to a March 12, 2022 date of injury is denied and dismissed. All remaining endorsed issues are denied and dismissed as moot.

Dated April 10, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8--43-301(2), C.R.$. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8--43-301, C.R.$. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In **addition, It Is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-188-968-002

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the cervical disk arthroplasty at the C5-C6 level, as recommended by Dr. Alex Sielatycki, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted May 21, 2021 work injury.

FINDINGS OF FACT

1. The claimant works for the employer as a welder/mechanic. On May 21, 2021, the claimant suffered a work injury when he stood up and stuck his head on scaffolding. The claimant testified that initially he felt a "crunching sound" in his neck and felt dazed. Over the next several days the claimant experienced increasing pain in his neck. In addition, the claimant had radiating pain into his right shoulder and right arm.

2. On May 24, 2021, the claimant was seen by Dr. Matthew Grzegozewski regarding the May 21, 2021 injury. At that time, x-rays showed no evidence of fracture or subluxation. Dr. Grzegozewski diagnosed a cervical strain and administered a trigger point injection.

3. On May 24, 2021, Dr. Grzegozewski ordered work restrictions of no lifting, pushing, or pulling over 20 pounds. Over time the claimant's symptoms improved and his work restrictions were gradually increased to 40, 50, 60 pounds lifting and push/pull up to 100 pounds.

4. On July 12, 2021, the claimant underwent magnetic resonance imaging (MRI) of the cervical spine. The MRI was deemed to be a "negative study". The radiologist noted normal alignment and marrow signal, well-maintained disc height, and no bulge or herniation.

5. In the weeks and months following the injury the claimant underwent conservative care that included physical therapy, occupational therapy, massage therapy, chiropractic care, and pain medications. The claimant testified that these various treatment modalities provided temporary relief of his symptoms. No treatment has provided long term relief.

6. As part of this conservative medical treatment, the claimant underwent osteopathic manipulative therapy (OMT). On November 17, 2021, the claimant was seen by Dr. Aaron Stewart. At that time, the claimant reported right sided neck pain down into the upper thoracic area. Dr. Stewart administered OMT and recorded that the claimant tolerated the procedure well.

7. On November 19, 2021, the claimant communicated with [Redacted, hereinafter KF], Nurse Case Manager. In that discussion, the claimant reported to KF[Redacted] that he did experience some symptom relief from the recent OMT session. The claimant specifically reported that the burning radiating pain was better after OMT.

8. The claimant testified that in the days after the November 17, 2021 OMT treatment he started to experience left sided symptoms. The claimant described this as a deep sensation on the left side of his neck. The claimant further testified that he had not previously experienced left sided symptoms.

9. On Sunday, November 21, 2021, the claimant experienced an extreme flare up of symptoms while hanging a door at home. At the time of this incident, the claimant's work restrictions included lifting up to 60 pounds, and push/pull up to 100 pounds. The claimant testified that he was attempting to adjust a bifold door when he felt a pop in his neck followed by excruciating pain in his neck. In addition, the claimant experienced numbness down his left arm, followed by a burning sensation from his left shoulder into his left wrist. The claimant's pain was so severe that he was transported to Memorial Regional Emergency Services.

10. On November 21 2021, the claimant was seen at Memorial Regional Emergency Services by Dr. Tinh Huyn. Dr. Huyn recorded that the claimant was experiencing "sudden worsening neck pain while working on a cabinet with arms over head prior to arrival." The claimant reported to Dr. Huyn that he had pain radiating down his left arm. The claimant also described the May 21, 2021 work incident to emergency department staff. The claimant was given Gabapentin and placed in a soft neck collar, which provided some relief of his symptoms. Dr. Huyn reviewed the June 24, 2021 MRI and determined that the claimant did not need further imaging.

11. On November 22, 2021, the claimant spoke with KF[Redacted] and stated that "he is slightly better than last night. The OMT seemed to help last week, but the pain has now gone to his left side which is new. Yesterday was the worst pain he has had. He had a pop last night and he had numbness to his left arm and fingers. His arm was weak for a while."

12. On November 22, 2021, the claimant returned to Dr. Stewart. The medical record of that date states that the claimant's "pain had improved following an OMT treatment last week." The claimant also described the November 21, 2021 incident at home and treatment in the emergency department. The claimant testified that Dr. Stewart did not administer OMT on November 22, 2021, because of the claimant's report of the November 21, 2021 incident and onset of symptoms. Dr. Stewart ordered a cervical spine MRI.

13. The claimant testified that the new left sided symptoms lasted a few days. Then one night while wearing the neck brace provided by the emergency department, he felt a pop in his neck, and his symptoms returned to the right side. It is the claimant's belief that the left sided symptoms were caused by the November 17, 2021 OMT.

14. On November 24, 2021, the claimant underwent a repeat MRI of the cervical spine. That MRI showed a congenitally small canal at the C3 to CG levels and a disc bulge at the C5-C6 level.

15. On December 1, 2021, the respondent filed a General Admission of Liability regarding the claimant's May 21, 2021 work injury.

16. Following the November 24, 2021 MRI, the claimant was referred for a surgical consultation. On December 20, 2021, the claimant was seen by Dr. Michael Rauzzino. Dr. Rauzzino documented that the claimant was experiencing neck pain, bilateral shoulder pain, and right arm weakness. Dr. Rauzzino noted that an initial MRI showed degenerative findings. Dr. Rauzzino noted that the claimant had "an abrupt episode of worsening of symptoms when he felt a pop on the left side of his neck when his symptoms switched from the right side to the left." Dr. Rauzzino noted that a repeat MRI showed findings similar to the prior MRI, with a small concentric disc bulge at the C5-C6 level. Dr. Rauzzino opined that this disc bulge was not the cause of the claimant's pain symptoms. Dr. Rauzzino recommended continuing physical therapy and consideration of injections.

17. Thereafter, the claimant consulted with Dr. Eric Harris. The claimant was first seen by Dr. Harris on January 11, 2022. In the medical record of that date, Dr. Harris noted the claimant's May 2021 incident at work. Dr. Harris recorded that the claimant had "several repeat aggravations of his symptoms, one in early November of last year that caused him to have some symptoms on the left. He then went for an MRI, which was reportedly negative. He then started having symptoms on the right, which is where he is hurting now." Dr. Harris noted that the claimant had "an unusual constellation of symptoms that have been kind of moving around". Dr. Harris recommended continuing physical therapy, use of a Medrol Dosepak, and referred the claimant to Dr. Trevin Thurman for injections.

18. On January 20, 2022, the claimant was seen by Dr. Thurman. At that time, the claimant reported an onset of symptoms in May, with a worsenting in November. The claimant also reported pain radiating down his right arm and into his hand. Dr. Thurman reviewed the claimant's cervical spine MRI and diagnosed a right C6 radiculopathy and C5-C6 disc herniation Dr. Thurman recommended a right C6-C7 interlaminar epidural steroid injection (ESI). The claimant underwent the recommended ESI on February 4, 2022. In a report dated March 16, 2022, Dr. Thurman noted that the February injection did not provide the claimant with relief. Dr. Thurman recommended the claimant undergo a transforaminal epidural steroid injection (TFESI).

19. On March 17, 2022, Dr. Long Vu administered right C4-C5 and C5-C6 TFESIs.

20. On April 5, 2022, the claimant was seen by Dr. Scott Primack. In the medical record of that date, the claimant reported that the March 17, 2022 TFESIs provided him with pain relief for 16 days. Dr. Primack recommended that the claimant undergo facet joint injections at the C4-C5 and C5-C6 levels.

21. On May 4, 2022, Dr. Thurman administered bilateral C4-C5 and C5-C6 intraarticular facet joint injections. On May 23, 2023, the claimant returned to Dr. Thurman and reported he had 80 percent relief of his neck pain symptoms, but no improvement of the radiating right arm pain. The claimant also reported that he had started to experience left sided neck pain that radiated into his left arm. At that time, Dr. Thurman referred the claimant back to Dr. Harris.

22. On May 24, 2022, the claimant was seen by Dr. Harris and reported radiating pain into both arms. At that time, Dr. Harris recommended a repeat MRI of the claimant's cervical spine.

23. On June 22, 2022, the MRI showed a disc bulge at the C5-C6 level that was asymmetric to the right with annular tear demonstrates mild to moderate spinal canal narrowing and contacts the ventral right cord and mild left neural foraminal narrowing secondary to uncovertebral disease.

24. On June 23, 2023, Dr. Thurman performed electromyography (EMG) testing. In his EMG report, Dr. Thurman noted mild to moderate bilateral subacute C6 cervical radiculopathy; and mild to moderate left and mild right median neuropathy (consistent with carpal tunnel syndrome).

25. On June 24, 2022, the claimant returned to Dr. Harris. At that time, Dr. Harris noted the EMG findings and recommended that the claimant undergo surgical intervention. Specifically, Dr. Harris recommended either a C5-C6 cervical disc arthroplasty or, in the alternative, a C5-C6 anterior cervical discectomy and fusion (ACDF).

26. On August 3, 2022, the claimant returned to Dr. Rauzzino. At that time, Dr. Rauzzino agreed that surgery was warranted. However, he opined that an ACDF at the C5-C6 level would better address the claimant's symptoms. Dr. Rauzzino noted that the claimant had more than a year of symptoms without significant relief from conservative treatment. Dr. Rauzzino also identified an abnormal MRI**,** and EMG results that suggested C6 nerve root irritation. Dr. Rauzzino further opined that the claimant's need for the surgery was ..occupationally related."

27. On August 19, 2022, the claimant attended an independent medical examination (IME) with Dr. B. Andrew Castro. In connection with the IME, Dr. Castro obtained a history from the claimant, performed a physical examination, and reviewed the claimant's medical records. In his August 21, 2022 IME report, Dr. Castro opined that surgery is not indicated to treat the claimant's symptoms. In support of this opinion, Dr. Castro noted that the claimant is neurologically intact with mild findings on MRI. Dr. Castro also noted that the claimant does not have clear symptoms of cervical

radiculopathy. Dr. Castro noted that the claimant's symptoms are "somewhat vague". It is also Dr. Castro's opinion that the onset of new symptoms in November 2021 is unrelated to the claimant's May 21, 2021 work injury. Dr. Castro recommended that the claimant undergo a functional capacity evaluation.

28. The IME recording and related transcript were entered into evidence. During the IME, the claimant told Dr. Castro that a few days after a "DO worked on [the claimant]" in November, he began to have left sided symptoms. The claimant then described the November 21, 2021 incident at home.

29. On October 24, 2022, the claimant was seen by surgeon Dr. Alex Sielatycki for "a third opinion". Dr. Sielatycki diagnosed a disc herniation at the C5-C6 level, which was causing radiculopathy. Dr. Sielatycki recommended the claimant undergo a cervical disc arthroplasty, rather than a fusion. As to the issue of causation, Dr. Sielatycki opined:

> it is highly likely that the injury in question did cause these symptoms and the disk herniation. The MRI has the appearance of a more acute soft disk herniation. The patient denies any significant previous cervical spine pain. The onset of symptoms correlates with the injury as described. I therefore do believe that the injury in May of 2021 is causally related to his disk herniation in the neck and is related to the need for ongoing treatment.

30. Dr. Castro's testimony by deposition was consistent with this written report. Dr. Castro reiterated his opinion that the recommended surgery is not indicated to treat the claimant's condition. Dr. Castro also testified that he does not see a causal connection between the claimant's May 2021 work injury and the fusion surgery recommended by Dr. Harris. Dr. Castro testified that the claimant's symptoms are "all over the place" as far as moving between right sided and left sided. He also noted that even the claimant's neck symptoms are intermittent. Dr. Castro also reiterated that the MRI findings are mild and noted that the claimant is neurologically intact on examination.

31. The claimant testified that his current symptoms include a burning sensation into his right and left shoulders, with pain that begins on the right side of his neck and radiates down into his right shoulder blade. He also experiences pain in his right forearm. The claimant further testified that since November 21, 2021 he has not returned to work for the employer. In addition, he is no longer able to engage in other activities such as hunting and fishing.

32. The ALJ does not find the claimant's testimony regarding the onset of his new left sided symptoms to be credible or persuasive. The ALJ finds that the claimant began to experience those new left sided symptoms only after he attempted to hang a closet door at his home on November 21, 2022. The ALJ is not persuaded that the OMT administered by Dr. Stewart led to the onset of those symptoms. The ALJ credits the medical records and the opinions of Dr. Castro over the contrary opinions of Drs. Harris,

Rauzzino, and Sielatycki. Although Drs. Harris, Rauzzino, and Sielatycki each make some reference to an increase of the claimant's symptoms in November 2021, the ALJ is not persuaded that they were made aware of the incident at the claimant's home on November 21, 2021. The ALJ finds that only Dr. Rauzzino had a clear understanding of the claimant's full medical history, including details surrounding the November 21, 2021 incident. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended cervical spine surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 21, 2021 work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

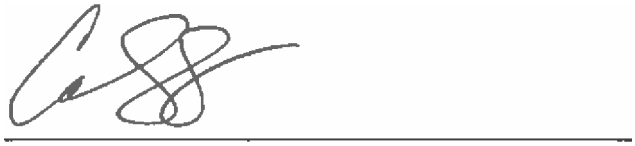
4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate that the cervical disk arthroplasty at the C5-C6 level, as recommended by Dr. Alex Sielatycki, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted May 21, 2021 work injury. As found, the medical records and the opinions of Dr. Castro are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a cervical spine surgery, as recommended by Dr. Alex Sielatycki, is denied and dismissed.

Dated April 20, 2023.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 5. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otheiwise, the ALJ's order will be final. Section 8-43-301(2), C.R.5. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1} That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A} and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be malled to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-197-156-002

PROCEDURAL MATTERS

1. On November 30, 2022, the respondents filed an Application for Hearing (AFH) endorsing the issue of withdrawing the March 4, 2022 General Admission of Liability (GAL) on the basis of improvidence.

2. The claimant is self-represented in this matter.

3. The respondents mailed a copy of the AFH to the claimant at the address of [Redacted, hereinafter HA]. This is the address that the DOWC has on file for the claimant. The DOWC has no email listed for the claimant.

4. On December 14, 2022, the respondents filed a hearing confirmation with the Office of Administrative Courts (OAC) for a hearing on March 16, 2023 at 1:00 p.m. The hearing confirmation was emailed to the claimant at two email addresses: [Redacted, hereinafter ESS] and [Redacted, hereinafter JG]

5. However, in the certificate of mailing on the hearing confirmation, the claimant's email address was identified as ESS[Redacted] This email contains a typographical error in the spelling of the claimant's first name ([Redacted, hereinafter JEY] vs. [Redacted, hereinafter JFY]).

6. On December 19, 2022, the OAC issued a hearing notice for the March 16, 2023 hearing. The email used for the claimant was the one containing the typographical error [Redacted, hereinafter OY]).

7. On March 9, 2023, the OAC sent a Google Meet invitation to the parties to attend the March 16, 2023 hearing via that platform. The email used for the claimant for that invitation was his correct email address of JEY[Redacted].

8. On March 16, 2023, the respondents appeared ready to proceed to hearing. The claimant failed to appear and did not contact the court indicating that he would be late or otherwise request to be excused from the hearing.

9. At the March 16, 2023 hearing, the ALJ considered Rule 23 OACRP which applies to a non-appearing party. The ALJ determined that although the hearing confirmation was sent to the email address containing a typographical error, the hearing confirmation and the Google Meet invitation were both emailed to the correct email address. Therefore, the ALJ determined that the claimant was provided some notice of the March 16, 2023 hearing.

10. The ALJ entered the respondents' exhibits into evidence and heard the respondents' legal position regarding the request to withdraw the GAL.

11. Given the unusual circumstances surrounding the notifications provided to the claimant of the hearing, the ALJ elected to issue an Order to Show Cause related to the claimant's failure to appear.

12. Therefore, on March 20, 2023, the ALJ issued an Order to Show Cause that held issuance of Findings of Fact, Conclusions of Law, and Order (FFCLO) pending the claimant providing good cause, in writing, for his failure to appear at the March 16, 2023 hearing. The claimant was given until April 20, 2023 to provide such information to the ALJ.

13. That show cause order also stated that if no good cause was shown, the ALJ would close the evidence in this matter and issue FFCLO pursuant to Section 8-43-215 C.R.S.

14. No written statement was received from the claimant regarding his failure to appear on March 16, 2023. Therefore, the ALJ now issues FFCLO on the endorsed issue.

ISSUES

Whether the respondents have demonstrated, by a preponderance of the evidence, that the March 4, 2022 GAL should be withdrawn as improvident, and a new GAL filed for medical benefits only.

FINDINGS OF FACT

1. On January 25, 2022, the claimant suffered a work related injury to his low back.

2. Following the injury, the claimant sought treatment in the emergency department (ER) at Fort Defiance Indian Hospital on January 25, 2022. At that time, the claimant was seen by Karissa Nemeti, RN and Matthew Plumb, PA-C. The medical record of that date indicates that the claimant was injured while climbing down a ladder and twisted.

3. PA Plumb assessed a muscle strain and took the claimant off of work for five days.

4. On February 8, 2022, the claimant returned to the ED and was seen by Kendra Wilson, FNP. At the claimant's request, Nurse Wilson determined that the claimant could return to work without restrictions.

5. On March 4, 2022, the insurer filed a General Admission of Liability reflecting payments for temporary total disability (TTD) benefits for the period of January 29, 2022 through February 7, 2022.

6. The respondents' now request to withdraw the March 4, 2022 GAL, as the dates of TTD are based upon work restrictions assigned by a physician's assistant (PA) and lifted by a nurse practitioner (FNP).

7. If the request is granted, and the GAL withdrawn, the respondents intend to file a new GAL reflecting admission for medical benefits only.

8. Absent any persuasive evidence to the contrary, the ALJ finds that the respondents request to withdraw the March 4, 2022 GAL is appropriate. The ALJ finds that the respondents have demonstrated that it is more likely than not that the March 4, 2022 GAL was filed improvidently.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.$. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.$. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. Section 8-43-201(1), C.R.S.; see also *Salisbury v. Prowers County School District,* W.C. No. 4-702-144 (ICAO, June 5, 2012); *Barker v. Poudre School District,* W.C. No.

4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." The amendment to Section 8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital,* W.C. No. 4-754-838-01 (ICAO, Oct. 1, 2013).

5. As found, the respondents have demonstrated, by a preponderance of the evidence, that the March 4, 2022 GAL should be withdrawn as improvident, and a new GAL filed for medical benefits only.

ORDER

It is therefore ordered:

1. The General Admission of Liability (GAL) filed on March 4, 2022 is hereby withdrawn.

2. Within ten (10) days of this order, the respondents shall file a General Admission of Liability admitting for medical benefits only.

3. All matters not determined here are reserved for future determination.

Dated April 21, 2023.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts,** 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. Section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts.** You may file your Petition to

Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us.** If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.$. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-141-216-004

ISSUES

- Did Claimant prove a bilateral SI joint fusion surgery performed by Dr. Christian Balcescu on November 3, 2022 was reasonably needed and causally related to her admitted work injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a Produce Supervisor. Her regular duties included stocking fruits and vegetables. The job was physically demanding and required her to frequently lift and carry up to 50 pounds.

2. Claimant suffered admitted injuries to her low back and left shoulder[1] on June 12, 2020 while breaking down pallets of lettuce. She lowered a heavy box of produce from her head to her left shoulder and felt a painful "pop" in her low back and severe pain radiating down her legs.

3. Claimant's claim has been complicated by a lengthy pre-injury history of low back problems, beginning with a lumbar fusion in 1994. She recovered well from the fusion, but the record reflects several subsequent episodes of low back symptoms, typically as a result of triggering incidents. The most recent episodes before the work accident were in 2015 and 2016.

4. Claimant was evaluated by PA-C Scott Morey on January 13, 2015 for low back pain. She had fallen in late 2014, and her back and right leg had been bothering her since that time. She described numbness in the right buttock, anterior lateral thigh, and anterior shin on the right, occasionally down to the foot. Examination showed significant tenderness over the right-side paraspinals and the right SI joint. The left SI joint was nontender, as were the bilateral sciatic notches. Sensation was decreased in the right leg but normal in the left. Mr. Morey reviewed a recent MRI which he described as "rather benign" with no stenosis, disc desiccation, or herniations. Mr. Morey assessed "low back pain associated with her fall." He thought the right leg numbness could be from "a contused nerve." He ordered an EMG but did not anticipate Claimant would need surgery. The record contains no subsequent records from Mr. Morey.

5. Claimant started PT on March 4, 2016 for "LBP and neck pain which began about a year ago when she fell on ice but became worse on 2/8/16." Claimant testified

[1] Claimant's left shoulder injury was the subject of a prior hearing before ALJ Lamphere on June 29, 2021. Judge Lamphere ordered Respondents to cover a left shoulder surgery recommended by Dr. James Duffey. The shoulder surgery was eventually performed on December 9, 2021. The left shoulder is not involved in the present litigation, and will only be noted in passing for historical purposes or if otherwise necessary to understand Claimant's medical status as relates to her lumbar spine and/or SI joint conditions.

her back and neck had flared from moving to Colorado in a U-Haul vehicle. She told the therapist her legs occasionally gave out. She was using a TENS unit but taking no pain medication. The therapist instructed Claimant to perform aquatic exercises pending an MRI and orthopedic evaluation.

6. A lumbar MRI was performed on March 8, 2016. It showed post-surgical changes at L4-S1, and mild multi-level DDD and facet arthropathy.

7. Claimant saw PA-C Phillip Falender on March 9, 2016. Her primary complaints appeared related to her neck and associated upper extremity symptoms, but she also reported pain in her low back, right buttock, and right leg. Mr. Falender indicated she had "very mild stenosis" in her lumbar spine per the MRI. He ordered PT and referred Claimant to Dr. Mark Meyer to consider injections.

8. Claimant was evaluated by Dr. Julia Brinley on April 26, 2016 for severe neck and low back symptoms. She described shooting pain down her legs into her feet. Dr. Brinley noted there was nothing on the recent MRI to explain her symptoms. Physical examination showed multiple bilateral tender points on the arms, legs, and back. Dr. Brinley opined, "given her multiple tender points and imaging that is unrevealing of cause she could potentially have fibromyalgia." Dr. Brinley ordered electrodiagnostic testing.

9. Dr. Gregory Ales performed a lower extremity EMG on June 6, 2016. The results were normal except for reduced amplitude of the right peroneal motor nerve. Dr. Ales suspected the finding was related to prior nerve root compression, although it could possibly reflect an L5 radiculopathy. There was no evidence of compressive neuropathy, or acute or chronic radiculopathy in any other nerves or muscles studied.

10. Claimant had a lumbar injection in June 2016 that helped her leg symptoms.

11. On June 27, 2016, Dr. Brinley opined Claimant "has a component of fibromyalgia in addition to her long-standing arthritis."

12. The final pre-injury record regarding Claimant's low back is dated November 16, 2016 from Dr. Brinley. The lower extremity numbness had improved and she was only having "mild" leg pain. Dr. Brinley recommended continued weight loss and PT.

13. Before the work injury, Claimant participated in numerous activities without difficulty, including horseback riding, four-wheeling, camping, hiking, skiing, shoveling snow, dancing, and walking her dog. Additionally, she performed her physically demanding job with no limitations or restrictions. Claimant's testimony is supported by the lack of treatment records from November 2016 until the work accident in June 2020.

14. After the June 12, 2020 industrial accident, Employer referred Claimant to UCHealth for authorized treatment. She saw PA-C Jayme Eatough at the initial appointment. Claimant reported severe pain in her back, hips, legs, and left shoulder. Ms. Eatough commented the physical examination was "hard today due to pain." She was "very tender" to palpation over the thoracic and lumbar spines, and the paraspinal muscles on both sides. Her gait was stiff and slow and it was painful to move and change

positions. Straight leg raise testing was negative. Lumbar x-rays showed moderate disc space narrowing from L3-S1, but no fracture or other obvious bony abnormality. Thoracic x-rays showed diffuse degenerative changes. Claimant was given a nonspecific diagnosis of "back pain." Ms. Eatough prescribed muscle relaxers and took Claimant off work.

15. Claimant saw Dr. Emily Burns on June 17, 2020. She reported ongoing mid- and low back pain, radiating pain in both legs, and numbness in the right thigh, down to the foot. Physical examination showed significant diffuse tenderness to palpation along the lumbar spine the bilateral paraspinal muscles. Dr. Burns noted "not much" SI joint or sciatic notch tenderness to palpation.[2] Sensation was decreased to light touch in both feet, the lateral lower legs, and right anterior thigh. Her gait was "very antalgic." Dr. Burns ordered "stat" thoracic and lumbar MRIs to rule out cauda equina syndrome or an acute thoracic fracture. Claimant's medications were refilled and she was continued off work.

16. The MRIs were completed later that evening. The thoracic MRI showed a left-sided disc protrusion at T9-10 with potential compression of the left T10 nerve root, but no other significant abnormality. The lumbar MRI showed a posterior disc protrusion and mild facet arthropathy at L2-3, and a pre-existing fusion from L3-S1, with no residual or recurrent stenosis.[3]

17. Claimant returned to Dr. Burns on June 19, 2020. She continued to report low back pain and right thigh numbness. Physical examination showed diffuse tenderness throughout the lumbar spine and tenderness over the right SI joint. Dr. Burns reviewed the MRI reports and noted the left T10 nerve root impingement could be related to her thoracic symptoms, although it did not exactly correspond to her symptoms, which were worse on the right. Dr. Burns saw nothing acute or emergent on the lumbar MRI to account for Claimant's low back and leg symptoms. She recommended conservative treatment and referred Claimant to Dr. Brian Polvi, a chiropractor. Claimant was released to resume "very limited duty," with minimal lifting and frequent postural changes.

18. Claimant had her initial evaluation with Dr. Polvi on June 30, 2020. She reported ongoing severe pain in her back, buttocks, and legs, including periodic "lightning bolts down both legs." Claimant was in moderate to severe distress because of pain with difficulty ambulating and changing positions. Dr. Polvi documented a very thorough physical examination of Claimant's thoracic and lumbar areas. Dr. Polvi noted muscle spasm and trigger points on palpation throughout the bilateral paralumbar and gluteal musculature, with associated moderate to severe local pain. He also found moderate to severe local pain over the bilateral SI joint sulci. Kemp's maneuver produced increased diffuse thoracic, lumbar, SI joint, and gluteal region symptomatology. Hibb's maneuver was remarkable for moderate to severe piriformis muscle spasm bilaterally with increased lower extremity referred symptomatology. Yeoman's maneuver produced increased bilateral SI joint pain. Dr. Polvi administered treatment to the lumbar, sacral, and gluteal regions, and bilateral piriformis musculature. He advised Claimant he may perform

[2] The ALJ interprets this as reflecting some SI joint pain, but significantly less than the low back pain.

[3] Claimant had a prior low back injury that resulted in an L5-S1 lumbar fusion, with subsequent extension of the fusion to L3, and subsequent removal of the fusion hardware.

manipulative procedures to the bilateral SI joints at future visits depending on her tolerance.

19. Claimant completed 12 sessions with Dr. Polvi over approximately 8 weeks. Dr. Polvi consistently documented complaints of pain in the low back, buttocks, sacrum, and pelvis. He also repeatedly observed tenderness and muscle spasm in the low back and pelvic areas. He directed manual therapies, exercises, and dry needling to the low back, buttocks, pelvis, hips, and piriformis muscles.

20. Dr. Burns' records document improvement with chiropractic treatment in July and August 2020. In contrast to her earlier records and Dr. Polvi's records, Dr. Burns noted "no SI joint or sciatic notch tenderness to palpation" on several occasions.

21. On August 18, 2020, Claimant told PA-C Peter Carroll in Dr. Burns' office she had improved "a lot" with Dr. Polvi's treatment. She had lifted 50 pounds without difficulty or pain during a recent therapy session, and wanted to go back to work. She was released with medium level work with no lifting over 50 pounds.

22. Claimant followed up with Dr. Burns on August 24 and said she was doing "very well with almost no low back pain." She also denied leg symptoms. Employer had "not accepted" the previous restrictions, so Dr. Burns released Claimant to full duty.

23. On September 16, 2020, Dr. Burns noted Claimant was "doing OK" but having some low back pain at work with reaching down or turning to the side. She asked about spinal injections to help improve her function. Dr. Burns referred Claimant to Dr. Kenneth Finn, a physiatrist.

24. Claimant saw Dr. Finn on October 8, 2020. She described low back pain radiating to the hip, buttock, and right leg, with numbness and tingling in what sounded to Dr. Finn like an L3 distribution. Examination of the low back showed muscle spasm and tenderness. Dr. Finn appreciated no SI join tenderness. Lower extremity sensation was decreased in an L3 distribution. Dr. Finn recommended an intralaminar ESI at L2-3.

25. The ESI was performed on November 3, 2020.

26. Claimant followed up with Dr. Finn on November 17, 2020. The ESI had significantly decreased her pain for three days and then abruptly returned, which Dr. Finn considered a positive diagnostic response. Dr. Finn noted she was still having predominantly L3 and some L2 symptoms and recommended a transforaminal ESI "for a more targeted approach."

27. On December 9, 2020, Dr. Burns documented Claimant was doing worse and "in a lot of pain, especially her right leg." She appeared "very uncomfortable . . . Even with just sitting on the table." Dr. Burns thought Claimant's symptoms sounded consistent with L4-5 compression or irritation, although the MRI had not showed an issue at that level. She referred Claimant back to Dr. Polvi for additional chiropractic treatment.

28. The transforaminal ESI was performed on December 16, 2020. Claimant's pain initially flared for few days, then improved slightly for a few days, and then "came back really strong." At a follow-up appointment with Dr. Finn on January 5, 2021, Claimant still had intense, burning pain in her thighs and numbness into her feet. Her pain was worsening, and she was interested in "a more aggressive next step." Dr. Finn opined additional injections were not warranted because they did not provide appreciable therapeutic benefit, and referred Claimant to Dr. Hammers for a neurosurgical evaluation.

29. Claimant saw Dr. Burns on January 6 and reported burning pain in both thighs wrapping around into her groin area and radiating down the right leg to the foot. Dr. Burns opined, "it is very clear we need to put her back on some restrictions which she has been hesitant to in the past but agrees to today."

30. Respondents denied the referral to Dr. Hammers and set up an IME with Dr. Wallace Larson.

31. Claimant saw Dr. Larson on February 21, 2021. She described ongoing and worsening back pain, and pain and numbness in her legs and feet. On examination, Claimant was tender to palpation throughout her thoracic and lumbar spine areas, buttock, hips, and sacrum. Dr. Larson saw no objective evidence of any acute pathology on the imaging studies and dismissed Claimant's physical exam findings as "nonphysiologic." He opined there was no indication for shoulder or spinal surgery. Dr. Larson opined Claimant had returned to her "baseline" and required no further treatment related to the June 2020 work injury.

32. Dr. Burns reviewed Dr. Larson's IME report on March 16, 2021. She disagreed that Claimant's then-current condition was consistent with her pre-injury "baseline." Dr. Burns noted Claimant had recovered well from her 1994 lumbar surgery and was having no significant back or leg symptoms or limitations immediately before the June 2020 work accident. Dr. Burns reiterated her agreement with Dr. Finn's referral for a surgical evaluation. She also ordered a lower extremity EMG.

33. Dr. Finn performed electrodiagnostic testing on April 13, 2021. There was evidence of a chronic L5 radicular process but nothing acute.

34. On June 29, 2021, Claimant attended a hearing before Administrative Law Judge Lamphere regarding the surgical evaluation with Dr. Hammers and a left shoulder surgery recommended by Dr. Duffey.

35. On August 10, 2021, Dr. Burns discussed with Claimant the possibility that the prolonged delay in completing the neurosurgery evaluation could have a long-term negative effect on her condition. Claimant asked if she could move forward in the meantime under her health insurance, but Dr. Burns did not know if that was an option for a work-related condition during an active claim. She advised Claimant to discuss the issue with her attorney.

36. On September 22, 2021, Judge Lamphere ordered Respondents to cover the shoulder surgery, and the lumbar surgical evaluation with Dr. Hammers.

37. An updated lumbar MRI was performed on August 11, 2021. It was unchanged compared to the June 17, 2020 MRI.

38. Dr. Hammers evaluated Claimant on October 25, 2021. He saw no neurological compression or other surgical lesion on the MRIs to account for Claimant's symptoms or examination findings. Therefore, Dr. Hammers did not recommend surgery.

39. On November 9, 2021, Dr. Burns referred Claimant back to Dr. Finn to consider SI joint injections.

40. Dr. Finn reevaluated Claimant on November 29, 2021. The physical examination showed midline and paravertebral tenderness of the lumbar spine, bilateral SI joint tenderness, and a positive Patrick's maneuver. Dr. Finn diagnosed sacroiliitis and recommended bilateral SI joint injections.

41. The SI injections were performed on December 29, 2021.

42. Claimant moved to Sheridan, Wyoming approximately 10 days after the SI joint injections. Her care was transferred to Sheridan Orthopedic Associates.

43. Claimant was evaluated by Dr. Cristian Balcescu, a spine surgeon at Sheridan Orthopedic Associates, on March 8, 2022. Claimant was "currently still quite painful," and described low back pain with radiation down the buttocks and hips into both legs and feet. Confusingly, the physical examination documented in Dr. Balcescu's report was entirely normal. Dr. Balcescu provided a preliminary "working diagnosis" of lumbar radiculopathy, but wanted to obtain Claimant's records before making his final diagnosis or treatment recommendations.

44. Dr. Balcescu reevaluated Claimant on March 25, 2022. He had reviewed voluminous records in the interim and was better prepared to understand the details of Claimant's situation. Dr. Balcescu agreed with Dr. Hammers that spinal surgery was not indicated based on the imaging studies. However, he noted Claimant has received some benefit from the bilateral SI joint injections in December 2021. Claimant said her pain increased shortly after the injections but she started getting relief approximately 3 days later. Dr. Balcescu would not consider that timeline to be a positive diagnostic response. But when pressed for specifics, Claimant could not categorically state she had no temporary relief immediately after the injection for the duration of the anesthetic. Given Claimant's uncertainty about the post-injection response, and the arguably therapeutic benefit she received after several days, Dr. Balcescu recommended repeating the injections.

45. Repeat bilateral SI joint injections were performed on April 11, 2022 by Dr. Shaun Gonda. The injections were performed under CT guidance to ensure proper placement.

46. Claimant returned to Dr. Balcescu on May 17, 2022. She described a positive diagnostic response to the injections, with an immediate reduction of her pain from 8-9/10 to 0/10. Approximately 4 hours later (when the anesthetic wore off), her pain

returned to 6/10. Dr. Balcescu performed a physical exam and found significant clinical signs of SI joint dysfunction, including bilateral tenderness to palpation over the sacral sulcus, positive thigh thrust test, positive FABER (*i.e*., Patrick's test), and positive Gaenslen's maneuver. Dr. Balcescu diagnosed bilateral SI joint arthropathy based on her reported symptoms, exam findings, and positive diagnostic response to the SI joint injections. Given her failure to respond to conservative measures, Dr. Balcescu recommended bilateral SI join fusions. Claimant wanted to pursue surgery but was unsure whether Respondents would cover it.

47. Respondents denied the surgical preauthorization request pending and IME with Dr. Anant Kumar.

48. Claimant saw Dr. Kumar on July 19, 2022. Examination of Claimant's low back showed tenderness to palpation and reduced range of motion. He also noted several positive Waddell signs. In contrast to Dr. Finn and Dr. Balcescu, Dr. Kumar stated all SI joint tests were negative on his exam. Dr. Kumar also noted Claimant had no immediate pain relief from the SI joint injections performed by Dr. Finn in December 2021, which "obviously proves the SI joint is not a pain generator." Dr. Kumar opined there were no clinical, radiological, or objective indications for an SI joint fusion.

49. Claimant followed up with Dr. Balcescu on October 5, 2022. SI joint testing was again positive bilaterally. Dr. Balcescu reiterated his recommendation for bilateral SI joint fusions. Claimant wanted to proceed with surgery despite the denial of preauthorization because she was debilitated by ongoing severe symptoms.

50. Dr. Balcescu performed a bilateral SI joint fusion on November 3, 2022.

51. Claimant had a post-op appointment with Dr. Balcescu's PA-C on November 23, 2022. Claimant reported she was "doing very well" since the surgery. Her pain level had dropped to 1-2/10 and she was taking no pain medication, not even Tylenol. She was no longer having the "zingers" down her legs, and had only occasionally a "little bit" of residual numbness in two toes on the right foot.

52. At hearing, Claimant testified the surgery was tremendously helpful and, "I'm back to living again." Consistent with the post-op report, she testified her lower extremity numbness has improved and she no longer has "lightning bolts" going down her legs. Her pain levels decreased to 2-3/10 and she had stopped taking pain medication. Claimant is very satisfied with the surgery and would do it again "in a heartbeat."

53. Dr. Balcescu testified he initially provided a provisional diagnosis of lumbar radiculopathy because Claimant's pain appeared to be in an L5 distribution. The symptoms she described can also be consistent with SI joint dysfunction, but the more common source would be the lumbar spine. He had the opportunity to review her medical records before he next saw Claimant on March 25, 2022, and the information in her records pointed away from the lumbar spine as the source of her problems. The imaging studies showed the previous fusion had healed well, and there was no significant stenosis or nerve compression. The most "striking" thing Dr. Balcescu noticed in the prior records

was that Claimant's best therapeutic response occurred after she received bilateral SI joint injections in December 2021. She then had a strongly positive diagnostic response to the repeat injection, coupled with clinical examination findings confirming the diagnosis of bilateral SI joint dysfunction. Dr. Balcescu opined the SI joint problems and the resulting surgery are causally related to the June 2020 work accident. He saw nothing in the medical records to contradict Claimant's report that she was doing well with no significant symptoms of functional limitation immediately before the work accident.

54. Dr. Kumar testified any pathology related to Claimant's SI joints is unrelated to the June 2020 work accident. He pointed out the first diagnosis of SI joint dysfunction was provided by Dr. Finn in November 2021, 18 months after the work accident, and opined it is improbable that an injury to Claimant's SI joints would have gone undiagnosed by multiple providers for so long. He did not mention the multiple positive SI joint exam findings documented at Dr. Polvi's June 30, 2020 evaluation. Dr. Kumar questioned the validity of Dr. Balcescu's exam findings and testified that his own exam at the IME showed no evidence of SI joint pathology. He opined it is not medically probable Claimant's complaints of low back pain, hip pain, and bilateral leg pain and numbness were caused by an injury to the SI joints. Instead, Dr. Kumar opined Claimant's reported symptoms are "nonphysiological," and therefore unlikely to respond to any treatment, including surgery. Dr. Kumar disputed Claimant's report of significant improvement after the SI joint surgery, opining such a "miraculous" recovery "doesn't make any sense."

55. Dr. Balcescu's opinions and conclusions are credible and more persuasive than the contrary opinions offered by Dr. Kumar and Dr. Larson.

56. Claimant's testimony is credible and persuasive regarding her preinjury functional abilities and her response to the November 3, 2022 SI joint fusion surgery.

57. Claimant proved the bilateral SI joint fusion surgery performed by Dr. Balcescu on November 3, 2022 was reasonably needed and causally related to the admitted June 12, 2020 work injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

A pre-existing condition does not disqualify a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

As found, Claimant proved the bilateral SI joint fusion surgery performed by Dr. Balcescu on November 3, 2022 was reasonably needed and causally related to the admitted June 12, 2020 work injury. Dr. Balcescu credibly explained that his diagnosis of bilateral SI joint arthropathy is consistent with Claimant's reported symptoms and supported by objective evidence including exam findings and Claimant's response to SI joint injections. To be sure, it is unusual that no one specifically diagnosed SI joint dysfunction until November 2021. But clinical signs implicating the SI joints as a pain generator have been present since the beginning. Dr. Burns noted SI joint tenderness within a week after the accident. And Dr. Polvi's detailed examination on June 30, 2020 provides persuasive evidence of SI joint involvement. Given the close connection between the SI joints and the spine, the considerable overlap between symptoms referable to these body parts, and Claimant's prior lumbar fusion, it is perhaps understandable that the SI joints were initially given short shrift. As Dr. Balcescu explained, the lumbar spine was the more likely source of Claimant's symptoms, so it made sense to focus there first. The ALJ also notes it took 10 months to complete the neurosurgical evaluation with Dr. Hammers, but once Dr. Hammers ruled out a surgical issue in the lumbar spine, Dr. Burns quickly referred Claimant to Dr. Finn for possible SI joint injections. Eventually, with a fresh perspective and the benefit of a longitudinal picture of Claimant's treatment, Dr. Balcescu uncovered the true source of Claimant's ongoing symptoms. And his insights were ultimately validated by the immediate and substantial benefit Claimant received from the SI joint surgery.

Claimant had episodes in 2015 and 2016 with low back and right leg symptoms similar to those documented after the 2020 work accident. But the prior episodes were relatively transient and did not require long-term treatment. Claimant received good relief from an injection in June 2016, and there is no persuasive evidence she sought specific treatment for low back or radicular symptoms between November 2016 and the June 12, 2020 work accident. More important, Claimant performed a physically demanding job during that time with no restriction or limitations related to low back or leg symptoms. The persuasive evidence shows the June 12, 2020 accident either caused new SI joint pathology, aggravated an underlying, pre-existing SI joint condition, or some combination thereof. The net result was a substantial change in Claimant's pre-injury status that is directly traceable to the work accident. The preponderance of persuasive evidence establishes that the June 12, 2020 accident was the proximate cause of Claimant's SI joint dysfunction and need for treatment, including surgery. The good surgical outcome confirms the surgery was reasonably needed.

ORDER

It is therefore ordered that:

1. Insurer shall cover the bilateral SI joint fusion surgery performed by Dr. Cristian Balcescu on November 3, 2022.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

WORKERS' COMPENSATION NO. 5-146-499-002

ISSUES

- Did Respondents prove all issues in this claim were closed by a Final Admission of Liability (FAL) filed on August 9, 2022?
- Did Claimant prove one or more issues in his claim should be reopened based on a change of condition?
- If the claim is reopened, did Claimant prove additional medical treatment is reasonably needed and causally related to his admitted injury?
- Did Claimant prove entitlement temporary disability benefits before December 25, 2021 greater than the benefits admitted in the August 9, 2022 FAL?
- Did Claimant prove entitlement to reinstatement of TTD on or after December 25, 2021?
- Did Respondents prove additional TTD is barred because Claimant was responsible for termination of employment?
- Average weekly wage.
- PPD.
- Disfigurement.

FINDINGS OF FACT

1. Claimant suffered an admitted injury on August 12, 2020 while working as a mover. Claimant was moving heavy boxes when he felt a pulling and tearing sensation in his right groin area. Approximately one week later, he coughed and felt a sharp pain in the right groin and noticed a bulge. The bulge became progressively larger and more painful, so Employer referred Claimant to Concentra. He was diagnosed with a right inguinal hernia and referred to Dr. McCann, a surgeon.

2. Dr. McCann performed a right inguinal hernia repair with mesh on September 2, 2020.

3. Claimant was put at MMI on October 5, 2020 by Dr. Daniel Peterson at Concentra. Claimant was still having pain in the right groin, but felt ready to return to work.

4. Shortly after being placed at MMI, Claimant noticed a painful bulge in his left groin. An ultrasound confirmed a left inguinal hernia. Claimant also reported ongoing pain in the right inguinal area radiating down his right thigh, and pain in the right testicle.

5. The claim was reopened, and Claimant underwent a left inguinal hernial repair by Dr. McCann on December 16, 2020.

6. The left hernia repair was successful, but Claimant continued to complain of pain in the right groin and right testicle. A repeat ultrasound of the scrotum and right inguinal area on January 29, 2021 showed no abnormalities to explain the ongoing symptoms.

7. Claimant saw Dr. Peterson on February 24, 2021 and reported no improvement in the right groin and testicular pain. Dr. Peterson thought the symptoms might be related to ilioinguinal neuropathy and recommended Claimant follow up with Dr. McCann.

8. Claimant returned to Dr. Peterson on March 24, 2021. He had seen Dr. McCann, who did not think Claimant had any inguinal nerve issues. Dr. McCann saw no surgical issue and recommended pain management.

9. Claimant saw Dr. Mark Meyer on May 13, 2021, who recommended an ilioinguinal nerve block.

10. On June 16, 2021, Claimant told Dr. Peterson he was very frustrated by his ongoing severe symptoms. He was receiving Oxycodone from the VA for an unrelated back condition, but the medication was not helping his groin symptoms. Claimant was not working and said he had "too much pride for light duty." Claimant wanted to proceed with the injection recommended by Dr. Meyer.

11. Claimant returned to Dr. Peterson on July 26, 2021. He had undergone the nerve block, which only provided relief for approximately two days.

12. Claimant had two additional nerve blocks, without benefit. Based on Claimant's lack of response to injections, Dr. Meyer opined he was not a candidate for radiofrequency neurotomy.

13. Claimant's last appointment with Dr. Peterson was October 13, 2021. Claimant's pain was unchanged since the prior visit. Dr. Peterson found no evidence of recurrent inguinal hernias. Claimant missed a follow up appointment on November 12, 2021, and was later discharged from Dr. Peterson's care.

14. Dr. Lawrence Lesnak began treating Claimant as the new ATP on January 10, 2022. Claimant had no relief from the injections and said Dr. Meyer advised he was not a candidate for a radiofrequency ablation procedure. Dr. Lesnak agreed that an ablation was not indicated given Claimant's lack of response to the injections. On examination, Dr. Lesnak found no clinical evidence of recurrent hernia or any other objective findings to explain Claimant's symptoms. Nevertheless, Dr. Lesnak ordered an ultrasound of the right groin to look for a possible occult recurrent right inguinal hernia. Dr. Lesnak offered Claimant a tramadol prescription for his pain. However, Claimant stated, "I've tried tramadol in the past, and if this is all you're gonna give me, I don't want anything at all." Therefore, Dr. Lesnak wrote no prescriptions.

15. Claimant had the right groin ultrasound on January 27, 2022. It showed no evidence of a recurrent right inguinal hernia.

16. Claimant followed up with Dr. Lesnak on February 7, 2022. He continued to complain of constant moderate-to-severe right testicular pain, as well as right-sided low back, buttock, and medial thigh pain. His testicular pain was severely aggravated with walking, squatting, or lifting. Any direct pressure on his right testicle or scrotum significantly increased his pain. Claimant gave Dr. Lesnak a 2-½ page handwritten narrative describing his constant pain and associated functional limitations. Physical examination showed no evidence of any inguinal abnormalities. Testicular examination produced pain, but no appreciable abnormality. Dr. Lesnak told Claimant he could not identify any specific pain generator based on examination, post-surgical diagnostic imaging, or the diagnostic nerve injections. Dr. Lesnak recommended no additional testing or specific treatment and put Claimant at MMI. Dr. Lesnak opined Claimant did not quality for a rating because he had no palpable hernia-related defects and no clinical evidence to support a diagnosis of right ilioinguinal neuritis. He released Claimant from care.

17. Dr. Martin Kalevik performed a Division IME on June 28, 2022. Claimant described ongoing severe right groin and testicular pain, as he had previously reported to Dr. Lesnak. Claimant said the pain prevented him from lifting any appreciable weight and limited his ability to sit for prolonged periods. Claimant was using a cane because the groin pain made it difficult to walk. Dr. Kalevik observed a slight alteration of gait, favoring the right leg. Claimant was upset about the continued right groin and testicular pain, and felt the doctors had "brushed him off" without providing adequate treatment. Dr. Kalevik's examination showed no evidence of a recurrent hernia. He agreed with Dr. Meyer and Dr. Lesnak that additional nerve blocks were not warranted because of Claimant's previous lack of response. He also agreed Claimant was at MMI as of February 7, 2022. Dr. Kalevik assigned a zero percent rating because there was no palpable hernia defect on the right or left side, and "pain in and of itself is not ratable." He concluded the source of Claimant's pain is "unclear" and no specific pathology had been identified by multiple examinations or diagnostic testing. However, Dr. Kalevik thought it was reasonable to obtain an MRI of the right groin or pelvis within the next 90 days to look for a recurrent hernia, "meshoma," or malfunctioning of the mesh. If the MRI showed an abnormality associated with the injury and hernia repair, re-evaluation by a surgeon would be warranted. Otherwise, Claimant would remain at MMI.

18. Respondents filed a Final Admission of Liability (FAL) on August 9, 2022 based on Dr. Kalevik's DIME report. The FAL admitted for various periods of temporary disability benefits, statutory interest, an overpayment, and $20,561.97 in medical benefits. The FAL specifically denied medical benefits after MMI, and denied that Claimant suffered any permanent impairment. The section addressing disfigurement was left unchecked, and the accompanying space to state the amount of any disfigurement benefit was left blank. The FAL contains no language to the effect that all benefits not specifically admitted are denied.

19. Claimant filed an Objection to Final Admission of Liability on August 24, 2022. He then filed a Notice and Proposal and Application for a Division IME form on August 29, 2022.

20. Claimant exchanged emails with Respondents' counsel on September 13, 2022 and was advised that the claim was closed because he had not requested a hearing within 30 days of the FAL. Claimant contacted the Division and was told by an unidentified person that his claim was not closed. The Division representative mailed Claimant a blank Application for Hearing form.

21. Claimant completed the Application for Hearing and mailed it on September 22, 2022, which was 44 days after the FAL.

22. All issues endorsed on Claimant's Application for Hearing (except for reopening), were ripe for adjudication when the FAL was filed.

23. Respondents proved the claim is closed as to all issues specifically admitted or denied in the August 9, 2022 FAL. Claimant conceded he received the FAL, and there is no persuasive evidence it was technically defective in any way. Although Claimant timely filed the Objection to Final Admission of Liability form, he did not file an Application for Hearing within 30 days of the FAL. Claimant had already undergone a DIME and was not entitled to a second DIME. As a result, the August 29, 2022 Notice and Proposal was insufficient to perfect an objection to the FAL.

24. Respondents failed to prove the FAL closed the issue of disfigurement. The FAL neither admitted nor denied disfigurement benefits.

25. Claimant has surgical scarring in his groin area because of the work injury. At hearing, the ALJ advised Claimant of the so-called "bathing suit rule" for determining if a disfigurement is "normally exposed to public view." Claimant agreed the scarring is not visible when wearing a bathing suit. However, Claimant demonstrated a slight alteration of gait favoring his right side. Claimant also routinely uses a cane to assist with ambulation when he is out of the house in public. Claimant credibly testified the alteration of his gait and need for a cane are related to his ongoing right groin and testicular pain since the work injury. Claimant has sustained serious permanent disfigurement to areas of the body normally exposed to public view. The ALJ finds that Claimant shall be awarded $1,800 for disfigurement.

26. Claimant failed to prove a change of condition to justify reopening any portion of his claim. He has complained of right groin and testicle pain and associated functional limitations to multiple providers, since before he was put at MMI. At hearing, Claimant admitted his current condition is the same as when he was put at MMI in 2022. There is no objective evidence of worsening, nor any other persuasive basis to conclude that Claimant's condition is appreciably different than it was when he was put at MMI.

CONCLUSIONS OF LAW

A. Issue closure

Respondents argue that Claimant's claim was closed by the August 9, 2022 FAL, and the ALJ has no jurisdiction to award any additional benefits unless the claim is reopened. Closure of issues by an FAL is an affirmative defense that the respondents must prove by a preponderance of the evidence. *Yim v. Avalanche Industries*, W.C. Nos. 4-506-753; 4-059-342 (December 5, 2005).

An FAL provides the primary mechanism for the respondents to initiate administrative closure of a claim. Once an FAL is filed, the claimant must take certain actions within thirty days or "the case will be automatically closed as to issues admitted in the final admission." Section 8-43-203(2)(b)(II)(A). Objecting to an FAL is a multi-part process. Here, Claimant completed the first step in the process by filing the Objection to Final Admission of Liability form on August 24. However, simply filing the Objection form is not enough. A claimant must also request a DIME pursuant to § 8-42-107.2 or request a hearing on ripe and disputed issues. *Id*.

The available options (either requesting a DIME or requesting a hearing) may be limited depending on what has previously transpired in the claim. Section 8-43-203(2)(b)(II)(A) provides that a claimant may only request a DIME "if [a DIME] has not already been conducted." In this case, Claimant had already undergone a DIME with Dr. Kalevik, so his only option was to request a hearing on ripe and disputed issues, within 30 days of the FAL. *Caylor v. State of Colorado*, W.C. No. 4-880-213-03 (May 13, 2015).

An issue is "ripe" if it is "real, immediate, and fit for adjudication." *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006). An issue is "fit for adjudication" if there is no legal impediment to its immediate adjudication. *E.g., McMeekin v. Memorial Gardens*, W.C. No. 4-387-910 (September 30, 2014).

Claimant's September 22, 2022 Application for Hearing was untimely because it was mailed more than 30 days after the FAL. [1] The FAL explicitly addressed medical benefits, AWW, temporary disability, permanent impairment, and medical benefits after MMI. Those issues were "ripe for adjudication" when the FAL was filed and were closed by the failure to timely request a hearing. No further temporary disability, PPD, or medical benefits can be awarded absent a reopening. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005).

---

[1] Claimant's Application for Hearing was not actually received by the OAC until October 13, 2022, because it was inadvertently mailed to the OAC's prior address at 1259 Lake Plaza Drive based on outdated information provided to Claimant by the Division. But even if we accept September 22, 2022 as the date of filing under the doctrines of "unique circumstances" or "substantial compliance," the Application was still 14 days late. *E.g., Converse v. Zinke*, 635 P.2d 882 (Colo. 1981); *Kratzer v. Iliff Care Center*, W.C. No. 4-280-513 (August 22, 2001).

B. Disfigurement

Although Respondents proved that most of the issues endorsed on Claimant's Application are closed, they failed to prove the issue of disfigurement is closed.

As an initial matter, it is important to bear in mind that FALs do not necessarily close a "claim." Rather, an FAL closes "issues" in a claim. *See* § 8-43-203(b)(II)(A) ("the case will be automatically closed *as to the issues admitted* in the final admission") (emphasis added). While the net effect may be to close the entire claim depending on the specific issues addressed in the FAL, such an outcome is not invariably the case.

Because the legal effect of an FAL is directed to "issues" and not "claims," an uncontested FAL may result in some issues being closed while others remain open. For instance, in *Dalco Industries v. Garcia*, 867 P.2d 156 (Colo. App. 1993) the respondents filed a FAL that addressed temporary and permanent partial disability benefits but did not address penalties. The court held that "§ 8-43-203(2) provides for continuing jurisdiction over *any issue not specially addressed* in a non-contested final admission of liability. The [ ] final admission of liability was limited to an admission for temporary and permanent partial disability benefits. Therefore, the issue of penalties was not 'automatically closed' and the ALJ retained jurisdiction to decide this issue." *Id.* at 158 (emphasis added).

The Court of Appeals refined this rule in *Dyrkopp v. Industrial Claim Appeals Office*, 30 P.3d 821 (Colo. App. 2001). In *Dyrkopp*, the FAL had admitted for various benefits, including PPD. The FAL also contained a statement that "All benefits or penalties not admitted below are hereby specifically denied." The court held,

> [T]he language "as to the issues admitted" in § 8-43-203(2)(b)(II) does not mean only those "issues" on which an employer agrees to pay benefits. Rather, . . . the phrase must be interpreted as referring to issues on which the employer *affirmatively takes a position*, either by agreeing to pay benefits or by denying liability to pay benefits. *Id*. at 822. (Emphasis added).

Even though the FAL in *Dyrkopp* contained no checkmark or other notation in the section related to PTD benefits, the court pointed to the explicit denial of "all benefits not admitted" as encompassing the issue of PTD. Therefore, the court held the issue of PTD was closed.

The ICAO has repeatedly relied on statements in FALs to the effect that "benefits not specifically admitted are denied" as sufficient to close issues that were not otherwise explicitly addressed on the FAL. *E.g., Campello v. Progressive Insurance Company*, W.C. No 4-205-461 (January 27, 2003); *Tygrett v. Denver Water*, W.C. No. 4-979-139-002 (March 15, 2021); *Villegas v. Denver Water*, W.C. No. 4-889-298-002 (February 5, 2021).

In Claimant's case, the section of the August 9, 2022 FAL relating to disfigurement was left blank, and the FAL contained no categorical denial of all benefits not specifically admitted. Because the FAL failed to "affirmatively" take a position with respect to disfigurement, the issue is not closed.

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." Disfigurement compensation is appropriate "if the scars would be apparent in swimming attire." *Twilight Jones Lounge v. Showers*, 732 P.2d 1230 (Colo. App. 1986). When made aware of the applicable legal standard, Claimant agreed the scarring in his groin area is not visible to the public and therefore ineligible for a disfigurement award.

A claimant's use of a cane or other assistive device can be a disfigurement if causally related to a work injury. *E.g., Felix v. The Griffith Center, Inc*., W.C. No. 3-972-633 (January 12, 1998); *Irvin v. Medical Center of Aurora*, W.C. No. 4-320-720 (January 6, 2006). As found, Claimant proved his altered gait and regular use of a cane are causally related to the work accident. The ALJ concludes Claimant should be awarded $1,800 for disfigurement.

C. Reopening

Section 8-43-303 authorizes an ALJ to reopen any award based on a change in condition. A "change in condition" refers either to a change in the condition of the original compensable injury, or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition has changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from a separate cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Id*. When a claimant seeks reopening based on a change of condition after MMI, a prior DIME determination is entitled to no special weight. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). The claimant must prove a basis to reopen by a preponderance of the evidence. Section 8-43-304(4). A claimant is not required to present expert medical testimony or opinions to establish a change of condition, but can rely on any form of competent and persuasive evidence, including lay testimony. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983).

As found, Claimant failed to prove a change of condition to justify reopening any portion of his clam. The ALJ does not doubt that Claimant continues to suffer severe groin and testicular pain, and he is understandably searching for a solution to those issues. But the symptoms and associated functional limitations have been present since before Claimant was put at MMI. Claimant conceded his current condition is the same as when he was put at MMI in 2022. There is no objective evidence of any worsening, nor any other persuasive basis to conclude that Claimant's condition is appreciably different than it was when he was put at MMI.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant $1,800 for disfigurement.

2. Claimant's claims for additional temporary disability benefits, additional medical benefits, PPD benefits, and medical benefits after MMI are denied and dismissed.

3. Claimant's request to reopen closed issues in his claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

- Did Claimant prove he is entitled to PPD benefits based on a 10% whole person impairment?

FINDINGS OF FACT

1. Claimant suffered an admitted work-related injury on April 4, 2019 when a heavy security door slammed shut on his right elbow.

2. Claimant was initially seen at Concentra on April 4, 2019. X-rays showed no fracture, and he was diagnosed with a right elbow contusion. He participated in therapy for several months, without substantial benefit. He continued to report elbow pain with pain, numbness, and tingling into his right hand.

3. Claimant testified he started having neck pain approximately two months after the accident. He likened the pain to a "kink" in the neck with sharp pain when moving his head too quickly. Claimant testified he received incidental treatment to the neck during therapy for the right elbow. However, the therapy records from June and July 2019 primarily focus on the right arm, with no persuasive indication of any significant neck or right shoulder issues.

4. Dr. John Sacha performed electrodiagnostic testing in September 2019 that showed right ulnar neuropathy and carpal tunnel syndrome.

5. Claimant was referred to Dr. Craig Davis, a surgeon. Initially Dr. Davis recommended conservative care. However, because of Claimant's persistent symptoms, Dr. Davis eventually recommended surgery.

6. Dr. Davis performed a right elbow ulnar nerve decompression, right carpal tunnel release, and right olecranon bursectomy on December 11, 2019.

7. Claimant resumed therapy after surgery. Therapy records through July 8, 2020 contain no persuasive evidence of any neck or shoulder symptoms.

8. At a July 9, 2020 PT session, Claimant complained of severe left shoulder pain from sleeping on the shoulder. There was no mention of any right shoulder symptoms. On August 18, 2020, the therapist also documented "pt reports neck pain on contralateral side of injury," *i.e.*, the left side of the neck. There were no examination findings or other persuasive clinical evidence of any associated functional impairment related to the neck or shoulder. The reference to contralateral neck pain was repeated in the PT records for approximately three weeks. On September 9, 2020, the therapist documented "pt reports he no longer has neck pain on contralateral side." This comment was repeated in subsequent PT records through October 13, 2020.

9. Claimant completed multiple pain diagrams during his treatment at Concentra. At least four pain diagrams are in the record, none of which indicate any complaints beyond the right arm.

10. Claimant saw multiple treating providers during his course of treatment without reported shoulder or neck symptoms. There are no documented complaints beyond the right elbow during visits with Dr. Sacha in 2019. Dr. Davis documented no complaints beyond the right elbow during multiple appointments from May 14, 2019 through August 5, 2020. There were no complaints beyond the right elbow during at least 13 Concentra appointments from January 2020 through January 2021.

11. Claimant completed a Functional Capacity Evaluation (FCE) on January 20, 2021, which showed he could work at the medium physical demand level. Claimant reported right elbow and arm pain that limited heavy lifting and gripping. He described popping and shooting pain in the right elbow, forearm, and wrist. He also reported numbness and tingling in the right forearm and hand. There was no mention of significant right shoulder or neck symptoms.

12. Claimant was put at MMI by Dr. Thomas Corson at Concentra on January 25, 2021. Dr. Corson documented continued right elbow problems, but nothing related to the shoulder or neck.

13. Dr. Sander Orent performed a DIME on July 16, 2021. Claimant reported "ongoing and persistent pain in the elbow with locking and tingling in the fingers." Dr. Orent determined Claimant was not at MMI. He recommended an MRI, repeat electrodiagnostic testing, and a consultation with Dr. Davis "to see what can be done about the locking elbow and the persistent neuropathic symptoms in the hand." Dr. Orent's documented significant exam findings were confined to the right elbow and arm. However, in the section of the report addressing a provisional rating, Dr. Orent stated, "there are symptoms here that include discomfort around the shoulder blade and neck, especially when he wakes up from sleep. I do not think these areas are rated but they do suggest the possibility of whole person conversion." Dr. Orent described no functional impairment associated with the neck and shoulder blade symptoms.

14. Respondent accepted the DIME and authorized additional evaluations and treatment.

15. Claimant followed up with Dr. Davis on December 7, 2021. He reported "clicking and popping [in the elbow] and has low-grade pain, but he is doing all of his normal activities." Dr. Davis noted the popping and clicking seemed to be coming from inside the joint, and hypothesized Claimant may have synovitis or a small loose body. Dr. Davis ordered an MRI of the right elbow. He offered Claimant an injection, but Claimant declined because a previous injection had not helped. There is no mention of any shoulder or neck issues.

16. Claimant returned to Dr. Davis on March 9, 2022 to review the MRI. Dr. Davis commented that the MRI was "basically normal." Dr. Davis saw no surgical lesion and opined Claimant was at MMI.

17. Dr. Kawasaki performed electrodiagnostic testing on May 12, 2022. It showed residual sensory and motor nerve slowing across the elbow, but no slowing at the wrist. Claimant told Dr. Kawaski "he would like to have his case closed as he does not wish to pursue the cleanup surgery with no guarantees." Dr. Kawasaki put Claimant at MMI with a 13% right upper extremity rating for range of motion deficits and residual neurological impairment. Dr. Kawasaki's report contains no reference to shoulder or neck issues.

18. Claimant underwent a follow-up DIME with Dr. John Hughes on August 30, 2022. Dr. Hughes noted that Claimant's pain diagram showed right elbow and ulnar forearm symptoms as well as symptoms in the right wrist and hand. Examination of Claimant's neck showed full range of motion, except lateral flexion was reduced to approximately 30 degrees, with positive right-side facet loading. Dr. Hughes agreed Claimant was at maximum medical improvement as of May 19, 2022. He assigned a 5% upper extremity rating for right wrist range of motion, an 8% upper extremity rating for loss of range of motion in the right elbow, and a 3% upper extremity impairment rating for injury to the right ulnar nerve. Dr. Hughes' final combined rating was 16% upper extremity, which converts to 10% whole person. He gave no indication the incidental cervical spine findings were related to the work injury or warranted conversion to whole person.

19. In his deposition, Dr. Orent confirmed he had not seen or evaluated Claimant since July 2021, and had reviewed no additional records after the original DIME. Dr. Orent explained ulnar nerve injuries typically cause numbness and pain radiating distally from the elbow toward the ends of the hands, and weakness. Dr. Orent did not know what was causing the discomfort around Claimant's shoulder blade and neck noted in the DIME report, but thought it was probably referred pain from the elbow. He described no functional impairment associated with the neck and shoulder symptoms. Dr. Orent agreed with the rating methodology used by Dr. Hughes.

20. At hearing, Claimant described ongoing popping in his elbow that shoots pain down into his hand, fingers, and wrist, and up to his shoulder and neck. Claimant described "stiffness" in his neck and shoulder but testified "it doesn't hamper my range of motion." Claimant described no significant functional impairment associated with the episodes of shoulder and neck pain.

21. Claimant failed to prove his injury caused functional impairment beyond the right arm.

CONCLUSIONS OF LAW

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the

industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm at the shoulder," they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. E*.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). However, the mere presence of pain in a part of the body not listed on the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant failed to prove his injury caused functional impairment beyond the right arm. While Claimant may experience transient neck and right shoulder pain, those symptoms do not give rise to any functional impairment affecting parts of his body not listed on the schedule. Consequently, there is no basis to "convert" the admitted right 16% upper extremity scheduled rating to a whole person rating for purposes of calculating the PPD award.

ORDER

It is therefore ordered that:

1. Claimant's request for additional PPD benefits based on a whole person rating is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

- Did Claimant prove a left total knee arthroplasty (TKA) recommended by Dr. Robert Fitzgibbons is reasonably needed and proximately caused by his January 6, 2022 admitted work injury?

FINDINGS OF FACT

1. Claimant has worked for Employer as a security guard since 2004. In January 2022, he was stationed at the [Redacted, hereinafter FX] Mead freight facility. He typically patrolled the lot and parking areas three times during an 8-hour shift, which required walking up to 1.5 miles per patrol.

2. Claimant suffered admitted injuries on January 6, 2022 when he slipped on ice and fell. He twisted his left knee and fell on his left side. Claimant felt immediate severe pain in his left knee.

3. Employer referred Claimant to Concentra for authorized treatment. He saw Dr. Lori Long-Miller at the initial appointment on January 10, 2022. Claimant explained he slipped on ice, twisted his left knee, and fell on his left side. His knee felt unstable, and he was having difficulty ambulating. On inspection, Dr. Long-Miller observed swelling but no ecchymosis or effusion. The knee was tender to palpation over the MCL and the medial tibial plateau. Dr. Long-Miller noted crepitus and limited range of motion. Claimant was diagnosed with a knee "strain" and a suspected MCL injury.[1]

4. A left knee MRI was completed on January 11, 2022. It showed tearing and degeneration of the medial meniscus, "bone on bone cartilage loss" in the medial compartment, mild cartilage loss in the patellofemoral and lateral compartments, and partial tearing and degeneration of a prior ACL graft.

5. Claimant had two prior surgeries on his left knee that set the stage for his current situation. He had a left knee meniscal repair in 1997, and an ACL reconstruction in 2008. Claimant credibly testified he recovered well after the surgeries and returned to normal activities. Claimant's testimony is corroborated by the lack of medical records documenting any evaluations or treatment of the left knee until at least 2020.

6. Claimant injured his neck and back in a motor vehicle accident (MVA) in February 2020. Contemporaneous medical records make no mention of any injury to the left knee. Claimant participated in PT for several months after the accident. On April 13, 2020, the therapist noted Claimant was having some left knee pain with walking and

[1] Claimant also injured his left shoulder and back in the accident. Those conditions are not involved in the present litigation and will only be referenced if necessary to understand Claimant's status as relates to his left knee injury.

squatting during PT. On April 17, 2020, the therapist stated she discontinued squatting activities during therapy because they were causing knee pain. On August 17, 2020, Claimant reported his left knee was bothering him and he was using a knee brace "at times doing work at home due to feeling like his knee 'shifts.'"

7. Claimant discussed the left knee symptoms with his PCP, Aaron Schumacher, NP, on August 19, 2020. Claimant stated his knee pain had gotten worse since April 2020, and requested a referral to PT. Provocative knee tests were negative, except a positive posterior drawer sign. Mr. Schumacher diagnosed "probable arthritis" and recommended Claimant take ibuprofen, use a compression sleeve with activity, and ice his knee after "vigorous exercise."

8. Claimant discontinued PT on August 24, 2020, and there are no additional records specifically referencing left knee symptoms until after the January 6, 2022 work accident.

9. Claimant followed up with Dr. Long-Miller on January 13, 2022 to review the MRI. Dr. Long Miller noted "lots of degenerative changes, partial tear ACL graft and medial meniscus and bone on bone medial knee." She referred Claimant to PT and recommended an orthopedic evaluation.

10. Claimant saw Dr. Robert Fitzgibbons, an orthopedic surgeon, on January 17, 2022. Claimant described persistent pain since the work accident. He told Dr. Fitzgibbons about the 2008 ACL reconstruction and stated "his left knee was doing fairly well" before the January 6 accident. Considering the MRI findings, Dr. Fitzgibbons did not think an arthroscopy would be helpful. He recommended PT and possible injections if Claimant's symptoms did not improve.

11. On February 24, 2022, Dr. Long-Miller documented that Claimant's knee was "improved but not resolved." The examination showed continued tenderness to palpation, crepitus, and limited range of motion. Dr. Long-Miller advised Claimant a knee replacement "will not be done by work comp."

12. Claimant followed up with Dr. Fitzgibbons on March 8, 2022, primarily in relation to his left shoulder. Claimant stated his knee was "doing well," but also reported ongoing knee pain and instability, aggravated by prolonged standing and walking. Dr. Fitzgibbons recommended surgery for the shoulder.

13. On March 14, 2022, Dr. Long-Miller documented there was "no change" in Claimant's left knee since the previous visit.

14. Claimant started seeing Keith Meier, NP, at Concentra on April 5, 2022. Examination of the left knee showed tenderness over the medial joint line and limited flexion with pain. Meniscal tests were positive. Mr. Meier advised that Dr. Fitzgibbons would decide whether a knee replacement was warranted and would need to submit the request for authorization. Regarding causation, Mr. Meier opined, "Patient has work[ed] his current job for 19 years without issue. Current work injury exacerbated the left knee issue and should be considered work related."

15. On April 25, 2022, Dr. Fitzgibbons noted, "[Claimant's] left knee is still symptomatic and bothersome. Physical therapy helped initially but now he is left with pain and instability of his left knee. The patient is adamant that his left knee was doing well until [h]is work related injury." Dr. Fitzgibbons stated, "will get Workmen's Comp. approval for a left total knee arthroplasty and removal of hardware."

16. Dr. William Ciccone performed a records review for Respondents on June 14, 2022. He opined Claimant suffered a minor sprain/strain at work on January 6, 2022. He noted Claimant was predisposed to develop arthritis in the knee because of the previous ACL reconstruction. Dr. Ciccone opined all pathology shown on the January 11, 2022 MRI was pre-existing and unrelated to the work accident. He said degenerative meniscal tears are common in knees with advanced arthritis, and unrelated to trauma. Given the significant pre-existing degenerative changes, Dr. Ciccone would expect Claimant's symptoms to wax and wane for no specific reason. He concluded the minor sprain/strain did not cause, aggravate, or accelerate the advanced degenerative changes in Claimant's knee.

17. Respondents formally denied the TKA based on Dr. Ciccone's report.

18. Mr. Meier addressed the denial in his June 22, 2022 report. Mr. Meier opined, "I do not agree that the left knee injury is not work related. The patient has worked for this company for 19 years without issue. He has a documented work-related injury . . . Under Colorado guidelines an exacerbation of a preexisting condition is work related."

19. On July 20, 2022, Claimant told Mr. Meier, "I was squatting 175 pounds before this injury. Now I can't do any squatting. I want to get back to where I was."

20. Claimant started seeing Dr. Eric Vanzura at Concentra on August 19, 2022. Dr. Vanzura "entirely" disagreed with Dr. Ciccone's causation opinions, because Claimant was "fully functional" before the work accident despite the preexisting degenerative changes.

21. Dr. Vanzura reiterated his support for the TKA on August 19, 2022. He noted, "prior to the injury [Claimant] was walking and functioning normally despite degenerative changes [and] prior repair of ACL . . . which worked great. Was fully functional with squats and throwing hay bales prior to work related injury. MRI shows degenerative changes in addition to new injuries from work slip/fall." Dr. Vanzura added, "I insist that this patient's new knee instability is due to his slip and fall onto left leg with twisting knee injury. He does have pre-existing degenerative changes but was fully functioning and has entirely new problems after his work-related injury. WC definitely should cover at least the majority of cost for a total knee replacement." Dr. Vanzura referred Claimant to Dr. Lucas Schnell, a knee specialist, for a second opinion.

22. Dr. Schnell evaluated Claimant on September 12, 2022. Dr. Schnell agreed a TKA was appropriate. Regarding causation, Dr. Schnell opined Claimant's pre-existing arthritis "was exacerbated by his fall at work."

23. Dr. Ciccone performed an in-person IME on December 21, 2022. Claimant told Dr. Ciccone he had recovered from the ACL reconstruction with no significant ongoing issues. Claimant had completed a six-mile hike just a few weeks before the work accident. He also lifted weights at least twice per week and performed "full exercises with no pain." Since the accident, Claimant had given up numerous activities, such as weightlifting, running, hunting, landscaping, and home repairs. He was having difficulty with routine household activities such as mowing the lawn, taking out the garbage, vacuuming, and washing dishes. Dr. Ciccone saw no reason to change the opinions expressed in his previous report. He reiterated that the "minor" knee strain at work did not cause, aggravate, or accelerate the pathology seen on the MRI. Dr. Ciccone noted 2020 records showing intermittent knee pain, which he believed was consistent with the expected course of progressive osteoarthritis. He also pointed to post-injury records showing fluctuating pain levels. Dr. Ciccone concluded that the proposed TKA is related to the natural progression of Claimant's underlying, pre-existing condition, not the work injury.

24. Dr. Ciccone testified in deposition consistent with his report. Dr. Ciccone testified the improvement in the Claimant's knee pain in the weeks after the accident was consistent with a resolving left knee strain. He would expect a traumatic aggravation of pre-existing arthritis to produce persistent pain in the knee. Once the pain starts resolving, or goes back to intermittent, he considers the pre-existing condition to be at baseline. Dr. Ciccone downplayed the substantial change in Claimant's functional abilities before and after the work accident. Dr. Ciccone conceded a physical examination in August 2020 showed no evidence of a symptomatic meniscus tear or compromised ACL. He also agreed no pre-injury medical records documented sufficient clinical findings to suggest Claimant was a candidate for a TKA.

25. Dr. Sharma performed an IME for Claimant on January 17, 2023. Dr. Sharma opined Claimant suffered an "exacerbation, aggravation, acceleration and actually a worsening of his underlying arthritis as a result of this work injury."

26. In addition to his pre-injury work activities, Claimant regularly engaged in strenuous exercise, including heavy squats, leg extensions, rowing, and running. He also did "a lot" of work around his home, including heavy landscaping. Claimant's testimony regarding his pre-injury condition and activities is credible and persuasive.

27. The causation opinions of Dr. Vanzura, Dr. Schell, Mr. Meier, Dr. Fitzgibbons, and Dr. Sharma are credible and more persuasive than the contrary opinions offered by Dr. Ciccone and Dr. Long-Miller.

28. Claimant proved the January 6, 2022 work accident aggravated, accelerated, or combined with his pre-existing condition and proximately caused the need for a left TKA.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the claimant's entitlement to medical benefits is disputed, the claimant must prove the treatment is reasonably needed and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

A pre-existing condition does not disqualify a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

As found, Claimant proved the January 6, 2022 work accident aggravated, accelerated, or combined with his pre-existing condition and proximately caused the need for a left TKA. The causation opinions of Dr. Vanzura, Dr. Schell, Mr. Meier, Dr. Fitzgibbons, and Dr. Sharma are credible and more persuasive than contrary opinions in the record. Even though Claimant's left knee was severely arthritic and "bone on bone" the day before the work accident, he was able to work and engage in a wide range of avocational activities such as weightlifting, hiking, running, and landscaping, without limitation or difficulty. Dr. Ciccone's opinion that Claimant returned to "baseline" shortly after the accident is not persuasive. Claimant's preinjury baseline was a minimally symptomatic knee that caused no significant limitations on his ability to work or participate in a variety of physically demanding activities including weightlifting and hiking. Although the documented severity of Claimant's symptoms has fluctuated since the accident, he has continued to experience knee pain, and more importantly, substantially reduced function. The preponderance of persuasive evidence shows the work accident aggravated and accelerated the need for a TKA.

ORDER

It is therefore ordered that:

1. Insurer shall cover the left total knee arthroplasty recommended by Dr. Robert Fitzgibbons.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition

to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-221-765-001

ISSUES

- Did Claimant prove he suffered a compensable injury to his left shoulder on September 15, 2022 "arising out of" his employment?

- If the claim is compensable, the parties stipulated to an average weekly wage (AWW) of $1,273.15. The parties also stipulated that Respondent shall cover an evaluation with Dr. David Weinstein.

STIPULATED FACTS

1. Claimant injured his left arm on September 15, 2022 swatting at a fly that had been bothering him for a while. Claimant swatted at the fly as hard as he could with his left arm, causing immediate pain.

2. Claimant had no prior left shoulder problems.

FINDINGS OF FACT

1. Claimant works for Employer as a Correctional Officer. He injured his left shoulder on September 15, 2022 when he swatted forcefully at a fly while working at a desk. Claimant felt a painful, tearing sensation in the lateral left shoulder and numbness down his left arm into the left ring and middle fingers.

2. Claimant selected Concentra from Employer's list of designated providers. At the initial appointment, Claimant was diagnosed with a left shoulder strain and referred for an MRI and PT.

3. A left shoulder MRI was completed on October 28, 2022. It showed a joint effusion, mild arthritis, supraspinatus tendinitis, and mild AC joint impingement. No rotator cuff or labral tears were identified.

4. A steroid injection on November 3, 2022 provided some relief. Because of persist symptoms, Claimant was referred to Dr. David Weinstein for an orthopedic evaluation.

5. Claimant proved the left shoulder injury arose out of and occurred within the course of his employment.

CONCLUSIONS OF LAW

To establish a compensable claim, a claimant must prove they suffered an injury while "performing service arising out of and in the course of his employment." Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The

"course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). There is no presumption that an injury occurring at work during work hours necessarily arises out of employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). The claimant must prove a causal nexus between the injury and their employment by a preponderance of the evidence. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

Respondent does not dispute the "course of employment" element, and this case turns on whether Claimant's injury "arose out of" his employment.

As found, Claimant proved his injury arose out of his employment. Several interrelated concepts support this conclusion. First, a claimant need not actually be performing work duties at the time of the injury, nor must the injurious activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996). "Many job functions involve discretionary or optional activities on the part of the employee, devoid of any duty component and unrelated to any specific benefit to the employer, but nonetheless are sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment." *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). In this case, the fly had been "bothering" Claimant for "a while," and the ALJ infers it was interfering with his ability to focus on work tasks. As a result, swatting at the fly was intended to remove a distraction and facilitate accurate and timely completion of his work.

Second, Claimant's citation to the "personal comfort" doctrine is persuasive. Under the personal comfort doctrine, a wide variety of activities have all been held to be incidental to employment, such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water, and keeping warm. *E.g., In re Question Submitted by United Stated Court of Appeals for Tenth Circuit*, 759 P.2d 17 (Colo. 1988); *Eslinger v. Kit Carson County Memorial Hospital*, W.C. No. 4-638-306 (January 10, 2006) (warming up car and brushing off snow in parking lot at end of shift); *Geist v. Liberty Mutual Group*, W.C. No. 4-839-225 (October 11, 2011) (employee pushed back in chair to stand and go to the restroom); *Lehr v. Town of Wiggins*, W.C. No. 4-488-778 (February 14, 2002) (employee tried to throw an empty soda bottle into the trash but missed, bent over to pick up the bottle and injured his low back). The rule is based on the premise that actions taken to satisfy the employee's personal comfort are indirectly conducive to the employer's business. *Ocean Accident & Guarantee Corp. v. Pallero*, 180 P. 95 (Colo. 1919). Although personal comfort cases most commonly involve basic bodily functions (*i.e.*, eating, drinking, and toileting), the doctrine has been extended to activities which are not biological necessities, like smoking cigarettes. *E.g., Even v. The Mining Exchange*, W.C. No. 4-892-465 (April 29, 2013) (employee slipped on stairs while returning from a smoke break). Logically, the doctrine should also extend to an attempt

to remove disruptive stimuli, such as closing an office door to mitigate noise or, as here, swatting at a bothersome insect.

Third, the act of swatting at the fly was insufficiently "substantial" to constitute a personal deviation from Claimant's work. An employee who is otherwise engaged in work activity can momentarily step outside the scope of employment by engaging in a purely personal deviation. In such cases, the question is "whether the claimant's conduct constituted such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970, 972 (Colo. App. 2006). The deviation must be "substantial" to remove the claimant from the course and scope of employment. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516 (Colo. App. 2009). Here, Claimant was performing work activity immediate before swatting the fly, and presumably intended to return to working immediately afterward. Although the duration of a putative personal deviation is not dispositive, it is a legitimate factor to consider when evaluating whether the deviation was substantial. More importantly, even though Claimant undoubtedly hoped to obtain a personal benefit of removing an annoyance, he was also attempting to facilitate his ability to concentrate on work tasks. This combination of personal and work-related motivations is inconsistent with a finding of a "purely personal" deviation.

Finally, a finding of compensability is consistent with the "but for" test for injuries arising from "neutral risks" set forth in *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). *City of Brighton* recognized three categories of employment risks causing injury to employees: (1) employment risks; (2) personal risks; and (3) neutral risks, which are neither employment related nor personal. An irritating insect is not an inherently employment-related risk, like a gas explosion or malfunctioning piece of machinery. Nor is it an entirely personal risk, such as an epileptic seizure or an assault in retaliation for an adulterous affair. It is more akin to neutral risks such as stray bullets, car thieves, and lightning strikes. Under *City of Brighton,* an injury caused by a neutral risk arises out of employment "if it would not have occurred but for the fact that the conditions and obligations of the employment placed [the] claimant in the position where he or she was injured." *Id*. at 504-05. In this case, Claimant's injury would not have occurred "but for" the fact that his employment placed him in the position to be bothered by the fly.

ORDER

It is therefore ordered that:

1. Claimant's claim for an injury to his left arm and shoulder on September 15, 2022 is compensable.

2. Claimant's average weekly wage is $1,273.15.

3. Respondent shall cover an evaluation with Dr. David Weinstein.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

WORKERS' COMPENSATION NO. 5-210-496-002

ISSUES

- Did Claimant prove he suffered a compensable injury to his right shoulder on March 10, 2022 arising out of and in the course of his employment?

- Did Claimant prove Respondent is liable for an evaluation by Dr. Timothy Sandell on December 1, 2022?

- Did Respondent prove Claimant's indemnity benefits should be reduced 50% for willful violation of a safety rule?[1]

FINDINGS OF FACT

1. Claimant works for Employer as a Head Clerk. In March 2022, his regular shift was from 2:30 PM to 11:00 PM.

2. Claimant injured his right shoulder at work on March 10, 2022. He was at the registers and observed two youths he believed were shoplifting beer. Claimant left his position near the registers and walked "at a quick pace" toward the front door, with the intent to "engage" the youths before they exited the store. Upon reaching the door, Claimant's hamstring "blew," and he fell on his outstretched right arm. He suffered a severe rotator cuff tear.

3. Shoplifting is a significant problem at many of Employer's stores, including the store where Claimant worked. Employer has promulgated written rules entitled "STORE PERSONNEL SHOPLIFTING DETERRENCE POLICY." The document states, "Improperly handling a suspected shoplifting situation puts the safety of Associates, Customers and the suspected shoplifter at risk. . . . Customer Service / Customer Delight is the best method to deter shoplifting, and it is the only deterrence method you may use." (Emphasis in original). The Policy explicitly instructs employees "Do not pursue, follow, or chase a shoplifter inside the store or outside the store exit."

4. Despite these admonitions, Employer does not expect its employees to remain entirely passive in the face of shoplifting. Under the section captioned "WHAT YOU SHOULD ALWAYS DO," the Policy states, "Engaging with a suspected shoplifter while they are in the store may prevent the theft. In most cases, excellent Customer Service / Customer Delight at the door can deter a push-out or walk-out. Always engage with Customer Service / Customer Delight first."

[1] No indemnity benefits were requested at the March 7, 2023 hearing because Claimant withdrew the endorsed issues of TTD and TPD. Nevertheless, the parties agreed Respondent's safety rule defense was ripe for determination and elected to try the issue.

5. Claimant interpreted Employer's policy of "engagement" to mean he should "try to talk to" or "have a conversation with" suspected shoplifters to deter theft. There is no persuasive evidence Claimant received training or instruction about "engagement" that differs from his understanding.

6. Claimant's medical records contain notations that he was "running after" and "chasing" the youths when the injury occurred. Claimant credibly disputed the characterization that he was chasing or running after the youths; he was walking toward the door at "a quick pace" because he "was trying to get to the door before they did." The medical providers probably incorrectly paraphrased Claimant's statements.

7. Claimant did not immediately ask Employer to provide medical treatment because, "I didn't think it was going to be a serious thing." He went to his PCP and was sent to physical therapy. Claimant participated in PT for eight weeks, without significant improvement.

8. An MRI of the right shoulder was done on May 17, 2022. It showed supraspinatus, infraspinatus, and subscapularis tendon tears, a torn biceps tendon, and a greater tuberosity osteochondral injury related to the acute rotator cuff tears.

9. After learning the extent of his injury, Claimant initiated a workers' compensation claim with Employer. [Redacted, hereinafter JM], the District Asset Protection Manager, interviewed Claimant about the incident in May 2022. During the interview, Claimant initially stated that he was "hurrying after" the shoplifters, but on further questioning, he clarified he was "not chasing" them.

10. Employer's Shoplifting Deterrence Policy states that "associates who violate this policy will be subject to disciplinary action up to and including termination." Employer has previously disciplined other employees for violating the policy.

11. Claimant was not disciplined for the March 10, 2022 incident. When asked at hearing whether JM[Redacted] believed Claimant's description of the incident constituted a violation of Employer's policy, she replied, "possibly."

12. Employer referred Claimant to Concentra. He was diagnosed a rotator cuff tear and referred to Dr. Michael Simpson for a surgical evaluation.

13. Dr. Simpson evaluated Claimant on July 19, 2022, and opined Claimant "undoubtedly" required surgery. Dr. Simpson submitted a preauthorization request for an arthroscopic subacromial decompression, rotator cuff repair, biceps tenodesis, and possible in-space balloon acromioplasty if the supraspinatus turns out to be "non-reconstructable."

14. Respondent filed a Notice of Contest on July 19, 2022 denying the claim as "not work-related." Respondent also denied the surgery preauthorization request.

15. Dr. Allison Fall performed an IME for Respondent on November 10, 2022. Dr. Fall agreed the surgery requested by Dr. Simpson is reasonably necessary and causally related to March 10, 2022 work accident.

16. Claimant saw Dr. Timothy Sandell, a physiatrist, on December 1, 2022. Dr. Sandell reviewed Dr. Simpson's report and agreed Claimant remained a surgical candidate. However, he referred Claimant to a different surgeon, Dr. Ross Schumer.

17. Dr. Sandell stated Claimant was "referred to my office to assume care moving forward," but his records do not identify the referral source.

18. No medical record or other document in evidence shows a referral to Dr. Sandell by any authorized provider. No testimony was presented on this issue, and the parties did not stipulate that Dr. Sandell is authorized.

19. Claimant's testimony regarding the accident, his understanding of Employer's shoplifting policies, and the motivation for his actions is credible.

20. Claimant proved his injury arose out of his employment and he remained within the sphere of employment when the injury occurred.

21. Respondent failed to prove Claimant willfully violated a safety rule.

22. Claimant failed to prove Dr. Sandell is an authorized provider.

CONCLUSIONS OF LAW

A. Compensability

To establish a compensable claim, a claimant must prove they suffered an injury while "performing service arising out of and in the course of his employment." Section 8-41-301(1)(b). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). There is no presumption that an injury occurring at work during work hours necessarily arises out of employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). The claimant must prove a causal nexus between the injury and their employment by a preponderance of the evidence. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

Ordinarily, it would seem rather obvious that injuries suffered by a grocery store manager while attempting to speak with a shoplifter arose out of and occurred within the course of the employment. But Respondent argues Claimant violated specific directives relating to shoplifters and was therefore acting outside the "sphere of his employment" when the injury occurred.

If an employer issues a directive that limits the "sphere" of a claimant's employment, any injury sustained while violating such directive is not compensable. *E.g., Bill Lawley Ford v. Miller,* 672 P.2d 1031 (Colo. App. 1983). To remove conduct from the sphere of employment, the directive must be clear, specific, and evidence an intent to cause a cessation of employment. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). Relevant factors in the analysis include the employer's reason for imposing the directive, the circumstances under which it was given, when it was given, what the employer intended to prohibit, and how the claimant interpreted the order. *Nielsen v. PXC Denver, LLC*, W.C. No. 4-241-772 (March 5, 1996).

As found, Claimant proved he remained within the "sphere of his employment" at the time of his injury. Employer's Policy regarding shoplifters does not evidence a clear intent to cause a cessation of employment. The directives are intended to regulate Claimant's conduct while performing his job instead of limiting the scope of his employment. Contrary to the situation in *Bill Lawley Ford, supra,* Employer's Policy does not instruct employees to do nothing in response to shoplifting. Rather, Employer requires employees to take some action and attempts to limit "how" they do it. In other words, the Policy "regulate[s] the employee's conduct while he is engaged in such employment," as opposed to defining the sphere of the employment itself. *Ramsdell v. Horn, supra*, at 152. Claimant was attempting in good faith to comply with the instruction to "engage" the shoplifters before they left the store. Therefore, the injury arose out of and occurred within the course of his employment.

B. Safety rule penalty

Section 8-42-112(1)(b) provides that indemnity benefits shall be reduced 50% where the injury results from the claimant's "willful" failure to obey any reasonable rule adopted by the employer for the safety of the employee. The claimant's conduct is "willful" if he intentionally does the forbidden act, and it is not necessary for the respondents to prove that the claimant had the rule "in mind" and determined to break it. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968); *see also Sayers v. American Janitorial Service, Inc*., 162 Colo. 292, 425 P.2d 693 (Colo. 1967) (willful misconduct may be established by showing a conscious indifference to the perpetration of a wrong, or a reckless disregard of the employee's duty to the employer). Willfulness may be inferred from circumstantial evidence including the frequency of warnings, the obviousness of the danger, and the extent to which it may be said the claimant's actions were the result of deliberate conduct rather than carelessness or casual negligence. *Bennett Properties Co. v. Industrial Commission, supra; Industrial Commission v. Golden Cycle Corp*., 246 P.2d 902 (Colo. 1952). Violation of a safety rule is not willful if the employee had a "plausible purpose to explain his violation of a rule." *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1995). Generally, violating a rule to facilitate accomplishment of a job-related task is not willful. However, violation of a rule simply to make the job easier or quicker is not considered a "plausible purpose." *Grose v. Riviera Electric*, W.C. No. 40418-465 (August 25, 2000). A safety rule penalty is an affirmative defense, and it is the respondents' burden to prove every element justifying a reduction in compensation for willful failure to obey a reasonable safety rule. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

As found, Respondent failed to prove Claimant willfully violated a safety rule. Claimant performed no action prohibited by the Shoplifting Deterrence Policy. He was not pursuing or chasing the shoplifters but rather was attempting to engage with them at the front door. Claimant's testimony regarding his understanding of the Policy and his motivation for moving quickly to meet the shoplifters at the door is credible.

Employer's Policy requires relatively nuanced distinctions if an employee suspects or knows a customer is stealing merchandise. On the one hand, the employee must not "pursue, follow, or chase a suspected shoplifter." But they are encouraged—and arguably required—to "engage" with shoplifters "while they are in the store" or "at the door," which is precisely what Claimant believed he was doing when the injury occurred. Claimant understood "engagement" to mean conversing with the shoplifter or asking if they required assistance. There is no persuasive evidence Claimant was trained in methods of engagement that differ from his understanding. The absence of any detailed description of the ways to "engage" shoplifters creates a zone of discretion for the employee to decide how best to handle any given situation. The lack of clarity is confirmed by JM's[Redacted] admission that the circumstances described at hearing were only a "possible" violation of Employer's rules. And the fact that Claimant was not disciplined in connection with the incident suggests even Employer was not convinced Claimant violated a rule.

Even if Claimant were deemed to have violated a safety rule based on his position relative to the shoplifters, the violation was not "willful." Instead, Claimant had a "plausible purpose" to engage the shoplifters before they left the store.

C. Dr. Sandell's December 1, 2022 bill

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

Besides proving treatment is reasonably necessary, the claimant must prove the provider is "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). The respondents are only liable for treatment rendered by authorized treating providers. Absent an emergency, the ALJ cannot award medical treatment recommended or provided by unauthorized providers, even if the treatment was otherwise reasonably needed or causally related. *E.g., Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (May 15, 2018); *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995).

Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the "normal progression of authorized treatment." *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

As found, Claimant failed to prove Dr. Sandell is an authorized provider. There is no persuasive evidence that Concentra or Dr. Simpson referred Claimant to Dr. Sandell. Dr. Sandell stated Claimant was "referred to my office to assume care," but did not identify the referral source. There is no medical record or other document in evidence reflecting a referral to Dr. Sandell by an authorized provider. No testimony was presented on this issue, and the parties did not stipulate that Dr. Sandell is authorized.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right shoulder injury is compensable.

2. Respondent shall cover medical treatment from authorized providers reasonably needed to cure and relive the effects of Claimant's compensable injury.

3. Claimant's request for payment of Dr. Sandell's December 1, 2022 bill is denied and dismissed.

4. Respondent's request for a 50% reduction of indemnity benefits for a safety rule violation is denied and dismissed.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. DATED: April 28, 2023

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-215-456-001

STIPULATIONS

The parties agreed to the following:

1. Claimant's designated Authorized Treating Physician (ATP) is Nicholas K. Olsen, D.O.;

2. Claimant's Average Weekly Wage (AWW) is $883.87;

3. Claimant received wages between September 2, 2022 and October 5, 2022 at the rate of $800.00 per week or $113.97 per day;

4. Claimant is owed Temporary Partial Disability (TPD) benefits between September 2, 2022 and October 5, 2022 at the rate of $55.91 per week, or $7.99 per day. The amount is based upon the difference between the admitted AWW of $883.87 and the paid weekly wage of $800.00 x 2/3;

5. Claimant is owed Temporary Total Disability (TTD) benefits from October 6, 2022 through November 30, 2022, and then beginning again on December 8, 2022 and continuing until terminated by statute.

ISSUE

Whether Claimant is entitled to receive TTD or TPD benefits, and if so at what rate, for the week of December 1, 2022 through December 7, 2022. Respondents assert that the $500 bonus Claimant received on December 1, 2022 should be considered in the calculation of TPD. In contrast, Claimant contends that the $500 bonus does not constitute "wages" and thus should not be considered in the calculation of PPD. Instead, he should receive TTD benefits for the December 1-7, 2022 pay period.

FINDINGS OF FACT

1. Claimant is a 74-year-old male who has been working for Employer since 1974. On September 2, 2022, while working as a Field Supervisor, Claimant sustained injuries to his right leg, bilateral elbows and left arm. Claimant specifically tripped on a lead wire in Employer's steel factory and fell.

2. Claimant has not returned to work for Employer since his industrial injuries. He remains significantly disabled and ambulates with the use of a wheelchair. Claimant's treating providers have continually assigned work restrictions since the date of his injuries.

3. Employer's wage records at Respondents' Exhibit G-83 reflect that during the period December 1-7, 2022 Claimant received a Bonus-O in the amount of $500.00. Wage records do not reveal why this bonus was paid. There was also no evidence presented at the hearing regarding the origin of the bonus. Claimant did not receive any other wages or temporary disability benefits from Employer for the period December 1, 2022 through December 7, 2022.

4. Employer's wage records at Respondents' Exhibit G-83 also show that Claimant received a series of other bonuses in the total amount of $1813 as reflected in the following:

- Bonus-O - $900
- Bonus-S - $493
- Birthday Bonus - $100
- COVID Bonus - $160
- COVID Bonus - $160

The wage records show that the preceding bonuses were paid at various times throughout the year 2022.

5. Claimant's December 1-7 bonus does not constitute "wages." Initially, there was no evidence presented with regard to the basis for Bonus-O in the amount of $500.00. Notably, because Claimant had not been working for three months at the time the bonus was received, it is unlikely that it was given for work performed or because Claimant had satisfied some condition of employment. The record is unclear regarding the basis for the bonus, and it may have been purely gratuitous in nature. Because it has already been determined and paid, Claimant has no further access to the bonus and no expectation of earning any additional bonuses. Accordingly, Claimant had no "reasonable access on a day-to-day basis, actually or potentially, to the benefit, or an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances." The December 1-7, 2022 Bonus-O in the amount of $500.00 is thus a fringe benefit not enumerated in §8-40-201(19) and thus does not constitute "wages."

6. The parties have stipulated to Claimant's AWW in the amount of $883.87. The parties presumably considered the total income Claimant received from Employer. In addition to wages, Claimant received Bonus-O during the week of December 1-7, 2022 as well as $1813 in additional bonuses during the year 2022. Therefore, Claimant's AWW is not at issue. Instead, after determining that the December 1-7, 2022 bonus in the amount of $500 does not constitute "wages," the central inquiry is whether Claimant is entitled to receive TPD or TTD benefits for the period.

7. Although Respondents seek to reduce Claimant's stipulated AWW with his December 1-7, 2022 Bonus-O in the amount of $500, Claimant's bonus constituted a fringe benefit and not wages. Specifically, Respondents' stipulated AWW of $883.87- Bonus-O of $500 = $383.87. Multiplying $383.87 x 2/3 = $255.91**.** Respondents contend that $255.91 is Claimant's TPD benefit for the week of December 1-7, 2022. However,

because Claimant's December 1-7, 2022 bonus does not constitute "wages" he did not suffer a partial wage loss during the period. Instead, because Claimant earned no wages or suffered a complete wage loss during the period, he is entitled to receive TTD benefits for the period December 1-7, 2022.

8. Claimant has demonstrated that it is more probably true than not that he is entitled to receive TTD benefits for the period December 1-7, 2022. Initially, the parties agreed that Claimant is owed TTD benefits from October 6, 2022 through November 30, 2022, and then beginning again on December 8, 2022 and continuing until terminated by statute. The record reveals that Claimant's industrial injuries during the period December 1-7, 2022 caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Notably, during the December 1-7, 2022 period, Claimant did not work for Employer or earn any other wages. Moreover, TTD benefits may only be terminated pursuant to one of the specific instances enumerated in §8-42-105(3), C.R.S. None of the instances have occurred in the present case. Claimant has not reached MMI or returned to regular employment. Furthermore, he has not received a written release to return to regular employment or received a written offer to return to work in a modified capacity but declined. Instead, Claimant remains completely off work and has not been receiving wages since Employer terminated wage continuation on October 6, 2022. Respondents thus owe Claimant TTD benefits for the period December 1-7, 2022.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Whether the December 1-7, 2022 Bonus Constituted Wages

4. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. Indus. Claim Appeals Off.,* 18 P.3d 867, 869 (Colo. App. 2001). The preceding method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." *Benchmark/Elite, Inc. v. Simpson* 232 P.3d 777, 780 (Colo. 2010). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Id*.

5. Under §8-40-201(19)(a), C.R.S., the term "wage" is defined as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury…" When the Workers' Compensation Act was enacted in 1919, "wages" included "the reasonable value of board, rent, housing, lodging or any other similar advantage received from the employer." Colo. Sess. Laws 1919, ch. 210, 47 at 716; *see Ganser v. Mountain Energy, Inc.* WC 5-128-084-002 (ICAO, June 4, 2021). In 1989 the General Assembly narrowed the definition of "wages." It still included board, rent, housing and lodging, specifically added gratuities and certain costs of continuing or converting health insurance, but for the first time excluded "any similar advantage or fringe benefit not specifically enumerated." Colo. Sess. Laws 1989, ch. 67, 8-47-101(2) at 411; *Ganser v. Mountain Energy, Inc.* WC 5-128-084-002 (ICAO, June 4, 2021). The preceding provision remains essentially unchanged. *See* §8-40-201(19)(b), C.R.S.

6. In *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996), the court of appeals reviewed the addition to the AWW of the claimant's accrual of paid time off. Specifically, the employer credited the claimant with 9.5 hours of paid leave for each pay period. The court of appeals applied the terms of §8-40-201(19)(a) and (b). Section 8-40-201(19)(a) defined 'wages' "to mean the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied." Subparagraph (b), however, limited the definition to exclude "any similar advantage or fringe benefit not specifically enumerated in this subsection (19)." To determine if the claimant's accrued time off constituted an included "wage" or an excluded "fringe benefit," the decision applied criteria inquiring "whether a reasonable, present-day, cash equivalent value can be placed upon it and whether the employee has reasonable access on a day-to-day basis, either actually or potentially, to the benefit, or an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances." *Meeker,* 929 P.2d at 28.

7. The *Meeker* court determined the claimant's accrued time off qualified as "wages" to be included in the AWW. The hours credited to the claimant had an easily discernable, immediate cash value derived by multiplying each hour accrued by the claimant's hourly rate of pay. Moreover, once earned, the time off was never forfeited and the claimant had reasonable access to the benefit. Notably, the claimant's weekly wage rate was increased by the hourly value of the number of time-off hours earned each week. *See Burd v. Builder Services Group, Inc.*, WC 5-058-572-001 (ICAO, July 9, 2019). Conversely, in *City of Lamar v. Koehn*, 968 P.2d 164 (Colo. App. 1998), the court of appeals affirmed the application of the *Meeker* test and concluded that vacation and sick leave earned by the claimant did not constitute "cash equivalents" for purposes of §8-40-201(19)(a) because the benefits were subject to forfeiture if the claimant accrued a specified maximum number of leave days.

8. In *Orrell v. Coors Porcelain*, WC 4-251-934 (ICAO, May 22, 1997) and *Yex v. ABC Supply Co*., WC 4-910-373-01 (ICAO, May 16, 2014), the Panel considered the addition of bonuses paid from employers' profit sharing plans to a wage calculation. In both cases the prior receipt of the bonuses was excluded as fringe benefits rather than included as wages. Applying the *Meeker* test, the bonus was deemed contingent and without a present day cash equivalent value. Importantly, the size of the bonus could only be established at the conclusion of the year or quarter. The claimant also had no access to the bonus on a day-to-day basis and had no immediate expectation of receiving the bonus.

9. As found, Claimant's December 1-7 bonus suffers from similar defects to the plans in *Orwell* and *Yex* and thus does not constitute "wages." Initially, there was no evidence presented with regard to the basis for Bonus-O in the amount of $500.00. Notably, because Claimant had not been working for three months at the time the bonus was received, it is unlikely that it was given for work performed or because Claimant had satisfied some condition of employment. The record is unclear regarding the basis for the bonus, and it may have been purely gratuitous in nature. Because it has already been determined and paid, Claimant has no further access to the bonus and no expectation of earning any additional bonuses. Accordingly, Claimant had no "reasonable access on a day-to-day basis, actually or potentially, to the benefit, or an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances." The December 1-7, 2022 Bonus-O in the amount of $500.00 is thus a fringe benefit not enumerated in §8-40-201(19) and thus does not constitute "wages."

10. As found, the parties have stipulated to Claimant's AWW in the amount of $883.87. The parties presumably considered the total income Claimant received from Employer. In addition to wages, Claimant received Bonus-O during the week of December 1-7, 2022 as well as $1813 in additional bonuses during the year 2022. Therefore, Claimant's AWW is not at issue. Instead, after determining that the December 1-7, 2022 bonus in the amount of $500 does not constitute "wages," the central inquiry is whether Claimant is entitled to receive TPD or TTD benefits for the period.

TPD or TTD Benefits

11. Section 8-42-106(1), C.R.S. provides for an award of TPD benefits based on the difference between a claimant's AWW at the time of injury and earnings during the continuance of the disability. Specifically, an employee shall receive 66.66% of the difference between his wages at the time of his injury and during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (TPD benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). Section 8-42-106(2), C.R.S. provides that TPD benefits shall continue until either of the following occurs: "(a) The employee reaches maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

12. To prove entitlement to TTD benefits a claimant must demonstrate that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Off.*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

13. As found, although Respondents seek to reduce Claimant's stipulated AWW with his December 1-7, 2022 Bonus-O in the amount of $500, Claimant's bonus constituted a fringe benefit and not wages. Specifically, Respondents' stipulated AWW of

$883.87- Bonus-O of $500 = $383.87. Multiplying $383.87 x 2/3 = $255.91**.** Respondents contend that $255.91 is Claimant's TPD benefit for the week of December 1-7, 2022. However, because Claimant's December 1-7, 2022 bonus does not constitute "wages" he did not suffer a partial wage loss during the period. Instead, because Claimant earned no wages or suffered a complete wagste loss during the period, he is entitled to receive TTD benefits for the period December 1-7, 2022.

14. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive TTD benefits for the period December 1-7, 2022. Initially, the parties agreed that Claimant is owed TTD benefits from October 6, 2022 through November 30, 2022, and then beginning again on December 8, 2022 and continuing until terminated by statute. The record reveals that Claimant's industrial injuries during the period December 1-7, 2022 caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. Notably, during the December 1-7, 2022 period, Claimant did not work for Employer or earn any other wages. Moreover, TTD benefits may only be terminated pursuant to one of the specific instances enumerated in §8-42-105(3), C.R.S. None of the instances have occurred in the present case. Claimant has not reached MMI or returned to regular employment. Furthermore, he has not received a written release to return to regular employment or received a written offer to return to work in a modified capacity but declined. Instead, Claimant remains completely off work and has not been receiving wages since Employer terminated wage continuation on October 6, 2022. Respondents thus owe Claimant TTD benefits for the period December 1-7, 2022.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's designated ATP is Dr. Olsen.

2. Claimant's AWW is $883.87.

3. Claimant received wages between September 2, 2022 and October 5, 2022 at the rate of $800.00 per week or $113.97 per day.

4. Claimant is owed TPD benefits between September 2, 2022 and October 5, 2022 at the rate of $55.91 per week or $7.99 per day. The amount is based upon the difference between the admitted AWW of $883.87, and the paid weekly wage of $800.00 x 2/3.

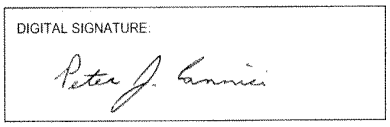
5. Claimant is owed TTD benefits from October 6, 2022 through November 30, 2022, and then beginning again on December 8, 2022 and continuing until terminated by statute.

6. Because Claimant's December 1-7, 2022 $500 bonus did not constitute "wages," he shall receive TTD benefits for the pay period December 1-7, 2022.

7. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: March 3, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-176-394-002

ISSUE

Whether Claimant has proven by a preponderance of the evidence that his 9% scheduled right upper extremity impairment rating should be converted to a 5% whole person rating.

FINDINGS OF FACT

1. Claimant was born on December 24, 1974 and has worked as a firefighter for Employer since September 27, 2010. During a team building exercise on June 6, 2021, Claimant was injured when he felt a pop in his right shoulder and numbness that traveled down his right arm to his hand. He selected Annu Ramaswamy, M.D. as his Authorized Treating Physician (ATP).

2. Dr. Ramaswamy began treating Claimant on June 6, 2021. He subsequently referred Claimant to In Sok Yi, M.D. for possible right elbow surgery and Thomas John Noonan, M.D. for consideration of right shoulder surgery.

3. On August 26, 2021 Claimant underwent right elbow surgery with Dr. Yi. On November 8, 2021 Claimant underwent right shoulder surgery with Dr. Noonan. The surgery included the following: (1) a right shoulder arthroscopy; (2) arthroscopic rotator cuff repair; (3) arthroscopic subacromial decompression; (4) arthroscopic distal clavicle resection; (5) arthroscopic bicep release; (6) arthroscopic debridement/tear; (7) arthroscopic debridement anterior labral tear and; (8) arthroscopic debridement partial tearing subscapularis.

4. On June 16, 2022 Dr. Ramaswamy determined that Claimant had reached Maximum Medical Improvement (MMI). On examination of the right shoulder, Dr. Ramaswamy found mild tenderness in the biceps tendon region anteriorly, no crepitus in the joint, minimal trigger point activity in the posterior shoulder girdle and negative impingement with provocative maneuvers. He determined that Claimant could continue full duty work and thus did not impose any work restrictions. Dr. Ramaswamy assigned a 7% upper extremity impairment for right elbow range of motion loss, a 3% upper extremity impairment based on sensory ulnar neuropathy, and a 3% upper extremity rating for the right shoulder. Combining the ratings yields a 13% right upper extremity impairment. On July 8, 2022 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Ramaswamy's MMI and impairment determinations.

5. Claimant challenged the impairment rating and requested a Division Independent Medical Examination (DIME). On September 26, 2022 Claimant underwent a DIME with Paul Ogden, M.D. Dr. Ogden agreed that Claimant had reached MMI on June 16, 2021. On examination, Dr. Ogden found no tenderness of the trapezius, scapular, and periscapular areas, no tenderness over the supraspinatus muscle, and no

tenderness over the acromioclavicular joint. There were also no findings of glenohumeral instability. Regarding Claimant's clinical diagnosis, Dr. Ogden determined Claimant had suffered a right rotator cuff labral injury to his right shoulder, arthritis of his right acromial clavicular joint, bicep tendonitis, impingement of the right shoulder and right ulnar nerve entrapment.

6. Dr. Ogden documented that Claimant experiences sharp pains in his right trapezius area that respond to stretching and physical therapy. There is also a binding sensation in the right shoulder area with shoulder abduction in rotation. Claimant further has difficulties washing his back because of limited range of motion in his right shoulder and elbow. Dr. Ogden assigned a total 17% right upper extremity impairment rating for Claimant's June 6, 2021 industrial injuries. Specifically, for the right shoulder area Dr. Ogden assigned a 7% right upper extremity rating due to range of motion loss and an additional 2% upper extremity impairment for Claimant's distal clavicle excision. The ratings for the right shoulder area combined to yield a 9% upper extremity impairment.

7. Claimant testified at the hearing in this matter. He remarked that he returned to full duty work for Employer on June 7, 2022. Claimant explained that he experiences right shoulder weakness that limits his ability to use his right arm. Specifically, the impairment of Claimant's right shoulder inhibits his ability to perform various functions of his job. He notably suffers functional limitations that require use of his left or non-dominant extremity to throw ladders and open doors. Claimant also wears a hose pack containing 100 feet of fire hose over his left shoulder because of diminished strength in his right shoulder area. Claimant commented that he continues to experience referred pain and limitations at the primary situs of his initial right shoulder injury.

8. Ronald Swarsen, M.D. testified at the hearing in this matter. He maintained that, because Claimant suffered an injury to his right shoulder and not arm, his impairment requires conversion to a whole person rating. Dr. Swarsen stated that the shoulder is not a part of the arm, but rather the scaffolding on which the arm is attached. He remarked that the shoulder has its own range of motion separate from the arm itself.

9. Dr. Swarsen marked Claimant's Demonstrative Exhibits 6-7 to identify the areas of right shoulder anatomy that were surgically addressed by Dr. Noonan. He relied on Exhibits 6 through 10 for his opinion and noted that they were from the first volume of the *Netters* compendium. Dr. Swarsen used the color orange to reflect where the arthroscopic rotator cuff debridement and the arthroscopic labral debridement occurred. He relied on Exhibit 8 to show the arthroscopic subacromial decompression at the glenohumeral joint to identify the open subpectoral long head biceps tenodesis and delineate the plane of the glenohumeral joint. He used Exhibit 6 to show the distal clavicle excision.

10. Dr. Swarsen commented that all of the preceding procedures, with the exception of the subpectoral long head biceps tenodesis, occurred above the plane of the glenohumeral joint. He testified that the scheduled impairment rating issued by Dr. Ogden should be converted into a whole person impairment. Dr. Swarsen detailed that Claimant suffered a functional impairment above the glenohumeral joint in his right shoulder. He

determined it was reasonable to convert the scheduled shoulder rating to a whole person impairment because Claimant's right upper extremity deficiency was due to weakness of the shoulder girdle musculature. The weakness flowed from the shoulder into the arm. Dr. Swarsen thus summarized that the 9% upper extremity impairment rating for Claimant's right shoulder should be converted to a 5% whole person rating.

11. Dr. Ramaswamy also testified at the hearing in this matter. He was Claimant's primary ATP from June 7, 2021 through June 16, 2022 and saw Claimant approximately 12-15 times. Dr. Ramaswamy placed Claimant at MMI and assigned a 3% upper extremity impairment for Claimant's right shoulder. After hearing all of the areas described by Claimant regarding functional limitations, Dr. Ramaswamy remarked that they all were limited to the right arm. Consequently, Dr. Ramaswamy determined the situs of functional impairment did not extend beyond the arm and, therefore, the best measurement of Claimant's permanent partial disability was on the schedule. Accordingly, conversion of Claimant's right upper extremity rating was not warranted.

12. Claimant has proven that it is more probably true than not that his right upper extremity rating should be converted to a whole person impairment. Initially, on June 6, 2021 Claimant suffered admitted industrial injuries to his right upper extremity during the course and scope of his employment with Employer. Claimant subsequently underwent right shoulder surgery including the following: (1) a right shoulder arthroscopy; (2) arthroscopic rotator cuff repair; (3) arthroscopic subacromial decompression; (4) arthroscopic distal clavicle resection; (5) arthroscopic bicep release; (6) arthroscopic debridement/tear; (7) arthroscopic debridement anterior labral tear; and, (8) arthroscopic debridement partial tearing subscapularis. On June 16, 2022 Claimant reached MMI. Subsequently, DIME Dr. Ogden assigned a 7% right upper extremity rating due to range of motion loss and a 2% upper extremity impairment for Claimant's distal clavicle excision for the right shoulder area. The ratings combined to yield a 9% upper extremity impairment.

13. Medical records reflect that Claimant's course of medical treatment, aside from his elbow, has involved his right shoulder area and not his arm. Claimant credibly explained that he experiences right shoulder weakness that limits his ability to use his right arm. He testified that, although he was released to full duty employment, his right shoulder limitations inhibit his ability to perform various functions of his job. Claimant notably suffers functional limitations that require use of his left or non-dominant extremity to throw ladders and open doors. He also wears a hose pack containing 100 feet of fire hose over his left shoulder because of diminished strength in his right shoulder area. Furthermore, during his DIME Dr. Ogden documented that Claimant experiences sharp pains in his right trapezius area that respond to stretching and physical therapy. There is also a binding sensation in the right shoulder area with shoulder abduction in rotation. Finally, Claimant has difficulties washing his back because of limited range of motion in his right shoulder and elbow.

14. Dr. Swarsen persuasively explained that Claimant suffered a functional impairment above the glenohumeral joint. The scheduled rating issued by Dr. Ogden should thus be converted into a whole person impairment. Dr. Swarsen emphasized that

the shoulder is not a part of the arm, but rather the scaffolding on which the arm is attached. He commented that all of Claimant's surgical procedures on November 8, 2021 with Dr. Noonan, with the exception of the subpectoral long head biceps tenodesis, occurred above the plane of the glenohumeral joint. He detailed that Claimant suffered a functional impairment above the glenohumeral joint in his right shoulder. Dr. Swarsen determined it was reasonable to convert the scheduled shoulder rating to a whole person impairment because Claimant's right upper extremity deficiency was due to weakness of the shoulder girdle musculature. The weakness flowed from the shoulder into the arm.

15. In contrast, Claimant's ATP Dr. Ramaswamy maintained that Claimant warranted a scheduled right upper extremity impairment for his June 6, 2021 industrial injuries. After hearing all of the areas described by Claimant regarding functional limitations, Dr. Ramaswamy remarked that they only involved the right arm. Consequently, Dr. Ramaswamy determined the situs of functional impairment did not extend beyond the arm. The best measurement of Claimant's permanent partial disability was thus on the schedule. However, Dr. Ramaswamy failed to address Dr. Swarsen's comments that Claimant's right shoulder surgery primarily occurred above the plane of the glenohumeral joint. Claimant's range of motion loss is thus attributable to physiological structures beyond the arm at the shoulder. Specifically, it is necessary that muscles, tendons, and ligaments in the shoulder and torso activate in order to move the arm. Accordingly, based on the medical records, Claimant's credible testimony and the persuasive opinion of Dr. Swarsen, Claimant suffered functional impairment proximal to the glenohumeral joint in his right shoulder as a result of his June 8, 2021 admitted industrial injuries. Therefore, the 9% scheduled right upper extremity impairment rating issued by Dr. Ogden should be converted into a 5% whole person rating.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998). When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

5. Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S. or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S. is determined on a case-by-case basis. *See DeLaney v. Indus. Claim Appeals Off.*, 30 P.3d 691, 693 (Colo. App. 2000).

6. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO, Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson–Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

7. Under the functional impairment test, neither the situs of the injury nor the anatomical distinctions found in the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)* (*AMA Guides*) controls the issue. *Garcia v. Terumbo BCT*, W.C. No. 5-094-514 (ICAO, July 30, 2021). Rather, the ALJ must consider all relevant evidence and determine the parts of the body that have been functionally impaired. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996). Even if the claimant proves tissue damage and pain in structures beyond the schedule, the ALJ may still find a scheduled injury. *Strauch,* 917 P.2d at 367-68. Depending on the particular facts of a claim, damage to the structures of the "shoulders" may or may not reflect a "functional impairment" that is enumerated on the

schedule of disabilities. *Walker v. Jim Fouco Motor Co.,* 942 P. 2d 1390 (Colo. App. 1997)*; see Henke v. United Airlines,* W.C. Nos. 4-456-163, 4-490-897 (ICAO, Sept. 10, 2003). In the case of a shoulder injury, the question is whether the injury has affected physiological structures beyond the arm at the shoulder. *Newton v. Broadcom, Inc.*, W.C. No. 5-095-589-002 (ICAO, July 8, 2021).

8. The portion of the *AMA Guides* pertaining to the upper extremities is not a model of clarity. *Id.* The *AMA Guides* do not rate impairments of the shoulder but only of the upper extremity. However, the applicable statutory schedule of impairments reads, *"*loss of an arm at the shoulder.*"* §8-42-107(2), C.R.S. The arm, without other bodily tissue, is unable to move. Thus, without other bodily tissue, the arm lacks range of motion and has no functional ability. For range of motion to exist in the arm, it is necessary that muscles, tendons, and ligaments in the shoulder and torso activate. *Id.*

9. When a claimant seeks to challenge a scheduled impairment rating, the claimant must show by a preponderance of the evidence that the scheduled rating is incorrect. *See* W.C.R.P. 5-5(E)(1)(c)(i); *see also Egan v. Indus. Claim Appeals Off.*, 971 P.2d 664 (Colo. App. 1998) (DIME procedures of §8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments); *Gebregeorgis v. ISS Facility Services*, WC 5-135-393-003 (ICAO, Feb. 27, 2023).

10. As found, Claimant has proven by a preponderance of the evidence that his right upper extremity rating should be converted to a whole person impairment. Initially, on June 6, 2021 Claimant suffered admitted industrial injuries to his right upper extremity during the course and scope of his employment with Employer. Claimant subsequently underwent right shoulder surgery including the following: (1) a right shoulder arthroscopy; (2) arthroscopic rotator cuff repair; (3) arthroscopic subacromial decompression; (4) arthroscopic distal clavicle resection; (5) arthroscopic bicep release; (6) arthroscopic debridement/tear; (7) arthroscopic debridement anterior labral tear; and, (8) arthroscopic debridement partial tearing subscapularis. On June 16, 2022 Claimant reached MMI. Subsequently, DIME Dr. Ogden assigned a 7% right upper extremity rating due to range of motion loss and a 2% upper extremity impairment for Claimant's distal clavicle excision for the right shoulder area. The ratings combined to yield a 9% upper extremity impairment.

11. As found, medical records reflect that Claimant's course of medical treatment, aside from his elbow, has involved his right shoulder area and not his arm. Claimant credibly explained that he experiences right shoulder weakness that limits his ability to use his right arm. He testified that, although he was released to full duty employment, his right shoulder limitations inhibit his ability to perform various functions of his job. Claimant notably suffers functional limitations that require use of his left or non-dominant extremity to throw ladders and open doors. He also wears a hose pack containing 100 feet of fire hose over his left shoulder because of diminished strength in his right shoulder area. Furthermore, during his DIME Dr. Ogden documented that Claimant experiences sharp pains in his right trapezius area that respond to stretching and physical therapy. There is also a binding sensation in the right shoulder area with

shoulder abduction in rotation. Finally, Claimant has difficulties washing his back because of limited range of motion in his right shoulder and elbow.

12. As found, Dr. Swarsen persuasively explained that Claimant suffered a functional impairment above the glenohumeral joint. The scheduled rating issued by Dr. Ogden should thus be converted into a whole person impairment. Dr. Swarsen emphasized that the shoulder is not a part of the arm, but rather the scaffolding on which the arm is attached. He commented that all of Claimant's surgical procedures on November 8, 2021 with Dr. Noonan, with the exception of the subpectoral long head biceps tenodesis, occurred above the plane of the glenohumeral joint. He detailed that Claimant suffered a functional impairment above the glenohumeral joint in his right shoulder. Dr. Swarsen determined it was reasonable to convert the scheduled shoulder rating to a whole person impairment because Claimant's right upper extremity deficiency was due to weakness of the shoulder girdle musculature. The weakness flowed from the shoulder into the arm.

13. As found, in contrast, Claimant's ATP Dr. Ramaswamy maintained that Claimant warranted a scheduled right upper extremity impairment for his June 6, 2021 industrial injuries. After hearing all of the areas described by Claimant regarding functional limitations, Dr. Ramaswamy remarked that they only involved the right arm. Consequently, Dr. Ramaswamy determined the situs of functional impairment did not extend beyond the arm. The best measurement of Claimant's permanent partial disability was thus on the schedule. However, Dr. Ramaswamy failed to address Dr. Swarsen's comments that Claimant's right shoulder surgery primarily occurred above the plane of the glenohumeral joint. Claimant's range of motion loss is thus attributable to physiological structures beyond the arm at the shoulder. Specifically, it is necessary that muscles, tendons, and ligaments in the shoulder and torso activate in order to move the arm. Accordingly, based on the medical records, Claimant's credible testimony and the persuasive opinion of Dr. Swarsen, Claimant suffered functional impairment proximal to the glenohumeral joint in his right shoulder as a result of his June 8, 2021 admitted industrial injuries. Therefore, the 9% scheduled right upper extremity impairment rating issued by Dr. Ogden should be converted into a 5% whole person rating. *See Newton v. Broadcom, Inc.*, W.C. No. 5-095-589-002 (ICAO, July 8, 2021) (affirming ALJ's conversion of extremity rating to whole person impairment for shoulder injury because, based on range of motion loss, the anatomical disruption or functional impairment of the claimant's extremity not only involved the arm or glenohumeral joint, but also the shoulder complex proximal to the torso from the glenohumeral joint).

ORDER

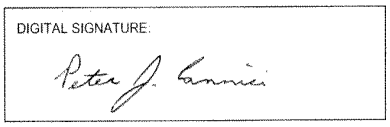
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's 9% right upper extremity rating shall be converted to a 5% whole person impairment. The payments to Claimant shall be calculated based on the formula in §8-42-107(8)(d), C.R.S.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: March 9, 2023.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-106-637-005

ISSUE

Whether Claimant has proven by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive Permanent Total Disability (PTD) benefits as a result of industrial injuries he sustained during the course and scope of his employment with Employer on December 26, 2018.

FINDINGS OF FACT

1. Claimant is a 39-year-old former diver/project manager for Employer. On December 26, 2018 Claimant was involved in a diving accident while at a depth of between 120 and 160 feet. Instead of being oxygenated with air, Claimant received 100% oxygen for approximately 15-20 minutes. He was rendered unconscious while underwater and suffered an oxygen toxicity condition.

2. Claimant was brought back to the surface and assessed on site, He was then evaluated at Parker Adventist Hospital. Kevin Merrell, M.D. noted Claimant exhibited minor tongue cuts from his seizure, slight memory loss and confusion, and petechiae. Dr. Merrell consulted with the medical director of the "DAN network who is a dive medicine specialist," The director of the DAN network determined that Claimant did not have the bends or a barotrauma. There were also no long-term symptoms from oxygen toxicity. Claimant declined Dr. Merrell's suggestion to remain hospitalized.

3. Claimant returned to work of the following day. However, he then took off for a week in early January, 2019 because of sinus difficulties.

4. Claimant was evaluated by Justin Moon, M.D. on January 16, 2019. He reported his memory, vertigo and headaches had improved since the incident. A brain MRI on January 25, 2019 showed an area of abnormality in the cerebellum. An EEG on February 15, 2019 revealed a possible seizure disorder. Dr. Moon recommended Claimant discontinue work as a diver due to his abnormal EEG.

5. On March 1, 2019 Claimant first visited Concentra Medical Centers for an evaluation. Claimant complained of daily headaches and a panic attack "which he had never had before," and "[h]e had no problems with panic attacks from his [military] service." Carrie J. Burns, M.D. assigned work restrictions of no diving, no ladders and no working in confined spaces.

6. On March 30, 2019 Claimant reported intensifying headaches after driving to Utah. On April 1, 2019 Dr. Burns noted Claimant relayed that, he was struggling with computer screens. She thus took him off work for one week and referred him to Kevin Reilly, M.D. for a neuropsychological evaluation.

7. Claimant returned to work for Employer in April, 2019. He traveled to Nevada to inspect the Hoover Dam for a prospective job. However, Claimant resigned in mid-April, 2019. He filed a Federal Maritime lawsuit in the US District Court for the State of Colorado on April 23, 2019.

8. Psychologist John Mark Disorbio, Ed. D. evaluated Claimant September 19, 2019. Dr. Disorbio did not document a history of prior mental health conditions. He assessed an adjustment disorder, anxiety disorder, a pain disorder with anxiety and depression, and PTSD.

9. On August 27, 2020 psychiatrist Gary Gutterman, M.D. evaluated Claimant. Claimant denied "psychiatric or psychological treatment prior to this injury." His recent and remote memory were intact with adequate attention/concentration, he was focused and organized with thoughts, and he displayed no cognitive, speech, or word finding problems. Dr. Gutterman assigned Claimant a 9% mental impairment on October 8, 2020.

10. John Aschberger, M.D. assigned Claimant a combined 28% impairment rating. The rating consisted of 15% for headaches, 10% for erectile dysfunction, and 5% for equilibrium. Ronald Wise, M.D. also assigned a 14% impairment for Claimant's vision.

11. On March 16, 2021 Dr. Burns placed claimant at Maximum Medical Improvement (MMI). She assigned permanent restrictions of no diving, no work in confined spaces, no ladders or working at heights, and no driving company vehicles.

12. Brian Mathwich, M.D. performed a Division Independent Medical Examination (DIME) of Claimant on January 25, 2022. He agreed that Claimant reached MMI on March 16, 2021. Dr. Mathwich assigned a combined 36% whole person physical and mental permanent impairment rating. He incorporated Dr. Wise's and Dr. Gutterman's impairments, and assigned a 19% nervous system rating inclusive of a 10% seizure rating and 10% rating for sexual function. Dr. Mathwich noted Claimant's abnormality on MRI was not work-related. He recommended restrictions of no diving, no work in confined spaces, no ladders or working at heights, and no driving company vehicles.

13. Respondents subsequently filed a Final Admission of Liability (FAL) acknowledging the 36% combined physical and mental impairment rating assigned by Dr. Mathwich. Claimant filed an application for hearing asserting that he was permanently and totally disabled.

14. On April 21, 2022 neurologist Eric Hammerberg, M.D. performed an independent medical examination of Claimant. Claimant reported his headaches were "becoming more frequent and more intense." Dr. Hammerberg determined Claimant's abnormality on brain MRI was not work-related. In a June 8, 2022 supplemental report, Dr. Hammerberg clarified there was no physiologic explanation for Claimant's worsening headaches, dizziness, and cognitive complaints over time. Symptoms and functional abilities should improve following a single toxic event. Claimant's impairment demonstrated on testing was indicative of significant dementia to an extent he would not

even be able to provide a verbal history or drive a vehicle. Dr. Hammerberg recommended a neuropsychological evaluation to measure validity and potential symptom magnification.

15. On May 10, 2022 Lynn Parry, M.D. performed an independent medical examination of Claimant. She determined Claimant certainly experienced a decompression syndrome and an oxygen toxicity event. Dr. Parry diagnosed vestibular and possible TMJ dysfunction. She also determined he required vocational counseling to return to employment.

16. On April 27 and May 19, 2022 Claimant underwent a Functional Capacity Examination (FCE). Because Claimant reported headaches, dizziness, and nausea symptoms during the evaluation, it occurred over two days. The stair climbing test, occasional crouching/squatting reach tests and kneeling to standing and back reach tests were declined altogether. Remaining tests were delayed or halted due to Claimant's subjective reports.

17. On May 18, 2022 Roger Ryan performed a vocational evaluation. Claimant reported daily headaches as well as migraines 2-3 times each week. Additional complaints included blurry vision while driving and using a laptop. Mr. Ryan determined Claimant is employable and identified twenty-two entry level jobs in the Denver, Colorado area based upon the work restrictions recommended by Dr. Burns, Dr. Mathwich, Dr. Hammerberg, Dr. D'Angelo and Dr. Parry. Mr. Ryan also performed labor market research for the following three positions: unarmed security guard; janitor; and night auditor. Claimant fit the employment profile for five of the security companies that had both full and part time work available. Claimant also met the profile for five janitorial companies. Notably, all but one of the companies had part-time work available in addition to full-time work. Finally, Claimant fit the profile for six night-auditing companies. All but one of the companies had part and full-time work available.

18. On July 20, 2022 Kathleen D'Angelo, M.D. authored an independent medical examination report. In response to a question inquiring about his primary difficulties, Claimant noted the following: headaches, memory loss, problems thinking, depression and stress. Dr. D'Angelo documented that Claimant had normal physical, mental, and neurological exams. He was articulate and thorough in his discussions, "which belies his complaints of cognitive compromise." Dr. D'Angelo did not believe Claimant's complaints had a clear etiology. She also noted Claimant's pre-existing panic attacks and PTSD were contrary to reports he had given to providers. Dr. D'Angelo determined that Claimant did not suffer decompression illness as a result of his December 26, 2018 diving accident. She agreed Claimant should undergo a neuropsychological evaluation.

19. On July 20, 2022 Kevin Reilly, M.D. performed a neuropsychological independent medical examination. Dr. Reilly remarked that Claimant had no deficits in recall and presented in a normal manner. However, his psychometric testing was indicative of a negative response bias and invalidity consistent with exaggerated symptom reporting. Therefore, the testing results could not be considered valid. Dr. Reilly stated

there was no objective data to support Claimant's reported symptoms, and his worsening was contradictory to the natural course for brain injuries. Dr. Reilly stated there was no valid or reliable data to support Claimant's claim of impairments. He thus diagnosed Claimant with Malingering.

20. On August 24, 2022, after reviewing Dr. Reilly's results, Dr. Hammerberg issued an addendum report. He explained that, based on Dr. Reilly's findings, Claimant's test results at his own independent medical examination were not valid. Claimant had no evidence of cognitive impairment and only his seizure disorder was related to his diving accident. Dr. Hammerberg recommended permanent restrictions of no climbing ladders, no working at heights, no diving and no driving company vehicles.

21. On August 26, 2022 Dr. D'Angelo issued an addendum report. She reasoned that, based upon the new psychometric testing data and her own evaluation of Claimant, Claimant's only work-related diagnosis was a seizure disorder. She explained that, based on Claimant's diagnosis of malingering, only diagnoses supported by objective findings, can be attributed to his December 26, 2018 diving accident. Dr. D'Angelo recommended permanent restrictions of no commercial driving, no diving, no working on ladders or at heights, and no operation of heavy equipment.

22. Claimant testified at the hearing in this matter and through a rebuttal deposition. He explained that his normal job duties for Employer included managing employees, preparing project bids, working on contracts, handling client communication, and coordinating materials and vendors. Claimant explained that he would have continued working with Employer after his diving accident, but it became too hard for him to perform basic tasks. He told IS[Redacted] he was leaving Employer due to medical difficulties.

23. Claimant testified that he suffers daily headaches and experiences migraines 2-3 times per week. The migraines incapacitate him. Claimant remarked he also suffers blurry vision that can trigger headaches. Furthermore, Claimant noted daily dizziness and nausea, including almost daily vomiting. Claimant stated that he wants to work but the biggest issues are the unpredictable generalized headaches and migraines. Once he begins feeling a headache, he can barely function, has trouble putting words together, cannot focus and lies down. Claimant remarked that, when the migraines occur, he is "literally laid up for the day." He detailed that "[a]ll I can do is lay in the dark and try to ice my head and just pray that it will end. It's –it feels like my head is literally going to explode, and if I move, it hurts. Claimant feared being fired from a job due to missing too much work.

24. [Redacted, hereinafter JM] testified through a rebuttal evidentiary deposition in this matter on February 2, 2023. She remarked that in the two months she had been dating Claimant prior to the diving injury, he never complained of headaches. Claimant was also not limited in any way physically or emotionally in what he could do before the accident. JM[Redacted] described Claimant's worsening memory issues and forgetfulness since the diving accident. She commented that, when Claimant gets a headache or migraine, it is very obvious because his face turns red, he cannot focus, his

eyes become squinty, his mood changes and he becomes physically nauseous. JM[Redacted] remarked that Claimant suffers migraines five days per week and becomes incapacitated.

25. Neurologist Dr. Parry testified at the hearing in this matter. She maintained that Claimant sustained a brain injury from oxygen toxicity as a result of his December 26, 2018 diving accident. The oxygen toxicity was so severe that it resulted in a seizure disorder and decompression injury during his ascent. Based on the significance of the seizure disorder, Dr. Parry determined it was certainly reasonable and foreseeable that Claimant would experience an ongoing headache and migraine disorder.

26. Dr. Parry explained that Claimant has headaches and migraines related to his injury that most likely constitute vestibular migraines. She commented that Claimant's generalized and migraine headaches are unpredictable. Triggers are activities that cannot be suppressed such as visual scanning or tracking. Claimant's headaches, combined with vestibular components, interfere with concentration and result in significant disability issues. Claimant is unemployable because he cannot attend work on a regular and consistent basis. Finally, Dr. Parry remarked that the neuropsychological testing performed by Dr. Reilly four years after the diving accident would not be helpful because of interference from other factors such as pain, mood changes and depression. Furthermore, interpretation involves subjective assessment. Dr. Parry summarized that Claimant is currently unable to earn any wages in any capacity. However, he may be able to earn wages in the future with additional care and treatment.

27. Katie Montoya testified as an expert in vocational rehabilitation through an evidentiary deposition on October 27, 2022. She also authored a report on July 22, 2022 and an addendum report on September 3, 2022. Ms. Montoya maintained that Claimant is incapable of earning any wages in any capacity. Specifically, Claimant has been consistent regarding his limitations caused by headaches, migraines, balance and vision issues. Because of Claimant's unpredictability as to whether he can show up for full or part-time positions based on his physical limitations, he is currently incapable of earning any wages in any capacity.

28. On January 6, 2023 the parties conducted the deposition of Dr. D'Angelo. She maintained that Claimant's only condition caused by the December 26, 2018 diving accident was a seizure disorder from oxygen toxicity. After considering emails, text messages, and Claimant's testimony, she determined he was very functional for several months after his diving accident. Dr. D'Angelo noted Claimant's initial symptoms and functionality at work suggested he did not have an organic abnormality. She explained Claimant's complaints of headaches should not be credited, because they were inconsistent with his expected course of recovery, his invalid neuropsychological testing with Dr. Reilly and Claimant's lack of candor about his medical history. Dr. D'Angelo reasoned that Claimant did not have a work-related headache or migraine condition that prevented him from working.

29. Owner of Employer IS[Redacted] testified at the hearing in this matter that Claimant returned to full-time work after the diving accident. He commented that after the

accident he and Claimant were in the office 75% of the time. [Redacted, hereinafter IS] further testified Claimant did not miss work on a regular basis until a few weeks before his resignation. Claimant otherwise completed his job tasks without difficulty or delay, traveled to work sites in and out of state, worked on a computer for hours at a time, held conversations with clients, and displayed no memory or concentration issues. He remarked that Claimant never complained of concentration issues, dizziness, or vision problems. Claimant only mentioned a headache on one occasion after the diving accident.

30. Respondents' Exhibit G contains text messages between Claimant and IS[Redacted] discussing work and personal issues from the date of the diving accident on December 26, 2018 until Claimant's resignation in April, 2019. For example, January 23, 2019 texts discuss working on the [Redacted, hereinafter CG] tunnel job. IS[Redacted] explained CG[Redacted] was a job in California that they worked on together. IS[Redacted] also explained texts on February 11, 2019 pertaining to a 1 ½ mile long 5' x 8' tunnel he and Claimant inspected. On March 20, 2019 Claimant and IS[Redacted] texted regarding a job they had traveled to in Grand Junction, Colorado. IS[Redacted] testified Claimant resigned in mid-April, 2019 because he wanted to find a new career, was considering becoming a day trader, or perhaps go back to school. Claimant did not mention medical symptoms as a reason for quitting.

31. Dr. Reilly testified at the hearing in this matter as an expert in the fields of clinical and neuropsychology. He explained that neurocognitive symptoms are typically worst shortly after a brain injury. If symptoms increase six months or more after a brain injury without an intervening event, that is typically a strong indication for psychosocial factors influencing symptoms. Dr. Reilly commented that Claimant displayed no issues of fatigue or memory issues over the testing and interview process, and the test results were incongruent with Claimant's presentation. Claimant's testing identified over-reporting of symptoms/symptom magnification, and test data was not valid for interpretation.

32. Dr. Reilly explained that malingering is defined as the intentional production or exaggeration of symptoms for external incentives. He assigns the diagnosis in only 1-2% of patients. Dr. Reilly remarked that his diagnosis was based on all the testing batteries and influenced by Claimant's denial of pre-existing mental health conditions from military service.

33. Dr. Reilly testified that he had reviewed the testing that Dr. Andrews performed in April, 2019. He acknowledged the battery was quite extensive and did not reveal any evidence of malingering or negative response bias. Nevertheless, Dr. Reilly acknowledged that neuropsychological testing is largely based upon different interpretive approaches and Claimant scored much worse on his testing than Dr. Andrews because of the negative response bias. Claimant's performance was "much worse" at the more recent evaluation. Dr. Reilly also rejected Dr. Parry's opinion that neuropsychological testing would be of no value due to the presence of physical pain or a mood disorder. Instead, a neuropsychological assessment has increased efficacy in the presence of the preceding symptoms.

34. Mr. Ryan testified at the hearing as a vocational expert. He noted Claimant has a varied work history inclusive of supervisory experience, customer service, estimating, bidding, inspecting, and welding. The opinions of the physicians in the case were unanimous in recommending work restrictions. Mr. Ryan detailed his labor market contacts for the positions of unarmed security guard, janitor, and night auditor, included contacting numerous actual employers in the Denver metropolitan area. However, Claimant's employment opportunities are not limited to those employers who were contacted and additional opportunities with other employers for those types of jobs were available.

35. Mr. Ryan explained that work from home jobs, such as telemarketing and sales, are options for Claimant. He also remarked that Claimant could work temporary staffing day jobs on days he felt better. The positions included multiple entry level jobs within Claimant's work restrictions. Moreover, temporary day labor was an employment option even assuming Claimant's testimony he could not maintain regularly scheduled employment due to having migraines several times per week. Mr. Ryan testified there were no assigned working restrictions pertaining to Claimant's headaches, and Claimant had not tried returning to employment. He felt it was improper to inject limitations into his evaluation that are not based upon medical restrictions. Mr. Ryan thus concluded that Claimant is capable of earning wages in some capacity.

36. Claimant has failed to prove that it is more probably true than not that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of the industrial injuries he sustained during the course and scope of his employment with Employer on December 26, 2018. The record reveals that physicians have assigned Claimant permanent physical restrictions of no commercial driving, no diving, no working on ladders or at heights, and no operation of heavy equipment. The restrictions permit him to function in the work environment and render him a suitable candidate for a number of employment opportunities.

37. Initially, Claimant was involved in a diving accident on December 26, 2018. He suffered an oxygen toxicity event resulting in a seizure disorder. The bulk of the evidence suggests there are no additional, expected long-term symptoms. Claimant was evaluated at Parker Adventist where, in conjunction with a dive medicine specialist, Dr. Merrell ruled out a decompression illness. None of the other physicians who have treated or evaluated Claimant, including Drs. Moon, Hammerberg, Burns, and Mathwich, have diagnosed a decompression illness.

38. The opinions of Drs. D'Angelo, Hammerberg, and Reilly reveal that Claimant's diving injury should have manifested as a typical brain injury and likely improved over time. Claimant's symptoms initially followed the expected course. Over the ensuing two months after the accident Claimant reported to Dr. Moon's office that his memory and dizziness were improving, and he had a complete resolution of headaches. After considering emails, text messages, and Claimant's testimony, Dr. D'Angelo specifically noted that Claimant was very functional for several months after his diving accident. She remarked that Claimant's initial symptoms and functionality at work suggested he did not have an organic abnormality. IS[Redacted] also credibly explained

that Claimant did not miss work on a regular basis until a few weeks before his resignation. Claimant otherwise completed his job tasks without difficulty or delay, traveled to work sites in and out of state, worked on a computer for hours at a time, held conversations with clients, and displayed no memory or concentration issues. He remarked that Claimant never complained of concentration issues, dizziness, or vision problems.

39. By March 16, 2021 DIME Dr. Mathwich determined that Claimant had reached MMI and assigned a combined 36% whole person physical and mental permanent impairment rating. Nevertheless, Claimant asserts that he has suffered worsening symptoms including daily headaches, incapacitating migraines, vision problems and mental health issues as a result of his diving accident. However, on July 20, 2022 Dr. Reilly conducted psychometric testing of Claimant that was indicative of a negative response bias and invalidity consistent with exaggerated symptom reporting. Dr. Reilly stated there was no objective data to support Claimant's reported symptoms, and his worsening was contradictory to the natural course for brain injuries. Dr. D'Angelo also explained that only diagnoses supported by objective findings can be attributed to Claimant's December 26, 2018 diving accident. She recommended permanent restrictions of no commercial driving, no diving, no working on ladders or at heights, and no operation of heavy equipment. Similarly, Dr. Hammerberg determined Claimant had no evidence of cognitive impairment and only his seizure disorder was related to his diving accident. Dr. Hammerberg also recommended permanent restrictions of no climbing ladders, no working at heights, no diving and no driving company vehicles. Notably, Claimant has received permanent work restrictions that are virtually unanimous from both treating and evaluating physicians.

40. Mr. Ryan noted Claimant has a varied work history inclusive of supervisory experience, customer service, estimating, bidding, inspecting, and welding. He determined Claimant is employable and identified twenty-two entry level jobs in the Denver, Colorado area based upon the work restrictions recommended by Dr. Burns, Dr. Mathwich, Dr. Hammerberg, Dr. D'Angelo and Dr. Parry. Mr. Ryan detailed his labor market contacts for the positions of unarmed security guard, janitor, and night auditor, and included contacting numerous actual employers in the Denver area. He also explained that work from home jobs, such as telemarketing and sales, are options for Claimant. Mr. Ryan remarked that Claimant could work temporary staffing day jobs on days he felt better. The positions included multiple entry level jobs within Claimant's work restrictions. Moreover, temporary day labor was an employment option even assuming Claimant's testimony he could not maintain regularly scheduled employment due to having migraines several times per week. Mr. Ryan testified there were no assigned working restrictions pertaining to Claimant's headaches, and Claimant had not tried returning to employment. He thus concluded that Claimant is capable of earning wages in some capacity.

41. In contrast, Claimant testified that he suffers daily headaches and experiences migraines 2-3 times per week. The migraines incapacitate him. Claimant remarked he also suffers blurry vision that can trigger headaches. Furthermore, Claimant noted daily dizziness and nausea, including almost daily vomiting. Claimant stated that

he wants to work but the biggest issues are the unpredictable generalized headaches and migraines. JM[Redacted] remarked that in the two months she had been dating Claimant prior to the diving injury, he never complained of headaches. Claimant was also not limited in any way physically or emotionally in what he could do before the accident. JM[Redacted] corroborated that Claimant suffers frequent migraines and becomes incapacitated. Dr. Parry explained that Claimant's headaches and migraines are related to his injury and most likely constitute vestibular migraines. She commented that Claimant's generalized and migraine headaches are unpredictable. Triggers are activities that cannot be suppressed such as visual scanning or tracking. Claimant's headaches, combined with vestibular components, interfere with concentration and result in significant disability issues. Claimant is unemployable because he cannot attend work on a regular and consistent basis. Ms. Montoya also maintained that Claimant is incapable of earning any wages in any capacity. Specifically, Claimant has been consistent regarding his limitations caused by headaches, migraines, balance and vision issues. Because of Claimant's unpredictability as to whether he can show up for full or part-time positions based on his physical limitations, he is currently incapable of earning any wages in any capacity.

42. Despite Claimant's testimony, as well as the conclusions of Dr. Parry and Ms. Montoya, the record reveals that Claimant is capable of earning wages. Claimant has been assigned and/or recommended permanent work restrictions that are nearly unanimous across the treating and evaluating physicians. Dr. Burns and Dr. Mathwich, the two non-retained medical providers who recommended restrictions, were aware of Claimant's severe subjective complaints yet chose not to assign additional restrictions. Furthermore, the record reflects that Claimant's abilities render him a suitable candidate for a number of employment opportunities. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions, he is capable of earning wages in some capacity. Accordingly, the record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Claimant's request for PTD benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Permanent Total Disability (PTD) is defined as the inability to earn "any wages in the same or other employment." §8-40-201(16.5)(a), C.R.S.; *Christie v. Coors Transportation Co.,* 933 P.2d 1330, 1333 (Colo. 1997). A claimant is not permanently and totally disabled if he is able to earn some wages in modified, sedentary or part-time employment. *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). The claimant carries the burden of proof to establish that he is permanently and totally disabled by a preponderance of the evidence. The question of whether the claimant has proven PTD is a question of fact for resolution by the ALJ. *Id.*

5. A claimant must demonstrate that his industrial injuries constituted a "significant causative factor" in order to establish a claim for PTD. *In Re Olinger,* W.C. No. 4-002-881 (ICAO, Mar. 31, 2005). A "significant causative factor" requires a "direct causal relationship" between the industrial injuries and a PTD claim. *In Re Dickerson,* W.C. No. 4-323-980 (ICAO, July 24, 2006); *see Seifried v. Industrial Comm'n,* 736 P.2d 1262, 1263 (Colo. App. 1986). The preceding test requires the ALJ to ascertain the "residual impairment caused by the industrial injury" and whether the impairment was sufficient to result in PTD without regard to subsequent intervening events. *See Joslins Dry Goods Co. v. Indus. Claim Appeals Off.*, 21 P.3d 866 (Colo. App. 2001). Resolution of the causation issue is a factual determination for the ALJ. *In Re of Dickerson,* W.C. No. 4-323-980 (ICAO, July 24, 2006).

6. In ascertaining whether a claimant is able to earn any wages, the ALJ may consider various "human factors," including a claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998); *Holly Nursing v. Indus. Claim Appeals Off.,* 992 P.2d 701, 703 (Colo. App. 1999). The critical test, which must be conducted on a case-by-case basis, is whether employment exists that is reasonably available to the claimant under his particular circumstances. *Bymer*, 955 P.2d at 557. Ultimately, the determination of whether a Claimant suffers from a permanent and total disability is an issue of fact for resolution by the ALJ. *In Re Selvage,* W.C. No. 4-486-812 (ICAO, Oct. 9, 2007). The ability to earn wages inherently includes consideration of whether claimant is capable of getting hired and sustaining employment. *See Christie*, 933 P.2d at 1335; *Cotton v. Econ. Lub-N-tune*, W.C. No. 4-220-395 (ICAO, Jan. 16, 1997).

7. The test for determining "availability of work" is whether employment exists "that is reasonably available to claimant under his or her particular circumstances." *Christie*, 933 P.2d at 1335; *Bymer,* 955 P.2d at 554-55. Respondents are not required to prove the existence of a particular job that a specific employer has made available to the claimant. *Labiak v. Bader Burke & Co.,* W.C. No. 4-134-999 (ICAO, Oct. 14, 2009) *citing Beavers v. Indus. Claim Appeals Off.*, No. 96CA0275 (Colo. App., Sept. 5, 1996).

8. As found, Claimant has failed to prove by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of the industrial injuries he sustained during the course and scope of his employment with Employer on December 26, 2018. The record reveals that physicians have assigned Claimant permanent physical restrictions of no commercial driving, no diving, no working on ladders or at heights, and no operation of heavy equipment. The restrictions permit him to function in the work environment and render him a suitable candidate for a number of employment opportunities.

9. As found, initially, Claimant was involved in a diving accident on December 26, 2018. He suffered an oxygen toxicity event resulting in a seizure disorder. The bulk of the evidence suggests there are no additional, expected long-term symptoms. Claimant was evaluated at Parker Adventist where, in conjunction with a dive medicine specialist, Dr. Merrell ruled out a decompression illness. None of the other physicians who have treated or evaluated Claimant, including Drs. Moon, Hammerberg, Burns, and Mathwich, have diagnosed a decompression illness.

10. As found, the opinions of Drs. D'Angelo, Hammerberg, and Reilly reveal that Claimant's diving injury should have manifested as a typical brain injury and likely improved over time. Claimant's symptoms initially followed the expected course. Over the ensuing two months after the accident Claimant reported to Dr. Moon's office that his memory and dizziness were improving, and he had a complete resolution of headaches. After considering emails, text messages, and Claimant's testimony, Dr. D'Angelo specifically noted that Claimant was very functional for several months after his diving accident. She remarked that Claimant's initial symptoms and functionality at work suggested he did not have an organic abnormality. IS[Redacted] also credibly explained that Claimant did not miss work on a regular basis until a few weeks before his resignation. Claimant otherwise completed his job tasks without difficulty or delay, traveled to work sites in and out of state, worked on a computer for hours at a time, held conversations with clients, and displayed no memory or concentration issues. He remarked that Claimant never complained of concentration issues, dizziness, or vision problems.

11. As found, by March 16, 2021 DIME Dr. Mathwich determined that Claimant had reached MMI and assigned a combined 36% whole person physical and mental permanent impairment rating. Nevertheless, Claimant asserts that he has suffered worsening symptoms including daily headaches, incapacitating migraines, vision problems and mental health issues as a result of his diving accident. However, on July 20, 2022 Dr. Reilly conducted psychometric testing of Claimant that was indicative of a negative response bias and invalidity consistent with exaggerated symptom reporting. Dr.

Reilly stated there was no objective data to support Claimant's reported symptoms, and his worsening was contradictory to the natural course for brain injuries. Dr. D'Angelo also explained that only diagnoses supported by objective findings can be attributed to Claimant's December 26, 2018 diving accident. She recommended permanent restrictions of no commercial driving, no diving, no working on ladders or at heights, and no operation of heavy equipment. Similarly, Dr. Hammerberg determined Claimant had no evidence of cognitive impairment and only his seizure disorder was related to his diving accident. Dr. Hammerberg also recommended permanent restrictions of no climbing ladders, no working at heights, no diving and no driving company vehicles. Notably, Claimant has received permanent work restrictions that are virtually unanimous from both treating and evaluating physicians.

12. As found, Mr. Ryan noted Claimant has a varied work history inclusive of supervisory experience, customer service, estimating, bidding, inspecting, and welding. He determined Claimant is employable and identified twenty-two entry level jobs in the Denver, Colorado area based upon the work restrictions recommended by Dr. Burns, Dr. Mathwich, Dr. Hammerberg, Dr. D'Angelo and Dr. Parry. Mr. Ryan detailed his labor market contacts for the positions of unarmed security guard, janitor, and night auditor, and included contacting numerous actual employers in the Denver area. He also explained that work from home jobs, such as telemarketing and sales, are options for Claimant. Mr. Ryan remarked that Claimant could work temporary staffing day jobs on days he felt better. The positions included multiple entry level jobs within Claimant's work restrictions. Moreover, temporary day labor was an employment option even assuming Claimant's testimony he could not maintain regularly scheduled employment due to having migraines several times per week. Mr. Ryan testified there were no assigned working restrictions pertaining to Claimant's headaches, and Claimant had not tried returning to employment. He thus concluded that Claimant is capable of earning wages in some capacity.

13. As found, in contrast, Claimant testified that he suffers daily headaches and experiences migraines 2-3 times per week. The migraines incapacitate him. Claimant remarked he also suffers blurry vision that can trigger headaches. Furthermore, Claimant noted daily dizziness and nausea, including almost daily vomiting. Claimant stated that he wants to work but the biggest issues are the unpredictable generalized headaches and migraines. JM[Redacted] remarked that in the two months she had been dating Claimant prior to the diving injury, he never complained of headaches. Claimant was also not limited in any way physically or emotionally in what he could do before the accident. JM[Redacted] corroborated that Claimant suffers frequent migraines and becomes incapacitated. Dr. Parry explained that Claimant's headaches and migraines are related to his injury and most likely constitute vestibular migraines. She commented that Claimant's generalized and migraine headaches are unpredictable. Triggers are activities that cannot be suppressed such as visual scanning or tracking. Claimant's headaches, combined with vestibular components, interfere with concentration and result in significant disability issues. Claimant is unemployable because he cannot attend work on a regular and consistent basis. Ms. Montoya also maintained that Claimant is incapable of earning any wages in any capacity. Specifically, Claimant has been consistent regarding his limitations caused by headaches, migraines, balance and vision issues. Because of

Claimant's unpredictability as to whether he can show up for full or part-time positions based on his physical limitations, he is currently incapable of earning any wages in any capacity.

14. As found, despite Claimant's testimony, as well as the conclusions of Dr. Parry and Ms. Montoya, the record reveals that Claimant is capable of earning wages. Claimant has been assigned and/or recommended permanent work restrictions that are nearly unanimous across the treating and evaluating physicians. Dr. Burns and Dr. Mathwich, the two non-retained medical providers who recommended restrictions, were aware of Claimant's severe subjective complaints yet chose not to assign additional restrictions. Furthermore, the record reflects that Claimant's abilities render him a suitable candidate for a number of employment opportunities. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions, he is capable of earning wages in some capacity. Accordingly, the record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Claimant's request for PTD benefits is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for PTD benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: March 17, 2023.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-207-495-001

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on May 11, 2022.

2. Whether Claimant has established by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to him through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonable, necessary and causally related medical benefits for his May 11, 2022 industrial injuries.

4. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period May 11, 2022 until terminated by statute.

5. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for his termination from employment under §§8-42-105(4) & 8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits after May 10, 2022.

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $2290.24.

2. Respondents are entitled to an offset for unemployment benefits under §8-42-103(f), C.R.S.

FINDINGS OF FACT

1. On November 16, 2021 Claimant began working for Employer as a Risk Manager. Claimant also received unemployment benefits during the period October 30, 2021 through December 14, 2021.

2. On February 28, 2022 Employer placed Claimant on a Performance Improvement Plan (PIP). Employer's Area Manager [Redacted, hereinafter KH], testified Claimant's performance was deficient in terms of productivity, efficiency, attendance,

teamwork, communication and quality of work. Despite signing the PIP, Claimant denied all of the performance deficiencies.

3. On April 7, 2022 Claimant underwent non-work related fusion surgery on his back with neurosurgeon Sean Markey, M.D. He then took paid time off and vacation leave for a few weeks to recover from his surgery. Claimant returned to work remotely and part-time in the last few days of April, 2022.

4. On May 10, 2022 Claimant attended a meeting with KH[Redacted] and Employer's Business Unit Manager [Redacted, hereinafter RN]. At the meeting he was terminated from employment. Claimant was terminated because he failed to improve his performance. There were also complaints from clients that Claimant was combative, argumentative, abrasive and he would not be on time or show up for meetings. Claimant received his final paycheck and was locked out of Employer's computer/IT system.

5. At the termination meeting, KH[Redacted] required Claimant to provide him with his key card and work tablet. However, Claimant did not have the items with him at the time because they were in his home office. Claimant told KH[Redacted] and RN[Redacted] that he would bring the tablet back to the office the following day. Claimant testified that he also told KH[Redacted] and RN[Redacted] that there was additional work he was going to do on behalf of the company to get his files and client lists transferred over to his co-worker and Risk Manager for Business Unit 1 [Redacted, hereinafter AK].

6. Despite being terminated, Claimant contends he continued to perform work after the meeting on May 10, 2022. Claimant remarked he received a phone call from client [Redacted, hereinafter LC] about an OSHA inspection. He commented that he then gathered information and files off his laptop and transferred them to a USB stick in order to pass them onto KH[Redacted].

7. KH[Redacted] testified that, after the termination meeting, he did not ask Claimant to meet with AK[Redacted] to transfer work. Claimant also did not have a meeting with RN[Redacted] to discuss OSHA concerns of client LC[Redacted]. KH[Redacted] explained that he only sought the return of the keycard and laptop from Claimant. He remarked that Claimant offered to bring the laptop back on the following day, and agreed that would be fine. KH[Redacted] did not invite Claimant back to the office on May 11, 2022 for any other purpose.

8. KH[Redacted] remarked that he did not plan any kind of an exit interview or expect any transfer of files. He noted that Claimant had stated after the termination meeting that he was willing to provide client information, but KH[Redacted] declined because Employer had Claimant's computer. He emphasized that AK[Redacted] was fully capable of assuming Claimant's job responsibilities without any input from Claimant. KH[Redacted] summarized that Claimant's "employment was terminated and that was it." Claimant was simply going to come into the office at 10:00 a.m. on May 11, 2022 to drop off the keycard and laptop.

9. On May 11, 2022 Claimant visited Employer's facility and met with KH[Redacted]. Claimant testified he was expecting to go over the work files he had passed on to AK[Redacted], the OSHA situation with LC[Redacted], and have his exit interview. After Claimant argued somewhat about his termination, he returned the keycard and laptop. Claimant requested to grab something from his office and KH[Redacted] acquiesced. KH[Redacted] did not ask Claimant to work because he had been terminated. He emphasized that, although Claimant wanted to provide information about the work he was doing, it was unnecessary because Claimant had been terminated. KH[Redacted] did not ask Claimant to perform any work on May 11, 2022 or recall providing him with a pen and notepad to write down information. Claimant then returned to KH's[Redacted] office after a couple of minutes and stated he had retrieved what he needed. KH[Redacted] walked Claimant out the front door of Employer's suite.

10. In contrast, Claimant testified that KH[Redacted] gave him a notepad and pen on May 11, 2022. He told Claimant to go to his cubicle to document everything he was passing onto AK[Redacted]. Claimant then went to his workstation to write notes for AK[Redacted] and prepare a USB drive containing his files. He remarked that, after he received a call from a client, he got up from his workstation to go to the photocopy machine. When he returned, he pulled his office chair to sit down, but it became caught on something. Claimant then tried to sit on the chair, fell and landed on the floor.

11. Employer's Payroll Manager [Redacted, hereinafter SJ] testified that while at work on May 11, 2022 he heard a bang, but did not think much of it. About thirty seconds later, Claimant called out to SJ[Redacted] for help. When SJ[Redacted] arrived at Claimant's cubicle, Claimant was either on his knees or on the floor. Because SJ's[Redacted] back had been toward Claimant in a different cubicle, he did not see Claimant fall. He asked Claimant if he could help him up because Claimant was on the floor unplugging "something." Claimant explained that he fell off his chair while getting an item from under his desk.

12. Claimant testified that KH[Redacted] then came out of his office and asked whether he was done with what he was doing. Claimant responded that he was just about done, and that he just hurt himself. KH[Redacted] responded, "[y]ou need to be a little more careful. I need you to wrap up what you are doing and get going."

13. KH[Redacted] explicitly denied that he had spoken to Claimant after the alleged fall on May 11, 2022. He explained that he did not realize Claimant had made an accusation of falling until a couple of days later. KH[Redacted] reiterated that walking Claimant out of the suite was the last time he has seen Claimant. He also recalled that on either May 10 or May 11, 2022 Human Resources Director [Redacted, hereinafter HG] called him and stated she had about a 45-minute conversation with Claimant. The conversation was somewhat of a tirade because Claimant had been terminated and felt wronged.

14. Business Development Manager [Redacted, hereinafter EQ] commented that on May 11, 2022 he arrived at work and saw Claimant in one of the breakout rooms

in the lobby of Employer's building. Claimant called his name and tried to get up. He told EQ[Redacted] he had a meeting with KH[Redacted] and that he "[f]ell and kind of jacked up his back." EQ[Redacted] helped Claimant stand, grabbed his backpack and walked Claimant to his car. He inquired whether Claimant wanted a ride home, but Claimant declined.

15. On May 16, 2022 Claimant underwent x-ray imaging of his lumbar spine at Porter Adventist Hospital. The visit was characterized as a postoperative follow-up. Providers compared the imaging to a lumbar spine MRI from April 10, 2022. The impression was "similar postoperative changes from instrumented posterior fusion without radiographic evidence of dynamic instability or acute hardware complication."

16. On May 24, 2022 Claimant had a telemedicine visit at Denver Health. He reported that he had fallen off his chair at work a couple of weeks earlier and hurt his back. Ali Zirzakzadeh, M.D. assessed Claimant with acute lower back pain.

17. On June 3, 2022 Claimant completed a Workers' Claim for Compensation. He described the accident as "I was in for a scheduled meeting, wrapping up my notes & laptop. I went to grab the chair to sit down. The back wheel of the chair got caught on the plastic carpet cover (in the damaged corner) the chair seat swiveled, my butt hit the seat" and I slid off and fell to the floor.

18. On July 7, 2022 Claimant's primary care doctor, Grace Ann Alfonsi, M.D., confirmed that he had been doing well following his initial surgery. However, he fell at work on May 13, 2022. Imaging subsequently revealed that Claimant had pulled out the L2 screw and suffered fractures of the pedicle.

19. On July 22, 2022 Claimant underwent a T10-L3 fusion, removal of hardware and bilateral steotomies. Dr. Markey documented that Claimant was on full restrictions for a spinal fracture from May 11, 2022 and continuing through 3-6 months following August 1, 2022.

20. Claimant has failed to demonstrate that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer on May 11, 2022. Claimant's aggravation of his back condition did not arise out of his employment with Employer. The record reveals that on May 10, 2022 Claimant had been terminated. Claimant's purpose in visiting the office on May 11, 2022 was limited to simply returning his keycard and laptop. KH[Redacted] directed him not to carry out any further employment duties. Nevertheless, Claimant asserts that he was injured while performing work for Employer on May 11, 2022 when he fell off a chair in his cubicle. However, Claimant's argument fails and he did not suffer a compensable injury. Claimant had been terminated on the previous day, his activities on May 11, 2022 were not incidental to employment, and he was explicitly advised not to perform additional work that limited the sphere of the employment relationship.

21. Initially, Claimant worked for Employer as a Risk Manager. On April 7, 2022 he underwent non-work related fusion surgery on his back. He then took paid time off and vacation leave for a few weeks to recover from his surgery. Claimant returned to work remotely and part-time in the last few days of April, 2022. However, he was terminated on May 10, 2022 because he failed to improve his performance after receiving a PIP. Claimant's performance was deficient in terms of productivity, efficiency, attendance, teamwork, communication and quality of work. There were also complaints from clients that Claimant was combative, argumentative, abrasive and that he would not be on time or show up for meetings. Claimant received his final paycheck and was locked out of Employer's computer/IT system on May 10, 2022.

22. KH[Redacted] credibly testified that, after the termination meeting, he did not ask Claimant to meet with AK[Redacted] to transfer work. Claimant also did not have a meeting with RN[Redacted] to discuss OSHA concerns of client LC[Redacted]. KH[Redacted] remarked that he did not plan any kind of an exit interview or expect any transfer of files. He noted that Claimant had stated after the termination meeting that he was willing to provide client information, but KH[Redacted] declined because Employer had Claimant's computer. He emphasized that AK[Redacted] was fully capable of assuming Claimant's job responsibilities without any input from Claimant.

23. KH[Redacted] explained that he only sought the return of the keycard and laptop from Claimant. He remarked that Claimant offered to bring the laptop back on the following day, and he agreed the return of the laptop would be fine. Mr. KH[Redacted] did not invite Claimant back to the office on May 11, 2022 for any other purpose. He summarized that Claimant's "employment was terminated and that was it." Claimant was simply going to come into the office at 10:00 a.m. to drop off the keycard and laptop.

24. On May 11, 2022 Claimant visited Employer's office and met with KH[Redacted]. After Claimant argued somewhat about his termination, he returned the keycard and laptop. When Claimant requested to grab something from his office, KH[Redacted] acquiesced. He did not ask Claimant to work because he had been terminated. KH[Redacted] emphasized that, although Claimant wanted to provide information about the work he was doing, it was unnecessary because Claimant had been terminated.

25. In contrast, Claimant contends that on May 11, 2022 KH[Redacted] gave him a notepad and pen to take to his workstation to document everything he was passing onto AK[Redacted]. Claimant then went to his workstation to write notes for AK[Redacted] and prepare a USB drive containing his files. He remarked that, after he received a call from a client, he left his workstation to go to the photocopy machine. When he returned, he pulled his office chair to sit down, but it became caught on something. Claimant then tried to sit on the chair, but fell and landed on the floor suffering injuries.

26. Despite Claimant's account, his testimony lacks credibility. The record reflects that Claimant was irritated and dissatisfied after being terminated on May 10, 2022. On May 11, 2022 Claimant was expecting to go over the work files he had passed

on to AK[Redacted], the OSHA situation with LC[Redacted], and have his exit interview with KH[Redacted]. HG[Redacted] also had an approximately 45-minute conversation with Claimant that was somewhat of a tirade because he had been terminated and felt wronged. Claimant's actions subsequent to the termination demonstrate that he sought an exit interview and more information about the details of his termination. Claimant also repeatedly persisted in wanting to provide information and files to Employer. His account of returning to his office to do work after being terminated is simply not plausible. Claimant had already submitted his laptop and keycard, and been repeatedly told that no further information was necessary. Claimant's actions reflect a clear violation of KH's[Redacted] request to simply return the keycard and laptop. Finally, the actual occurrence of the accident was questionable because it was unwitnessed, Claimant called two co-employees over to him by name, and he merely recounted the alleged incident.

27. Claimant's actions in returning to his cubicle to perform work after retuning his laptop and keycard were also not incidental to employment. Claimant explained that he went to his cubicle to write notes for AK[Redacted] and prepare a USB stick containing his files. Claimant was not engaging in activities preparatory for employment or incidental to his job duties. Instead, he was performing work after termination in contravention of the clear instructions of KH[Redacted]. Claimant's injuries thus did not arise out of a risk that was reasonably incidental to the conditions and circumstances of his specific employment.

28. An employer's direction to an employee may potentially limit the sphere of the employment relationship. The direction must be specific and show a clear intent to limit the sphere of the employment relationship. Here, KH[Redacted] specifically directed Claimant to return to Employer's office on May 11, 2022 to simply return the keycard and laptop. Because Claimant had been terminated on May 10, 2022, Mr. KH's[Redacted] directive constituted an intent to limit Claimant's sphere of employment to simply return items and not engage in any work. Notably, KH's[Redacted] instructions were not an effort to control Claimant's method of completing his job duties. The directive negated the requisite causal relationship between Claimant's employment and resulting injury. Claimant's violation of Employer's instructions governing the sphere of employment thus severed the causal relationship between his employment and any injuries. Accordingly, Claimant did not suffer compensable injuries on May 11, 2022. His claim is therefore denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

5. As a general rule, the course of employment for employees having a fixed time and place of work encompasses a reasonable interval before and after official working hours during which the employee is engaged in preparatory or incidental acts. There is no requirement that the activity be a duty of employment if it is reasonably incidental to the employment. *Ventura v. Albertson's, Inc.,* 856 P.2d 35 (Colo. App. 1992). The employee's activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In re Swanson,* WC 4-589-645 (ICAO, Sept. 13, 2006). It is sufficient "if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment." *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are "devoid of any duty component, and are unrelated to any specific benefit to the employer." *In re Rodriguez,* WC 4-705-673 (ICAO, Apr. 30, 2008).

6. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d

999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967).; *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

8. Generally, an employer has the right to issue directives concerning what an employee may do and when she may do it. *In re Eelorriaga*, WC 5-047-389-01 (ICAO, June 19, 2018). In some cases, the claimant's disobedience of the employer's instructions concerning what is to be done and when it is to be done negates the requisite causal relationship between the employment and the resulting injury. In such circumstances the employer's instructions are said to limit the "sphere" of the employment. *In re Eelorriaga*, WC 5-047-389-01 (ICAO, June 19, 2018). The employee's violation of the employer's instructions governing the "sphere" of employment severs the causal relationship between the employment and the injury, rendering the injury non-compensable. *Bill Lawley Ford v. Miller*, 672 P.2d 1031, 1032 (Colo. App. 1983); *see Escobedo v. Midwest Drywall Company*, W.C. No. 4-700-127 (ICAO, July 13. 2007). Conversely, violation of rules and directives relating only to the employee's conduct within the sphere of employment do not remove injuries from the realm of compensability. *Bill Lawley Ford* 672 P.2d at 1032.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on May 11, 2022. Claimant's aggravation of his back condition did not arise out of his employment with Employer. The record reveals that on May 10, 2022 Claimant had been terminated. Claimant's purpose in visiting the office on May 11, 2022 was limited to simply returning his keycard and laptop. KH[Redacted] directed him not to carry out any further employment duties. Nevertheless, Claimant asserts that he was injured while performing work for Employer on May 11, 2022 when he fell off a chair in his cubicle. However, Claimant's argument fails and he did not suffer a compensable injury. Claimant had been terminated on the previous day, his activities on May 11, 2022 were not incidental to employment, and he was explicitly advised not to perform additional work that limited the sphere of the employment relationship.

10. As found, initially, Claimant worked for Employer as a Risk Manager. On April 7, 2022 he underwent non-work related fusion surgery on his back. He then took paid time off and vacation leave for a few weeks to recover from his surgery. Claimant returned to work remotely and part-time in the last few days of April, 2022. However, he was terminated on May 10, 2022 because he failed to improve his performance after receiving a PIP. Claimant's performance was deficient in terms of productivity, efficiency, attendance, teamwork, communication and quality of work. There were also complaints from clients that Claimant was combative, argumentative, abrasive and that he would not be on time or show up for meetings. Claimant received his final paycheck and was locked out of Employer's computer/IT system on May 10, 2022.

11. As found, KH[Redacted] credibly testified that, after the termination meeting, he did not ask Claimant to meet with AK[Redacted] to transfer work. Claimant also did not have a meeting with RN[Redacted] to discuss OSHA concerns of client LC[Redacted]. KH[Redacted] remarked that he did not plan any kind of an exit interview or expect any transfer of files. He noted that Claimant had stated after the termination meeting that he was willing to provide client information, but KH[Redacted] declined because Employer had Claimant's computer. He emphasized that AK[Redacted] was fully capable of assuming Claimant's job responsibilities without any input from Claimant.

12. As found, KH[Redacted] explained that he only sought the return of the keycard and laptop from Claimant. He remarked that Claimant offered to bring the laptop back on the following day, and he agreed the return of the laptop would be fine. KH[Redacted] did not invite Claimant back to the office on May 11, 2022 for any other purpose. He summarized that Claimant's "employment was terminated and that was it." Claimant was simply going to come into the office at 10:00 a.m. to drop off the keycard and laptop.

13. As found, on May 11, 2022 Claimant visited Employer's office and met with KH[Redacted]. After Claimant argued somewhat about his termination, he returned the keycard and laptop. When Claimant requested to grab something from his office, KH[Redacted] acquiesced. He did not ask Claimant to work because he had been terminated. KH[Redacted] emphasized that, although Claimant wanted to provide information about the work he was doing, it was unnecessary because Claimant had been terminated.

14. As found, in contrast, Claimant contends that on May 11, 2022 KH[Redacted] gave him a notepad and pen to take to his workstation to document everything he was passing onto AK[Redacted]. Claimant then went to his workstation to write notes for AK[Redacted] and prepare a USB drive containing his files. He remarked that, after he received a call from a client, he left his workstation to go to the photocopy machine. When he returned, he pulled his office chair to sit down, but it became caught on something. Claimant then tried to sit on the chair, but fell and landed on the floor suffering injuries.

15. As found, despite Claimant's account, his testimony lacks credibility. The record reflects that Claimant was irritated and dissatisfied after being terminated on May

10, 2022. On May 11, 2022 Claimant was expecting to go over the work files he had passed on to AK[Redacted], the OSHA situation with LC[Redacted], and have his exit interview with KH[Redacted]. HG[Redacted] also had an approximately 45-minute conversation with Claimant that was somewhat of a tirade because he had been terminated and felt wronged. Claimant's actions subsequent to the termination demonstrate that he sought an exit interview and more information about the details of his termination. Claimant also repeatedly persisted in wanting to provide information and files to Employer. His account of returning to his office to do work after being terminated is simply not plausible. Claimant had already submitted his laptop and keycard, and been repeatedly told that no further information was necessary. Claimant's actions reflect a clear violation of KH's[Redacted] request to simply return the keycard and laptop. Finally, the actual occurrence of the accident was questionable because it was unwitnessed, Claimant called two co-employees over to him by name, and he merely recounted the alleged incident.

16. As found, Claimant's actions in returning to his cubicle to perform work after retuning his laptop and keycard were also not incidental to employment. Claimant explained that he went to his cubicle to write notes for AK[Redacted] and prepare a USB stick containing his files. Claimant was not engaging in activities preparatory for employment or incidental to his job duties. Instead, he was performing work after termination in contravention of the clear instructions of KH[Redacted]. Claimant's injuries thus did not arise out of a risk that was reasonably incidental to the conditions and circumstances of his specific employment.

17. As found, an employer's direction to an employee may potentially limit the sphere of the employment relationship. The direction must be specific and show a clear intent to limit the sphere of the employment relationship. Here, KH[Redacted] specifically directed Claimant to return to Employer's office on May 11, 2022 to simply return the keycard and laptop. Because Claimant had been terminated on May 10, 2022, KH's[Redacted] directive constituted an intent to limit Claimant's sphere of employment to simply return items and not engage in any work. Notably, KH's[Redacted] instructions were not an effort to control Claimant's method of completing his job duties. The directive negated the requisite causal relationship between Claimant's employment and resulting injury. Claimant's violation of Employer's instructions governing the sphere of employment thus severed the causal relationship between his employment and any injuries. Accordingly, Claimant did not suffer compensable injuries on May 11, 2022. His claim is therefore denied and dismissed. *See Escobedo v. Midwest Drywall Company*, W.C. No. 4-700-127 (ICAO, July 13. 2007) (where ALJ determined that the sphere of employment was limited by the employer's direction to either go home or wait for scaffolding to be repaired and claimant was told not to perform his duties, the claimant's subsequent injuries were not compensable). *Compare In re Eelorriaga*, W.C. No. 5-047-389-001 (ICAO, June 19, 2018) (because the employer's attempt to regulate driving by prohibiting phone calls while driving constituted an effort to control the claimant's methods of carrying out her duties and not a regulation concerning the sphere of employment, her injuries were compensable).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Workers' Compensation benefits is denied and dismissed.

2. Claimant earned an AWW of $2290.24.

3. Respondents are entitled to an offset for unemployment benefits under §8-42-103(f), C.R.S.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: March 23, 2023.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-196-616-001

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that Pre-Hearing Administrative Law Judge (PALJ) Susan D. Phillips was incorrect in determining in a March 24, 2022 Order that claim notes are part of the claim file and subject to initial disclosure under §8-43-203(4), C.R.S.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304(1), C.R.S. for Respondents' violation of §8-43-203(4), C.R.S. by failing to timely disclose the claim file and claim notes.

3. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recover penalties from Claimant for violating WCRP 9-1 by failing to timely produce requested discovery.

4. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to a general award of medical maintenance benefits pursuant to *Grover v. Indus. Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988).

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage of $559.85.

FINDINGS OF FACT

1. Claimant is a 31-year-old delivery driver for Employer. On December 23, 2021 he was involved in a motor vehicle accident (MVA) during the course and scope of his employment.

2. On December 24, 2019 Claimant was involved in a prior MVA. He suffered injuries to similar body parts as he claims in the current December 23, 2021 matter.

3. On January 19, 2022 counsel for Claimant sent a written request to Respondents for the claim file in the present matter pursuant to §8-43-203(4), C.R.S. Counsel precisely requested the following:

> Please send us a copy of all of your file materials, including the E-l, any admissions or denials of liability, any other employment records, wage records, and an indemnity log reflecting all payments made to our client to date. Please treat this as a specific request for the claims file under §8-43-203(4). This is a specific request for the entire claims file under the Act and includes a specific request for production of any and all claims' or adjusters'

notes and/or compliance with the privilege log requirements of the Act.
Please, of course, copy us on all of the medical records in your file as well.

4. On February 10, 2022 Claimant sent a follow-up letter to Insurer's adjuster stating that the claim file was late because it was due by February 3, 2022 under §8-43-203(4), C.R.S. and Respondents were now in a penalty situation.

5. Insurer's Claims adjuster [Redacted, hereinafter TM] testified that the claim was initially treated as medical benefits only. There was no information available to Insurer that Claimant had lost any time from work. The claim was thus assigned to adjuster [Redacted, hereinafter TW] to handle authorization of medical benefits only.

6. TM[Redacted]explained that, upon determination that the claim involved lost work time and Claimant had hired an attorney, the claim file was transferred to him. He became the adjuster for the claim on February 11, 2022. TM[Redacted] thus began collecting information from Employer in order to comply with the 20-day notice provision of §8-43-203(1), C.R.S.

7. The claim was reported to the Division of Workers' Compensation (DOWC) on February 11, 2022.

8. On February 15, 2022 TM[Redacted] filed a General Admission of Liability (GAL) for the December 23, 2021 claim. In the GAL TM[Redacted] calculated Claimant's Average Weekly Wage (AWW) at $559.85. TM[Redacted] explained that he used the most recent 12 weeks of wages prior to Claimant's December 23, 2021 MVA in his calculation. He further remarked that he used the gross wages as listed on the Claimant's payroll records. TM[Redacted] commented that he did not include amounts noted on payroll records as "Driver Maint Reimb – Payable" because the amount was not part of "gross wages."

9. On February 28, 2022 counsel for Claimant sent TM[Redacted] a letter again demanding the claim file and providing a different calculation of Claimant's AWW. He asked TM[Redacted] to file an amended GAL incorporating his AWW calculations. In reaching his AWW calculation, Claimant's counsel added to the gross wages the "Driver Maint Reimb – Payable" fee. As of February 28, 2022 TM[Redacted] was aware of a demand for the claim file on a "lost time" from work claim that would trigger the provisions of §8-43-203, C.R.S. TM[Redacted] remarked that he then proceeded to obtain legal counsel on the case to represent Respondents and respond to outstanding requests.

10. TM[Redacted] testified that he did not understand claim notes to be a part of the claim file. He commented that claim notes and any notes by adjusters or other insurance company personnel are not kept with the claim file. They are maintained in a separate program that is separately accessed. TM[Redacted] detailed that, when he sends the initial claim file to an attorney for Respondents in a Workers' Compensation claim, he does not include claim notes because they are not maintained as part of the

claim file. He only accesses the program where the claim notes are kept and prepares a log of the claim notes if specifically requested.

11. On March 8, 2022 legal counsel [Redacted, hereinafter BP] entered an appearance on behalf of Respondents.

12. On March 9, 2022 Respondents sent a copy of the claim file including all medical records, pleadings, correspondence, wage records and investigation in the file to Claimant's counsel. Counsel for Claimant acknowledged receipt of the claim file, but stated that it did not include any of the requested claim and adjuster notes. He also asserted that failure to produce the adjuster's notes as soon as possible would result in Respondents' claim of privilege being waived. On March 9, 2022 Claimant also requested a pre-hearing conference that was scheduled for March 24, 2022.

13. On March 11, 2022 Respondents submitted Interrogatories and Requests for Production to Claimant requesting information about prior MVAs, insurance benefits received, and information about prior injuries. Claimant never responded to the discovery requests. Respondents also never filed a motion to compel requesting Claimant to produce the information.

14. On March 21, 2022 Respondents submitted a written objection to Claimant's Motion for Respondents to produce adjuster notes. Respondents asserted that the claim notes are not enumerated within the disclosure provision of 8-43-203(4), C.R.S. and not a part of the claim file.

15. On March 24, 2022 Pre-Hearing Administrative Law Judge (PALJ) Susan D. Phillips entered an order granting Claimant's motion to compel production of the adjuster's claim notes and ordering Respondents to provide the claim notes subject to an accompanying privilege log within 10 days of the order. PALJ Phillips remarked that §8-42-203(4), C.R.S. does not specifically state the words "adjuster notes" in the text of the statute. However, in accordance with *Lyman v. Town of Bowmar*, 533 P.2d 1129 (Colo. 1975), the General Assembly intended the word "includes" in the statute to create an expansion of the types of items that an insurer is required to provide as part of the claim file. She therefore concluded that the adjuster's notes were part and parcel of the claim file and Respondents had ten days to provide them to Claimant subject to an accompanying privilege log.

16. On March 25, 2022 Respondents produced the adjuster's claim notes and redacted only the notes about reserves. They asserted the claim of privilege for the reserve notes.

17. Claimant received medical treatment from Authorized Treating Physician (ATP) Caroline Gellrick, M.D. for his December 23, 2021 injuries. She determined that Claimant reached Maximum Medical Improvement (MMI) on June 30, 2022. On July 13, 2022 Dr. Gellrick concluded that Claimant warranted a 5% whole person impairment rating as a result of his December 23, 2021 MVA. She advised Claimant that, in terms of

maintenance care, he could continue to use over-the-counter topical medication for his lumbar spine.

18. On July 26, 2022 Respondents filed a Final Admission of Liability (FAL) acknowledging that Claimant reached MMI on June 30, 2022 with a 5% whole person impairment rating. The FAL also reflected that Claimant earned an AWW of $559.85. The FAL acknowledged that Claimant was entitled to medical maintenance benefits, but specified that if no "pursuant to Dr. Caroline Gellrick 's medical report dated 07/13/2022." The FAL specifically provided:

"Admit to Maintenance Care after MMI? ☒ Yes ☐ No

If no, pursuant to Dr. Caroline Gellrick 's medical report dated 07/13/2022."

19. TM[Redacted] explained that he was the adjuster who filed the FAL. He testified that it was his understanding that he should attach the medical report of Dr. Gellrick to the FAL. TM[Redacted] specified that he attached Dr. Gellrick's report because he was relying on it for the admission of permanent partial disability and maintenance care after MMI. Under the "remarks and basis" for permanent disability award, the FAL simply noted that maintenance care was admitted without any improper limitation. TM[Redacted] testified that Insurer has not denied authorization of any of Claimant's medical treatment. He further commented that, as of the date of the hearing, there were no outstanding requests for medical treatment from Claimant.

20. On October 26, 2022 Claimant filed an Application for Hearing (AFH) endorsing, AWW, TTD, TPD, medical benefits, and asserting a penalty claim against Respondents for failure to provide "the complete claims file, including claims and/or adjuster's notes." Claimant further asserted that Respondents waived its claimed privilege by failing to provide a timely privilege log for adjuster's notes. Notably, as of the date of filing the AFH, Respondents had provided claim notes more than seven months earlier.

21. On October 26, 2022 Respondents submitted a second set of Interrogatories and Requests for Production to Claimant. They again sought information about prior MVAs, insurance benefits received by Claimant as a result of earlier MVAs, and any prior injuries.

22. On November 23, 2022 Respondents authored an email to Claimant stating they had not received discovery responses. Claimant's counsel responded on December 1, 2022 that he hoped to have the responses returned by the next day, but requested an extension until the following Monday or December 5, 2022. Counsel explained that he was missing one attorney for medical leave and one paralegal for a family emergency.

23. On December 5, 2022 Claimant provided partial answers to the interrogatories and followed-up with the notarized signature of Claimant on December 17, 2022. Medical records related to the prior December 24, 2019 MVA were not provided at

that time. Respondents never filed a motion to compel discovery responses with respect to the October 26, 2022 Interrogatories and Requests for Production.

24. On December 8, 2022 Dr. Gellrick advised Claimant's counsel that her office was closing due to retirement. She noted that, if Claimant needed further maintenance treatment, he would need to visit another physician.

25. In January, 2023 Respondents received additional discovery from Claimant's counsel including medical records from Littleton Chiropractic. The documents revealed that Claimant had been involved in a prior MVA on December 24, 2019. He injured his thoracic and lumbar spine as well as his sacroiliac. The preceding areas involve the same body parts Claimant contends were injured in the December 23, 2021 MVA.

26. Upon learning of the prior MVA through Claimant's discovery responses, Respondents again sought discovery regarding the prior claim including a release for the insurance file from carrier USAA that paid damages. Rather than providing a release to Respondents for USAA, Claimant requested permission to obtain the claim file from USAA and review it for privilege prior to producing it.

27. On January 24, 2023 PALJ John H. Sandberg granted Claimant's motion to request and obtain insurance records from USAA. PALJ Sandberg specified that "claimant shall request the complete insurance file at respondents' expense and produce the records obtained promptly upon receipt, with an accompanying privilege log." Claimant requested the file from USAA on February 14, 2023.

28. Respondents have failed to demonstrate it is more probably true than not that PALJ Phillips was incorrect in determining in a March 24, 2022 Order that claim notes are part of the claim file and subject to initial disclosure under §8-43-203(4), C.R.S. Initially, on January 24, 2023 PALJ Phillips granted Claimant's motion to compel production of the adjuster's claim notes and ordered Respondents to provide them to Claimant subject to an accompanying privilege log within 10 days of the order. PALJ Phillips remarked that §8-42-203(4), C.R.S. does not specifically state the words "adjuster notes" in the text of the statute. However, in accordance with *Lyman v. Town of Bowmar*, 533 P.2d 1129 (Colo. 1975), the General Assembly intended the word "includes" in the statute to create an expansion of the types of items that an insurer is required to provide as part of the claim file. She therefore concluded that the adjuster's notes were part and parcel of the claim file and Respondents had ten days to provide them to Claimant subject to an accompanying privilege log.

29. Notably, §8-42-203(4), C.R.S. provides in relevant part that the insurer shall provide to the claimant "a complete copy of the claim file that includes all medical records, pleadings, correspondence, investigation files, investigation reports, witness statements, information addressing designation of the authorized treating physician, and wage and fringe benefit information for the twelve months leading up to the date of the injury and thereafter." The word "includes" reveals that what is to follow is only part of a greater

whole. Rather than creating an exhaustive list, the statute identifies the general class of "a complete copy of the claim file," and then specifics particular examples or subclasses.

30. The specifically delineated parts of a "complete copy of the claim file" in §8-42-203(4), C.R.S. include "correspondence," "investigation files" and "investigation reports." Although "claim notes" are not specifically enumerated in §8-42-203(4), C.R.S., they are in the same class of documents as the preceding examples. The enumeration of the types of materials that constitute a "complete copy of the claim file" is merely illustrative, not exclusive. The list of materials to be disclosed is thus only illustrative and partial. The use of the word "includes" enlarges, rather than limits what constitutes a "complete copy of the claim file." The inclusion of "claim notes" as items in the claim file is a reasonable construction of the plain language of §8-42-203(4), C.R.S. Had the General Assembly sought to limit materials to be disclosed to specifically enumerated items, it could have used the word "means" instead of the general or enlarging term "includes."

31. The preceding construction gives the words in the statute their plain and ordinary meanings. The adjuster's notes, although not specifically enumerated by the statute, are part and parcel of the general term "claim file" and therefore fall within the requirements of §8-43-203(4). Accordingly, claim notes are properly included as part of "a complete copy of the claim file" under §8-42-203(4), C.R.S. They are thus subject to the initial disclosure provisions pursuant to §8-43-203(4), C.R.S. PALJ Phillips therefore properly granted Claimant's motion to compel production of the adjuster's claim notes and ordered Respondents to provide the claim notes subject to an accompanying privilege log within 10 days of the March 24, 2022 Order.

32. Claimant has failed to establish it is more probably true than not that he is entitled to recover penalties under §8-43-304(1), C.R.S. for Respondents' violation of §8-43-203(4), C.R.S. in failing to timely disclose the claim file and claim notes. Initially, Claimant seeks penalties on two separate grounds. First, Claimant seeks penalties for Respondents failure to provide the claim file within 15 days of a request made on January 19, 2022. Claimant also seeks penalties for the time period after Respondents provided the claim file but not the claim notes. However, Claimant has failed to satisfy his burden of establishing that Insurer's actions were objectively unreasonable with respect to the two reasons for seeking penalties.

33. Claimant first seeks penalties for Respondents failure to provide the claim file within 15 days of January 19, 2022. This request was made less than one month after Claimant's injury on December 23, 2021. TM[Redacted] credibly testified that the claim was initially assigned to a medical-benefits-only adjuster because it was not clear that the case involved a lost time claim at that point. The First Report of Injury (FROI) was not filed until February 11, 2022. The claim was also not reassigned to TM[Redacted] until February 11, 2022 and his initial priority was to obtain information from Employer regarding the claim in order to file a GAL. He then filed the GAL on February 15, 2022. Claimant has not proven that TM[Redacted] was aware of the January 19, 2022 demand for the claim file and the demand letter was premature. Therefore, Claimant has not

established that there was knowledge of any violation of the statute for failing to provide the claim file within 15 days.

34. On February 28, 2022 counsel for Claimant sent a second demand for the claim file and provided incorrect AWW calculations. He asked TM[Redacted] to file an amended GAL using the incorrect calculations. Because TM[Redacted] was aware of a demand for the claim file, he engaged legal counsel within one week of receiving the letter. Respondents' counsel entered an appearance with the DOWC on March 8, 2022 and sent a copy of the claim file to Claimant's counsel on the next day March 9, 2022. The production of the claim file thus occurred within 15 days of Claimant's February 28, 2022 demand. There is a lack of reprehensibility with respect to Insurer's conduct. Further, Claimant has not demonstrated harm by not having the claim file at the early stage of the claim or less than two months after the Claimant's injury, where Respondents also quickly filed a GAL accepting liability for payment of medical benefits and temporary disability benefits. The record thus reflects that Respondents' have offered a reasonable factual and legal explanation for its actions. They were thus not objectively unreasonable.

35. Moreover, because the claim file was produced more than seven months before Claimant filed an AFH endorsing the penalty as an issue, the penalty had been cured pursuant to §8-43-304(4), C.R.S. Thus, the imposition of penalties in this case requires Claimant to prove by clear and convincing evidence that Insurer knew or reasonably should have known it was in violation. While Claimant sent a notice to TM[Redacted] on February 28, 2022 alleging that Insurer was in violation, the notice also contained improper calculations for AWW and demanded that TM[Redacted] amend his GAL with the incorrect AWW calculations. Counsel for Claimant was adverse to Insurer and TM[Redacted] had no obligation to rely on the legal advice provided by Claimant's counsel. At this point, TM[Redacted] acted swiftly to engage legal counsel for Respondents to resolve a legitimate legal dispute. By March 9, 2022 Insurer's counsel had provided the claim file to Claimant within 15 days of February 28, 2022. Accordingly, Claimant's request for penalties for Respondents' failure to timely produce the claim file under §8-43-203(4), C.R.S. is denied and dismissed.

36. On March 9, 2022 legal counsel for Insurer did not include claim notes with the claim file. Claimant also seeks penalties for the time period after Respondents provided the claim file but not the claim notes. Claimant again bears the burden of establishing that Insurer's actions were objectively unreasonable with respect to this basis for seeking a penalty. However, Claimant's argument fails because the record demonstrates that Respondents had a good faith basis in law or fact for failing to produce the claim notes.

37. The preceding section of this opinion details that claim notes are properly included as part of "a complete copy of the claim file" under §8-42-203(4), C.R.S. They are thus subject to the initial disclosure provisions pursuant to §8-43-203(4), C.R.S. Nevertheless, Respondents have made a good faith argument that claim notes are not, in fact, part of the "claim file" pursuant to §8-43-203(4), C.R.S. TM[Redacted] explained that he did not understand the adjuster's notes to be a part of the claim file because they

are not even maintained with the rest of the claim file. Respondents reasonably asserted that claim notes could not be reasonably construed to be part of a "claim file." Claims adjusters rarely provide such notes to their own counsel when transmitting the entire claim file for a litigation referral. Here, TM[Redacted] commented that this was his practice and adjuster's notes were not initially sent to counsel with the claim file.

38. On March 24, 2022 PALJ Phillips entered an order granting Claimant's motion to compel production of the adjuster's claim notes and ordering Respondents to provide the claim notes subject to an accompanying privilege log within 10 days of the order. On the following day March 25, 2022 Respondents produced the adjuster's claim notes and redacted only the notes about reserves. The actions of Insurer up to this point were not objectively unreasonable. Respondents' actions were based on a rational argument in law or fact. Importantly, "claim notes" are not specifically enumerated in §8-42-203(4), C.R.S. Claimant has thus not met his burden of establishing Insurer's actions were objectively unreasonable under the circumstances. Accordingly, Claimant's request for penalties based on Respondents failure to produce claim notes is denied and dismissed.

39. Respondents have failed to prove it is more probably true than not that they are entitled to recover penalties from Claimant for violation of WCRP 9-1 for failing to timely produce requested discovery. Specifically, the record reveals that Claimant's failure to timely respond to requested discovery did not constitute a willful violation justifying an award of penalties.

40. Initially, on March 11, 2022 Respondents submitted Interrogatories and Requests for Production to Claimant requesting information about prior MVAs, insurance benefits received, and prior injuries. Claimant did not respond to the discovery requests. Respondents also never filed a motion to compel requesting Claimant to produce the information. On October 26, 2022 Respondents submitted a second set of Interrogatories and Requests for Production to Claimant. They again sought information about prior MVAs, insurance benefits received by Claimant as a result of earlier MVAs, and any prior injuries. On November 23, 2022 Respondents authored an email to Claimant stating they had not received discovery responses. Claimant's counsel responded on December 1, 2022 that he hoped to have the responses returned by the next day, but requested an extension until the following Monday or December 5, 2022. Counsel explained that he was missing one attorney for medical leave and one paralegal for a family emergency. On December 5, 2022 Claimant provided partial answers to the interrogatories and followed-up with the notarized signature of Claimant on December 17, 2022. Respondents never filed a motion to compel discovery responses with respect to the October 26, 2022 Interrogatories and Requests for Production.

41. In January, 2023 Respondents received additional late discovery from Claimant's counsel including medical records from Littleton Chiropractic. The documents revealed that Claimant had been involved in a prior MVA on December 24, 2019. Upon learning of the prior MVA, Respondents again sought discovery regarding the prior claim including a release for the insurance file from carrier USAA that paid damages. Rather

than providing a release to Respondents for USAA, Claimant requested permission to obtain the claim file from USAA and review it for privilege prior to producing it. On January 24, 2023 PALJ Sandberg granted Claimant's motion to request and obtain insurance records from USAA. PALJ Sandberg specified that "claimant shall request the complete insurance file at respondents' expense and produce the records obtained promptly upon receipt, with an accompanying privilege log." On February 14, 2023 Claimant requested the file from USAA.

42. The record reveals that Claimant violated WRCP 9-1 on an ongoing basis by failing to provide disclosures and then discovery related to a prior MVA and the insurance claim file related to the prior MVA. Respondents repeatedly propounded discovery, but Claimant failed to respond. Although Claimant violated WCRP 9-1 by failing to respond, the record reflects that his conduct did not constitute a willful violation. There is no presumption of willfulness because Respondents never filed a motion to compel requesting Claimant to produce the information.

43. Claimant did not provide discovery responses to Respondents' initial the March 11, 2022 Interrogatories. However, Claimant did not file an AFH until October 26, 2022 and Respondents never filed a motion to compel requesting Claimant to produce the information. Instead, Respondents propounded discovery requests again on October 26, 2022 upon receipt of the AFH. Because Claimant did not respond to this discovery request, Respondents authored an email to Claimant on November 23, 2022 stating they had not received discovery responses. Claimant's counsel responded on December 1, 2022 and reasonably explained that he hoped to have the responses returned by the next day, but requested an extension until the following Monday or December 5, 2022. Counsel detailed that he was missing one attorney for medical leave and one paralegal for a family emergency. On December 5, 2022 Claimant provided partial answers to the interrogatories and followed-up with the notarized signature of Claimant on December 17, 2022. Respondents never filed a motion to compel the discovery responses.

44. Upon learning of Claimant's prior MVA, Respondents again sought discovery including a release for the insurance file from carrier USAA that paid damages. Claimant requested permission to obtain the claim file from USAA and review it for privilege prior to producing it. On January 24, 2023 PALJ Sandberg granted Claimant's motion to request and obtain insurance records from USAA. PALJ Sandberg specified that "claimant shall request the complete insurance file at respondents' expense and produce the records obtained promptly upon receipt, with an accompanying privilege log." Respondents again did not seek a motion to compel and PALJ Sandberg granted Claimant's request to review the claim file from USAA for privilege prior to production. PALJ Sandberg's decision reflects that Claimant's request to review the information before disclosure was reasonable.

45. The record is devoid of any evidence showing that Respondents filed a motion to compel discovery responses from Claimant. Claimant's actions cannot therefore be presumed to be willful. Notably, Claimant's conduct was not deliberate and did not exhibit either a flagrant disregard of discovery obligations or constitutes a

substantial deviation from reasonable care in complying with discovery obligations. Accordingly, Respondents' request for penalties for Claimant's violation of WCRCP 9-1 is denied and dismissed.

46. On July 26, 2022 Respondents filed an FAL acknowledging that Claimant reached MMI on June 30, 2022 with a 5% whole person impairment rating. The FAL remarked that Claimant was entitled to medical maintenance benefits, but specified that if no "pursuant to Dr. Caroline Gellrick's medical report dated 07/13/2022." TM[Redacted] testified that it was his understanding that he should attach the medical report of Dr. Gellrick to the FAL. He credibly commented that he attached Dr. Gellrick's report because he was relying on it for the admission of permanent partial disability and maintenance care after MMI. Under the "remarks and basis" for permanent disability award, it is simply noted that maintenance care is admitted without any improper limitation of continuing care. TM[Redacted] also noted that Insurer did not deny authorization of any medical treatment for Claimant. He further commented that, as of the date of the hearing, there were no outstanding requests for medical treatment from Claimant. The record thus reveals that Respondents' July 26, 2022 FAL constitutes a general award of medical maintenance benefits. Accordingly, Claimant's request for amendment of the FAL is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Propriety of PALJ Phillips' March 24, 2022 Order

4. Section 8-43-207.5(2), C.R.S. grants a PALJ authority to issue "interlocutory orders." A PALJ may also order a party to participate in a prehearing conference and make evidentiary rulings. An order of a PALJ is "an order of the director and binding on the parties," and "such an order shall be interlocutory." §8-43-207.5(3); *see Kennedy v. Indus. Claim Appeals Off.*, 100 P.3d 949 (Colo. App. 2004); *Martinez v. Vertical Electric Inc.*, WC 5-049-469 (ICAO, Oct. 20, 2017) (orders relating to prehearing conferences are generally interlocutory because a prehearing conference is followed by a full hearing before the director or an ALJ). ALJ's have the authority to review the pre- hearing orders of PALJ's. *See Dee Enterprises v. Indus. Claim Appeals Off.*, 89 P.3d 430, 441 (Colo. App. 2003); *Villegas v. Denver Water*, WC 4-889-298-005 (ICAO Apr. 14, 2021).

5. Section 8-43-203(4), C.R.S. provides that,

> Within fifteen days after the mailing of a written request for a copy of the claim file, the employer, or if insured, the employer's insurance carrier or third-part administrator shall provide to the claimant or his or her representative a complete copy of the claim file that includes all medical records, pleadings, correspondence, investigation files, investigation reports, witness statements, information addressing designation of the authorized treating physician, and wage and fringe benefit information for the twelve months leading up to the date of the injury and thereafter, regardless of the format. If a privilege or other protection is claimed for any materials, the materials must be detailed in an accompanying privilege log.

6. Under the general principles of statutory construction statutes must be construed to give effect to their legislative purpose. *Grogan v. Lutheran Medical Center, Inc.*, 950 P.2d 690 (Colo. App. 1997). If the statutory language is unambiguous, there is no need to resort to interpretative rules of statutory construction because it must be presumed the General Assembly meant what it clearly said. *Davison v. Indus. Claim Appeals Off.*, 72 P.3d 389 (Colo. App. 2003). To discern the legislative intent, we must first give the words in the statute their plain and ordinary meanings. A forced, subtle, or strained construction of the statute should be avoided if the language is simple and the meaning is clear. *Snyder Oil Co. v. Embree*, 862 P.2d 259 (Colo. 1993). Furthermore, where the statute is part of a comprehensive legislative scheme, it must be considered in relation to the other provisions to effect the legislative intent of both statutes. *Gonzales v. Advanced Components*, 949 P.2d 569 (Colo. 1997); *DeJiacomo v. Indus. Claim Appeals Off.*, 817 P.2d 552 (Colo. App. 1991).

7. When a statute uses a general word followed by the word "include" and then an enumerated list, the plain and ordinary meaning of "include" is used as "an extension or enlargement." *Lyman v. Town of Bow Mar*, 533 P.2d 1129, 1133 (1975). To conclude otherwise "would transmogrify the word 'include' into the word 'mean.'..." *Id.*; *see People v. Patton*, 425 P.3d 1152, 1156 (Colo. App. 2016) (concluding that statute did not require

notice only in person or in writing, because the word "includes" is a word that is meant to extend rather than limit)*; Dillabaugh v. Ellerton*, 259 P.3d 550, 553 (Colo. App. 2011) (relying on *Lyman* for the proposition that “include” is ordinarily used as a word of extension or enlargement and warning against transmogrifying “include” into the word “mean”); *Arnold v. Colo. Dep't of Corr.*, 978 P.2d 149, 151 (Colo. App. 1999) ("the word ‘include’ is ordinarily used as a word of extension or enlargement and is not definitionally equivalent to the word ‘mean.’ ").

8. As found, Respondents have failed to demonstrate by a preponderance of the evidence that PALJ Phillips was incorrect in determining in a March 24, 2022 Order that claim notes are part of the claim file and subject to initial disclosure under §8-43-203(4), C.R.S. Initially, on January 24, 2023 PALJ Phillips granted Claimant’s motion to compel production of the adjuster’s claim notes and ordered Respondents to provide them to Claimant subject to an accompanying privilege log within 10 days of the order. PALJ Phillips remarked that §8-42-203(4), C.R.S. does not specifically state the words “adjuster notes” in the text of the statute. However, in accordance with *Lyman v. Town of Bowmar*, 533 P.2d 1129 (Colo. 1975), the General Assembly intended the word “includes” in the statute to create an expansion of the types of items that an insurer is required to provide as part of the claim file. She therefore concluded that the adjuster’s notes were part and parcel of the claim file and Respondents had ten days to provide them to Claimant subject to an accompanying privilege log.

9. As found, notably, §8-42-203(4), C.R.S. provides in relevant part that the insurer shall provide to the claimant “a complete copy of the claim file that includes all medical records, pleadings, correspondence, investigation files, investigation reports, witness statements, information addressing designation of the authorized treating physician, and wage and fringe benefit information for the twelve months leading up to the date of the injury and thereafter.” The word ”includes” reveals that what is to followis only part of a greater whole. Rather than creating an exhaustive list, the statute identifies the general class of “a complete copy of the claim file,” and then specifics particular examples or subclasses.

10. As found, the specifically delineated parts of a “complete copy of the claim file” in §8-42-203(4), C.R.S. include “correspondence,” “investigation files” and “investigation reports.” Although “claim notes” are not specifically enumerated in §8-42-203(4), C.R.S., they are in the same class of documents as the preceding examples. The enumeration of the types of materials that constitute a “complete copy of the claim file” is merely illustrative, not exclusive. The list of materials to be disclosed is thus only illustrative and partial. The use of the word ”includes” enlarges, rather than limits what constitutes a “complete copy of the claim file.” The inclusion of “claim notes” as items in the claim file is a reasonable construction of the plain language of §8-42-203(4), C.R.S. Had the General Assembly sought to limit materials to be disclosed to specifically enumerated items, it could have used the word “means” instead of the general or enlarging term “includes.”

11. As found, the preceding construction gives the words in the statute their plain and ordinary meanings. The adjuster’s notes, although not specifically enumerated

by the statute, are part and parcel of the general term “claim file” and therefore fall within the requirements of §8-43-203(4). Accordingly, claim notes are properly included as part of “a complete copy of the claim file” under §8-42-203(4), C.R.S. They are thus subject to the initial disclosure provisions pursuant to §8-43-203(4), C.R.S. PALJ Phillips therefore properly granted Claimant’s motion to compel production of the adjuster’s claim notes and ordered Respondents to provide the claim notes subject to an accompanying privilege log within 10 days of the March 24, 2022 Order.

Penalties

12. Section 8-43-304(1), C.R.S. authorizes the imposition of penalties not to exceed $1000 per day if an employee or person “fails, neglects, or refuses to obey any lawful order made by the director or panel.” This provision applies to orders entered by a PALJ. *See* §8-43-207.5, C.R.S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Indus. Claim Appeals Off.,* 100 P.3d 949 (Colo. App. 2004). A person fails or neglects to obey an order if she leaves undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under §8-43-304(1), C.R.S. even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001).

13. The cure provision of §8-43-304(4), C.R.S., provides that,

> After the date of mailing of [any application for hearing for any penalty pursuant to subsection (1)], an alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking the penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed….

14. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must ascertain whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of an action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Indus. Claim Appeals Off.,* 107 P.3d 965 (Colo. App. 2003) ("reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact.”) *In Re Claim of Murray*, W.C. No. 4-997-086-02 (ICAO, Aug. 16, 2017). The question of whether a party’s conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Indus. Claim Appeals Off.,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Indus. Claim Appeals Off.*, 240 P.3d 429 (Colo. App. 2010). Where the violator fails to offer a reasonable factual or legal explanation for its actions, the ALJ may infer the opposing party sustained its burden to prove the violation was objectively unreasonable. *Human Resource Co. v. Indus. Claim Appeals Off.*, 984 P.2d 1194, 1197 (Colo. App. 1999).

15. An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital,* W.C. no. 4-619-954 (ICAO. May 5, 2006). However, any penalty assessed should not be excessive or grossly disproportionate to the conduct in question. When determining the penalty, the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the other party and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products v. Indus. Claim Appeals Off.,* 126 P.3d 323 (Colo. App. 2005).

Penalties Related to Claimant's Request for Claim File under §8-43-203(4), C.R.S.

16. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304(1), C.R.S. for Respondents' violation of §8-43-203(4), C.R.S. in failing to timely disclose the claim file and claim notes. Initially, Claimant seeks penalties on two separate grounds. First, Claimant seeks penalties for Respondents failure to provide the claim file within 15 days of a request made on January 19, 2022. Claimant also seeks penalties for the time period after Respondents provided the claim file but not the claim notes. However, Claimant has failed to satisfy his burden of establishing that Insurer's actions were objectively unreasonable with respect to the two reasons for seeking penalties.

17. As found, Claimant first seeks penalties for Respondents failure to provide the claim file within 15 days of January 19, 2022. This request was made less than one month after Claimant's injury on December 23, 2021. TM[Redacted] credibly testified that the claim was initially assigned to a medical-benefits-only adjuster because it was not clear that the case involved a lost time claim at that point. The First Report of Injury (FROI) was not filed until February 11, 2022. The claim was also not reassigned to TM[Redacted] until February 11, 2022 and his initial priority was to obtain information from Employer regarding the claim in order to file a GAL. He then filed the GAL on February 15, 2022. Claimant has not proven that TM[Redacted] was aware of the January 19, 2022 demand for the claim file and the demand letter was premature. Therefore, Claimant has not established that there was knowledge of any violation of the statute for failing to provide the claim file within 15 days.

18. As found, on February 28, 2022 counsel for Claimant sent a second demand for the claim file and provided incorrect AWW calculations. He asked TM[Redacted] to file an amended GAL using the incorrect calculations. Because TM[Redacted] was aware of a demand for the claim file, he engaged legal counsel within one week of receiving the letter. Respondents' counsel entered an appearance with the DOWC on March 8, 2022 and sent a copy of the claim file to Claimant's counsel on the next day March 9, 2022. The production of the claim file thus occurred within 15 days of Claimant's February 28, 2022 demand. There is a lack of reprehensibility with respect to Insurer's conduct. Further, Claimant has not demonstrated harm by not having the claim file at the early stage of the claim or less than two months after the Claimant's injury, where Respondents also quickly filed a GAL accepting liability for payment of medical benefits and temporary disability benefits. The record thus reflects that Respondents'

have offered a reasonable factual and legal explanation for its actions. They were thus not objectively unreasonable.

19. As found, moreover, because the claim file was produced more than seven months before Claimant filed an AFH endorsing the penalty as an issue, the penalty had been cured pursuant to §8-43-304(4), C.R.S. Thus, the imposition of penalties in this case requires Claimant to prove by clear and convincing evidence that Insurer knew or reasonably should have known it was in violation. While Claimant sent a notice to TM[Redacted] on February 28, 2022 alleging that Insurer was in violation, the notice also contained improper calculations for AWW and demanded that TM[Redacted] amend his GAL with the incorrect AWW calculations. Counsel for Claimant was adverse to Insurer and TM[Redacted] had no obligation to rely on the legal advice provided by Claimant's counsel. At this point, TM[Redacted] acted swiftly to engage legal counsel for Respondents to resolve a legitimate legal dispute. By March 9, 2022 Insurer's counsel had provided the claim file to Claimant within 15 days of February 28, 2022. Accordingly, Claimant's request for penalties for Respondents' failure to timely produce the claim file under §8-43-203(4), C.R.S. is denied and dismissed.

20. As found, on March 9, 2022 legal counsel for Insurer did not include claim notes with the claim file. Claimant also seeks penalties for the time period after Respondents provided the claim file but not the claim notes. Claimant again bears the burden of establishing that Insurer's actions were objectively unreasonable with respect to this basis for seeking a penalty. However, Claimant's argument fails because the record demonstrates that Respondents had a good faith basis in law or fact for failing to produce the claim notes.

21. As found, the preceding section of this opinion details that claim notes are properly included as part of "a complete copy of the claim file" under §8-42-203(4), C.R.S. They are thus subject to the initial disclosure provisions pursuant to §8-43-203(4), C.R.S. Nevertheless, Respondents have made a good faith argument that claim notes are not, in fact, part of the "claim file" pursuant to §8-43-203(4), C.R.S. TM[Redacted] explained that he did not understand the adjuster's notes to be a part of the claim file because they are not even maintained with the rest of the claim file. Respondents reasonably asserted that claim notes could not be reasonably construed to be part of a "claim file." Claims adjusters rarely provide such notes to their own counsel when transmitting the entire claim file for a litigation referral. Here, TM[Redacted] commented that this was his practice and adjuster's notes were not initially sent to counsel with the claim file.

22. As found, on March 24, 2022 PALJ Phillips entered an order granting Claimant's motion to compel production of the adjuster's claim notes and ordering Respondents to provide the claim notes subject to an accompanying privilege log within 10 days of the order. On the following day March 25, 2022 Respondents produced the adjuster's claim notes and redacted only the notes about reserves. The actions of Insurer up to this point were not objectively unreasonable. Respondents' actions were based on a rational argument in law or fact. Importantly, "claim notes" are not specifically enumerated in §8-42-203(4), C.R.S. Claimant has thus not met his burden of establishing

Insurer's actions were objectively unreasonable under the circumstances. Accordingly, Claimant's request for penalties based on Respondents failure to produce claim notes is denied and dismissed.

Penalty Related to Claimant's Violation of WCRP 9-1 for Failure to Timely Provide Discovery Responses

23. Workers' Compensation Rules of Procedure WCRP 9-1(B) permits discovery in the form of written interrogatories. Under WCRP 9-1(D), the parties have a "continuing duty to timely supplement or amend responses to discovery up to the date of the hearing." Rule 9-1(F) provides that "[i]f any party fails to comply with the provisions of this rule and any action governed by, an administrative law judge may impose sanctions upon such party pursuant to statute and rule." Rule 9-1(G) specifies that once an order to compel has been issued, failure to comply with the order to compel shall be presumed willful.

24. The purposes of discovery and pretrial procedural rules include the production of relevant evidence, the simplification of issues, the elimination of surprise and the encouragement of fair and just settlements. *Shafer Com. Seating, Inc. v. Indus. Claim Appeals Off.*, 85 P.3d 619, 621 (Colo. App. 2003). To uphold these purposes in Workers' Compensation matters, §8-43-207(1)(e), C.R.S. provides that ALJs "may rule on discovery matters and impose the sanctions provided in the rules of civil procedure in the district courts for willful failure to comply with permitted discovery." In order for a discovery violation to be considered "willful," the ALJ must determine that the conduct was deliberate or exhibited "either a flagrant disregard of discovery obligations or constitutes a substantial deviation from reasonable care in complying with discovery obligations." *Reed v. Indus. Claim Appeals Off.*, 13 P.3d 810, 813 (Colo. App. 2000); *see Henrichs v. Department of Human Services*, WC 5-030-150-010 (ICAO, Feb. 8, 2022); *In re Claim of Zvolanek*, WC 4-859-506-02 (ICAO, July 13, 2016).

25. Whether to impose sanctions and the nature of the sanctions to be imposed are matters within the fact finder's discretion. *Shafer Com. Seating, Inc. v. Indus. Claim Appeals Off.*, 85 P.3d 619 (Colo. App. 2003). The fact finder is given flexibility in choosing the appropriate sanction and should exercise informed discretion in imposing a sanction that is commensurate with the seriousness of the disobedient party's conduct. *Id*. The Colorado Supreme Court has determined that, although the rule provides little guidance in the selection of a sanction, it should be applied "in a manner that effectuates proportionality between the sanction imposed and the culpability of the disobedient party." *Kwik Way Stores, Inc. v. Caldwell*, 745 P.2d 672 (Colo. 1987); *see Pinkstaff v. Black & Decker (U.S.) Inc.*, 211 P.3d 698, 702 (Colo. 2009) ("When discovery abuses are alleged, courts should carefully examine whether there is any basis for the allegation and, if sanctions are warranted, impose the least severe sanction that will ensure there is full compliance with a court's discovery orders and is commensurate with the prejudice caused to the opposing party."). The sanction should therefore be commensurate with the seriousness of the sanctioned conduct. *See In re Claim of Nozik*, W.C. No. 4-874-669 (ICAO, Mar. 13, 2013). An ALJ's exercise of discretion in determining an appropriate discovery sanction is broad and binding in the absence of a clear abuse of discretion.

Pizza Hut v. Indus. Claim Appeals Off., 18 P.3d 867 (Colo. App. 2001); *Hall v. Home Furniture Co*., 724 P.2d 94 (Colo. App. 1986) (ALJ's authority to impose a sanction is discretionary and may not be disturbed in "absence of clear abuse of discretion").

26. As found, Respondents have failed to prove by a preponderance of the evidence that they are entitled to recover penalties from Claimant for violation of WCRP 9-1 for failing to timely produce requested discovery. Specifically, the record reveals that Claimant's failure to timely respond to requested discovery did not constitute a willful violation justifying an award of penalties.

27. As found, initially, on March 11, 2022 Respondents submitted Interrogatories and Requests for Production to Claimant requesting information about prior MVAs, insurance benefits received, and prior injuries. Claimant did not respond to the discovery requests. Respondents also never filed a motion to compel requesting Claimant to produce the information. On October 26, 2022 Respondents submitted a second set of Interrogatories and Requests for Production to Claimant. They again sought information about prior MVAs, insurance benefits received by Claimant as a result of earlier MVAs, and any prior injuries. On November 23, 2022 Respondents authored an email to Claimant stating they had not received discovery responses. Claimant's counsel responded on December 1, 2022 that he hoped to have the responses returned by the next day, but requested an extension until the following Monday or December 5, 2022. Counsel explained that he was missing one attorney for medical leave and one paralegal for a family emergency. On December 5, 2022 Claimant provided partial answers to the interrogatories and followed-up with the notarized signature of Claimant on December 17, 2022. Respondents never filed a motion to compel discovery responses with respect to the October 26, 2022 Interrogatories and Requests for Production.

28. As found, in January, 2023 Respondents received additional late discovery from Claimant's counsel including medical records from Littleton Chiropractic. The documents revealed that Claimant had been involved in a prior MVA on December 24, 2019. Upon learning of the prior MVA, Respondents again sought discovery regarding the prior claim including a release for the insurance file from carrier USAA that paid damages. Rather than providing a release to Respondents for USAA, Claimant requested permission to obtain the claim file from USAA and review it for privilege prior to producing it. On January 24, 2023 PALJ Sandberg granted Claimant's motion to request and obtain insurance records from USAA. PALJ Sandberg specified that "claimant shall request the complete insurance file at respondents' expense and produce the records obtained promptly upon receipt, with an accompanying privilege log." On February 14, 2023 Claimant requested the file from USAA.

29. As found, the record reveals that Claimant violated WRCP 9-1 on an ongoing basis by failing to provide disclosures and then discovery related to a prior MVA and the insurance claim file related to the prior MVA. Respondents repeatedly propounded discovery, but Claimant failed to respond. Although Claimant violated WCRP 9-1 by failing to respond, the record reflects that his conduct did not constitute a willful violation. There is no presumption of willfulness because Respondents never filed a motion to compel requesting Claimant to produce the information.

30. As found, Claimant did not provide discovery responses to Respondents' initial the March 11, 2022 Interrogatories. However, Claimant did not file an AFH until October 26, 2022 and Respondents never filed a motion to compel requesting Claimant to produce the information. Instead, Respondents propounded discovery requests again on October 26, 2022 upon receipt of the AFH. Because Claimant did not respond to this discovery request, Respondents authored an email to Claimant on November 23, 2022 stating they had not received discovery responses. Claimant's counsel responded on December 1, 2022 and reasonably explained that he hoped to have the responses returned by the next day, but requested an extension until the following Monday or December 5, 2022. Counsel detailed that he was missing one attorney for medical leave and one paralegal for a family emergency. On December 5, 2022 Claimant provided partial answers to the interrogatories and followed-up with the notarized signature of Claimant on December 17, 2022. Respondents never filed a motion to compel the discovery responses.

31. As found, upon learning of Claimant's prior MVA, Respondents again sought discovery including a release for the insurance file from carrier USAA that paid damages. Claimant requested permission to obtain the claim file from USAA and review it for privilege prior to producing it. On January 24, 2023 PALJ Sandberg granted Claimant's motion to request and obtain insurance records from USAA. PALJ Sandberg specified that "claimant shall request the complete insurance file at respondents' expense and produce the records obtained promptly upon receipt, with an accompanying privilege log." Respondents again did not seek a motion to compel and PALJ Sandberg granted Claimant's request to review the claim file from USAA for privilege prior to production. PALJ Sandberg's decision reflects that Claimant's request to review the information before disclosure was reasonable.

32. As found, the record is devoid of any evidence showing that Respondents filed a motion to compel discovery responses from Claimant. Claimant's actions cannot therefore be presumed to be willful. Notably, Claimant's conduct was not deliberate and did not exhibit either a flagrant disregard of discovery obligations or constitutes a substantial deviation from reasonable care in complying with discovery obligations. Accordingly, Respondents' request for penalties for Claimant's violation of WCRCP 9-1 is denied and dismissed. *See O'Reilly v. Physicians Mutual Insurance Co.*, 992 P.2d 644 (Colo. App. 1999) (absence of a prior order compelling discovery precluded C.R.C.P. 37(b) sanctions for any alleged violation); *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (March 25, 2013) (ALJ erred in drawing adverse inference as a discovery sanction when no order compelling discovery previously had been entered).

Medical Maintenance Benefits

33. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). An award for *Grover*-type medical benefits is neither contingent

upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Indus. Claim Appeals Off.,* 992 P.2d 701,704 (Colo. App. 1999); *Stollmeyer v. Indus. Claim Appeals Off.,* 916 P.2d 609 (Colo. App. 1995). Nonetheless, the claimant must show medical record evidence demonstrating the "reasonable necessity for future medical treatment." *Milco Constr. v. Cowan,* 860 P.2d 539, 542 (Cob. App. 1992). The care becomes reasonably necessary where the evidence establishes that, but for a particular course of medical treatment, the claimant's condition can reasonably be expected to deteriorate so that he or she will suffer a greater disability. *Id.;* see *Hanna v, Print Expediters Inc.,* 77 P.3d 863, 865 (Colo. App. 2003). Once a claimant has established the probable need for future treatment, he or she "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna,* 77 P.3d at 866. Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center,* 992 P.2d at 704.

34. As found, on July 26, 2022 Respondents filed an FAL acknowledging that Claimant reached MMI on June 30, 2022 with a 5% whole person impairment rating. The FAL remarked that Claimant was entitled to medical maintenance benefits, but specified that if no “pursuant to Dr. Caroline Gellrick's medical report dated 07/13/2022.” TM[Redacted] testified that it was his understanding that he should attach the medical report of Dr. Gellrick to the FAL. He credibly commented that he attached Dr. Gellrick’s report because he was relying on it for the admission of permanent partial disability and maintenance care after MMI. Under the “remarks and basis” for permanent disability award, it is simply noted that maintenance care is admitted without any improper limitation of continuing care. TM[Redacted] also noted that Insurer did not deny authorization of any medical treatment for Claimant. He further commented that, as of the date of the hearing, there were no outstanding requests for medical treatment from Claimant. The record thus reveals that Respondents’ July 26, 2022 FAL constitutes a general award of medical maintenance benefits. Accordingly, Claimant’s request for amendment of the FAL is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claim notes are properly included as part of “a complete copy of the claim file.” They are thus subject to the initial disclosure provisions under §8-43-203(4), C.R.S. PALJ Phillips therefore properly granted Claimant’s motion to compel production of the adjuster’s claim notes.

2. Claimant’s request for penalties for Respondents’ failure to timely produce the claim file and claim notes under §8-43-203(4), C.R.S. is denied and dismissed.

3. Respondents’ request for penalties for Claimant’s violation of WCRCP 9-1 is denied and dismissed.

4. Claimant's request for the amendment of the July 26, 2022 FAL regarding medical maintenance benefits is denied and dismissed.

5. Claimant earned an AWW of $559.85.

. 6. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she is entitled to maintenance treatment in the form of cognitive behavioral therapy ("CBT").

FINDINGS OF FACT

1. Claimant is a 42-year old woman who works for Employer as a warehouse associate.

2. Claimant sustained an admitted industrial injury on June 20, 2014. Claimant underwent arthroscopies of her left and right hips on January 11, 2016 and August 1, 2016, respectively.

3. Claimant was placed at maximum medical improvement ("MMI") in October 2017. Respondents admitted for maintenance medical care.

4. On June 29, 2022, Claimant's authorized treating physician ("ATP") Robert Moghim, M.D. noted complaints of axial back pain with extension into the left hip. Claimant reported her condition had worsened. He documented, "She has issues with anxiety and 'getting out of the house.' She her (*sic*) anxiety is due to pain. She may benefit for (*sic*) CBT but this has been denied by WC." (Cl. Ex. J).

5. On July 20, 2022, Dr. Moghim noted, "My recommendation is pelvic floor PT, GTB injections w/ steroids, CBT and follow up PT for core muscle stabilization. Multimodal pain management has been shown to be the most effective in managing complex chronic pain symptoms. In the past, she has had excellent results when these modalities were deployed." (*Id*.)

6. On October 4, 2022, Amanda Osborne, DPT, authored a letter recommending that Claimant undergo CBT therapy. She noted that scientific literature has demonstrated the efficacy of interventions such as CBT in reducing pain, and opined Claimant should receive skilled mental health intervention like CBT to facilitate her pain management and to increase her participation in recreation and community engagement.

7. At the request of Respondents, Kathleen D'Angelo, M.D. performed Independent Medical Examinations ("IMEs") of Claimant on June 22, 2020, May 3, 2021 and October 31, 2022. Dr. D'Angelo has interviewed Claimant on multiple occasions, performed physical examinations, and did a comprehensive review of Claimant's medical records dating back to 2013. Dr. D'Angelo opined that Claimant 's need for CBT is not work-related. Dr. D'Angelo noted that in her evaluations of Claimant, Claimant admitted that she is able to leave her home for work and for doctor appointments without difficulty,

anxiety or psychic trauma. Dr. D'Angelo further noted Claimant can enjoy herself upon meeting friends, and that she has no concerns once she leaves her home. Dr. D'Angelo opined that providing CBT for a condition that is truly not present is not medically indicated.

8. Claimant testified at hearing to her belief that Dr. D'Angelo is biased. She referenced multiple parts of Dr. D'Angelo's prior IME reports and testimony from prior depositions, noting perceived inaccuracies or areas of disagreement with Dr. D'Angelo. Claimant testified that she did not request CBT until a couple years after her surgeries when she realized her issue with getting out of the house. She further testified to her belief that she needs CBT therapy to help get out of the house. Claimant testified that her issue with getting out of the house is a learned experience after undergoing her surgeries, noting that for two years she only left her house to go to doctors' appointments and that she does not have a strong support system. Claimant testified that she drives herself to medical appointments and goes to work and to the grocery store when out for work. She stated that she does not participate in other activities outside of her home. Claimant testified that she seldomly goes out of her home for an activity other than work or appointments. She acknowledged that she has a problem leaving the house, but once she leaves the house she is fine. Claimant testified that, prior to the work injury, she was active and did not experience similar issues.

9. On January 27, 2023 Dr. D'Angelo testified by post-hearing deposition as a Level II accredited expert in internal medicine. Dr. D'Angelo testified that Dr. Carbaugh's psychometric testing demonstrated depression at the time and that his February 24, 2016 report diagnosed Claimant with somatic symptom disorder, probable persistent depressive disorder, and avoidant personality traits with a rule out for avoidant personality disorder. She testified that Dr. Carbaugh recommended 8 sessions of CBT for Claimant. Claimant underwent multiple session of CBT with Dr. Carbaugh. Per her review of the medical records, Claimant reported to Drs. Walker and Fillmore that the CBT with Dr. Carbaugh was not helpful. Dr. D'Angelo opined that CBT therapy would not be helpful to Claimant at this time if it was not helpful in the past. Dr. D'Angelo testified that Claimant does not have symptoms of agoraphobia because she can get out of the house, go to work, go to doctor's appointments and, once she is out with friends, she is okay. She further testified that Claimant has no difficulties interacting with others, is able to go to work routinely and has no phobia of driving. Dr. D'Angelo testified that such presentation is inconsistent and not medically probable. Dr. D'Angelo concluded that CBT not reasonably necessary and causally related treatment for Claimant's June 20, 2014 work injury, stating, "You cannot treat something that doesn't have a diagnosis." Dr. D'Angelo explained that she could not relate Claimant's purported anxiety issues to a work injury sustained 8 years prior, and surgeries that occurred 6 years prior.

10. On cross examination, Dr. D'Angelo confirmed that she is not a psychologist and is not "certified" in CBT. She testified that Claimant's situation of attending nothing but therapy and doctors' appointments for two years between 2016 and 2018 is not learned behavior, explaining that Claimant's selective issue with going out for social interaction

but then being fine during such interaction is not consistent with any specific pattern. She opined it is not medically probable Claimant's issue is casually related to her work injury or surgeries. She further stated that there is no evidence Dr. Moghim reviewed Dr. Carbaugh's or Dr. Johnsrud's notes regarding prior CBT therapy.

11. In response to Dr. D'Angelo's January 27, 2023 deposition testimony, Claimant offered additional testimony by post-hearing deposition on February 6, 2023. She testified that has not had a life since 2016, reiterating her belief that her anxiety regarding going out socially is learned behavior resulting from not going out socially due to her pain, and limitations in walking and driving for almost a year after her surgeries. Claimant testified that she did not request CBT until two years after her surgeries when she realized that her issue with not getting out of the house was psychological. She further testified that she has told Dr. D'Angelo more than once that she has anxiety.

12. The ALJ finds the testimony of Dr. D'Angelo, as supported by the medical records, more credible and persuasive than the opinions of Drs. Moghim and Osborne.

13. Claimant failed to prove it is more probably true than not CBT is reasonably necessary and causally related maintenance medical treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert

testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that medical maintenance treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012).

Claimant argues she experiences anxiety in going out of the house for anything other than work or appointments, and that such condition is a learned psychological state resulting from her work injury and subsequent surgeries. Dr. D'Angelo credibly and persuasively opined that any need for CBT therapy is not reasonably necessary or causally related to Claimant's June 2014 work injury and 2016 surgeries. Dr. D'Angelo has performed multiple IMEs of Claimant and comprehensively reviewed Claimant's medical records. Dr. D'Angelo credibly and persuasively opined that it is not medically probable Claimant's need for CBT therapy is related to the work injury, particularly considering the dichotomy between Claimant being able to go out to work and for appointments versus going out for other social issues and being fine once out. As noted by Dr. D'Angelo, there is no indication Drs. Moghim reviewed Claimant's medical records regarding prior CBT treatment. While Claimant is credible in her reports regarding her perceived condition, the preponderant evidence does not demonstrate that any need for CBT therapy is causally related to her 2014 work injury and resultant surgeries.

ORDER

1. Claimant failed to prove by a preponderance of the evidence the CBT is reasonably necessary maintenance treatment causally related to her work injury.

2. Claimant's request for CBT is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-192-744-002

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she is entitled to temporary total disability ("TTD") benefits from December 31, 2021, ongoing.

II. Whether Respondents proved by a preponderance of the evidence Claimant was responsible for her termination from employment and thus not entitled to TTD.

STIPULATION

The parties stipulated at hearing to an average weekly wage ("AWW") of $500.00.

FINDINGS OF FACT

1. Claimant is a 53-year-old woman who was employed by Employer as a deli clerk from approximately October 2021 to January 2022.

2. A written job description for Claimant's position indicates the position required, *inter alia*, the ability to lift/carry up to 70 lbs. and the ability to stand up to 4 hours continuously for a total of 8 hours per shift.

3. Claimant sustained an admitted industrial injury on Friday, December 31, 2021 when she slipped and fell at work. Claimant immediately reported the injury to the manager on duty. Employer then provided Claimant a list of four designated providers, including Lutheran Medical Center, Peak to Peak Family Practice Inc., CareNow Urgent Care, and Family Physicians.

4. Claimant sought treatment at the emergency department of Lutheran Medical Center later that same day. Claimant presented with complaints of pain in her coccyx, left ribs, abdomen, head and neck after slipping and falling at work. Claimant underwent a CT scan of the lumbar spine. The provider's final impression was coccyx pain, lumbar herniated disc, fall from standing, and left-sided rib pain. The provider placed Claimant on 48-hour restrictions of lifting no more than 10 lbs. and discharged Claimant with instructions to follow up with a primary care provider. Claimant did not provide any work restrictions to Employer.

5. Claimant Exhibit 15 contains a call log of calls to between Claimant and the main telephone number of Employer's store. Claimant testified that the call log reflects all the calls she made to Employer's store around that time period. She testified she did not know if Employer called from any other numbers other than the main store number and that, if Employer did she would not have recognized the numbers.

6. Employee work schedules are posted electronically on an online portal for employees, as well as in the employee breakroom. Work schedules are posted two weeks in advance. The schedule for the week of January 2, 2022 was published on December 24, 2022. The schedule for the week of January 9, 2022 was published on December 31, 2022.

7. Claimant was next scheduled to work on 4:30 p.m. on Saturday, January 1, 2022. Claimant called Employer at 9:00 a.m. on January 1, 2022 and informed Employer that she was unable to appear for her scheduled shift to the work injury. Employer considered the January 1, 2022 an excused absence.

8. Claimant was next scheduled to work on January 4, 2022 at 6:30 p.m. Claimant called Employer at 6:51 a.m. on January 4, 2022 and notified Employer she was again unable to appear for her scheduled shift due to the work injury. Employer considered the January 4, 2022 an excused absence.

9. Claimant's next scheduled shift was on January 6, 2022 at 4:30 p.m. Claimant did not appear for her scheduled shift due to the work injury. She did not notify Employer of her absence prior to the start of her scheduled shift. Claimant's call log indicates Claimant received a missed call from Employer at 1:45 p.m. on January 6, 2022. Claimant testified she did not recall receiving any voicemail from Employer. Claimant returned Employer's call at 5:33 p.m. that day, one hour after her scheduled shift began. Employer considered this a no-call, no-show.

10. Claimant was next scheduled to work on January 8, 2022 at 4:30 p.m. Claimant did not appear for her scheduled shift due to the work injury, nor did she contact Employer at any time to notify Employer of her absence.

11. Claimant testified she does not recall anything about January 8, 2022.

12. Claimant testified that, a few days after the date of injury, she attempted to log into the online portal to access her employee discounts and she was unable to log into the system. Claimant testified she called [Redacted, hereinafter MP], who was not in, and then called the corporate office, who sent her another PIN number that did not work.

13. Claimant testified on direct examination:

> Q: So, at that point, how would you - - if it is possible, how would you know about your shift?
>
> A: I didn't.

(Hrg. Tr. 42:8-10).

14. Claimant further testified on direct examination:

> Q: All right. And so it looked like you disagreed with [[Redacted, hereinafter MH]] about calling in?
>
> A: Yes.
>
> Q: Well, which shift - - just sitting here, which shift did you not call in on?
>
> A: I don't recall because I wasn't able to see the portal. I mean, I was calling in just to let them know what was going on and trying to update them.

(Hrg. Tr. 49:6-13).

15. On cross examination, when asked if her work schedule for the week of January 1, 2022, including January 4, January 6 and January 8, was posted in the online portal prior to December 31, 2022, she testified, "I guess. I assume. I don't know." (Hrg Tr. 64:22). Claimant testified she could have called the store or a co-worker to inquire about her schedule.

16. MH[Redacted] testified Claimant would not have been locked out of the online portal until a separation was final. He testified that Claimant never informed him she had an issue accessing the online portal.

17. Employer policy provides that employees may be terminated for two consecutive no-call, no-shows. Employees are required to notify Employer of an absence at least two hours prior to their scheduled start time. Per the policy, failure to notify Employer of an absence more than two hours in advance of a shift will be considered a no-call, no-show.

18. At hearing, when asked if she knew how many no-call/no-shows Employer permitted before termination, she testified, "I believe it is two or three." (Hrg. Tr. 53:24).

19. MH[Redacted] testified at hearing on behalf of Respondents. MH[Redacted] was the Store Manager of Claimant's store at the time of Claimant's work injury. MH[Redacted] testified that, after January 4, 2022, he did not speak to Claimant again until January 11 2022, despite Employer placing multiple telephone calls to Claimant in that time period to no avail. MH[Redacted] explained that the store has four telephone lines and that the calls placed to Claimant could have come from the store's main telephone number, or the other lines. He testified it is common practice to not use the main line as it is often busy. MH[Redacted] testified he tried to contact Claimant at least once for every shift for which she was scheduled to work and missed between January 5, 2022 and January 10, 2022.

20. On January 10, 2022, Claimant sought treatment at CareNow Urgent Care Center. Claimant testified she sought treatment at the urgent care center because she had a migraine and did not have any other doctor to go to. Claimant testified she had contacted another provider on Employer's designated provider list and understood that the provider was not accepting new clients at that time. She had scheduled an

appointment with another designated provider, Dr. Yamamoto, who was unable to see Claimant until February 3 2022. Claimant testified she planned to get a document from the urgent care center to provide to Employer regarding any work restrictions. While Claimant was completing documentation at the urgent care center, the urgent care center contacted Claimant's store, who informed the urgent care center that treatment was denied. Accordingly, Claimant was not evaluated at the urgent care center.

21. On January 10, 2022 at 8:24 a.m., MP[Redacted], Administrative Coordinator, emailed [Redacted, hereinafter AO], Human Resource Business Officer. She stated,

> We have a [team member] who has NCNS'd her past two shifts, the last time the Core talked to her was Tuesday when she called in for that shift, she had a shift on Thursday and Saturday and Core was not able to reach her. [Claimant] had hurt herself the week before here at the store and has a workman's comp claim open. Is there anything that needs to happen before submitting an ER ticket?

(R. Ex. C, p. 014).

22. MH[Redacted] testified that an ER ticket is a recommendation for termination, which is submitted to corporate, who makes the ultimate determination if the employee will be terminated.

23. AO[Redacted] replied to MP[Redacted] at 8:55 a.m. instructing AO[Redacted] to proceed with submitting a ticket.

24. At 11:10 a.m. on January 10 2022, MP[Redacted] emailed AO[Redacted]and ME[Redacted], Employer's Workers' Compensation Supervisor. She wrote,

> [Claimant] fell in the deli a couple of weeks ago. Since then she has called in for a couple of shifts but most recently she has NCNS'd her last two consecutive of shifts. Today, an urgent care center called for authorizations for a workman's comp. visit for [Claimant]. The center wasn't one of the ones that was listed and we denied the authorization. I had already opened an ER for job abandonment before the center called and just wanted to make sure that we were proceeding correctly.

(Id. at 015).

25. [Redacted, hereinafter ME] replied to MP[Redacted] on at 11:14 a.m. on January 10, 2022 notifying her that no one at the store was authorized to deny treatment and that authorizations for medical treatment needed to be reviewed by the claims department.

26. Employer's Timesheet Exceptions Report (R. Ex. D) is an internal document of Employer used by management that reflects employee attendance. The document reflects that MP[Redacted] marked Claimant's absences on January 1 and January 4, 2022 as excused, and her absence on January 6, 2022 as an unexcused no-call/no-

show. The document reflects that Claimant's January 8, 2022 absence was marked as excused and approved by MH[Redacted] at 6:33 a.m. on January 10, 2022.

27. MH[Redacted] addressed the discrepancy in his testimony. He testified that, early on Monday mornings, he quickly clears all exceptions for all employees to make sure each employee's time can be submitted to payroll. He does not investigate each entry. He testified he marked the exceptions report as excused at 6:33 a.m. on Monday January 10, 2022 before he had talked to his management team about Claimant's failure to call off for her shift.

28. Employer terminated Claimant due to no-call/no-shows for her scheduled shifts on January 6 and January 8, 2022. MP[Redacted] completed a Team Member Separation Form dated January 11, 2022 citing the reason for termination as no-call/no-shows on January 6 and January 8, 2022. She noted that attempts to contact Claimant were made by MH[Redacted] and MP[Redacted] on January 6, and January 8, 2022. MH[Redacted] signed the document on January 11, 2022.

29. Claimant, unaware of her termination, called MH[Redacted] on January 11, 2022. Claimant testified she called MH[Redacted] to obtain her correct claim number, as she had previously been provided an incorrect claim number. Claimant initially testified that she spoke to MH[Redacted] in two telephone calls on January 11, 2022. She later testified that it was one call.

30. Claimant's daughter recorded portions of Claimant's telephone conversation with MH[Redacted] on January 11, 2022. Three subparts of the telephone call were admitted into evidence as Claimant's Exhibit 16 and Respondents' Exhibits S-U. Claimant testified she recorded the call because she felt MH[Redacted] was speaking to her inappropriately and unprofessionally in what she described as a rude and sarcastic tone.

31. Claimant's call log reflects a call to MH[Redacted] at the store at 3:49 p.m. on January 11, 2022 for a duration of five minutes and nine seconds. The three recordings of the audio call submitted as exhibits total approximately two minutes and 25 seconds in duration.

32. The ALJ listened to each audio clip in its entirety. The clips start and stop suddenly throughout a larger conversation. During one audio clip (Cl. Ex. 16, video 3 and R. Ex. S), Claimant and MH[Redacted] state, in relevant part:

> MH[Redacted]: I've been straight up with you about everything.
>
> Claimant: Okay.
>
> MH[Redacted]: You're the one giving me the runaround by not calling us for your scheduled shift to keep us in the loop and see what's going on.
>
> Claimant: I called you Tuesday and told you I still wasn't feeling well, and I had Wednesday off.

MH[Redacted]: And then what about the rest of the week?

Claimant: I'm still down.

MH[Redacted]: Yeah, but you could've called me - -

Claimant: I mean - -

MH[Redacted]: and let me know. And then you go to an urgent care?

Claimant: Yeah, it's one of the four places listed on this print out.

MH[Redacted]: Right, but you gotta - - you need to call me to say 'Hey, I'm gonna go to the store - - I'm gonna go get this looked at - - and can you give me the information. You just take it on your own accord to go? You don't think the store should know that? I mean, you work in the medical field, you should know right? If that's the proper procedure.

33. In a second audio clip (Cl. Ex. 16, video 2, R. Ex. T), MH[Redacted] and Claimant state:

MH[Redacted]: - - inform the store?

Claimant: Inform the store of what? Me going into be seen?

MH[Redacted]: Yeah. And you're not showing up for your shift, right?

Claimant: Well I'm not going to be able to show up until I get a release.

MH[Redacted]: Right. But you still gotta let us know. You'll scheduled for a shift, right?

Claimant: So, am I gonna a get a claim, or?

MH[Redacted]: Yeah I'm looking. I'm pulling it up.

34. In the third audio clip (Cl 1, Resp. 3), MH[Redacted] provides Claimant a claim number. MH[Redacted] and Claimant then state:

MH[Redacted]: Keep us in the loop - - it is not fair for us at the store for you to not communicate with us. Alright?

Claimant: Okay.

MH[Redacted]: Let's all be adults about this and have those great conversations. (*Inaudible*) Not be afraid not return calls and do other things on the backend without informing your employer of these things. Alright?

CL: Okay.

(Telephone hangs up).

35. MH[Redacted] testified that he was unaware the telephone call between himself and Claimant on January 11, 2022 was being recorded. He testified he did not say anything to Claimant during the call about being terminated as they had just submitted the paperwork to corporate and a decision was still pending at the time. He testified that, during his conversation with Claimant, he was emphasizing to Claimant the necessity of communicating with the store about what was going on and about her condition if she could not come in for scheduled shifts.

36. Claimant testified that during their January 11, 2022 telephone MH[Redacted] did not make any mention of her being terminated. She testified that, when MH[Redacted] made multiple references to her failing to communicate with the store, she did not disagree with him because he was "screaming" at her on the call and she did not know what to say.

37. MH[Redacted]was not screaming at Claimant on the audio clips of the telephone call.

38. Claimant testified she did not become aware of her termination until receiving a COBRA letter at some unspecified time. The letter is dated January 10, 2022. She further testified she did not otherwise receive any written or verbal notification from Employer of her termination, nor did she speak to Employer after January 11, 2022.

39. Claimant's call log confirms Claimant placed a 2:29 long call to the main telephone number of Employer's store at 1:51 p.m. on January 15, 2022.

40. Respondents filed a General Admission of Liability on January 20, 2022 admitting for medical benefits only.

41. On January 13, 2022, Claimant sought treatment with a non-designated provider, Matthew Gray, M.D., at Mountain View Pain Specialists. She reported slipping and falling at work and experiencing severe headaches, worsening memory, cervical axial pain radiating into the left shoulder and left fingers, thoracic left-sided pain, and lumbar axial pain radiating into her left leg and foot. She further reported that ability to work and perform household activities were significantly affected by her symptoms. Dr. Gray referred Claimant for chiropractic treatment and physical therapy and ordered MRIs of the spine. He recommended that Claimant avoid lifting greater than 10 lbs. and that she take frequent breaks throughout the day.

42. On February 3, 2022 Claimant presented to designated provider David W. Yamamoto, M.D. at Peak to Peak Family Medicine, P.C. He assessed Claimant with cervical and lumbar strains, left leg pain and numbness, left arm pain and numbness, and a closed head injury with concussion. He restricted Claimant from all work.

43. Dr. Yamamoto continued Claimant's no-work restrictions through June 23, 2022.

44. Upon the referral of Dr. Yamamoto, Claimant saw Roberta Anderson-Oeser, M.D. at Premier Spine & Pain Institute, who referred Claimant for physical therapy, chiropractic care, neuromuscular massage and a neuropsychological consultation with William Boyd, Ph.D.

45. On June 24, 2022, Dr. Yamamoto released Claimant to work with restrictions of lifting, carrying, pushing, pulling no more than 5 lbs., walking no more than 1-2 hours per day, and changing positions every 15 minutes as needed.

46. On August 26, 2022 Dr. Yamamoto released Claimant to work up to four hours per day with restrictions of lifting, carrying, pushing, pulling no more than 8 lbs., walking and standing no more than 1 hour per day, and sitting 3-4 hours per day.

47. Dr. Anderson-Oeser drafted an undated letter responding to several questions from Respondents' counsel regarding Claimant's condition and status. She noted that prior medical records reflected that Claimant had a prior history of several conditions, including headaches, dizziness, neck pain, low back pain, stiffness in joints, tingling in feet, memory problems, and depressed mood, with prior diagnoses of and treatment for osteoarthritis of the knees, degenerative disc disease, fibromyalgia, migraine and depression. She noted prior records referenced Claimant informing her physicians of applying for disability. Dr. Anderson-Oeser opined that Claimant suffered a cervical strain, lumbar strain and left leg pain and muscle spasms as a result of the work injury. She opined that Claimant was not at MMI for her work-related injuries. She concluded that Claimant's any head injury was not work-related. She opined that Claimant needed 8 additional sessions of physical therapy, chiropractic treatment and neuromuscular massage treatments to reach MMI. Dr. Oeser opined that Claimant could perform seated work.

48. On October 13, 2022 Dr. Yamamoto restricted Claimant to working a maximum of 5 hours per day, 30 hours per week, with restrictions of lifting, pushing and pulling no more than 10 lbs., no more than 8 lbs. of repetitive lifting and carrying, no more than 1-2 walking hours of walking per day, standing sitting of 3-4 hours per day.

49. On November 3, 2022 Dr. Yamamoto noted that Clamant had sustained a non-work-related right fibular fracture when a box fell onto her leg in a private storage unit. Dr. Yamamoto continued Claimant's work restrictions.

50. On December 1, 2022, Allison M. Fall, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Fall's assessment was: status post fall leading to left hip and upper thigh contusion, right forearm contusion and adjustment disorder with increased anxiety. Dr. Fall opined that Claimant's symptoms were out of proportion to the mechanism of injury and that Claimant's subjective complaints were without correlating objective findings. She opined that Claimant reached MMI as of May 9, 2022 without the need for permanent impairment or further treatment for the work injury.

51. Claimant testified she has been unable to work since December 31, 2021 because of her injuries, symptoms and appointments. She testified that she has been under work restrictions since seeing Dr. Yamamoto. Claimant testified to numbness in her left side, pain, and an inability to stand for more than 3 hours in an 8-hour shift. Claimant testified she is unsure if she is capable of working 25-30 hour weeks. She confirmed she was not been offered work by Employer.

52. MH[Redacted] testified that, had Claimant showed up at any of her scheduled shifts following her injury date, he would not have had or allowed her to work as she did not have a work release, which she would be required to produce. He further testified that Employer did not offer Claimant because Employer had not received documentation stating Claimant's restrictions. He explained that, even if Claimant did not have a document allowing her to return back to work, she remained responsible for her contacting Employer regarding her scheduled shifts.

53. The ALJ finds MH's[Redacted] testimony, as supported by the employment records, more credible and persuasive than Claimant's testimony.

54. Claimant proved it is more probably true than not the December 31, 2021 work injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss.

55. Respondents proved it is more probably true than not Claimant is responsible for termination of her employment and thus Claimant is not entitled to TTD as of January 11, 2022.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the

witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

TTD

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a

recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

As found, Claimant proved she is entitled to TTD benefits from December 31, 2021 through January 10, 2022. Claimant suffered an admitted work injury on December 31, 2021 which rendered her unable to resume her work as a deli clerk. Claimant's position required lifting and carrying up to 70 lbs. and continuously standing for up to 4 hours in an 8-hour shift. The provider at Lutheran Medical Center placed Claimant on 48-hour restrictions of lifting no more than 10 lbs. Claimant credibly testified she was unable to perform her job duties at such time due to the symptoms from the work injury. Claimant missed more than three work shifts as a result of the work injury. Accordingly, to the extent Claimant sustained wage loss from December 31, 2021 through January 10, 2022, she is entitled to TTD.

Responsibility for Termination

Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show that the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if he is aware of what the employer requires and deliberately fails to perform. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). This is true even if the claimant is not explicitly warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the

termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

As found, Claimant is not entitled to TTD as of January 11, 2022 as the preponderant evidence demonstrates Claimant was responsible for termination from her regular employment. Claimant's testimony and actions establish awareness and understanding of Employer's policy requiring employees to call Employer within two hours of a scheduled shift to notify Employer of an absence. On both January 1 and January 4, 2022, Claimant followed Employer's policy by calling out more than two hours in advance of her scheduled shifts. Claimant was aware that no-call/no-shows could lead to termination. She further specifically acknowledged a general understanding of the need to communicate her status with Employer when she testified that she was calling in to let Employer know what was going on and to update Employer.

Claimant's contention that she did not properly call out on January 6 and January 8, 2022 because she did not have access to the online portal and was unaware of her scheduled shifts is incredible and unpersuasive. Claimant had access to her work schedule for the week of January 2, 2022 on December 24, 2022 and for the week of January 9, 2022 on December 31, 2022, prior to her alleged inability to access the online portal. Claimant was aware of, and properly called off for, scheduled shifts just two and four days prior to her scheduled shifts later that week on January 6 and January 8, 2022. Furthermore, Claimant acknowledged that she could have contacted the store or a co-worker to inquire about her schedule if she was having an issue accessing her schedule.

The audio recordings of the January 11, 2022 telephone call between Claimant and MH[Redacted] further support the finding Claimant was aware she missed scheduled shifts and failed to properly notify employer of her absences. MH[Redacted] repeatedly references Claimant's failure to call out for scheduled shifts. At one point, Claimant responds that she did call off on Tuesday, January 4, 2022. When MH[Redacted] specifically asks her about the rest of the week, Claimant merely replies "I'm still down." Claimant did not ask what MH[Redacted] was referring to, nor in any way indicate she was unaware she was scheduled for other shifts and failed to call out for them as required. A reasonable person who was actually unaware of the scheduled shifts and need to call out would make some indication to her supervisor of that at the time. Claimant's stated reason for failing to address this in the recorded telephone call - that she did not know what to say because MH[Redacted] was screaming at her - is unpersuasive, as the ALJ listened to the audio in its entirety, and it did not evidence MH[Redacted] yelling at Claimant.

Based on Claimant's responses to MH[Redacted] during the January 11, 2022 telephone conversation, Claimant, of her own volition, chose not to contact Employer regarding absences for scheduled shifts on January 6 and January 8, 2022 because she because she felt she could not work and had not received documentation releasing her to work. Claimant's presumption that she did not need to contact Employer per Employer policy was unreasonable. Claimant does not argue, nor was any evidence

offered to demonstrate, that she reasonably relieved on some information or indication from Employer that, due to her circumstances, she was not required to follow policy regarding absences for scheduled shifts. Even if Employer would not have allowed Claimant to work a previously scheduled shift prior to providing a release, Claimant remained required to notify Employer of her absences under these circumstances, particularly when Employer had not received any documentation of a release or restrictions at that time.

To the extent Employer's Timesheet Exception Report indicates MH[Redacted] initially marked Claimant's January 8, 2022 absence as excused, MH[Redacted] provided a credible explanation, and other records support the timeline and reason for termination proffered by Respondents and found by the ALJ. Based on the totality of the credible and persuasive evidence, it is more probably true than not Claimant was at fault for her separation from employment and thus not entitled to TTD benefits as of January 11, 2022.

ORDER

It is therefore ordered that:

1. Claimant's AWW is $500.00.

2. Respondents shall pay Claimant TTD from December 31, 2021 through January 10, 2022.

3. Claimant was responsible for her termination from employment, and thus not entitled to TTD benefits as of January 11, 2022.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-180-032-001

ISSUES

I. Whether Respondent proved by a preponderance of the evidence Claimant did not sustain a compensable industrial injury, entitling Respondent to withdraw its admissions of liability.

II. In the alternative, whether Claimant proved by a preponderance of the evidence the lumbar surgery recommended by Robert Blatt, M.D. is reasonable, necessary and related.

FINDINGS OF FACT

1. Claimant is a 59-year-old who has been employed with Employer for approximately six years.

2. Claimant has a prior history of left hip pain noted in personal medical records dated December 2016 and January 2017, as well as low back pain radiating into his left lower extremity in January 2021.

3. Claimant alleges he sustained a compensable work injury on August 4, 2021 that was exacerbated while at work on August 10, 2021.

4. Claimant testified at hearing that in the days leading up to his work injury he had been working with the hand asphalt patching crew, which included removing old asphalt, pushing the road base, raking, pushing and shoveling. Claimant testified that his symptoms began on August 4, 2021 when he felt a pinch in his back and pain in his groin area while raking. He testified he went to work on August 10, 2021 feeling completely normal. Claimant participated in stretching exercises with his crew as part of their normal occupational activity to prepare for the day. Claimant testified that, while engaged in a hip flexor stretch, he felt a sharp stinging and burning pain in his lower back. Claimant stated he stopped the stretch and attempted to walk around to relieve his symptoms. He testified that his symptoms worsened and he began experiencing numbness and radiating pain down his left leg. Claimant found himself unable to climb stairs to use the restroom, and ultimately fell when stepping off of a sidewalk due to the lack of feeling in his left leg.

5. [Redacted, hereinafter TJ] testified at hearing on behalf of Respondent. TJ[Redacted] works for Employer as the road and bridge director. TJ[Redacted] testified that, per Employer records documenting the day, location and type of work performed by each worker, on Claimant was performing mowing on August 4, 2021 and asphalt patching on August 5, 2021. As it was typical for employees in the summer to not work weekends, Claimant did not work August 6-8, 2021. Claimant performed mowing duties

on August 9, 2021. TJ[Redacted] explained that raking asphalt involves pushing and the asphalt, which he estimated weighs around 150 pounds per cubic foot.

6. Claimant presented to the emergency department at UC Health on Tuesday, August 10, 2021 with complaints of low back pain. Regarding the onset of symptoms, the provider noted Claimant "developed back pain last Thursday. He believes this began while at work. He does manual labor. Starting Sunday noted worsening back pain and then yesterday numbness to left extremity. Either last night or today started noting weakness." (R. Ex. F, p. 31). Claimant reported he fell earlier in the day due to weakness. A lumbar spine MRI of revealed degenerative changes of the lower lumbar spine, greatest at L4-5, with mild spinal canal and mild/moderate bilateral foraminal narrowing. There was no effacement of the nerve. The provider's clinical impression was acute left-sided low back pain with left-sided sciatica and numbness and tingling of the left leg. Claimant was provided a walker and prescribed prednisone, hydrocodone, and flexeril. The provider referred Claimant for physical therapy and instructed him to follow-up with a worker's compensation physician.

7. On August 11, 2021 Claimant saw Amber R. Payne, PA-C at authorized provider Workwell Occupational Medicine ("Workwell"). Regarding the mechanism of injury, PA-C Payne noted,

> [Claimant was] Doing hot asphalt patching shoveling and raking on 8/4/21 and was really sore for a couple days. He was doing his preventative stretching at work yesterday and he was getting more and more sore and all of the sudden lost feeling in the left leg. He almost fell when he tried to get up on a prota (*sic*) potty trailor (*sic*). He reports that when he went to step down out of the office his leg went out and he went right down on his buttocks.

(R. Ex. G, p. 37).

8. Claimant reported to PA Payne that most of his pain was in his groin. He denied experiencing prior problems of the same type. On physical examination, PA Payne noted Claimant was unable to lift his left leg in the flexed position, absent sensory at the anterior thigh, and unable to extend knee actively with full passive extension. She diagnosed Claimant with an injury of the left femoral nerve at the hip and thigh level and referred him for an EMG and physiatry consultation with Dr. van den Hoven. PA Payne removed Claimant from all work and referred Claimant for a pelvic MRI. Regarding her review of the 8/10/2021 lumbar spine MRI, PA Payne remarked that the MRI results did not correlate with findings of the left lower leg, but that Claimant's numbness and loss of strength did correlate with the femoral nerve innervation.

9. Claimant returned to Workwell on August 12, 2021 and saw his primary authorized treating provider ("ATP") Robert Dupper, M.D. Regarding the mechanism of injury Dr. Dupper noted,

> On 8/4/2021 [Claimant] states he was working on an asphalt crew. Part of his job was to rake the asphalt. When he pushes the rake, he is pushing from 50 - 100 lbs. of asphalt. To get enough force to push it he places the end of the rake handle against the left groin area, and pushes with his groin/hip. He did this intermittently throughout the day on 8/4/2021. The next few days he was quite sore in the groin/hip area, but was able to continue working.
>
> Two days ago immediately after doing the morning stretching exercises he had an increase of pain in the left groin. He then noticed at the front of the left thigh fairly suddenly became numb. He could feel the numbness start from the groin and extend down the front of the thigh, knee, and proximal lower leg. He states there is also numbness in the 4th and 5th toes of the left foot.

(R. Ex. H, p. 43).

10. On examination, Dr. Dupper noted tenderness in the left groin, decreased sensation over the left anterior thigh extending distally to the proximal third of the anterior lower leg, decreased sensation to light touch and pinprick, and significant weakness in the quadriceps. Dr. Dupper continued the diagnosis of a femoral nerve injury and continued Claimant's work restrictions.

11. Claimant underwent pelvic MRIs on August 12, 2021 which revealed no acute abnormalities. The radiologist specifically noted that the left femoral nerve appeared normal.

12. On August 17, 2021 Dr. Dupper responded to a letter from Insurer requesting his opinion on the work relatedness of Claimant's condition. Dr. Dupper reiterated his understanding of the mechanism of injury as documented in his August 12, 2021 medical report. He noted Claimant had an onset of pain on 8/4/2021 while raking asphalt and then, on 8/11/2021 while at work stretching, the left groin pain increased significantly. Dr. Dupper opined the events surrounding Claimant's onset of left thigh numbness and weakness were all associated with his work activities and thus causally related to his work.

13. Respondent subsequently filed General Admissions of Liability ("GALs").

14. Dr. Dupper reexamined Claimant on August 19, 2021, noting Claimant now had a little more movement of his left leg. Claimant was using a cane. Claimant reported that his left leg continued to give out, causing him to fall on several occasions. Claimant further reported that he was now experiencing severe pain in the left gluteal area radiating to his left knee when laying down. Dr. Dupper noted, "[Claimant] states it feels like sciatica, which he has had in the past, but it hurts when his leg is extended, not when he is sitting." (R. Ex. L, p. 59). Claimant complained of mild pain in the lower back. Dr. Dupper noted Claimant's MRI did not demonstrate significant nerve impingement in

the lumbar spine and it did not appear Claimant's gluteal pain is radicular. Dr. Dupper continued Claimant's physical therapy and restrictions.

15. Upon referral from Dr. Dupper, Claimant presented to Raymond P. van den Hoven, M.D. for EMG testing on August 24, 2021. Regarding the mechanism of injury, Dr. van den Hoven noted,

> Apparently, he was involved in raking asphalt on 08/04/2021. This involved pushing a fairly wide rake and pushing fairly heavy asphalt. He has done this for a number of years, but that evening is when he noticed pain in his left groin pain (*sic*). The pain was aggravated the next day on the 5th and than (*sic*) on the 10th became significantly to the point that he went to the emergency room.

(R. Ex. M, p. 65).

16. On examination, Dr. van den Hoven noted obvious weakness in Claimant's left lower extremity, moderate tenderness in the lower thoracic spine, and reproducible discomfort in the left groin region with palpation and percussion. Dr. van den Hoven further noted Claimant had left lower extremity numbness, burning discomfort, and fairly global weakness with sensory changes all the way up to approximately T9 or T10 dermatomes. He opined Claimant likely had a disc injury in the lower thoracic spine around T9-10, just above where the MRI had visualized. Dr. van den Hoven recommended Claimant undergo a thoracic MRI. He suggested Claimant wait to undergo the recommended EMG, noting it takes 21-24 days for the optimal degree of findings to manifest after a nerve root injury.

17. Claimant underwent a thoracic spine MRI on August 27, 2021 which revealed some facet arthropathy in the mid to lower thoracic spine worst at T8-9, but no evidence of trauma or significant canal or foraminal narrowing at any level.

18. On September 8, 2021 Claimant returned to Dr. van den Hoven for an EMG. Dr. van den Hoven noted Claimant's thoracic MRI did not demonstrate any results that would affect Claimant's thoracic cord and produce his left leg symptoms. Dr. van den Hoven opined the results of the EMG were consistent with left L4 radiculopathy, moderate to severe, with abnormalities in the lumbar paraspinals, without clear evidence for L5 or S1 root findings. He stated, "With lumbar paraspinal abnormalities, this is not likely due to lumbar plexus injury. There is a possibility of acute idiopathic lumbar radiculoplexus neuropathy, but disease course is not consistent with such." (R. Ex. O, p. 74). Dr. van den Hoven recommended Claimant undergo a left L4 nerve block for diagnostic and therapeutic purposes, as well as a repeat lumbar MRI.

19. Claimant underwent a second lumbar MRI on September 20, 2021 that was compared to the August 10, 2021 lumbar MRI. The radiologist noted a broad based disc bulge at L4-5 and a superimposed central disc protrusion measuring 5 mm in AP diameter, partially effacing the ventral thecal sac, moderate degenerative facet

arthropathy and a small right facet joint effusion. There was overall a relatively similar mild stenosis of the bilateral neural foramen, right greater than left, and mild spinal canal stenosis. The radiologist's impression was: "Slight increase in size of a central disc protrusion at L4-5 and development of mild spinal canal stenosis at this level. Otherwise relatively similar appearance of the mild to moderate severity multilevel degenerative disease in the remainder of the lumbar spine, otherwise as detailed in the above report." (R. Ex. Q, p. 82).

20. Claimant returned to Dr. Dupper on October 13, 2021 with complaints of increased pain in his left buttocks radiating to the left distal anterior thigh and to the medial aspect of the knee and calf. Dr. Dupper noted profound weakness in the left knee extensors of the thigh and the hip flexors. He noted Claimant's EMG showed L4 radiculopathy but that the lumbar MRI did not indicate L4 impingement. He referred Claimant for a neurosurgical evaluation.

21. On October 20, 2021 Claimant underwent a left L4 selective nerve root block with Timo Quickert, M.D.

22. Claimant testified that he only experienced a few minutes of relief from the injection before his symptoms returned.

23. Dr. Quickert's office conducted a follow-up telephone call with Claimant on October 27, 2021, at which time Claimant reported that he experienced 60% relief for three hours immediately following the injection, but no relief thereafter.

24. At a follow-up examination with Dr. Dupper on October 27, 2021, Dr. Dupper noted that the injection did not seem to have changed anything very much. Claimant continued to report pain in the low back and left leg weakness.

25. On November 5, 2021 Claimant presented to neurosurgeon David Robert Blatt, M.D. at UC Health Brain and Spine Clinic. On examination, Dr. Blatt noted atrophy of the left thigh and leg, decreased sensation, back pain with hip manipulation and tenderness of the left lateral hip and across the lumbosacral region. He reviewed Claimant's 8/10/2021 lumbar MRI and remarked, "To level degenerative changes not unusual for age. Muscle atrophy. Normal conus. Diffuse disc protrusion at L4-L5. There is mild foraminal narrowing. I do not appreciate any neural impingement. No significant canal narrowing." (R. Ex. T, p. 97). He noted that 9/20/2021 lumbar MRI showed similar findings. He wrote, "In reviewing the 2 lumbar MRIs cannot rule out the possibility of L4 nerve compression within the foramen." (Id.) Dr. Blatt also reviewed the 8/27/2021 thoracic MRI, 8/12/2021 pelvic MRI, and EMG results. Dr. Blatt opined,

> Symptoms and clinical findings are most consistent with a lumbar plexopathy. Multiple nerve distributions are involved. EMG was performed 9/4 which was less than 1 month after weakness developed. That study was most consistent with L4 root involvement of plexopathy could not be ruled out. EMG changes can take 6 weeks or more to develop. At this time I recommend repeat electrodiagnostic studies of the left lower extremity. If

> plexopathy is not demonstrated then he would need MRI of the brain and cervical spine. Lumbar MRI findings do not explain his clinical presentation.

(Id. at p. 94).

26. Dr. van den Hoven performed a repeat EMG on December 7, 2021. He remarked,

> It should be noted that previous testing done in September did show moderate to severe left L4 lumbar radiculopathy. Unfortunately, the imaging is not conclusive for such.
>
> ELECTRODIAGNOSTIC TESTING: Today his EMG studies are essentially unchanged from before. There continue to be abnormalities in the paraspinal muscles as well as the muscles supposed by L4 nerve root in common. There is involvement of the femoral obturator and sciatic nerves (sciatic nerve component with L4). The iliopsoas is also involved. No clear evidence for L5 or S1 involvement.
>
> The only changes I see on today's study is that there is some increase in polyphasia in the L4 myotome, which would be consistent with early terminal sprouting and attempt to reinnervate denervated muscle fibers, which is anticipated at this stage.

(R. Ex. U, p. 99).

27. Dr. van den Hoven remarked,

> Lumbar paraspinals are clear (*sic*) abnormal, and findings are in multiple peripheral nerve territories (femoral, obturator, and sciatic (via superior gluteal nerve and fibular nerve)). Continues to demonstrate significant mechanical component of symptoms, with triggering of symptoms readily with palpation at L4-5 interspinous region, and positive femoral nerve stretch test. This suggests significant irritability of L4 root, and given degree of symptoms, involvement of the dorsal root ganglion is suggested. Typically, this type of presentation is most likely related to lumbar radiculopathy, though acute idiopathic radiculoplexus neuropathy could possibly present this way. However, since is (*sic*) now 4 months into clinical course, I have never seen an acute idiopathic radiculoplexus neuropathy show such continued mechanical irritability, and furthermore, onset presentation is much more consistent with an acute, rapid onset of symptoms, faster than typically observed with radiculopathy neuropathy (whereas lumbar radiculopathy due to root impingement from disk herniation or small hematoma could present this way). Given overall findings, left L4 root involvement at or just lateral to foramen appears to be

> implicated as the cause. Did have 2 hours of essentially complete pain relief after a left L4 nerve root block, also suggesting mechanical involvement of that root. This is clearly not an isolate femoral neuropathy given the findings in other peripheral nerve distributions. No clinical evidence to suggest shingles. This is clearly lower motor neuron injury, not due to CNS involvement.

(*Id*. at 101).

28. Claimant underwent an x-ray of the lumbar spine on December 20, 2021 which revealed mild degenerative disease throughout the lumbar spine and mild facet arthropathy at L3-4 through L5-S1.

29. On January 14, 2022 Dr. Blatt followed up with Claimant via telephone, noting extension x-rays did not show any instability. Dr. Blatt again reviewed Claimant's lumbar MRI. He noted the MRI results showed a disc protrusion at L4-5 with mild foraminal narrowing bilaterally but no clear neural impingement. Dr. Blatt opined, "The patient's symptoms and clinical findings are consistent with L4 involvement. The electrodiagnostic findings would be consistent with impingement of the L4 root in her far lateral and that is consistent with MRI showing some elevation superiorly of the L4 nerve root and foramen." (R. Ex. W, p. 105). He discussed the possibility of Claimant undergoing a left L4-5 far lateral extraforaminal microdiscectomy, noting that the procedure "in some ways be 'exploratory' as we do not see definitive nerve compression although his clinical and other diagnostic testing does lead to the site as being the source of his symptoms." (*Id*.)

30. At the request of Respondent, Carlos Cebrian, M.D. performed an Independent Medical Examination ("IME") on March 16, 2022. Dr. Cebrian issued an IME report dated April 4, 2022. Claimant reported he first developed symptoms on 8/4/2021 when he finished raking asphalt. He further reported his symptoms increased over the weekend and on 8/10/2021 he felt a pinch while stretching. Dr. Cebrian noted, at the time of his IME, clinical diagnosis was not clear. He concluded he could not state whether it was medically probable Claimant's complaints are causally related to his claim based on the available information. He remarked although there was evidence of L4 radiculopathy, there were not objective findings on the lumbar MRI correlating with that level, nor findings explaining the significant amount of atrophy and weakness, which developed quickly. Dr. Cebrian explained that, if there were a disc lesion, there would be more significant findings on the lumbar MRI. He noted that, if there is pathology in the lumbar plexus, it is not explained by any of the diagnostic testing. Dr. Cebrian remarked that Claimant's "clinical picture is confusing" and did not add up to a lumbar spine work-related injury with nerve root compression. He opined Claimant's presentation is more consistent with a systemic neuromuscular condition resulting in focal muscular atrophy. He explained that there are multiple different possible causes of such condition. Due to Claimant's age and profound and significant atrophy with minimal MRI findings, Dr. Cebrian recommended additional neurological work-up outside of the workers' compensation system. He ultimately opined Dr. Blatt's request

for left L4-5 far lateral extra foraminal microdiscectomy should be denied as not medically reasonable, necessary or related, noting there were no specific objective findings correlating with Claimant's pathology.

31. On April 14, 2022 Dr. Dupper documented,

> [Claimant] continues to have profound weakness of the left anterior thigh. He had an IME ordered by the insurer. The examiner concluded the condition is not work related, and the surgery recommended by Dr. Blatt is not medically necessary or indicated. He suggested there is a neuromuscular condition causing the weakness, but failed to give a differential diagnosis of what those conditions might be. It seems unlikely for a neuromuscular condition to affect the left suddenly and completely without any gradual onset. [Claimant's] condition does not have a clear and definite diagnosis. Because we are unable to say absolutely that the condition is or is not caused by his employment a neurology consult is indicated in my medical opinion to define what neuromuscular disease, if any, is affecting him.

(R. Ex. Y, pp. 130-131).

32. On May 5, 2022 Dr. Dupper noted Insurer denied continued workup of the etiology of Claimant's leg weakness and that, without further workup, the etiology of the weakness could not be determined. He remarked Claimant would be scheduled for an impairment rating as no further workup was being authorized by Insurer. Dr. Dupper opined that it was more than 50% probable that the weakness Claimant is experiencing is related to his work, noting that the providers had not been able to show this condition was due to any other specific condition.

33. On May 26, 2022 Dr. Dupper recommended Claimant undergo a repeat MRI and a neurologic evaluation to clearly determine causation. He reasoned,

> The cause of [Claimant's] condition has not been diagnosed. Temporally [Claimant's] symptoms correlated with his work. Additionally the symptoms came on suddenly, and were not a slow progressive onset. Usually a neuromuscular disease would progress slowly and symptoms would be gradually progressive. [Claimant's] symptoms were essentially the same at onset as they are now. The changes seen since onset are likely the result of his continued weakness, and loss of function and probably not a progressive underlying disease. Neither Dr. Blatt, or Dr. van den Hoven mentioned the probability of a neuromuscular disease. Both of them concluded that the symptoms were most consistent with an L4 radiculopathy. However, as I have stated we have not made a diagnosis that shows the condition is definitely not caused by his work, or that it definitely was caused by his work. In my opinion this should be defined clearly before concluding it is not a work related condition.

(R. Ex. Z, p. 136).

34. On June 7, 2022 neurologist Alexander H. Zimmer, M.D. performed an IME at the request of Respondent. Dr. Zimmer issued an IME report dated June 14, 2022. Dr. Zimmer noted that Claimant's physical examinations revealed a very diffuse sensory loss pattern, as well as motor symptoms that extended beyond the usual myotome of the L4 nerve root. Regarding the September 8, 2021 EMG, he remarked that, while denervation changes were noted predominantly in the left L4 muscles, they also were noted in muscles beyond the usual L4 distribution, with other areas showing reduced motor unit recruitment and discrete interference patterns consistent with neuropathic change in three non-L4 muscles.

35. Dr. Zimmer concluded Claimant's "clinical presentation of diffuse motor weakness and diffuse sensory abnormalities in the left lower extremity, associated with pain at the onset and subsequent muscle atrophy primarily of the thigh muscles followed by modest improvement in strength over several months", along with the results of the EMG studies and negative MRI findings, was most consistent with a diagnosis of lumbosacral radiculoplexus neuropathy. He explained,

> Lumbosacral radiculoplexus neuropathy is typically an idiopathic inflammatory condition which involves a combination of pathology of the lumbosacral plexus and lumbosacral nerve roots. A similar picture can be seen in patients with diabetes or with a variety of inflammatory diseases. In [Claimant's] case, there does not appear to be any clear incident at work that would be associated with the production of pathology involving the lumbosacral plexus. Therefore, it is my opinion to a medical probability that [Claimant's] condition is not work related but is most consistent with an idiopathic medical condition [lumbosacral radiculoplexus neuropathy] that developed in a subacute fashion while [Claimant] was participating in routine work activities and routine exercise activities, which do not correlate etiologically with a lumbosacral plexus injury.

(R. Ex. AA, p. 157).

Dr. Zimmer noted Claimant had shown some degree of recovery of motor function and some reduction in his original pain symptoms, which he explained was typical over time in patients with lumbosacral radiculoplexus neuropathy. He recommended Claimant follow up with a neurologist to review bloodwork that may be associated with various inflammatory mechanisms.

36. On August 16, 2022 orthopedic surgeon Michael Janssen, D.O. performed an IME at the request of Claimant. Claimant reported that on August 4, 2021 while raking asphalt he felt a pull towards the left side in his low back near his lumbosacral plexus and began experiencing some pain in his thigh, which progressed over the next number of days. He further reported that within a week he was doing some stretching at work

associated with numbness and tingling. Dr. Janssen reviewed several MRIs and EMGs, noting that the most recent lumbar MRI on September 21, 2021 showed a disc herniation centrally at L4-5, but was not lateralized per se, and revealed no other obvious compressive pathology. Dr. Janssen assessed Claimant with a work-related injury, and possible plexopathy and possible radiculopathy. He stated,

> In my professional opinion, after reviewing all of this information, the patient is not clinically improving. He correlates this to a clear-cut occupational condition. He does have substantial motor weakness in more than one dermatomal distribution that is not explained on the MRI…I recommend the following: A repeat MRI scan of the lumbar spine and possibly now an EMG to correlate with this because none of this actually makes sense from a musculoskeletal standpoint. He has clear-cut objective pathology. This does not appear to be a case where subjective symptoms outweigh clinical findings."

(R. Ex. BB, p. 163).

37. Dr. Dupper reexamined Claimant on August 18, 2022, noting some improvement. He referred Claimant for another lumbar MRI and EMG of the left lower extremity.

38. Claimant underwent a third lumbar MRI on August 26, 2022. The radiologist noted an ongoing disc protrusion at the L4-L5 level indenting the right thecal sac with associated diffuse disc bulging encroaching on both neural foramina and central canal and bilateral foraminal stenosis. The radiologist's impression was: "1. No significant change compared to the September 20, 2021 MRI. 2. L4-L5 central/right paracentral disc protrusion. 3. Milder spondylotic changes at other levels." (R. Ex. DD, p. 170).

39. On August 30, 2022 Claimant was evaluated outside of the workers' compensation system at Kaiser by Dr. David Weiner. Dr. Weiner diagnosed Claimant with lower back pain with radiculopathy and recommended a referral to neurology.

40. Upon referral by Dr. Dupper, Claimant presented to neurologist Kenneth Morris, M.D. at UC Health Neurology Clinic on September 6, 2022. Regarding the mechanism of injury, Claimant reported that he felt a pop in his back while getting ready for work then subsequently lost feeling in his left leg. Dr. Morris remarked,

> I agree there is good evidence for possible L4 nerve root involvement, but symptoms also seem to extend to other nerve roots, especially sensory symptoms. MRI of the lumbar spine does not show any clear area of L4 nerve impingement. Although he does not have a history of diabetes, I think monophasic inflammatory radiculoplexopathy is still a possibility.

(R. Ex. EE, p. 173).

Dr. Morris recommended an MRI of the left lumbosacral plexus for evaluation of any structural compression and another EMG.

41. On September 26, 2022 Anjmun Sharma, M.D. performed an IME at the request of Claimant. Claimant reported that on August 4, 2021 he felt symptoms when he finished raking asphalt and then felt a pinch on August 10, 2021 when stretching. Dr. Sharma opined Claimant was not at maximum medical improvement ("MMI"), noting Claimant had ongoing pathology in his lumbar spine or in his left plexus in lower extremity evidenced by significant atrophy and weakness in the left lower extremity. Dr. Sharma wrote,

> I am very surprised that this patient has gone on for well over one year nearly 14 months since the date of injury and he is still unable to get a simple procedure to alleviate the disc herniation on the nerve root. The patient clearly has an injury. This is supported by the MRI at L4-L5. This is also supported by the EMG findings which has been completed three times now. We are reconfirming the same diagnosis over and over. At this point in time, it is highly unlikely that a new diagnosis is going to be elicited While it is true that the patient may have an injury to the plexus, this will not necessarily be able to be addressed until the primary lesion is addressed which is the lumbar spine. The patient has a significant amount of atrophy in the left lower extremity. It takes quite a bit of time for such atrophy to occur but this atrophy has occurred because the patient's nerve is not firing properly and that is because it is compressed. The patient has a compressed disc, compressing on the left L4 nerve root This is resulting in the symptoms that are all consistent in the myotomal and dermatomal pattern on physical exam…The patient does not have knee pathology. He does not have a thoracic nor does he have a cervical pathology. The patient does not have a systemic, chronic immune or inflammatory problem. In these cases where there is a chronic systemic problem, this occurs in multiple body parts and is usually bilateral and symmetrical. To even raise this as a point of issue or to deny medical care because of alternative theories or alternative realities that do not exist is simply ignoring the evidence and the data that is already available in this claim.

(Cl. Ex. 6, pp. 91-92).

He recommended a repeat MRI of the lumbar spine, a repeat EMG of the left lower extremity, a surgical consultation with a neurosurgeon, physical therapy, and an MRI of the lower plexus to completely understand whether or not there is a lesion that is also in concomitant with the injury at L4 nerve root.

42. Dr. van den Hoven conducted a third EMG on September 28, 2022, noting results showed improvement in innervation. Dr. van den Hoven concluded,

> This overall pattern while not classic for it early on and certainly not suggested on his physical examination does now suggest that his initial insult to the nerve supply of the left lower extremity was due to acute idiopathic radiculoplexus neuropathy. There clearly were abnormalities in the lumbar paraspinal muscles early on on (*sic*) needle study. While plexus concern in the pelvis is a possibility, I doubt ongoing compression as he is improving clinically as well as electrodiagnostic testing evidence is showing improvement as well. Prior lumbar imaging does not suggest a significant L4 nerve root entrapment and given his improvement now it is more consistent with noncompressive neuropathy.

(R. Ex. FF, p. 178).

Dr. van den Hoven opined Claimant would show significant additional improvement over the next 6-12 months.

43. An October 19, 2022 MRI of the sacrum and lumbar sacral plexus revealed no abnormalities.

44. Dr. Zimmer issued an addendum IME report on October 28, 2022 after reviewing additional medical records. Dr. Zimmer continued to opine that his original assessment and diagnosis of lumbosacral radiculoplexus neuropathy remained, and was reinforced by additional clinical and EMG findings. He explained that evidence of reinnervation of Claimant's proximal left lower extremity muscles is consistent with recovery of some of the nerve fibers affected by the lumbosacral radiculoplexus neuropathy. Dr. Zimmer again noted that this type of plexopathy is typically idiopathic and inflammatory and is not related to trauma. Regarding Dr. Sharma's IME report, he explained that Dr. Sharma included an assessment of the lumbar MRI scans that was at odds with MRI scan interpretations by the radiologists, as well as by the surgeons who have examined Claimant. He remarked other providers all noted the absence of a compressive lesion on the MRI.

45. Dr. Dupper attended a SAMMS conference with counsel of both parties and issued a note on November 9, 2022 changing his opinion on the causality of Claimant's condition. Dr. Dupper opined Claimant has an idiopathic lumbosacral plexopathy and that he was unable to state with more than 51% certainty the actual cause of the condition.

46. Dr. Sharma testified on behalf of Claimant by pre-hearing deposition on December 7, 2022. Dr. Sharma was admitted as a Level II accredited expert in occupational medicine. Dr. Sharma testified the diagnoses of lumbar radiculopathy and lumbar plexopathy are interchangeable and that, whether Claimant has radiculopathy or plexopathy, it is work-related. He stated,

> …So an acute injury indicated that it was something that occurred as a result of a particular incident, a particular time or perhaps a series of

events that occurred in a short period of time. He was working. He was not having any pain. You know, for the record, he has had pain in his back before, but the pain resolved quickly without any need for intervention. The pathology that we see now on the imaging studies and the EMG supports the fact that this is a work-related condition. This did occur at work. This occurred at a specific time, a specific place, and specific activity, and all of these things have contributed to what is a workers compensation injury.

Q: Okay is the controversy over radiculopathy versus plexopathy tied to the multiple dermatomes that are involved in this?

A: Yes.

Q: So could you explain that to us?

A: Sure. So let's just talk, you know, let's use some definitive terms so, you know, everybody can understand what we are saying.

When we are talking about a radiculopathy we are talking about a nerve…if you are having pain in the nerve all the way down from the back or near the root where the issue is occurring, for example a herniation, that is going to present as a radicular pain all the way down into the leg or just a small portion of it, okay, depending upon how much of an impingement is occurring in the spine.

You know, when we are talking about a plexopathy, you know, we are talking about a network of nerves, not just one nerve, which is a radicular pain, but a network of nerves.

(Dr. Sharma Dep. Tr., p. 6:14-25, p. 7:1-25, p. 8:1-7).

47. Dr. Sharma clarified that either or both of the Claimant's occupational activities of stretching and/or the motions needed for asphalt repair could cause lumbar plexopathy. He testified his conclusion regarding Claimant's condition is supported by Claimant's subjective complaints and objective findings. Dr. Sharma testified that objective clinical findings include weakness, pain, burning, tingling and atrophy, and that objective findings on MRI were an extruded fragment at L4-5. Dr. Sharma acknowledged he did not personally review the MRI film, but believed this was referenced in Dr. Blatt's report. He testified that such reference in Dr. Blatt's report indicated to him that Dr. Blatt felt the nerve was being impinged by extruded fragments that you may not be able to see on the MRI. Dr. Sharma further testified the EMGs indicated a nerve root impingement starting from the lumbar spine at the L4-5 nerve root, and that the nerve block was diagnostic because of Claimant's good initial response. Dr. Sharma acknowledged that he had not reviewed any EMGs conducted after December 9, 2021.

48. Claimant testified at hearing that, prior to the work incident he had some minor hip and lumbar issues in the past, but that the symptoms from the August 10, 2021 work incident were completely different than anything that he had previously experienced. Claimant testified that in December 2016 he experienced some pain and swelling in his hip, whereas the August 10, 2021 incident caused numbness and a burning sensation, which he had never before experienced. Claimant further testified he also experienced atrophy and weakness as a result of the work injury, which he did not have previously. Claimant testified that he has experienced some slight improvement in his condition over time, but continues to experience significant weakness.

49. Dr. Dupper testified at hearing on behalf of Respondent. Dr. Dupper is an occupational medicine physician who has been practicing since 1985. Dr. Dupper testified he initially believed Claimant's condition was work-related, but that he now agrees with the conclusions of Drs. Zimmer and van den Hoven that Claimant's condition is idiopathic. Dr. Dupper testified he also discussed the matter with Dr. Morris. Dr. Dupper further testified he was unfamiliar with the condition of lumbar radiculoplexus neuropathy prior to treating Claimant. He stated that he has since conducted some reading on the condition, but not extensively. He acknowledged that he was not qualified to answer certain questions regarding the condition. Dr. Dupper stated he has not personally reviewed any research suggesting Claimant's condition could be caused by trauma; however, he testified that the condition can be caused if there is some sort of impact on the lumbosacral spine like a major injury such as pelvic fracture with displacement. He testified that it might be possible stretching/traction could traumatize the plexus and that it could be possible to have both radiculopathy and plexopathy concurrently. Dr. Dupper did not offer an opinion on whether the recommendation for a microdiscectomy is reasonable, necessary and related, noting he is not a surgeon.

50. Dr. Zimmer testified at hearing on behalf of Respondent as an expert in neurology. Dr. Zimmer testified consistent with his IME reports and continued to opine Claimant suffers from non-work-related idiopathic lumbar radiculoplexus neuropathy. He explained lumbosacral radiculoplexus neuropathy is a disease that can affect multiple areas, including the nerve root, the plexus, and the peripheral nerve, and that each case is a little different. He stated,

> …it can be quite confusing if you're the first person to see the patient because when it starts, it could start with just one nerve root area being involved, or one plexus area being involved, or one nerve area being involved. But, you know, typically, it's on the average what we would call subacute, meaning that it starts off sort of relatively suddenly, but it can evolve over a period of days or weeks, and then it stabilizes. And then eventually, it starts to improve. So that's the typical course.

(Hrg. Tr. p. 59:21-25, p. 60:1-4).

51. Dr. Zimmer explained that Claimant's course is consistent with lumbar radiculoplexus neuropathy. He testified that the condition can look like an L4 nerve root issue at the beginning in the subacute phase, as was the case in Claimant's situation. He explained that Claimant's providers initially assessed a femoral nerve injury, then L4 radiculopathy, but that Claimant's very diffuse sensory symptoms and weakness of muscles affected multiple nerve and root areas beyond L4, encompassing the whole nerve supply from L2 to S2. Dr. Zimmer reiterated that the lumbar MRIs did not show a disc compressing the L4 nerve root or any others. He noted MRI evidence of bilateral foraminal narrowing, which he explained is typically degenerative, and was equal on both sides for Claimant. Accordingly, he stated that there was no explanation based on the lumbar MRI findings of why Claimant's symptoms were on one side. Dr. Zimmer testified there would have to be obvious disc compression on MRI to cause the significant weakness Claimant is experiencing, not simply nerve root irritation. He further explained that the pelvic MRI did not evidence any issues with the plexus.

52. Regarding the EMGs, Dr. Zimmer testified that the EMGs predominantly pointed to issues in the L4 area, but also L5-S1 and well as L5 and L3 muscles. He explained Claimant's condition results in small vessel inflammation that causes diffuse patchy problems in the lumbar area, as well as in the plexus and nerves. Accordingly, there was some confusion in the beginning of Claimant's treatment because the EMG revealed some changes indicating damage to the paraspinal muscles, which would indicate some involvement of the nerve root. He opined the last EMG performed by Dr. van den Hoven was supportive of his initial impression in that the results showed a recovery pattern in the muscles, which is typically occurs when the nerves are starting to reinnervate and typical with radiculoplexopathy neuropathy. Dr. Zimmer explained that such recovery would not occur in the event Claimant had a compression lesion in the plexus.

53. Dr. Zimmer reviewed Dr. Sharma's deposition testimony and testified that Dr. Sharma's description seems to confuse radiculopathy and plexopathy, which are different. He explained that radiculoplexopathy means that both the nerve root and the plexus are involved in an inflammatory way.

54. Dr. Zimmer further explained that lumbosacral plexopathy/lumboplexus disease is different from lumbosacral plexopathy neuropathy. He testified that the physiology of lumbosacral plexopathy/lumboplexus disease is different, that it may have multiple causes, and does not necessarily have the patchy pattern involving multiple nerve roots. Dr. Zimmer testified that, with lumbosacral plexopathy/lumboplexus disease, if you have trauma to that area it will not start in one little area and then progress to a bigger area and then a third patchy area. He explained that Claimant's condition is a distinct entity that can be differentiated from lumbosacral pathology by its course.

55. Dr. Zimmer testified that Claimant's condition - lumbar radiculoplexus neuropathy – cannot be caused by trauma and is idiopathic. He testified that plexopathy – a different diagnosis- can result from major trauma such as a pelvic fracture or severe traction such as a hip dislocation, but not low-impact activities like pushing a rake in the

hip area or stretching. Dr. Zimmer stated that Claimant's description of placing a rake near the groin area would not be near the plexus, which is located on an individual's backside. He explained that the only thing the rake would have been close to per Claimant's description was the femoral nerve, which he does not think Claimant hit because it is deep in the groin and protected by the muscle.

56. Dr. Zimmer explained that Claimant's condition involves inflammation of small blood vessels, resulting in diffuse patchy problems. He stated that such patchy distribution can also be seen in diabetics. On cross-examination, when asked if diabetes is a potential contributing factor to developing Claimant's condition, Dr. Zimmer testified,

> A: No, no I'm just saying that in some people - - it's just statistically, it's like a risk factor, that if you're - - if you're diabetic, you're statistically at a higher risk of getting a vasculitis, or a small - - small blood vessel changes like this…So - - so that's because - - like I say, anatomically, it's the same structures.
>
> In other words, with diabetes, you get small blood essel disease, which can affect different areas. And with this entity, with this inflammation, it's also the same small blood vessels that are affected, so you can get the same damage to the plexus and - - so forth from small blood vessel changes. So I'm just saying that diabetes is a common cause of small blood vessel disease. And so that's why it's - - it can look the same." (Hr. Tr. p. 81: 1-7).

(Hrg. Tr. p. 80:20-25, p. 81:1-7).

57. Dr. Zimmer acknowledged that Claimant does not have diabetes nor any other underlying disease they know of causing Claimant's condition. He testified that, because there is no evidence of other involvement and Claimant's condition is improving, there is no need to test for systemic ongoing inflammation, as there would be with an individual with a more progressive disease. Dr. Zimmer testified that most of Claimant's recovery will occur with the natural reinnervation at a rate of one millimeter per day.

58. The ALJ finds the opinions of Drs. Zimmer, van den Hoven and Dupper, as supported by the medical records, more credible and persuasive than the opinions of Drs. Blatt, Janssen and Sharma and the testimony of Claimant.

59. The ALJ finds Respondent proved it is more probable than not Claimant's disability and need for treatment is not causally related to his employment. Respondent proved by a preponderance of the evidence Claimant did not sustain a compensable work injury and Respondent is entitled permitted to withdraw its admissions of liability.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Withdrawal of Admission

Withdrawal of an admission is granted prospectively, except in limited situations where the claimant is shown to have fraudulently supplied materially false information upon which the insurer relied in filing the admission. *Rocky Mountain Cardiology v. Indus. Claim Appeals Office*, 94 P.3d 1182 (Colo. App. 2004); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). *Compare HLJ Mgmt. Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990), with *Vargo v. Colo. Indus. Comm'n*, 626 P.2d

1164 (Colo. App. 1981)(retroactive relief granted where claimant made fraudulent misstatements regarding specific injury for which benefits were claimed).

When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School District*, WC 4-702-144 (ICAO, June 5, 2012). Section 8-43-201(1), C.R.S. provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." The amendment to §8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, WC 4-754-838-01 (ICAO, Oct. 1, 2013).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

As found, Respondent proved it is more probable than not Claimant's disability and need for treatment is not causally related to his employment and thus not a compensable work injury.

That Claimant experienced an onset of symptoms while performing his work duties is not dispositive of the fact his work activities caused Claimant's disability or need for treatment. The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). While Claimant initially testified he felt fine on the morning of August 10, 2021 prior to work, the records indicate Claimant reported experiencing worsening pain and numbness after August 4, 2021 and over the course of the next several days leading up to the morning of August 10, 2021. At Claimant's initial evaluations, he made no mention of feeling a pop or any other symptoms from stretching. Thus, Claimant's experience of symptoms while performing his work activities is one factor to consider among other evidence, particularly in light of Respondent's assertion of an idiopathic condition.

Throughout Claimant's course of treatment, multiple assessments have been provided including a femoral nerve injury, a lumbar plexus injury, lumbar radiculopathy, lumbar plexopathy, and lumbosacral radiculoplexus neuropathy. As elucidated in the medical records, Claimant presented with a confusing and challenging clinical picture - one in which he presented with significant objective findings on examination and on EMG, but no correlative findings on MRI. While Claimant's lumbar MRIs evidence a disc protrusion at L4-5 with mild foraminal narrowing bilaterally, each of the treating physicians - Drs. Dupper, van den Hoven, Blatt, and Morris - as well as the IME physicians retained by Respondent - Drs. Cebrian and Zimmer - and by Claimant, Dr. Janssen - all consistently opine the lumbar MRIs do not show effacement or clear neural impingement and do not correlate with Claimant's significant left lower extremity findings. Dr. Blatt noted he could not "rule out the possibility" of L4 nerve compression within the foramen and noted the MRI showed "some elevation superiorly of the L4 nerve root and foramen," but he again explicitly stated he did not see definitive nerve compression. Dr. Blatt's reference to the "possibility" of L4 nerve compression does not establish medical probability in light of the totality of the evidence in this case.

The only physician in this matter who opines there is significant nerve compression is Claimant's IME physician Dr. Sharma who, based on his interpretation of Dr. Blatt's reports, determined Claimant's condition results from a herniated disc with extruded fragments causing impingement. Such description and conclusion is not found in Dr. Blatt's reports, is not corroborated by any other medical records, and is at odds with the findings of multiple other physicians as discussed above. Moreover, as credibly testified to by Dr. Zimmer, if Claimant's condition was caused by compression or trauma, it would be seen on an MRI, particularly considering the significant weakness in Claimant's left lower extremity.

Claimant underwent extensive workup consisting of lumbar x-rays, three lumbar MRIs, a pelvic MRI, an MRI of the lumbar sacral plexus, a thoracic MRI, a left L4 selective nerve block, and three EMGs. It is undisputed the pelvic and lumbar sacral plexus MRIs revealed no abnormalities with the plexus or femoral nerve. Dr. Zimmer credibly, persuasively and thoroughly explained why it is medically probable Claimant suffers from idiopathic lumbar radiculoplexus neuropathy and not, the "possible" diagnosis (as identified by Drs. Blatt and Janssen) of lumbar radiculopathy and lumbar plexopathy. While Dr. Sharma testified that the terms lumbar radiculopathy and lumbar plexopathy are interchangeable, Dr. Zimmer credibly testified to the differences in those conditions, as well as their differences with respect to lumbar radiculoplexus neuropathy. Dr. Zimmer credibly explained that lumbar radiculoplexus neuropathy is a distinct entity that is differentiated from lumbosacral pathology by its course.

Dr. Zimmer provided a credible explanation for why Claimant's presentation and test results initially caused confusion for providers and why Claimant was initially assessed with a femoral nerve injury and L4 radiculopathy. He credibly testified that lumbar radiculoplexus neuropathy can initially appear as an issue with a specific nerve root or area, but subsequently affects multiple areas with a diffuse, patchy distribution of symptoms. As credibly explained by Dr. Zimmer, Claimant's presentation, EMG findings and negative MRI findings have been consistent with the course of lumbar

radiculoplexus neuropathy. Claimant's clinical improvement and evidence of improvement on EMGs further support the diagnosis of lumbar radiculoplexus neuropathy, as credibly opined by Drs. Zimmer and van den Hoven. Dr. Zimmer further credibly testified there is no evidence of further involvement as Claimant is clinically improving so there is no need to perform additional testing for systemic ongoing inflammation.

Dr. Zimmer's opinion is buttressed by the opinions of treating physicians and fellow neurologists Drs. van den Hoven and Morris. Dr. van den Hoven evaluated Claimant and performed each of Claimant's three EMGs and is familiar with the course of Claimant's presentation and condition. On September 8, 2021, prior to Dr. Zimmer performing any IME, Dr. van den Hoven specifically noted acute idiopathic lumbar radiculoplexus neuropathy as a possible cause of Claimant's symptoms based on his findings. Dr. van den Hoven ultimately opined Claimant's symptoms were the result of acute idiopathic radiculoplexus neuropathy based on Claimant's course. Dr. Morris also noted the possibility of an inflammatory condition as the cause of Claimant's symptoms when considering Claimant's presentation and testing. While Claimant's primary ATP Dr. Dupper initially attributed Claimant's low back and left lower extremity issues to a work-related femoral nerve injury, upon further testing, Dr. Dupper changed his opinion to conclude Claimant suffers from an idiopathic neuropathy condition, of which he was unfamiliar prior to dealing with Claimant's case.

In *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014) the Supreme Court addressed whether an unexplained fall while at work satisfies the "arising out of" employment requirement of the Workers' Compensation Act and is thus compensable. The Court identified the following three categories of risks that cause injuries to employees: (1) employment risks directly tied to the work; (2) personal risks; and (3) neutral risks that are neither employment related nor personal. The Court determined that the first category encompasses risks inherent to the work environment and are compensable while the second category is not compensable unless an exception applies. *Id.* at 502-03. The Court further defined the second category of personal risks to encompass those referred to as idiopathic injuries. These are "self-originated" injuries that spring from a personal risk of the claimant, such as heart disease, epilepsy, and similar conditions. *Id.* at 503. The third category of neutral risks would be compensable if the application of a but-for test revealed that the simple fact of being at work would have caused any employee to be injured. *Id.* at 504-05.

Here, the preponderant evidence demonstrates Claimant's injury and condition is idiopathic and not compensable. Drs. Zimmer and van den Hoven credibly opined Claimant's condition is idiopathic and was not caused by Claimant's work activities. Although Claimant was in the scope of his employment and performing his normal work activities when he experienced an onset of symptoms, the totality of the circumstances do not establish a sufficient causal nexus between Claimant's employment and his injury/condition. Based on the totality of the evidence, Respondent proved it is more probable than not Claimant did not sustain a compensable work injury.

Respondent does not allege Claimant provided materially false information upon which Respondent relied in filing its admission(s). As Claimant did not suffer a compensable work injury, and Respondent does not allege fraud, Respondent shall be permitted to prospectively withdraw its admission(s) of liability.

ORDER

1. Respondent proved by a preponderance of the evidence Claimant did not sustain a compensable injury.

2. Respondent's request to withdraw its admission(s) of liability is granted.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-899-087-007

ISSUES

I. Whether Claimant established by a preponderance of the evidence that the L4-L5 foraminotomy requested by authorized treating provider ("ATP") Michael Rauzzino, M.D. is reasonable, necessary and related medical care.

II. If Claimant did not establish entitlement to the L4-L5 foraminotomy, whether the lidocaine patch requested by Dr. Rauzzino is reasonable, necessary and related maintenance medical care.

III. If Claimant did not establish entitlement to the L4-L5 foraminotomy, whether the methocarbamol requested by Dr. Sacha is reasonable, necessary and related maintenance medical care.

FINDINGS OF FACT

1. Claimant is a 60-year-old male who works for Employer as a package handler.

2. Claimant sustained an admitted industrial injury on September 12, 2012 when he picked up a box and felt a pop in his low back.

3. Claimant underwent medical treatment for the work injury with ATP John Sacha, M.D.

4. On December 17, 2012, Claimant underwent an EMG of the left lower extremity that was negative for left lower extremity radiculopathy.

5. Claimant was placed at maximum medical improvement ("MMI") on January 30, 2014.

6. Upon the referral of Dr. Sacha, Claimant presented to Andrew Castro, M.D. for a surgical evaluation on February 10, 2014. Claimant complained of low back pain as well as numbness and tingling in his left thigh. Dr. Castro opined surgical intervention would not benefit Claimant as Claimant's predominant complaint was low back pain with minimal involvement of nerve roots in the area. Dr. Castro recommended Claimant treat with non-operative conservative measures including physical therapy, anti-inflammatories, and other conservative modalities.

7. Respondent filed a Final Admission of Liability ("FAL") on July 17, 2014 admitting for reasonable and necessary related care from an authorized treating doctor.

8. Claimant continued to experience low back pain with radiating pain and numbness and tingling in his left leg.

9. Claimant continued to see Dr. Sacha as maintenance care, undergoing chiropractic treatment, acupuncture and taking medications. Claimant also underwent multiple left L5 and S1 lumbar transforaminal epidural steroid injections and trigger point injections performed by Dr. Sacha.

10. On December 30, 2014, Claimant presented to Dr. Sacha with increasing low back and left leg pain. Dr. Sacha recommended Claimant undergo a lumbar transforaminal epidural steroid injection.

11. On January 7, 2016, Dr. Sacha performed an L5 transforaminal epidural steroid injection/spinal nerve block as well as a left S1 transforaminal steroid injection for a diagnosis of lumbosacral radiculopathy. The injections provided Claimant relief.

12. On January 28, 2016, Claimant underwent a left greater trochanteric bursa corticosteroid injection with ultrasound guidance, which provided Claimant relief.

13. On September 15, 2016, Claimant underwent an L5 transforaminal steroid injection and left S1 transforaminal steroid injection with Dr. Sacha. Dr. Sacha noted Claimant had a diagnostic response to the injection, which provided Claimant some lasting relief.

14. Claimant returned to Dr. Sacha on December 1, 2016 reporting ongoing low back and left leg pain. Claimant reported that, if not for the chiropractic care and acupuncture, his symptoms would be intolerable.

15. On April 14, 2017, Dr. Sacha noted that since he last saw Claimant, Claimant had experienced a flare in severe pain in the low back with radiation to the left leg with increased numbness and tingling.

16. On April 26, 2017, Claimant returned to Dr. Sacha who performed an L5-S1 transforaminal epidural steroid injection/spinal block as part of his maintenance follow-up.

17. On May 3, 2018, Dr. Sacha noted that Claimant was returning under maintenance medical care for the “same distribution as his current pain” and performed an L5 transforaminal epidural steroid injection/nerve block as well as an S1 transforaminal epidural steroid injection/nerve block.

18. On October 4, 2018, Claimant returned to Dr. Sacha who indicated that Claimant had a diagnostic response at the L5 level, consistent with L5 radiculopathy, and placed a request for another repeat Left L5 transforaminal injection.

19. On February 7, 2019, Claimant underwent a left L5 transforaminal epidural steroid injection performed by Dr. Sacha which provided relief.

20. Claimant returned to Dr. Castro on May 24, 2019 for an evaluation of low back pain into the buttock and legs. Dr. Castro again remarked that Claimant’s back pain was his predominant complaint. He noted circumferential left lower extremity pain, but that

the low back pain was still greater than the leg pain. Dr. Castro further noted that a recent EMG revealed chronic S1-L5 radiculopathy. He reviewed x-rays and MRIs, noting that a disc bulge at L4-L5 could be extending into the foramen causing radiculopathy. Dr. Castro stated, "Certainly, there is not severe nerve encroachment at any of the levels. The foraminal stenosis seems to be more on the left side at L4-L5 than any other levels." (R. Ex. B., p. 34). He recommended that Claimant undergo a new lumbar MRI to better evaluate neural encroachment.

21. On August 28, 2019, Claimant again underwent a left L5 transforaminal epidural steroid injection/spinal block performed by Dr. Sacha which provided relief.

22. On July 16, 2020, Claimant returned to Dr. Sacha who noted that Claimant was there for maintenance care under a September 12, 2012 work-related injury. Dr. Sacha performed a trigger point injection.

23. Claimant returned to Dr. Sacha on August 6, 2020 for his repeat trigger point injection.

24. Dr. Sacha continued to recommend trigger point injections, which were denied by Respondent.

25. The parties went to hearing on January 7, 2021 after which the Court entered an Order on April 2, 2021 authorizing the trigger point injection recommended by Dr. Sacha. The findings of that Order (Cl. Ex. 7) are incorporated herein by reference.

26. On April 19, 2021, Claimant returned to Dr. Sacha who noted Claimant continued to experience ongoing low back pain, left buttock pain, and left posterior thigh pain. Dr. Sacha administered trigger point injections to Claimant on May 10, 2021.

27. On August 31, 2021, Dr. Sacha noted that although the injections were providing temporary relief, it may be time for Claimant to consider surgery, stating:

> I did do a maintenance followup visit today with [Claimant]. Since last being seen, he is still having ongoing low back and left leg pain. He is getting some relief either with the lumbar epidurals or the trigger point injections for about 2 weeks, then the pain returns. He is getting increased leg pain and cramping. At this point, this gentleman has been under maintenance care for a prolonged period, and I discussed with him that it might behoove him to start considering lumbar spine surgery, which we put off on this gentleman. He now does want to consider it. We will get a repeat MRI of the lumbar spine, compare to previous, and then assess to see whether this is reasonable.

(Cl. Ex. 8, p. 133).

28. On October 11, 2021, Claimant returned to Dr. Sacha who noted the following:

> [Claimant] did have a repeat MRI today that we did do as maintenance. It does show progression and worsening of his L4-5 spinal stenosis. It is not so much the canal that is narrow. The lateral recess on the left-greater-than-right side is worsening, and this is consistent with my findings on this gentleman's transforaminal injection of him having fairly severe foraminal stenosis of the left L5 spinal nerve. At this point, I recommend he get a surgical reevaluation with Dr. Castro. This is a gentleman who has been very good at maintaining his work status, working, and taking minimal medications. At this point, I do feel that surgical intervention is inevitable.

(Id. at p.135).

29. Dr. Castro reexamined Claimant on November 5, 2021. He reviewed Claimant's September 20, 2021 lumbar MRI report, noting a L4-5 left bulge with left foraminal annular tear results and mild to moderate left and mild right foraminal narrowing without spinal canal stenosis. He further noted the L5-S1 minimal disc bulge resulted in mild right neural foraminal narrowing. Dr. Castro recommended that he review the actual MRI images to make further evaluation and recommendations.

30. Claimant returned to Dr. Castro on December 6, 2021. Dr. Castro noted Claimant described ongoing back pain without radiating symptoms. He concluded surgical intervention was not necessary and referred Claimant back to Dr. Sacha to consider other physiatry interventions. He opined Claimant was at MMI from a spinal surgery standpoint.

31. On January 17, 2022, Claimant presented to ATP Michael Rauzzino, M.D. for a second opinion on whether he is a candidate for a microdiscectomy. Claimant reported continued severe pain in his back and radicular symptoms into his left lower extremity. Dr. Rauzzino noted,

> We reviewed his images at length. We used various models and diagrams in the clinic to discuss his pathology. [Claimant] has been dealing with his symptoms for several years. He has pain in his back radiating down his left leg. Most of his symptoms are in his left leg. His imaging studies show degenerative changes at L4-S1, particularly with left foraminal narrowing on the left at the L4-L5 level.
>
> We discussed various treatment options from doing nothing to more conservative modalities such as time, rest, medications, physical therapy, and additional injections. We discussed surgery as well. He is not interested in any injections or therapy. He is looking for a more definitive option including surgery

(Cl. Ex. 9, p. 158).

Dr. Rauzzino recommended proceeding with an EMG/NCS study and flexion/extension x-rays to better assess Claimant's pathology.

32. Dr. Sacha performed a repeat EMG/NCS on March 7, 2022. He remarked that the test results showed evidence of work-related chronic left L5 and S1 radiculopathy, as well as a sensory peripheral polyneuropathy that was not work-related.

33. On March 21, 2022, Claimant returned to Dr. Rauzzino with complaints of worsening back and left leg pain. Dr. Rauzzino noted that injections performed by Dr. Sacha at L4-5 provided diagnostic relief with subsequent return of symptoms. He further noted Dr. Castro preferred to manage Claimant non-operatively with injections, but Claimant preferred a more definitive fix. Dr. Rauzzino remarked that imaging obtained in September 2021 was of poor quality but suggested significant foraminal narrowing at L4-5 consistent with Claimant's symptomatology. He noted that an EMG performed by Dr. Castro on March 7, 2022 showed chronic left L5-S1 radiculopathy and chronic peripheral neuropathy consistent with Claimant's complaints of back and leg pain. Regarding treatment, Dr. Rauzzino noted,

> I told him I would not recommend a large surgery but instead a minimally invasive L4-L5 decompression in the hope of alleviating his leg symptoms. I explained that it would not take away all of his back pain but would help with the leg symptoms. I offered to have him return to Dr. Castro to perform the surgery as Dr. Castro knows him best; we would be happy to do the surgery if this was the patient's preference. We will arrange to get an MRI of better quality and he would need a note from his cardiologist to clear him for surgery.

(Id. at pp. 159-160).

34. Dr. Rauzzino submitted a request for authorization for an L4-L5 foraminotomy on March 21, 2022.

35. Respondent denied Dr. Rauzzino's surgery request and scheduled an independent medical examination ("IME") with Neil Brown, M.D.

36. Claimant returned to Dr. Sacha on March 29, 2022. Dr. Sacha agreed with Dr. Rauzzino's recommendation for surgery, stating that "probably [the surgery] should have been done some time ago for this patient with a fairly severe L5 radiculopathy, but because of multiple medical issues and the patient's own request to try and avoid it, we have not done that." (Cl. Ex. 8, p. 143). He noted Claimant was now healthy enough to undergo the surgery.

37. On May 2, 2022 Dr. Sacha noted Claimant was awaiting authorization for surgery. He again noted Claimant was now healthy enough for the surgery, and has ongoing objective findings of lumbar radiculopathy.

38. On May 5, 2022 N. Neil Brown, M.D. performed an Independent Medical Examination ("IME"). Dr. Brown noted Claimant initially had low back symptoms but developed left-sided radicular symptoms a few weeks later, which he stated was not unusual. He also noted Claimant's radicular symptoms have persisted through the most recent evaluation by Dr. Rauzzino on March 21, 2022.

39. Dr. Brown reviewed an October 31, 2012 lumbar MRI, noting a broad-based posterior disc bulge at L4-L5 with foraminal narrowing which could abut the L4 nerve root; however, he opined that the findings were incidental since there was no evidence of a L4 radiculopathy. There was also a minimal central disc bulge at L5-S1. Dr. Brown noted the December 17, 2012 EMG showed no evidence of any acute or chronic radiculopathy, but that an April 11, 2019 EMG confirmed chronic L5 and a possible S1 radiculopathy. Regarding the September 20, 2021 lumbar MRI, Dr. Brown noted findings indicating mild bulging to the left at L4-5 with a left foraminal annular tear and minimal disc bulging at L5-S1. He opined that the findings are non-operative, stating there is no documentation of objective findings which could account for the EMG findings on April 11, 2019. Dr. Brown further noted that Dr. Sacha opined there had been interval progression of spinal stenosis, which he stated is contrary to the radiological report.

40. Regarding the March 30, 2022 MRI Dr. Brown noted,

> There was moderate bilateral foraminal stenosis at L4-5 and moderate right-sided foraminal stenosis at L5-S1. Comment is made about disc material at L3-4 abutting the L4 nerves, at L4-5 abutting the L5 nerves bilaterally slight compression of the left L5 nerve…There is no evidence of significant central canal spinal stenosis reported.

(R. Ex. A, p. 22).

Dr. Brown again remarked that Claimant has no evidence of L4 radiculopathy and this was the first radiological documentation of a possible cause of the patient's L5 radiculopathy.

41. Dr. Brown opined that the surgery recommended by Dr. Rauzzino is reasonable and necessary, but not causally related to Claimant's work injury, stating,

> His clinical course since his remote occupational Injury on September 12, 2020 is manifested by pain behaviors which would signify an exaggerated psychological response to his physiological disorder. Surprisingly, no psychological counseling has been recommended. Lack of treatment of co-existing psychological disorder is associated with poor treatment outcomes so any surgical intervention should be deferred until his psychological condition had been adequately treated. Consequently, it is my opinion that his current subjective complaints are causally related to his occupational injury on September 12, 2012 but there is no objective evidence of any compromise of the L5 nerve roots until several years after his accident. The subjective symptoms may be psychological manifestations of his physiological injury. One does not operate on patients with subjective symptoms but no objective evidence of neural compression of the appropriate nerve roots. The findings on the March 30, 2022 MRI are simply age-related progression of lumbar degenerative disc disease. Consequently, any indication for surgery would not be related to

> his occupational injury but rather simply age related degenerative changes.

(Id. at p. 23).

42. Dr. Rauzzino subsequently submitted a request for authorization of lidocaine, which was denied by Respondent.

43. The parties subsequently attended a SAMMS Conference with Dr. Castro, who outlined his opinion in a letter dated September 22, 2022. Dr. Castro noted he had seen Claimant on several occasions and Claimant primarily complained of low back pain without lumbar radiculopathy. He noted the MRI findings of mild to moderate degenerative changes. He stated, "Specifically, I do not believe that a lumbar decompression is indicated in relation to his initial symptoms from an accident which occurred several years ago where he did not have radicular or claudicatory-type symptoms initially." (R. Ex. B, p. 26).

44. Dr. Castro reviewed the IME report of Dr. Brown, noting he agreed with the opinion of Dr. Brown but differed in that he did not believe surgery was indicated "irrespective of causality or degenerative changes." (Id.). Dr. Castro noted Claimant primarily has low back pain with mild findings without substantial neurological impingement. He further noted that he reviewed Dr. Rauzzino's March 21, 2022 medical note, and opined that his imaging did not support substantial neurological impingement. Dr. Castro reiterated his opinion that surgical intervention is not reasonable in this matter and is not related to Claimant's occupational injury of September 12, 2012.

45. Dr. Sacha reviewed the reports of Drs. Castro and Brown and issued a report dated October 4, 2022. Dr. Sacha continued to opine that Claimant is a surgical candidate for an L4-5 and possibly L5-S1 laminectomy and discectomy. He explained,

> In reviewing this patient's case, I do believe Dr. Castro is an excellent surgeon; however, he does not have all the information correct on this patient. Here's what we know based on the records. This patient (*sic*) MRI, which I am reviewing as we look at (*sic*), does have evidence of moderate foraminal narrowing at the L4-5 level. He also has mild-to-moderate foraminal narrowing in the L5-S1 level. This gentleman did not have a normal EMG, in fact, his EMG showed evidence of a chronic left L5 and S1 radiculopathy, and finally, I do not believe either Dr. Brown or Dr. Castro reviewed my procedure notes for the spinal nerve blocks for this gentleman. Every time this gentleman has had a transforaminal epidural injection/spinal nerve block, not only has he had a diagnostic response, but he has been noted during the procedure to have reproduction of symptoms when injected to the L5 neural foramen and moderate to severe compression of the L5 spinal nerve, especially on the left side. These are all very specific objective evidence of neural impingement. The notations by both Dr. Brown and Dr. Castro above are completely incorrect with respect to this, and the data is very specific and all of the diagnostic and

> therapeutic studies as outlined above. This gentleman meets all the medical treatment guidelines for lumbar spine surgery. He has all the objective findings on physical exam and although there are times when he has more back pain and leg pain, his pain has been consistent and the complaint is consistent dating all the way back to this gentleman's original date of injury of September 2012 and his practitioner has been the physician treating him over the entirety of this course and performing both his electrodiagnostic studies as well as transforaminal injections. This patient needs all the medical treatment guidelines appropriateness for the surgery.

(Cl. Ex 3, p. 34).

46. Dr. Brown reviewed Dr. Castro's September 22, 2022 letter and Dr. Sacha's October 4, 2022 report and issued an addendum to his IME report on November 21, 2022. Dr. Brown continued to opine surgical intervention is not indicated for Claimant.

47. Claimant returned to Dr. Sacha on November 29, 2022 who noted, "At this point, he does have L5 radiculopathy that is longstanding with foraminal compromise and does want to move forward with surgery. He has likely been a surgical candidate for a long period, but this patient was against any type of surgical intervention." (Cl. Ex. 8, p. 149).

48. Pending authorization for surgery, Dr. Sacha submitted a request for methocarbamol, which was denied by Respondent.

49. Claimant credibly testified at hearing. He testified the injections performed by Dr. Sacha have helped him be able to continue to perform his work duties, but that the relief from the injections is not sustained. Claimant testified he continues to experience symptoms of low back pain and radiating pain into his left leg and toes, and that the symptoms have worsened. Claimant has not sustained any new injuries to his low back. He stated he cannot perform more than two to three hours of work activities without pain. Claimant testified he understands the risks of the recommended surgery and wants to undergo the surgery to relieve his excruciating pain. Claimant stated that, if he is unable to undergo the recommended surgery, he wants the lidocaine and methocarbamol authorized to provide temporary pain relief.

50. The ALJ finds the opinions of Drs. Sacha and Rauzzino, as supported by the medical records and Claimant's testimony, more credible and persuasive than the opinions of Drs. Castro and Brown.

51. Claimant proved it is more probably true than not the L4-L5 foraminotomy requested by Dr. Rauzzino is reasonable, necessary and related medical care.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable for medical treatment that is reasonable and necessary relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S.; *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found, Claimant proved it is more probable than not the surgery recommended by Dr. Rauzzino is reasonably necessary and causally related medical treatment. Respondents rely on the opinions of Dr. Castro and Respondent IME

physician Dr. Brown. While Dr. Brown concluded that the surgery is reasonable and necessary, he opined that objective findings of L5 radiculopathy were not evidenced until several years after Claimant's injury and are due to degenerative changes. Dr. Castro also believes Claimant's MRI findings are degenerative, but further found no objective evidence of substantial neurologic impingement. Dr. Castro opined that the surgery is not causally related or otherwise indicated, repeatedly stating Claimant's primary complaint is low back pain without lumbar radiculopathy and that he did not have radicular symptoms initially.

Both Dr. Rauzzino and Dr. Sacha address the purported lack of and delay in objective findings. Dr. Rauzzino credibly noted Claimant has been experiencing low back and left leg symptoms for several years. He reviewed the MRIs and EMGs and credibly and persuasively opined the imaging shows objective evidence of significant left foraminal narrowing at L4-5 and chronic L5-S1 radiculopathy consistent with Claimant's symptomatology. Dr. Rauzzino recommended surgery to help alleviate Claimant's left leg symptoms caused by the work injury.

Dr. Rauzzino's opinion is supported by Dr. Sacha, who has served as Claimant's primary ATP for over 10 years and is well-familiarized with Claimant's presentation and clinical course. Contrary to Dr. Castro's opinion that Claimant's primary concern is back pain, Dr. Sacha credibly explained that, while there are occasions Claimant has more back than leg pain, Claimant's back and leg pain have been consistent and dates back to his date of injury. Dr. Sacha's opinion is supported by Claimant's credible testimony regarding his symptoms as well as the medical records documenting complaints of, and treatment for, both back and leg pain over the course of several years. Dr. Sacha further credibly and persuasively opined that, in addition to the findings on MRI and EMG, Claimant's physical exam findings and his diagnostic responses to several injections are objective evidence of significant neural impingement warranting surgery. Dr. Sacha has reviewed the opinions of Drs. Brown and Castro and continues to opine that the recommended surgery is related to Claimant's work injury and reasonably necessary to relieve its effects. Based on the totality of the evidence, Claimant has met his burden to prove the L4-5 foraminotomy recommended by Dr. Rauzzino is reasonable, necessary and causally related medical treatment.

ORDER

It is therefore ordered that:

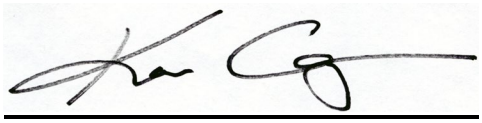
1. Respondents shall authorize and pay for the L4-L5 foraminotomy requested by Dr. Rauzzino.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 31, 2023



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-198-596-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that the following medical treatment is reasonably necessary to cure or relieve the effects of his work-related injury:

    a. Treatment at Centura/Lakewood Emergency and Urgent Care;

    b. Chiropractic care;

    c. Gabapentin;

    d. Lidoderm patches; and

    e. Left L4-5 and L5-S1 transforaminal epidural steroid injection.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant sustained an admitted injury to his lower back on January 3, 3022.

2. Claimant is the owner of Employer, and on the date of injury, contacted Insurer regarding his injury. Insurer instructed Claimant to seek medical treatment at Centura/Lakewood Emergency and Urgent Care center ("Centura").

3. On January 3, 2022, Claimant went to Centura and was examined by Case Kerr Newsom, D.O. Claimant reported pain in his low back with radiation down his left leg after lifting a heavy box at work that day. X-rays performed that day showed minimal degenerative changes and were negative for fractures. Claimant was diagnosed with a lumbar strain with possible radiculitis, and prescribed Lidoderm patches and naprosym. (Ex. 6).

4. On January 7, 2022, Claimant saw Gary Zuehlsdorff, D.O., at On the Mend Occupational medicine on January 7, 2022. Thereafter, Dr. Zuehlsdorff served as Claimant's authorized treating physician (ATP). Claimant reported low back pain and left leg symptoms. Dr. Zuehlsdorff diagnosed Claimant with a lumbar sprain/strain, back spasms, and left leg dysesthesias, ordered a lumbar MRI, and prescribed medications and physical therapy. (Ex. 3).

5. On January 11, 2022, Dr. Zuehlsdorff prescribed Claimant Lidoderm patches, and referred Claimant for chiropractic care. Claimant received six chiropractic visits, and reported to Dr. Zuehlsdorff he received relief from the chiropractic treatments. (Ex. 3).

6. On March 14, 2022, Dr. Zuehlsdorff referred Claimant for an evaluation with a physiatrist. Insurer denied authorization for the Lidoderm patches and the physiatry referral. (Ex. 3).

7. On April 19, 2022, Claimant underwent a lumbar MRI. On April 26, 2022, Claimant saw Dr. Zuehlsdorff, who interpreted the MRI as showing a disc extrusion at the left paracentral region at L4-5. Dr. Zuehlsdorff opined that the disc extrusion was indicative of an acute injury, not chronic and was consistent with Claimant's acute injury pattern. As of April 19, 2022, Insurer had not approved Claimant's prescription for Lidoderm patches. Claimant testified he obtained the patches using his health insurance, and the patches provided him with relief. Dr. Zuehlsdorff reiterated his request for a referral to physiatrist Dr. Trainor, and prescribed 30 Lidoderm patches. (Ex. 3).

8. On July 11, 2022, Claimant saw Dr. Trainor for evaluation. After examination, he diagnosed Claimant with lumbar spinal stenosis, and prescribed Gabapentin. Dr. Trainor also recommended an L4-5 L5-S1 transforaminal epidural steroid injection. Claimant initially chose to delay the procedure but ultimately decided to go forward with the injection. On August 3, 2022, Dr. Trainor requested authorization for left L4-5 and L5-S1 transforaminal epidural steroid injection (TESI) from Insurer. (Ex. 5). Insurer denied authorization for the procedure.

9. On November 1, 2022, Claimant saw Dr. Zuehlsdorff. Dr. Zuehlsdorff noted that Insurer continued to deny authorization of the TESI, and had denied further chiropractic care. Dr. Zuehlsdorff continued to prescribe gabapentin, and Lidoderm patches, but noted Claimant was obtaining Lidoderm through his primary care physician because of the denial. (Ex. 3)

10. As of November 30, 2022, Insurer had not authorized the requested TESI. Dr. Trainor's office indicated they would again submit the request for approval to Insurer. (Ex. 5).

11. On January 3, 2023, Claimant saw Dr. Zuehlsdorff again. He noted the TESI had not been approved, and Claimant was continuing to obtain Lidoderm patches through his primary care physician. Claimant reported receiving relief with the Lidoderm patches. (Ex. 3).

12. On January 23, 2023, Dr. Zuehlsdorff responded to a letter from Claimant's counsel regarding Claimant's need for treatment. In the letter, he indicated the TESI recommended by Dr. Trainor, and chiropractic treatment was reasonable and necessary to cure and relieve the effects of, and causally related to Claimant's work injury. He further indicated if the treatment failed, Claimant may need a surgical consult. (Ex. 3).

13. Dr. Zuehlsdorff testified at hearing and was admitted as an expert in occupational medicine. Dr. Zuehlsdorff testified the treatment Claimant received at Centura,

chiropractic care, Lidoderm patches, Gabapentin, and the TESI injection were reasonable and necessary to cure or relieve the effects of Claimant's work injury, and the treatment was causally related to Claimant's January 3, 2022 injury. Respondents submitted surveillance footage of Claimant driving a vehicle and photographs of Claimant using a hand-held leaf blower. (Ex. F & G). Dr. Zuehlsdorff credibly testified the surveillance videos did not demonstrate Claimant performing activities inconsistent with his presentation to Dr. Zuehlsdorff or any recommended work restrictions. Dr. Zuehlsdorff further testified Claimant's use of a leaf blower was not inconsistent with his injuries, presentation, or restrictions. Dr. Zuehlsdorff's testimony was unrebutted, credible, and persuasive.

14. Claimant testified at hearing that he had undergone one course of chiropractic treatment, which improved his function and gave him relief. He also indicated he received pain relief and increased function from use of Lidoderm patches, and he continued to use them, but obtained them through is private health insurance, because Insurer had not authorized them. Claimant also testified that Insurer had denied authorization for Gabapentin, and that it also provided relief. Claimant further testified he wished to undergo the TESI injection prescribed by Dr. Trainor. Claimant's testimony was unrebutted and credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert

testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Specific Medical Benefits At Issue

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School Dist.,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Diagnostic testing which is reasonable and necessary for treatment of a work-related injury is compensable. *Beede v. Allen Mitchek Feed and Grain*, W.C. No. 4-317-785 (ICAO Apr. 20, 2000). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).
